THE members of the First Brigade Rifle Association seem fated to have unfavorable weather conditions for their Saturday afternoon practice at the Newark Shooting Park. Last Saturday they were obliged to do their shooting in a wind that varied in strength from fifteen to thirty miles an hour and constantly flicking from "2" to "5 o'clock" and back. As a result it was difficult to hold either elevation or windage for any number of consecutive shots. There was a fair light, however, until nearly 5 P. M. During the past month politics have somewhat interfered with the practice of this association, but now that the campaign is closed the members are expected to turn out stronger.

The same old trio reported for Saturday's shoot, Major D. D. Wallace and Captain W. H. Howard being the first on the scene. Major Wallace is developing into a strong shot and succeeded in keeping above "centers" in the day's work. The Major is surgeon of the First Regiment and thinks that close attention to off-hand shooting will steady his hand so that he will be the better fitted for cutting off "necks" during the 1893 encampment of the First Brigade. When asked what kind of necks he will practice on, he simply says, "Mumm's the word!"

Capt. Howard, who holds the responsible position of Inspector of Rifle Practice of the First Regiment, is an enthusiastic devotee of military shooting, but his greatest forte is in depicting on paper the faces and forms of his friends. He has few equals as a cartoonist, and would undoubtedly have held a leading position with *Puck* but for the fact that there was no position open when he applied.

After the Major and Captain had emptied a few boxes of ammunition and got chilly enough to go up to the hotel "to see Alex," the shooting scribe appeared, so after several "smiles" had been exchanged the trio once more moved to the shooting house and resumed the business of hunting for bullseyes. The Major and the Scribe had each an idea that they were in prime shooting form, so agreed to shoot a 40-shot match, the result as usual being in favor of the wielder of the pen, although it was a narrow escape. Each of the contestants were credited with one miss, but neither of them is willing to acknowledge their faulty holding. Below are the scores made during the afternoon:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Maj D L Wallace | 4 | 3 | 3 | 3 | 4 | 4 | 3 | 4 | 4 | 4 | —36 |
| | 4 | 4 | 4 | 4 | 4 | 5 | 5 | 4 | 4 | 4 | —42 |
| | 4 | 4 | 4 | 4 | 4 | 4 | 5 | 4 | 4 | 4 | —41 |
| | 4 | 4 | 4 | 4 | 5 | 4 | 4 | 4 | 4 | 4 | —41 |
| | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | —40 |
| | 4 | 5 | 4 | 4 | 4 | 4 | 4 | 4 | 5 | 4 | —42 |
| Capt W H Howard | 4 | 4 | 4 | 3 | 4 | 4 | 3 | 4 | 3 | 4 | —38 |
| | 4 | 4 | 3 | 3 | 3 | 3 | 4 | 4 | 4 | 4 | —36 |
| | 4 | 4 | 4 | 3 | 3 | 3 | 4 | 4 | 4 | 4 | —37 |
| | 4 | 3 | 4 | 4 | 3 | 4 | 4 | 4 | 4 | 4 | —38 |

Forty-Shot Match.

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|

| | 4 | 5 | 4 | 5 | 5 | 5 | 4 | 5 | 4 | 4—45*—168 |

* Club record to date.

Nov. 8 was the day set aside for the American people in general to take a loaf and incidentally to cast ballots for or against "tariff for revenue only," "protective tariff" or whatever fad the shrewd wire-pullers of the great parties choose to make "the issue of the day." Now the First Brigade Rifle Association is not a political machine nor have its members any interest in tariffs. Consequently a shoot was arranged and about 2 P. M. the fun began. The wind was "fishy," sheering from "11" to "3 o'clock," and changing its gait about as rapidly as a politician changes his policy. The light was good. The militaire, medico and the rifle inspector were the first to report for duty, the scribbler being the next to arrive. By this time it was near 3 P. M., and the business of the day was soon under way when along came Sergt. Black and Sergt. Ward of Company B, first regiment, both of whom were recently elected members of the association. Both of them are enthusiasts in rifle matters, but on this occasion the bullets and targets did not seem to connect in proper fashion and consequently their scores are suppressed. They will soon learn the difference between the shield and the bullseye and then look out for breakers.

Quartermaster George W. Church was the next arrival, and he soon got down to a style of shooting that opened the onlookers' eyes, and incidentally their mouths, it being customary to ask, "What'll you have?" when a man surprises himself by bringing up a "flag." Capt. Church is not only regimental quartermaster, but is treasurer of the rifle association as well, and for this reason he is treated with great respect (our stock of ammunition is not large).

Then came Captains C. B. Champlin and G. M. Townsend, who fired a string apiece and came out satisfactorily. Capt. Champlin's nerve will be steadier, however, after he has an opportunity to render a few bills for repairing "bursted" water pipes, which will probably be very soon. Captain Townsend forgot to bring along his second pair of eyes, and in consequence the target seemed too far away. The shooters were all in an election day humor and every time a "red flag" was waved "the boy" was called to serve out nervine. The shooting, although difficult under the weather conditions, was fully up to the average. The surprise of the day came in a forty-shot match between the Major and the scribe, in which they tied on aggregates. By some unforeseen method of figuring the Major won the shoot off of the tie and the score will probably be found in his office in a gold frame.

The record scores were as follows:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Capt W H Howard | 3 | 4 | 4 | 5 | 3 | 4 | 4 | 4 | 3 | 3—37 |
| | 4 | 5 | 3 | 4 | 3 | 4 | 4 | 3 | 3 | 3—38 |
| Capt G W Church | 4 | 5 | 3 | 5 | 3 | 4 | 4 | 4 | 4 | 4—40 |
| | 4 | 3 | 3 | 4 | 4 | 4 | 4 | 4 | 5 | 4—39 |
| | 5 | 3 | 3 | 5 | 4 | 3 | 3 | 4 | 3 | 4—38 |
| Capt C B Champlin | 5 | 4 | 4 | 3 | 4 | 3 | 3 | 4 | 4 | 0—34 |
| Capt G M Townsend | 0 | 4 | 0 | 3 | 4 | 3 | 3 | 0 | 0 | 0—17 |
| Sergt Ward | 3 | 4 | 0 | 3 | 0 | 0 | 3 | 5 | 4 | 4—24 |
| | 0 | 0 | 3 | 4 | 0 | 4 | 5 | 3 | 0 | 4—23 |
| Sergt Black | 4 | 0 | 0 | 4 | 0 | 4 | 5 | 4 | 0 | 4—25 |
| | 0 | 3 | 0 | 0 | 3 | 0 | 4 | 3 | 3 | 0—16 |

Forty-shot March.

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Major D L Wallace | 5 | 3 | 4 | 4 | 4 | 5 | 5 | 4 | 4—42 | |

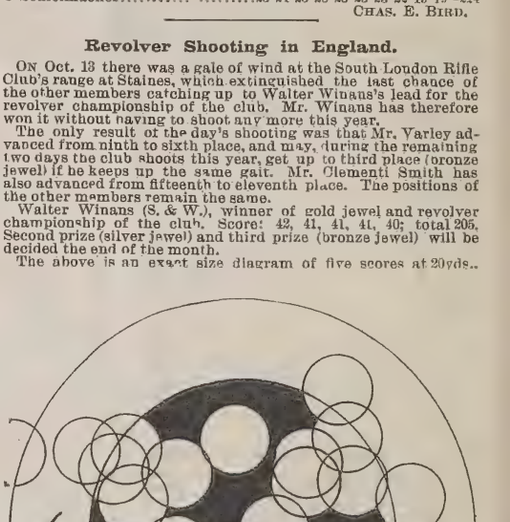
CHAS. E. BIRD.



## Revolver Shooting in England.

ON Oct. 13 there was a gale of wind at the South Loudon Rifle Club's range at Staines, which extinguished the last chance of the other members catching up to Walter Winans's lead for the revolver championship of the club. Mr. Winans has therefore won it without having to shoot any more this year.

The only result of the day's shooting was that Mr. Varley advanced from ninth to sixth place, and may, during the remaining two days the club shoots this year, get up to third place (bronze jewel) if he keeps up the same gait. Mr. Clementi Smith has also advanced from fifteenth to eleventh place. The positions of the other members remain the same.

Walter Winans (S. & W.), winner of gold jewel and revolver championship of the club. Score: 42, 41, 41, 41, 40; total 205. Second prize (silver jewel) and third prize (bronze jewel) will be decided the end of the month.

The above is an exact size diagram of five scores at 20yds.,

possible 210 (30 shots in all), with which Mr. Walter Winans has just won the revolver championship of the South London Rifle Club for 1892.

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| First score | 7 | 6 | 7 | 7 | 6 | 7 | —40 |
| Second score | 7 | 6 | 7 | 7 | 7 | 7 | —41 |
| Third score | 7 | 7 | 7 | 7 | 7 | 7 | —42 |
| Fourth score | 7 | 7 | 7 | 6 | 7 | 7 | —41 |
| Fifth score | 7 | 6 | 7 | 7 | 7 | 7 | —41—205 |

These scores were shot on five different days, the rules of the club for the championship allowing only one score, made each day, to count for the aggregate for the championship. Shot under Bisley rules as to military revolvers, except as to sights.

## New Jersey Notes.

THE regular monthly meeting of the H. R. C. was held Monday, Nov. 7, at 35 Giles avenue. After the regular business was attended to Capt. Hansen read the following proposition in the form of a challenge, viz.:

*Greenville Rifle Club, Jersey City, N. J.:*

This is to certify that Hudson Rifle Club, of Jersey City, does hereby challenge the above-named club to shoot a series of matches, best 2 out of 3, for a trophy to the value of from $15 to $25 upon the following conditions:

Team to consist of 10 men. Each man to fire 10 shots (3 shots allowed each man for sighting), standard 25-ring American target. One match on the H. R. C. ranges; one match on the G. R. C. ranges; one match on neutral grounds to be selected by a committee of two reliable members from each club.

(Signed), C. E. BIRD, Secretary.
H. L. HANSEN, Captain.]

After a little discussion it was decided to forward the challenge to Greenville and await reply selecting dates.

"P. S.—The matches to be shot in three consecutive weeks."

It is rumored that the Hudson Rifle Club is soon to issue a challenge to the Miller Rifle Club, of Hoboken, to shoot a match consisting of five men from each club, each man to fire 50 shots.

There is great competition in the H. R. C. teams for the honors, and the following members are pushing very hard to secure them: First team—J. Rebhan, H. L. Hansen, C. E. Bird, A. Malz. Second team—John Smith, T. A. Reynolds, Michael Hoff, H. E. Boddey. Third team—S. Middleton, A. Heidorf, C. Staderman, J. Buch.

There is very little doubt but that the Hudsons will have lively times this winter at their headquarters, as the members are hustling to secure new members. Monday evening Messrs. Aug. and Geo. Plog, Geo. W. Morgan and Wm. Meyre were elected to membership. THE EAGLE.

## Rensselaerwyck.

ALBANY, N. Y., Nov. 3.—The following scores were made to-day at Rensselaerwyck Range by members of the Third Brigade Rifle Association. Weather conditions were favorable for off-hand shooting:

Off-Hand.

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Wm C Gomph | 9 | 8 | 10 | 10 | 10 | 9 | 8 | 9 | 10 | 7—90 |

R. MCNEIL, JR., Secretary.

# Trap Shooting.

All ties divided unless otherwise reported.

## FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Nov. 15-16.—Ted Ackerman's tournament, at Stanton, Neb.
Nov. 17.—Newark Gun Club live bird tournament, at John Erb's grounds, Newark, N. J.
Nov. 22-23.—Union Gun Club tournament, at Springfield, N. J. First day targets; second day live birds.
Nov. 23-26.—Milwaukee (Wis.) tournament, targets and live birds.
Nov. 24.—John A. Hartner's sixth annual tournament, Bishop's Driving Park, Baltimore, Md.
Nov. 24.—West Virginia State Sportsmen's Association tournament, at Wheeling, West Virginia.
Nov. 24.—Standard Gun Club tournament, Acton's Park, Baltimore, Md.
November.—Al. Heritage's tournament, at Marion, N. J.
Nov. 24.—Arlington Gun Club tournament, at Cleveland, O.
Dec. 28-29.—Jacksonville (Fla.) Gun Club's fifth annual tournament; $500 guaranteed purses; $300 in money and merchandise prizes added. Professional experts barred. Bryan Taliaferro, Sec'y.

1893.

Jan. 10-11.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.
May 23-25.—Knoxville Gun Club tournament, $1,000 added to purses. Also valuable merchandise prizes.
June 12-16.—New York State Sportsman's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry building, Rochester, N. Y.

## DRIVERS AND TWISTERS.

The new Lake View Shooting and Fishing Association opened its new club house on the Santa Fe, about 20 miles east of Topeka, Kas., with a jolly party of friends and members on hand. The event of the day was a match between teams of five men each from the Lawrence Gun Club and the West Side Gun Club, of Topeka. Each man shot at 25 bluerocks, the score being 96 for the West Sides to 78 for the Lawrences. A beautiful flag was presented to the Lake View Shooting and Fishing Association by the following named ladies of Topeka: Mrs. Aus. H. Piety, Mrs. J. C. Clark, Mrs. W. N. Hall, Mrs. George B. Palmer, Mrs. J. W. Nowers. Mrs. Frank G. Willard, Mrs. William Henderson and Miss Maude Buhre. The ladies of Lawrence will present to the club a very handsome lamp for the club's dining room on or before Thanksgiving Day next, at which time the two above named gun clubs will have an all day shoot at live birds and bluerocks. The club, which is regularly organized and chartered under the State Law, and is known as the Lake View Shooting and Fishing Association, has 100 members. About one year ago the organizers of the association secured a lease on the lake for twenty years, including 300ft. all around the lake. The lake is about two and one-half miles long and about 200yds. wide, and is well stocked with fish of the black bass, crappie and sunfish species. The shares of stock in this association are evenly divided between Topeka and Lawrence, holding 50 shares each. At the organization of the association shares of stock sold for $30 each, but they have advanced, the last one sold a few days ago for $80. The officers of the association are: J. C. Clark, Topeka, President; Wm. Bromelsic, Lawrence, Vice-President; W. Metcalf, Lawrence, Secretary; W. N. Hall, Topeka, Treasurer. Board of Directors—J. C. Clark, Topeka; Aus. H. Piety, Topeka; Wm. Bromelsic, Lawrence; J. O. Holloway, Lawrence, and Eben Baldwin, Lake View. The new club house was erected at a cost of $2,585. It is a frame building and has rooms conveniently arranged for the wants of the members. The building is in the rustic style of architecture and has wide porches on all four sides. On the first floor the principal feature is the large dining room. On the side of the room is an alcove and an immense old-fashioned wood fireplace with seats inside the alcove. On the second floor are the private rooms and lockers of the club members. What the boys keep in the lockers no one knows save themselves, as each member has a key to his own locker, and he seldom, if ever, goes to the locker unless he thinks he needs something. The club house and grounds are in charge of S. L. Rench, of Topeka, and the boys think they have the right man in the right place. Mr. Rench's family resides there with him.

The following has been received from J. A. Penn, anent the Thanksgiving Day shoot at Wheeling, W. Va.: "The proceedings in connection with the formation of our State Association have been thoroughly advertised throughout the State, 50 leading papers inserting full notice of same in their columns. Owing to the game season, which will be at its height with shooters here in November, the association will only attempt to give a one-day's shoot Thanksgiving Day in order to entertain the boys from other clubs. In May, 1893, we expect to give a three or four days' shoot to be known as the first annual tournament of the West Virginia State Sportsmen's Association for the protection of Fish and Game. At this tournament we expect to decide the championship of the State on targets and live birds, and shall have an emblem to give to the winner of same, to be contested for annually. This tournament will probably be given the week preceding the World's Fair shoot at Chicago, and one set of traps will be open to all, to be run by Paul North. We expect to make same a grand success, and everything will be done between now and then by the Island Gun Club, of this city (where same will probably be held), and all other gun clubs in the State to bring it to a successful issue and to place the association on an enviable oasis. The tournament Thanksgiving Day will be run under the Parker handicap system, with bluerocks and electric pull, open to all."

Bryan Taliaferro, secretary of the Jacksonville (Fla.) Gun Club, is known to a large number of Northern shooters, having spent several weeks during the early summer in visiting the prominent tournaments, both North and South. We first met him at Winchester, Va., and recall with pleasure a long drive over the famous Shenandoah pike in company with Mr. Taliaferro and A. W. Du Bray. Behind a spirited team of horses we whirled away up over the top of the mountain, passing some magnificent farms en route, and none of us thought of turning back until we reached the old Shenandoan toll-gate, full ten miles from Winchester and well up toward the summit of the range. Long before this the sun had lowered himself behind the western ridge and the stars had begun to twinkle overhead. Mons. Du Bray began to get poetical and there is no telling to what length his fancies would have driven him had not the Jacksonville man reminded him that he had better reserve his eloquence until the following day, when he could use it in making "Parker converts" among the Winchesterians. Mr. Taliaferro informs us that his club will hold a tournament at Jacksonville on Dec. 28 and 29, when there will be awarded $300 in cash and merchandise prizes. There will also be $500 guaranteed in the purses. Professional experts will be barred.

Books are now open for entries for the grand American handicap to be held in New Jersey in January under the auspices of the Interstate Manufacturers' and Dealers' Association, and two entries have already been received at this office. Those who enter are requested not to forget to send $10 forfeit along with their entry, as otherwise their entries will not be filed. The balance of the entry money ($40) must be paid on or before Jan. 1, 1893. Each person entering will be given a receipt for their $10. When the balance of $40 is paid this receipt must be sent along, when it will be receipted in full on the back, this entilling the holder to take part in the contest. Those who have entered at this office to date with their handicaps are F. C. Fowler, 26yds. and Allen Willey 28yds.

It is time that the subscribers to the Interstate Manufacturers' and Dealers' Association held a meeting and discussed the existing handicap, which is an injury to the Association and to the sport. To claim that a man who is once an expert is always an expert is rank nonsense. What the Association wants is a system of handicapping that will class a man according to his shooting from one event to another. The present handicap is driving shooters out of the field at a rapid rate, and the sooner it is abolished the better. Why do not the shooters of the country express themselves on this handicap question? To our way of thinking, the most equitable handicap of the day is the one devised by John Parker and adopted by the Michigan State League.

A private letter from W. T. Mitchell, of Lynch, Va., states that he is having great sport among the quail. He says, "50 to my gun one day; another day 61 to two guns and one evening in 55 minutes I bagged 22, at which point I stopped shooting, having all the birds I wanted. Don't you wish you were down here?" Well, rather.

Several Winchester, Va., shooters will take part in the tournament of the West Virginia Sportsmen's Association at Wheeling, on Thanksgiving Day. Some from Ohio and Pennsylvania are also expected.

Owing to an error in our record of the work of one club during the recent tournament of the New Jersey Trap Shooters' League our list of winning teams was incorrect. The way the clubs stand follows: Independents win first prize and special premium for best average; Boiling Springs win second prize; Maplewood and South Side tie for third place on four, second places won by each, but as they tied in one contest the shooting off of said tie will drop one club out; New Jersey Shooting club win fourth place; Woodside and East Side Mutual tie for fifth place; Passaics win sixth, East Orange and Brunswick tie for seventh place.

Owing to a mistake in summing up we gave, last week, an incorrect list of the standing of the clubs in the New Jersey Trap Shooters' League. Below is the correct standing: First prize and special premium, won by the Independents; second prize, won by the Boiling Springs; third prize, tied for by the South Sides and Maplewoods; fourth prize, won by the New Jerseys; fifth prize, tied for by the Woodsides and East Side-Mutuals; sixth prize, won by the Passaic Citys, and seventh prize, tied for by the East Orange and Brunswicks. Otherwise our report was correct.

At the recent Oregon Exposition held in Portland the management arranged a trap shoot at 20 singles and 5 pairs of Peoria blackbirds, the first prize being a silver water pitcher; second prize a pair of pastell paintings and third prize a basket of cut flowers. There were 15 entries. P. A. Kinzell, C. Merritt and R. Cropkey tied for first prize on 25 each, Kinzell winning on the shoot-off. For second Jas. Caraher, W. A. Story and C. E. Hughes tied on 24 each, Caraher winning the shoot-off; third was won on a shoot-off by W. Monteith, who had tied with R. Parker and Wm. Winters on 23 each.

At the annual shoot for the champion badges of the St. Joseph (Mo.) Sportsmen's Club, each contest was at 10 live birds. In the champion badge shoot J. W. Batchellor and R. S. Dinsmore tied on 9 kills each, Dinsmore securing the badge on the shoot-off. In the shoot for the Franck badge Dinsmore won on a score of 10 straight. There was also a contest at 15 bluerocks for the target badge, this also being won by Dinsmore, who broke 13. In the first two events the birds are said to have been very fast.

The Riverside Gun Club, of Los Angelss, Cal., recently held a banquet in honor of its victory in winning the Shelby team trophy at the State shoot. The Shelby trophy consists of a large plush base, upon which rests a marble slab supported by birds' feet in silver. From this rises a marble column, surmounted by a silver pigeon; guns, ammunition boxes, etc., of oxydized silver are appropriately arranged on the trophy, which is altogether a handsome piece of work.

It is stated that there is a handsome balance in the treasury of the Interstate Manufacturers' and Dealers' Association. If this is true can the manager explain why the promises of the Association were violated in regard to guaranteed purses at Watertown and Auburn? Early in the season the Association pledged itself to give guaranteed purses at all shoots and these pledges should have been kept. The fact of the attendance being light should be no reason for broken pledges.

The shooner Rattler, of Rockport, Maine, which has started for Behring Sea and the Japan Coast in search of seal, walrus and like game, carries forty-eight Parker hammerless shots, weighing 9¼lbs. each, and with 32in. barrels; fifteen .40-65 Winchester rifles, 1886 model; 850lbs. of powder; 2½ tons of shot; 16,000 brass shells; and 82,000 wads. The vessel will carry twelve men to do the game shooting, these being in addition to the regular crew.

Miss Annie Oakley left Newark on Tuesday for Altoona, Pa., to take part in the Wapsononock tournament to-day and to-morrow. From there she will go to Ohio to visit her mother, returning to Jersey in a fortnight. She contemplates purchasing a farm somewhere in the State, probably in the vicinity of Long Branch. She will install her brother on the farm as manager.

All this fall the Bay City (Mich.) Gun Club has tried to get on a team match with the Saginaw Gun Club and several dates have been fixed for the same. In every instance, however, the Saginaws have requested a postponement, and the Bay City men have finally concluded that the Saginaw men are afraid to meet them.

Abe Kleinman, the well-known Chicagoan, recently fell into the river at Washington street, and had a narrow escape from drowning. Having on a heavy overcoat, his swimming abilities availed him little, and it was only by the aid of a rope thrown by a bridge-tender that he escaped a watery grave.

Jack Brewer has been game shooting in Indiana. Wonder if he will visit Chicago before returning. The Chicago *Globe* says he may possibly be at the initial shoot of the Chicago Shooting Club tomorrow. Fulford and Budd will also be there and some matches may be the outcome.

Live-bird shooters who would be willing to enter an open sweepstake at 100 live birds, $100 entry, are requested to send their name and address to the trap editor of FOREST AND STREAM, 318 Broadway, N. Y.

The Parker sliding-scale handicap will be used during the 1893 shoot of the Knoxville Gun Club. And what an entry list that $1,000 in added money and the hundreds of dollars worth of merchandise prizes will draw.

A letter from Dr. H. E Lupas informs us that the Standard Gun Club, of Baltimore, will hold an individual match for the championship of Maryland at Acton's Park on Thanksgiving Day. The club will add a purse and a silver cup.

FOREST AND STREAM would be pleased to publish opinions anent the existing handicaps used in target shooting, and experts and amateurs alike are invited to send us their views for publication.

The ties for the team prizes in the New Jersey Trap Shooters' League will be discussed at the coming League meeting, and the manner of deciding the same will then be determined upon.

Teams of eleven men each from the Highland and Forester Gun Clubs shot a match at Moline, Ill., on Oct. 23, at 25 targets per man, the Foresters breaking 200 to their opponents 170.

E. D. Miller, who made the fine percentage of 92.44 in the team contests of the New Jersey Trap-Shooters' League, used the same Parker gun that he has manipulated for three years.

Parties desiring information anent the 1893 tournament of the New York State Sportsman's Association should address H. M. Stewart, corresponding secretary, Rochester, N. Y.

Frank Mason has returned home from a six weeks' trip through Chicago and the West. He says he met many old trap-shooting friends en route.

What gun club in America will pit a team of 10 men against a like team from the Newark (N. J.) Gun Club for a match at 10 live birds per man?

All the Jersey experts and many from other States are expected to attend the live bird tournament of the Newark Gun Club, at John Erb's, on Nov 17.

The Orlando Gun Club tournament, announced to take place at Orlando, Fla., the last week in October, was postponed to a later date

Ted Ackerman's annual tournament will be held at Stanton, Neb., on the 15th and 16th inst., and an attractive programme has been published.

Oscar Hesse, of Red Bank, N. J., reports a growing demand for the smokeless Walsrode powder, of which he is sole agent for the United States.

The West End Rod and Gun Club of Newark will hold a live bird and target shoot on its Grove street grounds on Thanksgiving Day.

The Keystone company is putting up more new target machines and hopes to be able to catch up with their orders by spring.

The Union Gun Club tournament, at Springfield, N. J., on Nov. 22-23, will be attended by a number of well-known Pennsylvanians.

Among the treasures brought home by "Little Sure Shot" is a five-months-old puppy dog of the famous Pinlimmon strain.

Every West Virginia sportsmen's club is expected to send a delegate to the convention in Wheeling, on Nov. 24.

The Arlington Gun Club, of Cleveland, Ohio, announces a grand open tournament to take place on Nov. 24.

The Milwaukee live bird and target tournament, Nov. 24-26, is expected to be the best attended of the season.

The Lynn (Mass.) Fish and Game Protective Association will hold a trap tournament on Thanksgiving Day.

Frank Butler says that Mons. Journeau, the French expert pigeon shot, is the best second-barrel shot he ever saw.

Every gun club in New Jersey should take part in the coming series of team contests of the State League.

Jack Brewer will have a handy task to defeat "Snapper" Garrison with the odds he allows the latter.

The New Jersey Trap Shooters' League will begin a new series of team shoots before the holidays.

The New York Athletic Club has arranged to hold weekly shoots at Travers Island during the winter.

The Essex Gun Club will hold its monthly shoot at live birds on the Marion grounds, next Thursday.

"Little Sure Shot" will be one of the star attractions of the Wild West Show, in Chicago, in 1893.

The gun and ammunition firms will soon be deluged with applications for 1893 calendars.

Some big open sweeps are to be arranged for John Erb's shooting grounds this season.

John L. Brewer is still seeking for matches but no one seems willing to face him.

Jas. F. Thompson intends to organize a gun club in Martinsburg, West Virginia.

The New Jersey Shooting Club will hold its regular shoot at Claremont on Saturday.

"Big Jim" Smith will hold a live bird shoot at Hackettstown in December.

Shooting will begin at 9 A. M. during Newark Tournament day, Nov. 17.

Paul North says bluerock targets and expert traps are "cock of the walk."

H. A. Penrose was looking after his interests in town last week.

The V. L. & D. "Lightning" shell is rapidly gaining friends.

E. C. powder has the call in and around Washington, D. C.

"Tee Kay" Keller has returned from his Southern trip.

The Willey—Smith match is still hanging fire.

Harvey McMurchy was in town last week.

C. H. TOWNSEND.

### The Pot Cover Trap Club.

THE trap-shooting craze has at last struck New Brunswick. The sportsmen of St. John and Dorchester have been pulverizing the inanimates for some time. Late last winter the Fredericton Gun Club, alias the Pot Cover Trap Club, was organized, and of this body I propose to give a short sketch. It is small as regards the number of members, but what it lacks in size it makes up in individuality. There is probably nothing in North America just like it.

Its membership is limited to 13. It has for its object the making of its members quicker and better shots on game. (Incidentally, every member is a reader of FOREST AND STREAM). Every member must be a sportsman—one who goes afield after game, and all pot hunting and sweepstake shooting is resolutely sat down on. Each man shoots, pays for his share of the birds and is satisfied. If he beats some one else he wears his honors modestly; if he is at the tail of the drive, as some one must be, he has had a heap of fun, anyway, and is no worse off than the winner.

The boys took part in a shoot in connection with a picnic where a painting was offered for the best score, and they talk of having a medal for the best average during the entire season, but that is probably about as far in the direction of shooting for prizes as they will ever get.

The first regular shoot of the season was held at Camp Comfort, Hart's Island, July 1, and the veteran Indian guide and canoeman, Joe Paul, was taken along to prepare dinner. Joe had understood that they were going to have a shoot, but his ideas on the subject of the kind of game to be killed were a little hazy. When they began to unpack the bluerocks, and it dawned on his mind that these were the targets, he asked in surprise: "You shoot them pot-covers?" And pot-covers they have been ever since. That is how the club got its best known name.

One of its promoters, as well as one of its most active members is A. Moore. When "our uncle Adam" unlimbers that old 10-bore hammerless, and goes into action, he has a nasty habit of making "straights" and getting them nearly all. At the picnic shoot mentioned above, he got 23 out of 25, and to see how long he could keep this sort of thing up, he was allowed to shoot at twelve more, which he broke, when the trapper struck and refused to play "flushes" against his "straights" any longer. If he continues to tread this "straight" path, he will be made the subject of a ten yard handicap.

W. Chestnut, of R. Chestnut & Sons, shoots in the same class with the writer, inasmuch as sometimes he gets them and sometimes he doesn't, but unlike the latter, he gets them a little the oftener.

W. H. Lawrence finds 'em "pretty middlin' often," but if you want to see W. H. shoot his best, you must get him after a couple of whistler ducks. He cuts his inner powder wad from the vamp of an old shoe, and if you could see him smash his game right and left, it would shake your faith in the popular delusion that an old shoe, or any part thereof, thrown after one means good luck.

David Cremin, as a game shot, is noted for the ease and celerity with which he can miss his bird with the first barrel and plaster it all over with the second. Indeed, it is said that he sometimes fires his first to confuse the game and his second to kill. A young New Yorker, who saw him shoot, said he was like John L. Sullivan—"he depended chiefly on his deadly left." He shoots best in the gray dawn of morning, when "somebody" isn't looking, and on inanimates, if allowed both barrels, it is a mighty tough and nimble bluerock that can get away from him.

W. H. Moore, a young taxidermist, and an occasional contributor to the Natural History columns of FOREST AND STREAM, does his best work about the same time of day as David, but he never gets rattled. He is considerably handicapped by a too open shooting gun.

Harry Chestnut can give an Indian points on propelling a bark canoe, and when he trains that 12-gauge Lefever on a 90yds. incoming bluerock, he crushes it to impalpable powder, just a little coarser than smoke.

A. Jackson is the club's long-range man. A trap to get a bird beyond range of the old 10-gauge Ithaca in his hands would have to throw at least 80yds.

There is a young man, not yet admitted to full membership, who says he shoots a "mortified choke" gun and can get them oftener than any one in the club. A gun like that ought to be a "deadly" weapon, and many of us would like to see the combination working.

Mr. Byron Phair, of the Postal Service, was not at the shoot I attended. He and Mr. Arthur Porter—another Pot Cover man—were on the Miramichi with Harry Braithwaite, the veteran trapper, after moose.

Mr. Porter is regarded as one of the coming shots of the club, and the new 10-gauge Lefever he has ordered will, in all probability, when he "gets its hang," enable him to roll up even better scores than he has made heretofore.

A Lefever "fever" seems to be breaking out among the boys, and some of them talk of discarding guns of standard makes and ordering that "brand." Harry Chestnut's gun is responsible for this state of affairs. It hangs nicely, is a good shooter, and has enough cast-off to enable a man with a decent breadth of shoulder to find the center of the rib without straining the cords of the neck.

I have the scores made at the last shoot, but in deference to the wishes of some of the club members will not forward them.

The final shoot of the season will be on Thanksgiving Day, Nov. 10. L. I. FLOWER.

### Shooting at Ridgewood Park.

THE bitter cold gale of Saturday last did not prevent the members of the Ridgewood Gun Club from holding their proposed team shoot at C. Deckelmann's Ridgewood Park. John Schliemann and L. C. Gehring captained their respective teams of seven men, who each shot at 10 birds, 25yds. rise, modified Long Island rules. John Schliemann with his straight score of ten was the means of his team winning by the score of 40 to 36. The losing side had to pay for wine suppers for the teams and guests as well as for the birds. The hot supper was very welcome after such a cold blustering afternoon's outing. A return match will probably be arranged during the month. The score:

| Schliemann's Team. | | Gehring's Team. | |
|---|---|---|---|
| J Schliemann | 1121212112—10 | L Gehring | 0002020201— 4 |
| P J Eppig | 1210211021— 8 | F Ibert | 1221200212— 8 |
| J Schneider | 0020012020— 4 | J Welz | 0012012122— 7 |
| I Martin | 0002002000— 2 | G Dutch | 0 0020020— 4 |
| C Deckelman | 0100020010— 3 | G Kudel | 1020002012— 6 |
| G Kramer | 1122020220— 7 | C Wagner | 0020020200— 3 |
| C Laeger | 1120020220— 6—40 | H Waegells | 0200122000— 4—36 |

Referee, Conrad Laeger. Scorer, F. J. Martin.

### Ephrata Gun Club.

EPHRATA, Pa., Oct. 31.—The members of the Ephrata Gun Club held a special meeting last Saturday afternoon and engaged in target shooting, each shooter getting 50 birds in two matches of 25 birds each. The following are the best scores made, five Keystone traps being used: W. L. Bixler 17, S. E. Sharp 17, C. W. Gier 17, W. D. Winters 16, J. M. Krouse 16, Geo. A. Heilig 11, R. W. Bickley 9, A. Heinsman 7, E. Alrich 13, Dr. Reamsnyder 13. The Ephrata Gun Club enrolls a membership of 125, among which are some fair shooters. SAMUEL L. SHARP, Sec'y.

## Chicago Traps.

CHICAGO, Ill., Oct. 23.—Energetic and well conducted Garfield Club of Chicago issues a neat card showing the record and percentage of each shooter for the past year. As example for other clubs this is given entire as submitted by Secretary Brown.

GARFIELD CLUB PERCENTAGES.

| | Shot At. | Broken. | Percentage. |
|---|---|---|---|
| **Class A.** | | | |
| James P. O'Brien | 210 | 185 | 84 1/10 |
| Thomas O'Neil | 180 | 151 | 83 9/10 |
| H. B. Tefft | 260 | 210 | 80 8/10 |
| C. P. Richards | 320 | 246 | 80 8/10 |
| Edw. Steck | 340 | 269 | 79 1/10 |
| Thomas P. Hicks | 400 | 309 | 77 2/10 |
| F. E. Coppersnoll | 400 | 312 | 74 2/10 |
| Charles Antoine | 80 | 59 | 73 7/10 |
| Charles Grubbs | 120 | 88 | 73 3/10 |
| J. H. Robbins | 80 | 58 | 72 5/10 |
| J. W. Meek | 160 | 116 | 72 5/10 |
| M. L. Bowers | 300 | 212 | 70 7/10 |
| Silas Palmer | 280 | 190 | 67 8/10 |
| George Lauterbach | 340 | 220 | 64 7/10 |
| M. R. Bortree | 280 | 148 | 56 7/10 |
| **Class B.** | | | |
| Samuel Young | 260 | 183 | 70 4/10 |
| G. H. Brown | 360 | 243 | 67 8/10 |
| E. M. Ackerman | 220 | 143 | 66 |
| F. R. Campbell | 280 | 180 | 64 1/4 |
| F. E. Pilz | 340 | 217 | 63 8/10 |
| William Northcott | 260 | 157 | 60 4/10 |
| F. S. Baird | 300 | 179 | 59 7/10 |
| G. S. Norfolk | 100 | 57 | 57 |
| John Northcott | 340 | 191 | 56 2/10 |
| William Palmer | 300 | 166 | 55 1/3 |
| S. M. Meek | 100 | 41 | 41 |
| William Sparks | 60 | 24 | 40 |
| **Class C.** | | | |
| A. C. Paterson | 220 | 136 | 61 8/10 |
| D. S. Stevenson | 140 | 64 | 45 7/10 |
| A Cruver | 180 | 81 | 45 |
| F. A. Hodson | 340 | 153 | 44 1/3 |
| A. V. Drake | 300 | 121 | 40 1/3 |
| Thomas Meek | 80 | 30 | 37 1/2 |
| **Unclassified.** | | | |
| W. R. Fleming | 60 | 38 | 63 1/3 |
| O. Johnson | 50 | 30 | 27 7/10 |
| N. Burkland | 40 | 14 | 35 |
| Charles Eseman | 20 | 7 | 35 |
| T. A. Snow | 60 | 20 | 33 1/3 |
| A. Peters | 20 | 5 | 25 |
| P. A. Schriver | .. | .. | ..... |
| Townsend Smith | .. | ... | ..... |
| Thomas Pond | .. | ... | ..... |
| James McElligott | .. | .. | ..... |
| B. B. Jones | .. | ... | ..... |
| E. Hough | .. | ... | ..... |
| B. W. Goodsell | .. | ... | ..... |
| William Green | .. | ... | ..... |
| N. Rowe | .. | ... | ..... |
| Charles Ball | .. | ... | ..... |
| F. W. Lamb | .. | ... | ..... |
| F. L. Srevenson | .. | ... | ..... |

James P O'Brien wins Class A medal; Samuel Young wins Class B medal; A. C. Paterson wins Class C medal

GEORGE H. BROWN, Secretary.

## Live Birds in the Delaware Valley.

MENTION a live bird shoot to a Jerseyman and he will forego his dinner for the sake of taking part. Incidentally a few Jerseymen got wind of the fact that some live birds were to be trapped on Oct. 26-27 at Roxbury, a small village in the Picturesque Delaware Valley, and as a consequence when the initial event was called there were on hand such jolly Jerseymen as "Bill" Apgar, the whole-souled boniface of Frenchtown; Mahlon Fox, "the shooting blacksmith," and Ed Updegrove, formerly president of the now defunct Mercer Gun Club, both of Trenton; Miller Mowder, of Netcong; Brink, Schenck and Fred Searle, Jr., of Belvidere, and "Big Jim" Smith, of Hackettstown, who brought along a big bag full of his famous "kill-'em-all" hand-loaded cartridges, which were in great demand after "Jim" had shot himself into first place in several consecutive sweeps. Among the shooters were also noticed George Givens and "Mack" of Easton, Pa. The weather was favorable on both days and the birds a fair lot, very few of them having to be flushed.

The only incident of note was the shooting of a boy by one of those parasites popularly known as a "bushwhacker." The charge struck the boy in the face, but fortunately escaped his eyes. It is about time that this outside shooting is stopped, and measures to stop it should be taken by tournament managers.

Below are the scores in detail of the various events. On the first day Nos. 1, 2 and 3 were at 4 birds each, $3 entry; No. 4 at 8 birds, $8 entry, and No. 5 at 3 birds, $2 entry. All the shooting was under Hurlingham rules:

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. |
|---|---|---|---|---|---|
| Smith | 2121—4 | 2111—4 | 1111—4 | 12111121—8 | 111—3 |
| Apgar | 2211—4 | 2212—4 | 0212—3 | 11212111—8 | 211—3 |
| Fox | 1111—4 | 1113—4 | 2212—4 | 01121112—7 | 221—3 |
| "Miller" | 1221—4 | 2212—4 | 1211—4 | 02211110—6 | 211—3 |
| Givens | 1112—4 | 2110—3 | 0110—2 | 21211221—8 | 112—3 |
| "Mack" | 1210—3 | 1112—4 | 0111—3 | 11111120—7 | 211—3 |
| Updegrove | 2120—3 | 1121—4 | 2021—3 | 00112211—6 | 201—2 |
| Pierson | 0220—2 | 1112—4 | 1212—4 | 12201201—6 | 101—2 |
| "Schenck" | .... | 2101—3 | 1021—3 | 11012001—5 | 212—3 |

## The Waverly Gun Club.

THE regular monthly shoot of the Waverly Gun Club was held on Monday, Nov. 7, at Dexter Park. Only six members were present to compete for the club's gold medal at 70 bluerocks each, 20yds. rise. A strong westerly wind was blowing, which considerably bothered the shooters, hence the small scores. C. Mohrman was the winner with 5. The live bird sweepstake was the best of the day, darkness preventing the ties to be shot off. The scores:

Shoot for club medal, 10 bluerocks:

| | | | |
|---|---|---|---|
| M Schultz | 1010000000—1 | G Ellerhorst | 0000000901— 1 |
| L Grave | 0111000100—4 | G Hulmer | 0001101100— 4 |
| G Helmstead | 0100010101—4 | C Mohrman | 1010010010— 5 |

Live bird sweepstake, 5 birds:

| | | | |
|---|---|---|---|
| M Schultz | 21020—5 | G Ellerhorst | 00022—2 |
| L Grave | 21121—5 | C Mohrman | 12222—5 |
| G Helmstead | 21112—5 | | |

Sweepstake shoots, 6 targets, 25 cents entry, 2 moneys in each.

| | | | | | |
|---|---|---|---|---|---|
| M Schultz | 010070—1 | 110100—3 | 000010—1 | 011100—3 | |
| L Grave | 010110—3 | 001111—4 | 011000—2 | 000001—1 | |

| C Mohrman | .... | 100110—3 | 000001—1 | 000111—3 | |

Referee and scorer C. A. Dellar.

## Charter Oak Tournament.

CHARTER OAK, Ia., Oct. 25.—The first annual tournament of the Charter Oak Gun Club commenced Monday morning with a fair attendance. Bluerock targets were used, and the live birds were shot from 5 ground traps. They were a good lot and kept the shooters guessing to make a straight score. Monday evening the gun club gave the visiting sportsmen a banquet and a pleasant evening was enjoyed by all present. To-night the most of the shooters go to Omaha to attend a three-days' tournament.

Every one was highly pleased with the Charter Oak tournament, and when the second annual tournament comes off the boys will all be on hand. Among the shooters in attendance were Parmalee, Read, Smith and Nason, Omaha, Neb; McWilliams, Arff, Abbott and Saul, Charter Oak; Elliott, Kansas City; Abischere, Campbell, Meares and Baer, Dennison, Ia.; Ackerman, of Staunton, Neb.; H. J. and E. D. Trotter, of Kingsley, and Budd, of Des Moines.

*First Day.*

Summary of the target events is as follows:

| | 1 | 3 | 4 | 5 | 7 | 9 |
|---|---|---|---|---|---|---|
| Abbott | 12 | 17 | 8 | 16 | 11 | 17 |

C. W. BUDD.

## Big Matches at Harrisburg.

HARRISBURG, Pa., Oct. 26.—The shooters of this section are once more beginning to show signs of life, and matches galore are being talked up. The opening contest of the season took place yesterday on the grounds of the Harrisburg Shooting Association, when C. E. H. Brelsford and John S. Dustin tried conclusions at 100 targets each for a stake of $100 a side. J. H. Worden was referee and H. B. Shoop scorer. The time of the match was 47 minutes, and here is the score:

| | |
|---|---|
| Brelsford | 1111101111111111101111111101—22 |
| | 1011111111111111111111111111—24 |
| | 1111110111101111111111101111—22 |
| | 1011110111111111111001110011—20—88 |
| Dustin | 1101110011111111111110110—20 |
| | 1111110111011111111111111—23 |
| | 1111111111101110011010100—18 |
| | 1111011111111111111101111—23—84 |

This afternoon J. H. Worden and J. S. Dustin had a go at 80 live birds each, 20yds. rise, for $100 a side. H. B. Shoop was referee, Philip Swob scorer, and George Fleming trap puller. The time of the match was 1h. 47m. The wind was blowing a gale from score to traps, and the birds were an excellent of flyers. The scores:

| | |
|---|---|
| Dustin | 1222111111112122121—20 |
| | 1110121212122111118—19 |
| | 2111112202122122111—19 |

| | 1120112122111111021—18 |
| | 2111210112201011110—17 |
| | 2121212020202212201—18—74 |

## Traps at Watson's Park.

BURNSIDE, Ill., Nov. 4.—Scores made here to-day by the Chicago Shooting Club for club medal and small sweep added, 20 live pigeons each under new Illinois State rules:

| | |
|---|---|
| Wdsw'th | 12220202002022202w. |
| Atwater | 20201020022122102w. |
| Heikes | 22201112[1]12101021022—16 |
| Anson | 11100120120 02212w. |
| Mussey | 22202210322102200—14 |
| Dicks | 10000030010012202[1]w. |
| Adams | 00002120002012222w. |
| Kleinman | 01221222212111211011—18 |
| Watson | 02112202010010201w. |
| Thomas | 20022202202222212222—16 |
| Cairncross | 01110120102211112201—15 |
| B Rock | 10112220101 0 w. |
| *Patterson | 10010121111111w. |

* Guests.

Kleinman won the medal and first money, also the tie brought from the last shoot. Heikes and Thomas div. second, Cairncross third.

Birds good and brisk, N.W. wind blowing across the traps from the left.

RAVELRIGG.

## The Great Shoot at Milwaukee.

MILWAUKEE, Nov. 11.—*Editor Forest and Stream:* Richard Merrill, E. P. Thomas and A. H. Chapman are hard at work preparing for their live bird and artificial target tournament which is to take place in this city Nov. 23, 24, 25 and 26, and judging from the amount of local interest that is being manifested and the letters of inquiry they are receiving from all sections, it is going to be one of the most successful meetings ever held in the West

The tournament is open to the world; no one handicapped or barred.

With the large number of entries in prospect and the $800 added by the managers, the purses in the live bird events ought to range from $100 to $500 each. An extra lot of birds have been procured. They will be shot out of King traps.

Inanimate targets will be shot from traps on one side of the club house where it will not interfere with the live bird matches. U. S. targets and Best's trap pull will be used.

This tournament opens the trap-shooting season in this city, and from then on the clubs in general will hold their regular weekly shoots. There are several matches with outside clubs in prospect. The Milwaukee Field and Trap Association expect to soon try conclusions with clubs at Waukesha, Whitewater and Janesville, as well as settle matters between themselves and the genial Fort Dearborn Gun Club, of Chicago, who defeated our boys in one match and received a similar compliment in return. We are all looking forward with pleasure to the day the championship will be determined. No doubt both clubs are confident of winning. The result will be very interesting

J. P. CARMICHAEL.

## Shooting at Dexter Park.

A very pleasant sweepstake and match shoot had been arranged to be shot off at Dexter Park last Saturday by Alec Blinn and a party of friends, but on arriving at the grounds they found a stiff northwest gale blowing, so the majority of the party backed out and let Blinn shoot out his birds, and to the suprise of all present succeeded in killing 43 out of 45, when he had to give up from the cold—he had backed himself to kill 40 out of 50. Mr. Blinn is an old member of the Lake Ronkonkoma Gun Club, and he was elated at the fine score made under such adverse weather. His seventeenth bird fell dead out of bounds, and his fortieth was a fast right quartering driver. The score:

| | |
|---|---|
| Alex Blinn | 2211121121212101121212111111111111112101221—43 |
| A. Rice | 20120 — 3 |

E. Rankin, E. Blinn, M. Euler withdrew.

## The Crescent Gun Club.

THERE was a very small attendance at the regular monthly shoot of the Crescent Gun Club at Dexter Park, L. I., on Thursday, Nov. 3. Only five members competed for the best averages of the season, for a Parker hammerless gun and other annual prizes, also first and second extra club prizes for the shoot. J. Vagts and Walter Gilman tied for the first prize with seven each and the tie was shot off in the following sweepstake. C. Hubbell took the second prize with a score of six. In the sweepstake shoots the ties doubled up and the final result was W. Gilman took first and J. Siegmund second. The scores:

Club shoot and three sweepstakes, 25yds., $1 entry, 2 moneys:

| | Club Shoot. | 1st. | 2d. | 3d. | Ties. |
|---|---|---|---|---|---|
| C Hubbell | 1201112—6 | 21221—5 | 11011—4 | 011—2 | 10 |
| J Vagts | 1112111—7 | 11122—5 | 12110—4 | 021—2 | 1210 |
| P Jones | 2112001—5 | 11110—4 | 00122—3 | 211—3 | 1120 |
| B H Morry | 0202202—3 | 22100—3 | 00121—3 | 112—3 | 0 |
| W Gilman | 1111111—7 | 01211—4 | 12111—5 | 110—2 | 1122 |
| J Siegmund | | 21011—4 | 10101—3 | 212—3 | 2122 |

## The Atlantic Rod and Gun Club.

THE Atlantics had a fine day's sport at the West End grounds, Coney Island on Thursday, Oct. 27. The principal competition was for the Newton diamond badge and extra added prizes. Nineteen entered each to shoot at 10 birds, club handicap. C. Monsees, C. Furguesen, Jr., and C. E. Morris had each won the trophy three times, which made shoot interesting. The two first-named again tied with W. F. Sykes on straight scores of ten, but on the shoot-off D. Monsees added another win to his list by killing 5 more straight. The scores:

| | | | |
|---|---|---|---|
| R J Sutherland | 1o12202122— 8 | C Fuguerson | 1121221211—10 |
| J B Vorshea | 1111211210— 9 | G Roderick | 1112110120— 8 |
| E H Garrison | 0000202220— 4 | G Nostrand | 1100012102— 6 |
| C E Morris | 2111210210— 8 | T Buckley | 0202012111— 7 |
| R Newton | 0122110010— 6 | J Dooley | 0003121010— 5 |
| H Kromka | 0112010120— 6 | D Monsees | 1212122211—10 |
| C M Meyer | 9 | G Kleist | 6 |
| W F Skyes | 10 | J Jamieson | 4 |
| C A Sykes | 8 | D Deacon | 8 |
| C Mohrman | 6 | | |

Sweepstake shoot, miss and out, $2 entry, 30yds, rise: E. Garrison 22222222, C. Furguerson, Jr. 12222210, C. M. Meyer 10, C. E. Morris.

## Glenmore Rod and Gun Club.

SEVENTEEN members of the Glenmore Rod and Gun Club competed at Dexter Park on Wednesday, Oct. 27, for the Claus diamond badge. There was several ties on 7 straight for the trophy, which was again won by R. Phister, Jr., the winner of the Eppig badge of last season. Most of the members were somewhat depressed at the absence of Ex-President Peter Sutter, who was very sick with pneumonia, and his death resulted the next day. The scores:

| | | | |
|---|---|---|---|
| R Phister, Jr. | 1111111—7 | W Vorbach | 1011221—6 |
| W Levens | 1101222—6 | J A Still | 2201110—5 |
| J Schlieman | 1111110—6 | C McGee | 0101101—5 |
| C Englebrecht | 2222211—7 | W Linnington | 0021110—4 |
| M E Hayden | 1221222—7 | F Maier | 1101211—6 |
| T T Edgarton | 2101110—5 | A Du Bray | 1001222—5 |
| J Young | 2212010—5 | P J Eppig | 1001101—5 |
| W Hartye | 2111101—6 | C W Vincent | 2201121—5 |
| P Reed, Jr. | 1121211—7 | | |

Sweepstake shoot at 5 birds, 25yds., $2: C. Englebrecht 3 J. Young 3, J. Schlieman 5, P. J. Eppig 5, M. E. Hayden 3, C. Vincent 5.

## Sweepstake Shoot.

A GOOD sweepstake shoot was held at C. Deckelman's Ridgewood Park on Saturday, Oct. 29. The conditions were each man to shoot at 25 live birds, 25yds. rise, modified Long Island rules, gun below the elbow until bird was on the wing, the loser to pay for a champagne dinner and the next lowest the birds. The scores:

| | |
|---|---|
| P J Eppig | 1200110010010201021202112—15 |
| J Schneider | 2110011010210200120120l—15 |
| J Welz | 2110101010201201010120l—17 |
| C Deckelman | 0001210110000100010202112—11 |
| I Martin | 2101201201201300011112—14 |
| F Ibert | 2120212010210-21212112122—19 |
| J Simpson | 2202020102011212212122200—18 |

Sweepstake, 5 birds, same conditions:

| | | | |
|---|---|---|---|
| J Simpson | 12121—5 | P J Eppig | 12020 3 |
| F Ibert | 10011—3 | | 01011—3 |

## Saratoga Gun Club.

SARATOGA SPRINGS, N. Y., Nov. 1.—The Saratoga Gun Club takes pleasure in announcing its first live-bird tournament, which will be held on its grounds Tuesday, Nov. 15 next. If this tournament proves a success in its attendance, it will be the precursor of a series of pigeon shooting matches, given each fall and conducted upon the same liberal scale of our inanimate target tournaments.

Twelve hundred of the best birds procurable have been secured, all strong flyers, and such as will give first-class sport. We do not expect the shoot to prove profitable, as the birds are charged for at as near their actual cost as possible, viz., 25 cents for birds and we keep those killed, or 30 cents each and the shooter to keep them.

W. H. GIBBS, Secretary.

## The First German Gun Club of New York

Held a club shoot at Dexter Park on Tuesday, Oct. 25. Only ten members were present to compete for a club medal at eight live birds each, twenty-five yards rise. C. Dietz was the winner with straight score of seven. Scores:

| | | | |
|---|---|---|---|
| G Rested | 00011011—4 | G Grau | 10110111—6 |
| A Goetz | 10110011—5 | A Stolzenberger | 11100011—5 |
| F Schell | 11106110—5 | C Pfaff | 01111011—6 |
| J Schwaack | 00101211—5 | P Wannemacher | 10101110—5 |
| A Neusch | 10110111—6 | C Dietz | 11110111—7 |

### The Utah Championship.

OGDEN, Utah, Oct. 21.—The fourth contest for the championship of Utah took place in this city yesterday and was won by Dermody, the present holder of the badge. Conditions, 40 single bluerocks, 5 unknown traps and 10 pairs. Score:

| | | |

OGDENITE.

### An Expression from Virginia.

LYNCH, Va.—In a recent issue of your journal I noticed your comments on the slim attendance at our shooting tournaments and think you arrive at a wrong conclusion. I think the trouble is that as shoots are now conducted they are most all in the interest of clubs giving them. Nearly all are run as a money-making scheme for the managers, and as the shooters are on such a plane of equality that when they have paid the small entrance and taken out three cents for each target there is but little chance for a shooter to get back much more than his entrance, and as this is becoming known, the shooters who would travel to these shoots were there a chance to win, stay away. This, and a failure of managers to stick to their published programmes have about killed target shooting. You seldom see men at these shoots except local shots, unless there is good added money, as guaranteed money is no longer a drawing card since the ridiculous action of the manager of the Manufacturers' and Dealers' interstate shoots in cutting down guaranteed purses, and last but not least, changing their last shoot into a sweep to save the guarantee, and I must say I doubt if the paltry saving to the association met their approval when it made their association the laughing stock of the shooters of the world, as there was an implied contract between each shooter attending their shoots that they would be run under the published programme, and it was a breach of faith for the management to change the same, and had these shoots been run otherwise no doubt they would have been a success, as they opened up well at Baltimore and had a good entry at Stanton, where the cloven hoof first appeared, and friends were protected and guarantees cut down, from which time a repetition of the same, till to-day a corporal's guard cannot be mustered to their shoots. But let us hope their unwise course will be the means of showing others the folly of trying to hoodwink the shooters, and evolve a system that will draw hundreds to their tournaments. I would suggest as a trial that known angle shooting be abolished, as it is too much like child's play to see men standing at the score with butt of gun to their shoulders, with muzzle pointed nearly at the place of the apex of the target's flight, when they will only need to swing said guns a few inches, as the targets pass the line of flight, and pull to insure a break, but instead give us all unknown angle shooting and divide shooters upon a more equable base; that is, let all who can break 85 per cent. shoot from five unknown traps, unknown angles, and all who can break 75 per cent. shoot unkown angles from known traps. Let unknown trap shooters shoot from a score in front of No. 3 trap and shoot in squads of five or six when they can shoot fully as fast as by the Keystone system, as the indicator has to be used, which gives ample time for next shooter to step up to score. Then let all ties be shot off at their respective handicap at another set of traps if management so wish, and fully as many targets can be used as under the present system of rapid fire, and the man who has the nerve to stay and win one purse is solid for the day, while should he win twice or more a day he could leave the tournament a bloated bondholder instead of as now, win a piece of every event and be forced to foot it home unless with more than average forethought he provided himself with a round-trip ticket.

W. T. MITCHELL.

## Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

F. S. Greenpoint, N. Y.—The State law on "high-holders" applies to Long Island; they are among the "wild birds" which are protected at all seasons.

A. B., Cain's P. O., Lancaster Co., Pa.—Please inform me what is the best treatment for the distemper in dogs. Ans. Keep the dog indoors in a warm place—nurse well; give one grain of quinine three times a day.

J. W. G. D., Club House, Blooming Grove Park, Pa.—The description of bird No. 1 answers very well to the English or jacksnipe (*Gallinago celata*). Bird No. 2 was the ruddy duck (*Erismatura rubida*), a bird notorious for having 66 different English names. See Trumbull's "Names and Portraits of Birds."

W. R. P.—Please let me know if the true golden-bellied, smallmouth bass ever weighs 5lbs. All those we catch which weigh over 2lbs. have yellowish bellies and some are golden. My largest weighed 4¼lbs., 21in. long, and was as yellow as a perch. Ans. The small-mouth black bass sometimes exceeds 9lbs. in weight. Mr. A. N. Cheney has recorded one in these columns that weighed more than 9lbs.

G. M., Boston, Mass.—I have a setter bitch, and when I came home to-night I noticed a large lump about the size of an egg up near her shoulder just at the bend of the leg. It is soft and puffy; don't seem to hurt any. What shall I do with it? I was going to lance it. Ans. Lance it and keep open for a few days; it will then gradually disppear.

A. N. K., Harrisburg, Pa.—Will you please tell me what to give a young pointer puppy to cure him of fits when taking him out in the field. He does not get them often; only sometimes. The puppy is six months old. Ans. Treat for worms and then give following mixture: Donovan's solution 1dr., water 4oz. Mix. Give one teaspoonful twice a day.

DR J. F. D., Wadsworth, O.—Expecting to go South this winter I wish to ask how we might be able to capture a porpoise, dead or alive. What are the methods used to capture those animals? Ans. The harbor porpoise is probably the kind you will seek in the South, although not the only one that enters the brackish water of river mouths. The Maine Indians shoot the porpoise; fishermen along the coast catch them in fish traps and in gill nets and seines made for the purpose. Still others capture them from boats and vessels by means of the harpoon. By addressing the U. S. Commissioner of Fisheries, Washington, D. C., you may obtain a monograph of the porpoise family containing descriptions of the species and accounts of the fishery. In Florida you may be able to pen a school of porpoises in one of the small creeks which they ascend to feed upon fish, and use a rifle to kill one or a strong seine to capture a living specimen. It is said that drum are sometimes driven ashore and killed by them and tossed ashore. There is sport in store for you if you will chase the porpoise.

W. H. STEWART, New York.—The German ring target is numbered from 25 down to 1, the rings being ¾in. apart. The bullseye is 12in. in diameter, counting from 25 down to 18, inclusive. The measurements of the standard American (200yds.) target are as follows, the entire target being 4×6ft.:

| DIAMETER OF CIRCLES. | | WIDTH OF RINGS. |
|---|---|---|
| 10 circle, 3.36 inches. | Bullseye. | 9, 1.09 inches. |
| 9 " 5.54 " | | 8, 1.23 " |
| 8 " 8. " | | 7, 1.50 " |
| 7 " 11. " | | 6, 1.90 " |
| 6 " 14.80 " | | 5, 2.44 " |
| 5 " 19.68 " | | 4, 3.16 " |
| 4 " 26. " | | 3, 4.11 " |
| 3 " 34.22 " | | 2, 5.37 " |
| 2 " 44.96 " | | |

1 Balance of target, 4×6ft.

The 8, 9, and 10 comprise the Creedmoor bullseye; 4, 5, 6, and the center, counting 4.

### Praise at Parting.

A VIRGINIA subscriber and contributor of long standing writes: "I am in receipt of your card notifying me that my subscription will expire on the 15th inst. I write to say that I wish the paper discontinued after that date. I am getting too old to indulge in field sports. I take leave of the paper with regret, as I have derived much pleasure and profit from the perusal of its pages, and I take this occasion to express my appreciation of the uniform courtesy and kindness I have received at your hands, and to wish for the paper a long and prosperous career.

### The Dog's Fatal Trick.

A RATHER reckless Biddeford man, with no respect for law or gospel, is said to have devised a scheme for catching trout by the wholesale, which did not work as well as he thought it would. He thought that a bomb exploded in the brook would bring all the fish in it to the surface so that he would only have to pick them up. He provided himself with a bomb powerful enough to blast a schooner out of water and went to a local brook in which there were said to be lots of trout. He fixed the fuse, ignited it and threw the bomb into the brook. As he did so, his dog jumped in after it, seized it in his mouth, got back to shore and started after his master who was legging it across the field as fast as he could in the realization of his danger. The man had the good luck to get over a fence, which bothered the dog, and a moment later, hearing an explosion, he looked around to see his dog going skyward.—*Lewiston Journal.*

18 Vesey Street, New York.

The Breech-Loader

AND HOW TO USE IT. By W. W. Greener. Illustrated.

1892. Boards, 288 pages. Price, $1.00.

THE AUTHOR'S INTRODUCTION EXPLAINS:

This treatise is written for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study. Published at a popular price, it will, it is hoped, reach many who have hitherto been deterred from shooting, believing it to be an expensive recreation. The author's aim is to induce all who can to participate in a manly sport, and to advance the interests of those who can look to the gun for pleasure, health or occupation. The book is not written for experts, nor for those who have special opportunities for the acquisition of the art of shooting; and in order to make it as attractive as possible to the general reader, many matters which would interest the enthusiastic shot only have been omitted.

## Hotels for Sportsmen.

# WHERE TO FIND GOOD QUAIL SHOOTING.

There is probably no place in North Carolina where better quail shooting can be had than at Mr. Airy, 70 miles from Greensboro via Cape Fear & Yadkin Valley R. R., or where as good accommodations can be found for the huntsman and his family as at **Renfro Inn.**

**Renfro Inn** is a modern, new hotel, located amid beautiful scenery and in a most healthful climate. The hotel is thoroughly equipped.

I have personally hunted in nearly every county in North Carolina, and for continuous shooting early and late I know of no place equal to this immediate section.

Having secured the exclusive privilege of the best grounds for the guests of the **Renfro Inn**, I feel assured that all sportsmen who desire good shooting and good hotel accommodations will find no better in the South.

I should be glad to correspond and give further particulars.

Address **W. A. BRYAN,**
Renfro Inn, Mount Airy, N. C.
Of the Montouese House, Branford, Conn.

## *THE CAMP AT DAYBREAK.*

IT is still night. In the darkness not a sound can be heard, save now and then the stamp of a horse's hoof on the frozen ground, or, faintly, their plucking of the grass, for the horses begin to feed early. The sounds of the middle night are hushed. The owls long ago stopped their hooting, and now on noiseless wing are making their last hunting rounds before the day shall come.

Within the lodge it is darker than without. On the ground in the middle can be seen a pale shadow—the white ashes of the long cold fire; above, through the smoke hole is a patch of sky less black than the invisible inclosing walls, and in this bit of the heavens shine two stars. In a circle about the fireplace are shapeless white masses—the sleeping forms of men. They are silent and motionless.

Now on the still air very faintly is heard a distant tone of music; a sweet whistle, at first low, rising and falling, then gradually becoming more distinct. It comes nearer and nearer until it fills the air all about, then passing on, recedes, grows fainter, till at last the sound is lost. The wild ducks are flying. From the lake comes a far off trumpet note, and then another—the mellow call of the wild geese. The world is awaking. The day is near.

The stars which looked in at the smoke hole are paling now. Upon the horizon in the east lies a line of gray, which slowly broadens and makes twilight where all before was dark. The outlines of the tree trunks are seen standing like ghosts reaching out shadowy arms, as if feeling their way through the dimness. The chirp and flutter of migrating birds that through the night slept in the low bushes begin to be heard.

As the light grows, dusky shapes appear in the little park behind the camp—the horses feeding. Close to the lodge door, the two dogs are curled up in the grass, still asleep. Their long black coats are white here and there with frost, and in their sleep their muscles twitch as they shiver from the cold; yet their rest is sound.

Day is at hand. Now a stir is heard within the lodge. There are muffled grunts and groans, a yawn or two, the rustling of clothing, then the faint sound of footsteps, and suddenly the pale glare of a match—increasing to a little glow as the shavings catch, and then to a bright flicker which lights up the whole lodge as the larger sticks take fire and crackle, and white smoke and a few sparks float from the smoke hole. Soon the door of the lodge is thrown back. A man steps out and looks about, yawns and shivers. He breaks the ice in the water bucket and pours some in a basin. Others in the lodge are getting up. Voices are heard. The men of the camp pass in and out at the door. Some prepare breakfast, others busy themselves about the packs and lash the bundles. Two of them build a corral of ropes about three trees, and then start off to drive in the horses. Soon these are seen coming toward the camp. The men spread themselves out and drive the animals into the inclosure, where they are caught and tied up. While this is being done the call to breakfast is heard.

Meantime, the light has spread itself over all the heavens. In the east the streaky clouds have flushed to deep red and paled again to richest gold. To the west the snow-clad mountains are wrapped in a garment of rose. Looking again toward the east, the limb of the sun appears over the prairie ridge. The day has come.

## *A NEW CODE FOR VERMONT.*

THE Vermont Fish Commissioners, Messrs. John W. Titcomb and Charles C. Warren, have prepared and submitted to the Legislature a codification of the game and fish laws of the State. Without taking into consideration the merits of all the specific provisions of the bill, it is not too much to say that the enactment of a new statute in such form as here proposed would mean an advance of ten years for the game and fish interests of the Green Mountain State. It is an old story, and most of us know to our cost how the obscurities and blind statements and conflicting provisions of our protective legislation often prevent a popular understanding of what the law means. The very first requirement of a fish or game law is that it be intelligible, understood by the people, the common, every-day average man, who is not versed in legal technicalities nor trained to interpret statutes about the meaning of which, as in the case of the Vermont six-inch trout law, even public prosecuting officers entertain a difference of opinion. If the public is expected to respect and observe a statute, the public must understand the statute, and without paying attorney's fees to have it explained. To make the game law plain is to promote its efficiency. The Vermont laws as now on the statute books are not clear. To overcome the difficulty, to put the law into such simple, direct, intelligible form that there may be no mistaking it, has been the endeavor of the framers of the new bill. It may be explained, for the benefit of others engaged in a like undertaking, that the Commissioners and the Game Law Committee of the Legislature supplied themselves with copies of the *Book of the Game Laws* for the purpose of a study of the legislation of other States, and they appear to have followed closely the new code adopted by New York. As is well known, the New York law was the result of the work of a special codification commission charged by the Legislature with the task of reducing to a clear and consistent code the chaotic accumulation and accretions of years of bungling and tinkering with the statutes. While the New York law is not perfect in all details, it is a model of arrangement, and affords an excellent standard for the work of similar commissions elsewhere, and Vermont has done well to adopt it.

The Commissioners deserve full credit for their intelligent work in this direction; and every friend of the State will share our wish that the bill may be approved.

## *FISH BASKETS AND POOR FISHING.*

THE old, old struggle against illegal fishing is still progressing in Pennsylvania. Fish Commissioner Powell has sent us from Harrisburg a statement of the difficulties experienced by Fish Warden Enos Moyer in destroying fish baskets, nets, and outlines which line the Susquehanna between Muncy and Lock Haven. A spot which is practically favorable for the illegal fisherman and especially fatal to game fish is at the junction of Loyalsock Creek with the Susquehanna. Here the unlawful implements have been destroyed many times, yet they are constantly renewed, and the warden finds it impossible to get sympathy and assistance in performing his duty. The warden continued his work down the river as far as Harrisburg, and removed a great many nets.

The wings or stone dams forming adjuncts to the fish baskets have been repeatedly pulled down, only to be replaced as soon as the officer's back is turned. The Juniata, the Susquehanna, and the tributaries of both rivers are full of these illegal obstructions to the free movements of fish, and many of the wardens are unwilling to remove them and prosecute their owners.

The natural and inevitable consequence of such fishing is a scarcity of fish. Fishermen are dissatisfied with the existing regulations, and are now preparing amendments which they hope to introduce into the fish laws at the next session of the Legislature. Some of them want to use the deadly outline, and others are clamoring for an extension of the trout season from April 1 to August 1, instead of April 15 to July 15, as the present excellent law stands. The Fish Protective Association will have to be on the alert to defeat these threatened dangers to the already precarious future of the brook trout, black bass, and pike-perch. What with the pollution of the streams by mine and mill refuse, and the lax administration of existing law, the fish are having a hard struggle to maintain themselves, and improved fishing is out of the question.

The destructive qualities of fish baskets and outlines are denied by no one who has a grain of sense, yet their employment is made possible through sympathy with the law breakers and fear of incurring their enmity.

## *SNAP SHOTS.*

NOW THAT the Columbus celebration has been forgotten in the excitement of the national campaign, and the election itself has receded into the past, the "time is ripe" for Assistant District Attorney Townsend to consider the practicability of bringing that notorious Delmonico woodcock case to trial. When the new calendar of the City Court was made up last summer, this case was left off from it entirely. But thanks to Game Protector Kidd, it has been restored, and is numbered 2009. There are something less than one thousand cases ahead of it, so that in the regular course it would be reached some time next year. It should be tried in 1892. District Attorney De Lancey Nicoll has stated that it was his wish to have the Delmonico case disposed of as soon as practicable. Might he not instruct Mr. Townsend to move for an advancement of the cause? It is probable that the Court would accede to such a motion if the facts were duly set forth that this case dates from the summer of 1890; that its obstruction in the district attorneys' offices of two counties has been watched with impatience by the sportsmen of the State; and that as the evidence is strong for the People there is little likelihood that the actual trial will consume much of the Court's time.

A Pennsylvania ferret breeder, whose communication is printed on another page, represents that the use of ferrets in rabbit hunting does not exterminate the supply as is usually contended, but fosters it. He accounts for this fact—if fact it be—by a theory which is plausible enough. We believe that it is a matter of record that the supply of skunks in a certain region in Connecticut was once largely increased when the Shakers set to work to trap the animals for their fur; and the same rule has been found to hold elsewhere. The law against ferrets is based on a belief in the exterminating effects of ferreting. It would be interesting to know how far the Pennsylvania ferret man's theory is borne out by observation in other localities. For that matter what place does the rabbit (or hare) hold in popular estimation as a game animal? How is it looked upon by the average gunner, by which is meant the bird shooter? In some States, as in New York, the rabbit has no protection by law.

The political campaign brought out a lot of talk about wildcat currency, and there were reminiscenses galore of the good old days when we had to refer to "Thompson's Bank Note Detector" to determine whether a bill was genuine or not. Now that the campaign is over it may be pointed out that we need to-day not so much a wildcat currency detector as a wildcat and panther yarn detector, to distinguish the true from the counterfeit. Nine out of ten of the newspaper tales of ferocious panthers that lug off women and devour babies are lies of the baldest character, and while they may shed luster upon the imaginative ability of those who get them up, they do little credit to the sagacity of the editors who pay "special" tolls on them.

By means of subscriptions from scientific societies and private donations, a marine biological laboratory has been established at Bergen, Norway, under the direction of Doctor J. Brunchorst. Biological science is already deeply indebted to Norway and will receive still further assistance from this new center of investigation.

The panther's scream is an old subject, but we've never had so much fun out of it. Nor more interesting stories of actual personal observation and experience. The oldest, most thread-bare and bygone topics take on new life and interest when discussed and illuminated by the host of bright FOREST AND STREAM contributors.

The convention of the executive committee of the New York State Association for the Protection of Fish and Game in Syracuse to-day affords every promise of being well attended by delegates representing all sections of the State and sincerely interested in the serious work of the organization.

# The Sportsman Tourist.

## IN WEST VIRGINIA MOUNTAINS.

DO you remember seeing in FOREST AND STREAM within a year mention of the Capon Iron Works, West Virginia? Well, that's where we went, J. P. H. and his friend, for a fortnight's hunt, fish and general relaxation from business, for we are very busy men, J. P. in doing the work and I in watching him. Then, he had a new Parker hammerless which he wanted to break in. These are sufficient reasons for going most anywhere in the fall.

We got away early in the morning. Our train was late into Philadelphia. We had a mile to go to reach the B. & O. station, and just 12 minutes to go it in. We tumbled into a cab, impressed the facts in very few words on cabby, and told him to push on the lines hard. When he drove into the station the engine bell was ringing, the gateman was closing the gates, porters picking up their stools and the conductor cried, "All aboard!"

"Settle the fare," said I to J. P. as I shot for the ticket office, and as I ran I shouted to the conductor, "Hold 'er!" hardly expecting he would, for the train was a Royal Blue Flyer, New York to Washington. In a jiffy the agent wrote two excursion tickets to Capon Road, which I seized, and the gateman slid back the gate as I dashed through, picked up all the grips J. P. hadn't been able to corral, and with the assistance of the porter climbed aboard as the wheels revolved, and we were off for the West, panting nearly as hard as the locomotive. Now, I don't like such haste as that. A man can't go through the motions gracefully, and I am graceful or nothing, but it was that or getting left at Harper's Ferry, so we scrubbed and felt better after we cooled off.

After a pleasant journey via Baltimore and Washington we left the main line at Harper's Ferry, noted for chicken sandwiches, as being the scene of John Brown's mad exploit, and stirring events later, '61 to '65. Part of the gateway of the old U. S. Arsenal and its chimney are still left, but "John Brown's Fort," the little engine house, has gone to Chicago to visit the exposition, along with Libby Prison.

It was now after noon, and kindly waiting for us to tackle a sandwich, the valley train pulled out southward, the romantic Shenandoah on the left just begging us to come out among the rocks and sample its bass. Through Charlestown we went, where John Brown's soul took wing from the scaffold, then through Winchester, now and forever linked with the name of the immortal Sheridan, and so on down the beautiful valley in sight of the famous pike, where hosts of Blue and Gray alternately in victorious pursuit or sullen resistant retreat choked the white road and overflowed into the fields, while the booming cannon and sharp crack of rifle snuffed out life and sent mourning all over the land. We pass Middletown, near which, in surging ebb and flow the famous battle of Cedar Creek was fought with "Sheridan twenty miles away," and at Capon Road, fifty miles below Harper's Ferry, we leave the train.

Here we had hoped to find Mr. Thos. B. Wilson awaiting us, to take us to his home among the beautiful mountains which loomed up in the west, but to our disappointment he was not there, though we had written him of our coming on that train. It was Saturday evening and there was no hotel, though we had been informed by the conductor that Mr. Williams, the store keeper, who had a large, roomy house, usually entertained travelers. He refused, however, saying his wife was ill. So there we were in a pocket, no game pocket either, or it might have been endurable. But there was a hack or stage or wagon just about starting for Capon Springs, a summer resort sixteen miles out, three miles off the Iron Works road. The Springs had just closed house for the season, but the driver said the proprietor was still there and would take care of us, so as there was nothing else to do, and hoping to meet Mr. Wilson en route for us, we tumbled up and were off. The horses, wagon and road were in fair condition, and as the "culled gemman" who handled the ribbons and was custodian of the U. S. mail wanted to reach the Springs in good season, we made very good time. Our course led northwest across the valley to the first range, Little North Mountain, thence across it into the valley of Cedar Creek, just at the ford of which, eight miles out, we found Mr. Wilson and his son Peter—so called because his name is Henry—and a two-horse team on the way to the station to meet us. To say we were glad to see them is to tell the honest truth, and in a jiffy we had changed teams and the horses' heads were turned westward. So the second time this day we hit it when we expected to get left.

This Cedar Creek is the same on which the battle was fought, or for which it was named, flowing here northeast between Great and Little North Mountains, until it can get around the north end of the latter, when it turns southeast, and flowing irregularly across Shenandoah Valley empties into the North Fork of the Shenandoah near the battlefield and the north end of Massanutten Mountain. It would be a lovely stream where we forded it but for a large steam tannery just above, which, in addition to leather, tans the hitherto limpid water a dirty brown, and takes the romance and trout out of it. Along the road we move on, from far away nooks among the mountains come daily many wagons, two, four, six-horse or mule, loaded with tan bark for the tannery, for this bark business is a big one, affording a not very remunerative employment to a goodly number of people. It is all oak bark, and it seems as though the end of any profitable hauling to this tannery was near at hand, so denuded have the mountains become. Indeed we learned that the owners had already begun the erection of another further back in the range. Three dollars a ton was the price for hauling a distance of fifteen miles or so, taking two days for the round trip, crossing and recrossing the mountain. It doesn't seem at first glance, or if you have time, at any other, that there is sudden and bewildering wealth in this, but it is probably better than loafing at the crossstore.

We jogged slowly along, for Mr. W. had already come sixteen miles, not over a race track either, and the same back would make a pretty good day's trip, not, of course, as Hank Monk drove in Nevada, but as they drive in West Virginia, where to-morrow is just as long as to-day. We were now ticketed through to the Iron Works without change, had a large six-spring wagon with more room than we could use, good company, glorious scenery, if one could see it (which they couldn't for the night had come down), so what more would you have. No need of haste. We leaned back at a comfortable angle, and as the moon sailed into the sky concluded that our introduction to West Virginia was about the right thing, the more so as Mrs. Wilson had thoughtfully provided a bounteous lunch which we duly considered. We approached Great North Mountain through something Gap, where on the right, tilted up on almost perpendicular edge a couple of thousand feet or so into the heavens was a Titanic toboggan slide, from which no slider would ever return. With many a question and answer, including many incidents, chiefly hunting, from the life of our host who has lived as did his father and grandfather, in these mountains all his life, we slowly pulled up the mountain, slipped over the crest, made better time down the other side, and over a very good road slid down around the bends into Capon River Valley, turning southward into the Winchester pike, which we kept for a couple of miles, leaving it at a point about three miles from our destination, and zigzagging up the valley of Wait's Creek eastward, fording the beautiful trout stream occasionally, at 11 P. M. pulled up at the front door of the house, which is tucked away here in the mountains rising all about, and which gleamed white in the moonlit clearing as we approached from the wood-shaded road and splashed through the pretty stream that skirts the yard and sings now in pianissimo cadences, for a protracted drought had reduced the streams to nearly their lowest terms and cut short the crops.

Here for many years has Mr. Wilson entertained sportsmen, fishers in the spring, for there are divers trout streams hereabouts, and hunters in the fall who would, but don't always, cruelly slay the timid, graceful deer, the wary, suspicious turkey or the hurtling grouse, for as Mr. W. wrote me, "You can't sit in my back yard and kill game." Mr. W. is a man of truth. There is game in these parts beyond a doubt and also beyond reach of the gun (some guns)—deer, bear, turkey, grouse and squirrel, some plentiful, others scarce, but the stranger needs to be a tramper, a stayer and a good shot, as well as to know the habits of the game, to be able to bag it; even then, not being thoroughly acquainted with the country he is apt to come short of his expectations, which is more or less true of all localities, but especially true of mountainous regions, where you have to climb for all you get.

We spent two very pleasant weeks there, and undoubtedly would have scored better on game had we been a fortnight later, for the leaves were still on the bushes, but we could not go later. We can, however, comfort ourselves with the thought that we left more game for late comers. As an outing simply, it was a success. With new experiences, perfect weather, the loveliest views from jutting crag or wind-swept clearing on the mountain side or crest, charming rambles in shady old back roads, long in disuse, leading everywhere and nowhere in particular, near the sides of which, in the thick undergrowth, the watchful grouse sat silently until you passed and then sped away to safety under cover of his thunder, watching the gracefully poised trout in limpid pool, or far aloft in the upper deep the soaring buzzard, swinging and wheeling, symbol of grace and power.

With such adjuncts to enjoyment, with a little game now and then, together with the efforts of the whole family to make our stay pleasant, the fortnight was quickly and happily passed. We were up betimes in the morning, before daybreak, perhaps, and off to the mountains for squirrel, turkey or a deer drive, and the climb, the quickened pulse, the day's existence in the open air with hearty enjoyment put us in fine trim for Mrs. Wilson's table of good things when we got back, and a restful sleep thereafter.

Deer dogging is prohibited by statute in West Virginia, but driving by men is not. There didn't seem to be much "driving" while we were there, although efforts were not wanting, for the deer in thick cover could skulk or dodge while the beaters went by. Standers are posted at the crossings and drivers go to suitable distances and come down toward the stands in skirmish style, trusting to driving the deer before them; and later this is often successfully done, for then the vision of hunted and hunters is not so limited. Mr. W, and several of his neighbors tried faithfully on several occasions to drive a deer into danger, but without success. One day a deer crossed just above J. P.'s stand out of sight, and getting his wind whistled, which attracted the hunter's attention and a load of buckshot; but in the thick brush the buck was not shot, which was not strange, for he was very nimble on his pins and the cover was heavy. Deer tracks could be found without difficulty, wildcat sign was common (a half-grown one had been killed the week before we were there by Henry and the dogs) and bear range the mountains, one having been killed since we were there.

The Monday before we left had been selected for a deer hunt on Paddy Mountain some miles away, but on Sunday afternoon Mr. W. went up to the ridge field on top of a low mountain, to look after his calves, and took his Spencer shotgun to fend off the bull. Very unexpectedly he ran over, almost, a gang of twenty-two turkeys in the edge of the field—queer how such things happen—and away they all went, with a couple of loads of shot, down the mountainside, and away went Mr. W. to get below them; which he did, after a big detour, and by dark had them well scattered, and came home. With a big flock of turkeys scattered it wouldn't do to go away off somewhere else after deer, so the next morning, while yet the stars sparkled through the frosty air, ere the first flush of day appeared over Great North Mountain, four of us filed into the trail up the steep ascent, with considerable expectation and little noise. Mr. W. led us to the spot of scatteration, nearing which a turkey flew from the top of a big chestnut, and sailed away in the darkness. John Thorpe, a neighbor and good caller, with J. P., took one position, while Mr. W. and I went further down. As the darkness faded, I heard a faint call, and while I was trying to locate it, a bang from the rear broke the stillness and a hen turkey's neck at the hands of J. P., to whom it had been called by Thorpe. I imagine my friend felt a trifle "toppy" as he picked up his first turkey, America's most royal game-bird. Not another shot did we get, nor bird did we see, though Mr. W. said he heard some below us, and quietly intimated that I scared them away by my calling. Perhaps that was so, for it is long since I had practice, and then I was calling only for young green birds, and didn't want any old sharps around to take exceptions, (I'm not referring to Mr. W.) The next morning, however, he surprised a lost hen in a field on the mountain, and brought her corpse to the house. That was the sum total of our turkey bag, though I saw eight streaking it across the upper end of the same field one day, but couldn't come up with them, and J. P. saw presumably the same flock in another place, but the leaves were so dry that it must have been a deaf turkey, indeed, that couldn't locate a hunter a good way off.

Scarcely a day passed that some one or all of the party didn't bag squirrels, so that fried squirrel and cream gravy grew to be quite familiar features of the dining table. Mr. W. led the party I believe, in the squirrel business, but then he was acquainted with them, which was "diff'nt."

Hunters can most generally always find good and substantial reasons for failure in hunting, that is, satisfactory to themselves you know, however flimsy to others. For instance: I shot at a turkey one day after Mr. W. had tried his hand at it, and it wasn't more than 30yds. away either, but then it was going like lightning you see, and the brush was awfully thick you know, and I had to put my shot through a hole in the brush not over 6in. square you understand, and I wasn't well acquainted with the country either, so what could you expect.

Somewhat similarly the squirrels, they had different manners and customs from any squirrels I have ever interviewed. They hadn't any curiosity—not a mite. Now in other places if you surprise a squirrel on the ground or anywhere else, and you remain perfectly quiet, ten to one in less than five minutes he will show himself from his hiding place and open up on that tail motion and bark he has a patent on; while there, if you surprised one on the ground, which was extraordinarily seldom, he never stopped until he was clear out of sight or in his hole, and there he staid and you might wait until dark for all he cared. He wasn't curious about anything. If one barked, it was with that long drawn *diminuendo, pianissimo* squeal which plainly said, "I'm in my hole now, or mighty near it, and I'm on to your little game," and when a squirrel got fairly straightened out for home on the tops of the trees, with all that underbrush around your legs, you might as well chase Nancy Hanks. The fact that we killed what we did, proves our superior skill.

One day J. P. and I went to the Capon River, four miles away, for bass, but the stream was very low and sport poor. We brought back a few small bass, some sunfish, goggle-eyes and the memory of a delightful day along the crystal water that meanders northward through the beautiful valley.

Capon Iron Works is an institution of the past, though the wreck of the machinery and buildings is there still. There is iron in the mountains, with limestone for flux, and wood for charcoal, but it would seem that the period for utilizing it is past, at least with the machinery of many years ago, for it was established 40 or 50 years since, and only abandoned since the war. Perhaps with modern appliances iron might yet be profitably manufactured, though it is far to the railroad.

Mr. Wilson's house is the post-office for several families in the little valley, with daily mail to and from Wardensville, four and a half miles distant, on Capon River, with Miss Maggie as carrier, who drives a two-year-old colt to road cart just as easy as you please.

Mr. W. has two belled does that roam the forest during the summer and are penned up in his park in October for the winter. This park contains four acres, is partly on the level and partly on the slope of the mountain, about 100 rods from the house, with a fence eight feet high inclosing it. On the hillside a rail or two is pulled off the top, allowing bucks to jump in, but not always out, though Mr. W. says bucks have jumped even that high fence on the level. Several have been killed in the park, which contains plenty of timber and grass, in addition to which a portion of the flat is plowed in the fall and rye sown. Dozens of fawns have been raised in years past and given away or sold. Cold weather brings the does to the house, and one morning the mercury stood at twenty-four, while we were at breakfast, the tinkle-tinkle of the different-toned bells announced the arrival of the wanderers, which staid around the yard for a couple of hours, allowing us to pet them and witness their graceful movements, after which they wandered off leisurely to the hills again, and that day while after squirrels I heard the musical jingle of their bells, and sitting down watched them approach me unwittingly, daintily moving about, stopping to pick up an acorn or nip a choice bit of grass or weed, occasionally lifting their heads and throwing their ears forward as they listened to some sound suspicious, or sniffed some odor faint and illusive to other nostrils, causing them to forget for the nonce that it was unnecessary to flee for safety to their loved mountains. Sometimes, indeed, some vagabond dog strikes their trail, and then the sacred beauties have need of all their speed, cunning and endurance, but woe to the dog if he comes within reach of Mr. Wilson's rifle. By law if a belled or collared deer is killed by a dog the owner of the latter is liable for the value of deer. Two or three days before we left the does were penned, and the afternoon before we left J. P. and I went up to the park to bid them good-bye. After some little search we found them on the highest ground lying down under the trees, watching us with eyes not altogether void of fear as we approached, yet permitting us to come within a few feet before they rose, the younger coming up to us gingerly and permitting us to stroke her, while the elder at the gentlest touch sidled off suspicious. They would not touch the apples we brought, though cut in pieces, but walked about close by, nipping a plant morsel here and there, while we sat and watched them as they lay down again and began chewing the cud in their funny mincing way. It was a very pretty picture, for which we needed a Kodak; and as we left them, thinking we had been lying in wait only the day before to kill their kinfolk, our consciences pricked us just a little, and we resolved we wouldn't kill another deer—this year.

The two weeks were all too quickly gone, and the next morning at 3 o'clock after an unconscionably early breakfast or late supper, we bade Mrs. Wilson, Misses Maggie and Lou, and Henry good bye, and drove away into the darkness under the motionless oaken canopy, which here and there revealed the aging moon and sparkling stars in a cloudless sky. As day broke we had left the pike and Capon Valley, and were slowly ascending the mountain from the upper slopes of which was revealed to our delighted gaze a gigantic panorama of such regal splendor as, I am sure, two of us never witnessed before, and

can scarcely hope to enjoy again. Down the mountain-side far beneath us to right and left, and across the valley, rising to the summits of the nearer mountains and stretching away in rank overlapping rank as far as eye could reach, the brilliant crimson of the dogwood, the deep blood red of the gum, rich yellow of the hickory, variegated maples blending all three, oaks just faintly tinted, with here and there dark spots or bands of pine or hemlock shading the whole, completed a picture which for loveliness in detail and gorgeousness in ensemble belongs to the Alleghenies alone, a vision that holds one entranced, a vision baffling the loftiest flight of the poet or most skillful brush of the painter, a vision matchless that will always rise in delightful memories of Great North Mountain. ## MORE ABOUT THE SCREAM.

*Editor Forest and Stream:*

Apropos of panthers' screams. I never met with a panther at large, but I have many times been with individuals of the kind for days together in menageries while I have been engaged in making drawings. The conclusion I have arrived at is that the panther is in all respects a huge cat. It indulges in a caterwauling that is precisely like that of the domestic animal, but proportionately deeper and louder.

This yelling it utters more at some seasons than others, and is chiefly indulged in by the male. All males that I have observed—some thirty—were prone to it. The voice of the common tomcat is often horribly human, as in fact is that of all the *Felidæ* except the lion, so far as my observation goes, and I cannot see anything ridiculous in the comparison when one likens the scream to that of a person in anguish. I know that many a time while in the London Zoo my hair would indeed have been set a-prickling by the horrid yells of an old male panther but for the fact that I knew what and where the screamer was. The same sounds heard at night in the woods would have been simply appalling.

As to the possibility of the hair being set on end, see Darwin on the "Expression of the Emotions" and Bell on the "Anatomy of the Expression," and you will there see the matter scientifically examined and the fact established that under rare and extreme circumstances of human horror or terror the hair rises on end as in the lower animals. The physiology of it is pretty well understood. The minute muscle that is attached to each hair bulb is nearly atrophied in the human subject, and has lost connection with the voluntary nerve supply, but it is there still and may be acted on by sudden or severe cold, as in goose flesh, or by terror, as already stated.

ERNEST E. THOMPSON.

TORONTO, Canada.

*Editor Forest and Stream:*

When "Stanstead" made his daring assertion (in the face of what I supposed a conceded fact) that a panther had no more scream in him than a bulldog, I felt that he had stuck his foot in a hornets' nest, and I fully expected the flood of opposition that is pouring in.

I confess to being a know-nothing in the line of screams, but I'll relate an incident. Many years ago I was in the northern part of Maine, and as I was taking a drive with a man in whose veracity I have boundless confidence, we came to a place that sloped from the road down to a meadow. "Now, here," he said, "is a place that I shall never forget as long as I have a memory. It was a bright, moonlight night, and I was going over to a neighbor's in a sleigh with my sister when we saw a big dog coming up from the meadow just ahead of us. When he got to the road we were scarcely 20yds. from him and the horse stopped in terror. Then the big dog turned his head toward us, crouched down in the snow, swaying his tail from side to side, and gave a scream that fairly curdled our blood. I knew that scream and knew that something must be done, and there was but one thing to do, and that was to turn the horse, which I proceeded to do, expecting every moment that the beast would make a spring for us; but he did not, and when the horse got round he went as if he wanted to get away from something. That was several years ago, and my hair has never got down flat to this day, and I still sometimes imagine I hear that unearthly, horrifying scream."

No! the panthers scream is not a "myth"—it's a sound.

ST. AUGUSTINE, Fla. DIDYMUS.

*Editor Forest and Stream:*

I think that the evidence submitted in the last number of your paper concerning the scream of the panther ought to satisfy any unprejudiced person that this creature can scream on occasion, and that quite effectively. I myself have heard it, but as I did not see the animal in the act, I hesitated to appear in evidence. If the capital "cougar skin" story of "O. O. S." is to be believed, and there is nothing incredible about it, that ought to have settled the question.

Yes, the panther can scream, 'twere pity if he were the only cat which couldn't. The elephant, the horse, the bear, the mink, the hare, the rat, and even the bullfrog can scream when they see reason; then why doubt that the panther can do the same thing at his need, not to say his pleasure.

Let him henceforward scream in peace. KELPIE.

CENTRAL LAKE, Mich.

*Editor Forest and Stream:*

Two years ago I was hunting in the Florida Everglades, where we found deer, bear, turkey and plume birds very plentiful on the many different mangrove islands we visited. Some of the islands seem to be several feet higher than others, with large mounds of decayed shells and the growth principally hemp, Spanish needle, prickly pear, cocoanut and various kinds of poisonous vines, which sometimes cover half an acre in clusters. We found these places to be the home of the panther, catamount and rattlesnake. It is almost impossible to cross these islands without a large knife to cut one's way, besides you are pricked above your leggings at all times by needles. Our faithful dogs had already learned of the paws of panthers in the Gulf hammock and would not venture within 20yds. of one unless seriously wounded. On the margin of these islands were the only open spaces we could see any distance to shoot, and at night this seemed to be the panther's resort for gathering turtle eggs, crabs, young birds, etc.

We shot five with the head lantern in two nights, and killed two which we got, one measuring 7ft., the other 7ft. 8in. I have never heard one scream, but they would cry loudly in the manner of a cat. I left our camp-fire one night not more than fifty paces for some driftwood, and noticed something in front of me not more than 20ft. I thought it was one of our dogs and spoke to it. There was a signal of the tail and a low growl. I found I was almost in the clutches of a large panther. I had nothing to defend myself with, and called to my companion to come at once with the gun. He came, and so did the dogs, which gave the beast a fright into the scrub. When I would back from him he came toward me, and held his position when I would stand. I was not on the stand long, but just a little longer than I ever care to take another such stand, I am quite sure. I have his skin now among my collections. J. M. MCCRARY.

ORIOLE, Fla., Oct. 26.

A Bath, Maine, reader sends us this note from the *Plaindealer* of that town:

A Cameron correspondent says the residents of Swale are greatly excited over the appearance in their midst of a strange wild animal whose unearthly screeching makes the hair of the inhabitants thereabouts stand straight. Recently this unknown beast visited the farm of Roy Jones, a reputable farmer, and by its infernal howling aroused the family, which had retired for the night. Mr. Jones got his rifle and went forth to reconnoiter. He soon located the beast in an adjacent cornfield, and fired in the direction of the sound. The noise ceased, but began again a short distance from the first point. Calling his dog, a large shepherd, he sent him in pursuit. Soon after there were sounds of a conflict, and hurrying to the scene found his dog in the throes of doath, almost torn to shreds. The beast had escaped. It is thought to be a panther. An organized search led by Ross Hallett, will be made as soon as snow is sufficient for tracking purposes comes. The residents are in a terrified condition and dare not venture out after nighfall.

## THE CANADA LYNX.

TORONTO, Canada.—In December, 1890, we were going up the Sturgeon River on the ice. At a point about eight miles north of Lake Nipissing we saw an animal cross the river about a mile in advance. Not knowing exactly what it was I ran ahead with a .40-82 Winchester. On coming to the track in the snow I saw at once that it was a Canada lynx, and as there was an enormous bluff of rock on the shore in the direction taken by the anim l it seemed probable its den was in the vicinity. As soon as our dog came up he followed the fresh scent and found the lynx about 200ft. up the ledge crouching under a large rock. The ascent was so abrupt that I had the utmost difficulty in getting up, even the weight of the rifle told against me at times. The position of the lynx was such that it was impossible to see him without climbing on a large boulder directly in front of the place of the animal's refuge. I mounted the boulder, and stooping down looked in at the lynx barely 10ft. away, but I was so much blown by the exertion that it was necessary to wait a half-minute or so to recover my wind.

I remained on guard in front of the animal, and when sufficiently recovered knelt down and fired. One spring would have reached me, and its momentum must have precipitated me 200ft. down the face of the cliff. The position taken by the animal was such that he could not be seen except from the one point. He appeared rather frightened than vicious, so far as I could judge—when first seen his eyes were glaring green from beneath the rock, when ready to fire his position was changed. The head was not visible, but the breast only was exposed. The 360grs. bullet proved too much for him.

Hunters in northern Ontario do not consider the lynx at all dangerous. If taken in a trap they do not hesitate to attack the animal and beat it to death with a club. My own experience tends to confirm the notion that they are cowardly. S. R. CLARKE.

There are no Canada lynx about Nicatowis Lake, but the bobcat, which is often called the lynx by people who are not familiar with both animals, occurs there. Last Monday one of our guides was taking a young man down the lake, and just below the narrows they discovered a buck deer and some other animal swimming across the lake. They first killed the buck and then turned for the other animal. The young man fired at it and missed it. The animal at once turned for the canoe and showed fight. Their gun would not work and they had to use their paddles to kill or drown him.

I was about one mile behind them, and when I got to them they had both the cat and the deer in the canoe. They did not know what kind of an animal they had captured, but said that he was a savage one, and asked me if I could name it. I told them I could, and asked them if they had ever read in our papers of the Chain Lake serpent. They said that they had. "Well," I said to them, "that is the chap that you have read about. It is called by Machias people the great Chain Lake Serpent."

I have known bobcats and lynxes to kill deer on the land, but never before knew them to follow one across a lake. These cats are often seen in this section, and are troublesome to some of our farmers, killing their poultry, sheep and lambs. J. DARLING.

### Tried to Enter the Dining Room.

NEW YORK, Nov. 13, 1892.—*Editor Forest and Stream:* As you are interested in all that pertains to bird life, I will tell you of an occurrence which took place this morning at my house. While at the breakfast table, there was a thud against one of the windows, and looking up I saw a number of birds flying ontside. Upon raising the sash a bird was discovered lying in the yard, and a number of sparrows sitting on the fence watching him. The wounded bird was brought in to me, and to my astonishment it was a woodcock. Evidently the sparrows were chasing him, and in his fright he had flown against the glass. He weighed seven ounces. What do you think of living in New York and having woodcock flying almost into your dining room?

CHAS. P. FRAME.

### Black Muskrats.

WILLIAMSPORT, Pa., Nov. 13.—Mr. Fred. Kraemer, who lives near a small stream emptying into Loyalsock Creek, several miles below the city of Williamsport, and who is very successful in raising German carp, has an open barrel sunk into the ground and just across a natural runway of muskrats. Said barrel does duty as an ever ready trap, and many a thieving muskrat has been entrapped on her way to the carp ponds and dispatched by Mr. Kraemer. Some time ago the above-named young gentleman, a very successful hunter and taxidermist, who has a fine collection of birds and animals of his own killing and mounting, found one of his late captured muskrats to be a melanistic specimen. The individual is black on the upper side from tip of nose to root of tail, darkest on middle of back. The black color also extends below each eye, sides show a very slight brownish cast, blending with the blackish silver gray of inside of legs, throat and under side. There is a complete absence of all reddish-brown on the animal.

Several weeks later Mr. Kraemer captured a second specimen, a full-grown female, which is a perfect counterpart of the first animal, and which he had the kindness to present to the writer for his own collection.

AUGUST KOCH.

### Ruffed Grouse Wanted for Breeding.

TOLEDO, O., Nov. 5.—*Editor Forest and Stream:* You will, I am sure, remember my somewhat extended experiments in attempting to effect the breeding and rearing of the ruffed grouse in confinement, as will no doubt many of the readers of the FOREST AND STREAM. I am now prepared to resume these experiments under more favorable circumstances than ever, and the object of this note is to beg the coöperation of any of the readers of "our paper" who could aid me in procuring birds for that purpose. With the larger runs and greater seclusion that are now available for such grouse as I may be able to obtain this fall, I feel reasonably sure of gratifying results the coming spring. Of course if I should succeed in procuring any specimens that had been in confinement for a year or so, the chances would be all the greater for success the first season. Any communications through the editor of FOREST AND STREAM, or sent to me direct will be most gratefully received.

J. B. BATTELLE.

### A Carnivorous Muskrat.

WHILE out shooting the other day I noticed something which had hitherto escaped my notice, that muskrats would eat birds. I had always believed that muskrats were not carnivorous, and I have always caught them with a parsnip for bait. After getting several plover and a black duck, last week, I shot a snipe, which I saw fall in some long grass and weeds near the edge of some bushes. I went to the place and found every necessary trace to prove that the snipe had fallen there, big feathers, blood, and an indentation in the soft mud. From this place the fresh tracks of a muskrat led for about 20ft. to a hole in the marsh. There was no snipe to be seen.

## NOTES OF THE SEASON.

Yesterday Mr. A. M. Holbrooke, of Foster's Point, a Bath, Me., paper reported one day last week, saw a large animal, which looked like a deer, swimming across the New Meadows river. At first he thought that he must be mistaken as he knew that deer are not very plenty around here, but he decided to investigate. He went to the house and got his rifle and started out after the game. He found out that it was surely a deer and as he neared the bank fired and killed him. He was a beauty and had two large horns. He weighed nearly two hundred pounds.

Note has been made in these columns of Mr. S. E. Worrell's hunting and fishing boats. A new notion, devised by Mr. John G. Mott, of Michigan City, Ind., is a tent covering for the Worrell boat. The box seats he had made detachable, and the body of the boat was used for beds, the whole being covered over with the tent covering.

A Quebec correspondent writes: I procured a small quantity of the wild rice and sent my man to sow it, not being able to go myself, very much to my regret. The man reports that in one of the lakes to which I sent him he found a few heads of precisely the same grain, a few kernels remaining on the heads, the rest having evidently dropped out. Query: how came they there? There is none of the rice hereabouts that I know of, certainly none within many miles. The lake is a favorite breeding place for the common white gulls, called by the French people "Mauve." Could they have brought the grain? Or is the grain the cause of their coming? We see and hear hundreds of them in summer about there, but notice but comparatively few elsewhere.

### Undoubtedly the Influence.

SUMAS, Washington.—Here is a clipping from the San Francisco *Examiner* in report of an execution by hanging of some Texas cowboys. My idea of the feat is this: The distance was not measured, or it must have been some remarkable variety of liquor, under influence of which the shooting was done:

"One day in the cotton picking season of 1869 Bill returned from Brenham, where he had gone to dispose of a few bales of cotton, slightly under the influence of liquor. He was at this time an excellent marksman with the pistol, his aim being so accurate that men stood in awe of his skill. One of his feats was to race a mustang a distance of 200yds. past a 4in. sapling and empty his six-shooter in the tree as he rode by, planting the bullets almost one upon each other in a circle no larger than a Mexican dollar." G. H. G.

## A NOVEMBER TRAMP IN INDIANA.

In "Cumberland's" article of Oct. 20 his allusion to the wrong side of 40 and the rapidly approaching time when our shooting will all be of the retrospective kind, has touched a very tender chord in myself, and no doubt in many others on the "down grade." While there is sadness in the prospect there is no doubt but what we old fellows enjoy our field days better than we did when we were so young that old age was not in sight. It is like the Indian summer days that are doubly enjoyed because we know that the drear days of winter crowd close behind them and will soon drive them away. So we who have outlived so many of our youth's companions, feel that every day we now get is just one more than we had reason to expect, and that perhaps the "next time" will never come. We enjoy it better, too, because we know so much better how to do it, and are provided with such good and pleasant implements, and it takes less game to satisfy us.

For twenty consecutive seasons I have shot quail over the same familiar ground; and it seems to me that what little shooting I've done this season has been the most enjoyable of all, although the birds are not so plenty as usual, the cover unusually heavy, and the ground very dry indeed.

In the younger periods of life a big bag was the one thing sought for, and the glorious weather, the gorgeous foliage of the trees, the rich plumage and the cute ways of the birds, were altogether overlooked in the eagerness to kill. Now, all these things furnish their quota of enjoyment. Joe, as well as his master, has outgrown his puppy ways and is a mighty comfortable dog to shoot over. He don't have to be watched to keep him from chasing rabbits, nor switched for breaking after a falling bird; in fact he understands his work and attends to it. The nitro powders, too, have made the shooting much pleasanter. The noise is so slight that it don't disturb nervous people, and the absence of smoke gives the shooter many more opportunities for using the second barrel.

Since writing the above, heavy rains have fallen, the weather clearing up yesterday with one of those rare days, entirely free from smoke, dust or wind—a day that was all sunshine. Joe evidently thought it was a good day for quail, for he was very uneasy and kept a close eye on me during the fornoon, and when I came out with the corduroy suit and the gun, his delight was boundless. He scattered the chickens right and left, planted the cat on top of the fence with arched back and reversed fur, and sent the hogs blowing and snorting to the back side of the orchard. A walk of half a mile to the west brought us to the edge of the Green Fork valley, a mile wide with gently descending slopes on either side, its bottom level and showing squares of yellow cornfield, green wheat, and gray stubbles grown up with ragweed, which affords both food and cover for the quail. One of the fields just over there to the right has been in corn, but it has been cut for ensilage and many weeds now cover it. Joe points very suddenly before he gets into it 100yds. Eight or nine birds get up and whirr away toward a field of high corn. I do my best to get in a right and left, for there will be no chance to shoot them in that high corn. They will run before the dog, and when they fly will not top the corn, but fly between the rows. Both shots scored. One tumbled into the weeds, and the other fell, fluttering, into the hedge. After getting the dead birds, Joe wanted to go into the cornfield after the others but I told him it was no use; but to hunt for some more in the field. Less than 75yds. away he made another point, or rather dropped flat on the ground and lay there. On going to him a rabbit scurried away. "Now Joseph," said I, "aren't you big enough and old enough to know better than"—*Whirr! whirr!* about fifteen great plump, strong-winged birds get up all round us, part of them going to the big corn, and the rest toward the farm buildings. The first barrel didn't shoot within 2ft. of the bird, but the second winged one. Most of those going toward the buildings found a soft place in the berry patch, too close to the house to shoot without annoying the inmates, but a few of the birds dropped in the weeds before they got out of the field. Joe was put after them, and found four single birds. Two were killed, one missed and the other flew toward the home. "Now Joseph," said I, "this is great sport; we've bagged five birds in ten minutes, and it is a good afternoon's sport if we don't shoot any more; but we will go across the Sugar Camp and try Study's farm, and then swing round to the left and take in De Witt Bond's place."

We put in a full hour on the Study place scouring two big weed fields and a weedy cornfield, but did not find a bird. Another hour was spent exploring some other likely-looking ground, so it was nearly 4 o'clock when the Bond farm was reached. Here was an ideal place for quail. A brushy woods bordered on the south by a gently sloping strip of ground, covered with rag weeds and bounded by a brushy slough on the further side. Joe soon found them and they flew into the woods, except one that was shot. A short distance in the woods a single bird was put up which flew back to the open, giving a fair shot, but it was a clear miss. Mark him! There, he is down, in the cornfield 30ft. to the right of that bush. The next bird that got up was killed, as was another that rose at the crack of the gun. The next one was missed by both barrels, but was marked down. Now we concluded to go for the two birds that were marked, for if we had too many marks to remember, we would forget some of them.

The last bird was found at once and killed, but the one in the cornfield had run away, and the dog had a good deal of trouble to make it out, but finally got it. It was missed by the first, but the second wounded it, so it flew but a short distance, and Joe caught it before it could get above the weeds.

Next we went back in the woods and Joe flushed one, which I ought to have killed, but missed it. Next I flushed one which tried to fly around and behind me. The bushes were very thick and the bird not over 4ft. above the ground, but I swung myself and the gun around and knocked the bird into pulp before it was 30ft. away. I don't know how I did it, but I did it, and have done it many other times; in fact, rarely miss that kind of a shot. It seems as if I don't know anything till I see the floating feathers and the falling birds. If I am conscious of anything it is of intently watching the bird. I know that I pay no attention to the gun. Shortly after this Joe pointed in a fallen tree-top and that bird got away. After another thorough search Joe found one more bird which was missed by the first, but tumbled into a brush pile to the second barrel.

From this place we started to another stubble half a mile down the creek. In the middle of a cornfield, in very small corn, and no weeds, Joe pointed. I saw a single quail within three feet of his nose; here was a temptation to shoot the bird's head off and make sure of it, and I confess that before I became a reader of Forest and Stream, it would have been done that way, but the lessons in true sportsmanship learned in its columns decided the case in the bird's favor, so it was flushed, flew straight toward a house, and got away. That quail should thank Forest and Stream that it is alive to-day. When we reached the lower stubble field I was pretty tired, so I told Joe to "hunt 'em up" while the old man sat on the fence. The fence was on the top of a hill and the stubble lay mostly in the "bottom." Joe went racing down the hill and at its foot ran over a rabbit. He stopped and looked at the running rabbit for a few seconds, and then turned and looked at me. A wave of my hand sent him in an opposite direction from the rabbit and he galloped in wide circles through the weeds, occasionally stopping and throwing his nose up to windward. After fifteen minutes of this kind of work his nose went to the ground, and after a few sniffs he began drawing, stopping every few feet and looking toward me. The man on the fence forgot that he was tired, and went to the dog. The dog led him almost in a circle. It was nearly sundown and the birds did not want to get scattered, so, as the cover was heavy, they tried to get away by running, but by urging Joe we out-walked and flushed them, and a fine lot they were. Not less than twenty great big strong-winged fellows. I got all mixed up and fired both barrels right at the "brown of 'em," but didn't get a feather. They came down in the thick brush on the hill side. "Well, Joe, it's a mighty bad place to shoot, but we will get above them and they will probably scatter next time and some of them will come back in the field, for they want to roost there."

They got up rather wild and scattered badly, but I saw three go down in the field and three more along the edge, in some willow bushes. We went for those in the field first, and got them at three shots, but they gave us quite a chase, for they were running, and Joe would not trail them fast enough to put them up. After getting those three Joe found where the others had run from the willows into the field and got them up. Two were killed but the third one got up wild. The rest of them had not been marked down, and it was getting too dark to shoot, so we started up the creek to cross on Bond's foot bridge. Right on top of the bluff, and close to the edge, Joe pointed one, which flew over the creek and dropped into the water. It was a pretty cold swim but Joe got it in very short order.

Near the house I met Mr. Bond's little daughter and gave her a half dozen birds. As I passed the barn Mr. Bond greeted me with "Get out of here, I don't allow any man to shoot on my place." "Well," said I, "you're rather late about it; I don't object to being ordered off at this time of day." "Come in the house and have supper, and rest awhile," said he, but as it was late and somebody was waiting for me at home, and would be uneasy till I came, the invitation was declined and Joe and I tramped home, both thinking we had had great sport, and another day of pleasant memories to fall back on when we can do no shooting. It would hardly do to tell the truth about the supper Joe and I ate that night. It would exceed the Kekoskee bullhead story.

I have been at home fourteen days since the open season began, and have killed 157 quail. What did we do with them? Ate all we wanted (and that was a good many) and gave the rest to our friends.

Am expecting to go after ruffed grouse soon, and may have something to say about it. O. H. Hampton.

Williamsburg, Ind., Nov. 7.

## IN A MAINE HUNTER'S CAMP.

[*Concluded from page 400.*]

The carrying of loads by the Maine guides and woodsmen was a new experience to Mr. Coggin and his friends. Here was this sturdy young fellow—he hardly seemed more than twenty—with his deer across his back, making such time down the hill, over rocks, logs and fallen trees, that Mr. Coggin could scarcely keep up with him. "He declined my offer to carry his rifle," says Mr. Coggin, "and actually wanted to help me over some of the bad places. When we got into camp you should have heard the boys shout. It was but the work of a few minutes to skin the deer, and sooner than it takes to tell the first deer of the hunt was ready for cooking. The guides and lumbermen of the Smith Brook Camps dress a deer with the facility of experts. This deer was the beginning of venison every meal, when we wanted it. The other boys were soon off hunting, but as for myself, I had had enough for one day."

Mr. Coggin's next ambition was to get a moose. With his guide the next day they went well up and over the side of Mooselick Mountain. Soon the guide called the hunter's attention to moose tracks. "He is a big one!" was the only remark. The guide soon begun moving with the utmost caution. He would step so as not to make a sound in the fallen leaves. Not a twig did he break. The hunter followed his example as nearly as possible. They crept on for a while, when the guide stooped down, untied his hunting shoes and took them off. Mr. Coggin did the same. Neither spoke a word, scarcely in the lowest whisper. The guide listened, with his ear to the ground. Mr. Coggin did the same. The footfalls of the great moose could be heard. "Pat, pat, patter. pat!" slowly. "He is only walking," whispers the guide. The "pat, pat" suddenly stopped, when "gersh, gursh, gish!" the sound the moose makes when stripping off the branches of his favorite browsing trees and twigs. "He is feeding," whispers the guide. "I think you will get a shot." Our hunting friend's hair almost stood on end. He peered into the thicket, in the direction of the browsing sound, and the guide did the same. Neither could see the game. Very cautiously they crawled into the thicket. They could see no moose. Again the guide put his ear to the ground, and the hunter did the same. "Pat, pat, pat!" on the soft earth. "He is trotting," whispers the guide, as a shade of disappointment steals over his ruddy young face. "But he isn't frightened yet." They crawled a little further, peering cautiously over a little rise just ahead of them. They could now smell the moose very plainly—that peculiar odor that only the moose hunter has experienced. Gently as possible they parted the twigs of the thicket and worked towards the game. He must be very near! Not more than ten rods away, and yet they cannot see him, so dense is the wood. A little further—very cautiously. "Crash! crash!! smash!!! A railway train off the tracks could scarcely have made more noise. It seemed as though the whole woods were coming down. The moose had either scented or seen the hunters, and had taken the alarm. Away he went over the mountain. The hopes of our friend the hunter fell forty degrees. The guide jumped up in disgust. They quietly put on their shoes. There was not time that day to further follow the moose.

Rather crestfallen they returned to the camp. That evening Jim McGinn, the oldest guide assigned to the party, was rather inclined to sneer at the ill success of our friend Coggin and Nat Smith, the boy guide. He would go moose hunting himself with any one of the party the next day. He could "call." From his bunk he took his birch-bark horn and blew a blast. It was decided that Mr. Parker, the Bangor salesman, should accompany him on a three-days' hunt. The next morning Jim loaded some blankets on his back, with some food tied up in a bundle, and, with a rather lonesome look on his face, Mr. Parker, rifle in hand, followed him into the forest. The following day Parker returned, thoroughly tired out. He had killed no moose. Jim had called in the night and got a response, but the moose did not come. He was very silent at supper time, and all the early evening. When questioned about his success, "Um!" was his only answer. Only short expressions and sighs could be drawn out of his mouth. Early he went off to his bunk. The boys who watched him the closest say that he almost shed tears several times; he felt so badly that he had not got a moose for the hunters. He had followed the bull that had responded the night before, but had failed to get a shot.

There were other characters at the camp besides Jim, the elder guide, and Smith, the younger guide, assigned by Mr. Nason to our friend Coggin. Smith is really clerk for Mr. Nason. Indeed, among ninety men, the full crew at these camps, when in full operation, there should be some characters. The camp blacksmith, Moses Fleming, a sturdy fellow, strong as an ox, is a genuine sample of a thorough woodsman. No distance was too great for him, no load too heavy. The boys called him "The Distance Exaggerator," but distance reducer would have been better. He is guilty of many of the State-of-Maine-woods miles in that section. Jinks, the cook, is also a character that greatly interested the hunters. His "All up! All up!" in the morning was worth hearing, at four o'clock, especially if one was not obliged to turn out, as the lumbermen were.

The party staid at Smith Brook Camps six days. They got five deer in all. These were mainly used at the camps. It was too far into the wilderness to think of bringing one out. The patridge shooting was something to delight the heart of the amateur hunter. The birds were almost as tame as chickens. The boys shot them on the ground or on the trees with their rifles. They had no shotguns with them. The two guides would take their heads almost every time. "Shoot their heads off!" suggested Nat Smith, the guide, to Mr. Coggin, the first day out. That gentleman tried it for a couple of days, but found he was getting but few birds. Rifle shooting was comparatively new to him. Later he aimed at their bodies, and had the satisfaction of getting almost every one. He counted until they had killed eighty or ninety birds, and then got tired of counting. The party must have killed over one hundred ruffed grouse. Only one spruce partridge did they see. The guides report that these beautiful birds are becoming rare in the Maine woods. They are so tame that they cannot stand up against the great march of sportsmen that are invading that State. They saw no bear, though the signs were plenty. Mr. Coggin is confident that with a slight snow for tracking they could have obtained both bear and moose. The ground was very thickly strewn with fallen leaves, making it exceedingly difficult to approach these very wary animals within gunshot.

At the end of the six days they bid good bye to the kind Mr. Nason, who had done so much for their comfort and enjoyment. They left him, convinced that he comes fully up to his reputation as one of the most hospitable of lumber camp proprietors, and one of the most successful lumbermen in that region. The two guides were actually sad-hearted at parting with the sportsmen, and the sportsmen shared the same feeling. "Be sure to come again next year," were the parting exclamations.

From Smith Brook Camps the boys tramped the long twelve miles to Cape Sepomque, where they again rested. The batteaux and the horses were down river at the other end of the route, and that whole twelve miles had to be tramped. From Ox Bow they went six miles northeast to the Military Road that runs from lower Aroostook to Presque Isle. They were going out by Presque Isle, to see the country. At the Military Road they found a team, and started for the northeast. The first night they put up at Ashland, where there are a couple of good hotels. When within several miles of Ashland they passed a log camp, quite a distance from the road. Indeed they would scarcely have noticed the camp but from the fact that a couple of men ran out and hailed them. The men had rifles in their hands and packs on their backs, and from their looks the driver was scarce inclined to stop his horses, though the party also had rifles. But these rifles were stowed away in the bottom of the wagon. It scarcely seemed as though the hunters wanted to be stopped by these newcomers, but they ran on behind with a good deal of determination. At last the driver concluded to stop, the men seemed to be so much in earnest. They came up. They could speak fairly good English, though evidently French Canadians. They simply wanted the team to carry their packs for them. The driver was inclined to decline. His horses were light, and there were five men and their luggage already in the wagon. But finally he decided to accommodate them. He took the packs aboard and drove on, leaving the men to come on foot. At Ashland Mr. Coggin happened to think that the packs might be wanted before morning, and in the evening they took the packs out of the wagon in the stable, and put them on the piazza of the hotel. Then they had a chance to find out why the men were so much in earnest about having their packs transported. Each pack must have

weighed between fifty and sixty pounds. The men were on their way into the woods, in the extreme northern part of the State, to spend the winter trapping. In the morning the packs were gone.

Mr. Coggin was pleased with the ride from Ashland to Presque Isle. It runs through a new farming and forest country. Here farms and farm improvements are to be seen in all stages, from a log house and a "cut-down" to some of the finest farms in Maine. Some of the log houses, built a few years since, are being hewn, and some even planed and painted. Other farms have handsome modern houses and noble barns. At Presque Isle the journey home by rail begun.

The amount of pleasure Mr. Coggin has experienced in this, his first hunting trip into the Maine woods, is hard to tell of in cold letters. He is satisfied that a visit to the lumber camps in the Northwood is the way to go a hunting, and he believes that the "latch string hangs out" for the right kind of men to make such hunting trips. Invitations would be more generally in order did not the sturdy lumbermen fear the babyishness and meanness of the city dude and would-be sport. For the dude and the shirk there is no room in these camps. For the true gentleman, who expects hardship, and is willing to rough it, invitations are in order. SPECIAL.

## THE PRAIRIE CHICKEN.

THE prairie has been likened to the ocean, and the simile is not altogether wide of the mark, and as one looks out over the boundless expanse of rolling grass land, that spreads on every side until land and sky meet on the horizon line, it does not require such a great effort of the imagination to see the resemblance.

Though the waving grass gives life to the view it lacks the mighty heave of the ocean; that ceaseless pulsing of the waters is wanting; the swelling waves of prairie land seem to have stiffened and died, deserted by the impulse which gave them birth.

The mere turning of the sod reveals a rich, dark loam, that without fertilizing will yield several crops of corn, and produce a wonderful return in golden grain.

In late autumn the chickens resort to the fields of standing corn to glean, and rich pickings they find. They speedily become plump on this diet. Killed to-day and broiled to-morrow over a quick fire of corncobs, served immediately when done, they are perfection.

On a still, clear morning the scolding of the cocks begins at sunrise and the air resounds with their *kek-kek! kek-kek!* until long after the hoar frost has disappeared. Then you will see flock after flock leave the prairie and enter the corn, there to remain, unless disturbed, throughout the day. A short hour before sunset they run out to the edge and spring into sturdy flight for the night bivouac on the open plain.

At this season these camps of the prairie chicken often contain thousands of individuals, representing hundreds of coveys, that arrive from all quarters, coming sometimes from a distance of miles to this favored spot.

One will frequently see some belated party string across his path as he tramps along just after sunset. Silent as owls, they flit past on outspread wings and vanish in the gloom.

I first met the prairie chicken in Lee county, Illinois. It had been close season for several years, consequently the chickens were abundant and furnished delightful sport.

The shooting among the standing corn is, to me, the most exciting of any of the methods pursued in hunting this fine bird. * * *

It is early in the forenoon, and I will see if I cannot find some of the birds I saw enter that eighty-acre piece a while ago.

We are presently in the thick of it, and save for the rustling leaves on the tall stalks which rise above our heads it is very still.

The chickens are running, as I see by the trailing of my dog; and it is necessary to step out briskly in order to keep him in view.

There! He has struck a hot scent: hear how his tail is beating tattoo on the stalks as he worms his way along, crouching close to the ground in his eagerness to locate the birds.

At last, with head almost at right angles with his body, he stands rigid.

There they go. A dozen chickens whizz up through the corn about us. I catch a glimpse of one just as he clears himself, and pull on him almost without sighting. Crash! thud! down he comes, and quickly I have him in hand, a fine young bird, as I find by holding him up so that his whole weight falls on the under mandible, which breaks under the strain.

The difference in plumage of these full-grown birds is very slight, and it is by this simple test that we may distinguish young from old. In an old bird the lower mandible always sustains the weight of the body without breaking.

The old dog is pointing again!

A single bird rises this time and sails off uninjured, though I give him the contents of both barrels.

How easy it is to miss them in this cover in spite of their size. We move on.

There has been a covey about here, as numerous tracks tend to show. It will take careful work to put them up now, as they have doubtless taken the alarm ere this and are keeping well ahead of us.

There they go again off to the left! If we flush another bunch in this cover they will probably get up all together, as is their habit after being so disturbed. Try to pick your birds, for though they rise with a thundrous roar of wings and look very large, you will find, as in quail shooting, that pot shots can seldom be made.

Here is the edge of the field. I think we will work round to where we entered, and after trying that little patch between here and the house, I will wait until toward sundown, when they come out, and perhaps I may get a little flight shooting.

Chickens feed quietly among the corn, rarely betraying their presence, save to the keen nose of your dog. Once flushed they lie very close for some time after alighting, and will not scatter until thoroughly satisfied that danger is past.

This, however, is only in cover when they have been used to feeding undisturbed. Later in the season when constant gunning has made them wary, they will make for the open at first flight, and rarely return before next morning. Look here! see where they have been dusting in this dry loam, just like so many old hens.

Four o'clock! I walk out on the prairie to an old hay stack, that seemed to be located near the center of their flight, as they left the corn last evening and lie down to await developments.

High overhead, a flock of wild geese is moving south, travelers I guess from the height at which they fly, and the silence and regularity of their action.

Blackbirds in dense flocks are sweeping past, with incessant noise of harsh rasping cries.

Close by a miniature whirlwind is sucking up the stray heads of buffalo grass, and careering with them a short distance, where it leaves them awaiting the next puff, that shall waltz them off again.

Keeping a sharp lookout in the direction of the cornfields I presently see a covey of chickens rise. They come down well to one side, far out of shot but affording me a fine opportunity to observe their manner of flight.

Rising with a burst of strong wing strokes they attain an elevation of from 20 to 30yds., and scale off on extended pinions for long stretches, then with a renewal of wingbeats they acquire fresh impetus. In this manner they alternate, now scaling, now flying along until lost to sight over the prairie.

Here comes another covey, now they are close upon me. *Bang!* one—*bang!* again—as two cross each other in flight, and down they come. There are numbers of chickens sailing by, but none venture in my direction. It is nearly dark when I reach the house, as night shuts in very quickly. How cosy the firelight makes the room seem, after the silence of the prairie. The solitude on these plains after nightfall is depressing to me.

BAY RIDGE, Long Island, N. Y. WILMOT TOWNSEND.

## GAME IN SOUTH DAKOTA.

ENGLEWOOD, Ill., Nov. 7.—I have once more enjoyed the pleasures of an outing in South Dakota; and thinking some of the incidents of the trip, and especially the information as to where, when and how, to go to good shooting grounds, may be of interest to your readers I send you this brief account of the trip lately made.

With Dr. A. Vanderveen, of Grand Haven, Mich., I started on the evening of Oct. 13 for a two weeks' shoot. We met in Chicago, and having a few hours' spare time devoted them to looking up rates and routes. Our last call was on Major Heafford, general passenger agent of the Chicago, Milwaukee & St. Paul Railroad, and we could well have spared ourselves the extra tramping we had done had our first call been on him, and we were at once provided with tickets, sleeping car berths, etc. Left Chicago via C., M. & St. P. R. R. at 6:30 P. M., our first stopping place to be Vermillion, S. D. Here we were the guests of Prof. and Mrs. H. W. Dubee. The Professor is the musical director of the University of South Dakota, and is very proud of the young university; and well he may be, for it is a striking example of the enterprise and liberality of the new State. Two or three days were very pleasantly spent under his hospitable roof, or more properly speaking, the nights were spent there, for the Doctor and I put in our days on the Vermillion River and the fields adjacent, which were "swarming" with quail; we also found fair duck shooting on the river.

The second day of our stay we took a boat for an all-day's trip up the river; and had only left the boat house when just ahead of us we saw about a dozen ducks, which leisurely swam ahead of us, directly toward the shore where a barnyard came down to the water's edge. I was taking the first turn at the oars, the Doctor, with gun in hand, sitting in the stern of the boat. He, of course, was first to see the ducks, and got ready for a shot. Glancing over my shoulder and seeing the ducks headed directly for the shore, I at once concluded they were tame ducks, and warned the Doctor not to shoot. We drew nearer and nearer to the birds, and the Doctor exclaimed, "Well, G., those are the first tame redheads I ever saw." But so sure was I that they belonged to the barnyard that I gave the boat a short whirl round to bring me facing the flock, when away they went down the river, flying as only redheads can when they let themselves out. The turning of the boat cut the Doctor off from a shot, and I only had the satisfaction of saying something more emphatic than polite as I counted eleven fine birds as they whirled round a bend out of sight. I did not hear the end of the story during our whole trip, and I presume I never shall so long as the Doctor can repeat it. I only hope that on my next trip I may get a goose or a duck for every cigar I have had to "set up." Had we been out of sight of the town I should have looked before calling them tame ducks; but right at the public landing and only a few rods from a house, I thought the story would never stop should we shoot some good woman's ducks.

The sequel to the story, however, is more satisfactory. The birds lit a short distance below us, were fired at and came back up the river; we had the pleasure of dropping three of them, two to the Doctor's gun and one to mine, which he declared was more than I deserved.

On Monday we left Vermillione for Chain Lakes, northeast of Watertown, and made but a short stay there, finding the shooting not at all satisfactory. From here we went to Redfield, intending to take the Milwaukee & St. Paul R.R. to Aberdeen, thence east to Waubay; but at Redfield we learned that Cottonwood Lake was again partially filled with water, and we decided to try it. Here for four days we had all the duck shooting we wanted. When I last wrote you from Cottonwood it was a large lake, three miles long by one mile wide, with seven or eight feet of water; since then it has been dry, but now has about one foot of water, and is grown up thickly with grass and rushes; in short, is a big marsh about two miles long, and is a paradise for mallards and redheads. On quiet days we waded through the tall grass and rushes, "jumping" the birds. On windy days, taking our stations around the lake we kept them flying, and had excellent shooting. The last morning of our stay two of us brought forty-seven mallards and redheads, two canvasbacks and a number of smaller ducks, which were "not counted."

At Redfield we met John Trail, of Rosendale, Wis., the noted dog trainer. He has been spending the past season at this place and other points along the C. M. & St. P. R. R. and reports having had a very successful season, with plenty of chickens and good sport. He still had twelve dogs with him, some of them beautiful specimens. We had one day with him, but the season was too late for good chicken shooting, the birds being bunched in big coveys and very wild. We got but seventeen birds. In the season, from August to last of September, there is no better chicken ground than can be found from Armour north to Aberdeen. Two friends whom I recommended to try Armour in August came back reporting themselves more than satisfied. They spent ten days in the vicinity or Armour and killed 352 birds, hunting only for amusement and doing no hard work.

For goose shooting Waubay is the best point we found. There are several lakes and all are good. The place is easily reached. Leaving Chicago at 6:30 P.M., the C. M. & St. P. R. R. lands you at Waubay the next night, going via Aberdeen. For duck shooting alone Cottonwood Lake is good enough for any one, and to reach it one must leave the railroad at Redfield.

We found my old friend Wm. Sutton still living on the lake and the latch string was out for hunters as of yore.

The coming season the Doctor and myself hope to take our outing in chicken season and will go directly to Armour or Redfield. Armour is only about eighteen hours run from Chicago and no better shooting can be found. S. C. G.

## DENVER NEWS.

If there are any who doubt and have not seen 150 trout in a bunch, let them call at the office of Henry Wilcox this afternoon, 143 being the number caught by Mr. Wilcox in one day. They vary in weight from 2½lbs. to the yearling, and are as fine a lot of finny beauties as were ever tempted by a fly. Wilcox caught 230 on Saturday and Sunday, and is now in a position to deny the statement that Sunday is a bad day for trout fishing. This is Mr. Wilcox's first season in trout fishing, his total catch being 1,230.

The above appeared in the Creede *Chronicle* of Tuesday, Nov. 1. Wagon Wheel Gap is but a short distance from Creede and was considered one of the finest places in the State for trout fishing. If such catches as the above are permitted, in a very short time it will be entirely fished out. Our laws prohibit the catching of more trout than the fishermen can personally use, and there is a penalty for retaining fish less than 6in. long. If above clipping is correct Mr. Wilson violated the law in two particulars. I have called Game Warden Land's attention to this and he will investigate it at once.

The Rocky Mountain Sportsmen's Association meets here this week. A number of gentlemen who are very much interested in game protection will ask the Association to appoint a committee to revise the old or to prepare a new game law, and to bring all the pressure possible to bear on the coming Legislature to enact it. The present law is very ambiguous, and in some cases the open seasons on large game begin too early.

G. H. Lambson arrived in Denver Nov. 6, in charge of a special car of the National Fish Commission. He went to Leadville Monday night for the purpose of getting 150,000 yearling trout from the Government hatchery at Evergreen Lake, for distribution throughout the State.

Buffalo Bill is in the city preparing for a hunt for big game. He is accompanied by Alfred E. Hatton, of Bradford, England; T. E. Haworth, of Manchester, and Col. H. McKinnen and Major Milvehy, of Her Majesty's army. Several other Englishmen will join the party before they start. It is the intention of the party to spend several months in the mountains and to slaughter large game indiscriminately, I presume.

Captain Sedam, of the Kennicott Gun Club, has opened a shooting park a short distance out of town. It has a good club house, electric pulls, and all the paraphernalia necessary for trap-shooting.

*Nov. 11.*—The Rocky Mountain Sportsmen's Association held its annual meeting in Denver, Nov. 10.

President Hampson addressed the meeting at length. He recommended certain changes in the game laws, deplored the lack of interest among a large class of the population, and proposed that it be made a misdemeanor for a man to have more than one elk, deer or antelope in his possession at one time. He also asked that the bounty on bear be removed, but favored its retention on coyotes and gray wolves.

A recommendation that the name of the society be changed, as soon as it could be effected under the provisions of the constitution, to the Colorado Fish and Game Protective League was adopted.

Game Warden Land made an interesting talk on the game law question. He favored the shortening of the open season for trout fishing, and suggested that it begin June 15 instead of May 1, extending, as under the present law, to Dec. 1. He thought the open season for deer began too early, shooting should be prohibited until Sept. 1. There were more deer killed by the skin-hunters during the summer than at any other period of the year. He thought a proper open season for four-footed game would be from Sept. 1 until Dec. 15. Under the present laws much of the work of the game wardens proved futile, and without a seizure clause it must continue to be so. He also declared that the shooting of game for winter use should be prohibited.

He also touched on the question of Indians killing game, and asserted that they killed large numbers of elk and deer for their hides, which they sold to the Indian agents.

The chair announced that 100 members belonged to the association, and in addition nine new members had been admitted that evening.

The following were elected a committee on game law revision: F. A. Williams, L. Butterfield, Gordon Land, L. B. France and Milward Hewitt, and the chair was instructed to appoint a advisory committee of five.

Secretary Hewitt read a letter from William N. Byers regretting his inability to attend, as he was obliged to be present at a meeting of Colorado Pioneers.

F. A. Williams offered a resolution, which was adopted, calling on the Governor to use all vigorous measures within his power to have the Indians returned to their reservations, stating that it was the sense of the association that in the enforcement of the game laws Indians should receive no better treatment than whites.

President Hampson offered his resignation, as his time was so occupied that he did not feel as if he could longer attend to the duties of the office.

The meeting then adjourned, subject to the call of the chair, to meet for the purpose of electing officers and hearing the report of the committee on game law revision.

TESEEBY.

## NEW HAMPSHIRE DEER.

We have been to the Connecticut Lakes and are prepared to make a little memoranda. Deer hunting with hounds has now been permitted for two or three years, with varying success. This season more have been taken because there are more deer, perhaps, but probably owing to the fact that more hounds and more sportsmen have participated than formerly.

Vermont does not permit the killing of deer at all; Canada has a gun license of $20, with close season till October; Maine does not permit hounding, so that New Hampshire, wedged in as it were between these more highly restricted sections, is made to suffer more than all in loss of deer. We were at first surprised to find sportsmen from Maine and the Canada preserves, but when informed of the aforesaid restrictions we wondered no longer. We have not, however, ceased to wonder at the stupidity of the New Hampshire Legislature in permitting all this.

Further, it is a notorious fact that along our Vermont and New Hamshire border Canadians are allowed to "crust hunt," with no game warden on the "line" to put a stop to the work of the pot-hunters. The largest bag this season so far which has come to my knowledge, was the recent killing of eight deer in four days by a few gentlemen at First Connecticut Lake. And still they thirsted for more. It was a sight—a two-horse wagon load of venison being drawn to the depot from this little spot in New Hampshire, as big as a man's hand when compared to the better protected hunting grounds of Maine and Canada.

The Yankee is fertile in inventing methods to catch the deer. Dropping into a blacksmith's shop the other day, I saw him at work on a steel trap of peculiar pattern, and when I said, "Wherefor?" he replied, "Why, that there thing is fer to catch deer with."

Coming up with a lad who was peddling venison, I inquired into his peculiar *modus operandi*. He told me that, procuring a large piece of rock salt, and sinking it 18in. in a gentle spring in the woods, he was now possessed of an ideal deer lick, and it was there he got his venison. Jack shooting is practiced with an untiring persistency worthy of a better cause. For days and weeks together three boats were out every favorable night at Second Connecticut Lake, to my certain knowledge. These facts are almost a parallel to the statement made about a speculator in these parts, that he would never make a dollar by honest means—if he could help it.

Notwithstanding all this, we are able to chronicle our success this year in still-hunting.

Waiting till September, we pointed the prow of our somewhat too large craft for deer shooting purposes toward South Bay, Second Lake. Not long after the start from camp, two miles up the lake, we were joined by the cook and chambermaid from the hotel, who were bound for the same destination for blueberries! Blueberrying and deer shooting did not seem to mix well, at least to my way of thinking, yet, believing as I do in the doctrine of the perseverance of the saints, and, besides, having two "kids" as spectators, who were taken along as umpires in the game, and who were desirous to proceed, Columbus-like, I kept on my way undaunted. Putting the lads beside a run just out of sight over a ridge, I ensconced myself low down in my craft close under some overhanging bushes, and waited—waited for the sun to drop below the treetops, and waited for the cook and chambermaid to withdraw. It was just here that I had, in three or four previous seasons, shot deer, so I was a good deal attached to the locality.

At a quarter past six, by my watch, as my eye scanned the further shore, I was gladdened by the sight of a deer on the edge of the lake drinking. The distance being too great for a shot, I forthwith shoved off and started toward the game. I had not gone a rod before the deer was joined by another, both full-grown does. They presently separated till they were perhaps ten rods apart. My progress was slow and water grass impeded the progress of the boat. I had now got within, say, forty rods, when one of the does sighted me and showed signs of fright. The other had not seen me and was quietly feeding at the water's edge with a little brush between us, and partly obscuring her body, but as she was standing broadside on I quietly dropped my paddle in the water, drew my piece—Colt lightning magazine—to shoulder and fired. Immediately the deer left the water, flag at half mast, and made for the woods. For an instant the other remained standing and so I was able to get in a hasty shot. The ball struck low down between the forelegs, and she only ran six rods. The other I did not find; may it be that she was not hard hit.

A friend had located a little bog on Coon Brook, and one fine afternoon betook himself to that locality for a twilight shot. Reaching the place, he sighted a large, leaning spruce, and thinking a climb into the limbs would enable him to command the situation, he first passed up his rifle as far as he could reach and then proceeded to draw himself up. To do so he must needs hold on by both hands, and while in this position he happened to glance in his rear, and there stood a buck attended by two females.

The buck was a little restive, but was still curious to know what our friend was in pursuit of up that tree. Something must be done, and done quickly, and so letting go his hold he made a lunge for the rifle as he dropped to the ground. Our friend is a quick shot and improved his opportunity to fire at the retreating quarry, but it was unavailing and the deer escaped without a scratch. Moral: When you go up a tree to find deer be sure first there are none standing at the foot of the tree.

Dr. Whidden, of Portland, went up East Inlet Brook—a dead stream—jack shooting. He was armed with a .45-90 Winchester, holding four cartridges. He imagined that Lyman sights and a rifle were the things to bring down game under the jack. The guide presently put him alongside three pairs of eyes, so wide apart as to show that they were not far away. One pair stood higher than the rest, and reasoning that this was the big one of the three let drive. When the smoke lifted the eyes had not changed position, and so he "pumped" another and another ball, as he supposed, into the carcass of the deer, but when the rifle was empty the three deer still stood their ground undismayed.

There was still one cartridge left, but that was in his vest pocket and well encased in a cud of spruce gum. Nothing daunted he leisurely whittled off the gum and knocking down his Lyman sight, he succeeded in knocking down the deer. It proved to be a good sized doe surrounded by her offspring.

Lately there has been a light fall of snow, and Judge Aldrich determined to improve it. Taking a guide and a friend he started off in the direction of Alder brook. The way was long and the judge is fat, and so he begged leave to build a fire and tarry for a while. The guide proceeded, and had not gone far before he struck fresh signs. Following it up he suddenly came upon a two year old buck which stopped and gave him a shot broadside on at five paces. The guide is a good shot ordinarily, but made a clean miss, but as the buck began to jump, the spell was broken, and he was brought to bag at the second fire, and putting him across his shoulders he staggered back to the judge, who was still resting himself by the fire.

A party coming on fresh moose tracks—very large—made a stern chase and a long one, but failed to sight the animal. And so the hunt goes on, and so it will till the last deer is shot, or till such careful legislation and such care in its execution that will allow a reasonable indulgence in this sport without lessening the supply of game.

C. H. Gleason.

## CHICAGO AND THE WEST.

Chicago, Nov. 10.—Two weeks ago old Boreas waked from his sound slumber of six months. He stretched himself, felt of his muscles to see if his old rheumatic pains were still with him, and after a profound yawn, which froze the flame in his oil lamp, he stepped to the door of his den and gazed out upon a landscape rich with the bright colors of the dying autumn.

The mild breezes of the Indian summer blew softly through his icy whiskers; a mallard quacked contentedly in a near pond hole; a flock of red-winged blackbirds rose noisily from a bed of wild rice and fluttered before his astonished eyes; the subtle perfume of the timid muskrat was borne on the breeze to his imperial nostrils; the querulous cry of the rail greeted his ears, and a jacksnipe flushed in front of him and flew lazily away with a half angry *scape!* The rich deep blue of the sky was unmarred by a single cloud; a warm breeze arose from the marsh, and over the hills across the lake hung the purplish tinge that makes the perfect autumn day. All nature was as quiet as the late political headquarters are to-day.

The king was angry. He had not slept well of late, and his universal peace and contentment aroused his perverse spirit. He frowned and a gray tinge obscured the blue of the sky; a small cloud came skurrying from the north; the wild rice and the marsh grasses bowed their gentle heads in fear, and from the lake came echoing the weird, warning cry of the loon.

The king puckered up his frosty lips and sent an icy blast howling and shrieking over the marsh and across the prairies to the distant hills. Instantly all nature took the alarm. Mr. and Mrs. Mallard called their family together, and with hurrying wings sought to escape the wrath of the king of winds and stormy weather. Nor were they alone. All the wildfowl endeavored to reach the last patch of summer-blue sky that was fast disappearing toward the south. A prodigious quacking and gabbling and whistling of fast-moving wings stirred the blood in the heart of the hunter, he who had for so many days sat patiently in his "blind," waiting for the long-hoped-for "big day." Whew! a flock of mallards darts past him, hovering a moment over his decoys, and then *pi-tou, pi-tou!* a rapid right and left barrel leaves three fluttering beauties in the water before him. So it was over many a marsh in the Dakotas, Minnesota and Wisconsin.

The brave blast that old Boreas blew two weeks ago started the wildfowl of the far North on their annual excursion to the South, and thus filled the boats and gladdened the hearts of many an ardent hunter. But the ducks caught up with the patch of blue and settled contentedly in the marshes of lower Wisconsin, Illinois and Indiana. There they dallied in fancied security until last Saturday. Then old Boreas roused himself in wrath once more and again sent a chilling blast that chased the patch of blue yet further south. And over many a marsh and many a lake echoed the sullen "boom-boom" of the heavy guns sounding their farewell to the hurrying flocks of ducks as they came and went on their southward journey. But all of them did not go South. From the Horicon marshes in Wisconsin the reports of the closing of the season show exceptional sport. Dr. H. C. Buechner has undoubtedly been most favored. On the big day he scored 78 mallards and pintails, and ran out of shells when the birds were coming thicker all the time. A few days later he scored 67, all big ducks, and in three consecutive days killed 126. Percy Stone, Walter Grey, Fred Donald, Major Hanley, C. C. Lamos and W. L. Shepard likewise enjoyed superb sport, each averaging from 25 to 50 birds per day.

From Illinois and Indiana points also come accounts of good to excellent shooting. At Fox Lake last week, canvasback, redhead and bluebills were reported very plentiful, though I have heard of none of the bags made. At Lake Koshkonong, Wisconsin, last week, Ed Bingham and Al Knox had good shooting at redheads and bluebills. Lake Calumet, which is inside Chicago's limits, has been for the past week the nightly resort of thousands of ducks, but each morning they have been promptly driven away by the horde of reckless shooters who infest that region. Tolleston Club and the marshes of the Kankakee River in Indiana have furnished excellent sport. At Mak-saw-ba Club, Will Haskell, John Whiting, Joe Card and Le Roy Brown have had steadily good shooting at mallards, and John Watson has slaughtered quite a few snipe. Uncle John massacred 37 jacks last Saturday and Sunday. Bill Haskell killed 18 mallards in two days this week. The great body of the ducks are now on the lower Illinois River, and many Chicago sportsmen are down there among them.

Charlie Carhart of the Board of Trade, who has just returned from a week's visit to the Swan Lake Club, averaged over forty mallards a day, refusing to either hunt or shoot teal and other small ducks, of which he reports there were myriads.

At present there is no doubt but what excellent shooting can be had on the lower Illinois River, but a letter to-day from V. M. Lincoln, of the Undercliff House at Lake Senachwine, warns intending visitors to hurry or they may be too late, as a freeze-up may now be expected any time.

But with the approaching close of the duck season, quail are beginning to attract the attention of Chicago sportsmen. Magnificent quail country is to be found within easy reach of Chicago, and there doesn't live a true sportsman whose heart will not bound with excitement when the whirring wings of the little brown beauties beat a merry tattoo on the crisp November air. Oswald von Lengerke, Charlie Antoine, Rolla Heikes, Frank Place, Ben Dicks, Lee Hamline and other well known Chicago sportsmen, have already had grand sport and are not yet ready to quit. Von Lengerke and Antoine go out once a week regularly and their bags run from thirty to fifty each time. There never was a better quail year.

Indiana, Illinois, Iowa, Kentucky, Missouri and Kansas are great quail States, and in all of them this year's crop is phenomenal. The quail are nearly as numerous as Democrats this year.

Charley Comley has just returned from Mississippi, where he and a party of friends have had royal sport with deer, turkeys, quail, ducks and "sich." Mr. Comley considers it part of his regular business to make this trip every year. Mr. R. R. Street, of New York, and Mr. Henry Stephens, of Chicago, have been for the past two weeks at the grounds of the Eagle River Shooting and Fishing Club in Wisconsin. They went after bass, muscallonge and deer. They will be joined in a few days by a party consisting of Messrs. Al. Hofmann, Geo. Hofmann, Alex. White, J. B. Sanborn, Geo. T. Farmer and others, on a deer hunt.

Don't it make you shiver to think about fishing at this time of the year? Ugh! ugh! ugh! But actually, little more than a week ago, a man caught over sixty bass in the Deep River, near Liverpool, Ind. And he caught them on a hook and line, as the law provides, and Bill Haskell saw them. Ed Price started to say, "Pshaw, that's nothing. One time in December, I caught—" but we all stopped him, and the mate to the Kekoskee fish story remains untold.

Anglers of the West should rejoice that George W. Peck has been re-elected Governor of Wisconsin. Governor Peck is an enthusiastic fisherman, and during his administration has done much to encourage the preservation and propagation of the different varieties of fish native to the magnificent waters of Wisconsin.

The latest returns from Wisconsin indicate that Dr. Thomas has not yet paid that fine for his July deer.

W. P. Mussey.

### Massachusetts Association.

Hon. Geo. W. Wiggin occupied the chair at the November meeting of the association at the American House, Boston, last Thursday evening, 125 members being present. Three applications for membership were presented and referred to the committee. Messrs. Kendall H. Damon, Chas. F. Chamberlayne, Chas. F. McNamara and Chas. E. Butterman were elected members.

Messrs. E l E. Hardy, Chas. A. Brackett, Warren Hapgood, Geo. B. Appleton, Dr. J. W. Ball, Dr. M. A. Morris and John Fottler, Jr., were appointed a nominating committee to prepare and present at the December meeting a list of candidates for officers for 1893.

Mr. Edward E. Hardy, for the committee on the formation of a United Fish and Game League, reported that representatives from the Old Colony Club, the Southeastern Massachusetts Fish and Game League and the Massachusetts Fish and Game Protective Association had held a meeting and had prepared a constitution for the proposed league. The main objects of this league are to obtain such legislation as will result in the propagation and preservation of fish and game in the interest of our fishermen and the general food supply of the people; to watch legislation, State and national, with the object of preventing adverse legislation; and seeing that favorable legislation is legally adopted to the end in view; to suggest to the Legislature such codification and amendment of the laws relating to fish and game as will advance the object of this league. The United Fish and Game League is to be an executive body composed of representatives from the different Massachusetts associations to better watch legislation.

After discussion the question was referred to the board of management for their consideration.

Richard O. Harding, Sec'y.

### The New York Seasons.

It is with pleasure after returning from a three weeks trip I sit down and read the accumulated numbers of Forest and Stream.

In noting the game reports from different parts, taking them as a whole there is a reported increase over last season's supply. Partridge and woodcock, so far as my observation goes, are certainly not so plentiful in the counties of Brown and Chenango, this State, and Susquehanna county, Pa., this season as last.

Under the condition of things, a season of only one and a half months duration in the first two named counties, the winter not being unusually severe, with the absence of ice storms, we looked for a good supply of birds this year. There seemed to be only one thing in the way of nature to retard them, a very wet and cold spring.

What should be done to try to preserve and increase these noble game birds? That something must be done to save them from complete annihilation can easily be proven by refering to some other parts of the country where they are practically extinct. To start the ball rolling in the right direction, let us encourage those who write for the public eye, that instead of writing of big bags, they formulate some plan of further game protection. My own ideas briefly stated would be to first offer sustantial benefit to those who bring game law breakers to terms. Another to adopt the Pennsylvania law in regard to bounty on game, exterminating animals such as fox, skunk, etc. Last but not least I would change open season to from Sept. 10 to Dec. 1. By all means I would take off the month of December. With the weather as it was last December, more birds were killed than in all the rest of the season, for the reason that the previous cold weather had driven them together into thickest cover, then to come out those warm December days and to be easily found by gunners. Let us hear an expression.

H. W. Brown.

Syracuse, N. Y.

Chimpanzee (professional humorist of the district, to lioness)—"I say, that dude hunter must have felt very down in the mouth when you swallowed him."—*Life.*

### Loading for Game.

RALEIGH, N. C., Nov. 14.—After many years of practice and considerable experimenting with different ways of loading shotguns, I have come to the conclusion that the commonly accepted standards of proportion of powder and shot is not the best. The most important improvement in modern gunnery, both in artillery and small arm practice, is in the line of higher velocities of the projectiles.

For this reason the governments of Europe have adopted for a standard military rifle, a caliber of .30 or .31 with increased powder charge. All quail hunters must have observed that many birds seem hard hit but succeed in getting away. Let them now increase the powder and diminish the shot and they will be gratified with the result.

For a 12-gauge gun I use 4drs. black powder, two heavy wads, a scant ounce of shot with a card-board wad over the shot. With this charge the recoil is greatly reduced, and the velocity and paralyzing effect of the shot greatly increased. Though the number of pellets in the charge is considerably less than usual, there will be fewer wounded birds to escape. A friend has adopted this idea, reducing the shot to ¾oz. with 4drs. of powder, with the best results.

I have lately killed some large black ducks, using No. 5 shot. Some idea of the force or velocity of the shot is shown by the fact that every shot passed entirely through, even in the thickest part of the body, at a distance of 35yds. The difference in effect when using one or two wads over the powder is also noticeable. It is decidedly best to use two wads. T. C. H.

### New Jersey Game Notes.

HOMERSTOWN, N. J., Nov. 5.—Quail and rabbits are more plenty throughout this section than during any past fall for a long time. Since the season for shooting them came in (Nov. 1) scarcely any one who has gunned has not secured a good-sized bag. Pheasants, in the young growth of wood along the edge of the pines, are about as plenty as usual, so far as we can learn. This section is by all odds the best part of the State for the first two kinds of game, the country being diversified by many woodlands, belts of timber and bushes, tracts of good farming land and many stubble fields, and the pines but a short distance to the southeast of us, thus making as good a region for gunning in as any sportsman could wish for.

Gray squirrels were so plenty with us this fall that their name was legion. In fact they really became a nuisance, so that many of the farmers allowed, and often encouraged, gunning for them, even before the season was in, as the rodents made such havoc in cornfields adjoining wood lots that the owners were heartily glad to have them thinned out, consequently many sportsmen, taking advantage of the license, secured large numbers of them. Even now they are quite plenty, and should one hunt for the grays he could, in a short time, secure a goodly number.

It seems almost a mystery where such a host of squirrels came from this fall; the like was never known before, even by that often spoken of personage, "the oldest inhabitant."

So taking it altogether, the season is truly a splendid one for all kinds of game indigenous to this section.

A. L. L.

### Texas Game.

BALLINGER, Runnels Co., Tex.—In Concho county, which adjoins this county on the south, the prospects for quail shooting are very good. We have usually very good success with the Bob Whites—and by success I mean that a man, with dog of course, who knows the country can secure from thirty to fifty quail in each day's shooting. Near the towns, of course, the quail supply is very limited. We have also numbers of the crested California quail. These are not satisfactory, as their excellence when on the table does not compensate for their superior ability in running, and their unwillingness to remain in the vicinity of one's dog. In fact it is only possible to make a large bag of the Californian quail, at least of those found here, by driving them to an ambush and shooting from the hiding place into the flock. They really go in flocks at this season, when the coveys get together.

We have a very good crop of acorns this year on the oak ridges in the southern part of Concho county and in consequence one can count upon getting fairly good deer shooting. Usually both ducks and geese with an occasional swan afford ample remuneration for the time expended in hunting them. H. L. B.

### Zinc for Gun Rust.

LANCASTER, N. H., Nov. 5.—In looking over an October number of the *Iron Age* I was struck by an article relative to a rust preventive for guns. The article claims that a ring of zinc soldered around the barrel, or, better, a strip soldered along the barrel on the under side and out of sight would effectually prevent rusting. It is claimed that "the galvanic action excited between the zinc and iron effectually prevents oxidation of either metal, and as long as this zinc remains in contact with the iron not a particle of rust will appear on either the inside or outside of the barrel." I have seen this principle applied to tin water pails, a narrow strip of zinc being soldered across the bottom of the pail, and it really seemed to fullfil the claims of the manufacturers that the pails would not rust, and I know that a small strip of zinc placed in contact with a nail when driven into wood will prevent rust streaks on the wood when exposed to the weather. Who of the FOREST AND STREAM readers have ever tried the experiment on their guns? ROB.

### Ferrets and Rabbits.

SOUTH MONTROSE, Pa., Nov. 8.—*Editor Forest and Stream:* I commenced breeding and selling ferrets some twelve years ago; and from the demand I am quite sure they are used for hunting rabbits. When I first commenced to sell them I supposed there would not be a rabbit left in five years, as I have seen a large band of hunters go forth with good hounds, guns and ferrets, and when a poor innocent rabbit would run in a woodchuck hole the men would circle around and tie up the dogs so as to get a better shot at the rabbit when he runs out. Sometimes all hands would miss him. Then the dogs would be turned loose and the rabbit was surely killed. The boys hunt them with dog and bag and they are tracked in the snow to the hole. In fact it does seem that no rabbit could live and that in a short time all must go. But after twelve years of hunting with ferrets I find the rabbits more plenty than before, and I have tried to find the cause. I find that the male rabbits kill and eat all the young rabbits he can find; and it is the male rabbit that holes up and is killed, while the female runs and does not hole up so often, and is saved to rear her young.

There is a law in Pennsylvania which prohibits the use of ferrets. A few have been prosecuted, but not convicted from lack of proof, as you must catch your man in the act. You have a righ to carry a ferret and no one has the right to question what you are going to do with it. So far as I can see the more we hunt with ferrets the more rabbits there are for the "true sportsmen," as they are called in FOREST AND STREAM. The farmers' boys who raise the grain which feeds the rabbits all summer can't get a chance to hunt until the fall work is all done unless they take a rainy day when they can't husk corn. We have some true sportsmen that hunt the woodcock upon our hills as soon as the young ruffed grouse is strong enough to fly, and it is queer how many shots they get at the woodcock up among the maples and hemlock trees on the very top of our hills. SILAS DECKER.

### Rifles for Deer.

OCOS, Guatemala, Oct. 20.—*Editor Forest and Stream:* When "Aztec" or any experienced hunter who has hunted deer over all kinds of ground, recommends a .38cal. rifle as the best hunting rifle, *i. e.*, as an effective deer shooter, it should be encouraging to lovers of the exhilarating and exciting sport of deer hunting, particularly to the skilled marksman. Deer, if they knew it, would also rejoice, for their chances of escape would be greater.

I have hunted deer for about twenty years and have always had plenty of time to spare, usually hunting three or four times a week—still-hunting or with hounds. As nature "abhors a vacuum," I have been compelled to jack deer for meat to satisfy the "inner man;" this, I'm happy to state, has but rarely occurred. I have tried the small caliber rifles, but out of at least 2,000 deer that I have killed very few indeed fell to guns of that kind. Experience has proved to me that they are of very little use and it is my decided opinion that the .45 Express, or .45-90-300 Winchester is the most useful and deadly for deer hunting.

Old hunters are well aware that unless a deer is killed by the first shot the chances are nine out of ten that it escapes, and this is what very often happens when hunting with a small caliber rifle, even a .38. It may be effective in the hands of a skilled marksman, or even in the hands of an amateur, if the latter could only carry with him the proverbial "pinch of salt." GUATEMALA.

### Losing Wounded Deer.

HUNDREDS of deer have been killed through this section this season, and they seem just as plenty as ever. I have seen several parties that have come down from the east and west branch of the Penobscot River, and they had all the deer they wanted, and one party told me that some days a single man would jump as many as thirty that they would get sight of, and that they wounded many that they could not get.

I noticed in FOREST AND STREAM mention of a party in northern Michigan that killed four deer and wounded six, and a reply to it advising that such parties should come out of the woods and stay out. I would say that I have had fifty years' experience in hunting deer and other large game, and I know that our best hunters often kill their game and lose it. I have shot deer that did not live twenty seconds, and have had a hard job to find them, and sometimes would lose them. Where deer are plenty their tracks are plenty, and sometimes several deer are together, and if the wounded one does not bleed freely he may run ten or twenty rods and fall dead to one side in the thick brush and never be found, and the hunter may follow on the trail of those not shot at.

I have sometimes given up looking for my game when I was sure it was dead and not far away, and have gone back the second time and looked until I found it. I believe that more wounded deer get away from some parties than they get. J. DARLING.

### The Mink as a Dodger.

ITHACA, N. Y.—In the winter of '91 while hunting along Fall Creek, east of town, I ran across two minks. The first one I had four shots at, but at each flash of the gun the velvety-skinned fellow seemed to dodge, "bobbing up serenely" immediately afterward unharmed, and as mischievous as ever. At the fourth shot he glided to a rocky fastness hard by and disappeared. The second one afforded me two fair shots with the same results as in the first case. Later on in the season a similar and equally unsatisfactory experience was had along Buttermilk Creek. It was a fair shot, as I thought; but at the flash the illusive anatomy of the mink was not where it was when I pulled the trigger. In all three instances I used shells loaded with 3½drs. of powder and 1¼oz. of No. 6 shot. The distance from the quarry was not in any case over 40yds. In shooting I took particular pains to cover each animal well and close. The query is, therefore, can the mink dodge shot? M. C. H.

### North Carolina Field Notes.

AVOCA, N. C., Nov. 11.—The weather has been variable since my arrival here on the 7th, partly rainy, but favorable for turkey shooting. We flushed four of these, fine birds, on Black Walnut Creek yesterday, within a half mile of the Dukinfield House. There seems to be an abundance of quail, turkeys, deer, rabbits and squirrels on the plantation (Dr. Capehart's), which comprises 5,500 acres. Parties are beginning to arrive at the hotel, and there are a number of applications on the books. The Doctor has recently added several thousand acres to his already extensive territory, and purchased 1,000 live quail to be turned loose forthwith on the premises adjacent to the hotel. The stock of birds is certainly exceptionally large, and the inducements for sportsmen great. Time from New York by the Cape Charles route (N. Y. P. & N.) to Avoca, N. C., 19 hours. C. HALLOCK.

### A Successful Maine Trip.

I HAVE just returned from a short hunting excursion in the State of Maine. Our success was far beyond expectation. We killed one bull moose, three caribou, one very large, and one deer, and came back earlier than we intended because we had enough. Mr. Van Santvoord, whom you know, was my companion. We took each of us a guide from here, making four in the party.

CHARLES FENTON.

### Ten Straight on Woodcock.

WATERFORD, Me., Nov. 7.—Mr. Frank Haskell, of the Westbrook Manufacturing Company, Westbrook, Me., shot 18 woodcock in six hours one day the last of October. He shot 10 straight shots without a miss. Who can beat this? MR.

### A New-Subscriber Offer.

A *bona fide* **new** subscriber sending us $5 will receive for that sum the FOREST AND STREAM one year (price $4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price $5)—a $9 value for $5.

This offer is to *new* subscribers only. *It does not apply to renewals.*

For $3 a *bona fide* new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Ieet's handsome work, "Bird Portraits for the Young" (the price of which is $3).

## Sea and River Fishing.

*The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.*

### THE PIKE-PERCH.

*Editor Forest and Stream:*

I should like to know something of the wall-eyed pike. Where is he found? How large does he grow? Is he thoroughly game? Can he hold his own against the black bass? For use on the table, how ranks he? Is he known to exist in any of the waters of northern New Jersey? And—I almost forget—with what kind of bait is the wall-eyed fellow generally captured? Once more, and finally, is there any reason to hope that the pike aforesaid can be made to live, thrive and propagate his kind in a certain New Jersey lake, which is a mile long and in places over one hundred feet deep? I may add that the lake in question has a gravel bottom, although at one end it winds up in a marsh. A small stream runs into it and through it. A. C. P.

NEWTON, N. J.

[The wall-eyed pike is more widely known as the pike-perch; it has received also many other common names. In Pennsylvania it has the unsuitable name of Susquehanna salmon. In some Eastern States it is styled perch-pike and glass-eye. In the Great Lakes it bears the names yellow pike, green pike and grass pike. It is the jack of the Ohio Valley and western North Carolina; the pickerel of Lake Erie and Canada; the white salmon and jack salmon of certain portions of the Ohio Valley. Among the Cree Indians it is the okow, and the French Canadians call it doré and picarel. The fur traders of British America often style it hornfish.

The pike-perch is native in the Great Lake region and extends northward into British America as far as the fifty-eighth parallel. It ranges southward in the Mississippi Valley to Arkansas and in Atlantic streams to Georgia.

This species is said to reach a weight of 50lbs., but market specimens seldom average 5lbs. In the Susquehanna occasional individuals weighing 10 or 11lbs. are taken.

As a game fish the pike-perch has few superiors, and its flesh is highly prized for the table. Anglers prefer live minnows to all other baits for its capture, particularly such as are more or less translucent and have silvery sides, as the dace, or fall fish, corporal, red-fin and gudgeon. The trolling spoon with black bass tackle is a great favorite on some parts of the Susquehanna between Harrisburg and Columbia. The fish is found on the bottom in clear, rapid waters, and lurks under sunken logs and rocks, from which it darts upon its prey. Its food consists chiefly of worms and small fish. It inhabits the same waters as the black bass and will hold its own against other predaceous fishes.

We have no information of the occurrence of pike-perch in northern New Jersey; it has, however, been introduced into the Delaware, where it will be protected for some time longer, and we understand it is likely to thrive if unmolested. The lake above described would appear to be admirably adapted for the experiment of planting pike-perch. If the tributary stream is large enough, the fish will probably run up to spawn in April or May, and deposit their eggs on sandy bars in shallow water. The eggs are very small, about 17 to 25 to the inch, strongly adhesive, and subject to great loss during the hatching period, which lasts from 14 to 30 days, varying with the temperature of the water.]

### Fish Colorings.

CHARLESTOWN, N. H., Nov. 9.—I am very glad to see "Rob's" notes on the "Trout of Third Connecticut Lake" and fully agree with him in the conclusion that there are two distinct varieties of trout in the Diamond Ponds. So far as my experience goes, the deep-bodied, brown-backed, light-fleshed variety are predominant in the smaller, or upper, pond, and the slim, blue-backed, red-fleshed variety in the larger, or lower, one. The flesh of the latter is more than a salmon-color, it is a "beefsteak-red," before cooking, and the carmine spots are very small, though very brilliant. I remember the first one I ever caught, I doubted it being a trout till I saw the red spots.

The heads of the pike family in FOREST AND STREAM of Nov. 3 are very good, but the bean-shaped, white spots on the pike proper are not quite clear and prominent enough. The golden green of the small species, the pickerel of the Connecticut, is simply golden brown, in iron-stained waters, like many of the New England ponds or smaller rivers, like the Chicopee, which drain large level districts, more or less impregnated with bog-iron sand. VON W.

## FEMININE SUCCESS IN TROUTING.

SIX O'CLOCK one bright October morning finds us hurriedly adjusting rods and reels on the bank of an ideal trout stream in the foothills of the grand old Cascade Mountains. The rosy-tinted summits of three snow peaks are distinguishable through the purplish morning mist that is rapidly breaking away before the first rays of the rising sun.

The atmosphere is heavy with the fragrance of the dew laden pines. What intoxicating draughts of pleasure such a morning affords! How lovable, too, nature is in her soft, shy mood of the early morning; even the water rippling over the mossy stones has a soft, subdued sound. Off there in the distance the musical tinkle, tinkle of a cowbell and a faint call of "So-o-k, s-o-o-k, Pide," rendered with inflections and accentuations, add a pastoral accompaniment to nature's own sounds.

There! my leader is now straightened out most beautifully, not a snarl left, and now for the first cast in that inviting riffle yonder. My husband always gives me choice of riffles, which is very gallant, I think, but then he is a true sportsman and consequently is generous. Ah, a rise already, and here is success to my last cast. The struggles of my beauty are soon ended by a quick rap of the head on the butt of my rod. Another cast elicits a faint response; again, a good rise. I'll just mark this place and return to it again in a few minutes. Now, I'll just draw this pretty royal-coachman and queen-of-the-water tantalizingly over this riffle and coax another effort. A splash, an instinctive twitch of the wrist, a speckled vision, and another trout is recorded to my list.

The Doctor is meeting with good success; I hear the song of the line humming its sweetest strains, showing his captives are quite gamy. Our fishing ground is a series of large, very swift riffles extending about a mile. On these riffles huge old salmon flounder awkwardly about, splashing the water furiously.

Further out there in the stream is a most promising riffle, so I'll just take the least possible abbreviation in my skirt and reach it. My suit is of corduroy velvet and so made that the skirt is easily adjustable to almost any length, by the use of the ever ready hook and eye. The trousers are narrow enough to allow the rubber boots to come up high over them. Such a suit not only allows perfect freedom of action, but is protective as well. There are no draggled edges of a skirt flapping about, and moreover it looks well. So, my friend, if you have indulged in ridiculous visions of the writer whipping a trout stream with her dress floating out on the current like an umbrella when she gets in deep water, just relieve your mind of such a funny picture, for with my suit I can whip a trout stream with as much convenience as any man, and not look ridiculous either.

I must'n't forget my soft felt hat: this is a very important adjunct to my costume. Just like a woman, I have digressed from the main point, and am talking about dress; but this is not vanity, I only want some other woman to know how to go trouting, that she will not only not be a laughing stock to her companions, but that she can combine ease and grace with pleasure. Having reached the desired haven I will let my line out well and make a cast beyond that log. Here is a big one, sure; but how deceptive, for the size has diminished very perceptibly since landing it. However, it is a fair specimen, and I will persevere until I hook and land a big one. Another cast, and how provoking! My hook is fast in that old salmon's sore back. During the spawning season the salmon are covered more or less with sores, caused by beating themselves against obstructions or fighting. They die soon after spawning.

The idea of my beautiful professor and royal-coachman, with their pretty tails and wings, waving like tiny pennants from the back of an old salmon, is too ridiculous. My giant prisoner, which is larger than I bargained for, makes a sudden rush for undisputed territory. The Doctor cries, "Look out," but his warning comes too late; the huge tail misses me but upsets my equilibrium, and down I go. A few struggles and my equilibrium is as firmly established as these slippery rocks and this swift current will allow.

The Doctor's line goes out with a cutting zip! that foretells a fight. But lo and behold! when landed not a beautiful trout meets his expectant, enraptured gaze, but only an ordinary steel-head salmon. With a disappointed air he tosses it on the bank, since it is too big for the basket.

He is now enticing another rise in that swift riffle below. I hear the hum of his reel again. His rod yields to the strain; the tip certainly will snap, for it seems to bend nearly double.

The captive leaps high out of the water, trying to free itself from the hook, then darts off either up or downstream, according to its fancy, with Doctor dancing attendance. After 15 minutes of careful playing the trout, weighing 3½lbs., is safely landed. It is left on the bank with the salmon, while we whip the riffle a little lower down.

Our other chum, Dick, is disputing with a hog the possession of the fish on the bank. The hog evidently thinks possession to be nine points of the law, so it makes off with a fish—the trout, too, maybe—while Doctor and the dog follow in hot pursuit.

In the mean time my professor and royal-coachman bob on the riffle at their own sweet will, while I watch the outcome of the race. All of a sudden my line goes out so fast it fairly burns my fingers, while the reel hums like a top. A big one at last! Instantly all the big fish stories I have read or heard run riot through my brain. The keynote of all these stories where success crowned the victor's efforts is "keep cool." Well, this is all very well theoretically, but practically it is somewhat difficult, with the first real big trout—of course it is a trout—it must not be anything else—leading one over slippery stones and through swift water at an astonishing rate of speed.

Keep cool I must; so down stream I go, then up, according to the whims of my gamy charge. Now he sulks, and I take advantage of this to breathe a little and clear out the water I have splashed into my eye. Now if my tip does not break, if—again my captive darts up stream and so do I; then down we go in the same fashion, then up again. This cannot last always, as the race is again repeated; my prize will soon exhaust itself at this rate. Oh, now he yields, as I carefully reel him in coaxingly nearer a good landing place. Oh, what a beauty, and see how his pretty speckled sides gleam in the shallow water. I am trying to keep cool with my pulse up to about 200 pulsations per minute and my cheeks burning like fire. Now, this is such trouting as we hear of, and how exciting—cooling I mean. A sudden flash and my seemingly vanquished prize suddenly is electrified with new life. Again my line goes out, and again I must follow up and down, and—my flies all at once are floating uninterrupted on the surface of the water, while the line curls lightly in the swift current and about the mossy stones. I might do as women are generally expected to do under such trying circumstances, viz., sit down and cry, but as there is no convenient seat in three feet of swift water I postpone the luxury. The Doctor returns victorious, and sorrowfully I narrate the unexpected capture and loss of my "biggest one that got away." We count twenty-six fine trout, the result of our morning's pleasure, which we consider very good, indeed.

Why do not more women enjoy trouting I wonder, and yet we may find a partial solution of the problem without taxing our brains very much. The husbands and brothers do not ask them to join in a sport that they find so necessary to their own health and pleasure. If they do, they probably laugh at the sister's or wife's first attempts, forgetting that they themselves once cast a fly awkwardly and got their hooks, too, entangled in all sorts of inviting meshes. Then, too, women often fail to picture any enjoyment in a sport they know nothing of, the indulgence of which would not only be beneficial to their health but particularly delightful enjoyment. An occasional outing is a panacea for most ills human flesh is heir to, woman's not excepted. Fishing, too, is a sport where there is comparatively no danger of injury, which makes it all the more possible for women.

We are glad to know that there are some sportsmen who consider their wives or sisters as real chums on a trouting excursion, instead of leaving them at home wishing "that they were men" that they, too, might enjoy an outing and leave their perplexing cares at home on a shelf.

A woman will soon learn to love the ripple or roar of a trout stream and the song of the reel as much as her husband or big brother, and look forward expectantly to a "day off" in the mountains enticing the wary trout.

OREGON. MRS. F. CAUTHORN.

## SUSQUEHANNA OBSERVATIONS.

*Aug. 23.*—Black bass running fair in size. Shiners best all 'round bait; stone catfish best for large fish. Crabs (crawfish) and Ho Jacks (helgramites) used to very little extent at present.

Salmon fishing poor. Trolling for these or black bass not successful. Still-fishing with live minnows good. River high for the past two weeks; now falling rapidly and clearing nicely.

The little darters are here known as "mud salmon." Is this not as far fetched as "Sand Lake trout" for mascalonge?

In collecting baits in the creek several kinds of shiners, the butter chub, the darter, the black-nosed dace and crawfish and helgramites were found. The darters are the commonest. Butter chubs, or cut-lips, are common enough at the foot of falls or rapids, in the foaming water close up to the current. How vigorous they are for their size! The angle worm is their weakness and they are ready biters.

Young lamprey eels are the only bait for "salmon" now.

In the river we take our bait with the hook. The grass chub (horny head, chub, jerker, horny-headed dace, etc.) was the principal and best bait taken. Shiner and cut-lips were also taken, but did not prove so good. The grass chub is so called because it is found along the grass patches. They are hardy, live well, and take two bass often before dying.

*Aug. 26.*—The river has fallen during the past week, although it is still above low water mark, and we have had good fishing. A dozen or more anglers here have had successful outings. The swift running waters found at and near the riffles below town have furnished the best fishing.

There seems to be no limit to the variation in the colors of the small-mouthed bass. They are taken here dirty-yellow, light green, dark green, dark, and sometimes very black. Of course the greener ones are mostly smaller fish, the large ones generally black, or green and black. But fish of the same size vary in color. They are found under the same conditions, so it would seem that it is not always safe to conclude that a fish's color is due to its environment.

We find a great difference in the strike of a fish. Some bass are hard to hook. Others hook themselves. It would seem at times that we had pulled the minnow out of the bass's mouth; while again it occurs to us that we gave the fellow just a little too much time. Size of bait also, undoubtedly, must enter into this question. If the bait be large ought not the fish have more time to turn it and commence the act of swallowing? An old and very successful bass angler once told me that he always counts 14 before giving the bass "the butt." The counting is done moderately slow. A very good plan, we find, is to pull out through the guides a couple feet of line and hold it in the hand so that the fish may make a short run without having to feel the resistance made by a reel with the drag on.

*Nov. 1.*—During the past season, which is just ending, some very good catches of fish have been made. The river took a long time to get down to low water mark, but when it did get there the mark was held for a considerable length of time. Salmon (pike-perch) fishing has been very fine. From the Juniata to the Columbia dam the sport has been excellent. A number of anglers caught handsome strings in the deep water immediately below the dam this week. Mr. Lemer, of Harrisburg, took 36 in one day at Fite's Eddy, weighing 75lbs. The Conewago Falls have furnished rare sport, too. Barney Doyle has been very successful there, and Mr. Aldinger, of Harrisburg recently caught 20 odd, which averaged very nicely. Other Harrisburg anglers have been to the Juniata and report good fishing.

BAINBRIDGE, PA.

First English Sparrow—The Legislatures are offering rewards for our heads. Aren't you scared? Second English Sparrow—No, I shan't worry until they call us game and pass laws to protect us.—*New York Weekly.*

## MAINE BLACK BASS SEASON.

CHESTNUT HILL, Mass.—I received to-day a note from the Maine Fish and Game Commission stating that there has been no close season for two years. I have a pamphlet of the "Fish and Game Laws of Maine," sent to me by one of the Commissioners, dated 1891. It contains the clause naming a close season. In your *Book of the Game Laws*, just purchased by me, said clause is also included, and yellow pages at end mention no cancellation of said law.

I bet a certain veteran that there was a close season, and opinion of those present forced me to lose; but I presented my authority, the two books above mentioned, and gathered back my payment. This letter from the Commission upsets me again. The bet was a trifle, but I wish to know where the proper authority is. Is there a close season, and if there is not, why do these publications state there is? X.

The Maine law as to black bass is given in the *Book of the Game Laws* as found in the statutes thus:

*Land-locked Salmon, Trout, Togue, Black Bass, White Perch.*—SEC. 47. There shall be an annual close time for land-locked salmon, commonly so called, trout, togue, black bass, Oswego bass and white perch, as follows, viz.: For land-locked salmon, trout and togue, between the first days of October and the following May, except on the St. Croix river and its tributaries, and all the waters in Kennebec county, in which the close time is between the fifteenth day of September and the first day of the following May; and for black bass, Oswego bass and white perch, between the first days of April and July. SEC. 48 [as amended 1887]. No person shall take, catch, kill or fish for, in any manner, any land-locked salmon, trout or togue, in any of the waters aforesaid, between the first days of October and the following May, nor in the St. Croix river and its tributaries, between the fifteenth day of September and the first day of the following May; or black Oswego bass or white perch between the first days of April and July, under a penalty of not less than ten nor more than thirty dollars, and further fine of one dollar for each fish thus caught, taken or killed; provided, however, that during February, March and April, citizens of the State may fish for and take land-locked salmon, trout or togue, and convey the same to their own homes, but not otherwise; provided, further, that the provisions of this and the preceding and two succeeding sections, shall not apply to the taking of black bass from any waters which have been stocked therewith for a period of five years.

*Black Bass.*—SEC. 55. Whoever takes any black bass during April, May and June, or at any time from their spawning beds, forfeits for each offense not more than twenty nor less than five dollars, besides one dollar for each bass so taken.

### The Vermont Game and Fish Bill.

THE Bill (S. 131) now before the Vermont Legislature provides for a Fish and Game Commission of two members, to be appointed by the Governor, and for fish and game wardens to be appointed by selectmen of towns or by the Commissioners. The close seasons prescribed are: Trout, land-locked salmon, longe, Sept. 1–May 1; black bass, Jan. 1–June 15; wall-eyed pike, pike-perch, white perch, muskallonge (except in Lake Champlain), April 15–June 15. Lawful length of trout, land-locked salmon, salmon trout, 6in.; black bass, 10in. Ice fishing forbidden in trout and land-locked salmon waters. Deer protected to 1900. Close season for rabbit (hare) and muskrat, May 1–Sept. 1; gray squirrel, raccoon, Jan. 1–Sept. 1; beaver, fisher, otter, April 1–Nov. 1; quail, wood duck, wild duck, wild goose, plover, Jan. 1–Sept. 1; ruffed grouse, woodcock, Jan. 1–Sept. 15; pheasant, Nov. 20–Oct. 1. Forbidden to kill woodcock or ruffed grouse (partridge) for sale outside of State.

### Florida Fishing.

WAUKEGAN, Ill., Nov. 7.—Let me tell you where to go fishing now that the winter is near at hand. Go to the Indian River, Florida. The past two winters I have stopped at Melbourne. There are fish by the millions at this point. A person can go a few miles north to the Banna River, where is fine fishing; and taking a boat and going down the river to the Inlet tarpon, sharks and other large fish can be caught. There is no place in America in the winter where such fine fishing and hunting can be found as on this Indian River, with the best of oysters, also the famous Indian River oranges and pineapples.

J. F. P.

### Seventy Years Ago.

A GENTLEMAN who recently visited Niagara Falls, and leaving there at 11:41 in the morning, arrived at Grand Central Station at 10:30 the same evening, after a delightful ride of 465 miles, writes regarding his trip as follows: "Seventy years ago, when Mrs. Sigourney wrote her 'Apostrophe to Niagara,' this ride would have been considered as wonderful as the Falls themselves. The New York Central is a poem, or an apostrophe in itself. Such perfect service does the road render, that it is not only a pleasure to travel thereby, it is a positive luxury."—*Adv.*

## ROD AND GUN AND CAMERA.

As a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM.

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us.

From time to time we shall reproduce by the half-tone process samples of the work submitted, and should the interest in FOREST AND STREAM'S Amateur Photography Collection prove to be what is anticipated, we may ask for an expression of opinion by a vote of all our readers after the manner of the successful and famous "Camp-Fire Flickering Vote." Such popular vote will be quite distinct from the award by the committee.

## ANGLING NOTES.

### Leaping Salmon and Swimming Trout.

In a very interesting article in FOREST AND STREAM, of Sept. 8 last, with the caption, "Ouananiche at Cinquieme Chute," "Rowdy Rod" pays an eloquent tribute to the leaping powers of the landlocked salmon of the Lake St. John region. After some remarkably fine word painting of the vigor and dash of this fish, he says: "At Cinquieme Chute I have seen the ouananiche, on his way up to Lac à Jim, leap full 10ft. against the face of the falls, and with scarce a perceptible pause again leap as high, reaching the top of the Chute and falling into the mirrory slide of the water be swept over the falls before he could get his head up stream, and his mighty tail going like the screw of an ocean liner."

There is a difference of opinion as to the height that it is possible for a sea salmon to jump when it is ascending a river to spawn and encounters obstructions. One well-known writer contends that salmon cannot jump the breast of a dam that is more than 6ft. in height, nor the breast of a natural fall of water that is more than the same height. On the other hand, Prof. Landmark, of Norway, who conducted a series of experiments to test the leaping powers of the salmon; Edward Fitzgibbon ("Ephemera"); H. Cholmondeley-Pennell; Twiss, the author of "Travels in Iceland;" Archibald Young, the veteran Inspector of Fisheries in Great Britain; ex-Fish Commissioner Henry Burden; the late Wm. J. Florence; Canadian canoemen who have spent more than a score of years on Canadian salmon rivers, and others that I might name, testify from personal observation, that salmon have jumped from 8 to 16ft. Prof. Landmark and Mr. Fitzgibbon say that they have seen the fish jump the last-named distance, while the others testify to distances ranging from 8 to 14ft. To display their jumping power at its best, salmon must have a deep pool from which to make the start, but Mr. Pennell personally vouches for the leap of a salmon made under the following conditions: The fish was discovered in a shallow creek by two young ladies. They walked in the water below it and drove it up stream until it was almost stranded, and as they stooped to secure it the salmon sprang completely over their heads and landed on dry land. Until a few days ago the only picture that I had seen of a salmon taken in the act of leaping was the one reproduced from an instantaneous photograph in Prof. Goode's book, "American Fishes." That shows the fish leaping a fall of water, and although the water is in good volume, the sheet thick enough apparently for the fish to swim up it, and it is an incline rather than a sheer fall, the salmon has made the jump in the air. I have just seen the negative of an exposure made at a leaping salmon in Alaska. (This reminds me that Prof. Goode told me that the picture in his book was also made in Alaska.) It was made by Mr. S. R. Stoddard, and when prints are made from this negative one may be reproduced in FOREST AND STREAM. In Mr. Stoddard's picture the salmon is in the act of jumping a dam, the height of which, unfortunately, he did not measure, but the measurement I shall obtain later. The crown of the dam projects down and over the water below, but there is no water running over it, so the fish is jumping a dry dam. This of itself is interesting, for salmon run usually only when the stream is in flood. The height of the dam appears to be about four times greater than the length of the fish. This dam was not a bar to the ascent of the salmon, for on the top of it a net is stretched to prevent the fish from jumping over it. Mr. Stoddard tells me that he saw fish make a clean jump to the top of the dam, only to be thrown back by the net. Since I have talked with him he feels that if he could again make the Alaska trip he might secure some photographs that would be interesting to a Congressional committee having in charge the fishing interests of that remote territory. The salmon is a leaper, but it does not always leap in passing an obstruction, and it can perform some astonishing feats in the swimming line.

The difference in tactics between a salmon and a trout in passing an obstruction is just the difference in action between the two fish when hooked. In nearly every case the salmon jumps to free its jaws from the hook, while the trout swims in desperation with the same object in view, and very rarely jumps above the surface. Although the salmon is a high jumper and the trout a desperate swimmer, in passing an obstruction neither confines its action to a display of its chief characteristic, for the trout is something of a jumper when forced to show its agility in that direction. As a boy I often wondered how trout forced their way over what were apparently impossible falls in mountain trout streams. That they did pass up over these falls I was convinced, but how I was unable to explain, even to my own satisfaction. Some years ago, perhaps fifteen, perhaps more, a well-known public man, the head of a lumber company in New York State, told me that during his visits to the lumber woods in the fall of the year he had seen trout swim up a vertical fall of water of several feet and pass over the dam that made the falling water. As I said to him at the time, therefore I do not mind admitting it here, it was a difficult matter for me to believe that his eyes had not deceived him, but I have had proof enough of it since. He described the operation thus: He was sitting on the bank of a stream near a dam that his own men had erected, when he noticed a movement in the water which attracted his closer attention. The water was falling from the crown of the dam in one unbroken sheet, 2 or 3in. thick, into a pool below. A trout would start from the pool up the sheet of water in a zig-zag motion so quick that it was almost impossible to follow it with the eye. Some trout would go over the dam, and some, after making part of the ascent, would fall back into the pool below, only to try it again. By watching closely he discovered that the trout fell back because they got their fins out of the water. The moment that a fin was exposed back the trout would go. Those of the trout that kept within the sheet of water made the passage without accident, and the ascent was as quick as a flash of light. Once in a while there would be a little struggle and a splash at the crest of the dam as the fish made the final effort and the turn at the same time, but this did not always indicate failure, though many fell back even from that point, when they were all but over. One of the foremen of the lumber company told me that he was once building a dam on a small stream to store the water for the spring river driving, and was obliged to put in a plank that had an auger hole in it. The bulk of the water was shut off, leaving the pool below quiet. Soon the water raised on the upper side of the dam until a stream poured through the hole, and as it gained a little head it discharged round and clear into the water below, agitating it. The foreman was looking at the stream thinking whether it was worth while to stop it with a plug when he saw a trout shoot out of the side of the solid stream. Then he watched and saw a number of trout try to swim up in the stream and some few succeeded in passing through the hole, but many fell back unsuccessful. After a time the head became so great that the force of the water was more than the fish could overcome. In these cases the trout accomplished what they sought by their swimming powers instead of by jumping.

While a dam at a storage reservoir of the Glens Falls village water works was being repaired a small leak was supplied with a trough made of two boards nailed together to carry the water away from the base of the dam. The lower end of the trough was, I should say, 15 to 20in. above the ground. The leakage found its way into the stream below, which was a trout brook, by a channel which it made for itself. A trout from the brook followed up this little leakage to the miniature pool under the end of the trough, then jumped into the trough, worked its way to the upper end of the trough in water not deep enough to cover its back, and was there found by Mr. Henry Gayger, a venerable bank officer living in the village. He carried the trout to the stream below, but soon found the same or another trout in the same place in the trough, and then he carried the fish to the water above the dam. I drove out to the dam and arrived just as Mr. Gayger had for the second time transferred the trout. Following the course of the leakage stream from the brook it seemed to be utterly impossible for a trout to swim in the small amount of water in the channel, and the height from this little pool under the trough to the trough itself was to my eye far too great for a trout to jump, and the water was not thick enough for a trout to swim up in it. Yet, that trout made the journey twice. I could multiply instances of this kind if it were necessary to show the power that a trout possesses to swim up over waterfalls that to the uninitiated are apparently impossible. The accompanying reproduction of a photograph shows a fall of water that is a fair example of the supposed barriers to the ascent of trout. The photograph is of Shelving Rock Falls, on Shelving Rock Brook, a stream that flows into Lake George, N. Y., on the east side, just south of the Narrows. The falls are but a short distance from the lake, and are considered well worth looking at, and many journey to the place for this purpose. The picture does not show the entire fall, but enough to indicate its character. Trout go down over these falls to the lake and return passing over falls. Trout that stay for a time in the lake take on a coating of silver from lying on the white sand, which almost covers the markings and mottlings and which gives them the local name of "silver trout." In this respect they are very like the so-called sea trout of Canada. When the trout have returned to the brook the silver coating gradually disappears and the spotting shows again in all its beauty and freshness. Years ago I was fishing this Shelving Rock Brook with a friend when he called to me to join him. He had just caught one of the silver mantled trout and was amazed to find it above the falls, for he knew well where it got its silver coat, but did not suppose it possible for a fish of any kind to swim up and over the falls. A man living near told us then that he knew the trout went up and down in the spring and fall when there was water enough to make the passage, but my friend declared the "silver trout" must have been carried up in a bucket of water, although he was afterward convinced that the trout could go up and did go up as the man expressed it, "slick as grease."

### Vermont Fish Law.

HIGHGATE, Vt., Nov. 5.—*Editor Forest and Stream*: Among the changes proposed in our present fish laws is one which, if it becomes a law, will, we fear, nearly exterminate the fish in this section of Lake Champlain. It is proposed to make a law giving our Fish Commissioners the power to grant licenses to seine the northern waters of the lake during the time that the fish are entering the mouth of the Missisquoi River to spawn. The reason given why licenses should be given here is that licenses are given on the Canadian side. That is a poor reason, for though Canadians do fish with seines, a large number of fish annually come into our river to spawn, and then return back into the lake and there remain within the borders of our State and furnish sport and food for a large number of our residents, as well as for summer tourists who come here during the hot season. If the above bill becomes a law, the same influence that caused the bill to be made and to become a law will be used to get licenses granted.

I believe that much of the net fishing done on the Canadian side of the line has been done by persons resident of this town and the towns of Swanton and Alburgh, Vt., and the fish caught were brought back to this side of the line and then shipped to the New York and Boston markets. A stringent law should have been passed and enforced to prevent this kind of work.

A few days ago one of our Fish Commissioners and the editor of a local paper were cruising in the lake near the mouth of the river, where they ran into a trap net that had some 400 fish in it. The Commissioner liberated the fish and took up the net, but it was left where it was stolen from him that night. The editor has not made any mention of the fact, which shows how his sympathies are. It is to be hoped that the good sense of our Governor will cause him to refuse to sign the bill. If not, we hook and line fishermen will be obliged to take our rods and our cash and go elsewhere for our sport.

STANSTEAD.

### An Automatic Striker.

An English firm has invented an automatic fish-striker, by which the line is twitched and the biting fish is struck entirely without the angler's intervention. "We have not tried this invention, as we do not care about automatic affairs of this kind, which all tend to reduce the interest of angling and its sporting character," says the London *Fishing Gazette*. "If you are fishing for your living, by all means use half a dozen lines (if you may legally do so) and automatic strikers, but do not as a sportsman claim any glory for fish killed by such means. 'Many a fish is lost,' say Messrs. Hearder, 'by not being struck the moment it takes the bait.' Of course it is, and that's one of the charms of angling. It requires skill, but if these automatic affairs do what they profess to do, then you only want a boy to pull in the fish and rebait for you."

## FIXTURES.

### DOG SHOWS.

Nov. 22 to 25.—Brooklyn. H. W. Huntington, Sec'y, 148 South Eighth street.
Dec. 6 to 9.—First Annual Dog Show Hermitage Kennel Club, Nashville, Tenn. Robert C. Stockton, Sec'y.

1893.

Jan. 3 to 6.—Mohawk Valley Poultry and Kennel Club. F. B. Zimmer, Sec'y, Gloversville, N. Y.
Feb. 21 to 22.—Westminster Kennel Club, New York city. Jas. Mortimer, Supt.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
May 3 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago.
Sept. 7 to 10.—Hamilton, Ontario. A. D. Stewart, Sec'y.

### FIELD TRIALS.

Nov. 21.—Eastern Field Trial Club Trials, at High Point, N. C. W. A. Coster, Sec'y.
Nov. 28.—Philadelphia Kennel Club Trials, at High Point, N. C. F. G. Taylor, Sec'y.
Dec. 5.—Central Field Trials, at Lexington, N. C. Col. Odell. Sec'y.
Dec. 19.—Irish Setter Field Trials, at Lexington, N. C. Dr. G. G. Davis, Philadelphia, Pa., Sec'y.

1893.

January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgarif, Sec'y.
Feb. 8.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y

## THE UNITED STATES FIELD TRIAL CLUB'S TRIALS.

### The Pointer Derby.

This stake began on Monday, Nov. 7, at Elizabethtown, Ky. There were fourteen starters. Owing to the scarcity of birds, a scarcity which was felt throughout the competitions, and which, in some heats, occasioned long, wearisome working with indecisive results, the stake was run in a slow, unsatisfactory manner. The standing of the dogs in the competition was many times necessarily decided on extremely narrow margins.

The grounds themselves were unfavorable, inasmuch as the large fields were so short of vegetation that they afforded neither cover nor a food supply for the birds. The large fields were covered by a short, light growth of grass; many were sown in wheat; the cornfields were entirely free of weeds, and there was little moisture in the ground. There were a few stubble fields, far too few for the requirements of the trials, and they were not very fruitful in results. What birds there were, however, used the few thickets, woods and other scanty cover which was available.

Hunting in the bare fields was a waste of effort. Hunting in the thickets or cover along the streams reduced the work to the level of pottering and hedge-hunting. Even at that, it was without much result in the way of finding birds, either as to quantity or quality of performance.

By noon of the first day, birds had been found in such few numbers, and the grounds were so unpromising, that many expressed grave doubts as to the possibility of holding the trials there. By night, the management was seriously considering a removal to other territory. Some local sportsmen, however, gave great encouragement by assurances of better success on other territory which was available. Their arguments prevailed. This territory was worked on Tuesday. It was no improvement on that of the previous day.

It is only just to say that the local sportsmen and land owners were as kind and courteous as it was possible to be. They were enthusiastic in their interest in the success of the trials, and gave all possible assistance. Excellent horses were provided. Every inducement which could be of advantage was held out, but the hard fact that the trials could not be run properly without birds always prevailed.

On Tuesday, after lunch, a special meeting of the club members was called to act on the matter. After a brief discussion of the situation, a motion to run the trials elsewhere was unanimously carried. It was then decided to call in such handlers as were directly interested in the competition and get an expression of opinion as to what locality they preferred. The president of the club explained the situation to them and stated that the wishes of the majority would prevail. Three places were mentioned—New Albany, Miss., Bicknell and Columbus, Ind.

New Albany was rejected on account of the difficulty and delay of reaching it, and being in an opposite direction from that which most of the handlers would take after the trials, namely, eastward to the Eastern trials.

Bicknell was objected to on the ground that some handlers had trained and worked their dogs there.

Columbus, Ind., was the place which met most general approval. Carlisle, Ind., was mentioned.

There appeared to be some few who were desirous of having the trials held as near their homes as possible. At this juncture, the irrepressible Andy Gleason made the following motion:

"I move that these trials be run at Alma, Kansas."

Alma is his home.

Everybody laughed, but the sarcasm served to show the absurdity of each handler desiring to have the trial at his own home. The motion to run the trials at Columbus was then put and carried unanimously.

Forthwith the secretary, Mr. Madison, began making arrangements for the change. He engaged a special train to transfer to Columbus the whole aggregation of owners, handlers, judges, reporters and dogs at the expense of the club. At 10:30 P. M. the train was ready and the largest field trial party ever seen on one train was soon on its way.

While this act showed the club management to be energetic, capable and equal to the occasion, it seems reasonable to assume that an accurate knowledge of whether birds were plentiful or not should have been obtained before the trials began. This could have been done by drawing the grounds a few days before the commencement of the trials by some representative of the club. All the unpleasant complications were a sequence to this oversight.

As to the merits of the dogs, it would, except in a few instances, be impossible to express a positive opinion or statement, owing to the small amount of work on birds. For the same reason, many of the heats were indecisive. They were necessarily so from the force of circumstances.

The judges exhausted all available facilities to give the dogs a thorough trial. Ample time was always given. Many times the dogs were worked till fatigue reduced their efforts to ineffectiveness. No judges could be more earnest or painstaking, and it is gratifying to state that their decisions were received with approbation.

The judges were Col. A. G. Sloo, Vincennes, Ind., and Messrs. P. H. Bryson, Memphis, and B. M. Stephenson, La Grange, Tenn. Maj. Renfroe and Mr. Freeman, the judges engaged originally, were to arrive later; the election probably engaging their attention. Judges managed the trials skilfully, considering the many disadvantages which were consequent to unfavorable grounds and scarcity of birds.

Among those present were A. T. Smith, Texas; R. L. Shannon and wife, Louisville; Norvin T. Harris, St. Mathews, Ky.; Edwin Gar, John Bolus, Frank and George Richards, L. W. Blankenbaker, N. B Nesbitt, Dr. Mitchell, Nashville; Dr. J. N. Maclin, Mason, Tenn.; Dr. Otto Moebes, Athens, Ala.; H. W. Delaplaine, Louisville; H. M. M. Mundy, Louisville; D. C. McDowell, Jno. A. Hunter, W. Daniel, Major Purcell, A. J. Gleason, T. H. Poindexter, A. P. Gilliam, Thos. Bond, Geo. Maclin, J. H. Johnson, M. C. Wiles, W. T. Irwin, D. E. Rose, C. W. Barker, G. R. Howse, J. M. Avent, Jas. Williams, A. M. Yound, Nashville; P. T. Madison, Maj. J. M. Taylor, Victor M. Haldeman, L. A. Rice, Chicago; W. B. Rice, W. B. Stafford, Gus. F. Schrever. Capt. Clinton, Dr. N. Rowe, John C. Gude and many others.

On Tuesday, Mr. W. J. Beck, the secretary of the American Field Trial Club, arrived at Elizabethtown. He was consulted in respect to grounds at Columbus, Ind., and the report was circulated that he stated that part of the American Field Trial Club's grounds could be used on the first day, and in that time other grounds could be secured which could be used thereafter. It was hasty on the part of all concerned to contemplate a departure for Columbus before having an absolute knowledge of what could be secured, and how long it would take to secure what was needed.

No analysis of the competiton would be of any value, since the opportunities of testing the dogs' qualities were too limited to fully develop the merits or demerits of the dogs. An intelligent dog could range and beat out the likely places with rare judgment and find nothing for his efforts. The dog that ran fast and far without judgment made as good showing, so far as finding is concerned. There was so much bare ground that it was most discouraging to the dogs to make any effort to search. Many intelligent dogs refuse to beat out a bare field. In fact it is well known that the greater is the dog's intelligence the more he refrains from doing silly things; and beating out a bare field with a view to finding birds is one of them.

As to which dog was the best one, it may or may not be that the trials determined it. The opportunities were too few and too imperfect to make the test conclusive. It was, however, the best which could be done under the circumstances. The club was earnest and energetic. It did the best it could to readjust and make the trials a success, but the one oversight of taking for granted the reports of abundance of birds were true was what began the tangling consequences. It was most unfortunate since whatever course was pursued it worked a hardship to some one.

To go in any direction to another locality entailed added expense to some one or more on returning. It added a fatiguing experience to the dogs which had come on a long journey, but as the running progressed it developed that there was no other alternative.

Following is the order of drawing:

Edgemont Pointer Kennels' bitch Troublesome (Tribulation—Pride of Idstone), A. T. Smith, handler,
*with*
R. L. Shannon's bitch Mame S. (Osborn Ale—Pearl's Pride), G. R. Howse, handler.

R. L. Shannon's bitch Ginger Ale (Osborne Ale—Pearl's Pride), E. Gar, handler,
*with*
John Bolus's bitch Kent's Queen (King of Kent—Vera Bang), owner, handler.

W. T. Hunter's bitch Lady Peg (King of Kent—Lass of Bloomo), F. Richards, handler.
*with*
G. W. Amory's dog Onward (Wise C.—Velce V.), T. H. Poindexter, handler.

Adolph Schmidt's dog Boy's Faust (Spotted Boy—Sally Ale), G. R. Howse, handler,
*with*
Gus F. Schrever's dog Earl of Kent (King of Kent—Sal), A. P. Gilliam, handler.

R. L. Shannon's bitch Croxie O'Bannon (King of Kent—Croxie Wise), E. Gar, handler,
*with*
W. Hinkle Smith's dog Biz (King of Kent—Lass of Bloomo), Geo. Richards, handler.

Joseph Crugom's dog David C. (Duke of Hessen—Princess Marguerite), G. E. Gray, handler,
*with*
J. L. Adams's dog Lad of Rush (Rush of Lad—Topsy L.), L. W. Blankenbaker, handler.

T. G. Barstow's dog Pomme de Terre (Ossian—Clipaway II.), W. B. Stafford, handler,
*with*
T. T. Ashford's dog Kent Elgin (King of Kent—Vera Bang), N. B. Nesbitt, handler.

### MONDAY.

A heavy rain had fallen during the night. The morning was cloudy and threatening more bad weather, but it slowly cleared up and the sun shone forth for a short time. In the afternoon a raw breeze sprung up and clouds again obscured the sky.

*First Series.*

TROUBLESOME—MAME S.—They were cast off at 8:36 in an open field. Mame showed the better speed and range, in this respect being quite good. Troublesome flushed, down wind, an outlying bird of a bevy and dropped. Mame, a moment afterward, pointed the bevy. The birds were followed. Mame pointed a single and Troublesome also got a point. Both were steady. Troublesome made but a moderately fair showing. The heat ended at 9:30 with everything in Mame's favor.

GINGER ALE—KENT'S QUEEN.—At 9:32 they were started, and were taken up at 10:39 without finding birds, although they were worked both in open and cover. It was necessary to take them up as they were worked down to a very narrow range and had lost interest in working for birds which were not.

LADY PEG—ONWARD.—They began at 11:04. Onward did not work independently. He followed Peg constantly. Peg showed the greater superiority. Onward roaded up wind to a flush on a bevy—poor work. On the scattered birds Onward flushed a single in open, and Peg pointed the scattered birds. Both were steady to wing and shot. They were ordered up at 11:36, Peg the better in every respect.

BOY'S FAUST—EARL OF KENT.—They were started at 11:51, both ranging poorly. No work on birds of any consequence was done. Earl pointed a single and flushed once. They were ordered up at 12:35 and the party partook of an excellent lunch

CROXIE O'BANNON—BIZ.—In high weeds at 1:40 they were cast off. A reporter flushed a bevy, which was marked down in an unfavorable place for good work. Biz made a half point, standing on bare ground and pointing at some light, narrow cover on the bank of the creek. A single bird flushed wild from the point. Biz roaded and half pointed, then a bird flushed wild. No dog could have made a good showing under such conditions. Moved on, Croxie pointed a bevy in brush and high weeds. Steady to wing. It was followed. The dogs were worked around and around and back and forth to find them. Some flushes were made and it was difficult to determine whether the dogs were at fault or not, as handlers and horses were close on them. The heat ended at 2:10. All the work was done in cover in a narrow strip of land, too small and close to test the range of either.

THE ROUGH-COATED ST. BERNARD MARVEL.

Owned by Mr. W. C. Reick, New York City.

DAVID C.—LAD OF RUSH.—The heat began at 2:14. Both worked merrily. Dave flushed a single in weeds. The scattered birds flushed wild. Dogs beat about in woods. Both pointed hesitatingly, then roaded. Dave roaded to a point on a bird, and was steady to shot. Lad, brought up to back, pointed—footscent probably. They were worked in both open and cover. In open, Lad was much the wider ranger, but in cover had no superiority over his competitor. The heat ended at 3:10.

POMME DE TERRE—KENT ELGIN.—They began at 3:14 and worked till 3:28 without finding, when they were taken to other ground and started afresh at 3:43 in an open field. Stafford called a point for Pomme just as the bevy flushed. Kent made a false point. Up at 4:23.

This completed the running for the day.

### TUESDAY.

The day opened delightfully cool and pleasant. A trace of frost could be seen in places. New grounds were tried, but they were no improvement on those of the day previous. Only four bevies were found by diligent search before lunch. Large bare fields, with a scarcity of cover, were the prevalent features. The further the running progressed, the plainer it became that it was impossible to hold the trials at Elizabethtown under existing circumstances, therefore a move to other grounds must be made.

POMME DE TERRE—KENT ELGIN.—This brace was again put down. At 8:40 they were started. Kent pointed a bevy by the edge of woods and was backed by Pomme. The birds were followed into a thicket where the dogs beat about without finding. They were ordered up at 9:22.

*Second Series.*

LADY PEG—LAD OF RUSH.—They were cast off at 9:24. At 9:30 they were ordered up for a few minutes while taken to other grounds. The fields were exceedingly bare and unpromising. Lad, going down wind, flushed an outlying bird of a bevy near a small growth of brush. His handler flushed the bevy a moment afterward. The birds were marked down in the open and followed. Lad made a point, and the birds at the same moment flushed wild. They were next worked in to woods, where Lad pointed a single bird well and was steady to order. Peg was the wider ranger. Lad performed the better on birds.

MAME S.—EARL OF KENT.—They were worked across a stretch of open, then into woods, where a bevy was marked down. In beating about several birds were flushed by the handlers. Mame was first to find. She pointed nicely a bevy in a fallen tree top. Earl backed. In the open Earl

flushed a single. Up at 11:04 with every advantage in favor of Mame, and favorable prospects for her to win first.

GINGER ALE—KENT ELGIN.—At 11:09 they were cast off. At 12:06 they were watered, no finding having been made in the meantime. Kent flushed a bevy and was quite unsteady. On the scattered birds he flushed a single. Ginger showed the better speed and range. The heat ended at 12:26.

The party then went to lunch. After lunch the president called a meeting of the club members. It was carried unanimously that the trials would be removed elsewhere, as hereinbefore stated, and on vote of the interested parties, Columbus, Ind., was unanimously chosen. The announcement that the club would so change the trial grounds was greeted with cheers.

*Third Series.*

MAME S.—LADY PEG.—They were started at 2:55. Both, going down wind, flushed a bevy in open weeds. The birds were followed. Soon both made game and pointed the scattered birds. They were steady to wing and shot. Mame next flushed a bird. Next she pointed at the moment the bird flushed wild. She next pointed in cover. Peg refused to back and joined in the point. Nothing found. A bevy had been seen in a large open field and the dogs were worked here and there to find it. Peg flushed it. Mame was the better performer. Up at 3:31.

GINGER ALE—LAD OF RUSH.—They began at 3:35 in an open field. They were worked in woods to find a bevy which had been marked by a spectator. Lad pointed, Ginger joining in the point. Lad moved on and flushed a bird. He moved on and flushed again. Ginger had several opportunities, but made a poor showing. She was the better ranger. Up at 3:45.

*Fourth Series.*

MAME S.—LAD OF RUSH.—The owner of Lad was given a choice between twenty minutes' rest and going on at once. He chose the latter. The brace was started at 4:03. On a side hill, in the open field, Lad pointed prettily. Mame, about 30yds. away, backed handsomely. Both were steady to wing and shot. On the way after the scattered birds, Mame pointed a bevy in the open. Lad at the same time pointed a few yards away, on the foot scent probably. Moved on after the scattered birds. Lad pointed a single. The railroad was crossed, and more search was made for scattered birds. Lad pointed a bird. Next both pointed one. Moved on. Both chased a single, but stopped and came back to order. Up at 4:31. Mame made a chase during the heat, which destroyed her chance to win first.

Immediately thereafter the judges announced Lad first, Mame S. second, Lady Peg third.

Lad showed good work in locating and pointing birds. His range is about ordinary.

Mame S. far excelled anything in the stake in the uniformity of her work. She maintained a good range and speed. Her work on birds was also the best, although she carried a low nose when on scent, and pottered a bit at times. The chase was what set her back to second place, but she could have chased twice and been a good bit ahead of anything in merit.

Lady Peg made a good showing for her place. It can be said of her, as of the others, that the opportunities were so limited that it was difficult to determine just how well she could perform.

Thus ended the stake after a series of most indecisive tests. The Derby prizes were: First, $250; second, $200; third, $150.

### The Columbus Story.

At 10:30 P. M. Tuesday, the special train backed up at the L. & N. depot to take the whole party to Columbus, Ind.

MR. D. C. LUSE'S LADY BARTON.
Winner All-Aged Stakes, Great Bend, 1892.

There were two baggage cars and a passenger coach. It was nearly 4 o'clock on Wednesday morning when the party reached its destination.

While en route the English Setter Derby final entries were made. There were twenty-seven drawn to run as follows: Dick Fox with Dixie's Rod, Clem Gladstone with Hoosier Lady, Hoosier Girl with Teal Swinge, Dan Burgess with Gaiety, Nancy Foreman with Rex the King, Lochinvar with Direct, Belle of Kentucky with Lillian Russell, Duff with Elphin II., Ranger B. with Dessie Hope, Rap-Eye-Dan with Sport, Gladstone Pet with Cecil H., Cleo with Kingston, Brighton Clip with Sancho. The Laggard a bye.

The weather opened most unfavorably on Wednesday morning. It was cold, windy and threatening. A light snow began to fall, which increased in volume to an ordinary snowstorm, which lasted till night.

Early in the morning rumors began to be circulated that the grounds available for the trials were bottomlands, covered by heavy growths of weeds, cockle burrs, etc.; that birds were not very plentiful, and that a sufficient number of saddle horses and teams for carrying the dogs could not be obtained. Soon after 10 A. M. the president called a special meeting of the club. It was decided to let the future action in respect to whether to continue the trials at Columbus, postpone them till February and run them in Mississippi or mov. elsewhere at once, to the vote of the interested handlers and owners. They were called in. The president informed them that it was left to them to determine what course would be pursued. Suggestions and discussion were invited.

Soon thereafter it was plain that no unanimous action could be agreed upon. There were also indications that no action could be taken on the issue without causing keen dissatisfaction to some handlers. To postpone the trials entailed a large expense in attending them again, or a loss of time and money already expended. To go elsewhere would consume more time and would furthermore be more or less a moving at a venture. To remain was unsatisfactory.

At an early stage of the meeting Mr. Beck arose and said that he would like to make a few remarks. In substance he said that, concerning the requirement of the United States Field Trials Club, he thought that it was expecting too much action at once. The people of Columbus were doing all that they could. The club had come on them without any notice and they therefore were caught unprepared for the emergency. He, himself, had not promised that everything would be all right before the club left Elizabethtown. Men were out engaging horses which would be in ample numbers on the morrow. Men were out also engaging more grounds. The grounds already secured would be ample for the present and were better than common rumor made them to be.

MR. ED. H. LYON'S TRALEE.
Winner American Field Cup, Great Bend, 1889.

The president assured Mr. Beck that the club appreciated his kindness and efforts, and the contemplated action was not in consequence of any inattention on his part or the people of Columbus. It was simply recognizing the situation, many factors of which were outside of the case, as Mr Beck understood and had presented it. Already much valuable time had been lost. More time would be consumed in preparing for another start. At the best, the trials would hold over till late the following week. Many handlers had entries in other trials and would not remain till the close of these trials. Those who did remain would have limited time to reach the other trials, and their dogs would not be in the best condition to compete. The same objections would hold against moving elsewhere.

Mr. Gleason got the floor and said that it looked as if the trials were run in the interest of a clique. That there were two or three handlers who desired to have the trials run near their homes. He objected to New Albany, Miss.

The president arose and for the club said he repudiated Mr. Gleason's charge with indignation. The club was not run in the interest of any clique. It was run in the interest of all, and would be while he had anything to do with it. That it was run in the interest of all was evidenced by the fact that future action was left to the decision of the handlers at Elizabethtown, and was even at that moment being left to their decision. The control of the whole affair was within the powers of the club, and it could justly act independently of their wishes; but it was with a purpose to act with the utmost fairness that the club had called this meeting. No clique could control it. The vote of the majority in the present instance would prevail, as there was no alternative but to have in mind the greatest good to the greatest number.

Messrs. Avent and Nesbitt both explained that they were the handlers living nearest New Albany, Miss., and had not hunted on the grounds there nor been on them except at the trials.

Mr. Gleason again got the floor and explained that he did not mean his remarks in the sense they were understood. (As a matter of fact, they could not be understood in any other sense).

A long discussion followed, in which a number took part, but it was threshing the matter over and over again.

The strongest sentiment apparently was in favor of postponing the trials till February, and running at New Albany, Miss.

Mr. P. H. Bryson had, in behalf of the Southern Club, offered the use of its grounds after its trials were run. He further said that the United States Club could gain a permanent interest in the grounds by simply paying half the rent and expenses, which at present did not exceed $130 annually.

On the motion that the trials be postponed till February, before or after the Southern trials, a vote was taken by roll call.

Ayes—Stafford, Nesbitt, Wiles, Bond, Gilliam, Mobes, Schriever, Barker, Howse, Avent, Chilcott, Blankenbaker, Purcell, Gar, Smith, Hunter and Johnson.

Nays—Gleason, Riley, Gude, Richards, Gray, Maclin and Daniels.

The secretary announced seventeen for the motion and seven against it.

The president announced that the trials would be held in Mississippi in February, in accordance with the motion. He notified the handlers that the last payment in the Setter Derby would be refunded, and the stake thus stood open to others the same as if the last payment had not been made.

There was then a bustling about, and by night the greater part of the handlers and owners had left.

Capt. Pat Henry had gone to Elizabethtown after the field trial party had left, and arrived during the special meeting. Mr. J. M. Freeman, of Bicknell, Ind., and Mr. H. J. Smith, Louisville, arrived on Wednesday.

That the move to Mississippi will be for the best interests of a majority of the competitors is indisputable. The vote shows it. The club would better fill its mission by holding its trials permanently in February in Mississippi. The vote shows that such is the sentiment of its patrons. With its trials held there, it would form a winter circuit in conjunction with the Southern and other clubs, which, with so much available support in view, would soon be formed. There is excellent material in Louisiana to form a first-class field trial club. They are sportsmen and experienced thoroughly in field trial matters. Some disagreements among themselves have been a restraint on field trial matters in the past two years. I was informed by a sportsman of that section, who is the peer of any in the land, that a new club would soon be formed in Louisiana.

The fall circuit is now too crowded, with a prospect of being still more so as new clubs are formed. Only the large clubs of the North can afford to hold trials so far South; or, in other words, the small clubs of the North will have to necessarily hold their trials in the North for financial reasons. Such clubs can do a great work in furthering doggy interests and sportsmanship. Local trials are needed and should be held. The time in the North in which such trials can be held is extremely limited—part of October and November. From December to March the trials can be held in the South.

Field trials are growing; they are growing in support, in standing and in importance. Spread out and make room, gentlemen.

A new club has been formed in Ohio, to hold its inaugural trial this year. Next year, it contemplates giving a trial equal to the best. There are three active field trial clubs in Canada. Michigan and Indiana each have a field trial club. Some other organizations are contemplated. New England has one. There are also the Eastern, Central, Philadelphia, Southern and Irish setter trials.

With all these important events it would be in the interest of all concerned to pay more attention to arranging a circuit with a view to making it properly consecutive as to places and dates.

B. WATERS.

## MITCHELL COURSING MEET.

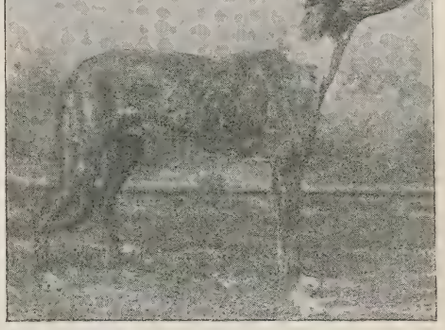
*[Special Report.]*

THE first annual coursing meet, held at Mitchell, S. D., under the auspices of the Mitchell Kennel Association, was a grand success. The quality of the sport was far ahead of the expectations of those who had never before witnessed coursing, and the attendance of coursing men was very good and would have been better had our meet been more thoroughly advertised. A large crowd came out each day to witness the sport and stayed to the finish.

Mr. Arthur Massey was secured as judge and proved to be thoroughly competent and gave the best of satisfaction. Mr. Massey is well known by all the coursing men of America as the "Old Slipper" for the American Coursing Club, of which he has been the stand-by ever since its organization.

The only objection that can be made is the same made at Great Bend—the horses furnished the judges were not the stayers they should have been, and in one or two of the longer chases it was impossible for the judge to see the finish, which might have reversed his decision. For instance where Judy met Lady Bly after their undecided course, they came to the slips for their second trial. Judy led to the hare, but very little was done, as puss seemed to be too gay for her enemies after quite a long run and no work was done; for a moment they were out of sight of the judges, but not so with the crowd. When they came in sight again Lady Bly was working the hare back to the crowd, across some plowed ground. Parties who were near said that Judy quit and others that she took after another hare. It was decided in favor of Judy. Had the judge been better mounted his decision would evidently have been reversed.

The entries closed Tuesday at 9 P. M., filled with twenty nominations.



### WEDNESDAY, NOV. 2.

Wednesday morning a jovial crowd, mounted on horses, bicycles and others in carriages, gathered on the beautiful grounds of the club, about one mile southwest of town, adjoining the campus of Dakota University. We could not ask for a better day or the ground to be in better shape.

*First Round.*

FANNY—NIG.—The dog came away from the slips and led several lengths to the hare, showing marked superiority. At this point something which was not looked for came up. Several of the other dogs got away from their owners and assisted in the kill. Here the rule on this point was read for the benefit of those not acquainted with it, and no more such accidents happened during the meet.

CARTER C.—SIR HUGO.—Hugo led four lengths to the hare and turned in favor of Carter; he made a desperate grab for puss, but missed. Hugo rushed by, took full control and won easily; no kill.

MR. ED. H. LYON'S SCAVENGER.
Winner American Coursing Club Derby, 1892

DENVER DUKE—JUDY.—Went from the slips with Judy a little in front. This was a long lead, at least one mile before the work commenced. Then they got down to business, working toward town, and finally making the kill on Main street in town. The kill was made by Duke, but Judy had the best of him in points, and won.

BLUE PRINCE—JACK.—The former led from the slips and won all the way, making the kill unassisted.

TULU—FLY.—Fly ran away from Tulu and made several points; then Tulu doubled his speed, rushed by and made it too hot for Fly, making the kill and won.

BRINDLE DUKE—SKIP.—In the run up to the hare there was not much between them for speed, but Duke shot out and shifted with wonderful power, nailed the hare and won.

DELSARTE—CAP.—Delsarte led ten lengths up to the first turn, doing clever work, until finally Cap got by but scored no points, and the former won; no kill.

BOUNCE—VIXEN.—The latter was quickest from the slips and hardly let Bounce have a chance at puss for some time, when Bounce got in his work and making the kill, it was undecided. In a subsequent course Vixen won easily.

CATCH—FLY.—The former led to the hare three lengths, making several wrenches; then Fly made one or two points, when Catch again led the hare away, killed and won.

LADY BLY—LIGHTS O' LONDON.—The former was a little quicker from the slips, but the latter rushed by and made four points. Then Bly got in for a go-by and turned in favor of the latter, who made one turn, the former again taking possession, and keeping the same, making the kill and won easily.

*Second Round.*

NIG—SIR HUGO.—The latter led to the hare several lengths, showing great superiority of speed, made the kill and won easily.

JUDY—BLUE PRINCE.—From a poor slip Blue Prince was held back at least 100yds., and after a long, hard run got in,

but on account of the hare favoring the former he was unable to win the race.

TULEE—BRINDLE DUKE.—The former was a little quicker from the slips, but the latter made a go-by and quick kill, making it a short race but all in favor of Brindle Duke. This closed the day's sport, and the happy crowd (except one or two who were "knocked out") sailed in for town. The judge remarked that evening that the ground, and also the style that the jacks worked, was a great deal more satisfactory than any he had seen in this country.

THURSDAY, NOV. 3.

A good crowd was on the ground, eagerly awaiting the morning races, which were called promptly at 10 A. M. The hares were quite shy early in the day, but in the afternoon the sportsmen were made jubilant by striking a regular "jack pot."

*Second Round (Concluded).*

DELSARTE—VIXEN.—The former, as before in her courses this season, beat to the hare, but was not able to hold it long. Vixen went by, and after doing some fine work, made the kill and won.

CATCH—LADY BLY.—This was a closely worked hare and neither dog seemed to have the best of it and an undecided kill was made.

*Third Round.*

SIR HUGO—JUDY.—Hugo led several lengths to the hare and did some good work. Judy getting the lead later but was unable to do any work. No kill. Sir Hugo won.

BRINDLE DUKE—VIXEN.—The latter was much quicker from the slips, but Duke shot by and made a kill, winning all one way.

In the undecided course of Catch—Lady Bly, the former led to the hare, which was not turned from her course for about one mile. Then going out of sight of the judge, it was given to Catch. They afterwards came in sight with Lady Bly working the hare, but the judge was unable to change his decision.

CATCH (A BYE).—This was run with Judy, and made a quick kill.

*Fourth Round.*

SIR HUGO—CATCH.—Hugo led five lengths to the hare, then placed Catch nicely; but Hugo got in again, and made the kill, and won.

BRINDLE DUKE *vs.* BYE.—This was a long, hard run, which he ran with Carter C.

*Fifth Round.*

SIR HUGO—BRINDLE DUKE.—This was another bad slip, and just in the time when the crowd, as well as the owners, wished to see an equal showing. Brindle Duke was unsighted, and not until Hugo ran up, making five points, turning the hare back to the crowd. This let the Duke in, and running across some plowed ground, Duke had the best of it, being the larger and older of the two, and just as they struck the grass again, the hare was holed—not a long nor a satisfactory course. Duke won, and being a Dakota dog, also won the title of "Champion of South Dakota."

SUMMARY.

ASSOCIATION STAKE.—Open to the world, for 20 or more all-aged greyhounds; entrance fee $5, the winner to receive 50 per cent. of the entrance money and $40; the runner-up, 50 per cent. of the remaining entrance money and $20; third and fourth, 25 per cent. each of the money remaining after second division.

The title of "champion of South Dakota" will be conferred by the president of the association on the dog owned in South Dakota getting the best place in the race.

Consolation Stake.—Open to dogs who have not won in any previous stake; no entrance fee, the winner to receive a $50 silver cup given by the association.

DR. J. KIME WITH MINGO, JR AND LADY SPOT. MR JOHN DAVIDSON WITH LUCY C.

First, second and third, Amateur Stake, International Trials, 1892.

*First Round.*

| | | |
|---|---|---|
| McDermaid, Smith & Wedehase's b and t d. Nig—unknown. | beat | Wm. V. Miner's bd and w b, Fannie—unknown. |
| Rew & Nichols's blk and w d, Sir Hugo—Lord Neversettle—White Lips. | beat | F. N. Brisbun's blk d, Carter "C." Carter "H."—unknown. |
| George E. Connick's f b, Jerry—Fly. | beat | Rew & Nichols's be d, Denver Duke—unknown. |

| George E. Connick's bdl b, Catch-Jerry—Fly. | beat | Pat. Lyon's Fly. |
| Rew & Nichols's be b, Lady Bly—General—Flora. | beat | F. H. Brisbine's w and blk d, Lights o' London—Trales—Dick's Darling. |

*Second Round.*

Sir Hugo beat Nig.
Jerry beat Blue Prince.
Brindle Duke beat Tulu.
Vixen beat Delsarte.
Catch beat Lady Bly.

*Third Round.*

Sir Hugo beat Jerry.
Catch a bye.
Brindle Duke beat Vixen.

*Fourth Round.*

Sir Hugo beat Catch.
Brindle Duke a bye.

*Final Round.*

Brindle Duke beat Sir Hugo.

## INTERNATIONAL FIELD TRIALS CLUB.

CHATHAM, Ont., Nov. 10.—The third annual field trials of the International Club passed off here very pleasantly this week, the runnings closing yesterday evening. The event might be characterized as small, but neat. Only seven starters in the All-Aged is not a heavy lot, though the Derby atoned in the matter of numbers. The experiment of the Amateur Stakes, dogs broke and run by owners, was well received, and this event will probably become a fixture in the future runnings of the club. Indeed, Chatham trials have always been practically amateur stakes, so large a number of gentlemen handling their own dogs there. Mr. Wells, Mr. Davey and Mr. Johnson do not need professional handlers. Under the loose construction of the conditions in this stake, the rules were not laid down very strictly this year. Mr. John Davidson, old-time judge and practiced hand with field dogs, appeared this year in a position the reverse of his customary one. He handled, and others judged his handling. The shoe was on the other foot, and Mr. Davidson came in for a lot of good-natured chaffing, a great many being willing to tell him that while he was good at judging, he couldn't handle a little bit. Mr. Davidson landed one dog second in the Amateur Stakes, but lost place in the All-Aged with his other. Those who know Mr. Davidson will imagine that he had to set his teeth pretty hard over this, but he took his medicine.

T. G. DAVEY AND DAME BANG.

First, All-Age Stake, and second, Derby, International Trials, 1892.

The judges this year were new at the work, but they were careful and conscientious, and hardly worked any serious injustice, in the general average of the opinions, though, of course, individual owners sometimes could not agree with them. Usually, this is part of the play, and is soon forgotten. This year the customary dissent took a more noticeable and not a commendable form when, after the first two days' running, Mr. Thos. Johnson drew his entry in the All-Aged, and left the town, under the excuse that he was sick. For shame, Tummas! You didn't ought to. But this will all come right next year. Our friends the dog men are as unable to harbor malice as they are to contain their choler, and their memories are short as their temper; which is all a very good thing.

In the Amateur Stakes the judging was done by Messrs. C. A. Stone, of Toronto, J. R. McGregor and Thos. Guttridge, of Chatham. These were called "boys" by one or two owners, but they quitted themselves like men, and were so careful in their work that error cannot be charged to them. Mr. Montagu Smith, of Forest, Ont., and Mr. J. E. Long, of Detroit, Mich., together judged the Derby and All-Aged Stakes very carefully and creditably, it is thought. Mr. Montagu Smith is a brother of Mr. L. H. Smith, one of last year's judges here. Mr. Long is an old-time shooter and lover of dogs.

That lucky and merry 'un, Mr. T. G. Davey, took another swift step in his rapid rise in the pointer world by landing a pointer first in the All-Aged and also second in the Derby. Mr. Davey always has a good dog or so up his sleeve, so to speak. It is to be hoped that he will now give Dame Bang a square meal. The Toledo Blade—Cambriana blood was, of course, in evidence in the string of Mr. W. B. Wells. That gentleman is a pillar of the club, both as secretary and as adviser-general and conductor-in-chief in the runnings. His place would be hard to fill and so would the places of his dogs. Dr. J. Kime had in a good lot of average-makers, a first and third in the Amateur, and a divided fourth in the All-Aged Stakes. In the bitches Lady Spot and Lady Patch, which, by the way, ran last year, he has two good ones, well broke as any and pleasant for a gentleman's shooting dogs. Mr. Johnson, from far-away Winnipeg, lost a peg in the field trial game this year, but he has no right to complain after the brilliant successes he has made here in other years. The popular idol, Ightfield Blithe, was not here this year.

THE BUSINESS MEETING.

The regular annual business meeting of the club was held on the evening on Monday, Nov. 8. The club chose as its president the venerable Sheriff Mercer, that hale and hearty sportsman who for forty years has been sheriff in Chatham town. Mr. W. B. Wells was, of course, again chosen as secretary-treasurer. Mr. Thos. Johnson, of Winnipeg, Man., was elected first vice-president, Mr. Montagu Smith, of Forest, Ont., second vice-president. The executive committee was elected as follows: Messrs. T. G. Davey, of London, Ont.; J. G. Armstrong, of Detroit, Mich.; Thos. Guttridge, of Chatham; Dr. Totten, of Forest, Ont; F. W. Eddy, of Detroit; L. H. Smith, of Forest; Jos. Kime, V.S., of Chatham; C. R. Atkinson, Jr., of Chatham; John Davidson, of Monroe, Mich.; I. L. Nicholls, of Chatham.

It was moved by Mr. Davey, Mr. Montagu Smith seconding, that the club in the future have a regular Derby for puppy nominations, $2.50 entry, to be paid June 1 preceding the trials, $2.50 Sept. 1, and $5 to start, four moneys, 40, 20, 15 and 10 per cent, the club to retain 15 per cent. This was carried.

It was moved by Mr. Montagu Smith, and seconded by Mr. Davey, that the entry in the All-Age Stakes be in the future not closed until Nov. 1. This was also carried.

The International Club, though modest in a way, is in a very prosperous condition, and has more than the necessary funds for carrying out its plans. At the start it had $80 for its start in life. It now has $200 in the bank and will have more when needed.

THURSDAY'S MEETING.

On Wednesday evening snow fell to a depth of 4 or 5in., and this morning seemed an unfavorable time to try the dogs, snow continuing to fall till 11 o'clock in the morning. No decision had been announced in the All-Age Stakes last evening, and the impression was general that the party would go out again to-day to conclude the runnings. The judges this morning announced that it would not be necessary to go out again, as they had already seen enough to enable them to place the dogs. The only possible objectors to this—and of course these could not yet know whether or not they had cause to object, since the decision had not been announced—were Mr. Davidson and Dr. Kime, whose dogs might be naturally thought gainers by a longer running, since their chances not perhaps placed them so well on the day previous. At any rate Mr. Davey and Mr. Wells announced themselves ready to hear the decision. Mr. Davidson said he would stand on the rules. Dr. Kime objected. He thought his dog entitled to more work, and insisted that the dogs should be taken afield again. It came a question who should decide whether or not to go afield, and the rules were looked up. Rule 9 was found to read as follows on this point: "After the first series has been run through, the judges shall announce which dogs they wish to see run again, and order of running them. Discretion is given the judges to run the dogs as often and in what order they think best, until they are satisfied which are the best dogs; but they may announce the winners any time after the second series, provided the first and second prize winners shall have run together."

Under the rule the judges were safe to announce their decision if they liked, for although there had been only one heat in the second series, still the first and second dogs as placed had run together, and it was for the judges to say whether or not the others had done enough without going again. Manifestly Dr. Kime could not cry until he was hurt, or in other words, could not protest the action of the judges until he knew what the action was. It was explained to him that after the decision was announced, he could enter protest and bring the matter before the executive committee of 1892, under Rule 1, which reads: "The management of the meeting for the annual field trials shall be intrusted to the committee of the club, and with them lies the interpretation of all rules. They shall decide upon all matters not provided for in these rules." Accordingly the members went into session as a club body, to hear the decision of the judges.

Mr. Long, for the judges, announced the decision in the All-Aged to be Dame Bang first (Mr. Davey), Matane and Luke second and third (Mr. Wells), Lady Patch (Dr. Kime) and Carrie T. (Dr. Totten) divided fourth.

*Mr. Smith, Judge*—"We were ready to announce this last night if required. We had placed the dogs. We believe we act under the rules, and we ask your forbearance if there is dissatisfaction."

*Mr. Wells*—"For my part, I am satisfied, and while it may not look well coming from me, a winner, I would move a vote of thanks to the judges. I think they have done the best they could, and we could ask no better judges."

DR. J. KIME WITH LADY PATCH.

Divided fourth, All-Age Stake, International Trials, 1892.

*Mr. Davey*—"Hear! Hear! I second the motion."

*Dr. Kime*—"I know my bitch would have done better if she had had more chance. I know she had no chance to show her quality. She was not tried yesterday, and I wanted her to go out and have a fair opportunity to show what she can do."

*Mr. Smith*—"We certainly think your bitch had plenty of opportunity. Consider how long she was down—longer than many others. I admired the bitch, and think much of her, but young as I am in field trial work, I can see there is an element of chance in these trials."

*Mr. Davidson*—"As to the justice of this, I can think what I think, and hold my peace."

*Mr. Smith*—"I have only wanted to get at the qualities of the dogs. I am sure I have judged from the head and not from the heart."

*Dr. Kime*—"On the work as shown, I don't say I wouldn't have decided as the judges do; but I know about the working of my dog, and I know that on more work she would have made a very different showing."

*Mr. Smith*—"Ah, that's just it, it's the element of chance. We couldn't keep on running them till they had all done their best, perhaps. Dogs have good days and bad days, and good luck and bad luck. We had to judge on what they really did do, not what they might do."

*Mr. Wells*—"I own I was surprised to see the judges so lenient with the handlers. I confess I took advantage of that once or twice."

*Mr. Long*—"We were on to you all right."

*Dr. Kime*—"Another reason why I wanted Patch to go again was, I didn't think she was at her best yesterday. The dog and I both ate too much Tuesday night, and I know she was so full"—[Laughter and applause].

*Mr. Davey*—"I think the judges were lenient with Dr. Kime's dogs. I think he will admit that."

*Mr. Wells*—"I hope the judges will not again, through

kindness, hold the dogs down after they are satisfied they have seen enough."

*Mr. Davidson*—I would give more for Mr. Wells's bitch that was thrown out of the runnings than for any dog here; yet she chased, flushed and would not back."

*Mr. Wells*—"Yes, you mean Cleopotra. It would take more money to buy her than any of my others. That's the way it goes."

*Mr. Smith*—"Yes, it's the element of chance, you see."

The vote of thanks to the judges was now put and passed, and under Tommy Davey's lead all present joined in singing "For they are jolly good fellows," etc., etc. Thus war, bloodshed and sudden death were averted, and the meeting came to a close in harmony. In time Dr. Kime, though now feeling a bit cut up over the failure of his really excellent one to do better than fourth, will, no doubt, come to see that the return of a dog does not imply that the dog does not have literary merit, or that it may not be accepted elsewhere, but only that it is not available.

FUTURE OF THE INTERNATIONAL CLUB.

The young ladies of Canada are rakisher and sportier-looking than American girls, and the men go in for sport more generally than the average Yankee man. The atmosphere of sport in Canada is wholesome, and the belief in sport is deeply grounded. It is not to be believed, therefore, that this little club of enthusiasts will know anything but a good and prosperous future. It has the material in the men and in the dogs, and the impulse of a genuine interest. As a place for holding the trials, Chatham would be hard to replace. It is true that there is much log pile and close cover work, but in a country so far north there must be cover in plenty, or there will be no birds. The supply of birds here has always been ample, and such jealous care is taken of the birds that there is no reason to suppose that the supply will decrease. When news came up of the unfortunate experience of the United States Club in Kentucky this week, the members here congratulated themselves aloud, as well they might. The grounds are not far from town, and conveyances are plentiful, convenient and cheap. Moreover, Chatham is an interesting and agreeable town to stop in, and one can be comfortable there. Mr. Beck, of the Rankin House, headquarters for the field party, offers quarters far different from the uncomfortable ones so often met at field trial towns, and if he does not go bankrupt before next year, will doubtless see all his friends of this year and others also present next year.

Photographs for cuts shown herewith were taken by Mr. J. T. Baikie, photographer, of Chatham, who was at pains in the difficult work of photographing a dog.

Following is the account of the runnings, written out from the notes of Mr. J. E. Long, judge at the trials, the writer not being present at the runnings. E. HOUGH.

## MONDAY, FIRST DAY, NOV. 7.

Weather very decent for working purposes. The party took the boat up river four or five miles and got to work by nine o'clock. Birds were plentiful, ten bevies being found.

### The Amateur Stake.

AMATEUR STAKE.—All ages, professional handlers barred, owners to handle own dogs. Eleven entries, nine starters. Three moneys, 50, 35 and 15 per cent.

*First Series.*

TICKY TACK AND CLINKER.—Mr. A. Wells's Ticky Tack (Toledo Blade—Cambriana) and Mr. T. H. Nelson's Clinker (King—Fausta II.), both setter dogs. Down at 9:05, on stubble, Ticky-Tack showed the better ranging style. The field was drawn blank. In a low swale a bevy flushed wide ahead of Clinker, not to his fault. These were marked to a thicket, at the edge of which Clinker drew to a point. Tack coming around in opposite direction, three birds flushed, not to penalty. Tack a bit unsteady to wing, but dropped at command. Moving into thicket, Clinker pointed a bevy. Tack, refusing to back, ran in and stole the point. Nelson was ordered to shoot. Both dogs steady to shot. Down 40m.

MINGO, JR. AND SANCHO.—Dr. Kime's Mingo, Jr. (Mingo Rose Rapid) and Mr. G. P. Taylor's Sancho (Toledo Blade—Cambriana), setter dogs, cast off in stubble, they drew it blank, and were brought back to the cover where the first bevy had been marked down. Going down wind Mingo, Jr. drew to a point, but the birds went up wild. They were marked down, and Mingo, Jr., ordered on, came to a point, Sancho backing. Nothing was materialized from the point, however. In cover, Mingo, Jr. pointed a bevy that flushed wild. Sancho pointed at a brush heap and Mingo, Jr. backed, but it was a barren point, the birds having flushed. Turning back to the edge of the woods, Mingo, Jr. pointed a single staunchly, and was steady to wing when the bird was put up. Moving on, he again established a point, Sancho backing. Both dogs steady to shot. Down 50m.

LADY SPOT AND LONDON—Dr. J. Kime's setter bitch Lady Spot (Mingo—Lady Thunder) and Mr. R. Baugham's London (London—Lurea March). In ranging the bitch showed superiority both in speed and in style. At the edge of woods several birds flushed wild. The dogs were ordered on, and Spot pointed. London backed, but the birds evidently running, he left his back, moved up and established a point. The birds were put up and London showed unsteady to wing. Down 55m.

LUCY C. AND SIR HOWARD—Mr. John Davidson's setter bitch Lucy C. (Scottish Chief—Ailsa) and Mr. W. L. Donaldson's pointer dog (Sir Howard, Sr.—Bella). In the open Lucy showed by comparison the superior in speed and style. In a slashing Lucy pointed, moved on, and some running birds flushed. Ordered on, Howard pointed, Lucy brought up to back did so. The birds flushed and Howard chased wildly, not stopping to command. After being down 40 minutes the dogs were taken up for lunch. After lunch they went down on stubble. Lucy pointed, Howard backed. Moving on, Howard pointed a single. In the same field Howard false pointed, beautifully backed at long range by Lucy. Howard again pointed, this time getting out two birds. Further on Lucy pointed a bevy, both dogs steady to wing and shot. The birds were marked into a slashing. Howard moving on pointed a single, and was steady to shot. Further on, Lucy pointed at a brush pile. Howard, ordered up to back, refused, but went in and made point. Down 20 minutes; one hour in all.

MANITOBA PATTI—As drawn, Mr. Thos. Johnson's setter bitch Manitoba Patti (Duke of Gloster—Flora) was placed for a bye. Ticky-Tack went down with her. Running down wind in cover Patti flushed some birds and was none too steady to wing. Going on, Patti pointed, Tack backing nicely, both steady to wing when the birds were put up. Moving on into cover a bird flushed wild, Patti a trifle unsteady. The dogs were then ordered up for time being.

*Second Series.*

This closed the formal first series, and the judges now asked for Clinker and Mingo, Jr. These at 2:40 P. M. were cast off near a stubble which was drawn blank. In cover Clinker pointed a bevy, Mingo, Jr., backing. The birds put up to order; both dogs showed steady to wing and shot. Moving on, Mingo, Jr., false pointed. Moving on, Mingo, Jr., again pointed, Clinker backing, and the birds were flushed. This go was all for Mingo, Jr., in speed and style in action.

Lucy C. and Lady Spot were now asked for, and were put down in a slashing at 3:20 P. M. Lucy pointed at a log pile, and Mr. Davidson materialized a bevy when ordered to put up the bird. Ordered on, Lucy again pointed, and again a bevy was put up. Down 30m.

Manitoba Patti and Ticky-Tack were now called to go down again. In a cornfield Tack pointed, Patti backing. A bevy was put up and marked. Ordered on, Tack again pointed, Patti backing, both steady to shot and wing. Down 18m.

*Third Series.*

Mingo, Jr., and Lucy C. were called down together for the third running. They were cast off in a slashing, which was drawn blank. In a cornfield Lucy came to a point, with Dame the better. Dame pointed with only fair credit, the birds flushing and going to cover. Phyllis backed nicely. Moving on in cover Dame pointed a single, Phyllis refusing to back when brought up. On again Dame found and pointed another single, moving up on the running bird. Phyllis, again refusing to back, went in and worked up the bird, Dame steady to wing and shot. Phyllis showed fast, merry and stylish, but needing experience. Dame was seen to be a useful and dependable one, even so early in the work. Down 45m.

TOLEDO BEE AND MANITOBA SHOT.—Mr. Davey handled Mr. F. W. Eddy's setter bitch Toledo Bee (Toledo Blade—Maggy Bee). Mr. Thos. Johnson handled his own dog, the pointer dog Manitoba Shot (Ightfield Caton—Ightfield Psyche). Put down on a ragweed field, both showed much style and speed. Bee found the first bevy, and made a very handsome point, backed by Shot. Holding the point for some time, the birds ran, and here came in a nice bit of work for Bee. Bee left her point, drew around on a circle, ahead of the birds, and again pointed. Both dogs were steady to shot and wing. Bee later found another bevy, the birds being in full sight under a log. Bee was pointing these staunchly when Shot came up. Shot did not back, and though favored in every way, paid no attention to either dog or birds. The bevy was not flushed. Later on, Shot false pointed. Down 1h. 10m.

SHYLOCK AND NICK OF GLENCHO.—Mr. Davey handled his own dog, the setter Shylock (Rock—Maud), and expected more of this one than of any of his string. Huddleston handled, or rather mishandled, Mr. F. J. Abbey's red Irish setter dog Nick of Glencho (Pat S.—Allace K.). On stubble Nick first made game and pointed a bevy, Shylock backing to order only fairly. Shylock roaded up, not stopping to order, and flushed. Later he flushed a single. Nick false pointed later. Nick seemed staunch enough, but evinced no style nor speed. Shylock was also very disappointing Down 30m.

DIAMOND AND SIREN.—In the pointer bitch Diamond (Ightfield Upton—Ightfield Blithe), Mr. Johnson handled one of his own stock of which much should certainly be asked. Her training, however, was not that of the old-time favorite Blithe. Huddleston handled Siren, a pointer bitch owned by Mr. Jackson, of Monroe, Mich., not entirely to his own credit or to the fullest benefit of the dog. In the open, both dogs showed brilliant action and speed, Siren the better, an exceptionally high-headed and handsome working bitch, subsequently beaten by the indiscretion of her handler. On the stubble, Siren pointed a bevy, but rushed in and flushed, dropping to order. Marked to cover, where Siren flushed two singles, not improving chance for points. Diamond

INTERNATIONAL FIELD TRIALS, 1892.

The field party after lunch, nearing the close of the All-Age Stake.

## MONDAY, FIRST DAY, NOV. 7.

Weather very decent for working purposes. The party took the boat up river four or five miles and got to work by nine o'clock. Birds were plentiful, ten bevies being found.

### The Amateur Stake.

AMATEUR STAKE.—All ages, professional handlers barred, owners to handle own dogs. Eleven entries, nine starters. Three moneys, 50, 35 and 15 per cent.

*First Series.*

TICKY TACK AND CLINKER.—Mr. A. Wells's Ticky Tack (Toledo Blade—Cambriana) and Mr. T. H. Nelson's Clinker (King—Fausta II.), both setter dogs. Down at 9:05, on stubble, Ticky-Tack showed the better ranging style. The field was drawn blank. In a low swale a bevy flushed wide ahead of Clinker, not to his fault. These were marked to a thicket, at the edge of which Clinker drew to a point. Tack coming around in opposite direction, three birds flushed, not to penalty. Tack a bit unsteady to wing, but dropped at command. Moving into thicket, Clinker pointed a bevy. Tack, refusing to back, ran in and stole the point. Nelson was ordered to shoot. Both dogs steady to shot. Down 40m.

MINGO, JR. AND SANCHO.—Dr. Kime's Mingo, Jr. (Mingo Rose Rapid) and Mr. G. P. Taylor's Sancho (Toledo Blade—Cambriana), setter dogs, cast off in stubble, they drew it blank, and were brought back to the cover where the first bevy had been marked down. Going down wind Mingo, Jr. drew to a point, but the birds went up wild. They were marked down, and Mingo, Jr., ordered on, came to a point, Sancho backing. Nothing was materialized from the point, however. In cover, Mingo, Jr. pointed a bevy that flushed wild. Sancho pointed at a brush heap and Mingo, Jr. backed, but it was a barren point, the birds having flushed. Turning back to the edge of the woods, Mingo, Jr. pointed a single staunchly, and was steady to wing when the bird was put up. Moving on, he again established a point, Sancho backing. Both dogs steady to shot. Down 50m.

LADY SPOT AND LONDON—Dr. J. Kime's setter bitch Lady Spot (Mingo—Lady Thunder) and Mr. R. Baugham's London (London—Lurea March). In ranging the bitch showed superiority both in speed and in style. At the edge of woods several birds flushed wild. The dogs were ordered on, and Spot pointed. London backed, but the birds evidently running, he left his back, moved up and established a point. The birds were put up and London showed unsteady to wing. Down 55m.

LUCY C. AND SIR HOWARD—Mr. John Davidson's setter bitch Lucy C. (Scottish Chief—Ailsa) and Mr. W. L. Donaldson's pointer dog (Sir Howard, Sr.—Bella). In the open the fortune, as it proved, of again finding a bevy. Going on, Lucy made game, and moved on. Mingo, Jr., coming up later, made a point at this same place. Lucy backed to order. Down 30m.

Clinker and Lady Spot were now asked for to go together. They drew a slashing blank. Further on Lady Spot pointed, Clinker backing. In a cornfield Clinker pointed and Lady Spot backed, but the point proved barren. On a ragweed field Clinker pointed, and a large bevy was raised. Going on to where these were marked, Lady Spot pointed a single. Down 55m.

The judges now announced their decision in the Amateur Stakes, as follows: Mingo, Jr., first; Lucy C., second; Lady Spot, third.

Mingo, Jr., first (Mingo—Rose Rapid), owned by Dr. J. Kime, of Chatham, is a handsome dog of the old Druid type, black, white and tan, about 60lbs. weight. An up-headed, good performer.

Lucy C., second (Scottish Chief—Ailsa), is the pride of Mr. Davidson's heart. A compact bitch, about 50lbs., black and white, with plenty of room for heart and lungs. In gait Lucy C. is not so stylish as in her pointing.

Lady Spot, third (Mingo—Lady Thunder), is white and black, with a peculiar chestnut spot over the left eye. A racy and well made bitch, more of the narrow and deep greyhound type; about 50lbs. weight. She also is owned by Dr. Kime, who thus has two winners in this stake.

## TUESDAY, SECOND DAY, NOV. 8.

Weather raw and windy, not very moist and not the best for working. The party again took boat in the morning, but unfortunately when still about a mile and a half below the grounds intended, the steamer went aground and bent her shaft, disabling her. The party got ashore by using an old scow. The captain promised to have up another boat by night, but did not do so, and it was the fortune of the party, judges and all, to walk home that evening, five or six miles, a sorrow difficult to drown. It turned out, however, that the accident caused small delay in the runnings, as the dogs were cast off on going ashore, and four bevies were found before the old grounds were reached, the first series of the Derby being thus speedily worked off. As was the case on the day previous the entire stake was run through and finished in the day. Birds were abundant.

### The Derby.

DERBY.—For entries born not early than January of preceding year. Four moneys, 40, 20, 15 and 10 per cent., 15 per cent. to club. Twenty-six entries, fourteen starters.

*First Series.*

DAME BANG AND PHYLLIS T.—Mr. T. G. Davey handled his own entry, the pointer bitch Dame Bang (Trinket's Cash—Van Bang). Mr. W. B. Wells handled his own entry, the setter bitch Phyllis T. (Mingo II.—Cambriana). Cast off in the open to show ranging qualities both showed speed, flushed a single and chased, quite out of control, refusing to stop at command. The dogs were now brought around to the place where in the previous heat the bevy had been left under the log. Mr. Johnson, of course, knew the exact location of these birds. He took Diamond around carefully, to the best possible advantage, Siren also going around. Diamond was taken up almost on top of these birds, but in spite of all put her nose to the ground and nosed the birds up deliberately. Down 30m.

CLEOPATRA AND LONSDALE.—Another case of the unexpected. Mr. Wells values his setter bitch Cleopatra (Mingo II.—Cambriana) above any of those he ran, but she was not up to mark. Mr. Johnson handled his own pointer dog Lonsdale (Ightfield Caton—Ightfield Psyche). Cast off in stubble, Cleopatra very meritorious in speed and style. Lonsdale flushed a bevy, and moving on made a false point. Moving on to cover, Lonsdale pointed on a small bunch of birds, Cleopatra, brought up to back, refused, flushed and chased. Both were unsteady. Later, Cleopatra flushed a single, both dogs unsteady. Down 30m.

COUNTESS SISS AND TIRASSE.—Mr. Mather handled his setter bitch, Countess Siss (Cornell—Dart), and Mr. Wells handled his own setter dog, Tirasse (Mingo VII.—Cambriana). Cast off in a field to range, Countess showed more speed, but evinced little stylish quality in the point she established. Countess flushed twice and then false pointed. Brought up to back, practically under the whip of his handler, Tirasse made a very indifferent back of it. Both seemed quite ordinary. Down, 55 minutes.

FRITZ AND MIDGET BOW.—Mr. Kramer's pointer dog Fritz (Count Graphic) was handled by Mather. Mr. Oscar M. Springer's red Irish setter bitch Midget Bow (Scott—Queen Wilkinson) was handled by James McGregor. In the open both showed fair speed and good, merry style. Midget ran into a bevy and flushed. On the scattered birds she pointed, but roaded up and flushed a single. Fritz again pointed, Midget backing nicely. Moving on, Fritz made two false points. They were taken up. Fritz showed stylish and handsome, quite a goodish one. Midget was quick and snappy, making not a bad impression in all. Down, 30 minutes.

*Second Series.*

Dame Bang and Siren were asked for at 2.40 P. M., it being the wish to see Siren have a chance more just to her. Siren, however, flushed twice. Dame Bang made one false point, not to penalty, however, then a flush, and again a false point, the latter a very excusable one. She then pointed staunchly. Dame Bang now was seen for a very sensible, level-headed bitch, not easily to be rattled, and safe to be let alone. For Mr. Davey, it must be said that, more than any handler present, he left the work for the dog to do, and showed confidence in the dog's ability to do the work. He was not continually cautioning and commanding, but took it easy. "I'll let the bitch alone," said he; "she knows her business." More such dogs and handlers would make field trials far more enjoyable. Siren, in her general work, ap-

peared unsteady, but could not be said to have been handled so well as she should have been. They had a good, decisive trial.

Toledo Bee and Phyllis T. now went down together. In speed, style and range Bee was superior and showed quality which meant a mortgage on first place. In the open Bee found a bevy and pointed handsomely, steady to

MR. W. B. WELLS WITH MATANE AND LUKE.
Second and third, All-Age Stake, International Trials, 1892.

wing and shot. Phyllis backed well, but broke in and chased. Ordered up.

Fritz and Manitoba Shot got their second go in company. Fritz was first to point, establishing a good one on a single in a brush pile. Shot was brought up to back, but did so indifferently, though Mr. Johnson steadied him by keeping his hand on the dog's back, refusing to cast the dog off to try for back when so ordered by the judges. Fritz held steady, and did not break his point even when a rabbit was put up ahead of him and ran near by in front of him. Fritz's bird was then put up. Meantime, as the judges stood on a log conferring, Mr. Johnson walked toward them with Shot, and Shot made a point near by, which was allowed him. Taken up.

*Third Series.*

Toledo Bee's work had already been enough to satisfy the judges that he should fill first place.

Dame Bang and Phyllis T. were asked for again. Dame established a point. Phyllis also pointed, but was unsteady till cautioned much by her handler. Going on, Phyllis flushed.

It was now near evening. This closed the runnings in the Derby. The judges announced their decisions to be: Toledo Bee, first; Dame Bang, second; Fritz, third; Phyllis T., fourth.

Toledo Bee, first (Toledo Blade—Maggie Bee), is owned by F. W. Eddy of Detroit, is a black and white setter, about 45lbs., of good nose and very fair speed, good head carriage and tail action, fairly merry in work.

Dame Bang, second (Trinket's Cash—Van Bang), is a very useful pointer, and in condition might look a good one, though she was not cursed with beauty as she stood this week, after a lot of hard work which had pulled her down about 9lbs. She is liver and white, about 42lbs., a fair goer and a fine finder, many worse for field work.

Fritz, third (Count Graphic, dam not known), is a liver and white pointer, 55lbs., of very decent style and range.

Phyllis T., fourth (Mingo II.—Cambriana), is, as Mr. Wells himself puts it, "an odd-looking, bow-legged little thing, that hitches up behind when she goes, and the only thing she does is to back." She is black and white ticked, 35lbs., a pleasant little worker.

WEDNESDAY, THIRD DAY. NOV. 9.

Better working weather than on the previous day, moister and not so windy. The party took conveyances out, the boat not having been repaired. In the wish to honor the courtesy of some farmers who had reserved lands for the club, the line of work was changed and the grounds found so desirable during the first two days were abandoned. This proved an error, as to-day the birds were scarce and hard to find. Out of this grew the only dissatisfaction of the meeting, one or two owners thinking that their dogs should have had better testing, even though that meant another day's running. The judges, however, thought that to-day's running afforded them opportunity to determine the relative merits of the dogs.

### The All-Aged Stakes.

ALL-AGED STAKES.—For all ages, setters and pointers, four moneys. Eleven entries, 7 starters.

*First Series.*

LADY PATCH AND DAPHNE.—Dr. J. Kime handled his own entry, the setter bitch Daphne (Toledo Blade—Cambriana). Cast off on a field for range. Both showed speed and high-headed style, but little tail action. The first field was drawn blank, and the party moved to an adjoining stubble. This was a good place for work, the wind favorable, and the owners certainly could not say the dogs had no chance here, for two bevies were on the field. The dogs, however, made very little of the opportunity. Working up wind, the dogs beat out the field, naturally working toward a patch of cover on the left. Both were close together when in a portion of the field. Beyond the judges a bevy was put up on ground over which both dogs had passed directly, missing the birds quite inexcusably. As the judges stood speaking of this, still another bevy went up near them, on ground which the dogs had beaten over earlier. These birds also had been passed unnoticed by both dogs, with no apparent excuse whatever. Moving on rather quickly to the cover, Daphne pointed fur, Patch backing nicely. On an adjoining stubble Daphne false pointed, Patch backing beautifully. Patch then false pointed, backed handsomely in turn by Daphne. On again, Daphne false pointed, possibly on fur, Patch backing. On again, Daphne established a point on a single, Patch honoring her duly. Taken up. Down 1h. 10m.

DONALD BANE AND MATANE.—Mr. Davidson handled his dog, the setter Donald Bane (Dick Bondhu—Western Belle). Mr. Wells handled his own dog, the setter Matane (Mark J.—Cambriana). Certainly a pair of handsome ones and a pretty picture in the field. Both showed style and speed, and for Matane it would be hard to say too much. Matane pointed a bevy very staunchly, and Donald was wanted to back. Mr. Davidson was taking him down the field further to get him the wind going up, and Mr. Smith, judge, called to him to cast off his dog to see if it would back. Mr. Davidson was steadying Donald where he was, when Donald made game and stood anxious to go up A small bevy went up near him. Mr. Davidson said, "I flushed that bevy myself. It was my fault." Donald was then brought up to where Matane stood and backed only under orders, Mr. Davidson apparently afraid to cast him off on his own resources. This too cautious handling did not impress the judges favorably. At order Mr. Wells put up the birds, fired and killed, Matane steady to wing and shot. Following to cover Donald flushed a single. After considerable birdless work Donald pointed staunchly, two birds going out. Matane, brought up to back, did so handsomely, Donald a bit unsteady to wing and shot. Taken up. Down 1h. 30m.

LUKE AND DAME BANG.—Mr. Wells handled his own dog, the setter Luke (Toledo Blade—Cambriana). Mr. Davey handled his pointer bitch, Dame Bang (Trinket's Cash—Van Bang). Two good ones. Luke was broke on the grass country, and is an exceptionally high-headed little fellow. Dame kept up her Derby reputation, though getting plenty of running for the week. In cover Dame did some sharp work, pointing a single staunchly, moving on, stiffening again on a single, and again pointing a single at a brush pile. In this Luke backed well. Luke now made game, and drew to a point, none too steady, on a bevy in a brush heap. Dame, brought up to back, excusably flushed a single. Moving on, in a grassy fence corner both dogs whirled to a point, standing staunch. The handlers moved up, trying to find the bird, Mr. Wells crossing the fence to try to put it up. The dogs thus broke the point, Luke casting smartly about to locate the bird. Dame went but a few steps and pointed firm again in the same corner. The bird was found hid close under a rail in the grass. Ordered up. Down 1h. 5m.

CARRIE T.—Dr. Totten's setter bitch Carrie T. (Banker—Smith's Bell) was odd dog in the drawings, and Luke went down with her for the bye. Carrie was a merry one, with fair speed but rather low head. Luke kept up a good impression in ranging quality and gait. Working down a rail fence, Luke made a high-headed and handsome point on a bevy, honored on sight by Carrie, which was across the fence, some 60ft. distant. When the birds were put up, both dogs were steady to wing and shot. The birds were marked down in corn stubble, and here Carrie made game, getting a probably excusable flush, as the bird might have been put up by Mr. Wells in walking near. Moving on, Carrie pointed again, and it was materialized. Luke also pointed a single Leaving the corn, Carrie flushed a single in a grassy swale On again, she pointed. On again, she flushed. On stubble, Luke pointed elegantly, several birds being put up, Carrie backing here nicely. Ordered on after a bird marked down along a weedy fence, Carrie did the bad work of roading up and flushing the bird. Ordered to the open stubble on marked birds, she pointed, backed by Luke. A

photograph of this scene was made, but unfortunately did not print out well. Down 55m.

*Second Series.*

Dave Bang and Matane were now asked for at 3:45 P. M., to decide the question of first and second. They were put down in a very weedy cornfield. Both kept up their good work in range and style, Matane going a corker, pretty as a dream and fast as a ghost. Dame was also high-headed and eminently business-like, not excitable and not to be rattled by any means. Dame was first to find, pointing a bevy staunchly, Matane backing in great style. The birds were put up, both dogs steady to wing. Moving on, Dame pointed a cripple in a corn shock, with her nose thrust part way into the shock, her ears flapped up grotesquely. Mr. Davey came up and smoothed her ears down. Matane, not seeing very well, was brought around to back and did so under order. The dogs were now ordered up. Down about 30m. It was now nearing evening. No further running was done in the All-Aged, and on the following day, under the circumstances explained in the introductory remarks of this report, the judges announced their decisions in the All-Aged as follows: Dame Bang first, Matane second, Luke third, Lady Patch and Carrie T. a divided fourth.

Dame Bang, first, Mr. Davey's pointer bitch, has already been mentioned in the Derby. She here increased her reputation as a field performer.

Matane, setter, second, owned by Mr. W. B. Wells, large dog, rangy, 55lbs., black, white and tan, of considerable quality.

Luke, setter, third, also owned by Mr. Wells, is a small black, tan and white, about 45lbs., clever and up-headed, and a merry little fellow enough.

Lady Patch, setter, divided fourth, is owned by Dr. J. Kime, of Chatham. A stylish large bitch, white with heavy black mark on side; well built for going and withal well broke and pleasant.

Carrie T., setter, divided fourth, is owned by Dr. Totten, of Forest. She is a small black, white and tan, nervous, eager and merry, a bright enough one.

## NEW ENGLAND FIELD TRIALS

THESE trials were brought to a fairly successful conclusion last Saturday morning. I say fairly advisedly. It is no use running dogs in the field to test their game-finding qualities if the birds are not there. It is all very well for the dogs to gallop around and look very busy, but as, in the language of the street, money talks, so in a field trial birds are the stuff the dogs are after. Birds to the number of about forty dozen have been turned down since the club put up its protective signs on the 2,500 acres leased for the club. It is safe to say, however, if the late arrivals are a sample of what went down before, the cause is not far to seek for the present lack of game. Out of one box of twenty-four sent from New York, eighteen were found dead, either in box on arrival or the next day in the field when put down. It is no use holding trials on such weak birds, they are probably devoid of scent, and in their weak state, unable to fly, they run about the ground and tend to break up the dogs. The policy of procuring quail from warm Southern States to undergo the rigors of a Northern winter on the exposed grounds of this club is another subject that is open to question. Plenty of good quail can be purchased next month and turned down in sheltered spots, so that the survival of the fittest will be in good order and their sons and daughters too, by next November, and also know where to go to when they are flushed. If we had stayed another few days on the limited grounds where birds were likely to be, we should be able almost to recognize each and every individual quail, so often did the dogs hustle the same bevies about.

The ground over which the club has jurisdiction is varied to a degree. A great deal of it is swampy and covered with low, thick brush through which it is next to impossible to see the dogs, and I am confident a good deal of the work was lost or imperfectly seen owing to this fact. The judges being on foot they were handicapped both in following the dogs and in the rough, hard work which they had to undergo the day through. There is plenty of open ground, though these parts are very bare as a rule. This could be changed by planting strips of grain and leaving it standing, affording more cover and sustenance for the birds than when cut and left to rot. There is no reason why the judges should not be mounted, for with a man to pull down and put up fences as in the trials down South, there are no serious obstacles to be met with, and rubber boots need not be worn. The judges could then keep the dogs well in view, and of course the press representatives would follow suit. Now that I have had a little say about the grounds and game, it is pleasant to change the subject to those who took part in the trials and help to make them such friendly gatherings. There is more fun and good fellowship displayed at Assonet in one day than was our experience of a month of trials in the South. In the latter it is "pizness, mein freund," from the start. There is here a flavor of sportsmanship that is noticeable in all field meetings where the New Englanders take part. The stakes are not thought of—at least not apparently—they are out for a good time and to swap tales. At the same time the New England thrift creeps in and the owner of the "barges" or covered wagons that conveyed us to the grounds took a cold-blooded view of our trials and sympathized with every one of us to the extent of fifteen cents every time we held down a seat in his "Pullman." In fact, this continual "dribble" paying was somewhat of a nuisance. Each meal was fifty cents, whether in the open or in "cover," and was demanded promptly at the second mouthful, until "Fifty cents, please," became the joke of the meeting, and this onerous or odious duty of collecting devolved generally on Pres. Power. This gentleman worked hard in varied ways to do his duty, and on him rested most of the work, which was no small affair in addition to his press duties. Dr. Heyward and D. A. Goodwin, Jr. also helped things along in their genial way and did much to contribute to the good feeling all round. The genial secretary, Mr Sperry, had a smile, a kind word and a cigar for every one, and Mr. Wells did all that was re-

quired of him. As stated last week the main body of the members and visitors found quarters in the Town Hall "bedroom" the beds, *i. e.*, cots, were there, and comfortables, too, but as for sleep, that was out of the question till the "darkest hour." The first three nights were given up to horseplay and varied amusements in which the collapse of a would-be sleeper who inadvertently dropping into a doze would eventually find himself on a solid foundation with all the cot and paraphernalia on top of him. This led eventually to action on the part of the club on Thursday, when the following notice, unique in its way, was posted over the stage:

"Voted during the progress of the field trials all lights at the club headquarters shall be extinguished at 10 P. M., with the exception of those in the press room, which shall be for the exclusive use of the press. Perfect quiet shall be in order, and no one shall be disturbed in his rest. Any infraction of this rule may be penalized at the discretion of the Board of Managers. By order of the Board, E. K. SPERRY, Secretary."

This idea is all right, but its construction is defective. Several influential members of the club had returned home who were conspicuous in the "fun making," and a mere handful was left to acquiesce to this mandate. It would have been in better taste had some prominent member of the club, when he thought things had gone far enough, called for order and quietly explaining the situation, referring to the judges, etc., asked for quietness, and there would not have been a dissenting voice heard, as the members and visitors present were gentlemen and not children in a kindergarten. The number of visitors and members present was unprecedented at any trials I have seen.

In addition to the names given last week the following gentlemen were interested spectators during the course of the week. Messrs. Ed. W. Brooks, Henry Dutton, W. B. Foote, G. O. Vickery, R. B. McClean, Chas. W. Sturgis, E. C. Davenport, W. M. Lovering, F. C. Felton, E. Bradley, T. W. Cheney, B. S. Turpin, F. W. Chapman, James Abbott, D. S. Bennett, J. W. Wheelwright and a number of strangers from neighboring towns in Massachusetts and Rhode Island.

On Wednesday evening the English Setter Club medals were awarded to the dog and bitch showing best bench show form. Mr. W. Tallman was the judge, and in the confined space of the dining room was successful in picking out the best. Most of the dogs in the two stakes were brought for-

W. A. COSTER AND N. WALLACE, Judges.

ward and the issue soon lay between The Corsair, Kent II. and Rod's Chaff. The judge eventually plumped for the last named, who is owned by Mr. E. O. Damon, a rattling good one, slightly bitch-headed perhaps, but in keeping with his general contour, a beautiful expression, body well turned and standing on good legs. I shall expect to see this dog take a forward position even in hotter competition. The bitches were not so good and the issue lay between Molly Dale and Our Pet, the latter beats in legs, head and ribs, and was a good winner; she is owned by the Oakland Farm Kennels, of which Mr. A. R. Sharpe is the proprietor, and both he and his brother are enthusiastic supporters of the N. E. F. T. C. 'Nough said and an account of the running is now perhaps in order.

## WEDNESDAY.

The chaff has been separated from the wheat, figuratively speaking, in the Derby, in consequence of yesterday's busy work, and the judges announced last night that they would like to see in the second series Rod's Chaff run with Wild Lily, Nellie G. with Albert's Daisy, and Bradley with Tennessee Vandal.

This morning promised rain, the sky was heavily clouded and the air cold and raw with little wind. The rain yesterday had put the ground in good shape for scenting purposes. About 8 A. M. we started in the four-horse wagons for the Quaker Meeting House. The crowd was not so large as yesterday, but a contingent from neighboring towns who joined us about noon, increased the list to about sixty again. It is astonishing the great interest that these trials have excited round Boston, and if everything goes on in the future as it is doing now the N. E. F. T. should soon become a prominent club. At present its flavor is decidedly local. By this time we are at the little meeting house and

ROD'S CHAFF AND WILD LILY are at once cast off, at 8:37, in the open fields. Both are good rangers, but Lily the speediest. Shortly after the start Chaff pointed a swamp quail, as it is called here. A long tramp over the fields and Chaff was seen to point, moved on, nothing there. He made several false points after this, and Lily stopped as if she had something, too, but it was not till we reached heavy alder swamp that game was seen, and Mr. Whitlock "pointed" a bird, in a rabbit hole, which flew to a neighboring tree. Several birds flushed wild here and Lily pointed foot scent, backed by Chaff. The latter stopped on a single which flushed wild. He was loath to leave this part, but dogs were ordered together and then called up, the heat being somewhat less than brilliant and not winning work. Lily seemed to have put all her eggs in yesterday's basket, and barring her speed and style did nothing to attract attention. Down 53m.

ALBERT'S DAISY AND NELLIE G.—This was expected to be a rattling heat, but turned out a very uneven one, some good work and very indifferent being mixed up. Cast off at 9:52. Both bitches are fast and wide rangers, Daisy the best in this respect. Soon, in bare, open ground, Nellie pointed and bird flushed wild. Here the sun came out at 10 o'clock and livened things up a little, but not for long. Nellie pointed unsteadily in weeds by a fence and Daisy honored it, but nothing found. Then in open grass field Daisy ran right into a bevy; cross wind, dropping to wing. Daisy lower down then false pointed, Nellie backing to order. At edge of alder swamp Daisy, coming out, passed close by three birds that flushed wild when the crowd came up. Further on Daisy redeemed this somewhat by a good point on a bevy at edge of heavy cover; then on the singles she nailed one which handler flushed, steady to wing. Coming out of this, dogs were held up at 10:35. Daisy's pick-up at the finish put her straight with the judges. Nellie G. does careful work and was well handled. Down 43m.

TENN VANDAL AND BRADLEY.—These were put down at 10:42 in open. Bradley soon showed himself much more stylish in manner of working than Vandal. Vandal in alder swamp came to a good point on bevy and Bradley did the honors. A bird was killed and both steady. Dogs then hunted carefully through thick cover where it was almost impossible to see the dogs, and they were held up for a few minutes. In open, Bradley pointed two singles, Vandal also taking a hand in; handler flushed and fired, both dogs steady, and called up at 11:25. Here the judges consulted for some time and then announced that Dr. J. E. Hair's Albert's Daisy wins first money, $200; H. B. Tallman's Nellie G. second money, $100, and E. O. Damon's Rod's Chaff and Oakland Farm Kennels' Bradley divide third money, $50. The result was graciously received, Albert Daisy's showing in the first series being so meritorious that her misdeeds of to-day were passed over.

All the winners are English setters. Albert's Daisy is a trim built and racy looking little bitch and very much after Albert's Nell's make, that we all know about; Nellie G. is a handsomely formed and medium-sized bitch that has had something the matter with its head and had a running sore below the eye; Rod's Chaff is a very well formed dog, fit for any show and with one of the sweetest black, tan and white heads I have seen for some time. He afterward won the English Setter Club medal for best looking dog. Bradley is the largest dog but is an active worker and gets over his ground intelligently.

A long wait here ensued, the lunch wagon not being in sight. After the sandwiches and coffee had been disposed of the first brace in the All-Age Stake was called, they having been drawn on Tuesday night to run as follows:

R. R. Moore's Grousedale with Henry Dutton's Duke of Kent.
S. S. Gordon's Molly Dale with Bayard Thayer's Polly II.
Chas. Kelly's Mark Noble with Oakland Farm Kennels' Our Pet.
F. W. Whitlock's Minch with Jas. B. Blossom's Sally Beaumont.
J. L. Wells's Reverdy with E. S. Coggin's Mack, Jr.
Jas. B. Blossom's Flomont with O. W. Donner's Wagtail.
Fred W. Clark's Claude with Noyes Billings's Ranger B.
Miss S. A. Nickerson's Count Noble with Oakland Farm Kennels' Tennessee Vandal.
E. O. Damon's The Corsair with H. B. Tallman's Dash G.
Cohannet Kennels' Kent II. with Joe Lewis's Grouse.

### All-Age Stake.

As it was nearly lunch time when the Derby was concluded, the powers that be thought that lunch had better be discussed before the first brace in the All-Age should be started. It was chilly work waiting for the coffee and sandwiches, but when they did come they served to "fill a long felt want" Not much time was wasted, and at 1:07

GROUSDALE AND DUKE OF KENT were put down in a turnip field. Both are good-looking pointers, and active, stylish workers, Grousedale especially so. W. Tallman handled this dog, and E. S. Eames steered Duke of Kent. Working out varied ground Duke was the first to point where running birds had been seen on the pine needles. Grousedale backed; both drew on carefully, stopping frequently; nothing found. After covering a lot of varied ground, Grousedale getting out with most speed and range, Duke, at edge of alder swamp, pointed a bevy; Grousedale took the scent too, drew across him and pointed; birds got up; following them Grouse pointed in fence bottom, and was a bit unsteady as Tallman flushed two birds; Duke backed close, both steady to shot. Grousedale sent to find wounded bird pointed again, and was steady to rise of single, but failed to find bird which had run on. Both worked back after the main lot of birds, and at edge of swamp one flushed ahead of dogs. Up at 2:15. Grouse had the speed and range, but both dogs hunted with intelligence and in good style.

MOLLIE DALE (a bye).—Mr. Bayard Thayer's Polly II. being withdrawn Mollie Dale ran alone, and was cast off at 2:37 in open field, side of swamp. She started off well, and after quartering a lot of ground made game and did a good deal of undecided work, crawling along on her belly and stopping every few yards, but nothing tangible came of it though. Some more fields covered and then edge of open swamp she pointed two birds and was a bit unsteady as handler moved to flush, but was steady to wing and shot, retrieving the bird in good shape, and then called up at 3:12. Not a very brilliant performer, but did well on the birds she found, and works close.

MARK NOBLE AND OUR PET.—These were a large and small English setter respectively. Mark handled by F. C. Waterhouse, and Our Pet by her owner, A. R. Sharpe. Down in strawberry patch at 3:15. Edge of cover both pointed a large bevy, dropping as birds flushed wild. In open near by Mark pointed and was honored stylishly by Pet. Nothing being put up, they were worked into the next field, and the crowd coming up flushed half a dozen birds that the dogs had evidently got wind of when they pointed; these they should have drawn to. Marked into very heavy swamp cover, dogs were sent in and both pointed, and the "man up a tree" said Pet had the call, and Mr. Sharpe flushed the birds, fired and missed; both dogs steady. Going through a churchyard, where a few of us with antiquarian tendencies investigated the old tombstones and found some very interesting dates. Outside of this yard, by white pine cover, the dogs passed birds which crowd flushed into cover, and dogs did not stop till their noses were right on the feathers, Mark pointing when he saw the bird. Up at 4:15. This closed the work for the day.

## THURSDAY.

When we pulled up our blinds this morning the outlook was cheerless in the extreme, heavy clouds hung all over and the rain came down in torrents. This compelled us to stay under cover all day and amuse ourselves as best we could. A wet day at Assonet comes to an end at last, but it was slow—very slow. Some fellows thought it was Sunday.

## FRIDAY.

During the night a hard frost had set in, and when we started this morning the ground was hard and a chilly northwest wind was blowing. The "barges" took us to the Quaker Meeting House as usual and we started in on the same old ground and after the same old birds.

MINCH AND SALLY BEAUMONT were the first brace called. Minch, a heavily-marked black, white and tan dog, was handled by owner, F. W. Whitlock, and the Gordon, Sally Beaumont, was in charge of W. Tallman. They were cast off at 8:07. Soon in heavy cover, while Minch was drawing to a bevy, the birds flushed and outside in swampy ground he nailed a single in good style, but Sally, with the perverseness of her sex went in ahead and flushed. Nothing more was found, but a lot of bad ground was worked out and dogs called up at 9:07. Minch far the best in range, speed and nose. Flomont and Wagtail should have come on now, but

REVERDY AND MACK, JR., were put down. The two were almost identical, white with orange markings, but Mack was a trifle smaller than Reverdy. Soon after starting, in sparse cover, Mack pointed uncertainly and was honored; nothing found. After ten minutes' run, in which Mack showed best range and speed, though Reverdy was probably the most intelligent hunter, Reverdy dropped to a point side of beech clump and Mack dropped to honor, poor style and no result. Then both pointed in opposite directions, but Mack had the birds which flushed wild. On singles Mack pointed undecidedly on running bird edge of bay berry bushes, Reverdy honoring; dogs drew on and bird was flushed by crowd. Up soon after at 8:45. Mack, Jr., did the better work all round, and is a more active ranger, Reverdy being a sluggish mover, but neither are stylish on points or in getting to birds.

FLOMONT AND WAGTAIL. — Flomont, a Gordon, was handled by W. Tallman, and Wagtail, a large English setter, was steered by F. C. Waterhouse. Down at 9:51 and both ranged well out in the open, though at times, after the manner of Gordons, Flomont showed a fondness for her handler. Wagtail was first to point after galloping around in a rather aimless manner, drew on and repeated, when handler flushed a bevy and fired, dog not very steady. Then Wagtail flushed two outlying birds, dropping to wing. Flomont coming up, took a hand in and pointed, was honored, Tallman started in to flush and Flomont moved on; afterward the bird got up under the FOREST AND STREAM man's feet. Flomont pottered a good deal in cover. Afterward in same low cover Wagtail pointed undecidedly and at same time Flomont got two points, the last just outside of cover, was a good one and well carried out as Tallman fired at the single. Called up then at 10:34. Flomont did best on birds, showing better nose, and Wagtail had the speed and range but hunts in an aimless manner at times and has a peculiar jumping gait, as if he wanted to see well ahead of him.

RANGER B. AND CLAUD.—Another Gordon and English setter. Claud handled by E. S. Gordon has very little white. Ranger B., the Gordon, was in charge of F. D. Freeman. Down at 10:38 in open. There was a good deal of intelligent ranging in which Claud showed conspicuously, but for a Gordon, Ranger was by no means disgraced in this respect. Claud nailed a bevy very stylishly in grass, edge of cover,

NEW ENGLAND FIELD TRIAL CLUB'S OFFICERS.

E. KNIGHT SPERRY, Secretary. W. A. POWER, President. J. L. WELLS, Treasurer.

held point steadily while Ranger brought up to back also winded them to one side; Gordon flushed, fired, killed and Claud retrieved in good quick style. In fact this was as good a piece of snappy work as had been seen this week. The Gordon was loath to leave the spot and went back twice while Claud, under good control, hunted out fresh ground. Afterwards Ranger in heavy cover pointed a small bevy and dropped to shot. Dogs up at 11:10. Claud had the speed and range and was best on birds. Ranger lagged at times and was not under very good control.

Tennessee Vandal and Corsair having been withdrawn, the dogs left in of the two braces,

COUNT NOBLE AND DASH G., were run together. Cast off at 11:22, it was seen that Chas. R. Taylor handled the Gordon and H. B. Tallman the English setter. Some good ranging was a feature of this heat; the Gordon got out with such speed and range as I have not seen in any Gordon put down so far in trials. Dash G. pointed first, but Count paid no attention to him and worked all round the pointing dog. There was nothing found, but he should have honored; in fact, he seemed all through the heat to pay no attention to his partner. After dogs had passed through some pines the crowd flushed two birds. Dogs drawn to, and as they were roading several "weaklings," quail by courtesy, probably those put down two days before just near here, and of which eighteen were found to be dead in the box that laid in the open, a spectator caught one bird as it flew along. Then Dash pointed twice at edge of pines and was held for Count, who, as usual, paid no attention, but getting on to some weak runners picked one up and retrieved it. There was nothing to Dash's two points. Outside of pines Dash came to again, and Count coming round went right in and flushed birds and chased himself round the block. Count then pointed two birds steadily and dogs up at 12:10. Neither would do for final honors, but Dash was a "disappointed" dog, showing the most sense and under better control.

Lunch was now in order, and Dr. Heyward having arrived he piloted us to some new grounds about a mile further up the road where game was said to be more plentiful and stronger on the wing. During lunch two boxes of Tennessee quail arrived from New York, but they were a sorry lot, several were dead and others had retired within themselves, contemplating a speedy journey to happier hunting grounds.

KENT II. AND GROUSE were put down at 1:23 on the new ground, which was rough and stony, alongside the Assonet River. Kent II., handled by W. E. Jones, and Grouse by W. Tallman. After covering a lot of ground with speed and range in Grouse's favor the latter flushed a bevy at edge of small orchard. Grouse further on made game, and as he stopped a woodcock flushed. Working to pines several birds got up ahead of dogs. This was on a ridge, affording a view of some beautiful country that lay between the Assonet and Taunton rivers, which here winds tortuously through two pretty valleys. Dogs up here at 2:02. The work was in favor of Kent II., in so far as style and having made no

mistakes went. For a heavy dog he gets over his ground well and hunts it out intelligently. Grouse did not come up to expectation and he can do better. This ended the first series, and the judges having had their confab during lunch time were ready with the list of those that they wanted to see again.

They were Grousedale, Duke of Kent, Mark Noble, Our Pet, Minch and Claude. This seemed a just selection, with Grousedale and Claude the favorites. These two were cast off together shortly after.

*Second Series.*

GROUSEDALE AND CLAUDE.—Down at 2:15 on the same ridge. A number of fields and more or less rough ground were worked over, both dogs going well, but Grousedale having the speed and wider range. On a hillside, about 2:50 P. M., Claude either flushed or went dangerously near a bevy, which rose wild. Just before this the FOREST AND STREAM man met with an accident, and was compelled unwillingly to lag behind, Mr. Clarke kindly furnished me with the notes of the rest of the day's work. After these birds got up the dogs worked into the bottoms, and in thick cover Grousedale pointed and Tallman said he saw a bird some distance ahead. Nothing more was done, and dogs up at about 3:50.

DUKE OF KENT AND MARK NOBLE.—Cast off in pasture at 3:55. In cover Duke was first to wind the birds, and pointed a bevy staunchly, and was steady to flush; ordered on, Duke refused to move; handler investigated and found he had hypnotized a bird which lay close right under his nose. Following scattered birds, Duke pointed a single capitally, but broke shot as handler fired. Further on he got in another point and was steady to wing, on order. A false point, honored by Mark, then ensued. Coming out of cover Mark pointed, but Duke failed to honor and was unsteady to flush of single. He was a bit rattled here and needed steadying. Up at 4:17. Duke showed some good work and some indifferent; altogether, however, he was ahead of Mark Noble.

OUR PET AND MINCH.—Cast off at 4:25. There were no birds found in this heat and the dogs had worked back toward the old grounds, as birds were scarcer than ever on the new part. Our Pet showed much the better speed and range. Up at 4:48. It was thought that this would have given the judges a line and a decision be arrived at, but they thought best to have one or two more heats to-morrow. There was no little conjecture as to how things would go, as between there of the best there seemed little to choose.

SATURDAY.

This, the last day, opened cloudy and with a white frost on the ground. A trip in the barge, only one this time, as the crowd had dwindled to just a handful of club members, to the old stamping ground, and the first brace in the

*Third Series,*

DUKE OF KENT AND REVERDY, were called out at 8:30. There was some little surprise that the latter should be in it; for though he had made no bad breaks, still he had done nothing very noticeable. Several fields were drawn blank, but this showed the pointer Duke to be a much faster and wider ranger. Reverdy was first to find in edge of pine woods, but Duke failed to honor the point and went clean through the bevy, which lay close. Birds were flushed by spectators. Duke then located. Reverdy backed, and then both roaded on running birds, nailed them, and birds flushing Duke was unsteady. Up at 9:04.

GROUSEDALE AND REVERDY.—A little rest and these were turned down at 9:20. Reverdy seemed to have his nose today and was first to point, backed by Grousedale, but nothing found. Afterward he repeated this performance, Grousedale backing to order. Not a very winning performance for Reverdy. Up at 9:55.

CLAUD AND OUR PET.—This was the last brace of the series and proved the decisive one. Cast off at 10:05 Pet soon showed herself the faster and most intelligent ranger. Pet pointed first, and handler flushing, shot and missed. Pet was not quite steady but stopped at command. Following on Pet nailed the birds again, Claude honoring; birds were flushed and again Pet was unsteady, probably handler's fault as much as anything. Up at 10:45.

This closed the running, and the judges afterward announced that Claude wins first, Our Pet second, and Duke of Kent and Reverdy divide third. This decision was not altogether indorsed, and especially when the owner of Our Pet expresses himself as not satisfied that his dog had beaten Grousedale. This dog was thought to be hardly treated, and though I did not see the work in the last part of the series, still nothing that occurred seemed to indicate that he should be thrown out of it altogether, considering his consistent speed, range and general good sense. Mr. Tallman, who is a good judge of field work, handled Grousedale and saw the others work, was much disappointed over the result.

Still it's no use crying over spilled milk, and when the judges announced the placing of the Gordon setters for the special moneys offered by the Gordon Setter Club as follows: Ranger B. first, Count Noble second, Flomont and Sally Beaumont divide third, three cheers were given for the judges, winners and President Power. In this Gordon distribution Flomont, on work done, was fully entitled to second place, though she did not range so wide as Ranger B., still she was better on birds. Reaching town about noon the company began preparations for departure, and by evening the last of the stragglers had left quiet Assonet in repose for another year. H. W. L.

## BRUNSWICK FUR CLUB TRIALS.

OSSIPEE, N. H., Nov. 14.—*Special to Forest and Stream:* The Brunswick Fur Club's field trials will begin here tomorrow morning with the running of the Derby. The club headquarters are at the Carroll House, and there are gathered here to-night many enthusiastic fox hunters and sportsmen, among them A. C. Heffenger, Portsmouth, N. H.; J. H. Baird, Auburndale, Mass.; George J. Garrett, Columbus, Ga.; R. D. Perry, Braintree, Mass.; M. G. Whittier, Hontzdale, Pa.; R. H. Haggarty, Philadelphia; Geo. P. Berry, Salem Mass.; A. G. Hall, Brunswick, Me.; Richard Seely, Portsmouth, N. H.; E. B. Hayden, Plymouth, Mass.; E. W. Gill, Princeton, Mass.; S. H. Hill, Strafford Centre, N. H.; E. J. Bates, W. B. Clark, O. F. Joslin, Oxford, Mass.; S. Decatur, Portsmouth, N. H.; John M. White, Millbury, Mass.; N. Stewart, F. W. Noyes, Gorham, N. H.; W. S. Russell, Bath, Me.; A. McDonald, Rockland, Me.; Bradford S. Turpin, Dorchester, Mass.; A. B. F. Kinney, Worcester, Mass.

The hounds have comfortable quarters in a large stable, and in the pack are representatives of the July—Avent, Goodman, Robinson, Buckfield-Byron, Wild Goose, and other celebrated strains. The ground is covered with about four inches of snow, and if this becomes crusted it will be bad for the hounds. The executive committee have appointed A. C. Heffenger, E. W. Gill and Bradford S. Turpin to judge the Derby.

The entries for the Derby closed to-night, and are as follows:

GARRETT—S. Decatur's tawny dog, 11mos. (July).
VIVEN—S. Decatur's black and white bitch, 11mos. (July).
NANCY HANKS—A. G. Hall's black, white and tan bitch, 12mos. (Wild Goose and native).
TRY—W. B. Clark, Jr.'s red and white dog, 7mos. (Wild Goose and native).
TRUE—W. B. Clark, Jr.'s liver and ticked dog, 7mos. (Wild Goose and native).
CAMP—R. D. Perry's black and white bitch, 11mos. (July).
POPPLE—R. D. Perry's black, white and tan dog 12mos. (Native).
STEVE—U. Q. Pope's black, white and tan dog 17mos. (Goodman).

The entries in the All-Age class close Tuesday night. There will probably be more entries than ever before in the history of the club.

*[Special to Forest and Stream.]*

OSSIPEE, N. H., Nov. 15.—An attempt was made to-day to run the Derby in the Brunswick Fur Club field trials. The ground was covered with melting snow and a heavy fog hung over the hills, hiding the hounds. The puppies failed to start and were ordered up after three hours' hunting. The Derby will be finished later. There are twenty-five entries in the All-Age, and these will be run to-morrow. Among them the White Oak Hill Kennels, the Kinney & White, the Portsmouth Hunt Club, the R. D. Perry, and other packs are represented. With good weather the trials promise to be successful. BRADLEY.

## AMERICAN F. T. CLUB'S TRIALS.

*[Special to Forest and Stream.]*

COLUMBUS, Ind., Nov. 14.—Three stakes were drawn tonight. Frank, Ightfield Rhiwlas and Hi Di were the three starters in English setter All-Age. Quaker, Betsy Crafts, Hope Boru, Finglas, Marlowe, Beau Brummell, Elcho's Maid, Winnie II. and Ranger are the starters in All-Age Irish setters. Eric, Don Fishel, Wise Croxteth, Nutwood, Rex, Faust, King Don, Manitou, Midget and Maid of Ossian are starters in All-Age pointers. Weather has cleared up after heavy rains.

COLUMBUS, Ind., Nov. 15.—The trials began this morning under favorable conditions. The judges are as advertised. The weather is delightfully pleasant. Birds are in sufficient numbers. The work done was very inferior, inability to find birds was the prevailing feature of almost every heat. Hi Di first, Frank second, Ightfield Rhiwlas third in setters. The Irish Setter Stake will be finished to-morrow. The attendance is good.

English Setter Derby has three entries: Pembroke's Blue Grouse, Jim Dandy, Dan's Lady. Irish Setter Derby: Glenmore Appie, Sage's Tearaway and Elphin II. Pointer Derby: Pomme de Terre, Trinket's Don, Pride, King Don, Rex, Maan, Trixie of Axtel and Dick Fish-el.

COLUMBUS, Ind., Nov. 16.—Irish setter All-Age Stake: Finglas first, Elcho's Maid second, Hope Boru third. Weather pleasant, birds plentiful. Trials progressing satisfactorily. All-Age Pointer Stake begins next at 9:30 A. M. B. WATERS.

## CENTRAL FIELD TRIAL CLUB.

NEW YORK, Nov. 12.—*Editor Forest and Stream:* Herewith we hand you a list of 59 entries, 25 pointers and 34 setters, for our 1892 All-Age Stake.

C. H. ODELL, Sec'y and Treas.

SETTERS.

CECIL H.—J. L. Adams's dog (Dr. Maclin—Cosette).
RUPERT—Avent & Thayer Kennels' dog (Roderigo—Bo-Peep).
BETTIE S.—Avent & Thayer Kennels' bitch (Roderigo—Bo-Peep).
NOVELIST—Avent & Thayer Kennels' bitch (Woodhill Bruce—Lewellin Novelty).
BOB COOPER—Blue Ridge Kennels' dog (Roi d'Or—Miss Nelly Y.).
GOSSIP—Blue Ridge Kennels' bitch (Roderigo—Belle of Piedmont).
ZULU M.—Whyte Bedford's bitch (Toledo Blade— ——).
COUNT GLADSTONE—A. Dill's dog (Count Noble—Ruby Girl).
BRIGHTON TOBE—T. G. Davey's dog (Locksley—Ledlersdale VI.).
NAHMKE PHILIP—E. W. Durkee's dog (Ray Monarch—Saddlebags).
NAHMKE CHITA—E. W. Durkee's bitch (Count Howard—Calico).
TENNYSON—Fairmount Kennels' dog (King Noble—Queen Vashti).
ROSE BUD—Fairmount Kennels' bitch (Czar—Lady May).
COLERAINE—Glenmore Kennels' bitch (Fingal III.—Aveline).
FINGLAS—Glenmore Kennels' dog (Fingal III.—Aveline).
HARRY C.—Greenfield Hill Kennels' dog (Roderigo—Countess House).
NANCY HANKS—C. C. M. Hunt's bitch (Foreman's Noble—Flirt).
ANNIE F.—F. R. Hitchcock's bitch (Roderigo—Juno A.).
ALICE—F. R. Hitchcock's bitch (Jean Val Jean—Miss Thompson).
DIAMOND—F. R. Hitchcock's bitch (Deck Ray—Cad's Pet).
THORNDALE—Hempstead Farm's bitch.
MANITOBA PATTI—Thos. Johnson's bitch (Duke of Gloster—Flora).
DAN NOBLE—Ad. J. Klofanda's dog (Gladstone's Boy—Flame M.).
GUY (G. T. Leach's dog (Gladstone's Boy—Lady).
LARA—P. Lorillard, Jr.'s bitch (Gladstone's Boy—Ruby D.).
MISS RUBY—P. Lorillard, Jr.'s bitch (Gladstone's Boy—Ruby D.).
COUNT ANTEO—P. Lorillard, Jr.'s dog (Count Noble—Gladstone's Girl).
ANTIVOLO—P. Lorillard, Jr.'s bitch (Count Noble—Trickett II.).
HAWKEYE QUEEN—Perry & Switzer's bitch (Claremont Patsy—Nora of Claremont).
QUAIL—Randolph Kennels' (Agent) dog (Dakota—Rose).
BESSIE BETHEL—Randolph Kennels' (Agent) bitch (Capt. Bethel—Erich).
PHILADA PRESS—L. Shuster, Jr.'s dog (Cincinnatus—Cornelia G.).
HAZEL THE BLACK LEG—L. Shuster, Jr.'s bitch (Cincinnatus—Cornelia G.).
DONCASTER II.—R. L. Shannon's dog (Doncaster—Louise Gladstone).

POINTERS.

FRANKLIN—J. L. Adams's dog (Robin Adair—Blossom).
LAD OF RUSH—J. L. Adams's dog (Rush of Lad—Topsy L.).
WILD DAMON—Charlottesville Field Trial Kennels' dog (Damon—Flora).
OUTCAST—Charlottesville F. T. Kennels' dog (King of Keut—Hops).
EXILE—Charlottesville F. T. Kennels' dog (King of Kent—Hops).
JUPITER—C. C. Cushing's dog (Tom Boline—Belle C.)
VARRO—J. B. Castleman's bitch (Rex—Nell).
WESTMINSTER DUKE—T. G. Davey's dog (Lad of Bow—Kate VIII.).
IGHTFIELD DOMINO—T. G. Davey's dog (Ightfield Dick—Perdita).
PROMOTION—Fairmount Kennels' dog (Lord Graphic—Belle Bishop).
GROUSE—C. C. M. Hunt's dog (Mainspring—Swan's Fly).
TORY BARON—T. Hitchcock, Jr.'s dog (Duke of Hessen—Westminster Ina).
PRAWN—Hempstead Farm's dog (Crab—Polly Peachem).
DICKON—Hempstead Farm's dog (Ightfield Dick—Ightfield Bloom).
HEMPSTEAD DUKE—Hempstead Farm's dog (Duke of Hessan—Lass of Bow).
HEMPSTEAD COUNT—Hempstead Farm's dog (Duke of Hessen—Lass of Bow).
SANDFORD DRUID—Hempstead Farm's dog (Exon Don—Sandford Quince).
MANITOBA SHOT—Thomas Johnson's dog (Ightfield Caton—Ightfield Psyche).
KESSLER FAN—E. Kessler's bitch (Don of Upton—Linda).
GROUSEDALE—R. R. Moore's dog (Underwriter—Trix).
IGHTFIELD UPTON—C. G. Stoddard's dog (Ightfield Dick—Polly Peachem).
TRINKET'S DELL—Sander and Whealen's bitch (Bracket—Robert's Trinket).
BOB—Simpkins's dog (Beppo III.—Belle Brandon).
BEN A.—Dr. D. W. Yandell's dog (Stoddard—Jett II.)
LADY PEG—W. T. Hunter's bitch (King of Kent—Lass of Bloomo).

## THE WORCESTER FUR CLUB'S ANNUAL.

WORCESTER, Mass., Nov. 11.—That it was to be a hard day for the nounds every one knew before the start was made this morning, but that so little work could be done was unexpected. Six o'clock found a large party of hunters well fortified with a hot breakfast at the Bay State House, ready for the 'bus which was to take them to the Haywood farm, where the meet is always called. The weather was clear and crisp, and a cold wind that threatened to nullify any efforts of Old Sol to warm things up kept every one well muffled up. Shortly after the arrival at the rendezvous the hunt was organized and each party with dogs were on their way to the particular runs laid out for them.

John M. White, of Millbury, took the Kinney-White pack to the Shoemakers. L. O. Dennison, ex-president of the Brunswick Club, W. R. Dean and Capt. Barney Williamson, of Marshfield, also put out their dogs in the same country. "Denny" Eager, of Marlboro, and N. Willard, of Northboro, were at Rocky Pond. Webster Thayer, D. M. Earle, Old Snow Perry, put out at Uncle Nathan's ground, the Harlow place. The greater part of the driving was done between here and the "Hen Man's," and those who were fortunate enough to hunt in this locality had a little music to enliven the dull day, in fact they were about the only ones who were in the hunt to any great extent. Only one fox was shot at, and it was merely out of courtesy to "Lisha's" guest that he allowed the popular captain to give him "two bar'ls." Off to the north there was some disconnected driving until afternoon, but nothing came of it, and as a whole the hunt was not the howling success that former years have seen, still every one was satisfied that a perfect or even a fair day was something that could not be expected every year and took their disappointment philosophically, looking forward to the club hunt later in the season, when they expect to even things up.

As usual at any sporting event of prominence, there were more or less remarks of a slighting nature made about one of the club's most popular and successful (so far as foxes are concerned) members, intended to establish some connection between him and the hound Popcorn, or to the effect that if he had not stopped to whittle the stick he might have stabbed the fox, but to those of us who know him (from association) the idea of Tom's being out "unarmed" is simply out of all human probability, the chances being that he had concealed about his person more "dynamite" than any three other men in the hunt could carry. That he would not waste it on a fox is credible, but that he was that far away from home and unprotected, never.

The supper at the Bay State in the evening put every one in good humor, and the next annual hunt will see every one as enthusiastic as if the score had been 10 instead of 0.

HAL.

## FARMINGTON FUR CLUB.

FARMINGTON, N. H., Nov. 14.—The annual meet of the Farmington Fur Club was held at Wakefield, N. H., the last of the month. The meet was the most successful in the club's history. An account of each day's hunt would take up too much space, so I will simply say that we killed nine foxes, beside several partridges, gray squirrel and ducks, shot on our way home from each day's hunt. The weather was fairly good, foxes were plenty and the running was simply immense, and for six days the cry of the hound in pursuit of sly reynard filled the air with music. How sweet that music, none but a "crank" on fox hunting can tell. One's blood must indeed be cold, who can stand on a hill top of a clear frosty October morning, and hear his favorite hound drive, unmoved. It is something more than the desire to kill that causes his pulse to beat faster, as his dogs come in hearing round some distant hill, and every moment brings them nearer, with what eager eye he watches for the first glimpse of the fox. Who but a fox hunter can tell the satisfaction he feels when his trusty gun ends his foxship's career. My old fox hunting friends will understand what I mean. To all lovers of dog and gun who never went foxing my advice is, try it.

At the close of the meet it was decided to disband and form a new club, and after considerable discussion the following association was formed: Forest and Stream Fur Club. President, J. A. McGibbon, Farmington, N. H.; Vice-President, I. A. Piercy, Rochester, N. H.; Secretary, H. I. Jones, Farmington, N. H.; Treasurer, W. Scott Hayes, Farmington, N. H.; Master of hounds, H. E. Tanner, Farmington, N. H. Executive committee—J. A. McGibbon, Farmington, N. H.; Frank I. Hayes, Lynn, Mass.; Chas. H. Gerrish, Rochester, N. H. M.

## ROCHESTER NOTES.

ROCHESTER, N. Y. Nov. 13.—*Editor Forest and Stream:* I am able to give you a list of the sale of the Flour City Kennels' mastiffs. Chas. E. Bunn, Peoria, Ill., purchased C. O. D. and Minna Minting; J. J. Lynn, Port Huron, Mich. purchased Cardinal Beaufort and Lady Dorothy; H. J. Dolan, Beverly, Mass., purchased Linkwood Queen; Wm. Wade, Hulton, Pa., purchased Miss Caution and Lady Coleus.

Mr. Whitney presents Pansy to a friend in New York city and Facts to Mr. A. M. Hughes, and still has Lady Pamelia and Exeter Dirce as stable guards.

I ought to inform you also that the genial treasurer of our kennel club, Mr. Harry Yates, has lately taken to himself a life partner in the person of Miss Mamie Duffy, of this city. Mr. and Mrs. Yates will be at home after Jan. 1 at 227 Delaware avenue, Buffalo, N. Y., Mr. Yates's large interests in that city compelling his removal from Rochester.

There is only one "Harry," and the fullest measure of success is wished him by friends without number.

As a link between himself and the kennel world Mr. Yates takes with him the well known cocker Obadiah, recently purchased from Mr. Geo. Bell, of Toronto, by Dr. O. Stewart Bamber, and still later sold to Mr. Yates, who once he had seen the dog would have him. TARIFF.

The "Kodak fiend" was very much in evidence at the New England field trials, but Mr. D. A. Goodwin, Jr., easily scored with his "Kodak model of '92," and the number of exposures it went through the first three days fully attested its popularity. Its chief charm lies in its simplicity, a child could work it—if it cared to. Like other cameras, over exposure gives a cloudy effect, and a dry "palate" is a *sine qua non* if good results are expected. Mr. Goodwin has applied for a patent, and pending this we cannot conscientiously describe its "internals," but may remark that when put on the market the demand from Maine and Kansas will quickly assure the inventor a competency.

# DOG CHAT.

### Brooklyn Dog Show.

The following are the entries received by the National Greyhound Club for their show to be held at Palace Rink, Clermont avenue, Brooklyn, N. Y., Nov. 22 to 25:

| | | | |
|---|---|---|---|
| Mastiffs | 11 | Bull-Terriers | 42 |
| St. Bernards | 51 | Dachshunds | 12 |
| Great Danes | 27 | Beagles | 29 |
| Newfoundlands | 4 | Fox-Terriers | 51 |
| Bloodhounds | 6 | Dandie Dinmont Terriers | 4 |
| Deerhounds | 7 | Scotch Terriers | 8 |
| Greyhounds | 28 | Irish Terriers | 16 |
| Psovois | 19 | Black and Tan Terriers | 7 |
| Chesapeake Bay | 3 | Redlington Terriers | 5 |
| Foxhounds | 9 | Skye Terriers | 2 |
| Pointers | 34 | Yorkshire Terriers | 5 |
| English Setters | 28 | Toy Terriers | 5 |
| Irish Setters | 38 | Pugs | 19 |
| Gordon Setters | 19 | Toy Spaniels | 10 |
| Spaniels | 30 | Italian Greyhounds | 4 |
| Collies | 19 | Miscellaneous | 5 |
| Poodles | 8 | | |
| Bulldogs | 21 | | 587 |

For the time of the year this is quite as good an entry as could reasonably be expected.

### Importation of Marvel.

Another sensation for the St. Bernard world over here. Mr. W. C. Reick, owner of the New York St. Bernard Kennels, has purchased from Mr. Shillcock, Birmingham, England, the crack dog Marvel. This is the dog of all dogs that is needed just now for stud purposes in America, as in this respect he stands in the foremost rank. Of Plinlimmon blood he has not a drop. By champion Pouf out of Mossy, he is brimming over with the valuable Bayard blood. Whelped Feb. 10, 1889, he is quite a young dog, and in all probability a successful career is before him. He was bred by Mr. W. A. Harper. Marvel's head is said to be a study and has earned him the cognomen "of the Marvelous Head." He is a deep orange, with fine markings, correct coat, great bone, a symmetrical body, and particularly good in loins. He has sired more winners than any rough-coated dog in England. Among them are Duke of Maplecroft, Clifford Marvel, Marvelous, Lord Norton, Young Marvel, Vicar of Bray, Lord Hawke, Greater Bute, Thomond, Lady Gerty, Lady Marvel and Lady Helen Stuart. The price must have been high, but whatever it was he must prove a good investment if judiciously handled, and his advent as a consort to Princess Florence strengthens the New York St. Bernard Kennel in every way. Mr. Reick is to be congratulated on his persistent pluck, and we trust he may have a happier experience than he had with Prince Regent. Dr. French is bringing Marvel over on the Teutonic, which sailed yesterday, so it is doubtful if he will arrive in time for judging at Brooklyn. Marvel's winnings on the bench include firsts at such shows as Crystal Palace, Manchester, Liverpool, Agricultural Hall (2), in all 26 firsts and cups; recently he defeated Young Bute and won first at late Crystal Palace show.

### Death of Chieftain.

Another old landmark in dogdom has gone the way of all flesh. We allude to the death of champion Chieftain, Mr. John E. Thayer's world renowned deerhound. The son of champion Bevis and Heathen died at the ripe age of eleven years, having been whelped Nov. 1, 1881. Mr. Thayer tells us that Chieftain won more prizes than any dog he ever owned. In his prime, undoubtedly this dog was one of the best specimens ever whelped. His winnings over here are known to the veriest tyro in kennel records, and among his triumphs may be counted specials for the best dog of all breeds in certain shows. He was a grand dog. Great as he was on the bench, he was far greater as a sire of winners and to him Mr. Thayer owes all his success as a deerhound exhibitor. Mr. Thayer remarks, "He would sire grand pups and to most any bitch." He is the sire of such noted animals as champion Robber Chieftain, champion Romola, that Mr. Raper considered the best bitch in the world; champion Theodore, Pride of the Heather, King of the Forest, champion Hillside Warrior, Hillside Harold, Ruth, Sylvia and a great many more. Mr. Thayer has our sincere sympathy, though with such a kennel as those named above the old dog's loss on the bench will not be felt—still there was only one Chieftain.

### New England Kennel Club.

Several Boston fanciers remarked last week that the FOREST AND STREAM had struck the right nail in its remarks anent the change in the management of this club, and the following letter shows that the club seems to have entered on a new era of activity: "New England Kennel Club meeting of Nov. 10 was a radical departure from the former formal ones. The new management have started in to make all their future gatherings social ones. The first was well carried out. The entertainment committee of the club provided an ample collation, both liquid and solid, which were appreciated so well that they will be continued. Much important business was transacted, chief of which was the election of eight new members and several changes in by-laws of the club. The coming bench show in April, 1893, was discussed and the hearty support of the club is promised to make it the largest and finest ever held in Boston.—J. W. NEWMAN, Sec'y."

### Death of Bonsor.

Many of our best dogs are leaving us just now. We regret to hear the news from the Seminole Kennels to the effect that their grand little pug ch. Bonsor is dead. He died Nov. 2, from dysentery. His loss to the breed in this country can scarcely be estimated. Never having encountered defeat in America, his career in England was also an honorable one. The Seminole Kennels had only recently purchased Bonsor from Mr. A. E. Pitts, of Columbus, O., who imported him, and their disappointment must be keen and Dr. Sauveur has our sincere sympathy. Fortunately a litter out of their Midget by the deceased dog is expected next month, and we hope their owner may derive some comfort therefrom.

### Beagles at the World's Fair Show.

Mr. H. L. Kreuder, president-elect of the N. B. C., has written to Mr. Buchanan, superintendent of the World's Fair Live Stock Department, that the same classes be made at their show as at Brooklyn show for beagles. Also intimating that the club would probably offer suitable specials, such as a solid piece of plate for best pack of four or more over 13in. and same for those under that height; also club medal for best beagle at show.

### Irish Setter Club Entries.

Mr. G. G. Davis writes: I find that I have made two mistakes in the list of All-Aged entries of the Irish setter trials. The first is that Dr. Jarvis's bitch Romayne is by Duke Elcho—Romaine instead of by Elcho Jr. The second is that Nelson McIntosh and William Warner are the owners of Maid of Borstal, instead of only the former as given.

Competition in wire-haired fox-terriers is likely to be keen next spring. Mr. Symonds has just been looking one over that came in from walk the other day. It is by Barton Sting out of Venus, that was placed among the top company whenever shown, and which Mr. Symonds lately sold to Mr. Fishburne, Illicthwait (this is the best we can do on this word), British Columbia. At the same time a brace of the Naso of Strasburg—Ruby VII. pups came in, also a pair of greyhounds by Gem of the Season, the latter Mr. Purbeck's. The pointers and wire-hair had distemper in early puppyhood, and were fed with a spoon for weeks, but their growth has not been retarded, thanks to George Thomas's assiduous care. Mr. Symonds also writes: "Mr. Fraser of Toronto is right. It is high time that show people recognize in their premium lists that the small breeds should be treated equal with the larger breeds. They pay the same premium or entrance fees. It costs the same to bench, and exhibitors are tired of begging for classes." Latest English market quotations: "Prices of English dogs have taken a great boom which must soon be reflected here, and quality is not commensurate with cost."

A Cortland, N. Y., reader tells of a recent outrage: "Dog killers are not all dead. Mr. A. D. Wallace's Irish setter and pointer puppies Patsey and Donald W. strayed out into the country on Nov. 1 and were shot by a farmer as being mad dogs; he killed the setter but the pointer escaped with slight injuries."

Apropos of psovoi color, Mr. H. W. Huntington sends us this note from a letter written to him by the well-known breeder Mr. Blees, of Moscow: "Englishmen place far too much stress on size, and this opinion is shared with me by Count Shojcicoff, who also attended the kennel club show. The Count has the largest pack of psovoi in Russia, having about 150. Fifty are black, with white and tan markings, so you see what nonsense it is to say that black is not an orthodox color. Those who say such a thing have some selfish purpose to advance and wish to get rid of some such formidable opponent as your Argoss. The Count values his 'blacks' above all the others."

Theo. Meyer, 549 Newark avenue, Jersey City, N. J., has found an English setter in Rockland county, N. Y., would like to find owner.

Mr. E. O. Damon, the owner of Rod's Chaff, The Corsair, etc., played in rather hard luck last week. The brightest anticipations are sometimes rudely shattered. He was about a month since preparing his dogs for the N. E. field trials and while out in the woods some distance from home slipped and broke his ankle. He had to crawl two miles as best he could before aid was procured. Then he put his dogs in charge of a handler, who worked them up to the commencement of the trials, when circumstances compelled the handler to return home. Mr. Damon was present at the trials supported by crutches, the foot being in a plaster cast. Of course he was unable to take charge of his dogs, and they had to be relegated to the care of a strange handler. Naturally this handicapped them considerably. Rod's Chaff, however, gave a good account of himself both in the field and as a bench show dog. The Corsair was withdrawn rather than undertake the handicap.

It would, perhaps, be as well if the New England Field Trial Club would pay a little more attention to the commissariat department during their trials. The only bright feature in this regard was the luncheon served in the field. Hot coffee is very acceptable on a bleak, cold day, and after tramping through swampy land all morning. But to come back tired and hungry to a dinner of canned corn beef and cold beans is discouraging, and the "Fifty cents, please!" does not add to the hilarity of the occasion. There are ample facilities there for cooking, and some substantial roast or boiled meats properly prepared would not be any dearer and be far more conducive to a contented digestion. The club should take as a motto: "*Mens sana in corpore sano.*" The flesh of the American hog in its various disguises is all right enough in its way, but is disastrous to the "wind" that is so requisite when one travels after the dogs over the hills and dales that lie between the Assonet and the Taunton rivers. Mr. T. R. Cook and Son of Boston were the caterers on this occasion.

Our correspondent, Dr. J. S. Niven, of London, Ont., tells us that we may expect the news of the importation of a good Irish terrier bitch or two before long, as negotiations are now in progress.

A FOREST AND STREAM kennel note from far off San Antonio, Texas, brings back memories of several shining lights in the St. Bernard firmament when we note the names of such dogs as Eiger, champion Gemma and champion Sir Charles as the immediate ancestors of Mr. F. Paul Barber's St. Bernard pup The Prior. Eiger, the sire, was a demon in temper, but a good St. Bernard nevertheless.

It is not usual to see such a fine array of Dachshund and Basset hound stud dogs advertised, on this side of the water, as we notice this week in our business columns. Mr. E. A. Manice, Stockbridge, Mass., evidently feels that the time has come when his fine array of stud dogs of these breeds should be brought more prominently before the public, and naturally choses the best medium.

Mr. T. S. Bellin has sold the wire-hair Jack Trick, a litter brother to Sister Trick, that did some winning in this fall's shows, to Mr. C. L. A. Whitney, of Albany, N. Y. Jack is said to be a good one and is entered at Brooklyn.

From *Stock-Keeper* we learn that Col. Cody (Buffalo Bill) purchased a couple of wire-haired fox-terriers before leaving England. They are by Valuer and were bred by Mr. George Bozes.

The Duchess of Newcastle, so well known to fanciers in both hemispheres through her kennel of Russian wolfhounds, has purchased from Messrs. Toons & Symonds, owners of the Anglo-American Kennels, the fox-terrier Ebor Spendthrift, that was exhibited here in the spring.

A glance at our business columns this week will show that H. N. Howell offers trained black setter for sale: Wallace and Son, beagles and ferrets; Henry Franklin, trained blue belton setter; Ridgefield Kennels, foxterrier brood bitches; Dr. Jno. A. Hartman, setters and pointers; J. Feutner, choice English setters; H. C. Happerselt, r. c. St. Bernard bitch; W. H. Shawhan, Monk of Furness pups; Geo. Douglass, choice cocker pups; Chas. Codington, r. c. St. Bernard prize winning dog.

## A Stray Shinplaster

**Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.**

## POINTS AND FLUSHES.

COLUMBUS, Ind., Nov. 12.—The trials of the American Field Trial Club will begin on Tuesday, the 15th inst. Starting them on Monday was seriously considered since the United States Field Trial Club postponed its trials till February next, but there were so many circumstances to arrange that the club finally decided to hold to the date advertised. Next year the American contemplates running on the best grounds obtainable, and broadening its scope largely.

The act of the United States Field Trial Club has occasioned a great deal of comment. This was to be expected under the circumstances, whether the club acted wisely or not. It was a most unfortunate matter to the trials, and a hardship to many handlers who had fitted their dogs carefully and incurred the expense of a long journey to the trials. One matter was agreed upon by all, namely, that the trials could not be run at Elizabethtown on account of the scarcity of birds.

The following questions have since arisen and are discussed from a legal standpoint in connection with the matter; that is, from the constitution and by-laws of the club:

(1) In any instance, did the Board of Governors of the club have the power to delegate powers conferred on them by the club?

(2) Were not the entry blanks, with all the conditions of the stakes and requirements in respect to entries printed thereon, a contract between the club and each individual handler?

(3) If the club abandoned the grounds, it did not abandon the date advertised; for that question was not acted upon. Could the club abandon its date without any action whatever?

In respect to the first question, there is little doubt but what the Board went outside its powers in delegating future action to a vote of the handlers. The Board could have formally adopted the action of the handlers as its own, but it did not so do, therefore the act was that of the handlers.

In regard to the second question, if the entries were contracts, a majority vote of the handlers could not annul the contracts of the minority, or of a single owner.

In regard to the third question, the advertised dates hold good yet, inasmuch as they have not yet been abandoned, unless when it was voted to run next February, such act annulled the old dates.

This is simply stating the status of the case as it is at the present time discussed among sportsmen. There is neither the intention nor inclination to make out a case against the United States Field Trial Club. On the contrary, the writer is a member of it, and is earnestly interested in its success and prosperity. The matter herewith presented is outside one's personal inclination. If the Board of Governors acted outside its powers, its intentions were of the best. It meant to do the wisest and best acts for the benefit of all in an emergency. B. WATERS.

## THE GREAT BEND MEETING.

DENVER, Col., Nov. 8.—*Editor Forest and Stream:* In justice to a worthy officer of the American Coursing Club—Vice-President Dr. S. J. Shaw—will you kindly allow me to correct a statement in your report of the Great Bend meeting. Your correspondent states that the "estimable vice-president drove off in the morning, and left the judge to shift for himself in the matter of getting out to the grounds" (Thursday, Third day, Oct. 27). This is incorrect. The facts are these: Dr. Shaw agreed to call at the Morrison House for Mr. Mulcaster at a certain hour on Thursday morning, and take him out to the coursing grounds. The hour having elapsed, and the judge fearing the doctor might be detained, Mr. Ballard and myself (and not the "representatives of the press") invited the judge to a seat in our wagon. Dr. Shaw called for the judge, and found he had gone with us; and afterwards explained to me on the coursing ground, which he reached twenty minutes after us, that he had been unavoidably detained by a patient. When it is remembered that Dr. Shaw is a busy practitioner in Great Bend, his tardiness can be readily excused. A. J. CATTANACH.

## FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can.—Mr. A. J. Groves has just got over from Mr. W. H. Gammon, of Dorchester, Mass., a young St. Bernard bitch, by Scotch Bonivard (ch. Bonivard—Maize) out of Bonny (Merchant Prince—Rita). His Premier, vhc., Toronto, has gone to a breeder in Quebec City.

Mr. Jno. Saunders, Harriston, Ont., a new convert to collies, is getting over, in fact the dog is probably here now, Finsbury Dude, by Edgbaston Excelsior out of Highland Annie. He is a rich sable with white markings, and is a winner of numerous prizes in England.

Messrs McEwen & Gibson have been selling out several collies lately, including two or three to your side of the line. Mr. W. N. De Grauw, Jr., New York, has bought a sable dog by Metchley Wonder II. out of Dawn, and Mr. Thos. Smith, Chicago, a black white and tan dog by Scotsman out of Jess.

A meeting of the C. K. C. executive was held last night, the members present being Messrs. C. A. Stone and J. J. Mitchener, Toronto; A. D. Stewart, Hamilton, and H. B. Donovan, secretary. Mr. Stone was voted to the chair. A lengthy report of the business to come before the meeting was read by the secretary, as were also letters from the president and Mr. P. G. Keyes.

Action was taken in the Troublesome protest case, by which the contention in the following letter of Mr. Wilkie's was sustained. This means that the judge's award of first prize to Troublesome is allowed to stand:

OTTAWA, Sept. 27.—Dr. Wesley Mills, President C. K. C.—On behalf of Mr. Geo. Bell, of Toronto, and acting as his agent, I beg to protest against the decision of the show committee in the matter of the disqualification of the cocker bitch Troublesome, in the open bitch class. Against the decision of the show committee I now appeal to the C. K. C., and inclose herewith $5 as required by the rules of the C. K. C. in such cases. If you will kindly notify Mr. Bell or myself of the time and place of the meeting of the executive committee of the the C. K. C. at which the appeal will be heard, one or the other of us will be present to show conclusively, as we think, that the judgment of the show committee is unjust and should not stand. R. G. WILKIE.

The St. Bernard Sir John case was again deferred awaiting a certificate of pedigree from Mr. James Watson. Mr. Fred Stettenbenz, Buffalo, whose dogs were placed second to Sir John, now claims the two firsts awarded the latter.

The protest entered against the bull-terrier bitch champion Starlight by Mr. H. M. Howes, of Boston, could not be entertained, as the time specified in Rule 22 for the making of such protests had expired.

The following letter from Mr. Purbeck was read:

SALEM, Mass., Oct. 13.—GENTLEMEN—The dog Pious Pembroke was entered as Echo, that being his kennel name, and the mistake was made by myself in making out the entries, and not discovered up to the day Mr. Thomas left with the dogs. I then asked him to point out the error when he reached Toronto, which I think he did. He is always called Echo, and the name is more natural than Pious Pembroke. I regret the error, and whatever action you see fit to take will meet my approval. ARTHUR W. PURBECK.

This left the committee no option but to sustain Mr. Wurtele's protest, which was done, and the dogs placed under Pious Pembroke at Toronto get a move up. The committee regretted being obliged to take this action.

A committee consisting of Messrs. Donovan, Stone and

Mitchener will confer with the committee appointed by the A. K. C. to arrange some mutually satisfactory plan of fixing show dates to avoid clashing.

A letter was read from Mr. Geo. Bell complaining of irregularities in the judging at Ottawa bench show. It was referred to a committee consisting of Messrs. Stewart, Mitchener, Gorman and Oldrieve to report on.

Five new members were elected, and it was decided to have the C. K. C. diplomas engrossed before being sent out.

H. B. DONOVAN.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

### NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Rod's Druce and Clip.* By West End Kennels, San Antonio, Tex., for black, white and tan English setter dog and bitch, whelped March 18, 1892, by Rod's Ace (Roderigo—Countess House) out of Rosa Noble (Breckenridge—Franchel Noble).

*Imperial Kent and Richard Kent.* By West End Kennels, San Antonio, Tex., for black and white pointer dogs, whelped April 27, 1892, by Trinket's Chief, Jr. out of Duchess of Kent.

*Lord of Kent.* By J. M. George, San Antonio, Tex., for black and white pointer dog, whelped April 27, 1892, by Trinket's Chief, Jr. out of Duchess of Kent.

*Star of Kent.* By Mrs. E. S. Avis, Ft. McIntosh, Tex., for black and white pointer bitch, whelped April 27, 1892, by Trinket's Chief, Jr. out of Duchess of Kent.

*Fear of Kent.* By West End Kennels, San Antonio, Tex., for liver and white pointer dog, whelped April 27, 1892, by Trinket's Chief, Jr. out of Duchess of Kent.

*Cardinal Richelieu.* By J. W. Irwin, Little Rock, Ark., for liver and white pointer dog, whelped April 27, 1892, by Trinket's Chief, Jr. out of Duchess of Kent.

*West End Spot, Guy Fawkes, West End Beauty, West End Girl and West End Belle.* By West End Kennels, San Antonio, Tex., for black and white English setters two dogs and three bitches, whelped June 25, 1892, by Manitoba Frisk out of Sophia Hill.

*Neptune.* By Dr. W. T. Parker, Beverley, Mass., for pointer dog, whelped July 4, 1892, by Dan out of Fanny.

*Tony Forest, Noble Weller, Nettie Weller, Waltham Lily Grace and Weller's Fancy.* By National Beagle Kennels, Waltham, Mass., for black, white and tan beagle dogs and bitches, whelped May 17 1892, by Tony Weller out of Topsy S.

*Eberhart's Boy and Cashier's Daughter.* By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dog and bitch, whelped Aug. 9, 1892, by Eberhart's Cashier out of Flossie II.

### BRED.

☞ **Prepared Blanks sent free on application.**

*Peg II.—Henmore Shamrock.* D. C. Conig's (Lenox, Mass.) Irish setter bitch Peg II. (Snipe—Fan) to F. L. Cheney's Henmore Shamrock (Muskerry—Avoca), Oct 7.

*Judy—Patsy Bolivar.* E. L. Crou's (Cincinnati, O.) pug bitch Judy to Eberhart Pug Kennels' Patsy Bolivar (Eberhart's Cashier—Flossie II.), Oct. 15.

*Petrel IV.—Kent II.* A. E. Davis's (Worcester, Mass.) English setter bitch Petrel IV. (imported Don Juan—imported Petrel III.) to Cohanet Kennels' champion Kent II. (champion Count Howard Lady Westmoreland). Aug. 28.

*Rhoda—Manitoba Frisk.* J. P. Cruger's (San Antonio, Tex.) English setter bitch Rhoda to West End Kennels' Manitoba Frisk (imported Dick Boudhu—Western Belle), Aug 15.

*Princess Royal—Count Swiveller.* West End Kennels' (San Antonio, Tex.) Irish setter bitch imported Princess Royal (Kildare—Stella IV.) to Henry Solms's Count Swiveller (champion Dick Swiveller—Kildare Ruby), Sept. 25.

*Cozzie—Bradford Ruby II.* Ben Hey's (Cincinnati, O.) pug bitch Cozzie to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Nov. 3.

*Obruga—Leekhoi.* C. S. Hanks's (Manchester, N. H.) Russian wolfhound bitch Obruga (Kroat—Harpadka) to his Leekhoi (Reezvee—Labiedka), Oct. 29.

*Kinjal—Leekhoi.* C. S. Hanks's (Manchester, N. H.) Russian wolfhound bitch Kinjal (Charaday—Prokaza) to his Leekhoi (Reezvee—Labiedka), Oct. 31.

### WHELPS.

☞ **Prepared Blanks sent free on application.**

*Petrel IV.* A. E. Davis's (Worcester, Mass.) English setter bitch Petrel IV. (imported Don Juan—imported Petrel III.). Oct. 29, seven (three dogs), by Cohanet Kennels' champion Kent II. (champion Count Howard—Lady Westmoreland).

*Raskeda.* C. S. Hanks's (West Manchester, N. H.) Russian wolfhound bitch Raskeda (Krelet—Khralka), Oct. 16, six (four dogs), by his Leekhoi (Reezvee—Labiedka).

*Yum Yum.* B. P. Rothrock's (Williamsport, Pa.) Irish setter bitch Yum Yum (Rob—Daisy), Oct. 18, thirteen (seven dogs), by F. L. Cheney's Henmore Shamrock (Muskerry—Avoca).

*Daisy.* F. L. Cheney's (Pittsfield, Mass.) Irish setter bitch Daisy (Chief—Leigh Doane), Oct. 31, seven (four dogs), by his Henmore Shamrock (Muskerry—Avoca).

*Lady of Lyons.* Dr. Hugh Halladay's (Chicago, Ill.) English setbitch Lady of Lyons (Prince Phœbus—Lady Romp), Oct. 8, eight (five dogs), by his Mack (Locksley—champion Leddersdale).

*Svodka.* C. S. Hanks's (West Manchester, N. H.) Russian wolfhound bitch Svodka (Khedle—Krasotka), Nov. 8, five (three dogs), by his Leekhoi (Reezvee—Labiedka).

*Hillside Freedom.* R. G. Stewart's (Washington, D. C.) fox-terrier bitch Hillside Freedom (Russley Joker—Freya), Nov. 11, three (one dog), by Hamlet Owen's Ranter (Pitcher—Vene).

### SALES.

☞ **Prepared Blanks sent free on application.**

*Brownie.* Fawn pug dog, whelped Aug. 22, 1892, by Patsy Bolivar out of Mabel E., by Eberhart Pug Kennels, Cincinnati, O., to C. A. Martin, same place.

*Count Swiveller.* Red Irish setter dog, whelped May, 1890 by champion Dick Swiveller out of Kildare Ruby, by West End Kennels, San Antonio, Tex., to Henry Solms, same place.

*June.* Black, white and tan English setter dog, whelped April, 1889, by The Corsair out of Schula, by West End Kennels, San Antonio, Tex., to H. D. Kampmann, same place.

*West End Spot.* Black and white English setter dog, whelped June 25, 1892, by Manitoba Frisk out of Sophia Hill, by West End Kennels, San Antonio, Tex., to Chas. Hummel, same place.

*West End Belle.* Black and white English setter bitch, whelped June 25, 1892, by Manitoba Frisk out of Sophia Hill, by West End Kennels, San Antonio, Tex., to T. G. Lock, West Lake, La.

*West End Girl.* Black and white English setter bitch, whelped June 25, 1892, by Manitoba Frisk out of Sophia Hill, by West End Kennels, San Antonio, Tex., to J. D. Speer, same place.

*Lord of Kent.* Black and white pointer dog, whelped April 27, 1892, by Trinket's Chief, Jr. out of Duchess of Kent, by West End Kennels, San Antonio, Tex., to J. M. George, same place.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.*

WOODCHUCK.—Yes, a combination of foxhound and shepherd blood would be good for running rabbits, foxes, etc. They are commonly called lurchers. Mr. Ashburner's new book treats of training beagles, which would apply to your case. Price, 50 cents. We can supply it.

C. C., New York City.—Most of the handlers are down South preparing for the field trials, and we do not know of a handler who could be intrusted to confine himself to the methods you speak of in training your Irish setter. There are several places round New York where the dog could be boarded until some of the regular handlers return about Christmas.

T. B. L., Holmesville, O.—You can commence a record of your foxhounds at any time with the kennel record book we supplied you with. The letters A. K. R. before a dog's number denotes that this dog was registered in the American Kennel Register, now incorporated with the A. K. C. S. B. The latter letters stand for the American Kennel Club Stud Book, and E. K. C. S. B. for the English Kennel Club Stud Book.

J. M. C., Norristown, Pa.—We have a house dog, small, black and tan, 6yrs. of age. He seems to be in good condition, except that his breath is very bad or tainted. Can you give a remedy? Ans. Probably due to the teeth. If there is an accumulation of tartar have it removed and also any teeth that are very loose. If not due to the teeth give an aperient and after, tablets of papoid and boracic acid (Pinkler formula), one twice a day.

# Yachting.

WHAT Mr. Dixon Kemp points out in the *Field*, as quoted elsewhere, is, we believe, correct. According to the new deed, all mutual agreements must be preceded by a peremptory challenge, naming dates and giving dimensions; the challenger *shall* send such a document and the holder must receive it. If the match is made without such a formal challenge as is minutely specified in the new deed, and the races should be won by the challenger, it would be perfectly legal for a member of the New York Y. C. to object to the delivery of the Cup on the grounds that it had not been challenged for as the deed demands.

COM. GERRY'S remarks as to the rights of the surviving donor form a very lame defense of this portion of the dispute, and in no way answer the points recently made by a correspondent in our pages, that all ownership on the part of Mr. Schuyler and his associates terminated with the establishment of a trust of which all yacht clubs were the beneficiaries.

PENDING a letter from Lord Dunraven, which may or may not arrive this week, there is nothing new in regard to his challenge. By next week the last letter of the committee and Lord Dunraven's reply will probably be made public, and yachtsmen will know something of the prospects for a race.

UNMINDFUL of its sad experience with the faked plans of Thistle in 1886, the Boston *Herald* now announces itself in possession of the dimensions, elements and approximate plans of the Carroll 84-footer. Unfortunately for its readers, its stern sense of patriotism compels it to reserve all this interesting news.

## American Model Yacht Club.

PROSPECT PARK, Nov. 8.—The last regatta of the club was sailed on Election Day. The Presidential election had its effect on the entries of the yachts in their respective classes, as might be expected. Considerable sport was had notwithstanding. The course for the windward races was the best that has been laid out for many seasons. The owners of the competing yachts could not find any fault as it was a fair dead beat to windward. The wind being W. N. W., the regatta committee were enabled to lay out a quarter of a mile course due W. N. W. It will probably be some time before such a favorable slant of wind will show itself again.

The second class was called to the starting line at 11:30 A. M., only three yachts showing up, Thorn, Mary S. and Comet.

The Comet was first over the line on the port tack at 11h. 47m. 10s., the Mary S. going over 33s. later. Thorn having some trouble against the head sea which was quite heavy, jumping in to the committee skiff quite often. The Comet held the port tack only for a short time, the Mary S. holding on too long was forced off her course by a streak of wind which comes out firm behind a large hill situated on the north shore of the lake, she losing about 200ft. by this move. The Comet keeping the middle of the lake in the true wind was hitching her way to the finish very rapidly.

The Mary S. finally coming about on starboard tack started to overhaul the Comet, which she did, catching her about 100yds. from the finish, but she was footing so fast that her owner was unable to catch her to put her on port tack for finish line, she sailing outside the flags clear up in the southwest cove before she was caught.

The Comet crossed the line winner of heat, beating the Thorn 1m. 11s.

Second Heat.—The Thorn withdrew, the Mary S. crossed the line 12:19:30, Comet 12:22:10, both on port tack. The Mary S. holding the tack and almost ruining her chances by same maneuver as in previous heat. The Comet's owner knowing better, gained at least 100yds. by this, she tacking up the lake as before. The Mary's owner, seeing he was being left, came about on starboard tack, footing like a steamboat (her owner, by the way, sticking close to his yacht), crossed the line winner of heat by 2m. 21s. elapsed and 2m. 14s. corrected.

Third heat the Mary S. out-footed the Comet and would undoubtedly have won the third heat and race, but she was doomed to disappointment, she being run down by the May, whose sailing master evidently must have been asleep. The Mary S.'s boom was carried away and steering gear, which was of brass, broken and twisted out of shape. This accident gave the race to the Comet.

The Mary S., with proper handling, can undoubtedly outsail any second class yacht on the lake, if not the larger boats.

The third class was started next, over the triangular course, one mile, entries being Jennetta, Electra and Marjorie. The Electra sailing away from the others, crossing starting line at 2h. 29m., the Marjorie next, followed by Jenuetta.

First class filled with four boats, Marguerite, Katie C., Maria Shoofly and Hornet. The Marguerite shows she has been improved since last year, winning first and third heats and race. Wind was very strong and steady all day, most of the yachts sailing with scuppers under. So ends the season of 1892.

SECOND CLASS—FIRST HEAT—TO WINDWARD.

| | Elapsed. | Corrected. |
|---|---|---|
| Thorn, J. Pfeiffer | | 17 00 |
| Mary S., J. Sheridan | Got away from owner. | |
| Comet, George W. Townley | 12 19 | 12 57¾ |

SECOND HEAT.

| | | |
|---|---|---|
| Thorn | Withdrew. | |
| Mary S. | 11 05 | 11 42¾ |
| Comet | 13 26 | 13 55¾ |

THIRD HEAT.

| | | |
|---|---|---|
| Mary S. | Disabled. | |
| Comet | 13 39 | 14 08¾ |

THIRD CLASS—ONE MILE TRIANGULAR COURSE.

| | | |
|---|---|---|
| Jennetta, George W. Lyons | 34 33 | 34 33 |
| Electra, J. Pfeiffer | 32 28 | 31 59 |
| Marjorie, H. Fisher | 33 49 | 33 19 |

FIRST CLASS—FIRST HEAT TO WINDWARD.

| | | |
|---|---|---|
| Marguerite, H. Fisher | 9 48 | 10 28 |
| Katie C., J. Sheridan | 13 49 | 14 14 |
| Maria Shoo Fly, G. W. Lyons | 10 29 | 10 53¼ |
| Hornet, J. C. Meyer | 11 57 | 12 08½ |

SECOND HEAT.

| | | |
|---|---|---|
| Marguerite | 9 58 | 10 28 |
| Katie C | 14 54 | 15 14 |
| Maria Shoo Fly | 9 56 | 9 55¼ |
| Hornet | 11 58 | 12 09½ |

THIRD HEAT AND FINAL.

| | | |
|---|---|---|
| Marguerite | 9 21 | 9 51 |
| Katie C | 15 36 | 15 51 |
| Maria Shoo Fly | 9 47 | 9 56¼ |
| Hornet | 10 55 | 11 06½ |

F. W. NICHOLS.

## The Deed of Gift.

WE are not surprised that the New York Y. C. declined to attach Lord Dunraven's conditions as a permanent clause to the "new deed of gift." If they had the power to do that, they had also the power to alter the original trust imposed upon them; and the stand taken on this side of the Atlantic is that they had no power to alter that trust. The "sole survivor" had no legal right whatever to alter the trust, and we are certain that such an open-minded sportsman as Mr. J. C. Stevens, who was the prime donor of the Cup, would have been aghast at the quasi legal tinkering with the simple, straightforward deed, which was countenanced by the "surviving donor." The conditions asked for by Lord Dunraven and agreed to under the "mutual arrangement" clause are, we think, perfectly fair, and would form a befitting suggestion to attach to the original deed; but we feel certain that if the new deed is valid, the New York Y. C. has no power to contract itself out of the full conditions under which a challenge can be made. They may make mutual arrangements after the challenge has been made as to other matters; but the information required of the challenger cannot under the new deed be dispensed with. Accordingly, if an English yacht won the Cup under the conditions the New York Y. C. is now willing to accept, it would be competent for any member of the club, or, perhaps, for any American citizen, to move the courts to prevent the Cup being handed over to the winner.—*Field.*

SIR—Respecting your remarks on the attitude of the New York Y. C. with regard to the America Cup, I feel satisfied that they represent the views of most yacht owners or others who have studied the question, and that your correspondents have been most fair and judicious.

It may be that the late Sir Richard Sutton, Lieut. Henn and Mr. Beraced without "any equivocal objection" once they had decided to race on conditions agreed to.

They having done so does not ratify or confirm the act of the New York Y. C. in abrogating the original deed under which the Cup was presented to the club.

The committee of the club in question were doubtless men of repute in their own particular business, and this makes it all the more surprising to find they permitted the only surviving donor to cancel the old deed, and concoct a new one for their acceptance.

It was an *ultra vires* act, and beyond the powers of the donor and club respectively, and no matter how many races there may be under the new deed, the fact remains that the American courts could, and would, at any time set aside the new gift on being asked to do so, and quite irrespective of whether the terms were fair or otherwise.

What would be the result of a surviving executor or trustee purported to be able to set aside a will, acted on for years, in order to make a new one to suit interested persons?—*London Field.*

When told that yachtsmen recently seen in England questioned the right of the club, or of the late surviving donor of the America's Cup—Mr. George L. Schuyler—to legally change the deed of gift, Commodore Gerry said:

"They don't seem to understand that the club had as much legal right to request Mr. Schuyler to alter the deed, after that alteration had been agreed upon, as any man has to alter his will, or to change the conditions of any deed of trust by agreement of the surviving donor, or donors, of the article or securities in question."—*New York World.*

It is not likely that Dunraven has waived his objection to the new deed of gift under which the cup is held, objections shared in common by all sportsmen, be they English or American. And it seems quite as unlikely that the clique in the New York Y. C. which has heretofore "managed" the America's Cup will withdraw the obnoxious dimensions clause. Because once upon a time, many years ago, one English yachtsman tried to get the better of the racing contract, the New York Y. C. appears to set down English yachtsmen for ever more as knaves and American yachtsmen as simpletons.

Why not found an asylum for racing American yachtsmen, where every presumptuous and designing foreigner may be challenged at the entrance gate, and where the comings and goings of each subscriber are under the careful supervision of a distinguished committee.

The present deed of gift is not sportsmanlike. We have no right to ask from the challenger more than the waterline length and rig. For the rest, the record of the American sportsman shows that he is quite able to take care of himself even against a bold, bad Englishman.—*Brooklyn Standard-Union.*

## Rambler.

THE Rambler is a steam launch recently built for A. Warner and W. L. Polk of Vicksburg, Miss., by the Racine Hardware Manufacturing Company of Racine, Wis. She is 35ft. length by 7¼ft. beam, has 7 by 7 engine, and 12 horse-power upright boiler, fed by an injector and duplex pump. The hull is of wood, white oak frame planked with Alabama cypress. Cypress is considered by many to be a very superior timber for planking, owing to its durability, and was preferred by the owners to any other wood.

The Rambler was built for sporting purposes as well as light towing, and will be used during the winters on occasional trips after turkeys and wild fowl. She has open canopy extending full length of boat, except three feet forward, but can be completely and quickly closed by a curtain that is snugly pocketed when not in use just under the eve of the canopy. There is a 6½ft. × 6½ft. space flush with the seats in the stern for a bed, with 4ft. space between it and the engine for undressing and dressing when the bed is made, which is done by placing loose boards between seats and unrolling a 5in. mattress, the mattress and blankets being kept in a substantial rubber blanket during the daytime.

The boiler is fired from the forward end, coal being the fuel used. The launch has ample room for fuel and "calamities" for four sports, men for a two weeks' outing and two hundred miles round trip. On one side opposite the boiler the seat is omitted, leaving free and easy passage.

The wainscoting and fore and after decks are in oak, and everything about the boat is substantial and neat. In this respect a word of praise is due Fred W. Martin in charge of the boat building department for the company. The plans and verbal suggestions of the owners were faithfully followed with a painstaking care that a first class job be done that is somewhat rare. Mr. Martin thoroughly understands his business, having designed and built some very fine and fast boats.

When the wind blows, and it rains, and is cold, such conditions being propitious for wild fowl shooting, the Rambler can be made quite comfortable by letting down the curtain and fastening it snugly around the hull well below the coaming, and building a roaring fire in the boiler. Fifty or sixty pounds of steam makes the interior sufficiently comfortably, and will keep the boat pleasant all night without further attention.

There is no nicer way to go after game than with a boat of this kind. With two small paddling boats to use in going to and from the blind and for retrieving, with an ample number of decoys and other articles of use, the veriest of wild fowl shooter is greatly blessed. For instance, to find the game, the launch is used to coast along the bars until a suitable location is found. When that is done the launch is made secure by anchorage at a place just far enough away to keep her from being a "scarecrow." It is easy to cool down steam and step into the little boat, where the decoys have already been placed, paddle off to the most likely place for game, put out decoys, make a blind, generally in the willows near the edge of the water, and take the evening shoot. At dark, after the last glimmer of light has gone, and not even the splash of a duck on the water could be seen, how comfortable to paddle off a couple of hundred yards or so to the launch with a snug bag of mallards or green-winged teal, or both, lying in the bottom of the boat, to the launch, which is still warm from the hot boiler. And in the morning, just before the first streak of day, it is no great task to have an early cup of hot coffee and be back to the decoys, which had been left out, by the time the early flight sets in.

There is nothing chimerical in this. The owners of the Rambler used the launch Greenwing several seasons in just such sport, and they have voted it the most satisfactory way for river shooting. It is not always that game is to be had in abundance, but some is always obtained and the run to port is made with an ample supply for home and friends.

## YACHT NEWS NOTES.

While aspiring to be fairly well informed as to the noted writers of nautical fiction and general literature, as well as those who treat solely of technical matters, it was no small surprise to us to read, about a year ago, of the death in New York city of a writer who deservedly ranks with Cooper, Dana, Marryatt and Michael Scott; an author whose works we had long since read with pleasure, and yet whose very existence was unknown to many and forgotten by many more. The disappearance of Herman Melville and of his books is one of the curious incidents of the history of American authors; made suddenly famous by his first book nearly forty years ago, following it with other books, with magazine articles and stories and with poems, the author of "Typee" and "Moby Dick" retired voluntarily from the semi public life of the writer to the seclusion of the philosopher and dreamer, his existence forgotten even by those who had known him until it was recalled by the news of his calm and peaceful death. In addition to Mr. Melville's voluntary re-iguation of the honors of authorship, the entire edition of his works was destroyed by fire many years since, leaving but few copies in circulation. This loss is now being made good by the republication of a carefully edited edition of the most famous of his sea stories by the United States Book Company, of New York and Chicago, "Typee" and "Omoo" now being ready, while "Moby Dick" and "White Jacket" is announced. The volume of "Typee" contains a portrait of the author, with a very interesting biographical and critical introduction by Mr. Arthur Stedman. To those who, like ourselves, have long since read of Fayaway and the Happy Valley, of Captain Anab and Flask and Moby Dick, we need only say that this delightful fairyland of the South Seas is again opened to them. To the younger generation of yachtsmen who know not what they have missed, we offer the sound advice to forego for a time the mongrel French-American vulgarities that are found on so many cabin tables and devote themselves to a study of Herman Melville.

On Nov. 7 the Oswego Y. C. elected the following officers: Com., John T. Mott; Vice Com., Geo. B. Sloan, Jr.; Capt., John M. Schuler; Sec'y-Treas., W. B. Couch; Meas., W. P. Judson; Fleet Surgeon, J. W. Eddy, M. D.; Directors, Allen Ames, Geo. W. Sayward, J. D. Henderson. Delegates to the Lake Yacht Racing Association meeting, to be held at Rochester, Dec. 17, Com. Mott, ex Com. W. B. Phelps, Jr., and Allen Ames. It is proposed to shorten the Lake circuit, and the Oswego regatta will probably be omitted next year.

A match for 1893 has already been made, the parties being Harry Gray Otis, owner of the cat Magpie, and Walter Abbott, in behalf of the cat Typhoon. Three races, for $100 per side, will be sailed next July at Hull and Nahant.

The steam yacht El Vallede Annahuac, Wis., was recently sunk by a collision with the government steamer Gen. Gilmore, below St. Louis, while on her way to Tampico, Mexico.

Mr. Nathan Francis, of Boston, has ordered a cruising schooner of Stewart & Binney, a modern keel boat, 70ft. over all, 50ft. l.w.l., 15ft. beam, and 7ft. 6in. draft.

Detroit yachtsmen are still discussing the prospects of another race between the trio, Princess, Alice Enright and Josephine, lately re-christened Empress.

At Bay Ridge, Samuel Ayers is busy with a centerboard sloop and a row-boat for Com. Gerry, the sloop to be used on a lake in Delaware county.

The Gloucester Fisherman's Institute will establish a school of navigation with afternoon and night sessions every day through the winter.

Lady Mabel, steam yacht, has been purchased by Mrs. Langtry of Lord Ashburton for $135,000.

The U. S. Engineer's Office has advertised for proposals for removing the wreck of the Alva.

# Canoeing.

## In a Rowing Boat.

[*Concluded from Page 418.*]

As we go before the wind with boom well off to starboard we present a picture that might justly be entitled *otium sans dignitate*. I hope the reader will pardon this slip in my Latin—for the Coxswain wrapped in her ulster, is snugged down on the floor-boards, a cushion at her back and tiller-lines over one shoulder; J. is forward, likewise on the bottom-boards, two cushions under him, his feet upon the seat, while I am stretched across the boat between them, my shoulder resting on one rail and feet braced against the other. We pass astern of a sloop, on which a grizzled old bayman sits mending a sail. Our attitudes bring a gleam of amusement into his eyes. He stops work for a minute, takes a pipe out of his mouth and, breaking into a broad grin, says: "Havin' a good time, ain't yer."

We draw around the point ahead, on which stands a handsome house in the Colonial style of architeture, and then flip, flap, in comes the sail, dragging the sheet through the water. We now feel the strong flood tide coming it from the next bay; and as if to encourage us in the hard pull up to the bridges the sun comes out from behind the clouds, driving all thoughts of rain out of our heads and brightening up what our English cousins would call the "sweetly pretty" view on our hand.

Along this channel stretches a settlement, which is part of what a morning paper once called "the dogcart colony." We go by picturesque houses, set in the midst of lawns stretching down to the sea wall, from which each house has a little dock extending into the water. Groups of well-dressed people sit on the porches; a girl in a red gown crossing the shaven turf is a bright note of color in the view; back of the house runs a road, on which are constantly passing smart traps in all the glory of varnished wood and gleaming harness; high over all, the arms of the many windmills go dashing madly around in a comical fashion. These people are not only fond of horses, but also of good boats. For a few years they have been contented with a small building as headquarters for their yacht club; now a fine large house has been built on piles out from the shore about 100yds. It was not quite completed when we passed, and it seemed to be the resort of the servants from the cottages near by, one of whom unconsciously made a pretty picture, as in a lace cap and a blue and white gown, she sat on one of the broad ledges reading a book.

During the next 15 minutes all thoughts of the beauty of the day, the cottages or the maid servants vanished from our minds as we pulled and pulled against the tide. This was J.'s first experience in this creek, and a back breaking business he found it. We were glad to have the Coxswain steer us into a little cove just to the north of the first bridge across which the road runs, and to get ashore, that we might stretch our legs a bit. It now being the time of a full moon, the tide accordingly ran with much greater force than usual, and of course its volume was increased, so that after we embarked, rowed past the first bridge and came to the second the water was found to be so high as to prevent the boat passing under it. Here was a state of things! Half-past 4, an hour and a half yet to high water, and then at least 3 hours of ebb before we could possibly get the boat by the obstruction. This would never do. We decided to make a portage.

I went across the bridge and interviewed a man who was fishing from it as to the interval between trains. He said it would be an hour and a half before the next one came along. The information was as reliable as one usually gets from the local inhabitant, for by the time we had all our traps out on the bank one train thundered over the bridge, and just as J. and I got the boat hauled across the railroad embankment—I refrain from dilating on what a lift it was—another dashed by. A group of boys helped in carrying over the outfit, giving me cause to believe with Charles Dudley Warner that there is something in a boy to like after all. The author of "An Inland Voyage" is not so favorably inclined to the average urchin; patriotism—and a limited knowledge of boys from the point of view of a cruiser—imbues us with the belief that American boys are different.

Everything being stowed away properly we took to the oars again until we were free of the creek and out into the clear water of the bay. We endeavored to land on the outer shore, intending to walk across to the beach for a view of the ocean. A horde of mosquitoes rose up out of the fringe of meadow grass, causing us to remember suddenly that it was time for supper and that we really must go. As we got out in the middle of the bay, J. spotted a picturesque old windmill and was immediately seized with a desire to sketch it. He being in the bow, over went the anchor, out came the sketch-book and down he sat—immovable until his artistic labors were completed. It was evident, the windmill being large and ornamented with every description of window and tower known to architecture that the labors would occupy some time, so the Coxswain and I busied ourselves in the interval in preparing supper.

The sun was sinking down behind the hills off in the west by this time, and as it was growing cooler we did not spread the awning. The two boxes were hauled out, the stove lighted and water put on to boil for tea. While this was heating I broke six eggs into the cups—in lieu of a bowl—the Coxswain beating them up for an omelette. The bread was sliced and buttered à la afternoon tea; the pot of jam was opened and the plates, cups, etc., ranged convenient to our hands. Now the water is boiling, so the frying pan goes on the stove with a liberal pat of butter in it which soon sizzles; in go the eggs—I leave the omelette to the Coxswain—and just as J. hands me the book and asks for an opinion, supper is announced.

Before the meal is finished we regret not anchoring in a more secluded spot. Everybody who has a boat seems to be out on the bay and all sorts of craft go by us. The smallboat owners here are afflicted with a mania for yawling customs. We saw a 12ft. sneak-box with an ensign hoisted up to the topping-lift and a minute brass cannon on the forward deck, covered with what looked very much like one of those articles of wearing apparel which we are told Uncle Jerry Simpson has forsworn. Another ridiculous exhibition was a full-rigged cutter not over 15ft. on deck also togged out with an ensign, and, as her owner was ashore, of course an absence flag was flying. The absence flag, by the way, had been hauled up taut, parted the starboard shrouds, and consequently both it and the spreader were hanging lamely down to port.

We finish our meal, wash up, stow the dishes away hastily, get in the anchor, and within ten minutes after performing this act the bow of the boat rubs lightly against the well-kept landing place at the foot of one of the village streets. One-half of our journey is completed. The boatkeeper assures us everything will be put away safely for the night, and he goes about the work so briskly that we can readily believe his statement. Taking our bags and coats, we stand for a minute looking off to to seaward to watch the night shutting down and to cast anxious glances at a bank of grayish clouds driving in before the southeast wind—clouds that filled us with dismal forebodings for the morrow. The lamps were being lighted and the electric current had already been turned on as we walked up the main street of the village.

After reaching our rooms a vigorous application of soap and water and the clothes brush made us feel like ourselves again; so the alcohol bottle needing to be filled we strolled out to find a drug store and to have a look at the town. Our search took us as far as the railway station, where, as we watched the crowd surging into the cars, we could luxuriate in the sensation of being free, if it was only for another day. On our way back to the hotel we refreshed ourselves with some cream in a little restaurant, which was a marvel in respect to its neatness and service. It was not long after regaining our rooms before we were fast asleep, notwithstanding the fact that some one in a room below was performing on a piano and another musical being across the road was lifting up his voice in song. It had cleared by this time, and after J. had extinguished the light and raised the window shades the moon shone down out of a cloudless sky.

To sleep dreamlessly for ten hours inclines one on awakening to be up and doing. When J. and I got downstairs we found the Coxswain there to greet us. In describing Sunday as perfect I have robbed myself of the only adjective fit for this day of our return journey. For several hours of Sunday's afternoon we sailed under cloudy skies, but Labor Day, from early morn to dewy eve, was cloudless. It was a day to grow enthusiastic over in the long winter night when we gather together before the glowing coals and grow reminiscent. The satchels were packed before and after that meal—we had for a waitress a be-spectacled young woman whom J. called a "ministering angel"—he paid our bill, we took our departure and our traps.

It was a unique experience to come down to the boat and find it with all our outfit aboard, and if the things were not just where we would put them ourselves we did not discourage such good intentions by any rearrangement. Even the water pail was filled, therefore all we had to do was to "tip" the man, step aboard and take to the oars again, leaving at nine o'clock.

Although the tide was against us we made short work of the distance to the railroad bridge, where we went ashore and helped two men unstep the mast of a catboat, an operation in which J.'s sheath-knife played an important part, namely, starting the mast wedge. The men had nothing whatever to do this with, and were very grateful for an assistance.

The Coxswain and J. went ashore with the cable, which had previously been unbent from the anchor, made it fast to a piece of driftwood for a float and, going above the bridge, dropped it into the current. When it drifted through J. caught it with the boathook, made it fast in the bow, and the two ashore walked away with the tow line, J. meanwhile keeping the boat clear of the piling.

As soon as we were clear of the creek and out on the wide expanse of our bay, J. stepped the mast and shook out the sail. For the next hour, while the Coxswain sailed the boat before the light southerly wind, J. worked most industriously at cleaning the boat and arranging the traps properly. Beginning at the bow, the seat was washed off and the long painter flemished down on it; gradually working aft the whole boat was gone over with the sponge, inside and out, we keeping out of J.'s way as best we could, and by the time we had reached the main channel everything was in its proper place, ship-shape and Dorothy fashion.

The wind gradually grew stronger, and having a weather-going tide under us, we had little difficulty beating down to the railroad bridge. In home waters our red sail causes much comment and many allusions to the price of strawberries. Here no one seems to notice it, and before long we discover that colored sails are almost as common on this shore as they are among the fishing fleets abroad. We pass two small catboats with bright red sails and one lying at anchor shows a green sail hoisted up to dry.

All the world and his wife are surely out fishing to-day, their hired skiffs dotting the channel here in great numbers and making our course a very erratic one—now bearing away to clear this boat, the next minute close hauled in an endeavor to weather another. This, in our slowly moving craft, is vexatious; being near the bridge we lower sail once more, and under the influence of a spruce breeze pass under the bridge and down channel for half a mile to the landing stage at the end of the principal street of this noisy watering place. The Coxswain and I go ashore to buy some bread, our supply having been exhausted. The last holiday crowd of the season is coming off in a large excursion as we walk back to the boat, and we are forced to run the gauntlet of several hundred pairs of wondering eyes. I try to walk as if it was an everyday occurrence for me to be parading around in a pair of (once white) duck trousers with a yard of bread under my arm, but am conscious of the fact that I do not carry it off very well.

We push off and row along behind the big steamer as she goes down channel, rolling over the long swells in an exhilarating fashion until we have passed the last house on the beach, when we anchor to enjoy the last meal of the cruise. The awning is spread, seats arranged and the boxes hauled out. J. got up a stunning meal, hashing up the remainder of the lamb and potatoes, warming the mass in the frying pan; made sandwiches, using the contents of a small can of "duck pâtés" (one of the Franco-American Co.'s preparations and which cannot be praised too highly) and heated up a can of lima beans, while for dessert we finish the cake, scraped the jar of jam clean and topped off with oh, such a cup of coffee; Hitchcock's couldn't surpass it.

We prolonged our meal and the subsequent loafing time until the Coxswain dropped a remark about the desirability of getting home before the snow fell. This mild sarcasm had its effect. J. and I pitched in, soon having all the dishes washed, wiped and put away—we dried them with Sunday's paper, which was then thrown away, "complete novel and all; this accounted, J. said, for our subsequent quick run. The boat was so much lighter. The awning was lowered and rolled up, anchor taken aboard, sail shaken out, getting under way just in time to run across the wake of another big side-wheeler.

One of us being a Wagnerite, had been humming and whistling at tiresomely frequent intervals during the two days the "Steersman's Song" from the Flying Dutchman, so, although there was no lady awaiting either of us, the fair south wind at this point was "most kind" and blew up strong and true. We made the run across the bay—it is usually called five miles—in forty minutes.

I should like to tell in finishing, of rounding up to the dock with a bold sweep, of slatting sails and rattling sheets, but truth is mighty and must prevail, and I am compelled thereby to put on record that, tide being low, we ran on the mud in front of the float from whence the Orientas hove us a line and pulled us, with much shouting and laughter as is their wont, ingloriously up to the landing place.

W. B. McCormick.

## CANOE NEWS NOTES.

From a canoeing standpoint, we confess to a feeling of disappointment in finishing Mr. Poultney Bigelow's latest book, "Paddles and Politics Down the Danube." From our personal knowledge of the author as one of the few remaining disciples of Macgregor who can and does make long journeys in the orthodox cruising canoe, we had looked for another classic, like "Rob Roy in the Baltic," or the "Thousand Miles in a Rob Roy Canoe," and our expectations have hardly been realized. As a canoe trip, the voyage down the entire length of the Danube was evidently an interesting and exciting one, but of the true canoe life of Caribee and her crew, we gain but glimpses here and there. It does not follow, however, that the book is not enjoyable because it is read under a misconception of its true character. The fault of this lies with the author, who, in justice to his book, should have made the title more exact, as well as more alluringly alliterative, by the addition of two words. The proper title should be "Paddles, Petticoats and Politics, or Dancing Down the Danube," and anyone, canoeist or general reader, who opens the book with this fact in mind, is certain to read it through with increasing interest. Instead of being the heroine of the book, as strict canoeing ethics demand, Caribee was but the instrument which opened to her owner the wonderful inner life of the great river and the various countries through which it passes. Bavaria, Austria, Hungary, Servia, Roumania and Bulgaria. The opening deals somewhat minutely with the canoe and the river, but after passing the Hungarian border, poor Caribee is nearly forgotten, as the author falls under the influence of Hungarian hospitality and music, and of the beauty of the female portion of the population. The middle part of the book is largely devoted to the ladies, but no true canoeist would find fault with it on that account. As Caribee crosses the eastern border of Hungary, petticoats give place to politics, and we learn much of a most interesting country and people. Mr. Bigelow is the possessor of some very positive and well-defined views on European politics, and his experiences on the lower Danube are adduced to support them. The book is bright and lively, and the author's sketches, though crude and making no pretensions to artistic excellence, are vigorous and expressive, and add to the interest. It is published by Chas. L. Webster & Co., of New York.

On Saturday, Nov. 26, the Hoboken C. C. will hold their first "smoker" for the season of 1892-1893, to which all canoeists are invited. The club house is at the foot of 10th street, Hoboken.

The annual meeting of the executive committee of the American Canoe Association is being held to-day at Kingston, Ontario. We shall give the annual detailed report next week.

### A. C. A. Membership.

The following gentleman, residing in the Atlantic Division, has applied for membership in the American Canoe Association: Morton B. Stelle, Jr., of Brooklyn.

# Rifle Range and Gallery.

## Cincinnati Rifle Association.

Cincinnati, O., Nov. 6.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores as appended below. Conditions, 200yds., off-hand, at the standard target:

| | | | | | |
|---|---|---|---|---|---|
| Gindele | 84 84 81 | Payne | 79 79 74 | Stegner | 68 64 65 |
| Weinheimer | 76 75 70 | Topf | 67 61 61 | Wellinger | 75 74 64 |
| Louis | 77 76 72 | Nagel | 44 54 41 | Drube | 71 70 61 |

## South London Rifle Club.

The shooting season of 1892 is now over. The revolver championship of the club has resulted as follows:

Walter Winans (Smith & Wesson revolver, Ira Paine sights) has won the championship for revolver shooting and the gold jewel representing the same. Score, 42, 41, 41, 41, 40—205.

H. Andrew (Colt, bead sights) won silver jewel. Score, 39, 38, 38, 38, 37—190.

Major B. MacKerrell (Colt, military sights) has won the bronze jewel. Score, 41, 37, 36, 36, 36—186.

Next best score:

| | | | | | | |
|---|---|---|---|---|---|---|
| F E Varley (Webley) | 37 | 37 | 37 | 37 | 36 | —184 |
| C F Lowe (Colt and S & W) | 36 | 36 | 36 | 36 | 36 | —180 |
| T W Heath (Colt) | 37 | 36 | 35 | 33 | 37 | —176 |
| T P Hope | 34 | 31 | 28 | 26 | 25 | —144 |
| T Collman | 37 | 36 | 36 | 32 | .. | —141 |
| Mortimer (Colt and S & W) | 34 | 34 | 25 | 25 | .. | —118 |
| E W Keen | 32 | 30 | 28 | .. | .. | — 91 |
| E Howe | 35 | 34 | .. | .. | .. | — 69 |
| Clement Smith | 34 | 27 | .. | .. | .. | — 61 |
| Dutton Hunt | 32 | 26 | .. | .. | .. | — 58 |
| A W Carter | 27 | 23 | .. | .. | .. | — 50 |
| A W Thompson | 33 | .. | .. | .. | .. | — 33 |
| Malsinger | 24 | 8 | .. | .. | .. | — 32 |
| Boxhurry | 28 | .. | .. | .. | .. | — 28 |
| Ayers | 26 | .. | .. | .. | .. | — 26 |
| Keeson | 26 | .. | .. | .. | .. | — 26 |

## Portchester Rifle Club.

Portchester, N. Y., Nov. 12.—At 200yds., off-hand, Standard American target:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| J Smith | 7 | 6 | 6 | 8 | 10 | 6 | 7 | 7 | 8 | 10—75 |
| R McNeil, Jr. | 6 | 6 | 8 | 3 | 8 | 5 | 4 | 9 | 3 | 8—60 |
| T Kiernan | 6 | 6 | 3 | 5 | 6 | 6 | 4 | 6 | 7 | 6—55 |

R. McNeil, Jr., Secretary.

# Trap Shooting.

All ties divided unless otherwise reported.

## FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Nov. 22-23.—Union Gun Club tournament, at Springfield, N. J. First day targets; second day live birds.

Nov. 23-26.—Milwaukee (Wis.) tournament, targets and live birds.

Nov. 24.—John A. Hartner's sixth annual tournament, Bishop's Driving Park, Baltimore, Md.

Nov. 24.—West Virginia State Sportsmen's Association tournament, at Wheeling, West Virginia.

Nov. 24.—Standard Gun Club tournament, Acton's Park, Baltimore, Md.

November.—Al. Heritage's tournament, at Marion, N. J.

Nov. 24.—Arlington Gun Club tournament, at Cleveland, O.

Dec. 15.—Open shoot at 100 live birds, $100 entry, grounds to be announced later. Entries, if accompanied by $20, will be received up to Dec. 12, by Forest and Stream, 318 Broadway, New York.

Dec. 28-29.—Jacksonville (Fla.) Gun Club's fifth annual tournament; $500 guaranteed purses; $300 in money and merchandise prizes added. Professional experts barred. Bryan Taliaferro, Sec'y.

1893.

Jan. 10-11.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.

May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.

May 23-25.—Knoxville Gun Club tournament, $1,000 added to purses. Also valuable merchandise prizes.

June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry building, Rochester, N. Y.

Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh, N. Y.

## DRIVERS AND TWISTERS.

An open to all sweepstake at 100 live birds, $100 entry, birds included, will be shot on Dec. 15 in New Jersey on grounds to be announced later. No one will be barred from this contest and there will be no handicaps. The contest will begin promptly at 10 A. M. Modified Hurlingham rules will govern and all will shoot at 30yds. rise. Entries, which must be accompanied by $20, will be received by Forest and Stream up to Monday, Dec. 12. Entries have already been received from H. E. Smith of Newark, N. J., and Captain Wm. Craumer of Jersey City. Send your entry early.

*Pleasures Afoot, Afield and Afloat*, an English publication, says: "A really strong team of American wing-shots would sweep all before them at Monte Carlo; the American gentlemen who usually visit the Riviera for the shooting would not rank in their own country as first-class trap-shots. Such a team as Captain Brewer, Mr. E. D. Fulford, Mr. Elliott and almost any other trap-shot taken haphazard would be first, second and third in every event at Monte Carlo—if they were permitted to contest."

Col. A. G. Courtney, the ever welcome and always genial "Court," who has always made such a great hit for the Lefever Arms Co., of Syracuse, is in town and everybody is happy. Mr. Courtney, who looks well, hearty and happy as usual, has along with him a full outfit of the firm's automatic hammerless ejector guns, and unless signs fail he will capture the trade in this vicinity. "Court" says the new ejector is a "daisy," and everybody wants it.

The Pueblo (Col.) Gun Club has elected the following officers: D H. Geist President, John Harms Vice President, L. G Moorse, Secretary, Victor Johnston Treasurer, J. M. Killen Captain, Jacob Harms Director. A committee of three, as follows, was appointed to arrange for a shoot on Nov. 24, with power to act: E. A. Moorse, Victor Johnston and G. W. Williford.

The Omaha (Neb.) Gun Club has closed its regular season, and the averages of those who shot the requisite number of matches are: Frank Parmelee, 89 9-19; Billy Brewer, 88; H. B. Kennedy, 87 6-10; the three prize winners, John J. Hardin, 81 2-10; Frank Gogg, 89; W. E. Nason, 79 6-10; George W. Loomis, 86; W. H. S. Hughes, 75; Goodley Brucker, 77, and Billy Townsend, 73 1-10.

The pigeon shooting season at Monte Carlo will reopen with the bi-weekly series on Dec. 19 and the grand international meeting on Jan. 26. The grand prix of 20,000 francs, with 200 francs entrance fee added, will be contested on Jan. 30 and 31; and after the close of the meeting, Feb. 4, the usual series will recommence on Feb. 6 and continue until March 15.

On Oct. 22 at Witton, Birmingham, England, in a shoot in the second heat of a handicap there were 33 entries, Mr. Large, of Wolverhampton, winning. In the third heat there were 37 entries. On the first round 25 men missed and on the second round 7 missed. At this stage the sport was stopped by darkness.

The West Newburgh Gun and Rifle Association, of Newburgh, N. Y., has taken the very sensible course of claiming dates for its 1893 tournaments. The spring tournament will be held on May 20-21, and the fall tournament on Oct. 21-22. Other clubs will please note.

John Klee and Billy Pease shot a match at 10 live birds each at Dayton, Ohio, on Nov. 8, each killing 9. On the shoot off at 5 birds each killed 3. Then a 10 bird sweep was shot; Klee's and Pease's scores in this to decide the tie. Klee killed 5 to Pease's 4.

Don't forget the Union Gun Club tournament at Springfield, N. J., on Nov. 22 and 23, Keystones the first day and live birds the second. Stages will meet all trains at the Willburn depot. Shooting from 9 A. M. until dark.

Dr. W. F. Carver challenges E. D. Fulford, to shoot a match at 100 birds each, 30yds. rise, 7½ or 8lb. guns, for $5,000 a side, the match to be shot in the early spring and each to furnish birds for the other.

The *Sportsmen's Review and Bicycle News* of Chicago will publish an elaborate Christmas number with an illustrated cover and souvenir, and sixty-four pages of reading matter, profusely illustrated.

Mr. Frank Patterson, superintendent of the Juniata and Wapsonocck R. R., is an enthusiastic advocate of the smooth-bore, and took part in last week's tournament at the "Wopsy" grounds.

On Thanksgiving Day there will be a trap tournament at Acton's Park, Baltimore; one at Bishop's Driving Park, Baltimore; one at Arlington, Ohio; and one at Wheeling, West Virginia.

On Nov. 7, the Cleveland (Ohio) Gun Club shot for the Sipe and

Sigler cups at 30 targets each. Tamblyn and Goodnough tied on 25 breaks each, Tamblyn winning on the shoot off.

George Work and Edgar G. Murphy are matched to shoot 200 birds each, 30yds. rise, for $2,000 a side. The match will take place on the grounds of the Westchester Club within two weeks.

Several Altoona men will go to Wheeling, West Virginia, on Thanksgiving Day. The West Virginia State Association tournament to be held on that day, promises to be a big affair.

The Italian agent of the Schultze Powder Company has established a branch depot at Vintmille, where all necessaries for the Monte Carlo meeting may be obtained.

The Spokane (Wash.) Rod and Gun Club will shoot live pigeons, targets and turkeys on Thanksgiving Day.

Don't fail to send us your entry for the 100 bird match, $100 entry, to be shot on Dec. 15. We want a big list.

Open sweep at 100 birds; $100 entry, Dec. 15. Watch for further information.

Milwaukee will be the Mecca for trap-shooters on Nov. 23 to 26, inclusive.

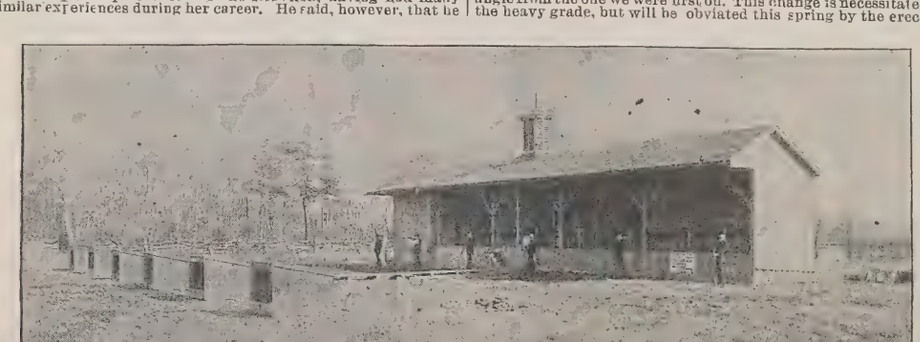
The East Rockaway Gun Club offers a gold medal to be shot for on Nov. 24.

C. H. TOWNSEND.

## THE ALTOONA SHOOT.

ON Wednesday morning, Nov. 9, when the sun shone brightly over the city of Altoona, Pa., Billy Clark, manager of the Wopsononock Shooting Park, was happy. "Little Sure Shot" had arrived in town that day, bringing along her shooting paraphernalia. Her manager, Frank Butler, had plenty of ammunition loaded, and was ready to cast the plaster balls for Miss Oakley's exhibition work. Several hundred live birds were on hand and all over the town were big posters announcing that on Thursday and Friday Miss Oakley and Billy Clark would shoot live bird matches and that "Little Sure Shot" would each day give one of her unrivaled exhibitions with the shotgun, rifle and pistol. Invitations and programmes had been sent all over the country, and from at least 50 shooters Mr. Clark had received promises to attend. Everybody in the town was waiting anxiously for the coming of Thursday in order that they might see the work of the queen of markswomen and the Juniata & Wopsononock Railroad was anticipating two big days of travel.

On this same day at 2 P. M. we, meaning the FOREST AND STREAM, left New York, and while crossing the ferry remarked that the clouds and wind portended a storm. At 2:15 the "Columbian Express" carried us out of the Pennsylvania Depot, and as we passed beyond the sheds down came a light fall of snow. No one paid much attention to this for a time, but soon it became apparent that it was not merely a squall, but the setting in of a genuine snow-storm. The mercury began to fall, and the farther we advanced the faster came the snow. Reaching Philadelphia, the ground had taken on a white covering that warned us that winter was at hand. After pulling out of the Quaker City and getting out on to the main line the storm increased in violence, and no one doubted but they would run into a blizzard before reaching very far west.



At Harrisburg we were told that the snow was five inches deep on the level, and west of that place it was still deeper and still falling. Altoona was reached just before midnight, and here everything bore the stamp of midwinter. We were told that the snow was six inches deep on the level, and soon found that the prospects were bad for a shoot on the next day.

As soon as we stepped from the train we were cheered by a warm welcome from "Uncle Jake" Pentz, who had arrived on an earlier train; our old Wilmington host, Charles "Bilderbach," Billy Clark and G. G. Zeth, both friends of Altoona. It did not take us many minutes to get rid of our traps at the Logan House and accept an invitation to visit Billy Clark's Red Lion Hotel, which we found much more comfortable than the car in which we had been shivering for nearly ten hours. Here we also had the pleasure of meeting Messrs. Hume and Kelly, local newspaper men; "Buckshot" McDonald, Harry Dunham and several local shooters. After a few "warmers" had been put away the party dispersed for the night, all bearing long faces at the prospects for the morrow.

About 7 o'clock the following morning we reluctantly left our warm couch and at once took a look through the window, convincing ourselves by a brief glance that the day would be a most disagreeable one. It was then warmer than at midnight, and instead of snow a drizzling rain was falling, which was rapidly converting the snow into slush. After breakfast it began to get colder, and from 9 until 10 A. M. it gave a faint promise of clearing.

Strolling through the corridor of the hotel before breakfast we had the unexpected pleasure of meeting the great and only J. Nelson Aisip, of Clayton, Del., he who so ably refereed the target events during the recent great shoot of the Wilmington (Del.) Rod and Gun Club. "Nelse," as everybody familiarly calls him, is a great chum of Billy Clark's, and was until a few years ago a practicing lawyer in Altoona, where everybody is his friend. He is now employed in the superintendent's office of the "Pennsy" at Clayton, Del., and his trip to Altoona was his vacation outing. Genial, ever good-natured, a good singer and fine elocutionist, he is one who will never let a party grow sleepy for the want of divertisement. As a shot he has few equals in the field, but does little or no trap work.

Shortly after breakfast in came jolly Frank Butler, the well known manager for Annie Oakley, who was in the doldrums at the very dull prospect for the shoot. He had been very liberal in the way of advertising and had even started an advertising wagon about with circulars and electric-lighted signs on the previous night. Mr. Butler said, however, that there was no use crying over spilled milk, and he would have to make the best of a bad bargain, hoping that at some future time the weather bureau would be more obliging. "Little Sure Shot," he said, was taking her usual philosophical view of the situation, having had many similar experiences during her career. He said, however, that he would not think of allowing her to risk her health by going upon the mountain under the existing weather conditions.

WOPSONONOCK SHOOTING GROUNDS.

This was the outlook, and a gloomy one it was, but we had traveled a long while to get a look at the famous Wopsononock Park and the more famous railroad leading thereto, and weather or no weather we determined to get the said look. So at 10 o'clock a half-dozen of us boarded one of the cars of the excellently equipped electric line which nearly encircles the city and were carried to the depot at Juniata, the station being opposite the Juniata shops of the "Pennsy." At this hour the clouds had lightened up in spots and we tried, though it was hard work, to convince ourselves that we would have a clear day.

On this trip our party comprised "Uncle Jake" Pentz, of *Shooting and Fishing*; Charles Fehrenbach, the famous "Bilderbach" who holds the responsible position of president of the wideawake Wilmington (Del.) Rod and Gun Club and who is developing into a very strong shot at either targets or live birds; George G. Zeth, proprietor of the well-known Zeth's Altoona Business College, and who incidentally edits the "Trap and Trigger" department of the Altoona *Gazette*, wherein he has done wonders in booming the sport; Edward Banks, correspondent for the Harrisburg *Telegram*, a hustler in trap matters, a rattling good shot at the trap or in the field, a genial companion and very popular all-around; the ever-welcome Frank Butler; J. Nelson Aisip, who has been mentioned before, and several others whose names I do not at this moment recall.

At 10:30 the whistle tooted, the Aisip and Bilderbach band started "We'll Soon be Riding 'Round the Bend," and a moment later we were started on our first trip to the summit of the world-renowned Wopsononock Range of the Alleghany Mountains. Before we had ridden a mile the mists began to gather, the clouds became once more heavy and dark and in a few minutes it began to drizzle. The temperature, too, got lower and the rain froze as it fell. But the party in the car was a jolly one, undisturbed by changes of weather, and all the way up the mountains they rattled off songs and jokes.

The views obtainable along the Juniata & Wopsononock Railroad are such as can only be justly described by the true artist, and we regret exceedingly that our pen is not trained to do them justice. From the start the train begins to climb a heavy grade; then it runs along for a distance through a magnificent valley with comfortable looking farm houses and fertile farms; then down into a deep ravine and up again on the mountain side. Every once in a while a look out the back window will show us the places we passed a few minutes before. Climbing a little higher we see a panorama of mountain ridge and valley with Mountain City in the distance. Then we come to "Horse Shoe Bend," which some claim presents more beautiful views than does the much-lauded "Horse Shoe" between Altoona and Pittsburg. Up again we go until we round "Butcher Knife Point," where one would suppose the track was a mile higher than a point passed a few moments ago. You can, however, get off the train and walk a few steps over the ridge to the right of the road and throw a stone down on the track over which you have just passed. Away up on a projecting point we see a little frame building, on top of which is an American flag, and this, we are told, is Point Lookout, the highest point on "Wopsy," and from which, on a clear day, one can look clear into Maryland, beside securing a bird's-eye view of seven Pennsylvania counties. The view from Point Lookout is indeed a beautiful one, showing the Juniata Valley in all its beauty. Soon we come to a place on the road where the track is on a jutting ledge with a deep ravine on either side. Here the train stops, the engine switches off to a side track, backs down and comes up to the other end of the train, when off we go up another grade, the track running off at a sharp angle from the one we were first on. This change is necessitated by the heavy grade, but will be obviated this spring by the erection of a section of trestle road over one of the ravines mentioned. A few minutes later we have reached the Wopsononock Station, to the right of which is the shooting grounds and to the left is the hotel. We are now at the highest summer resort in Pennsylvania, 1,500ft. above Altoona and 2,650ft. above sea level.

Are we glad we are here? Well, yes. But oh, don't the cold cut! The wind is blowing a gale from the northwest, and is bringing along with it a fine wet snow which cuts like a knife. And up here the snow is from 6 to 8in. deep on the level, covered with a crust which makes walking anything but a pleasant task. And yet when we have tramped through the crust and have entered the shooting house we have no regrets for having braved the elements, for inside the house we find, including our own party, fully thirty people, a far greater number than we expected to materialize.

There was Billy Clark, he of the Red Lion Hotel, whose love of trap and field sport has endeared him to sportsmen all over the country, and who is a hard one to beat at either branch of the work. It was this love of the sport and the knowledge that the Altoonians were in need of a good place for the work that induced Billy to invest in the equipment of these grounds, and he has been ably supported by the local shots. There was William Sands, "six foot and something over," who in addition to his truck work in the Pennsylvania shops is passionately fond of trap and field work, and who can do both kind of shooting in a winning style; J. E. England of Alleghany, who came over to see the boys and enjoy his favorite sport; J. F. Kipps of Altoona, a rattling shot but who has an unfortunate penchant for bringing his thumb and lip in contact when he is shooting; William Tappan, now of Altoona but who several years ago used to hold a residence at Pine Brook, N. J., and shot on Jon Erb's Newark grounds along with such veterans as Samuel Castle and others, and who is now considered one of the best field and brush shots in Pennsylvania. "Doc" Christie was also there full of shoot and fun, as was J. Manlove, one of Altoona's rising shots and formerly a well-known ball player. There were several other local shots whose names appear in the scores.

MISS ANNIE OAKLEY (Little Sure-Shot).

These shooting grounds, which are controlled solely by Mr. Clark, are splendidly equipped for the sport. The half-tone cut which accompanies this article gives an excellent idea of the arrangement of the house and traps. The main building is 75×16ft., with a 16ft. roof projecting out over the score so that the shooter is at all times under cover. The floor is 3ft. above the ground and the house is provided with plenty of seats, benches and gun racks. At the further end of the building is the store-room, which on this occasion was provided with a stove, which proved a great attraction to the shooters. The traps, six in number, are of the expert pattern, and the automatic pulling attachment, designed by Mr. Clark, is as good as any we have seen. As shown by the cut, there is a separate house over each trap. The foreground is clear with the exception of that to the right-quarter, where the targets are thrown toward a heavy growth of wood, this giving rather a poor light for No. 4 target. On this occasion only five traps were used, No. 6 being the idle one.

It was after 11 o'clock when the party unlimbered their guns and began to shoot, no one having any idea of allowing the cutting cold to interfere with the sport. Three events were shot before dinner and here are the scores. Nos. 1 and 2 were at 10 targets each, $1 entry, and No. 3 at 15 targets, $1.50 entry, there being three moneys in each event. The expert referee from Delaware, J. N. Aisip, gave the decisions, while G. G. Zeth manipulated the blackboard:

| | No. 1. | No. 2. | No. 3. |
|---|---|---|---|
| Fehrenbach | 1101001010— 5 | 1101010101— 6 | 1101100101010— 9 |
| Quirk | 0101111100 — 6 | 0100011110 — 5 | 1001101111111111—13 |
| Doc | 0111111111 — 9 | 1100001110 — 5 | 1111101011001001—10 |
| England | 1111011110 — 8 | 1111111111—10 | 0111011111101110—11 |
| Clark | 1001111011— 7 | 1111111111—10 | 1111110101010011—12 |
| Edwards | 1010011101— 6 | 0011101001— 5 | 0101101010011100— 8 |
| Killetts | 1111010111— 8 | 1111111011— 9 | ... ... ... |
| Manlove | 0011101001— 5 | 1111100010— 6 | ... ... ... |

Some may think the above scores low, but those who were on hand and who realized the delights of a freezing cold gale, considered the shooters in great form. At the above stage a recess was declared for dinner, which was served in good shape by mine host Williams and his wife at the Wopsononock Hotel. After dinner the Delaware "band" regaled the party with such choice selection as "Old Man Simon," "Long Time Ago," etc., all of which were received in a tolerant spirit, the hearers seeing in just the humor to endure any kind of an infliction.

All this time the weather had been growing worse (and more of it) and Frank Butler had decided not to bring Miss Oakley out and risk her health, a conclusion approved by all. When the first afternoon train reached the ground, bringing along about a dozen people who had braved the elements for the sake of seeing the live bird shooting. Shooters cannot long be confined in a hotel parlor when a trap is within reach, so they soon tore themselves away from the sweet music (?) of the "band" and meandered back to the shooting house.

The first event was at 10 live birds, $3.50 entry, American Association rules, 28yds. rise, 3 moneys. Jacob Pentz was referee. The score line was about 2yds. in advance of the targets and was marked by a row of American flags. The light was simply abominable, there being a mist hanging over the outfield of such density that at times the boundary flags could not be seen. The birds acted in a peculiar manner, a number of those trapped during the earlier stages of the game refusing to fly, being chilled through by exposure to the piercing air. Later, however, after being kept alongside the hot stove they were a fair lot, some in fact being extra good. The scores of this event are here given:

| | | | |
|---|---|---|---|
| Doc | 0011120112—5 | Killetts | 1111022211100—7 |
| Clark | 1020212221—8 | England | 1111211012201—7 |
| Bilderbach | 0022101011—5 | Edwards | 1111201220220—7 |
| Manlove | 0002011212—6 | Quirk | 1111200122002—6 |
| Bell | 1210111111—9 | Tappan | 1111061001120—4 |

Killetts and England who tied on 7 each for third money decided to shoot off at 25 targets each on the following day.

The next event was a match at 5 birds each for $25, 30yds. rise, a side, between Clark and Sands, each man shooting at 30yds. The score was a tie so they shot-off, miss-and-out, the result of which, pueing here given:

| | Tie. | | Tie. |
|---|---|---|---|
| | ↗↘↗↖↖ ↘↖ | | ↙↘↗↘↖ ↗↗ |
| Clark | 1 0 1 1—3—0 2 | Sands | 1 0 2 0—3—0 0 |

Neither man was satisfied with the result so they agreed that on the following morning they would shoot for $50 a side at 25 birds each. This was the first match Sands had lost for several years. Before the party started for home Sands and Tappan shot a 5 bird match for $10, the score being:

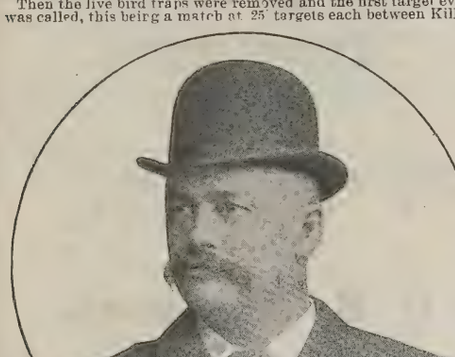
| | | | |
|---|---|---|---|
| Tappan | 21211—5 | Sands | 22210—3 |

This closed the sport of the day, and it is safe to say that despite the cutting sleet and general discomfort experienced no one had

anything but a jolly time. The ride down the mountain was marked by hilarity, and by the time the town was reached everybody was ready to do justice to supper.

At supper in the Logan House we had the pleasure of meeting Mrs. Charles Fehrenbach, who had accompanied her husband for the sake of getting a view of the scenery and to see Miss Oakley shoot, but who on this day was disappointed by being kept in doors. Mrs. Fehrenbach it was who superintended the arranging of the banquet served to the visitors during the recent Wilmington shoot, and like her husband she is an ardent lover of out door sport.

After supper a levee was held in Billy Clark's parlor, about a score of sportsmen being on hand. Songs, recitations and smoking, whiled away the hours until it was time for Billy to close up. Nelse Alsip distinguished himself by singing in a touching manner the old-familiar "Killarney" and by reciting "The Death of Little Wesley," both of which were listened to with rapt attention. There is one thing we must not forget to mention and that is the dish of pie sent in by Billy Clark. Oh, Billy! many fine pieces have we seen in our day, but never anything to compare with the pieces of mince so kindly donated by you.



Early in the evening Frank Butler dropped in and informed the party that as the weather showed no signs of improvement he would call off Miss Oakley's engagement, and at 10:40 that night "Little Sure Shot" took a train for the West en route to visit her mother in Woodland, Darke county, O., this being her first visit home for nearly five years. Mr. Butler himself bade good-bye to the party at a later hour, as he proposed starting for the East by an early train on Friday.

*The Second Day*

opened with a partly clear sky, but still there was a hazy look that was not at all cheering. The air was cold and crisp, and up to 2 A. M. it had been drizzling. Some of the party started up the mountain on the 9 A. M. train, while others remained until 10:30 awaiting weather developments. Before this time, however, the clouds had cleared away and the sun had deigned to show its head. As soon as the early train arrived the match between Clark and Sands was started, the weather being fair and the air cold and crisp. The wind blew from the same direction as on the previous day, although it was not nearly so strong. The birds were in much better condition than those used early on the previous day, some of them being phenomenally fast and calling for all the skill of the contestants. Each man shot at 23 birds, 30yds. rise, and Clark won by the appended score:

Clark.....2102111202222210110o121—18
Sands.....0002102112001212110210—15

Then the live bird traps were removed and the first target event was called, this being a match at 25 targets each between Killets

W. G. CLARK, of Altoona.

and England to decide the ownership of third money from the live bird event of the preceding day. The Alleghany man was the victor, as here shown:

England.....1111111011111101011111111—22
Killitts.....0111010111111011111011011—20

Then came the following programme events, No. 1 being at 20 singles, $2 entry, and No. 2 at 10 singles, $1 entry, three moneys in each:

| | No. 1. | No. 2. |
|---|---|---|
| Clark | 11101111111111111111—19 | 1111110110— 8 |
| Doc | 01011110111101111101—15 | 0100011111— 6 |
| Quirk | 11001101111101101101—13 | 1011000101— 5 |
| Killett | 10111101011111111101—16 | 1111110011— 8 |
| England | 11011111111111111110—18 | 1111111111—10 |
| Bell | 11100111011110111101—15 | 0111011001— 6 |
| Tappan | | 1100110111— 7 |
| Fehrenbach | | 1111110111— 9 |
| Edwards | | 1100100110 —5 |

Just here the party began to think of dinner, so over to the hotel they went, about a score seating themselves about the festive board. Mrs. Fehrenbach, Mrs. W. G. Clark and her four-year-old son, Master Charley, had braved the wind, and come up to see the shooting, remaining until after dinner. Master Charley is a bright little chap, and one who will be a sportsman when he attains the requisite age, being passionately fond, even at his age, of a gun and dog. After dinner there was more music by the "band," then a move to the grounds and a resumption of the target events.

And just here we would like to assert that in our humble opinion these grounds are in a class by themselves, as nowhere else have we heard of a trap-shooting ground where one might enjoy trap-shooting until wearied of the fun, and then by walking a few hundred yards in one direction, get a bag of woodcock or pheasants; walk off to the fields in the foreground and shoot cottontails, or by going half a mile or so secure (if lucky) a shot at a deer. Yet this is true of these grounds and the proof was given early in the afternoon. During the dinner the talk had drifted to game shooting, and one of the party gave a brief history of "Old Ironsides," a famous old buck with a magnificent pair of antlers who for years has defied the skill of the huntsmen. "Old Ironsides" is said to range as a rule on the opposide side of the ridge from the hotel and grounds, and although thousands of shots have been fired at him he is still monarch of all he surveys, and as he grows older he becomes more wary and alert to danger. All sorts of methods have been tried, but he is too keen to be trapped. Several times he has been hit and has been tracked by the blood marks, but never could he be found. While on this subject some one ventured the assertion that some of these days the wary old buck will lose his life at the hands of some inexperienced gunner, it being the rule that such game is killed by chance.

Incidentally it was also mentioned that a party of hunters headed by an Altoona farmer named Isaac Grazier had that day jumped two deer just below the hotel and that they were fairly sure of getting one or both. The forecast proved true, for about 2 P. M. along came the party dragging after them the carcass of a spike buck, killed about noon within half a mile of the grounds. Mr. Grazier stated that his party had jumped two deer, but that one had gone clear, although several shots were fired at it. We secured a picture of the party and the deer and then returned to the shooting house, where we were met by Mr. Banks, who had been missing from the traps for an hour. This time he had spent within a quarter mile of the house and had seen four pheasants, three of which he had brought back as the result of his tramp. We also secured a picture of Mr. Banks and his game.

During the afternoon quite a number of Altoona people visited the grounds and these were deeply interested in the shooting. None of the events had more than nine entries, but the scarcity of shooters did not deter those who were on hand from having the jolliest kind of a time. Below are the scores of the events shot after dinner. No. 3 being at 5 pairs of targets, $1 entry, and all the others at 10 singles, $1 entry;

| | No. 3 | No. 4. | No. 5 | No. 6. |
|---|---|---|---|---|
| Killetts | 00 10 10 00 10-3 | 1111001101-7 | 0010011111- 6 | 0010000101-3 |
| Doc | 10 01 10 11 01-6 | 1010111010-6 | 1111111111-10 | 0111101111-8 |
| Clark | 11 00 10 10 10-5 | 1111001111-8 | 1111111111-10 | 1111101101-8 |
| Bell | 11 10 10 00 00-4 | 1011101001-6 | | |
| Quirk | 10 11 10 11 01-7 | 1011111101-8 | 1011111011- 8 | 0010110116-5 |
| Bilderbach | | 1101111111-7 | 0111111001- 7 | 0111100111-8 |
| Kotty | | | 0101011000- 4 | 0010111111-7 |

| | No. 7. | No. 8. | No. 9. | No. 10. |
|---|---|---|---|---|
| Killetts | 0111110000—5 | 1110111111—9 | 0011110000—4 | 1011000100— 4 |
| Bilderbach | 0111010111—7 | 0111100111—7 | 0111001101—6 | 1111111111—10 |
| Quirk | 0111011011—7 | 1100001110—5 | 1010010000—3 | |
| Clark | 1111010011—8 | 0011111110—7 | 1101111111—9 | 1111001111— 8 |
| Doc | 1101001001—6 | 1000100001—3 | 1101110001—6 | |
| Edwards | | 0111111101—8 | 0110111000—6 | 1001011011— 6 |
| Bell | | 1110101011—7 | 1011001111—7 | 1110111111— 9 |
| Patterson | | 0001011110—5 | 1000001011—4 | |

Nelse Alsip refereed the above events, and on one occasion he created a laugh by a very unique decision. Bell was standing behind No. 4 trap, and when he called "pull" No. 3 trap was pulled by mistake and the target was shot at and missed. "Shoot at another target," said the astute referee, "you had no right to take that one." Bell did as he was told and broke his target, although it made no difference, his score being out of the division.

The final event was a miss and out, $2 entry, one money. There were only 19 birds on hand, so when this number was shot four of the five contestants were obliged to divide the pot. The score:

Tappan.....1121—4 Bell.....2121—4
Quirk.....1121—4 Killetts.....210 —2
Clark.....1111—4

Thus closed the second Wopsononock tournament, which, despite the inclement weather, can safely be classed as a pleasurable affair. Everybody was in a holiday humor from start to finish, and their good nature could not be ruffled by wind, rain, sleet, snow or cold. The contestants and spectators were of course disappointed at not seeing Miss Oakley shoot, but they consoled themselves with the hope of doing so in the near future. For ourselves, we are glad we took the trip, as we met a jovial, whole-souled lot of sportsmen, and had what we long wished for—a view of the famous "Wapsy" Mountain.

Coming down the mountain after the close of the tournament there was the usual hilarity, practical joking, etc., in which every one took a part. After supper another short "session" was held at Billy Clark's. Here we were informed that a three-days' tournament would be held during the early part of June, 1893, when it is hoped that the weather will be more favorable than last week. At 11:45 P. M. when we boarded the eastward bound express and had bade good-bye to the jolly Altoonians, we made up our mind that at the coming June tournament another visit to the place would be paid by C. H. TOWNSEND.

## Shooting at Dexter Park.

THERE was a fair lot of wing shots present at Dexter Park on Election Day and participated in one of Louis Miller's sweepstake shoots. R. Phister, Jr., and D. Snipe took away the best part of the money. The first six events were at targets from the rapid-firing system recently adopted at the grounds, and the last three were at live birds, five unknown traps, 25yds. rise. The score:

| | No. 1. | No. 2. |
|---|---|---|
| R Phister, Jr | 1111110110— 8 | 0110111111—8 |
| T Short | 0111110101— 7 | 1010010011—5 |

## Interstate Manufacturers' and Dealers' Association

IN response to a call by the manager, dated Nov. 12, a meeting of the Interstate Manufacturers' and Dealers' Association was held on Tuesday last at the Astor House. There were present Mr. J. A. Dressel of the U. M. C. Co., Mr. Sampson, Mr. H. C. Squires, Jr., Mr. H. A. Penrose, Mr. J. W. Clinton and Messrs. Pentz, Lewis and Grinnell representing the shooting press.

The meeting was called to order at 2:15 and Mr. Penrose was requested to take the chair, Mr. Clinton acting as secretary. The minutes of previous meeting were read and approved and the treasurer's report, called for, was read and approved. This showed that after delinquent assessments had been collected and outstanding bills paid, a balance of about $150 would remain in the hands of the treasurer.

The question of organization for the coming year was then taken up and various plans discussed. It was moved at length that Messrs. Dressel, Pentz and the Chair be made a committee on permanent organization, to draw up by-laws and submit plans of work for the ensuing year. Two members of this committee having declined to serve, Messrs. Sampson and Grinnell were substituted for them, the committee as appointed standing Messrs. Sampson, Dessel and Grinnell, who are to report at the next meeting, to be held Dec. 1, at 2 o'clock P. M., at the Astor House, New York city.

The question came up incidentally of the withdrawal at Watertown and Auburn of the guaranteed purses of the association. Of this Mr. Penrose said that at Watertown, on account of the great heat, the club held a meeting and requested that the purses be withdrawn as the weather was so hot that no one would shoot, and the money would be thrown away. In the case of Auburn it was said that the president of the Auburn Club had stated that there were a large number of shooters who would not enter if the regular entrance fee for these purses was charged, and that in order to secure this larger entry, the association has been requested to withdraw the purses.

As there seemed to be some uncertainty as to the position of a number of members of the association for the coming year, it was thought better to postpone further action until the next meeting to be held Dec. 1. The meeting then adjourned.

## The Unknown Gun Club.

THE members of the Unknown Gun Club were present on Thursday, Nov. 10, at Dexter Park, to compete for the club's championship trophy and sweepstake; for the first the best averages to count, all ties divided. J. Sampson, E. Vroom and H. Knebel, Sr., killed seven each. The rain beat down the birds so that they could not fly fast. The scores:

H Van Stader.....1110110—5 D Little.....1120211—6
J Sampson.....1212111—7 J Vaghts.....0112111—6
A B Merrihew.....1101201—5 C Miller.....2002111—5
E Vroome.....1211121—7 C Kollyer.....1010111—5
H Knebel, Sr.....2121112—7 J Rathbone.....0110222—4

First sweepstake, entry $1; Sampson 2, Merrihew 1, Little 1, Rathbone 2.
No. 2, same: Merrihew 3, Little 5, Rathbone 5.
No. 3, same: Merrihew 1, Little 2, Rathbone 0.

## The New Utrecht Rod and Gun Club.

THE regular monthly shoot by the members of the New Utrecht Rod and Gun Club for the live bird trophy was held at Woodlawn Park, Gravesend, L. I., on Monday, Nov. 14. Twelve entered at 10 birds each, 12 and 30yds., according to gun, under modified Hurlingham rules. All ties divided. The score:

Dr Wynn.....2012o21021—7 H Blattmacher.....0102101101—6
D C Burnett.....0121211112—9 W F Sykes.....1121210211—9

## American Manufacturers' Association.

THE following unsigned circular was sent out last week:

"To the manufacturers of sportsmen's supplies: There will be a meeting held at the Astor House, New York, Nov. 16, at 1 P. M., for the purpose of considering ways and means of promoting the interest of shooting in general, and trap shooting in particular, for the year 1893. Matters of importance to American manufacturers will be brought up, and you are earnestly requested to be represented."

In response to this a meeting was held on Wednesday at the Astor House at which the following firms were represented: H. C. Squires, American Wood Powder Co., U. S. Cartridge Co., Lefever Arms Co., Hunter Arms Co., W. Fred Quimby Co., Baker Arms Co., Tatham Shot Co., the American E. C. Powder Co., Cleveland Target Co.

When the meeting was called to order, Mr. Sanford, of the Winchester Arms Co., was chosen temporary chairman and Mr. Harry Squires temporary secretary.

Prospectus read by secretary set forth at some length the desirability of forming an association to increase the interest in trap-shooting. After it had been read in part, Mr. Quimby moved its adoption. Carried.

Mr. Quimby moved that the association be known as the American Manufacturers' Association.

Upon motion of Mr. Quimby the election of officers was taken up. Mr. Sanford was nominated for president, but declined. Mr. Chas. Tatham, nominated by Mr. Quimby, was elected president. Upon motion of Mr. Quimby, Mr. F. E. Belden was elected vice-president. Mr. Squires was elected secretary. Mr. Quimby, on motion of Mr. Lindsley, was elected treasurer. In the absence of Mr. Tatham, Mr. Quimby took the chair. Upon motion of Mr. Lindsley the chair was given power to appoint a committee of three upon organization, Mr. T. H. Keller, Mr. A. W. Dubray, Mr. A. D. Courtney. A recess of ten minutes was taken to give the committee time for discussion.

The committee reported that Mr. John Parker, of Detroit, be made manager for the year 1893. The committee was instructed to put the prospectus in such form that it may be sent out to the manufacturers. Upon motion of Mr. Lindsley the meeting adjourned.

## Trap at Watson's Park.

BURNSIDE, Ill., Nov 9.—Scores made here to-day by the South Chicago Gun Club, at 20 live pigeons each, under new Illinois State rules, for club medal:

L Willard 22121100212222212212—18 P Miller..2101020112222212111—17
A Reeves.1112210222211001021—16 D Larkin..1122021210101121220—16
J Watson.12111102211001111—17

L. C. Willard won medal.

For target medal, 30 bluerocks each: L. C. Willard, 16 out of 30; A. W. Reeves, 6 out of 21; John Watson, 5 out of 18; P. Miller, 20 out of 30; Doc Larkin, 7 out of 18.

*Nov. 11.*—Scores made here to-day by the Gun Club of Chicago, at 15 live pigeons each, under new Illinois State rules, for club medal:

J O'Brien .....012212112101111—13 W P Mussey..2101120221010222—11
L M Hamline.2212122220221121—14 *Cap Anson...0111121112111111—14

O'Brien.....00101—2 Adams's brother.....00002—1

RAVELRIGG.

## Parkway Rod and Gun Club.

A DRIVING snow storm did not prevent the members of the Parkway Rod and Gun Club from holding their regular monthly shoot at Dexter Park, on Wednesday, Nov. 9. The shooters were divided in three classes, with a prize for each class. A. Botty, J. Blake and J. Short, had a good race for the medal and class A prize; the first being the winner with a straight score of 19. H. Selover won in class B, and A. Walden in class C. It was quite dark when the last shot was fired. The scores:

| Class A. | | Class B. | |
|---|---|---|---|
| J Bennett | 2111120—6 | H Bramwell | 1202111—6 |
| E Helgans | 1122121—7 | H Selover | 1110112—6 |
| A Andrews | 1112120—6 | H Bookman | 2012202—5 |
| T Short | 1212212—7 | C Reim | 1121012—6 |
| J Blake | 1111112—7 | Class C. | |
| A Browers | 2220211—6 | M Meyer | 2211021—6 |
| A Botty | 2112122—7 | P Wolfert | 1111022—6 |
| T T Edgerton | 1111111—7 | A Wahlden | 2121111—7 |

## Ridgewood Gun Club.

THE members of the Ridgewood Gun Club held their last shoot of the season for the club badge, at C. Deckelman's Ridgewood Park, on Friday, Nov. 11. G. Durst and F. Ibert tied with 6 each out of 7 at 25yds. rise. On the shoot-off Ibert won. There was a high wind blowing during the shoot, which aided the birds in escaping the shot. The scores:

J Welz.....1022210—5 G Durst.....2211201—6
C Schneider.....0022002—3 C Kadel.....0022000—2
J Gardes.....1020201—4 L Gehring.....0222011—5
C Zerweck.....0001002—2 F Ibert.....2222202—6
G Nolte.....0002000—1 P J Eppig.....0121000—3
R Weigel.....0000220—2 C Deckelman.....0000022—2

## A Tie Shooting Match at Dexter.

AN exciting shooting match was shot off at Dexter Park on Friday, Nov. 11, between Frank Ibert and C. Wissell, the former is a well known brewer and the latter is the proprietor of Cypress Hill Park. Both shot at 50 birds, 27yds. rise, for $50 a side. C. Wissell led up to the thirty-fifth round and then gradually fell off. Ibert had bad luck in his birds falling dead out of bounds, but managed to kill his last three and made a tie of 33 each:

C Wissell.....2101220122100022122101—18
01212020111010220202122210—15—33

10cc2201220021222112e121—18—33

Referee, Mr. E. Helges.

## Fountain Gun Club.

THE Fountain Gun Club held its regular monthly shoot in a snow storm at Woodlawn Park, Gravesend, L. I., on Wednesday, Nov. 9. Ten competed for the best averages at 10 birds each. Just half of the number killed 10 straight, there not being any cash prizes, a sweepstake was shot off at three birds, then miss and out. Dr. Van Zile and A. Crook divided on the ninth round. The birds were fair considering the storm. The scores:

C Wingert.....1112121121—10 H W Blattmacher.0111102011— 7
A Eddy.....1111111111—10 J F Orr.....1010122111— 8

W Shumacker.....1121210111— 8 A Crook.....0112221212— 9
E H Garrison.....0220202222— 7 R Phister, Jr.....1121211112—10

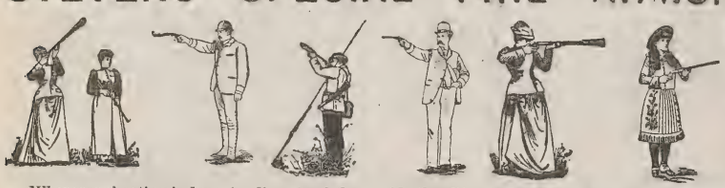
## Boiling Springs Gun Club.

THE first of the new series of monthly shoots of the Boiling Springs Gun Club was held on Nov. 9, the sport being cut short by the snowstorm. In the club shoot each man shot at 25 targets. The scores:

James .....1011111100111001111001111— 18
Meyer.....0110000001100101110111111—14
Laribels.....0010110100000000011110000— 9
Edebohls.....0010111101010100111001111—16
Paul .....1101110011000300110011110—12
Tee Kay.....1111111101100010100100110—17

In two 10 target sweeps the scores were: Tee Kay 7—8, Paul 8—6, Hobart 10—7, Meyer 7—5, Edebohls 2—1, James 6—5, Jones 5.

## American Wood Powder.



IT must long have been manifest from the FOREST AND STREAM'S trap-shooting reports from various parts of the country that the American wood powder has come to the front as a popular factor in trap work. The explosive has proved to possess so many points of excellence that its use may be fairly characterized as universal, and the leading cartridge-loading concerns catalogue American wood powder shells in their stock of standard supplies. The test of experience appears to have demonstrated the safety, efficiency and convenience of this form of nitro product.

STEVENS SPECIAL FIRE ARMS.

Wherever shooting is done, in all parts of the world, the Stevens Rifles and Pistols are being introduced, and on account of their superior accuracy are preferred.
STEVENS PISTOLS have made more brilliant records and have done finer work than any other pistol ever made.
STEVENS RIFLES have made records which were considered impossible.
STEVENS POCKET RIFLES are carried by ladies, anglers, tourists and hunters. They are marvels of accuracy, compactness and beauty.
STEVENS LADIES' RIFLE is the proper rifle for ladies. It is wonderfully accurate and has no recoil.
The .22 long rifle and the .25 rim-fire cartridges, the most accurate small-bore cartridges made, were originated by this company. These celebrated rifles and pistols are manufactured by

THE ART OF SHOOTING.
An Illustrated Treatise on the Art of Shooting. With extracts from the best authorities.
By CHARLES LANCASTER.
LONDON, 1891. PRICE $3.00.
AUTHOR'S PREFACE.
At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.
I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.
I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.
I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.
Forest and Stream Publishing Co., 318 Broadway, N.Y.

The Breech-Loader
AND HOW TO USE IT. By W. W. Greener. Illustrated.
1892. Boards, 288 pages. Price, $1.00.
THE AUTHOR'S INTRODUCTION EXPLAINS:
This treatise is written for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study. Published at a popular price, it will, it is hoped, reach many who have hitherto been deterred from shooting, believing it to be an expensive recreation. The author's aim is to induce all who can to participate in a manly sport, and to advance the interests of those who can look to the gun for pleasure, health or occupation. The book is not written for experts, nor for those who have special opportunities for the acquisition of the art of shooting; and in order to make it as attractive as possible to the general reader, many matters which would interest the enthusiastic shot only have been omitted.

## *THE NEW YORK ASSOCIATION.*

THE constitution which was adopted last June by the New York State Association for the Protection of Fish and Game provides for the complete separation of the trap-shooting and the deliberative purposes of the organization. The game and fish protection interests are intrusted to an executive committee made up by a representation of one delegate from each club, and this committee meets four times each year.

The first quarterly meeting of the executive committee was held in Syracuse last Thursday; and we are not saying too much in declaring that gathering to have been the most important in the recent history of the Association. For it was the Syracuse meeting of Nov. 17 which was to determine whether or not there was in the Association itself material for an efficient protective organization, whose members would gather in a business convention devoid of any shooting or other outside attractions whatever. The event more than justified the faith of those who were at the Syracuse meeting last winter and were determined to restore the State Association to its original purposes and activity, rather than to form a new society.

The meeting of last week was attended by delegates representing twenty-four clubs. The gathering was of mature, substantial, solid-looking men. The two sessions, morning and afternoon, were marked by interest, earnestness and harmony. For the initial meeting under the new order of things it was a grand showing of strength. In character and results the occasion gave the refutation direct to those carpers who, after the June meeting with the adoption of the new constitution, prophesied that we should see the same old purposeless and barren deliberative sessions. No one who was present and listened to the speeches of one after another, representing so many widely separated sections of the great State of New York, could longer doubt that the Association is rapidly getting into trim for a career of useful endeavor and achievement.

The time is certainly promising for such a renewal of effort, devotion and activity. There is no State in all this great Union where the conditions are richer in possibilities and promise. New York has in large measure passed beyond the stage of ignorant thoughtlessness and of criminal wastefulness as to her great natural resources of field and wood and stream and lake. The public has had a vast amount of wholesome education and enlightenment since the State Association was organized as the "Sportsmen's Club of the State of New York" in 1859; and since 1869 and 1879, and even 1889. Game protection, and more especially fish protection, have been growing in popular understanding and approbation, and they are, slowly it may be, but none the less surely, coming to have their right place in the public economy of a wisely administered commonwealth. At such a time and under such conditions, the new Association has had its birth, and the outlook for the future is most auspicious.

The keynote of this first Syracuse meeting was harmony and coöperation of sportsmen and sportsmen's clubs with the game protectors and the fish commissioners. And this must be taken as the keynote of the success of the Association.

There is in New York an admirable system of State Game and Fish Protectors. The system, it is true, is of human institution and cannot be perfect; but those who have given it the most careful and intelligent study are convinced of its possibilities. If game and fish are to be protected in this State, the work must be done by the State game protective service. The Association then has before it a very definite practical and practicable field of effort—to give aid, encouragement and support to Chief Pond and his deputies, and to develop and perfect the efficiency of the service.

A reading of the reports made by members of the Committee last Thursday will show that the clubs which have accomplished most are those which have called to their aid the district game protectors, or have secured the appointment of local protectors whose work they have directed and whom they have upheld in the discharge of duty.

While there is thus a practical mode in which every local protective club may accomplish its purpose, the converse is no less true, that in the Association and its constituent clubs the protectors have powerful allies. Indeed the aid rendered to the protectors by local clubs was gracefully and cordially acknowledged by Chief Protector Pond; and it must have occurred to every one present at Syracuse that such public gatherings of their friends and supporters will have a quickening and encouraging effect upon the protectors. It is a declaration to them that they are not fighting the battle alone.

The problem of New York game and fish protection is less complex than it was. The way to a solution appears to us to be clearly pointed out. It is to be found in the harmonious and co-operative working of the State protective service and the State Association.

It would be difficult to overestimate the possibilities of such a coöperation. The opportunity is an unusual one. But opportunities bring with them responsibilities. If the opportunity now inviting the New York State Association for the Protection of Fish and Game is such as it has never had before and such as no other organization of similar aim has ever had, the obligations which go with that opportunity are no less unusual and momentous; nor are they the less binding because they have been assumed voluntarily.

The spirit shown by the delegates who met in this first meeting gave unmistakable and abundant assurance that the Association is now in the control of those who appreciate its opportunities and will not seek to evade its responsibilities.

## *DEER ON LONG ISLAND.*

THE autumn of 1892 will long be remembered by Long Islanders and those who go there to gun for the abundance of its game. Deer are said to be especially numerous and many of them have been killed. Ducks, too, are much more plenty than usual, and the Great South Bay is said to be fairly covered with broadbills and other fowl. About the abundance of the quail not so much is said, yet a great many birds are found—great, strong-winged, stout fellows, that rise with a rattle like half a dozen snare drums, dart away like so many ruffed grouse, and plunge in to the densest cat-briers, whence it takes a plucky dog to start them again, and a quick eye and hand behind the double-barrel to stop them.

Of all the accounts of Long Island game which we receive, perhaps the most interesting is that which tells of the abundance of the deer. A dozen years ago these animals were supposed to be almost exterminated, and not long after this the Legislature established a five-year close time, which was reasonably well observed and gave the deer a chance to increase. At the expiration of this close time a large number of deer were killed, for the animals were numerous and tame. Various changes in the law have taken place, and at present the legal time for killing deer is limited to seven days in each year, or from the 10th to the 16th of November inclusive. Even in this short time many deer are secured, for they are very tame. One observer reported recently that in his locality, from Nov. 10 to Nov. 15, no less than thirty-eight deer were killed in the Long Island woods. It is but a few days since the passengers waiting at a station on the line of the Long Island R. R. saw a wild deer feeding on a lawn but a short distance from the station.

That deer still exist, and in considerable numbers, on Long Island is due not to the law—though, of course, this helps to preserve them—so much as to the existence of large preserves at that point on the south shore where the deer are most numerous. The extensive ground of the Southside Club, and of Messrs. Cutting, Vanderbilt and Fraser furnish a feeding ground and refuge where the animals feel safe from molestation. No shooting is allowed on these estates, and the result is at present the deer are holding their own if not increasing. Hunters will understand that they cannot pursue game here. This fall a man wounded a deer, which ran on to Mr. Vanderbilt's place and fell dead on his lawn. The hunter followed it until he came within sight of the house and saw the deer. Then, realizing that the game had escaped him by dying on another man's property, he left for parts unknown.

It may be doubted if anywhere on Long Island conditions prevail like those about Islip. If there were more of these large preserves there would be more deer within one hundred miles of New York.

## *NEW ENGLAND FISH COMMISSIONERS.*

THE Fish and Game Commissioners of New England met at the Parker House, Boston, on Wednesday, Nov. 16th. There were to have been present of the Massachusetts Commission, E. A. Brackett, of Winchester, E. H. Lathrop, of Springfield, and J. C. Young, of Wellfleet; of the Maine Commission, E. M. Stilwell of Bangor, Henry O. Stanley, of Dixfield, and E. W. Gould of Searsport; of the Rhode Island Commission. J. M. K. Southwick, of Newport, Henry T. Root, of Providence, and Wm. P. Morton, of Johnston; of the Connecticut Commission, James A. Bill of Bill Hill, and Wm. S. Downs of Birmingham; of the New Hampshire Commission, E. B. Hodge, of Plymouth, Willard H. Griffin of Kenniker and G. W. Riddle, of Manchester; of the Vermont Commission, John W. Titcomb, of Rutland, and F. H. Atherton, of Waterbury. But several of these gentlemen were hindered from being present, though a good delegation was at hand. Hon. E. M. Stilwell was taken sick, soon after reaching Boston, and could not be present. United States Fish Commissioner McDonald happened to be in Boston on his way from Washington to Gloucester, and was made the honored guest of the occasion. The desirability of a uniform code of game laws was discussed, but no decisive conclusion was reached. The Gilbert trout bill, which was presented to the last Massachusetts Legislature, and which provides that reared trout and other edible fish, raised and grown in private ponds, may be put on sale during the closed season, was talked over, and many of the gentlemen present were in favor of this measure, but no action was taken toward furthering it. Indeed this proved to be a rather inharmonious feature, since the Maine Commissioners, with Commissioner Hodge, and several others, are very pronounced against any measure so dangerous to the wild trout of the several States.

## *SNAP SHOTS.*

IN the work of awakening public sentiment on the forestry question in New Hampshire, Rev. J. B. Harrison writes in the *Critic*, a poem is needed, and he calls for some one to put into the "swinging movement of verse" the truth and the sentiment that shall appeal to the popular heart. "Let me make the songs of a nation and I care not who makes their laws." Mr. Harrison is right. The theme is worthy of our poets, and to aid in such a "campaign of education" were no mean ambition for a maker of verse.

At the Syracuse meeting of the New York State Association last week, a resolution was adopted calling on District Attorney Nicoll to bring the Delmonico woodcock case to trial. This may not move the District Attorney, but it will be quite likely to move public opinion, and public opinion will do the rest.

The date of the annual dinner of of the Massachusetts Fish and Game Protective Association has been set for Thursday evening, Dec. 8. President Harrison, President-elect Cleveland, Governor Russell, and other distinguished guests, have been invited.

There is a possibility that a special building may be provided for the angling exhibit at the World's Fair. The plan heretofore adopted has been to make the angling display a part of the fisheries division.

We are told that the Vermont proposition to license netting in Missisquoi Bay is of the nature of a retaliatory measure against Canadian fishermen. The Vermont bill has passed both houses.

# The Sportsman Tourist.

## RUSTLINGS FROM THE SELKIRKS.

LARDEAU CAMP, Trout Lake, West Kootenay, Aug. 31.—The FOREST AND STREAM reaches me at this point of the Selkirk range by the way of Revelstoke at the second crossing of the C. P. R., thence south twenty-eight miles by the C. & K. line of steamers to Hall's Landing on the Columbia, where the responsibility of the Government mail service ceases and the welcome visitor is forwarded by individual courtesy twelve miles by rowboat to the end of north arm of Upper Arrow Lake, and by trail of fifteen miles over the divide, where it is perused from time to time by twenty or more prospectors, who make this point headquarters for supplies both for placer and quartz mining. They pack their requirements for a trip of from six to ten days, as circumstances warrant, and rustle over the mountains of this undeniably rich mineral belt; and when the grub is out they return for a rest and feed, and to compare notes and exchange interesting souvenirs of their varied experiences. It is good manners and wise policy to refrain in any manner from questioning the veracity of camp-fire narratives.

These first-comers in a new mineral field get the cream of the finds. Later on rich locations may be made by expensive prospecting of covered veins.

It may be interesting (at least to your English readers) to know that developments of mining prospects in this section disclose large bodies of galena on several ledges that assay from 40 to 300oz. of silver, and at least three locations show ore in considerable quantities assaying from $600 to $1,400 in silver and gold, besides from 40 to 60 per cent. of lead to the ton.

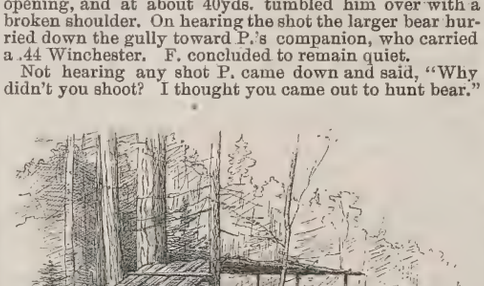
In your issue of Aug. 11—lately received by pack train—you suggest that your angling columns are always open to communications. As this is a section abounding in game, consisting of bear in four varieties, caribou, deer, mountain goat, three kinds of grouse, and fish in variety, quantity and quality, there is something to write about.

But what about bears, caribou and fish? Well, this camp, consisting regularly of five shacks of six large tents, with occasional temporary additions of from two to six single fly tents, is abundantly supplied with salmon, trout and caribou, but no goats have yet been shot, although many have been seen, and one of our party, armed with a revolver, thought he had a lot of six corraled on the side of a cliff, where they could not escape, but four went up the nearly perpendicular cliff, where it did not seem possible to obtain a footing, and two went into a cave or grotto, where, after passing a very dangerous point of the rocks, he followed them, and seeing their eyes glistening in the dark several yards in the rear, he blazed away. Moving forward and hearing a scrambling to the left he looked round in time to see them emerge from the entrance which they had reached by a side passage. It takes a high climber to get mountain goat, and when found you don't most always get them.

In this section caribou are found during June and July lying down in the snow in some basin or side bench high up, where they can see any approach from below. All above the edges and in the hollows of the snow they find the fine moss blown from the trees and they are also less annoyed by flies and mosquitoes than on the lower benches, where they can be found evenings and at early dawn on the caribou marshes feeding or drinking. In August and September they remain lower down, and about the first of October the bucks begin to roam and round up the does and heifers into bands that work up the mountain when heavy snows come. They remain all winter high up among the balsams and gray moss. Last July, being camped about nine miles down the lake, I loaned my .55-38 Marlin to Andrew A., who was doing assessment work on a claim high up the mountains. The next day five caribou came up below him and lay down in the snow. His companion skirted the edge of the cliff, and at 150 or 200yds, shot two fat heifers. Each cartridge got a caribou, which was a very acceptable addition to grub supplies. It is lawful for miners to shoot all game required for food. A sack of the dried meat was brought to this camp, and about the time it was gone Blackburn's party shot a fat bull and cow that were discovered on the snow in a basin just below the summit. The velveted horns and most of the meat was brought down to camp, where it was smoked and dried.

Personally, I have toted a pole-pick more than a rifle this year in search of or examining other parties' finds of metalliferous deposits. Three days ago Juric N. came in and reported to me, confidentially, that "about four miles out on the North Fork trail, half a mile beyond Poole's shack, he found, on the first and second benches, plenty of caribou tracks, with the skunk's cabbage and devil club all beaten down." As I had leisure for a few days while waiting for the superintendent of the Revelstoke Smelter and an English mining expert, I put up four days' grub and packed out to the locality, camping at the shack. I found plenty of tracks, large and small, and the beaten down skunk's cabbage and devil club, that delusive and luxuriant species of the cactus that grasped at when climbing, "biteth like a serpent and stingeth like an adder," but although a dozen or more runways centered at one of the marshes on the creek, a mile up from the trail, the track-makers did not show themselves during a two days' stay. By my camping above the marsh they would have come to me, sooner or later, but the weather was bad, sleety and wet, and I did not at this time wish to risk the exposure in the open.

Now, a few words about fishing. Trout Lake is about twenty miles long and from one to three wide. My first experience fishing its clear water was in July and August last year. The sample, two hours' trial, was a success. Paddling a dugout canoe along the East Shore for a mile or so, trolling 100ft. of strong line and a large three-hook spoon tackle fastened with wire at the end, two 5lbs. salmon were secured after the usual circus of deep diving, high flopping and incoming tactics. Crossing the lake I caught two larger salmon weighing 10 to 12lbs. each. On the west side near a creek a 3lbs. brook trout was hooked and secured, and at the mouth of a large and deep creek at the extreme right of the lake two lake trout, with long heads and slim bodies, were hooked and "run in" after a plucky fight. The aggregate weight of the seven fish was about 48lbs. This was about average luck of the fishermen, although several spoons were lost by not having a wire fastening.



Later on, in August, when about six miles down the lake I put out the troll line, and on reaching my destination, 16 miles down, I showed up four salmon that would dress 8 to 10lbs. each, their tails being from 9 to 11in. broad and their length twice their center girt. A few have been landed that weigh 18 to 20lbs.

This year I fished with a rod and live minnow bait in the beforementioned deep creek, and hooked and landed two lake trout weighing about 6lbs. each. Mr. Hough should have been here to see the battle; he could tell the boys about it in a manner to make their desk chairs very uncomfortable sittings.

Silver and rainbow trout from ¾ to 1¼lbs. weight can be caught in August and September in the Lardeaux River that runs by our camp and empties into the northeast end of the lake. From 5 to 6 P. M. they rise readily to fly tackle and make good sport for an expert with light rod and reel. When a salmon takes off the spoon tackle he jumps out of the water the same as when on the line.

Regarding bear, the bulldog head grizzly will not always attack on sight as the long nose, white-face grizzly of the upper Columbia does; but they loom up large, and when wounded invariably go for the gun smoke, and they strike their foe without rising, as is customary with the black and brown bear. As it generally takes several shots to stop a large grizzly, old prospectors do not tackle them unless they have a clear field and possible opportunity for inflicting a mortal wound. Their weight in this section ranges from 600 to 1,200lbs. Last May Mr. P. and partner went up the mountain to the right of this camp for bear and found two grizzly in a gully about two miles from the head of the lake. P., who was ahead, shot one with his .45-90 Winchester. It was a fatal shot, at 75yds., but on locating the smoke the bear scrambled rapidly up toward it. P. waited coolly for a favorable opening, and at about 40yds. tumbled him over with a broken shoulder. On hearing the shot the larger bear hurried down the gully toward P.'s companion, who carried a .44 Winchester. F. concluded to remain quiet.

Not hearing any shot P. came down and said, "Why didn't you shoot? I thought you came out to hunt bear."

"WAYLAND'S" SELKIRK SHACK.

Made with cedar bark, without a nail, grooved and tied with cedar bark withes. Slanting roof 9x14. Flat roof 9x12.

F. is said to have stammered out, "I–I don't know as I've lost any bear around here."

The skin of this bear has just been sent out by pack train. It was in prime condition and the four claws were over 4in. long clear of the flesh.

Jack S. shot a charging grizzly dead, with his only cartridge, at 20yds. The ball went in above the eyes and ranged lengthways through the body.

Last month Tom A. and partner were chased by a grizzly that was rooting up gopher holes. They had no weapon but a knife. As a bear cannot travel as fast down as up hill, they struck down for the trail toward their cabin, not far distant. The bear was gaining on them and the situation was a serious one, both being nearly winded, when as a desperate resort Tom stopped suddenly, turned and swung his hat, at the same time shouting with all the strength of will he could master. For a wonder their pursuer stopped, which gave K. time to run down a bluff and reach the cabin where Tom soon joined him, followed by the bear, which stopped on seeing the cabin door shut in his face.

Only last week two men from this camp were prospecting on the west range, when, four miles from camp, they came upon four large grizzlies nosing among the roots of a green slide like a lot of swine. It is seldom that more than two are seen in company. Very few silver-tips have been met here this year. Only one has been shot, within my knowledge. Their skins are not so heavily furred as the grizzly. The hair is about 5in. long on the back, of which 3in. is black tipped with white. They weigh from 400 to 600lbs. The brown bears are also scarce and range in size with the black bear, which are very plentiful and weigh from 200 to 400lbs., and will run on sight of man. A good trapper can make large wages during the winter by trapping beaver, martin, fisher, otter, wolverine and skunk, and in poisoning black and gray wolves.

This melange will be wound up by the narration of a ten minutes' personal adventure last September in the Lower Arrow Lake section. As I was coming down the mountain a perpendicular bluff necessitated a detour. Turning to the right I struck a deer runway, and while following it down in a diagonal direction I was brought to a standstill by the sight of a stump or a deer's head and neck just showing up on the edge of the bench below at a distance of 800 or 1,000yds. The object was perfectly motionless and so was I, who was bound to wait a while for demonstrations in case the doubtful object should be animated. It seemed a long time to wait, but finally a slight movement of the head was made and then slowly the whole form of a full-grown black-tail deer came into view. Cocking my rifle I sunk down and crawled behind a rock and then worked my way down to a gully so as not to be seen by the approaching deer, which I soon perceived was accompanied by a young fawn trotting a few yards behind. The old doe came forward with a sort of ambling trot that took her over the ground rapidly. Occasionally she would stop and look round for the fawn and also to try and hear or get scent of something suspicious ahead. These tactics were repeated several times until within 100yds, or so, when it seemed she got scent of me, as she approached very cautiously and looked over to the tree behind which I was stationed, admiring the animated and rare display of untamed and undomesticated maternal solicitude. Although my rifle constantly covered the deer I had decided to refrain from pulling trigger until the quarry was at the head of the gully, about 60yds. away and squarely sideways to me. On nearly reaching this location the deer stopped and looked directly my way, at the same time turning her head round toward the fawn, which came trotting up. The deer then looked over to me and I fancied if she could talk would have said: "Sir, I cannot see you, but I feel that you are near me. I have taken extra risk of exposure by daylight in accompanying this little one to the lake for drink. Pray do not take advantage of my maternal complacency, but let us go in peace."

Although handy to camp I lowered my rifle and let her go on up the mountain.

WAYLAND.

## ANOTHER EXPLORATION.

QUEBEC.—Since our excursion to Lake Pas de Nom we have made another exploration somewhat more interesting. It was on a river well known now to many American anglers, but mostly on a part of it where in all human probability no fisherman before us had ever cast a fly.

Our rendezvous was at the Tenth Portage, familiarly known as "Le Dixieme," or "The Tenth." My Professor was a day late in arriving, which did not surprise or disconcert me at all, for I knew that the railway by which he must come from his summer retreat could be relied on to miss all the connections possible.

But when he did arrive we were all ready to embark, two canoes, three passengers and three boatmen. One canoe was my old Chameau or Camel, which it requires two men to handle properly or portage. She gets her name partly from her carrying capacity and partly because she has been so loaded and knocked about, so wrecked, repaired and re-covered that she has lost all semblance of her original form and looks about as much like a camel as she does like a canoe. She was originally covered with bark, but when that eventually got beyond repair I substituted canvas.

The river we were to go up has a bad name. The Canadians generally stigmatize it as *une méchante rivière* (a wicked river). I had taken care to have good men. The faithful Nazaire did not feel equal to the trip, and I took Damase in his place. Damase is a good all-round canoeman, though he had no special acquaintance with these waters. But he is a man a good deal of Nazaire's stamp. If there is a thing to be done or a place to be reached, you can rely on him to reach that place and do that thing, and I knew that he had courage and endurance *à toute épreuve*. There is no better man for work in the woods than Damase. He is a good deal of a hunter too, and I expect has killed more caribou than any other man in all this region. The manners and customs of all the beasts and birds whose tracks we came across were quite familiar to him. Those sharp eyes of his would see a muskrat's hole where I could find only a lot of brush. *C'est le diable pour se cacher* (he is the devil for hiding), he said of one duck that was seen a little way ahead of us on a river; but he spied him out in his tangle of branches, and we ate him for breakfast. I am rather afraid Damase has not all the regard for the game laws that a really good citizen ought to have, and I was half glad that no caribou came within shooting distance of us. On the duck and partridge question we were all right, but about the caribou it was not certain, and Damase did not seem to care. But I fear me much that if one had come within our reach I should have risked becoming *particeps criminis* with him by eating a piece of the steak. (We found afterward that my scruples were needless, as the close season ended on the first of the month instead of the 15th, of which I was not quite sure.) Just now I am reminded of what he said about the superiority of modern firearms. Formerly, in the days of the old-fashioned muzzleloaders, a good many caribou escaped, but now, with the Winchester rifle, *Quand on les voit on les tue* (when we can see them we can kill them). I remember once, a good while ago, I asked him if the caribou had any particular abiding places or if they herded together in yards, like moose. He said, "*Non, il est toujours chez lui*" (No, he is always everywhere at home). Damase is a good deal like that himself, always and everywhere at home in the woods.

The other two canoemen were men who go annually into the region we wanted to visit for the purpose of trapping, and so were somewhat familiar with the river. I find that many of these trappers remain on their grounds only some five or six weeks in the year, going into the woods about Oct. 1 and returning by the middle of November. They go two together, set some 300 or 400 traps and snares of different kinds, visit them twice or three times, and then take them up and go home, working in lumber shanties through the winter. They go about in their canoes, and get away before the ice is very troublesome. A smaller class stay longer, going the rounds of their traps of course on foot after the cold weather sets in. My men said that their first and last rounds, when setting and baiting the traps and when taking them up, usually took two weeks time, and the intermediate rounds about one week. They establish a good camp for their headquarters and for storing their furs, and carry a light tent for shelter on their journeys. The peltries are mainly beaver, otter, mink, muskrat, marten and foxes.

Having made the short portage of Le Dixieme, we were poled up the river, the current being too swift for much paddling. The first rapid we reached was "Les Trois Roches," where the passengers scramble through the woods as best they could, but the canoes were got up without unloading. Here we got the first trout of our trip and so were sure of our supper, but a couple of hours later, at the mouth of the Pierre, we could have taken enough for half a dozen suppers in a very short time. There we camped and caught what we wanted, putting back into the water all but enough of the largest ones for a couple of meals.

Next morning we started up river again. So far as this I had been fishing before, but beyond all was new—at least in summer. We were not going far and had plenty of time, so we dropped our flies in a good many likely looking places and rarely failed to get as many trout as we cared to stop for. We poled nearly all the way, but got on well. As Damase's help was not needed he took a gun and started off into the woods to try to get

us some partridges, he said, but I fear he was looking for caribou.

When he rejoined us toward evening he reported having seen in a swamp a pathway of caribou "*Ça de large et ça de creux*" (so wide and so deep). I discounted his story by 75 per cent., as I usually do with such reports; but even then it was apparent he had come across the track of several animals, perhaps four or five and perhaps a dozen. He said he waited a while in hopes of seeing one, but as it was getting late and we might need him he came away.

Our young gunning friend was all enthusiasm for going out early next morning to try for a shot. But in the morning, when he found that it had been raining during the night, and that the swamp was a couple of miles away, his ardor abated. Moreover, the night previous he had burned his boots so that there was not much left of them but the soles and the lacings, and on the whole he thought he had better stick to trout fishing, which he could do barefoot. I approved of his prudence, for I knew that Damase has no more idea of distance than an Indian, and his two miles were as likely to be five as anything else.

I occasionally get a laugh on Damase when he undertakes to tell how far it is to any place by repeating what an Indian is reported to have said: "*C'est tout proche; on voit la bocagne. Rien que quinze lieues.*" (It is close by; you can see the smoke. Only fifteen leagues.) Five or ten miles, I know, are nothing to him. I used to think I was a fair all-day snowshoer myself, but never, in my best days, would I have trusted myself to follow Damase on a caribou hunt. I only know of one man that I would bet on to do it, and that man hasn't any more meat on his bones than would decently cover a clothes pin. Damase isn't built that way at all. He stands about 5ft. 10in. and weighs 180lbs. He doesn't start suddenly, but when he gets to going he don't stop. He goes over the ground like one of those carcajons, whose tracks are occasionally—very rarely of late years—found in these woods; that same steady, monotonous, unrelenting putting of one never-tiring foot before another. And like the carcajon, he eats when he gets there, not before. There is no stopping for lunch or 5 o'clock tea with him. The good Nazaire was not an easy man to keep along with when he was in his prime, but Damase I always had a wholesome awe of in that particular and never took him on a long tramp. So I am not sure but our young friend was fortunate in having his boots burned.

At the rapids à Thifaut we found, as we expected, that we had serious work before us if we insisted on camping further up the river. At that stage of the water it was possible to get up the empty canvas, without passengers or baggage, and we decided to camp there and do the rest of our exploring without our impedimenta. So, while the tents were being pitched some of us fished. And such fishing! The river seemed to be teeming with trout, and they were hungry. So were we, but we avoided taking small ones as much as we could, and when we got them put them back. We took none so large as I thought it likely we should get. The largest ones were of about a pound and a quarter and from that down. We saved none that would weigh under about half a pound. I was rather surprised that we saw none of all of those three and four-pound fellows such as are sometimes found a good deal further up the river and in some of its branches. Not that I care about them, a trout that will weigh three-quarters of a pound or a pound suits me well enough for sport and is far better eating, but we were on an exploring expedition. There are, no doubt, some very large trout in the streams and lakes further up, but I have never seen them. In some places I believe they will take the fly and in others they will not. I heard to-day that a gentleman from New York recently took one weighing 7¼lbs. But it was taken with bait in 60ft. of water. My informant, a sportsman *pur sang*, who I think would sooner go hungry—just a little bit—than take *fontinalis* with anything but a fly, said he would as soon fish for cod. I don't exactly know how I should feel about it myself. I am not so much a sportsman as he. But as I said before, three-quarters of a pound will do very well, and six men can dispose of a very fair lot of them, especially when Damase is of the party. We got enough. We could not have eaten any more and had very little salt.

So we camped, and the next morning the empty canoes were poled up the rapids. The passengers, with Damase, took to the woods, where we found a very good path made by some lumbermen who had been obliged to portage a good part of the provisions for "the drive" on their backs. The rapids are called a mile and a half long, but the mile is a long one. The canoemen said that after the rapids we should have a mile and a half of *eau morte*, but I found their ideas of dead water very different from mine. Apparently, to them dead water is any water that is not broken into rapids white with foam. The current was still very swift, and we poled nearly all the way from the top of the rapids à Thifaut up to those of La Sauvagesse, where the passengers disembarked again. The water being low, we crept along the river bank. The rapids à Thifaut are wide and shallow, while those of La Sauvagesse are steep and broken by enormous boulders. One, quite in the middle of the river, called "*La tuque de la Sauvagesse*," bears a striking resemblance to that characteristic Canadian headgear, the "tuque." The canoes were coaxed along from rock to rock and from point to point, and at about a couple of miles further up stream we lunched—and fished.

There were trout everywhere.

Here too, as in many other places we found the "ouatasee." This fish is so common here that it seems to me he is hardly appreciated as he ought to be, for he is very good eating indeed and a really good sized one is no fool to handle with a light rod. I took one weighing about 2lbs. with a fly, just below the surface, although usually only the smaller ones rise. The Professor eventually succeeded in getting one home in order to settle a disputed point. Its real name is *Leucosomus pulchellus*, but it is variously called "roach," "roach-dace," "red-fin," etc., and is widely distributed. A man told me once that after a few days of fish diet he and the men with him actually preferred the "ouatasee" to the trout.

Having gone up river as far as I felt any special interest in going, and having reached a place where for a long distance the river was wide, and too shallow for either of our canoes, we decided on turning back. The Professor and I loafed and fished a little, our gunner went for ducks, but got us only one, and Damase took an hour's tramp into the woods, trying to find a couple of lakes where I was told by excellent authority I could load a boat with trout in a couple of hours. We didn't want a boat load of trout just then, but thought that if there were any such lakes in the neighborhood we should like to see them. We afterward learned that we had gone beyond them, and that if we had looked for them a mile or so further down instead of up the river, we should have found them in ten minutes. So there are more lakes that no fly-fisherman has ever visited and another excursion in store for us next summer. Two of my friends had come across these lakes when caribou hunting. Whether those big trout that were so ravenous in winter will take the fly next August remains to be seen.

We ran the rapids of La Sauvagesse in a very small fraction of the time it had taken us to go up. It was as exciting a business as I wish to engage in. If our canoes had not been beautifully handled we should surely have been swamped. I have run rapids before, but I will award the palm to La Sauvagesse. At the rapids à Thifaut a difference of opinion between our two men resulted in running us on to a rock, where we came within an ace of getting capsized. We ran part of them safely until we came to a place where Lazare said we must get out or risk the whole with no chance of getting to shore.

We disembarked and Damase ran the canoe down alone, reporting that we might all have gone as well as not, and got out with perfect safety within a few yards of our camp. There was a little friction between the two men about that time, but I incline to think Damase was correct, for we had already decided that Lazare's prudence verged very closely on timidity. But he knows more about running rapids than I do, and it is a matter in which it is best to err on the safe side.

At the foot of the rapids and close by our camp I fished again. And what quantities of trout there were! At almost every cast one, two and sometimes three little chaps would be out of the water at once, tumbling over and turning somersaults in the most ludicrous manner. I

A LITTLE FISHER MAID.

(Forest and Stream Amateur Photography Competition.)

laughed until I was tired. We did not care for many more fish and we threw the flies chiefly to see the trout jump at them, avoiding catching them as much as I could; but once in a while a bigger fellow would rush in, and make off with the hook himself. Him we saved for the frying pan, but the small ones went back into the river very little the worse for their experiences. Some people might say it was cruel sport, but I am of those who think fish are not very sensible to pain. It was only a few days ago that a trout carried off a poorly fastened fly for me, and within five minutes he rose again and I caught him with the hook still sticking in his mouth. Two acquaintances of mine were fishing together when one lost his whole casting line with three flies on it. A few minutes later the other man caught the trout and recovered the whole thing. So I do not consider that my quarter of an hour's amusement hurt the trout much, though I do not know that I ever before fished for trout that were not wanted to be eaten. I do not approve of cruelty even to fishes. I invariably kill my trout before taking them out of the landing net as the most safe, convenient and humane method. I do not like to see or hear them flopping about in the bottom of the canoe. I had a man with me once who used to put his fish alive inside his flannel shirt and next his skin for safe keeping. I should think the feeling would be disagreeable.

I have said we had very little salt and so we despaired of being able to send any fish to our friends. But one of the men found a logging road near our tents and some distance up the road was a camp and in the camp was a small box of coarse salt, left there because not worth carrying away. It was a godsend for us. We packed up a good lot of trout to send away and the Professor carefully salted and packed the 2lb. "ouatasee" to take home, for one of his friends had insisted that a fish with such a mouth as was described to him must be a sucker and would never rise to a fly. When the fish was nicely prepared for transportation we came away and left it, forgetting all about it. Perhaps he is there yet.

We went down the river, ran all the rapids, camped again at the mouth of the Pierre, caught more trout and other "ouatasee" and reached the railway near The Tenth two hours before our train was due and four hours before it arrived. There was plenty of time to amuse ourselves with photography and novel reading but we eventually reached a camping ground on our homeward route and arrived back at Lake Clair in good time the next day. The Professor allowed that it was all very well to visit and explore new fishing grounds but when one is in Paradise one might as well stay there, and that hereafter he was not to be tempted away from our favorite lake. It is true that of all trout the Lake Clair trout is "first and there is no second."

# Natural History.

## A PRAIRIE CHICKEN MIGRATION.

DURING the summer of 1886 it was my good fortune to make a ten days' visit to Isle Royale. I do not think any one was living on the island at the time except light-keepers, but I met quite a number of fishermen and old miners who as well as the light-keepers knew a good deal about the place and from all of whom I received much information concerning the beasts and birds that were to be there found. Of the latter the only game bird that was mentioned was the partridge or ruffed grouse.

Last summer (1890) I made a second visit to the rocky little island and was surprised to find that in addition to the ruffed grouse, the pinnated or prairie chicken was also an inhabitant. At our first camping place which was near by the abandoned Minong copper mine, we met with as handsome a covey of chickens as I have seen in many a day. They were real prairie chickens and no mistake.

Again I interviewed "ye ancient ones," for my curiosity was excited—excited not only because their presence run counter to the information of five years before, but for the further reason that the exceedingly rocky, rough, mountainous, timbered and bush-covered island was not the character of country in which I had been accustomed to seeing these birds. But the old fishermen and others assured me the birds were there, but they had "recently come in" they said. "How long since?" "Three or four years ago," answered one and "four or five" another, and "a few years ago" answered still another, and so on.

It is enough to say that I was satisfied that the prairie chicken was a recent arrival, but whence came it, was the next question. The island is from twenty to thirty miles from the North Shore of Lake Superior (I write without map or data before me) and it seemed reasonable enough that the birds could have crossed on the ice like the deer are said to do, but the country along the North Shore as seen from the deck of a steamer seemed so inhospitable to prairie chicken life, that it looked unreasonable to account for their presence from that quarter.

Later on Jo and I made a canoe trip along the boundary between Canada and Minnesota. We followed that somewhat remarkable lacustrine water way which begins at the mouth of the Pigeon River on the North Shore and leads northwesterly to the Lake of the Woods. Leaving the North Shore at Grand Marais we wagoned and packed across the country to the lake chain we were to follow, reaching it about fifty miles from the mouth of the river.

For a few miles after leaving Grand Marais the country was covered by a dense forest of timber, but on reaching the high land which was ten or twelve miles back from the lake we found ourselves in an exceedingly hilly, nay mountainous and rocky region, which at one time had evidently been a finely timbered region, but the timber had been swept away by fires and the whole country was overgrown with thickets of bushes and saplings. Our Indian guides, Shingibis and Swamper, spoke of this region as "the plains," and both assured us that prairie chickens were to be found on these "plains."

Shingibis was little if any short of sixty years of age, but was still rugged and capable. He had spent all his life in the woods as trapper and hunter, several years being in the employ of the fur companies. He was an intelligent woodsman and I have no reason to suspect the truth of what he said. We did not ourselves see any chickens, but we were told by others afterwards, who had been through the region, that the story of the Indians was true.

Whence came the chickens to the so called "plains" of the North Shore?

Before leaving the island I met with a very intelligent gentleman from Duluth, whose name I have forgotten, who gave me the following account of a chicken migration. "Some twelve or fifteen years ago," he said, "the prairie chickens invaded Duluth and vicinity in flocks of thousands. They came apparently from the west and south, and great numbers perished in the lake while others passed on down the North Shore and went no one knew where." It was generally supposed he said that they were fleeing from the hunters.

A more diligent inquiry might have resulted in more definite information, but I had no opportunity to make it. The question is one that is not altogether devoid of interest. Four-footed animals have been known to migrate—to leave one country for another when the former became too hot for them on account of the hunters, or too poor for them because of the lack of food; and so too the wild turkey and the quail will move from one locality to another in search of food. I know of an instance (from report of those who saw) of the wild turkeys traveling from one part of Indiana to another in the early day, in search of more abundant food. They traveled in a scattered flock and were half a day passing a given point. But this chicken migration is, to say the least, quite remarkable—remarkable because of the great distance the birds have apparently traveled, and because of the new conditions to which they seem to be habituating themselves.

D. D. BANTA.

### Eggs Killed by Heat.

QUAIL seem to be less numerous this season than for several years past. Some suppose the wet spring was the cause of the scarcity, but I cannot assign that reason, as the rains were too early, for it is known that the hatching season is not until about harvest time. My opinion is that the hot summer had much to do with it. Whether this opinion has ever been held by others I cannot say, but I noticed that after an uncommonly hot summer years ago the birds were unusually scarce. I reason upon the case thus: a degree of heat above 106° Fahr. is dangerous to the germ of the egg. Now, supposing the temperature of the egg at a certain stage of incubation to be 100°; when the bird leaves her nest in quest of food, the rays of the sun, should they find entrance to the nest, must in a short time raise the temperature of the eggs sufficiently to kill all or a portion of them. Does not the reason seem quite plausible?

WEST VIRGINIAN.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

## SWAMP RABBIT vs. MINK AND WILDCAT

DURING the highest rise of Red River in the great overflow of last summer, it was my misfortune to be an eye-witness of a scene that is rarely ever presented to a hunter.

In May the river warned the planters of the parishes on both sides that it was necessary to move their stock to the hills for safety. Barely had we time to drive our stock of mules and cattle from Gold Dust Landing to the foot of Indian Hill, on the Bossier Parish side, before the levees around Navigator Point broke, and the raging waters rushed under the residence of my son-in-law, Lawson K. Hodges. A delay of six hours would have drowned our entire stock.

Mr. Hodges remained in his house to take care of it, while my daughter and granddaughter went to Shreveport. From Indian Hill I drove the stock to the hills bordering on Lake Bisteneau. There I remained for several weeks, until my anxiety to learn the condition of my friends on the river determined me to take a skiff and row over to Gold Dust.

It was a Sunday morning, about the first of June, when I stepped into an excellent skiff at the foot of Indian Hill to go to Gold Dust. I had four good oarsmen to pull against the racing waters. This hill, named after the Caddo tribe of Indians, who had a village on its summit as late as the first settlement of Shreveport, was a splendid site for those dusky aborigines. Nowhere was game more abundant. The finest trout and perch literally filled all the bayous and lakes. Four large springs boiled up along the foot of the hill, thus affording the tribe the best of drinking water; and to this day do many families along the banks of Red River camp during a part of the summer at these springs, and enjoy themselves in hunting and fishing. It is only four and a half miles from them to Knox Point or Red River. A public road leads from the hill across the bottom to the river, and no doubt it had been an Indian trail for hundreds of years before the first white man traveled it. Half a mile from the hill runs Red Chute, which was crossed by a good bridge. In not many places is Red Chute fordable. At the bridge the bayou is some 400ft. wide, and just below it widens into Swan Lake, that is from half a mile to a mile or more in width, and over ten miles long. Red Chute takes its rise way up in Arkasas, where it is called Bodceau, which expands into a long, wide lake of the same name about thirty miles north of the bridge. From this lake it takes the name of Red Chute. During the summer Swan Lake goes dry, while Red Chute cuts its way above the bridge by a bayou known as Cross Bayou, which is two and one-half miles long and empties into Platt River, about a mile from Knox Point. My route would take me to the bridge and thence up the chute as far as the plantation of W. H. & C. B. Hodges, thence across that into a road that lead from my own place to the river at Gold Dust.

On the Sunday morning that I started I found twenty or more skiffs and canoes tied at the foot of the hill, with not less than a hundred negro men, women and children, some anxious, like myself, to learn the safety of their friends, others assembled for curiosity, and not a few to wait for the return of a party sent to rescue a cow that was reported to be standing on the gallery of a cabin on the Hodges plantation, with the water nearly over her back. Most of these negroes were refugees from the river and had now camped on the hill in brush tents for several weeks. The negro does not believe he is free unless surrounded with a number of worthless, mangy cur dogs. The rude tents were swarming with chickens, cur dogs and hogs, which they had brought with them from the river.

Before starting, the party arrived with the cow tied to the skiffs and her head pulled on the stern to prevent her drowning while being towed along. Great was the shout applauding the rescuers when the skiffs struck the land. I could but smile as the old negress who owned the animal deliberately hugged and kissed her poor favorite, that looked its gratitude, even if it could not express it, but in a long mournful low.

Everything being arranged to my satisfaction I ordered the skiff to be untied, and a few strokes of the oars bore us to where the water was 17ft. deep over the public road, a rise of 5ft. higher than in 1890. When we got to Red Chute, the bridge had been washed away and could now be seen knocked to pieces and lodged a quarter of a mile below against some trees, swaying back and forth like the gigantic sawyers of the Mississippi. The current thus far had been slack and easy to row against, but when the skiff entered the chute it was running like some mountain torrent. With the greatest difficulty could my four oarsmen pull against it. Many logs were rushing by us, and I dreaded lest we should be struck by one, and all hands sent full fifty feet to the bottom of the bayou. We were compelled to hug either side and keep close to the trees that fringed the banks, not only for protection, but to render the rowing easier. We were on a sea of water stretching for fifteen miles from the hills of Bossier to those of Caddo Parish. Soon after we passed the mouth of Class Bayou one of the oarsmen remarked, "What ails that big swamp rabbit?" All eyes turned to the direction he was pointing, and we saw a very large rabbit sitting on a big cottonwood log, with its head turned partly on its shoulders, intently watching something behind it.

"Look at that mink," another rower exclaimed, and we saw a mink slowly creeping down the log, evidently with the intention of catching the rabbit.

"Bless my soul, if there is not a huge wildcat swimming across the Chute, and it is coming right to that cottonwood log. Stop, boys, there is going to be some fun, you bet, and that pretty soon," said another oarsman.

The skiff was pulled to some overhanging branches of a tree and there stopped for us to observe the maneuvers of the three animals and await the result of the tragedy that was about to be enacted before our eyes. It was a struggle for food, mastery and life.

The rabbit paid no attention to us, while the mink, so intent on getting a breakfast, to break its long fast, no doubt, either had not observed us, or, if it had, did not care worth a cent. The wildcat, too, was intent on getting to the log, or to take shelter in the lofty pecans that were left standing in what was known as the "Hodges Cane Deadening."

When the mink got within distance to make a spring to catch the rabbit, pussy dived into the water and under the log, and rising some distance up the Chute eluded the mink, that ran down the log with the expectation of seizing the rabbit as soon as it should come to the surface at the foot of the log. Waiting a short time and not seeing the rabbit, the mink ran back and catching a sight of its intended victim, plunged into the water where pussy had been, but she was not there then. She had again dived under the log, and did not come up until very near its lower extremity, where she hid herself in the broken projections of the end of the log.

In the meantime the mink ran back and forth, in vain endeavoring to secure a sight of the rabbit. Coming down to the very extremity of the log it scented its prey, and made a quick plunge into the water to seize it. But the rapid current carried the mink some distance below; before it could recover the lost space, and the rabbit diving the instant the mink made its spring, came up on the opposite side of the log, and swimming low down in the water with only nose out up to the top of the log, concealed itself in the roots that were hanging down.

"Just see that wildcat," exclaimed some one. "He is going to have a finger in this pie, but if I had my gun I would make pie out of him. You bet, wildcat is good eating, better than coon, a big heap."

Looking in the direction the negro was pointing I observed an extraordinary large wildcat of the catamount species, leaping from a pecan tree to a water oak standing near the roots of the cottonwood log. No doubt the cat had observed what was going on, and hunger had emboldened it to make a dash for a breakfast, though his deadly enemies were watching it. By this time the mink had returned to the log, and was slowly creeping forward to the roots, closely scanning both sides for a sight of the rabbit. Before it could get in catching distance the rabbit again dived, with the mink in rapid pursuit. By some means it managed to elude its pursuer, and the rabbit screening itself by the side of the log sank with nose only out, while the mink crawled on the log to observe where the rabbit should rise.

During this part of the struggle the cat had leaped on the log and crouched so low as to escape the eyes of the mink, and there waited for further developments. The mink heard the slight noise the cat made on leaping, and supposing it to be the rabbit, ran rapidly forward and right into the mouth of the cat, whose voracious jaws closed on its victim with a snap quite audible to us. Rising in an instant with the mink in its mouth, the cat sprang on the oak, and running out on a large limb, leaped into the pecan and was lost to sight.

Pussy was saved and came out of the contest conqueror, and I was glad of it. The negroes wanted to catch her for their dinner, to which I positively objected. A rabbit that could elude and out-maneuver a mink and a wild cat was certainly entitled to its life, and I devoutly prayed it might live through the ravages of the overflow until the waves subsided.

Had I not been an eye-witness I could not have believed that a poor, innocent, helpless rabbit could have escaped the attacks of two such ferocious enemies. By no means could a cottaintail have gotten away from them. But the swamp rabbit loves the water, and is as much at home in it as on land. It generally makes its form either in water or in open marshy land with little or no grass around it.

This was the only incident worth relating on my route to Gold Dust. The current ran so fast that it required five hours of rapid rowing to land on the levee that was not swept away, a mile below Gold Dust. We anchored the skiff on the third step of the residence of Mr. Hodges. Water 3ft. deep was under it—water around it—water everywhere, and not less that 12 to 15 miles wide. Chickens and young turkeys were cooped on the galleries, safe from drowning, but dying from long confinement.

I found Hodges, Mr. Willis Graham, the cook and a couple of nego men, the sole tenants. I ought not to omit that my fine setter, Bruno, was also there. My daughter and granddaughter had gone on a steamboat to Shreveport.

The next morning I bade all adieu and returned to Indian Hill. Only one hour it took to row with the current to our point of starting.

This great, disastrous overflow has disgusted me with all rivers that overflow their bottoms, and I have vowed never to live on the banks of any overflowing rivers.

GEORGE D. ALEXANDER.

## A MINK TRAGEDY.

WILLIAMSBURG, Ind.—It was my good fortune to witness a fight to death between a couple of male minks a fortnight ago, one of the most fearless as well as silent struggles I ever saw. In one of the largest stone quarries in western Ohio a small clear brook grows larger, deeper and wider by the help of the clear, sparkling water of many a spring, issuing from the crevices of the limestone, and flowing through little hollows and around pieces of stone that have been thrown out as worthless. In the course of years the accumulation of the rubbish or "dump," as it is termed, has made a perfect retreat for minks, weasels and rabbits. Having considerable amount of dirt in it the quarry affords a paradise for such animals that are in the habit of burrowing close to small streams. One afternoon as I was on my way to another block to give some instructions to my men I accidentally glanced toward a small sandy spot running out into the stream, forming a peninsula or cape by the junction of a little brooklet and the main or larger brook. The spot was bare with the exception of a few Spanish needles, and was overhung with small willows. Standing within six or eight feet from me were two large male minks, eyeing each other intently, their small eyes looking like coals of fire, and with mouth slightly open, their backs arched, necks stretched forward, their hindlegs close on the ground, they looked very much like miniature tigers waiting an opportunity to spring toward each other.

The first motion was a quivering of the bodies, followed by increasing rapidity in breathing. Then slowly each advanced toward the other until 18in. apart, when each seemed to be gathering all the strength possible to make a final leap. After standing motionless for a full minute, one of them turned his head a little to the right, and instantly the other did the same. Probably ten seconds elapsed while in this attitude, when quicker than the eye could follow they sprang toward each other, and catching by their throats just back of the lower jaw, held to each other with a grip that meant death to the one that should let go his hold. With a determination to conquer or die, they wound each other round and round until exhausted from loss of blood, when spreading their fore feet to brace themselves, they stood perfectly still until one of them staggered, then fell, pulling the other with him, laying them both down on the sand, growing weaker and weaker until they ceased to breathe. When they were dead, I picked one of them up, and the jaws of each were so set that it was with difficulty I pulled them apart. The battle was probably of a minute's duration, in which time the animals never noticed my presence, or if they did they made no signs of their knowledge of it. I presume the object was for one to catch the other so close to his lower jaw that he could get no hold upon his enemy's throat, when a very short time would decide the battle.

## AMERICAN ORNITHOLOGISTS' UNION.

THE tenth annual congress of the American Ornithologists' Union was held in Washington, Nov. 15, 16 and 17, in the lecture hall of the United States National Museum. There were present of active members the following gentlemen: Dr. J. A. Allen, Prof. W. B. Barrows, C. F. Bachelder, Capt. C. E. Bendire, U. S. A., Frank M. Chapman, Dr. Elliott Coues, D. G. Elliott, Dr. A. K. Fisher, Dr. Theo. Gill, Dr. C. Hart Merriam, H. Nehrling, Robt. Ridgway, John H. Sage, Dr. R. W. Shufeldt, Dr. L. Stejneger, L. S. Foster, Dr. D. W. Prentiss and Mr. Geo. B. Sennett. The associate members present were Vernon Bailey, Job Barnard, Prof. F. E. L. Beal, Dr. L. B. Bishop, B. W. Everman, Dr. W. H. Fox, Henry Hales, E. M. Hasbrouck, T. S. Palmer, Wm. Palmer, Witmer Stone, W. E Clyde Todd.

The sessions of the first day were devoted to business and were not open to the public.

The report of the secretary showed the present membership of the Union to be as follows: Active 45, honorary 23, corresponding 74, associate 416, total 557.

The report of the treasurer showed the finances of the Union to be in excellent condition.

Mr. D. G. Elliott gave notice that he was not a candidate to re-election to the presidency of the Union.

The following gentlemen were elected officers for the ensuing year. Dr. Elliott Coues, President; Wm. Brewster and H. W. Henshaw Vice-Presidents; John H. Sage, Secretary and Wm. Dutcher, Treasurer. Additional members of the council were elected as follows: Dr. J. A. Allen, C. B. Corey, C. F. Bachelder, Dr. C. Hart Merriam, Robt. Ridgway, Dr. L. Stejneger and D. G. Elliott.

The result of the ballots cast for active members of the Union showed the election to membership of Frederick A. Lucas, Witmer Stone and Leverett M. Loomis.

Sixty-six associate members were elected.

Complaint has been made that during the sessions of the Union there is not time enough for the reading of the papers offered to the Union. It was therefore voted that hereafter there shall be a session of the members of the Union held during the evening of the day on which the stated meeting of the council takes place, at which session the officers of the Union and members of the various grades shall be elected and whatever business may be brought up shall be transacted. As the meeting of the council takes place on the day preceding the opening of the general meeting of the Union, and as the first day of this general meeting is usually altogether given up to business, this change will add to the session a full day to be devoted to the reading of papers.

A resolution was passed that on the decease of any active member of the Union the president shall appoint a committee of one to prepare a suitable memorial of the life and work of the deceased, to be read at the first stated meeting of the Union, and to be published in the *Auk* as an expression of the sense of the Union.

On the last day of the session twenty-one associate members were present.

A resolution was passed thanking the Board of Regents of the Smithsonian Institution for use of the lecture hall of the National Museum.

A resolution was passed thanking the Washington members for courtesies extended to the visiting members.

The old Committee on Nomenclature and Classification of North American Birds, consisting of Messrs. Allen, Brewster, Chapman, Coues, Cory, Elliot, Henshaw, Merriam and Ridgway, was reappointed.

It was voted that a committee on communications, consisting of three members, shall be appointed by the president each year, which shall receive from the secretary all papers sent to him, from which said committee shall select those to be read at the annual meeting. Mr. D. G. Elliott, Dr. J. A. Allen and the secretary were appointed such committee.

The question as to where the next meeting of the Union shall be held was finally decided in favor of Cambridge, Mass. The session to begin on the third Tuesday of November, 1893.

The programme of papers read before the Union on Wednesday and Thursday, which sessions were open to the public, is as follows:

1. Birds of Lewis and Clarke in 1892. Elliott Coues.
2. Summer Birds of Indiana and Clearfield Counties, Pennsylvania. W. E. Clyde Todd.
3. The Geographical Distribution of the Genus *Megascops* in North America. E. M. Hasbrouck.
4. Summer Birds of Prince Edward Island. Jonathan Dwight, Jr.
5. A Partial List of the Birds of White Head Island, Maine. Arthur H. Norton.
6. The Origin and Geographical Distribution of North American Birds. J. A. Allen.
7. The Life Areas of North America considered especially in Relation to their Classification and Nomenclature. J. A. Allen.
8. The Fly-catchers of the *Myiarchus mexicanus* and *M. cinerascens* groups. J. A. Allen.
9. Notes on Birds observed in Cuba. Frank M. Chapman.
10. Remarks on the Origin of West Indian Bird Life. Frank M. Chapman.
11. A Review of the Faunal Literature of North American Ornithology. Frank M. Chapman.
12. Some Eccentricities in Geographical Distribution. D. G. Elliot.
13. Habits of the Knot (*Tringa canutus*) in Massachusetts. George H. Mackay.
14. Migration of *Charadrius dominicus* in Massachusetts in 1892. George H. Mackey.
15. The Autumnal Plumage of the Hooded Warbler. Wm. Palmer.
16. Food-habits of the Common Crow. Walter B. Barrows.
17. A Preliminary Investigation of the Food-habits of *Ampelis cedrorum*. F. E. L. Beal.
18. Notes on *Helminthophila chrysoptera*, *pinus*, *leucobronchialis* and *lawrencei* in Connecticut. John H. Sage.
19. Additions to the List of Manitoban Birds. Ernest E. Thompson.
20. Feeding and Breeding habits of the Manitoban Icteridæ. Ernest E. Thompson.
21. Feeding-habits of the Pinewood Woodpeckers. Ernest E. Thompson.
22. The Distribution of the Genus *Harporhynchus*. T. S. Palmer.
23. Exhibition of specimens of the Imperial Woodpecker. T. S. Palmer.

### A Black Lynx.

CALAIS, Me., Nov. 15.—Your cuts of the wild animals have all been very fine; the last, *Lynx canadensis*, very lifelike. This wildcat a few years ago was very common in our woods, and *Lynx rufus* did hardly ever occur. Now it is much more abundant than *canadensis*. About five years ago a taxidermist, Mr. Tappan, secured a black *Lynx rufus*, a very pretty, glossy black animal. I wanted to procure it for the National Museum, Washington, but as a black lynx was something very rare, he did not care to part with it. It was taken down into southwest Florida. I afterward saw him in Minneapolis and he consented to send the skin, which he had tanned. to Washington as a fur specimen. This wildcat (*L. rufus*) is very abundant in Florida, but much smaller in size. Hair thin and coarse even in winter. GEO. A. BOARDMAN.

### Black Muskrats.

BREWER, Me.—Black muskrats are not such a rarity as Mr. Koch, in your last issue, seems to think. Though not common in Maine, still some are taken here nearly every year, while in New Jersey and other States they are quite common, so that usually several thousand are offered at the London sales whenever any rats are sold. March 4, 1889, C. M. Lampson & Co. offered 22,965 black rats. January 31, 1890. they offered 9,920, and March 28 of the same year 14,932, while March 19, 1891, they sold 22,028. It is very safe to say that over 20,000 black muskrats are exported every year. M. HARDY.

## Camp-Fire Flickerings.

"That reminds me."

### THE PANTHER'S SCREAM.

*Editor Forest and Stream:*

The many stories you have published of late in regard to the horrible screams of the panther remind me of one which was current here years and years ago, and which I think is timely.

One of the first settlers here owned a farm which was but a short distance from Grand River. The head of the family was away from home most of the time trading with the Indians, and was on an expedition of this kind when the incident occurred. Late one afternoon one of the boys while working in the garden was nearly paralyzed by hearing the awfullest, blood-curdling, "hair-lifting" screeches and screams coming from the woods down near the river. He dropped his hoe and ran horror-stricken into the house to find his mother speechless—eyes, ears and mouth wide open, wondering what could possibly make such an unearthly, ear-splitting noise and where it came from.

An uncle who lived near by soon appeared, gun in hand, dog at heel. "Did you hear it, Jim? What was it? Get your dog and gun; let's go down in the woods," and away they hurried. A careful hunt was made, but no awe-inspiring monster was found, nor even any tracks nor visible signs were seen to indicate that any great calamity had visited that locality. After much wondering, considerable talking and a very careful looking around the house and adjacent fields the subject was dropped for the night.

In the afternoon of the next day, to their utter amazement there came from the woods down near the river a repetition of the wild, weird, soul-barrowing screeches, yells and shrieks of the previous day. Jim ran for his gun, called his dog, stuck the butcher knife into his boot leg, grabbed an ax and anxiously waited for his uncle, who fully armed and equipped was hurrying along as fast as his legs could carry him. Down into the woods hurried the would-be monster exterminators, full of fight and just aching for gore. The only means of crossing a deep run was a slippery moss-covered log. The dogs were over and scouting around in the thick brush; the hunters were about in the middle of the log when the dogs set up a howl and a bow-bow. The air was rent, "the earth trembled," so says one of the hunters, there was a succession of sharp, shrill blasts "strong enough to lift your hat off your head," or to awaken a good Indian. The noise went whistling and screaming through the forest until it caromed on the high hills, from which it rebounded, split into innumerable fractions, reverberated in discordant whoops across the river, or hissing, buzzing and ringing whirled and twisted away off into space up and down the river valley. Jim dropped his ax and at the same time slipped astraddle of the log, to which he clung until breath was recovered. When he looked back his uncle was just scratching up the bank, his wet and muddy clothes bearing ample evidence of where he had rested. "Come home, Jim, come home," he gasped, as soon as he could catch his wind and master his tongue. Toward home they hurried as fast as ever they could, looking back occasionally to see if the monster which had awakened so many echoes and fears was hunting them.

At home they found the "old man" listening to a nerve destroying tale from the "old woman" in regard to that "horrid thing down in the woods." "What kind of a noise did it make?" asked the father. Whereupon the trio screeched as loud, long and sharp as possible. "Ugh," grunted the old man, "nothing but a steamboat whistle, you durned fools."

It was the first steam whistle ever heard in the Grand River Valley. The boy is gray-headed now, but he often laughs about his hunting a steamboat whistle with dog and gun. A. W.

GRAND RAPIDS, Mich.

### The Fast Limited Train South.

COMMENCING Sunday, Nov. 20, the Richmond & Danville R. R. (Piedmont Air Line), in connection with Pennsylvania R. R., will run a solid Pullman Vestibule Train of Dining and Sleeping Cars between New York and New Orleans, leaving New York daily at 4:30 P. M. In addition the solid through train will be Pullman Drawing Room Sleeping Cars, New York to Columbia, Augusta, Asheville and Washington to Memphis. The new schedule from New York reaches New Orleans and Memphis within 40 hours; Atlanta and Augusta, 24 hours. The South Carolina R. R. and the South Bound R. R. will put on fast trains from Columbia to connect with the Limited, reducing the time between New York and Charleston to 25 hours, and to Savannah 24 hours, thus opening up a new fast line to southwest Georgia and Florida. Office 229 Broadway.—*Adv.*

### RECOLLECTIONS OF GOLDEN PLOVER.

BY the time I was twenty-one, inland shooting on the golden plover was a thing of the past in that part of New Jersey where I was raised. It seemed to run out very suddenly and in three or four years the birds became so scarce as not to be worth hunting. But when I was a boy there was little sport more interesting or more certain to be rewarded with a good bag than the shooting on this bird when he visited the plowed fields in the fall.

The golden plover made himself especially attractive too, by filling a serious gap in the shooting. The mellow twitter of the woodcock had died away in the swamp, while the sharper whistle of his more full-feathered wing was not yet heard along the sapling-covered hillside. Bob White was yet too small and the hare had not left the thickets and gone to the open where there was a better chance to find him. The dove, too, was rising but rarely from the blue masses of the bugloss, the pure penetrating note of the upland plover had died away along the sky, and his charming presence had betaken itself you knew not where. Nor was the whizzing wing of the wild duck yet seen along the shore nor the "scape" of the snipe heard in the meadow, nor was the obstreperous wing of the ruffed grouse yet ready to be clipped in the tangled brake.

This plover was known inland for only about three or four weeks of the year. The fringe gentian had not yet closed its blue, the reddish hue of the sorrel still tinged the slopes, the blue and white of the morning glory still lingered in the pastures, and sheets of flame were curling around the head of the maple, when the plover came to visit the freshly plowed fields of autumn.

"Rainbirds," "snipes," "plubbers" and other names they were called by the country folks, and when September rains had thoroughly soaked the fields that were plowed for the winter wheat, they often came in great numbers. High in the air they came, at first in long strings and wedge-shaped masses, now in a crescent with the horns forward, now in the same with the horns turned backward. Over the distant rim of woods he came where the hickory and the chestnut were yellowing, over the outskirts of the wood where blue was creeping over the flattened berries of the blackhaw and the gold of the highholder gleaming among the scarlet leaves of the gum tree whose berries he was watching for their ripening.

He came with soft, thrilling whistle, that seemed to ripple over from his throat whether swinging high above the hill top where saddening tints were creeping over the oaks, or fanning the air with wings that seemed only to tremble with speed above the fragrant buckwheat fields, or skimming low along the top of the corn where the pumpkins were yellowing among the rows. Gamy, too, he seemed in his robe of black and brown and gray, dotted with gold and white. Fat and sleek he was, too, and when he reached the earth you had something well worth picking up. It was believed that he came from the coast and was "driven in" by the storm; though why he should be driven in by anything it was hard to divine. For he evidently rejoiced in the rain, and when it was driving so hard against the windows that we could hardly see anything else, we could see the dark lines rising above the horizon and skimming the plowed fields as gaily as if rain were their natural element.

It used to be thought that the birds came for the worms turned up by the plow. This was rather a violent theory, but the fact remains that the freshly plowed fields were their favorite feeding grounds during the rain and after the rain and until they left the country.

It was along the edge of such fields that we made a blind under the still green and fragrant branches perhaps of some sassafras or wild cherry, or perhaps in a clump of fast reddening blackberry bushes in the corner. Nothing very scientific was required, and a few cornstalks or tumble weeds often served our purpose well. Some 20yds. out in the field from this were set the decoys. Decoys were necessary for real good sport with this bird, though occasionally some country lout with an old single-barreled bit of pot metal having as much fit and balance as a garden rake with a brick hung on the end, but with plenty of patience in hugging a fence corner all day, made a very fair bag. We used to say he suffocated his birds with his vile powder. He used to chuckle over his string and tell us our guns cost too much money, that we put on too many airs and had too much toggery. He used to swear that hornets' nest made better wadding than cut wads and that our caps were too fancy, and that the G. D. was the thing to kill. We had to stand this sometimes, but generally the good success was all our way, and the next year found him using decoys.

Decoys could at that time be bought in New York and were good imitations of the plover. But when we had none we used to use dead birds propped up with sticks and often used these to supplement the stock of artificial ones. Without a few artificial ones it was often hard to get a start with a few dead ones and involved much tiresome waiting, for when the birds were flying with nothing to guide them to any particular spot, you might wait long before any came close enough, though many were flying.

The decoys set, the whistle was next brought out, and the tender trilling call of the birds imitated as soon as a flock came in sight. This was a common whistle with a dried pea rattling about below the air vent and made a very good call.

Sometimes a flock three or four hundred yards and more away would swerve on the instant and come straight to the decoys almost from the first note of the whistle, although other birds were in the air calling or out in the middle of the field. There was nothing to do but have patience and keep tolerably well hidden and play gently with the whistle. Before long with wings hazy with speed they bore down upon you, answering your whistle with their soft notes, so many of them at once that from a large flock it came like the tremolo of some sweet organ pipe. They used to look so sweet and so artless as they came on and twittered in such touching tones that it would now give me some compunctions of conscience to shoot at them. But when I was a boy I felt they deserved all the bad treatment they got, for they came so seldom and made such a short stay and seemed so smart about keeping out of the way.

When they massed up a little in air and set their wings to slide down to the decoys then was the critical time with a young shot. Sometimes I could not wait but had to shoot prematurely, to see the whole flock sheer and rise with perhaps one whirling over to the ground. And sometimes I was so excited that I could not get what seemed a good enough aim until they were past and almost out of good reach. And sometimes my finger used to balk on the trigger and refuse to pull it when I had a good aim. Then, too, was the fact that farmer Squizzle's bumpkin was lying along the same fence with a revolutionary relic which was liable to belch villainous odors if anything came within 200yds. of it, and spoil a shot for me. The Reverend Simon Snoodle, too, the village preacher, had strolled out with his old musket that had not been fired since he shot his annual rabbit the winter before in a rail heap back of his house, and firm in the faith that his gun would "kill at 100yds.," a thing that all decent guns were supposed to do as a matter of course in those days, he might shoot from across the field at the very flock at which I was raising the gun. But when the gun was held right, three, four and sometimes half a dozen birds came whirling and gyrating to the ground together.

How pretty they looked in their soft combinations of gamy colors with black feet and bills and white stripe over the eye, and brownish tails barred with gray. And how gamy they looked even in air as they wheeled in the sun and let the light flash on their glossy black and sped twittering away. What wonder that we hastened out sometimes before the storm had fairly cleared away and shivered in the wet grass till late in the evening.

But the storm has gone at last and the sunlight streams mellow from a clear sky. Bright are the purple and orange of the meadow beauty that is lingering beyond its time, the pale blue corolla of the lobelia, the yellow disk and blue or purple rays of the aster shine afar across the pastures where the golden rod and other members of the great host of the compositæ are still tinging the land with a background of gold, and the birds are more plenty and numerous than ever. No longer do you have to watch for specks on the horizon or over the nearer wood where the butternut is yellowing by the creek or the chelone still rears its snake-like head in a corolla of white and red. Low down they come over the fences and the hedges, almost brushing the paling crown of the alder or the scarlet and flame-colored mass of the sumac, and making the sombre head of the red cedar seem bright with their presence as they whistle so softly past it.

Over the fence across the field comes another line of little dark bodies with wings quivering with speed on each side, and at the roar of a gun from among the white glistening scales of the everlasting along the fence, three come tumbling somersault to earth, while the rest radiate out in lines like a fan, and then grouping up in a black mass, rise higher and spin away for the next field. The birds you were so confidently expecting a shot at take the alarm and bear off, too. But you have not long to wait, for from over the corn not far away another line of dark spots is bearing down upon you. And just as it bends to your whistle and each dark bill seems set toward your decoys, out from among the red berries of the wild rose along another fence leaps another sheet of flame too far off for anything but to spoil another shot for you.

But there seems nothing to do but to stay here, for the birds seem to admire this particular field. If you should go away you might not find as good a one, and if you did some of your rural friends would follow you; for this was about as well established a custom in those days as for one boy to crowd up and drop his line into the same hole where another was pulling out more chubs and sunfish. I have seen a dozen guns around one twenty-acre field, and yet it would not pay to leave it unless to leave the neighborhood entirely. And if you did you might find nothing, for the plover had favorite places, and the greater part of the country they ignored entirely though the conditions seemed the same.

But your patience is soon rewarded, and another flock, turning to your whistle, comes spinning down toward the decoys. It runs the gauntlet of the other guns without drawing their fire, and stringing out in a crescent bears down with one end toward you. A whirl and a flutter and a medley of black, gray and brown with white and golden spots follows the report of the first barrel, and as the flock rises and sheers it bunches up toward you again, so that at the report of the second barrel it seems almost to rain plover. T. S. VAN DYKE.

### Ohio Small Game.

CADIZ, O., Nov. 10.—The opening season was ushered in with a light fall of snow, but notwithstanding the inclemency of the weather many of our local gunners were out to try their luck, but I did not hear of any large bags being secured. The writer was out with his merry little pack of beagles and had a grand day's sport with the cottontails, bagging five and having several exciting runs, which ended by Mollie going to earth. Quail and grouse are very scarce this season; only saw two of the former, which got up together and one of which was brought to bag by my second barrel. I was also fortunate in bagging a fine large male grouse, which the beagles flushed while working on the cold trail of a cottontail, and I would have had trouble in finding it if Dandy and Rover (the old reliables) had not come to my assistance, as it was only winged and had run quite a distance from where I had marked it down; and when the dogs came up it took refuge by flopping into the middle of a creek, where it was floating when I came upon the scene, just as the dogs were going into the water after it. I was out again on the following day and bagged four cottontails and three quail. Game of all kinds is not so plenty as in former years. S. C. G.

### Cold Barrel Shooting.

CHICAGO, Nov. 14.—In your issue of Nov. 10 I noticed an item regarding cold barrels. I have found the same to be true in rifle shooting. In U. S. Army rifle competition the riflemen take pains to keep their rifles warm, sometimes firing a few rounds of blank cartridge before going to the firing point. R. H. W.

## BEAR HUNTING IN NEW MEXICO.

NEW MEXICO, October, 1892.—This year I have confined myself mostly to trapping, for, thinking it might be my last trip for a while, I was anxious to obtain all the fur I could. The best part of the year (April and May) was lost owing to the illness of a friend, whom I nursed through what I believe to have been a bad case of la grippe, although I am no doctor, neither was there any near. As might be expected from traps, not a great deal of actual sport fell to our lot, but such as it has been I am ready to narrate for the benefit of others who may be making for New Mexico.

On May 28, 1892, we camped at the Puerco Espin or Porcupine. In the previous year this country had been overrun with bears, but they had all gone or been killed, and after having traps out till June 7, with no effect barring that one small black bear had got into and out of a trap, we moved to the vallés (valleys) where there is a pretty little river full of trout, some growing over one pound, fishermen say they grow over two pounds, but these I have not seen. There are also hot sulphur springs to which many invalids resort from Santa Fé, Albuquerque and other cities. Here we stayed till the 12th, catching muskrats, bathing, shooting ducks and fishing.

Our next camp was at the Calabaza (Squash) Cañon. Here bears had evidently been plenty, but the sign was mostly two and three days old. Two traps were sprung though nothing killed except a wildcat. On the 22d we started and on the 23d camped at the Cebolla (Onion) Cañon. Here things looked brighter. During the night a gun was fired close to the camp, and the morning disclosed to our anxious gaze a large black bear shot through the head and dead as mutton. So we had come to the 24th of June before getting any bear. However, I felt sure the tables would turn soon, and so they did, for on the 25th a cinnamon was trapped and duly brought into camp; two more traps had also been tampered with but failed to act. On the 26th a cinnamon was shot, and on the 29th another large male cinnamon was killed and the body left at the gun. The next day a man was sent to fetch it, and found it half eaten by a big black bear, which fell a victim to the same gun on the 1st of July. On the 3d a big she silvertip was successfully trapped, and on the 5th I killed an enormous male cinnamon. This bear bit the muzzle of the gun, a 12-bore Riley shotgun, and crumpled it up like paper.

Nothing more happened till the 12th, when we moved to the Piedras Négras (Black Stones). Here were two large dirty-looking rocks, standing by themselves in the center of a sheep-eaten valley, surrounded by towering peaks covered with black-looking pine trees, the monotony of which was broken by patches of quaking asp of an emerald green hue. On the 16th a bear went over the back of the pen where a trap was fixed (an old trick), took the meat and skedaddled. On the 17th I had intended to go and watch a trail, where I had recently seen a big bear track, about half a mile from camp; but "worse luck to it," a lazy fit took me, and I sent an Indian. He had been gone but a few minutes when three shots were heard in quick succession, followed by a triumphant yell, as of glee. Then I straddled a burro and started to fetch the game. On arriving there I found Andrés, who had just posted himself behind a tree to wait events, when he heard something coming up the cañon, and was not a little astonished to see a huge brown bear appear on the brow of the hill about ten yards from him. He fired, striking the side of its head. This knocked the bear down, but he was soon on his legs again, and making a dash at Andrés, who had mighty little time to put a bullet through his heart, which, however, he succeeded in doing. The third shot was fired just to make sure there was no kick coming.

On the 19th I rode to the Senorita Cañon, about fifteen miles, where we found huckleberries, raspberries, gooseberries, ground mulberries, and loads of unripe cherries and acorns, also plenty of fresh sign. On my return next day I found two bears had been to the traps, and one, a cinnamon, had been killed. At about 10 A. M. on the 22d I strolled out to the trail before mentioned, where two traps were now set. Not expecting to see anything, I did not even take any extra cartridges, having three in my gun. I saw the traps, and then thought I would take a short circular walk home. Coming to the summit of a ridge, I heard a branch crack, and looking over spied a cinnamon bear, sitting bolt upright, staring at me. There were two others jumping about her, one jet black and the other brown. A "Highland gathering," thought I, as recollections of Oban and Inverness, and of big burly Highlanders with their legs all covered with hair—some black, some cinnamon, and others, well, silvertip—flitted through my brain.

But away with imagination; I must look to practical business, and that right quickly. I did not at first take in the fact that the other two were cubs, for the grass and ferns were very high and I could only see them now and then, and could not move my eyes from the old lady, who went down on all-fours, still facing me, probably at a distance of 15yds. Taking steady aim I fired at her forehead. She fell, but scrambled up again, and instead of making for me, which I expected she would do, bolted like a streak with a second bullet from my express in her leg, leaving her cubs to shift for themselves, which they did, promptly enough. The black one scooted up the nearest tree, and the brown one disappeared in the scrub in double-quick time. I had one cartridge left and with it brought down the cub, who let out a dying yell that caused mamma to stop in her insane gallop through the woods and answer her lost child. Just about this time it struck me I had no more cartridges and no more business in the locality. Picking up my cub I departed for camp, taking many a glance back and trying to stretch my ears to catch the faintest sound in case the old vixen might follow, but she did not, and I soon arrived safe at home, where I at once had three horses saddled, and left with the hounds, one Mexican and M., my companion, giving orders to my cook that any one who might return from hunting should follow immediately, as I contemplated a split with the hounds and required all hands, knowing that the she bear and cubs had taken separate directions. The dogs, however, when turned loose, insisted on following the track of the latter, and after a sharp little gallop through shin oak, cedar and pine, down a steep hill and up a very rough cañon, they treed him within 20ft. of the spot where I first disturbed the family gathering at their feast of berries. M. and I dismounted and watched him for a few minutes while our horses recovered their breath, after which he was brought to bag.

It was now getting late, but notwithstanding I put the hounds on the trail of the old one, and off we went again. She had too long a start, however, and we could not keep up with the dogs through such dense timber, so after galloping about six miles we gave it up and returned. The dogs did not come back till midnight. So ended the 22d. On the 23d a cinnamon was trapped and shot. On the 29th all traps were taken up and the dogs turned loose in the Pedras Negras Cañon to work their wicked will on the first bear they came across.

They scented one from afar and instantly set up a roar, rushing off at full speed with heads and tails held high. They raced up and down this big rough valley for the best part of an hour, during which time I never moved from the spot where they were loosed, for I was saving my horse and could locate them far better from above than the men who went with them trying to follow close. When I was satisfied that they had treed I led my horse quietly down the almost perpendicular sides to where bruin was lying dead, just shot by one of the men, whose horses were blowing like grampuses. This turned out to be the she bear of the 22d. My first shot had cut a strip about ten inches long from the center of her back, and the copper tube of the second bullet was found in her leg. My excuse for these bad shots is that the front sight of my rifle was broken.

On Monday, July 1, we had a very long run after a silvertip. They never tree, and I think this one must have gone to Arizona. Soon we lost the dogs and came home to feed. The repast over, I sent men to the tops of the surrounding hills to listen for the dogs. One of the boys had walked up a she silvertip and two cubs. He missed the old bear two or three times, but killed a male silvertip cub with as pretty a fur as I ever saw.

On the 5th we moved to Senorita Cañon. Here I got a touch of poison ivy, and should have been badly off but for some remedies I cut out of FOREST AND STREAM a long time ago. I applied salt and saltpeter, of which I had plenty on hand for corning meat. For about three weeks I had an ungovernable desire to tear myself to pieces and then I recovered.

On the 11th a brown bear and a porcupine were trapped, and then a big sheep dog, which gave us no end of trouble, but we got him out safely, and glad enough he was to skip out of that country. On the 12th another brown bear was brought in, and on the 13th we killed a cinnamon and a wildcat.

On the 15th a bear came to the trap, pulled the pen to pieces, took the bait, and walked off. The same aggravating beast came again on the 16th, with like result. On the 18th a large beast (too large for a seventeen-pound trap) got in and out again, leaving a little fur to show his color. Another bear pulled off a set-gun and escaped. On the 19th we killed a yearling and a big bear, both brown, and a skunk. On the 20th a brown cub was brought in, and on the 23d a magnificent old male silvertip, with pure white neck, who had been known to the miners and Mexicans for years by the soubriquet of "Jumbo:" he had several old bullet wounds and considerable lead in him.

On the 25th the bait was taken from the trap, and on the 27th the meat was eaten off two guns which had got damp, and another bear got into and out of a trap. On the 28th a man came back from his line, early, reporting the escape of a wounded bear and a fresh lion track in the road, the latter beast having been seen in the morning by two lumbermen. I decided, however, to hunt the bear first, so sent one man to lift the traps and guns on that side of the range, and took another with me, turning the hounds loose near the discharged gun. This bear had two cubs with her, and either she fooled the dogs or else they ran another one. Anyway, I got disgusted, and started to return with Bulger and Tiger, two half-bred dogs, who had likewise given up the chase. Now came the fun. As we were riding casually along the narrow mesa, overlooking deep cañons of Nacimiento (Birthplace) on one side and Senorita on the other, two dogs threw up their heads and trotted to the the brink of the Nacimiento; then they went down, and in a few minutes the cañon was ringing again with frantic yells of the hounds and the barring noise of cubs. We dismounted at once and walked down about one hundred yards, when I spied a cub in a cedar tree. A ball from my rifle soon settled him, and I sent another after the old lady as I caught a fleeting glimpse of her on the ground fighting the dogs. All moved on now some hundred yards more, where the other cub was treed. This one was shot by my companion, and on we went, this time very cautiously, for the bear was near and the brush so dense as to make traveling very difficult.

When we arrived in sight of the dogs we found that my bullet had found the right place, and she was lying dead in a little ditch. As quickly as possible we removed the hides, and hung up the meat, and returned to our horses, who after a slight remonstrance were packed with the skins. Telling the Mexican to hunt up the missing dogs I returned to camp. During supper, my cook remarked that she could hear the horn blowing, and going to the top of the hill, I could hear from far away down in the bed of the river, quite two miles off, the baying of the pack, while from the mesa above the frantic blowing of a horn was plainly audible. Lanterns were lit and off we went, two Mexicans and myself, this time on foot, as riding through oak brush at night is not safe for shins or eyes. We had made about half the way, when we met the other man, who had descended into the cañon, in hopes of calling off the dogs, for they had run their bear into a trap. We soon located him by the noise, but in such a place! Down in a cañon as black as ink, in a perfect network of brush, probably 20ft. below us, could be easily distinguished the hog-like blowing, grunting, panting and puffing of old bruin in his desperate attempts to escape; these sounds, combined with the delighted yowling of eight long-eared hounds, completed the pandemonium. After firing a few random shots, we caught the dogs and retired for the night.

Next morning, M., I and a Mexican, started on horseback for our bear, while the others went their daily rounds to look after and reset traps. On arriving at the place we left the night before, we found he had moved out and gone up the hill. Next we discovered the log that had been attached to the trap all chewed up and discarded. It was no use going further, for a bear simply takes a 17lbs. trap (without a log) under his arm and trots off with it as if nothing were the matter, so we sat down, and sent Lucero, the Mexican, back for the dogs. When they arrived, I turned them loose, and in a few minutes more they had him. But here it became too rough to ride, so we dismounted and tying our horses started to climb the rocks in hot pursuit. We were somewhat blown, not being accustomed to this sort of fun, but struggled on bravely enough.

The Mexican, who was still mounted, took a wrong direction, and soon there was a huge dyke between us. As I had anticipated, the bear (a very large black male) took along our side of the ditch, and came in sight about 80yds. off on the opposite side of a hollow filled with dense oak from 8 to 12ft. high. On catching sight of him I fired and missed, and fired again, this time he faced around and charged down the hill into the hollow, making a bee line for us. Suddenly all was still, then from the brush came two or three great roars or groans, and the dogs began to yell again; another calm and I decided to go in after him, which M. and I did and found him dead, while the dogs were earnestly endeavoring to tear a hole in his hide and secure a hot lunch. He was the largest bear I ever took with a 17lbs. trap. While we were resting "crack, whiz," and a bullet flew over my head, and looking up, there was Lucero above us on a very pointed rock, floundering about in vain efforts to find us, for we were hidden by oak. I yelled out to know what he shot at, but being as deaf as a post he could hear nothing. Shortly after that he came down, and told us his rifle had gone off by accident.

There was lots of fun in this hunt, but I do not think either of us were sorry when it came to an end, for it is tedious work climbing these rocks as fast as you can, on a warm day in the month of August, at an altitude of over 9,000ft. On the 31st the traps were taken up. A bear had been to one of them, so we took dogs and turned loose on trail in the Mesa Nacimiento again. They found at once, and fighting bayed for about five minutes, but not time enough for us to get down to them, and Mr. Bear being a silvertip was not going up a tree, but made a sudden burst down the cañon two or three miles like a streak of lightning. We followed as fast as we could, but lost him in crossing from one side to the other. They must have run him a very long way, for it was six days before I got all my pups back. Until the 6th of September was spent chiefly in hunting dogs. On the 8th we moved again, camped one night at Piedras Negras, and the next at the "Valleys," where I caught about 150 fair trout and a coyote.

On the 12th we camped above the Polvedero, our old winter quarters, and on the 14th we went down into the Chama Valley, crossed the river and camped in Copper Cañon. Next day a move was made up the opposite range and late at night we found ourselves at "Julie's grave" (one of my hounds who was killed by a bear in 1890). Here the trout are somewhat small, but found in countless numbers, having a peculiarly good flavor and being indefinitely superior to their relations on the opposite range. On the 17th we set traps for mink and beaver, sent the men out to hunt bear tracks, and shot a coyote as he was crawling off with a lamb.

Finding very little here we moved on the 19th to a camp about eight miles away called the "Lagoonas." On the 12th we ran the dogs, but the trail was old and the ground very dry. One dog, however, while separated from the rest, found a bear and ran it all day, taking the men through a country full of fresh tracks, so on the following day I set out traps, but never a bear came near there again, and on the 28th I was compelled to lift them. We have no grass in this camp and much valuable time has been spent in hunting stock.

To-day is the first of October, bears have been located again, but a long way from grass and water. The drought has lasted so many days that scent will scarcely lie at all, however, I will let you hear what luck attends us. E. and S., formerly in my camp, now on the Brazos, have killed five bears, but report trout fishing poor. The Brazos fishing was seriously damaged by spring floods in 1890, when the river altered its course, making it difficult for the large fish to get up. My friends have only captured two "busters" this month, one of 3¾lbs. and the other 3½lbs. A few years ago I stood at one small pool and took out 11, averaging 2½lbs. I also hooked and lost many others, my friend had abstracted seven similar fish from the same pool on the previous day. That was piscatorial sport, I think.

A. P. F. COAPE.

## THE CUVIER BANQUET.

GAME in season. And appetites up to the requirements of the season. Such were the conditions that combined to make the Cuvier Club dinner last evening most enjoyable.

The large room of the famous club was given up to the tables and their occupants, and the latter were men of whom the patrons of the *Commercial Gazette* are accustomed to read. Of the hundreds who came to partake of the rich and palatable feast of game, with just enough of the other things to relieve monotony and make up one of the most appetizing menus ever presented, there were very few of whom the ci izens of Cincinnati have not heard in one capacity or other. Men who have represented the people in judicial and legislative and executive capacities were present; there were judges from the bench, city officials in present enjoyment of office, and several of whom the result of the late election entitle to official distinction.

There were men prominent in business and commercial life; men who have no part or interest in political life, but who bear their full share in the good fellowship that gives the charm to every-day existence. It was a "stag" gathering, and in that particular it stands forth conspicuous among the excellent annual dinners of the famous organization, for generally the ladies of the members have had their share of the good things set out for the annual celebration.

There were lots of these good things. Of course, the feature of the menu was the game, and this was abundant, had been gathered just in the ripeness of time, and was cooked in the perfection of kitchen art and to the full satisfaction of the most epicurean taste. There is no use talking—you never tasted such salmon, snipe, quail, venison and duck—it seemed they had lived with the Cuvier Club dinner in view, and wanted to make as good an impression in death as possible. They did all that could have been asked of them. They could not have done more. They seem to have fully appreciated what the club has done in protecting them against the ravages

of wanton hunters by enforcing observance of the seasons.

Among the guests of the club were C. C. Turn, Samuel R. Smith and Richard Morris, of Frankfort, Ky., who were cordially welcomed for the aid they have given the club in many ways.

Other guests of the club were Capt. Ed Taylor and John Collender, of the Wyandotte Fishing Club, of Columbus, O. These latter, like the gentlemen from Frankfort, have rendered the Cuvier valuable aid in furthering legislation in the interest of the preservation of game and the regulation of the season for gathering it.

The banquet committee consisted of H. H. Tinker, Lee R. Keck and Lowe Emerson, and the house committee of Luther Parker, John Egan and Alex Lewis. No one of these gentlemen had been lax in his duties, as the success of the entertainment showed. Besides these there was a reception committee made up of a large number of members, who divided the obligations of the evening in reliefs. —*Cincinnati Commercial Gazette, Nov 17.*

## A BOSTON GAME REPORT.

BOSTON, Nov. 19.—The number of deer being taken in the Maine woods this fall is something remarkable. It is safe to estimate that more than 100 have already come to Boston; the results of the skill of sportsmen who have been to that State in the open season, and have generally taken their game honestly. At the Boston and Maine railroad stations I learn that they are coming every day, and have been since the first of October. At the steamers the report is the same. A gentleman well acquainted in Lowell, Mass., tells me that he knows of over 30 Maine deer that have been brought to that city by sportsmen this fall. A Franklin county, Me., newspaper says that fully 100 deer have been taken in that county since the open season begun. In the Machias district, and up through to Wesley, the number of deer shot has been simply marvelous. In the Megantic region the number is large. What a field of sport this is! It is all the result of protection, the great features of which are non-hounding and non-crusting. Both these methods may be practiced in some instances, but the fines are too great and the game wardens too vigilant to permit of the general destruction that would result, were these laws repealed.

Mr. Charles H. Glover, proprietor of the restaurant at the Boston and Maine railway station, in Boston, is a happy hunter. He has just got back from a hunting trip into the Maine woods. He had the good fortune to shoot two handsome deer, one of which he brought home. His party was made up of two Lowell gentlemen, besides himself; Mr. W. T. Patten, and Mr. O. H. Dexter. They went first to St. Stephen, then across to Calais, and up to Grand Lake. Their hunting was done in the vicinity of Clifford Lake, which is some four or five miles from Grand Lake. They hunted on the hills in the neighborhood of beech trees. The deer came for the beechnuts. Mr. Glover speaks in glowing terms of still-hunting for deer. The work he pronounces extremely fascinating. "You approach a beech grove, silently as possible, and towards the wind. Suddenly you see a beautiful deer. You make the slightest noise, and he is up and away. But the deer in that section will stand approaching within easy gunshot, if you go still enough." This party got eight deer in all. One monster buck weighed 221 pounds with all the entrails out.

Mr. H. Walter Pinkham is another successful hunter, who has been into the Maine woods. Besides Mr. Pinkham the party was composed of D. P. Power, H. Osgood, Geo. H. Sullaway, of Boston, and Fred H. Holmes of Belfast, Me. They visited the wilds of Wesley, the town where the two game wardens were murdered several years ago. They had great success. They took 75 partridges, three ducks, two deer and a fawn. This latter they secured alive, and it is now on exhibition at Pinkham's market, on Dudley street in Boston. It is a handsome fellow, a little buck, about five months old. It is already very tame, though it has been out of the woods not many days. How in the world they caught it alive, the hunters have not yet explained. They only say that "the mother was shot, and this one hung around;" so they caught him.

Mr. E. M. Gillam, already mentioned in the FOREST and STREAM as going to Vineland, N. J., on his vacation, where he met his two brothers, one the sporting editor of the Philadelphia *Record* and the writer of the celebrated advertisements of Postmaster-General Wanamaker, has returned to the Boston *Advertiser*. They had "a glorious vacation," hunting a good part of the time. They were on the ground on the first day of the open season on game in that State, November 1st. They secured twenty-three quail the first day, and with the rest of their success they got nearly one hundred quail in all. They also secured a number of rabbits. Hereafter it is possible that Ernest M. will not take a gun when he goes after rabbits. Nature has provided him with a natural weapon of good size. His brother, with his dogs, started a rabbit one day, and it ran directly towards Ernest. The brother shouted for Ernest to "Look out!" There was not time to get his gun into position, and the rabbit running very near, Ernest drew out his foot and "let him have it with a sidewise kick." The rabbit fell dead a rod away. Gillam tells this story on 'Change, and the flour and grain men look at his feet and smile. The Gillam boys did not get any deer, though they trailed a number. Ernest got two snap shots, and he is honest enough to own that he missed them both. One hunter in that section, however, got two deer and a couple of pheasants in one day. The deer they found to be extremely shy; frequently skulking away, even when the hunter was entirely hidden, and skulking so cautiously that they could not be seen. The Gillam boys are much pleased with what protection has done for game in New Jersey, the number of hunters is so great that it is hard for the game supply. SPECIAL.

### A New-Subscriber Offer.

A *bona fide* **new** subscriber sending us $5 will receive for that sum the FOREST AND STREAM one year (price $4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price $5)—a $9 value for $5.

This offer is to *new* subscribers only. *It does not apply to renewals.*

For $3 a *bona fide* new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Ieet's handsome work, "Bird Portraits for the Young" (the price of which is $3).

## COLORADO GAME AND FISH.

DENVER, Col., Nov. 14.—It is reported that a band of the Indians from the Uintah Agency in Utah are killing elk, deer and mountain sheep in large numbers in western Colorado. The reports are from cattle men in that part of the country and are apt to be highly colored. They state that the Indians are killing large game by the thousand and take nothing but the hides. The number in the band is placed at 100, but this is in all probability exaggerated. The settlers say Indian Agent Waugh is responsible for this invasion, and hint that he and the Indians have a mutual understanding in regard to the disposition of the hides. The Governor notified the Federal authorities on Saturday, Nov. 12, and asked to have immediate steps taken to return the Indians to their reservation.

Game Warden Land is hard at work preparing his annual report to the Governor. In it he will recommend a number of changes in the existing law. It will be ready about Dec. 1.

Capt. Sedam's new shooting park was thrown open to the public Nov. 13. There was a large crowd of sportsmen there and several lively sweeps at targets were shot. The Captain is an enthusiastic trap-shoter, and has fitted up this place with all the requirements of the art. It is destined to become a very popular resort.

Messrs. Blayney, Haywood, Sibley and McKay, of the Queen City Club, killed 101 ducks at McKay's Lake on Nov. 13.

Mr. George 'Ady, general agent of the Union Pacific Railway, has had 23,000 young trout placed in the Platte River in the cañon. Considering that this stream is very easily reached from Denver, and that a special train for the accommodation of fishermen goes up the cañon every day during the summer, the fishing is very good. If the law in regard to retaining fingerlings was rigidly enforced the fishing in this stream would improve, but at the present time the "trout hog" has it all his own way, and numbers, not size, is the criterion of skill.

The people of the State are beginning to realize that our trout afford a source of revenue, and agitation for due protection is a natural result. I note this in the *Colorado Sun* of Nov. 16?

Probably no man in Colorado has had so good an opportunity to learn the true state of affairs as Mr. Gordon Land, State Fish Commissioner. It has not only been his official duty, but his personal pleasure to study the situation from every standpoint, and when he speaks, he does so advisedly.

"The supply of fish in Colorado streams," said he, "is growing less every year, in spite of the fact that hundreds of young fish are yearly distributed from the State and national hatcheries.

"In the first place, the number of fishermen who line the banks of Colorado streams during the summer months is something wonderful. I do not think that there is a great amount of fishing by illegal methods, but the numbers of rods and lines to be seen along the banks must convince anyone that the daily catch through the season is enormous.

"In one point I think the law might be changed to advantage, regarding the catching of trout. The present law allows trout fishing as early as May 1. This is about the time they begin to spawn. The spawning season usually continues about six weeks. During this time the fish seek the riffles. When the spawning is over they are very hungry and take bait voraciously. They are thus caught in great numbers.

"At this time they are so lean and soft as to be unfit for food, but many persons seem to be unaware of this, and the places where the fish congregate for spawning are lined with fishermen. The fish should be protected by law at this time.

"Many mountain streams that never had fish in them before have been stocked from the State hatcheries, and in every instance the fish have shown remarkable growth, but in most cases they have not been allowed to live long enough to attain a very great size. The fisherman comes before they are large enough to make a decent fry and carries them off.

"Colorado's fishing is one of her greatest attractions, and it should not only be properly protected by law, but the State should appropriate more money toward fostering it. Nature cannot be relied upon to keep up the supply, and the State should pay more attention to it. To lose her reputation with the fishermen of the East would by a calamity to Colorado."

TESEEBY.

## CHICAGO AND THE WEST.

[*By a Staff Correspondent.*]

CHICAGO, Ill., Nov. 18.—One often has occasion to wonder why, in the many mistakes made by compositors and proof readers, the victim of the error always gets the worst of it, and never has his meaning or his method improved. In my copy for the issue of Nov. 10 I said, or meant to say, in regard to a Kansas quail shoot, that I left "regretting not more, certainly, to leave the shooting than to leave my friends." Inasmuch as I was quite indebted to my Kansas friends for the shooting, and inasmuch as I do not care to be publicly ungentlemanly, not to say ungenerous, I was somewhat horrified to see the types coldly and calmly announce that I left "regretting more, certainly, to leave the shooting than to leave my friends." Even the most callous newspaper writer could not let such mishandling pass without protest, for the offense is not to the writer but to others.

This morning telegraphic communication between this point and St. Paul was made by way of Denver, Ogden and Helena. The direct lines were blown down by the blizzard of last night. Nashville and Memphis, Tenn., communicated via Chicago, St. Louis, New Orleans, and back through Chattanoogo. So it may be seen that the storm was general. In fact, it was worse south of here than west. This is the third bad storm of this fall, and it probably cleans up what little laggard flight of wildfowl there may have been left this week along this latitude. The late mallard shooting, which has been so good this fall, is now ended, unless a few birds remain holding to the heavily timbered streams.

The second blizzard, that of Nov. 7, was general throughout the entire West and Northwest, and the heavy snow that fell then would have been bad for the game birds had it not gone off quickly. The first hard storm was over two weeks ago, and not severe as these later ones. So far as can be learned, the quail crop will not be seriously cut up by any of these early winter entertainments.

Swan Lake Club and the open waters of Lake Senachwine have afforded good shooting within the past two weeks. Eddie Steck bagged over fifty birds, about half mallards, on Senachwine last week. Mr. John Earll bagged ninety, mainly mallards, on Swan Lake, two weeks ago, and at that time other Swan Lake men had heavy shooting. It is reported that Mr. Ed. Hunter bagged eighty-seven mallards on this water one day, and seventy-odd the next day, but as to this I do not have particulars or confirmation. Certainly the shooting there has been good. Walter Dupee yesterday said that he had word of a bag of eighty, mostly greenwing teal, on Swan Lake this week, but as to this also details are meager.

On the Kankakee, on Mak-saw-ba Club grounds, Dr. Norris, Mr. Shedder and two others one day last week killed eighty-four ducks, mostly mallards, and Mr. W. H. Haskell and Mr. Joel Kinney have continued in their good shooting at that point.

Mr. C. B. Dicks and Mr. Geo Holden left three days ago for a floating trip after mallards along the Kankakee. They will float over 100 miles of the river, starting from Mak-saw-ba Club, at Davis, Ind. The weather has been cold since they left, but whether they found conditions favorable or not can not yet be told. To make mallard shooting in this style most successful, the marsh must be frozen up, the stream in the timber open, and the weather rough and blustery. Granted these conditions, and no sort of duck shooting is more intesting and exciting.

Having been much out of town of late, I missed an invitation from Mr. W. Y. Wentworth, of Ft. Atkinson, Wis., to come up to shoot canvasback on Lake Koshkonong. Under date of Nov. 2 Mr. Wentworth said: "Every appearance is good for fair canvas shooting for the next ten days. Come up if you can. Governor Peck bagged eighteen birds yesterday, ten canvas, four redhead and four bluebills."

The present cold snap came too late for one unfortunate whose young eyes should have opened in a still colder clime. The little Esquimaux baby, Columbia Manak, born at the World's Fair grounds the first of the month, died about a week ago. The little one, so say the city news columns, was the pride of the Esquimaux colony, and her death is much mourned.

### A Judicial Quail Hunt.

Last week there went afield at Winamac, Ind., a party of grave and reverend seniors which included no less than four judges of the bench. These were Judge Dykeman, of Winamac, Judge Burson, of the same town, Judge Winfield, of Logansport, and Judge Johnson, of Chicago. Mr. F. C. Donald, vice-chairman of the Central Traffic Association, of Chicago, was along to add dignity to the occasion, and according to his story this was needful, for the judicial gravity was not very sternly observed after the shooting began. The party hunted over the grounds of Judge Dykeman, about a section of land in one body. Twelve bevies were put up and nineteen birds bagged, Mr. Donald getting 9. The cover was so dense the dogs could hardly work and shooting was next to impossible. I think that under the circumstances Mr. Donald has fully earned the right to be called "judge" also. It would be a shame to break the sequence. But if five judges go quail hunting and one judge kills nine quail, how many quail do the other four judges kill apiece, I wonder? I wonder, also, if five judges go hunting and one judge says, "How about that, Judge?" How many judges would say, "I don't mind?"

### Plenty of Quail.

Quail are abundant enough in Indiana, and nearly all of the Chicago quail parties there have been successful. Messrs. L. M. Hamline, C. B. Dicks and F. A. Place were at Warsaw, Ind., four days of last week, and averaged a good bag daily, their highest being 56. It would seem that about Marion, Ind., the birds are even more plentiful. A recent letter from a gentleman of Marion to a friend in Chicago has the following apologetic tone for a bag of "only 75:"

In regard to that contemplated quail slaughtering expedition of your friends, I spoke to Mr. B., who escorted the party out yesterday, and he stated that it would be useless to go out again before we had a good rain. The party yesterday only got 75; it was so dry the dogs would walk right over a covey without seeing them. As soon as it rains I will wire Mr. D., and if he can make it convenient to come Mr. B. and Mr. H. will take him or other friends of yours out for a couple of days. I feel confident that they will show them a good time. Bring no dogs; plenty good ones there.

Messrs. Oswald Von Lengerke and Charles Antoine, who pull together in the sporting goods trade in this city, have been having good shooting this fall along the line of the Chicago & Erie road, near Newton, Ora, and other points. On Oct. 15 and 16 they bagged 24 quail and 1 ruffed grouse. A week later they got 33 quail, and a week later still, 40, and then again 20. One day last week Mr. Antoine alone bagged 27, the two together bagged 38, and the day following Mr. Von Lengerke bagged 21. On Oct. 21 Mr. Von Lengerke was out with Italian Joe, inside the city limits, between Calumet Lake and South Chicago, and they bagged 36 jacksnipe and 6 ducks, 3 of the latter mallards. On the next day Joe and Mr. Antoine got 41 jacksnipe on the same grounds. This has been a great year for birds of all sorts.

Mr. Ernest Detmold, of the big New York house of Von Lengerke & Detmold, is in Chicago this week, naturally much with the younger firm here of Von Lengerke & Antoine.

Rolla Heikes spent a week in Indiana, shooting a little about Logansport, with a total of 65 quail.

E. HOUGH.

### New Mexico Game Notes.

EDDY, New Mexico, Nov. 12, 1892.—Mr. John Plowman, of this place, went into the Guadalupe Mountains, about 70 miles west, a few days ago, and killed three mountain sheep, the heads of which are now being mounted by a local taxidermist. This taxidermist, by the way, is making up a colletion for exibition at the World's Fair. He has mounted, thus far, good specimens of elk, black bear, mule deer, and several small quadrupeds. He has sent a hunting party into the Staked Plains, about 40 miles east of here, after Virginia deer and peccaries.

The quail season is now open and the game is plentiful. Several good bags have been made during the past few days. Ducks are coming in and will winter on the Pecos River. A few flocks of geese and brant have also been seen. War on the jack rabbits has begun and will be continued throughout the winter and until the weather becomes too warm for hunting, next summer.

G. O. SHIELDS.

### North Carolina Quail.

REIDSVILLE, N. C., Nov. 16.—This is one of the best hunting localities that I know of. There are more birds this season than usual. Good accommodations for visiting sportsmen. W. R. VICKERS.

## THE NEW YORK ASSOCIATION.

THE Executive Committee of the New York State Sportsmen's Association held its quarterly meeting in Syracuse last Thursday, Nov. 17. The delegates met in the spacious assembly room generously put at their disposal by Messrs. Averill & Gregory, proprietors of the Yates, the new and handsomely appointed hotel of which Syracuse is justly proud. In attendance, interest and prevailing spirit the meeting, which was the first under the June constitution, more than fulfilled the anticipation of those who had been most active in putting the Association on the new basis. The president, Charles B. Reynolds, of FOREST AND STREAM, was in the chair, with John B. Sage, of Buffalo, secretary. The roll call showed that twenty-four clubs were represented by delegates as follows:

Anglers' Association of Onondaga County—Henry Loftie.
Cortland County Sportsmen's Club—A. M. Schermerhorn.
Frankfort Game and Fish Protective Association—C. M. Rich.
Honeoye Falls Gun Club—Aaron Mather.
Leather Stocking Game Club—G. P. Mattison.
Onondaga County Sportsmen's Club—Harry Ayling.
Onndiaga Gun Club—Augustus Martin.
Rochester Rod and Gun Club—W. C. Hadley.
Syracuse Rifle Club—A. A. Stillman.
Spencer Sportsmen's Club—W. S. Gavitt.
Syracuse Gun Club—Henry M. Chase.
Syracuse Indoor Shooting Club—C. H. Mowry.
West End Rod and Gun Club—E. M. Klock.
Glen Haven Fish and Game Protective Association—E. D. Crosley.
Central New York Fish and Game Protective Association—W. S. Gavitt.
Caledonia Rod and Gun Club—James Annin, Jr.
Black River Fish and Game Protective Association—W. E. Wolcott.
Seth Green Club—J. B. Mullen.
Hemlock Lake Association for the Protection of Fish and Game—S. E. Filkins.
Honeoye Falls Anglers' Association—A. Mather.
Cheaper Food Fish Association—F. J. Amsden.
Canandaigua Anglers' Association—Homer J. Reed.
Anglers Association of the St. Lawrence—G. M. Skinner.
Niagara County Anglers' Club—Charles Ripson.
Associate Members—Gen. D. H. Bruce.

In addition to which letters were read from the Monroe County Sportsmen's Association, of Rochester, Poultney Rod and Gun Club, of Poultney, and the Lake Side Gun Club, of Geneva, making a total of twenty-seven.

There were also present by invitation Secretary E. P. Doyle of the Fish Commission, Chief Protector J. Warren Pond, District Protectors Hawn, Northrup, Ripson, Carr, Cotton; H. W. Thompson, secretary of the Anglers' Association of the St. Lawrence River, Monroe Green and others, to all of whom, on motion of Mr. Amsden, was extended the privilege of the floor. The following letter was read from President Huntington of the Fish Commission:

OFFICE OF THE COMMISSIONERS OF FISHERIES, STATE OF NEW YORK.—NEW YORK, Nov. 15.—*Chas. B. Reynolds, Pres't N. Y. State Ass'n, etc.:* DEAR SIR—Your cordial invitation to attend meeting of the New York State Association for the Protection of Fish and Game duly received. Allow me to assure you that it would afford me much pleasure to be present; that I regret exceedingly that it is impossible for me to avail myself of your cordial invitation owing to urgent engagements of an official nature. With my best wishes for the worthy object of the Association, yours truly, L. D. HUNTINGTON.

It was chiefly an experience meeting. The delegates had been asked to come prepared to report on the game and fish interests of their sections; and both sessions were for the most part taken up with such reports, supplemented in the afternoon with some accounts by the protectors of their work. The most encouraging and instructive lesson of the reports by delegates and protectors was that of the intimate relationship and mutual dependence of game protective organizations and the State force. Numerous hearty tributes were paid the several protectors for their faithful performance of duty and efficient activity, and in return Maj. Pond and his force were not wanting in appreciation of the material assistance and co-operation by societies.

The committee voted to recommend to the Association at the next annual meeting, Jan. 12, that the present club dues, a *per capita* tax of 25 cents, be abolished and the dues be fixed at $5 per club per annum. As the funds derived from this source will be insufficient to provide for the work of the Association, it is proposed to invite contributions from clubs and individuals. A Financial Committee to undertake such subscription was appointed, consisting of Messrs. F. J. Amsden, of Rochester, D. H. Bruce, of Syracuse, and H. W. Thompson, of Alexandria Bay.

A Committee on Legislation, to consider all proposed amendments to the law relating to fish and game, was appointed as follows: Walter S. MacGregor, Syracuse (chairman); G. M. Skinner, Clayton; F. J. Amsden, Syracuse; W. S. Gavitt, Lyons; J. S. Van Cleef, Poughkeepsie. The committee will receive and consider suggestions and will make their report thereon to the Association at the annual meeting.

The following resolution was submitted by Mr. Skinner, and after remarks in support of its adoption by Messrs. Doyle, Bruce and Reynolds, was unanimously adopted:

*Whereas*, It is a well known fact that the District Attorney of the city of New York has for two years failed to call the noted "Delmonico woodcock case" to trial, though supplied with unquestioned evidence of guilt, such delay being unnecessary and detrimental to the efforts which are being made for an enforcement of the game laws; therefore,

*Resolved*, That this committee calls upon the Hon. DeLancey Nicoll to forthwith bring such case to trial, and thereby show a willingness if not a desire to enforce the game laws as he would enforce other laws, thereby discharging a duty which he owes to the State.

A collection amounting to $20 was taken for defraying the cost of the stenographic report of the proceedings; and after a fitting vote of thanks to the proprietors of the Yates for their courteous tender of the assembly room, and an appreciative expression of the work of the FOREST AND STREAM as a factor in game and fish protection, the meeting adjourned.

### THE CLUB REPORTS.

Five minute reports were called for on the following points, and a portion of the responses are here given. Owing to a delay in receipt of the others, they must be deferred until our next issue. The entire report will then be reprinted for the Association by the FOREST AND STREAM.

1. What is the actual working of the present law in your section?
2. How is your local game protector performing his duties?
3. How is public sentiment in your locality?
4. What is the condition of hunting and fishing in your locality?
5. Have you any amendments to offer?

#### Rochester Rod and Gun Club.

W. C. HADLEY—As to the actual working of the present law I am totally unable to answer because I shoot but very little in the field. As regards the fishing portion I know nothing at all because I scarcely ever cast a fly. Of course we all take upon ourselves the opportunity of fishing if such an opportunity comes. As far as the game is concerned in Monroe county the Monroe Sportsmen's Association, of which Wm. S. Kimball is president, placed in Monroe county a year ago something over 5,000 quail, and I do not believe it was a success, although the intention was good. I cannot learn that a great many lived, although I have heard of once in a while a few being found.

As far as the game protector officially in Monroe county is concerned I am inclined to think that most of his attention has been directed to fish instead of game. I think perhaps he has devoted more time to that, in fact he has devoted all his time to fish protection. I have never heard of his prosecuting any one for the violation of the game law. As regards taking woodcock, ducks and other game birds out of season, I do know that in Monroe county a person may go to certain first-class restaurants of our lake resorts and purchase game suppers out of season. The fact has been brought to my notice a great many times that in July a person may go to Ontario Beach and purchase game suppers (Ontario Beach being our Coney Island), while up town in the city game suppers can be obtained out of season, yet they do not keep their practice before the public. As I said before, we need a little more game protection in Monroe county, such that it would have our game protected. If our game protector would kindly devote a little more attention to the protection of game certain of us would love to shoot.

I believe that Game Constable Swartz has done his official duty in Monroe county, and as far as I can find out I believe he has done good work in that way.

#### Cortland County Sportsmen's Club.

A. M. SCHERMERHORN—I agree with Mr. Hadley that our local protector's work has been done on fish. People have been shipping birds which is strictly prohibited. Complaints have been made but I do not know that anything has been done about it. The fish are well protected, but the game is not. There never was such a scarcity of game as there is now.

#### Anglers' Association of the St. Lawrence River.

G. M. SKINNER—The working of the present law has been entirely satisfactory. We have some amendments which we would like to offer at the proper time. We think we have a very efficient protector and that he is doing noble work. We are very glad to have Mr. Northrup as our protector. We think that public sentiment in our locality is growing all the while in favor of protection, but as has been said previously, too much attention is paid to the fish.

In regard to the fourth clause, fishing is improving. Our water is international water at the foot of Lake Ontario. The great trouble here is, the water being international water, that the Canadian fishermen are granted licenses, while we are strictly preserving the waters on our side. Nevertheless, we have experienced good results and we know that angling opportunities are increasing. Never before since our association was organized have there been so many small bass in the river. There have been exceedingly large numbers of muscalonge caught this year. I accept this as evidence that they are on the increase. Large numbers have been caught by angling, which is very encouraging. We have been told that next year a large number of wall-eyed pike will be put in the river. There was a time when wall-eyed pike were not much found. Providing we can get the amendments, which I will lay before you, we think we shall have everything in condition for good results.

I would like to add, Mr. President, as regards to the shooting, that there is very little done in this line. There have been but few partridges shot. I have but very little change in numbers to report in regard to ducks. The flight of ducks has been very large.

#### Syracuse Indoor Shooting Club.

CHAS. H. MOWRY—I find the actual working of the law in this section good as far as it goes, but it is too liberal for the welfare of the sportsmen and should be corrected. I believe the sentiment of our sportsmen is that the shooting season should commence on all game alike and close at the same time of the year. I would like to make this as an amendment to the law in regard to shooting of partridge, woodcock and duck, and also rabbits. As the law stands to-day there is no protection on rabbits. A man may go and shoot rabbits at any time in the year, and also shoot at young birds before the season opens. The season now opens on Aug. 15. This is far too early. I would suggest that there be no shooting at any time until Sept. 15. On the Montezuma Marshes there are a large number of mudhens. People go to these marshes and shoot them just before the opening of the season, and many do not hesitete to shoot anything that flies. Therefore, I would suggest that mudhens be included in the law. Although there has been no marked violation, there should be protection as well on other waterfowl.

In regard to our local protector performing his duties, the Onondaga Club has prosecuted not only for violations of the game law, but also of the fish law. I think the Onondaga County Sportsmen's Club will stand pre-eminently high above any other society or any other organization in New York for protection of fish and game. We can report excellent work in the protection of both game and fish by our local protector. This fact is well known to a number of you here. On that point we feel that we have accomplished most satisfactory results and are very happy that we can report in this manner. No doubt, our attorneys will have something to say regarding our cases. Public sentiment is with us, in fact, shows that it is with us.

I believe the report is that hunting in this locality was never so poor as it has been this year. The partridge has been very scarce. There seem to be very few woodcock. Very few ducks came in here.

I would suggest that an amendment be strongly urged on the Legislature for further protection of game and fish in Seneca River. The present law permits the use of nets in Seneca River, in Cayuga and Wayne counties. It is something that is working a great deal of harm. Our lake being fed from Seneca River, and the taking the fish out of the river prevents our catching them in this lake in large quantities.

As the law stands to-day in regard to shipping game, it is not allowed to ship any game out of the county or into the county. I have no doubt, however, that game dealers in New York city and other cities do receive game and fish from other counties. I think that our efforts should be used to stop them. We must defend the law, so that there can be no shipping from one county to another. This is a point that we should be interested in. The non-transportation clause is a greater protection for birds than any other law that can be enforced. We see the good working of it right here in our own city.

#### Onondaga County Sportsmen's Club.

HARRY AYLING—I think that Mr. Mowry has stated everything that I can say, but I may mention the action we have taken in the Andrews partridge case. The case was prosecuted and the defendants gave bail to appear before the Grand Jury. The case is in progress now. In regard to game, sportsmen in this section think that if there could be an open season for everything and a uniform close season the result would be much better.

In regard to fishing in Seneca River. Formerly one could go out and in one day catch all the fish he cared for, while now some of the best fishermen can catch but a very few. In former years I could catch 40 or 50lbs., but this year I could not catch more than 10lbs. The river is full of nets. The law allows this, and they are taking advantage of it. They fish for bullheads and catch a great many pickerel. I would suggest that something be done in regard to fishing in Seneca River.

#### Syracuse Rifle Club.

A. A. STILLMAN—I can only indorse what Mr. Mowry has said.

#### Syracuse Gun Club.

HENRY M. CHASE—I will answer in regard to the third clause, which is in regard to the sentiment of the people. There are a great many people in this locality who pretend to be friendly to this association, but who are in reality hostile to the movement.

The shooting has been very poor. The Syracuse Gun Club would like to obtain such legislation as will accomplish the following results:

1. Uniformity of the law throughout the State as far as possible.
2. Lengthening the close (or breeding) season and shortening the open season.
3. Regulating the use of nets, and if possible their extermination.

#### Central New York Fish and Game Association

W. S. GAVITT—I do notknow that there is anything that I can say that has not already been spoken of. We are quite well pleased with the new law in many respects. As a whole, I do not think we have many amendments to offer, but there are two or three that I would like to call your attention to. The law now allows the shooting of rabbits and also the use of batteries in Sodus Bay, and I am strongly in favor of forbidding this. Shooting has been very poor in our section. In regard to fyke nets on Seneca River, I think that they supply the reason for the scarcity of fish.

Another thing, in the catching of bullheads in nets, many other fish are caught in the nets, and are thrown back into the water dead. There are many clauses that should not have appeared in the bill, but should have been corrected, and we suffer from this. The exemption permitting battery shooting on Sodus Bay was inserted through the influence of a gentleman of that State, and was done out of spite, and while perhaps there will be no personal benefits by reason of that clause in the bill, still I think that it shou d be stricken from the bill.

#### Lakeside Gun Club, of Geneva.

J. GEORGE STACEY wrote: "We think here that all shooting (quail excepted) should begin not earlier than Sept. 1 and close Jan. 1. Quail shooting Nov. 1 to Jan. 1. Duck shooting will have to be kept open, I suppose, but I think March 1 late. Ruffed grouse, woodcock, quail, snipe, rabbits or hares, plover, in fact, all upland birds—not to be sold or had in possession after Feb. 1. That gives dealers five months in which to handle game. Surely that is enough. One word as to the meadow larks. I think the open season may begin Sept. 1. They are a shy, wary bird, and take very good care to keep out of gunshot.

"In regard to our local game protector, he is not performing his duties as he should do. The public would like to see a good man in his place—one that would do something in regard to illegal fishing."

#### Poultney Rod and Gun Club.

PRESIDENT CHARLES WAGNER wrote: "We would suggest that the law on partridge be changed from Aug. 15 to Oct. 15 following or Nov. 1. Our local game protector is doing his duty. Public sentiment is generally in favor of the law. Hunting has been poor, fishing fairly good. We suggest there be a law prohibiting fishing on the Sabbath day."

#### Monroe County Sportsmen's Association.

SECRETARY EDMOND REDMOND wrote: "I regret that I cannot be with you, but Rochester will be well represented in the meeting of the Executive Committee. I beg to submit for your consideration an idea that occurred to me yesterday, and which was published in the *Post-Express*. I am not sanguine that much good can be done right away, but that something should be tried is evident to all. The small publice preserve scheme would call for self-restraint on the part of sportsmen—and it might not be of any value to them. But I submit it for what it is worth:

A member of the Monroe Sportsmen's Association suggests that as an experiment the State Association should encourage clubs to establish in their respective counties places of refuge for game, where it would be absolutely free from danger of the gun. This could be done, he says, to some extent by leasing suitable grounds and prohibiting shooting upon them at any time. Such preserves would serve as safe breeding places for migratory and non-migratory birds, and in time the protected game would spread outside of the preserves and afford sport on the borders. If it

were possible to preserve the grounds rigidly it would at least serve to perpetuate some of the game that now seems destined to extermination. The suggestion is not a new one except as to the application of the idea to small territories. The Yellowstone Park affords an instance of the good effect of a preserve, and the private preserves in New Jersey also prove the value of the idea. In the vicinity of these places game from the preserves comes outsides the boundaries and affords sport when the original stock is exhausted. It is well known that what are called non-migratory birds, such as ruffed grouse and quail, while they do nos move from one climate to another with the seasons, nevertheless, travel over many miles of ground in the region where they are bred This practice would guarantee fair shooting away from the preserve, for some of the birds would be sure to come out. Such a place could without much expense be protected from vermin that is very destructive to game. If the sportsmen in the towns of a county could be induced to try this idea for a few years it might prove to be exceedingly beneficial to the cause of game preservation. Every one who goes out with a gun in this State knows that game is disappearing rapidly, and that it is only a question of a short time when there will be nothing in the woods to invite one out for a day's sport. The local preserve idea would also enable those interested to try, with some chance of success, the scheme of liberating quail or other birds, such as the Mongolian pheasant. If something of this nature is not done very soon the woods and fields of this country will be destitute of game.

### Niagara County Anglers' Club.

CHAS. RIPSON—The membership of our club is large. They take a great deal of interest in the laws for the protection of fish and game, and as the protector for the Fifteenth District I can assure you that they not only urge a strict enforcement of the game laws, but they materially assist me in many ways in the performance of my duties. How well those duties are performed I will have to leave to others than myself to tell.

The fishing in my locality is good. I think it is better than in years past; and though it may sound "fishy," I state from postive knowledge that persons have caught 500 perch and eighty large black bass each in a single day. This was done in Niagara River. I meet very few people who are opposed to the enforcement of the laws for the protection of game.

If this Association intends to make any recommendations to the Legislature I would suggest the following:

That the law with regard to Lake Erie remain as it is.

That the penalty for having black bass and muscalonge in possession should be $10 per fish. A total penalty of $25 will not pay a lawyer's fee in case you have to go into the courts.

Sec. 134, prescribing the size of meshes of nets used in lakes Erie and Ontario, should call for 1¾in. bar instead of 1¼in. as it now is.

One-half the penalty recovered should go to the protector, and $75 per month would not be too much pay for a man who is willing to do his whole duty and look after our interests in a territory covering three or four counties.

The law should be so amended as to prevent fishing within three miles of the mouth of the Niagara.

### Mink, Otter and Weasel Dodge Shot.

BREWER, Me., Nov. 19—In your last issue M. C. H. asks, "Can the mink dodge shot?" I have shot at a mink at close range which had its forefeet resting on a log covered with snow, the whole upper part of the body being fairly exposed. The shot cut the snow all up exactly where the forefeet rested, but the mink was not touched, as he dodged behind the log. I have repeatedly seen otter and weasel dodge rifle balls, which struck exactly where their heads had been when the gun was fired. Although I have shot otter, mink and weasel, which were looking directly at me when I fired, I do not consider this as any proof that they cannot dodge when they try to. M. HARDY.

### An Exclusively Vestibule Line.

THE Ohio & Mississippi Railway runs three solid vestibule trains each way daily between Cincinnati and St. Louis without change, permitting all classes of passengers to occupy the vestibule cars without extra charge. It is the only line running a passenger train between Cincinnati and St. Louis, notwithstanding the advertisements of competing lines. The running time is less than ten hours, easily made over its straight track and solid roadbed. The Ohio and Mississippi is the best and quickest line between St. Louis and Louisville and between Louisville and Cincinnati. Pullman buffet sleeping cars are run each way by this line between St. Louis, Cincinnati, Washington, Baltimore, Philadelphia, New York and Boston, and between Cincinnati and Louisville. Tickets via Ohio & Mississippi Railway are for sale at offices of connecting lines East, West, North and South.—W. B. SHATTUC, Gen. Pass. Agent. F. W. TRACY, President, Cincinnati, O.—*Adv.*

### ROD AND GUN AND CAMERA.

As a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM.

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us.

From time to time we shall reproduce by the half-tone process samples of the work submitted, and should the interest in FOREST AND STREAM'S Amateur Photography Collection prove to be what is anticipated, we may ask for an expression of opinion by a vote of all our readers after the manner of the successful and famous "Camp-Fire Flickering Vote." Such popular vote will be quite distinct from the award by the committee.

## Sea and River Fishing.

*The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.*

## CAMPS OF THE KINGFISHERS.—XV.

### CARP LAKE, MICHIGAN.

### The Carp Lake Camp.

*(Concluded from page 333.)*

I HAD to put on fresh fins every once in a while, as the trout would occasionally jerk one off the hook, and they were continually splitting and fraying them with their teeth till they soon became unattractive and useless.

I killed several of them as needed for their fins, and when I got through with one his belly was as bare as an eel's, for I found the pectorals answered as well as the ventrals or the anal.

When we had followed the winding stream about a quarter of a mile I thought I had about fished my share of it and asked Kelpie to change places that he might get some of the glory before it was all gone; but to my utter surprise he flatly refused to surrender his seat in the bow, where he had been sitting since we left the bridge, with his mouth watering—else he was made of different stuff from other men—to take a hand in the sport, for he was an old and crafty trout fisher, who would rather "poke" along a trout stream than to sit down to a feast of his favorite "red rozberries an' cream."

What had come over the man? Had the hot sun made him clean daft? Had I offended by fishing a longer stretch of the stream than courtesy would warrant? No. In the pure goodness and unselfishness of his old heart he wanted me to get all that was to be had out of the remainder of the afternoon, as I would not, he said, likely get another chance at the trout for a whole year.

"It stands just this way, Hickory, or sits rather in my case," he said, as he braced the oar against the bottom and held the boat in mid-stream. "We will break camp in a couple of days, as the arrangement is, and we will probably not have an opportunity to come back and fish this stream again. I can go trouting over where I live most any day when I feel like it, but you will not get to see another trout after to-day, it may be, till next year, and I want you to enjy the fishing in this stream while it's right here under your hand. I'll take my turn next year, if we come back to Carp Lake. Now, go ahead and fish and I'll hold the boat wherever you say 'stop 'er"—and he let the boat drift against the bank in a little pocket, where the current held it till he got up and deliberately filled and lighted his pipe, blew out the match and dropped it in the water, and then he sat down again, puffing complacently, while I stood looking at him and wondering if there was ever such another exhibition of self-denial "on the face o' this livin' airth."

I urged him in vain to take my place in the stern; his decision was not to be altered, and the boat drifted out in the current again, and I turned to be ready to "stop 'er" at the next trouty looking hole, but the sport had lost a good deal of its charm, for I was uneasy in my mind at the thought that I was, on his own insistance, however, robbing Kelpie of his share of a glorious afternoon's fishing. How many Kelpies are there claiming membership in the gentle craft? Too few and scattered.

A little further down we came to where there were some skids lying on the bank, where the lumbermen had rolled logs into the stream, and here was a hole deeper than any we had found, with some sunken logs in it, and one, bigger than its fellows, lying slanted out down the stream. Kelpie stopped the boat about 10 or 12yds. above it, and I let the bait drift down the current till it was nearly over the big log, when I saw a trout flirt out from under it and make a snatch at the slowly turning fins that made my blood tingle like from the shock of a battery. As he struck at the bait I gave the rod a quick twist that was a fraction of a second too soon, as he missed it and whirled back out of sight under the log.

Had Kelpie seen that trout I think he would have swapped places with me on the instant without further argument, for he looked fully as big as a three pound bass, larger if anything than the big fellow that I was sure was still hiding under the bank in the pool by the bridge crossing McConnell's Creek; but he was sitting too low down to get much of a view of the stream below him.

I said nothing, only to request him to "drop 'er down a couple o' yards," that I might have a better chance for a sure strike by using a little less line.

When the current again carried the bait down near the log and it was about to suck under, the big trout came out again with a dash, seized it and turned to go back under the log, but like the one up at the bridge he took the wrong direction, and right there began a fight, short, sharp and fierce, that was enough to make "gentle old Ike" turn over in his coffin.

The trout tried his level best to get under the log, which meant "good bye Hickory," but failing in this he made a wild rush across the stream and came near stranding on a small sandbar, and then before I could think to give or take up a little line he was back at the log making savage jerks and plunges to get under it.

It was a desperate case; if the line parted my hopes were blasted; if he got under the log he would saw the line in two before I could catch my breath, and with these two possibilities worrying me I was in a "state of mind."

The fight ended as suddenly as it began. At last he got the right purchase on the current with his broad tail and with a mighty surge disappeared from sight under the log and the hook flew back over my head and beyond Kelpie, stripped of both the fins.

I quickly reeled in the line to put a couple more fins on the hook, and there was the cursed fraud, a No. 6 Carlisle, straightened out to about the shape of a cant-hook iron. It hadn't the honesty to break fair and leave a clean record; it just lost its grip at the supreme moment, and me the big trout at the same time.

D—arn a Carlisle hook anyhow, or words to that effect; it is the thinnest excuse for a hook, whatever its size, that was ever put on the market to fool the confiding angler.

I was tired and sat wearily down on the little stool near the stern and "cussed"—cussed a whole catalogue of new fangled cuss words invented to suit the occasion, till the air grew thick and blue, Kelpie sitting meanwhile puffing calmly at his pipe, as though the loss of a big trout was one of the ordinary mishaps of life.

Finally, with his usual deliberation of speech, he said, holding on to a snag sticking up from the bottom with one hand while he took the pipe from his mouth with the other, "Hickory, I'm sorry about that trout; no, I didn't see him when you called to me, but I know he was a monstrous big one by the way the old rod worked, and by the remarks you made. Yes, I'm sorry you lost him," and that was all the consolation I got out of him, but it was enough, for I knew he meant it.

I found a No. 3 Limerick in my pocket calamity box and tied it on, and then cut a couple of bright colored fins from a dead trout and strung them on the hook in such a way that they would revolve in a most "bewilderin' an' enticin'" manner, but it was of no avail, even though I let it drift repeatedly under the log and pulled it back with the most captivating flirts and alluring jerks known to the art; the big trout was too smart, or too badly scared to again fool with a crippled, crazy-acting bug that had nearly dislocated his jaw during the brief time he was trying to let go of it.

I tried patiently for fifteen or twenty minutes to coax him out again, but it was only time wasted, and Kelpie once more let the boat drift with the current.

When we were within a few feet of the log the old fellow came out from under it like a flash and shot off down stream three or four rods and hid in a snarl of roots along the bank, but we paid little attention to him, knowing that he would not be likely to bite again that day. Kelpie stopped the boat just below the big log and I caught four good trout, 9 and 10in. long, and then we drifted along again to where I had seen the big trout go in hiding, but before we got within the boat's length of the snarl of roots he made up his mind the crazy bug was still after him and again he went off down the stream like a streak of light and we saw him no more, although we must have passed by him, lying scared nigh into fits under the bank, or behind some friendly log.

It was a crushing disappointment to lose that trout; I would have given my last "chaw tobacker," and thrown in an almighty dollar for just one more whack at him with the little Limerick, for after I tied it on I missed no more strikes nor lost a single fish.

The trout kept biting greedily—and so did the deer flies, but I had become so absent-minded and wrapped up in the fishing, and thinking of patient, unselfish old Kelpie sitting cramped up there in the bow, denying himself one of the greatest pleasures of his life—red-letter days of his life—he still refused to change places with me—that the flies failed to keep up the "enthusiasm" they had aroused in me on their first onslaught, and, besides, I had run out of cuss words of the right sort, and didn't think it quite fair to start over and treat Kelpie to the same old grist.

When we got down to where the stream widened and the bottom was sandy and free of logs, and roots, and snags, we found no more trout—at least they quit biting, and the most careful fishing for a hundred yards failed to provoke a rise; but we had had enough—a string of them tied to one of the rowlocks half as long as a man's arm, and there were no finerlings among them, nor had we returned more than three or four to the water, as under the lawful limit.

They ran from 8 to 11in. in length; a string of beautiful fish that made Kelpie's old eyes snap with the fire of youth, and I was in much the same humor.

Curious how a fine string of fish will take the old grizzled veterans back to their boyhood days, when they felt rich with a pole cut in the woods, a frayed straw hat, that took its turn as headgear and dipnet for 'minners, and a one suspender out-in-the-rear pair of breeches, a world too wide. Oh! the marvelous fishing—the wonderful days when we were boys.

The old rod was placed carefully in the bottom of the boat and we took our way down the stream, pushing with an oar apiece and standing up that we might better follow the devious water trail and look out for snags that might bring on a catastrophe at any moment and lay us out for the night in the swamp.

As long as the trout had kept biting, and while we were feeling our way out of the swamp as it were, I had forgotten I had such a thing as an appetite, but when we got to the mouth of the stream, and stopped to rest a few minutes alongside of the old wood scow, a hungry fit seized me that soon put the better part of the remaining lunch out of sight, and then shipping both pairs of oars, we followed the windings of the bayou out to the lake and out into the shadows of the falling evening that had just begun to darken the foot of the hills on the further shore.

We lifted our fish in the boat to save the drag, and bending to the oars—Kelpie had picked up muscle till he could pull a fairly vigorous stroke—were soon a quarter of a mile out and into a strong breeze blowing our way down the lake, one of the rare favors bestowed on us by the wind god since we had been in camp.

When we got back to the camp the sun was down, but there was still light enough left for the keeper of the fryin' pans to see to clean the trout and fry some of them for supper, and I managed to keep up my end in disposing of then, even though I had fared sumptuously on hard crackers and cold fried bacon less than a couple of hours before. The others were sprinkled lightly with salt, packed in a camp kettle and set in the "refrigerator" under the bank, well covered to keep night-prowling varmints out, and we had some for breakfast and some more for dinner, and there were enough left for a taste all round for supper next evening. Truly, the trout of Cedar Run are toothsome and comfortin' to the inner man.

Sitting around the camp-fire that night, Kelpied and I tried to induce the "Perfessor" and Johnny to spend next day on the Cedar, but the account we gave of the difficulties of navigating the stream and the danger of the boat turning over in the swift current with a couple of fresh-water sailors who were not thoroughly at home on the water in a "collar box," gave the "Perfessor" a backset, and he concluded he would rather risk a ducking in the warmer waters nearer camp than a bath in the frigid waters of Cedar Run.

Then we tried to talk the Colonel into making the trip with one of us, but he preferred the comforts of the camp and his pipe to being flayed alive by a swarm of blood

thirsty deer flies, and this moved us to try it again ourselves, that I might get even with Kelpie by holding the boat while he fished and "fit flies"—I would have to do the cussin' for him—but we at last abandoned the notion of going, as we had only two days left, Saturday and Sunday, before breaking up time.

These two days we could use up in loafing and enjoying the "Perfessor's" daily grind of ancient jokes and in packing up odds and ends before the final catastrophe came, wishing the while that there were no realities of life for us to go back to. Facing the realities was the hardest part of it all, for we had been so free of care or worry, and had become so attached to Robin's Nest Camp—the best of them all—that it was like breaking a heart string to leave it.

The "Perfessor" and Johnny were, however, going to stay three or four weeks longer.

They had thought of boarding with the Gerings or going up to Uncle Jimmy Nolan's, but country people are not always prepared to accommodate boarders, and it was at last arranged to leave them a tent—the big fly—a camp kettle, coffee pot and enough other necessaries from the outfit to get along with comfortable, and they could bring them home when they got ready.

On Saturday we fished a little, sat around and smoked and cogitated a good deal and debated what to do next; packed a few things just to make it look like we were in earnest about breaking up, and then we smoked and loafed some more, and felt tired because packing up was not the sort of work that agreed with our notions of the fitness of things.

Along toward sundown Kelpie and I pulled across the lake to get the minnow trap—we might as well have left it hang for all the good it had done us—and to fish a little from force of habit, but we didn't catch anything worth bragging about, and we didn't care much, for the wind up was so near that we were more concerned about that than the number of fish we could take back to camp.

When darkness fell we kindled the camp-fire and sat around it and smoked and talked a little about breaking up, and meditated undisturbed—the "Perfessor" had forgotten to wind himself up—for there was little else to do. At last Kelpie broke a long spell of silence with "Hickory, it's a pity you didn't skin that bear the other day and bring in the hide to take home with you as a reminder of Robin's Nest Camp."

This was not a very mirth-provoking subject to the Colonel, Johnny and me, as it reminded us of the last "episode" in which we three had taken a prominent and rather ludicrous part, Kelpie and the "Perfessor" not being in camp at the time.

One afternoon a few days before, little Emma Laidlaw came running down to camp out of breath to say excitedly there was "an awful big black bear swimming along down the lake only a little ways out just above their house, and for us to come up quick and kill him." Then there was mounting in hot haste, or words to that effect, for the Colonel and I had been "jest a achin' fur a b'ar fight" for lo, these many years. Johnny seized a hatchet, I grabbed up the axe, and the Colonel went for his gun—the big revolver—and a handful of cartridges, and jumping into the big white skiff away we went up the lake, Johnny and I at the oars pulling as though our lives were at stake, while the Colonel sat grimly in the stern filling the chamber of his big pistol with cartridges to be ready for the fray.

A strong wind blowing down the lake and a heavy sea made our progress aggravatingly slow, but the prospect of a real, genuine bear fight ahead only made us redouble our efforts at the oars till the sweat rolled off us in great drops—except the Colonel, who sat in the stern calmly scanning the water ahead with his "eagle eye" for a sight of the bear. Little Em, being a lighter craft and not being handicapped by a heavy head sea, as we were, shinned it up the road and stood on the bank waiting for us as we rounded the point at the lower end of the grove below the house, pointing to a dark object rising and falling on the water a hundred yards or more out from shore.

We were too far away to see our intended prize very distinctly, but our plan of attack was soon formed. We would pull in between the bear and the shore to "head 'im off," and when within close pistol range the Colonel would open on him with his battery, and if he only wounded him and he attempted to climb in the boat—which bears sometimes take a notion to do—Johnny and I would "do him up" with the hatchet and axe while the Colonel "filled him chuck full o' perforated holes" at arm's length range.

Johnny and I put on a little more steam, heading a point or two inshore, and we were soon near enough to get a good sight of the bear, when, there, slowly drifting with the wind and waves was—not a bear, but what had looked surprisingly like one doubtless to the vivid imagination of little Em—a curiously shaped charred and blackened old stump that had somehow got adrift in the lake and was rolling and bobbing along in the seas in a manner that had led the child to take it for a "really bear." Johnny and I suddenly shut off steam, as it were, and the boat lost headway, only pitching up and down in the seas, and then we looked at each other in a foolish sort of way and then at the Colonel, whose face was a study, and the Colonel looked at us in a foolish sort of way, and then we all laughed: laughed till our sides ached, while the boat drifted near shore, where we told the little maid her bear was only an old black stump.

"I thought it was a bear," she said so naively that we, thoughtless wretches that we were, laughed again, till overwhelmed with confusion at the joke unwittingly played on us, she started for the house shame-faced and nearly ready to cry, to find as we knew a balm for her wounded feelings—as who of us has not in childhood days?—in that haven of refuge and comfort, a mother's arms.

Johnny and I laid on our oars awhile, only pulling a lazy stroke at intervals to keep the boat head on to the seas while we rested and cooled off, and then we headed back for the camp, three mighty bear hunters we, crestfallen, and "bunkoed ag'in b' gosh," to be laughed at and "chaffed" till life was a burden to us for the next day or two; even the keeper o' the fryin'-pans had a grin on his face that reached from one ear to the other whenever anything reminded him of the "bear hunt," as he called it.

The "bear" washed ashore at the foot of the grove, where we passed him on our way back to camp, and I doubt not laid there the rest of the season to remind little Em, as she passed on occasional trips to the village, of the commotion she created in the Camp of the Kingfishers, and if sight of the old black stump moved her to laugh a little to herself at remembrance of our discomfiture we will not lay it up against her, for we enjoyed the "episode" more than she, and it was a source of much fun in the camp—at least to the "Perfessor," Kelpie, and the keeper o' the fryin'-pans, if not to the three who took so active a part in the "fight."

It may be noted that the Colonel and I are not "jest a achin' fur a b'ar fight" as badly as we used to be; we are satisfied with our record.

Sunday forenoon we packed up our personal "calamities" and some other things of the outfit except the tents, carried up the ironclad, let it dry out and packed it, and in the afternoon entertained a lot of visitors and friends who made a neighborly call and to say good-bye, among the rest Uncle Jimmy Nolan and his boys and the owner of the big white skiff that had served the Colonel and me such a good turn when we were shipwrecked on the wrong side of the lake.

After supper Kelpie and I took a boat and pulled down and anchored off the birch point to have a last "fish" together, but the bass were not in a good humor, and we got only one; and it was so dark when I struck him that I could barely see the line at the tip of the rod.

He was a small-mouth of exactly 3¼lbs., and made such a valiant fight for his life that we had a notion to return him to the water, but concluded that as he might be the last bass we would ever get out of Carp Lake we would have him for breakfast as a fitting windup to our last morning in camp.

The Colonel surpassed himself that night in building the most rousing of his famous camp-fires, but it didn't burn as brightly nor look as cheerful as usual somehow, because maybe it was our last night, and we might never gather around another one; certainly not for another year.

We sat around it till well into the night, thoughtful and quiet, for nobody seemed much inclined to talk, even the "Perfessor" had taken a "double reef in his jawin' tackle"—an amazing and unaccountable "episode"—and failed to grind out the usual grist of smartness and old "chestnuts," for which we felt profoundly thankful.

The others of us went off to bed at last, leaving the Colonel to sit out his last camp-fire and poke the chunks together for their last dying flicker, going back, mayhap in his dreaming to the old camps as he gazed with half-closed eyes into the waning fire and sucked comfort and reminders from his old brown pipe. Oh! the old camps! Would we could go back into the years when life was in the silk and tassel and make them all over again. But I am drifting into a reminiscent mood; old memories and breaking camp don't go well together.

Next morning by 9 o'clock everything was packed and ready except the tents. They were left standing till the sun got above the hill and warmed the night dews out of them, when they were packed in one of the big canvas bags, and last came "old glory," leaving old Sam's "dandy flag-pole" desolate looking and bare except for a wisp of withering leaves fluttering at the top.

The wagons were soon loaded—neighbor Gering's and another one—and we said good-bye and good luck to the "Perfessor" and Johndy ("the two Johns") and left them to laugh and grow fat, or fight it out over each other's pithless puns and witless wit, for Johnny was a chip off the old block and could give his "governor," as he called him, as good as he sent. (A letter was received from the "Perfessor" a week or more after, and he could not forebear inclosing one of his old decayed "chestnuts," to wit: "Johnny caught a 6lbs. bass yesterday, but when we took it down to Bingham end put it on the store scale the darned thing weighed only 3lbs.")

When in the wagon we drove by under the oak for a parting look at our little pets in the nest overhead, and left "Robin's Nest Camp" behind us with genuine regrets, for it was a camp the like of which we may never find again. True, we did not catch a great number of bass, but we got more than enough for our needs, which was, probably, more than some of us deserved, and a perfect camp and fish enough is better than a poor camp and "heap much fish," which being boiled down resolves itself into that truism of a lamented brother of the rod—and I may be pardoned for again quoting it—"It is not all of fishing to fish."

At Traverse City there were more regrets in store for the Colonel and me; Kelpie was to leave us there for his home on Central Lake, and he had so endeared himself to us by his gentle ways and sterling qualities as a sportsman that it was like saying good-bye to a well-beloved brother, but the parting was made easier by a promise from him that he would "jine" us wherever we made the next camp, if we made it anywhere this side of the North Pole.

(I like to write good things about my old comrades of the camp and the pleasant people whom we meet, and if it please them to read it as much as it does me to write it I'm sure it will be to our mutual pleasement. Pleasant neighbors, if you have any at all, go a good ways in making the camp enjoyable, and a good cook, one that can adapt himself to the different humors of a party, is a rare jewel, and Barney, the keeper o' the fryin' pans, is one of 'em, to which the Kingfishers will take their "affidavy.")

The Colonel and I arrived at home brown and rugged, and filled with pleasant recollections of "Robin's Nest Camp," but before a week we were examining maps and casting around for a new place to pitch the tents next time, where old Sam would find "more fish and fewer episodes."

We found it, and if these letters have not already exhausted the patience of the readers of FOREST AND STREAM I may take a notion, if I find time, to make a few "amphibious remarks" about it some time in the future.

And now, to bring these chronicles to a close, I crave the indulgence of the brethren for any shortcomings they may have found in them; I have tried to write to please you all, more especially my old comrades of the camp, and if I have failed it is the fault of the "old head" and not of the heart.

Errors there are in them, I know, typographical and grammatical; the first may be charged to the printer, the others—well, the critical reader may be reminded that in the past 35 or 38 years I have looked into a "minner bucket" oftener than in a grammar, and, besides, "The Joneses never *wus* used to the very best o' grammar, nohow."

KINGFISHER.

## A GAR'S VULNERABLE POINT.

*Editor Forest and Stream:*

I have been a reader of the FOREST AND STREAM for the past ten years; and since reading your articles in regard to the Carondolet alligator gar, I take the liberty of handing you herewith some scales from one captured in eastern Arkansas last spring. It was taken from Dead Timber Lake, in Crittenden county in a seine, and was killed with the butt of an oar by striking it in the forehead. It measured 9ft. and weighed 176lbs. It was given to me. I had it skinned and preserved 2,000 scales. To separate the scales from the flesh had to boil them from seven to eight hours. When I tell you I was three days cleaning my 2,000 scales you can imagine the work connected with it. I do not believe this fish could be gigged as I have known men who have shot them with Winchesters and failed to do more than make them lash the water furiously for a few moments. This gar was a female, and her eggs were large and well formed, evidently they were about ready to deposit.

The horseshoe-shaped scales run down the back, the others lying obliquely on the sides. I send three scales from each side of the fish. The only vulnerable point about this fish seems to be the forehead, just between the eyes, which can be crushed with a hard blow.

J. H. BEARDSLEY.

KANSAS CITY, Mo.

[Dr. Goode quoted the following curious stories about the bony gars in the "Fishing Industries:"

Champlain wrote in 1609 of a fish in Lake Champlain which was undoubtedly the gar-pike, that "if it wants to catch any bird it goes among the rushes or reeds bordering the lake in many places, keeping the beak out of the water without budging, so that when the birds perch on the beak, imagining it to be the limb of a tree, it is so subtle that closing the jaws, which it keeps half-open, it draws the birds under water by the feet. The Indians gave me a head of it, which they prize highly, saying that when they have a headache they let blood with the teeth of this fish at the seat of pain, which immediately goes away."

In July, 1879, Mr. James F. Simmons, of Redhone District, Georgia, "had a narrow and peculiar escape. He was fishing on Flint River, and had attempted to swim across to get a batteau from the opposite side. About half-way over the stream he stopped on a root or tree to rest. After remaining there a short time, he plunged off for the other shore. Just as he made a plunge a tremendous fish known as the gar struck him, catching his thigh in its mouth, and leaving an ugly and painful wound. A regular battle then took place between the man and the fish, and lasted for some minutes, until finally Mr. S. got back on his resting place and his enemy departed. During the fight Mr. S. threw the fish some feet above the water, but it continued the attack. Mr. S. was thoroughly frightened and called lustily for help. He has several ugly and painful wounds given him by the fish, yet none serious. This is the first time we ever heard of a gar attacking a man, yet they say it frequently does so."

The species referred to in the latter account was supposed to have been the alligator gar.

In 1880 the writer had a number of arrow-head-like scales of the gar which he carried in a voyage to Arctic Alaska, believing that the Esquimaux would prize them highly for use in their weapons of the chase. The scales were frequently offered in trade to the natives, but excited no attention from any of them. A few were given as presents and may some day appear in a collection and cause some speculation as to the source from which the Esquimaux obtained them.]

## WITH A FLY-ROD.

IT will not be many weeks before the season will come for the appearance in our advertising pages of announcements by our fishing tackle friends of this tenor: "Trout and bass rods make excellent Christmas presents." And it is just as certain that many a fortunate fisherman, his father or mother, or wife or daughter, or son or cousin, or angling friend, having noted the suggestion in the FOREST AND STREAM, will be given a fly-rod for Christmas, and with it a presentation note of affection and well-wishing.

Now, if you were going to give such a holiday gift yourself, what would be your note to go with it?

A sentiment to accompany a fly-rod, what should it be?

The FOREST AND STREAM believes that suggestions in this line would prove timely and acceptable, and that a column in its angling pages made up of such notes would be capital reading. They are invited.—*Forest and Stream, Oct. 13.*

I.

MY FRIEND—The trees are always sympathetic, the birds never fail to welcome their lover, the landscape belongs to him who can see it, the story of creation, the purpose of being, the destiny of man are written on the face of the earth. May this little gift induce you to be oftener out of doors, away from yourself and the ever-disappointing world of men.

Sincerely yours, C. T. MC.

ANN ARBOR, Mich.

II.

The essence of good angling is not to catch too many.

MILLARD.

ARIOSA, Wyo.

### A Fishculture Lecture.

IN the Glens Falls (N. Y.) Lyceum lecture course Mr. A. N. Cheney, of that town, will lecture Dec. 27 on the "Progress of Fishculture."

### Desired Information.

WE desire to impress upon the minds of the public the superiority of the service offered by the Wisconsin Central Lines between Chicago and Milwaukee and St. Paul, Minneapolis, Duluth and all points in the Northwest. Two fast trains leave Chicago daily for St. Paul, Minneapolis and Duluth with Pullman vestibuled drawing room sleepers and coaches of latest design. Its dining car service is unsurpassed. This the public is invited to judge for itself. It is the only route to the Pacific Coast over which both Pullman Vestibuled, first-class, and Pullman Tourist cars are operated from Chicago via St. Paul without change. Pamphlets giving valuable information can be obtained free upon application to your nearest ticket agent, or to Jas. C. Pond, General Passenger and Ticket Agent, Chicago, Ill.—*Adv.*

## FIXTURES.

### DOG SHOWS.

Nov. 22 to 25.—Brooklyn. H. W. Huntington, Sec'y, 148 South Eighth street.
Dec. 6 to 9.—First Annual Dog Show Hermitage Kennel Club, Nashville, Tenn. Robert C. Stockton, Sec'y.

1893.

Jan. 3 to 6.—Mohawk Valley Poultry and Kennel Club. F. B. Zimmer, Sec'y, Gloversville, N. Y.
Feb. 21 to 22.—Westminster Kennel Club, New York city. Jas. Mortimer, Supt.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
May 3 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago.
Sept. 7 to 10.—Hamilton, Ontario. A. D. Stewart, Sec'y.

### FIELD TRIALS.

Nov. 28.—Philadelphia Kennel Club Trials, at High Point, N. C. F. G. Taylor, Sec'y.
Dec. 5.—Central Field Trials, at Lexington, N. C. Col. Odell, Sec'y.
Dec. 19.—Irish Setter Field Trials, at Lexington, N. C. Dr. G. G. Davis, Philadelphia, Pa., Sec'y.

1893.

January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgarif, Sec'y.
Feb. 6.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y

## AMERICAN FIELD TRIAL CLUB'S TRIALS.

ON the presumption that the United States Trials would not be finished in less than a week, the American Field Trial Club claimed Tuesday, Nov. 15, for the commencement of its trials. The former club having marched up the hill and then marched down again in less time than was anticipated, the feasibility of commencing on Monday was considered, but there were so many details to rearrange that it was finally decided to hold to the advertised dates.

The judges were Messrs. J. M. Freeman, Bicknell, Ind.; Royal Robinson, Indianapolis, Ind., and W. A. Thompson, Attica, Ind. They managed the running skilfully and their decisions were well received in nearly every instance. They were hampered greatly in testing the dogs by the small amount of work obtainable owing to the difficulty many braces had in finding birds.

The grounds were good enough to run a field trial on, but were mixed, good and common. There were undoubtedly more birds on them than the number found by the dogs would indicate. Many times birds were found by the horsemen which, it could reasonably be expected, should have been found by the dogs.

For a first trial it was conducted in a most praiseworthy manner. Few of the older organizations conduct a trial with less friction or more method. Mr. W. J. Beck, the secretary-treasurer, worked most diligently and efficiently in arranging and conducting the details of the competition, and it is but justice to mention that he did it skilfully and well. He is a prominent lawyer of Columbus, Ind. In managing a field trial, he seemed to have a knowledge from intuition which others acquire by years of experience.

The members are all gentlemen of high standing and ability, and the progress and elevation of field trials could not be in better hands. The section of country about Columbus is favorable for field trials, in respect to grounds. With a little care in arranging for a food supply for the birds, by planting sorghum or pea patches in favorable places, a sufficient number of birds could almost be guaranteed.

Mr. A. T. Quick, of Columbus, also contributed by his energy and personal attention to the success of the trials. That the trials are of public interest, and popular, too, was evinced in a thousand ways. Indeed, the uniform attention and assistance given by the club officers and members could not fail to win the appreciation of every one interested. The cordial welcome, generous hospitality and intelligent activity of the club this year won the esteem of the visiting sportsmen. It is in a section of country which, from its location, commands an assured support. Louisville, Cincinnati, St. Louis, Chicago, Cleveland and many other cities are tributary to it in a field trial way.

More birds than were found are needed for a field trial, at its best, than the grounds probably contain, but there were many more birds than the finds would indicate. Many of the dogs were lacking in experience, and many of the handlers failed to beat out the grounds with care and some of them hurried too much.

The rumors of dense weeds, cockle burrs and heavy river bottoms, which so influenced the final action of the United States Club, were without foundation in fact. *En passant*, it may be remarked that Messrs. Beck and Quick had been out early on the morning of the arrival of the U. S. Club engaging grounds, horses and teams, and felt that the club acted hastily in not giving the matter a practical test. Indeed, the action of the club was hasty, both as to intention to postpone the trials and manner of executing it, for there are many questions concerning the legality of the action under the club's constitution and by-laws. A vote of thanks to the American Club could have been most appropriately passed for its consent to use some of its grounds and for the personal efforts of its members to aid it in every possible way. This oversight will undoubtedly be corrected at a later meeting. It so ought to be.

Among the visiting sportsmen I noticed Messrs. W. M. Kerr, S. H. Socwell, Indianapolis; C. O. Ferry, Roann, Ind.; C. Sanderson, Gardner, Ill.; E. H. Lyons, Emporia, Kans.; C. A. Paetzel, Hope, Ind.; F. J. Stroebel, Utica, N. Y.

Tuesday and Wednesday were delightful days, clear and mild. Thursday was rainy and Friday was cold and windy.

The Glenmore Kenels have a magnificent string of their Irish setters, about twenty-two in all, although only a part of them ran in the trials. They were in bench show form, too nice condition for field trials. Bench show condition and field-trial form are incompatible. The necessary work is distructive to fine feather and polished coat. To attempt bench show and field form at the same time is sure to end in disappointment.

The stakes were sweepstakes, 50 per cent. to first, 25 per cent. to second and 15 per cent. to third. The absolute winner of All-Age gets a cup, value $100; the absolute winner of Derby gets a cup, value $75; the absolute winner of the Puppy Stake gets a cup, value $50.

The officers of the club are Major Jos. F. Gent, President; A. B. Reeves, First Vice-President; U. R. Fishel, Second Vice-President. Board of Governors, H. B. Reeves, U. R. Fishel, C. S. Baker, A. T. Quick, E. Nowatny, E. B. Peel and W. C. Bruce. The club has a large membership.

While the trials dragged a bit from the causes mentioned, they are trials which deserve the support of all who are interested in genuine sportsmanship. The gentlemen of the club, who have worked so diligently for its success, are the right sort to welome. In Indiana these remarks are superfluous, for there the gentleman are well known to the sportsmen of America, who may not be fully informed in all these particulars these remarks convey a truth which is a benefit to the future progress of sportsmanship.

### TUESDAY.

The weather was delightfully pleasant after the heavy rains of the previous day. All the conditions appeared favorable for good work, but good work was the exception indeed. The grounds were not half hunted, yet about ten bevies were found, a large number of which were found by the spectators. All the work was decidedly inferior.

#### The All-Age Setter Stake.

There were three starters, and they made an inferior competition in every respect. The work done on birds was limited. Following is the order of drawing:

J. F. Pantler's dog Frank (Sancho—Bessie), J. H. Johnson, handler, *with*
Baker & Beck's dog Ightfield Rhiwlas (Downe—Schonaid), J. E. Fisher, handler.

George E. Gray's dog Hi Di (Hope—Trap, Jr.), a bye, J. Mayfield, handler.

*First Series.*

FRANK AND IGHTFIELD RHIWLAS.—They began at 8:30 in open stubble. Frank was first to point. He found a bevy in the open weeds, which he pointed for a brief time, when he pressed forward and flushed. Rhiwlas did not see Frank in weeds or refused to back it was difficult to determine which. There was a crippled bird left, which Frank ran forward to retrieve, but he stopped to order. No more work was done on birds. Frank had the better range and speed. Up at 9:34.

HI DI.—The bye dog was run with Coleraine for a bracemate, commencing at 9:41 in a stubblefield. Hi Di, close to a bevy, pointed at the same moment that one of the birds flushed wild. The birds were followed. Coleraine pointed just as the bevy flushed in open weeds. Up at 10:13. Hi Di showed only a fair range. He suffered some from a swollen nose.

*Second Series.*

HI DI AND FRANK.—One brace of Irish setters wrs run to give this brace a rest in the meantime. They were started at 11:08. Hi Di ranged the wider. Frank gradually narrowed his range from the beginning. Up at 11:37. No birds found.

The judges soon announced the winners as follows: Hi Di first, Frank second, Ightfield Rhiwlas third.

The running in the next stake was then resumed.

#### The Irish Setter All-Age Stake.

There were nine starters. The work was unqualifiedly poor. Some of the dogs were diligent enough, but apparently had little preparatory work on birds. At all events, they made many blunders and failed to take advantage of numerous opportunities. The spectators found quite as many birds as the dogs.

Following is the order of running:

A. A. Anderson's dog Quaker (Rex—Fannie), C. Harvey, handler, *with*
Glenmore Kennels' bitch Betsy Crafts (Keno—My Maud), W. T. Irwin, handler.

Geo. E Gray's bitch Hope Boru (Byron Barugo—Biddy), John Mayfield, handler, *with*
Glenmore Kennels' dog Finglas (Fingal III.—Aveline), W. J. Irwin, handler.

R R. Howard's dog Marlowe (Elcho, Jr.—Maid), J. Mayfield, handler, *with*
Glenmore Kennels' dog Beau Brummel (Elcho, Jr.—Red Rose), W. T. Irwin, handler.

Geo. E. Gray's bitch Elcho's Maid (Elcho, Jr.—Maid), J. Mayfield, handler, *with*
Glenmore Kennels' bitch Winnie II. (Frisco—Grouse), W. J. Irwin, handler.

Glenmore Kennels' dog Ranger (Irish Elcho—Irish Belfast), a bye. W. T. Irwin, handler.

Every dog nominated qualified and started—a most exceptional occurrence.

*First Series.*

QUAKER AND BETSY CRAFTS.—Down at 10:32, in open stubble. Quaker flushed twice, after which Betsy made a flush, this on a bevy scattered about in the open. Betsy next false-pointed. The birds were followed into woods where Betsy got a point on two which flushed wild. On a marked bird, she next flushed. Neither ranged wide. They had a number of opportunities to point, but failed to take proper advantage of them. Up at 11:00.

The brace of English setters was next run in the final heat of that stake. The party then went to lunch.

HOPE BORU AND FINGLAS.—Down at 12:50 in open stubble and weeds. Both pointed, or Hope pointed and Finglas backed. They were close together. Nothing found. Up at 1:34 without finding birds. Judges announced they would be put down again.

MARLOWE AND BEAU BRUMMEL.—Started in an open field at 1:43. After a half-hour's search Beau flushed a single bird and dropped to wing. The bevy flushed wild down wind. The birds were followed into corn, where another bevy was flushed, handlers and dogs close around it. These birds were followed into corn. Beau flushed a bird up wind. Both passed by birds without recognizing scent. Poor work. Up at 2:27. Both ranged moderately well at the start, but gradually narrowed their fling.

ELCHO'S MAID AND WINNIE II.—Down at 2:40 in open. The first birds were of a bevy marked down in woods by spectators. Maid dropped to wing as the scattered birds flushed on bare ground. Followed the scattered birds. Maid pointed one and Winnie refused to back. Maid moved forward and flushed the bird. Both passed a number of birds, which flushed wild after the dogs had gone on. Maid pointed; nothing found. Winnie refused to back. Up at 3:20.

RANGER had Coleraine for a bracemate, he having a bye. Down in open at 3:18. Irwin walked up a bevy which both dogs had passed. It seemed as though they should have pointed or recognized scent, as they were close to it down wind. Both flushed on the scattered birds. Ranger next flushed wilfully. Up at 3:49. Poor heat.

FINGLAS AND HOPE BORU.—They were started at 4:12 to conclude their unfinished heat. On some marked scattered birds Finglas flushed one. Boru pointed a bird in open. Up at 4:40. Finglas showed the better range, both being superior to the others in this respect.

The judges in the evening announced that Finglas, Hope Boru and Elcho's Maid would run in the second series.

### WEDNESDAY.

The day was delightfully pleasant and mild. Birds were hard to find. New grounds were worked, some of which were excellent, but a large part was too bare. A gentle breeze made favorable conditions for good pointing. The work was fairly good as a whole, some of it much better than ordinary.

*Second Series.*

FINGLAS AND ELCHO'S MAID.—They started near town in a stubble. Finglas had taken but few casts when he came quickly to a point in the stubble. Maid, coming up, caught scent and pointed the same bevy. Both steady to shot. Sent on, Maid, a few yards further on, pointed part of the same bevy. She next pointed a single, which was flushed after she was ordered on. Finglas backed nicely. Both beat out the ground well, working merrily. It was the best heat of the trials up to that time. Maid showed some indecision at times in her point work. Finglas showed the higher class work.

HOPE BORU AND WINNIE II.—Began at 8:52 in stubble. Hope roaded nicely to a bevy and pointed it accurately and well. It was quite a good piece of work. Steady to shot. Winnie made a bracemate for Hope, the latter having a bye. Up at 9:15.

The judges soon announced that Fingal won first, Elcho's Maid second, and Hope Boru third. The following stake immediately was begun.

#### The All-Age Pointer Stake.

The quality of the work as a whole was fairly good. It averaged far better than any preceding it.

Mr. Thompson having bred one or more of the dogs retired from the judging in this stake, Messrs. Freeman and Robinson judged.

There were nine starters, drawn to run as follows:

J. F. Shipley's dog Eric S. (Rank—Queen), W. B. Stafford, handler, *with*
U. R. Fishel's dog Don Fis-Hel (Devonshire Sam—Nellie Bang), owner, handler.

U. R. Fishel's dog Wise Croxteth (Croxteth—Amine), owner, handler, *with*
C. A. Paetzel's dog Nutwood (Ossian—Nellie E.), J. H. Johnson, handler.

G. A. Castleman's dog Castleman's Rex (Mainspring—Dell), W. B. Stafford, handler, *with*
A. T. Quick's dog Faust King Don (King Don—Queen Faust), J. E. Fisher, handler.

J. W. Scudder's dog Manitou (Luck of the Goat—Clary), W. B. Stafford, handler, *with*
Carrie Harvey's bitch Midgett H. (Harrop—Frankie), owner, handler.

John B. McGuffin's bitch Maid of Ossian (Ossian—Pickwick), a bye, Carrie Harvey, handler.

Every dog nominated was started.

*First Series.*

ERIC AND DON FIS-HEL.—Began at 9:33 in open stubble. Don maintained a good working gait and range throughout the heat, while Eric started a bit the faster, but soon contracted his range to narrower limits, and in the last part of the heat was covering far less ground than Don. It was nearly an hour before birds were found. Don found and pointed a bevy nicely on a side hill and was steady to wing. Down 1h.

WISE CROXTETH AND NUTWOOD were started at 10:42. Both ranged wide and fast. The handlers walked very fast, too very fast. A slow dog would not have kept up. Large fields were beaten out without finding. In a large field the judges gave the handlers orders to take a certain course. They took another one and were soon fading away in the distance, while the judges serenely kept their own course. The handlers had bolted. They returned after a while, neither drawing a long breath. Great range and endurance for both dogs and handlers. Ordered up about 12:15, while the party went to lunch.

To the judges and reporters this lunch was one of the events which at long intervals unexpectedly happens to break in upon the bewildering monotony of points and flushes. Such a spread of good things was never before seen at a field trial. And the ladies—bless their hearts!—lent their gracious presence to the feast, and saw that no careworn judge or bashful reporter left the board hungry. Yet, kind as it was, it was but a part of the hospitality and uniform kindness extended to all throughout the trials by the managers. The ladies were Mrs. Beck, Mrs. Quick, Mrs. Fishel, Mrs. Nowatny and Mrs. Cobb.

CASTLEMAN'S REX AND FAUST KING DON began a 1:34. Rex false pointed and was backed. Moved on. He next pointed and moved on in stubble from the bevy, which Faust a moment afterward pointed; it flushed wild. On the scattered birds in woods Rex pointed a bird nicely Faust coming in flushed it. Rex turned around and pointed a remaining single—a good piece of work. Steady to shot. Rex pointed; nothing found. Faust flushed a bird. Rex jumped across a fence and pointed two birds. Faust a moment afterward flushed them. He next flushed a single. Up at 2:06. Rex had the wider and better range. He hunted out his ground with good judgment.

MANITOU AND MIDGETT H.—Started at 2:29. Manitou backed Midgett's point on larks. After about one hour and fifteen minutes Midgett pointed sharply in stubble. Manitou swung in ahead without seeing Midgett, drew quickly to the same bevy and pointed it. Manitou steady to shot. Midgett broke in but stopped to order. Along a fence on the scattered birds, Manitou made three points. Midgett made a back on a shared point and one flush. Up at 3:50. Manitou the wider and better ranger. He beat out his ground with good judgment.

MAID OF OSSIAN ran a bye, with Wise Croxteth for a bracemate, commencing at 4:15. Wise pointed a bevy in a cornfield and Maid backed. On the scattered birds in corn, Maid pointed and was steady to wing. She next false pointed in open. She next pointed a bevy in open stubble, doing this work quickly and accurately. Soon afterward Mr. Harvey stopped from a sudden illness caused by overexertion. He is not physically strong and could not stand the pace; and indeed the pace set by his competitor was too fast. It required a rare combination of good health and good legs to equal it. At 4:32 Wise was ordered up. Maid then worked alone. A point on larks was all done thereafter. Up at 4:39. Maid showed good ability on birds but was narrow in ranging.

This ended the day's work.

### THURSDAY.

The morning was most unpromising. The wind blew a half gale and heavy clouds darkened the sky. The conditions were most unfavorable for work, judging from the dogs' performances, not one making a point, although they hunted diligently and had opportunities. The temperature was comfortably warm in the morning. Rain set in, and as the wind subsided, it fell steadily and by lunch there were many indications that it would be a rainy day. The start was made near the edge of town on the Perry farm.

NUTWOOD AND MAID OF OSSIAN.—At 8:15 they began in stubble. Maid ranged out better than in her previous heat, but was led out betimes by her competitor. She showed some puppyishness, as is to be expected from one so young. Maid pointed a lark and was well backed. After running about 20 m. they were worked on birds marked down by spectators in a bare field, but no point was made, although they were worked close around the birds. It seemed as if the birds were holding their scent. A handler flushed them. Up at 8:48, both having ranged diligently, Nutwood the better.

Eric was next called up and started at 9:28. He was run sixteen minutes without finding, when he was ordered up.

*Second Series.*

Five dogs were retained in the second series.

DON FIS HEL AND MIDGETT H.—Began the heat at 9:57 in woods. On some marked birds in woods they failed to score. They passed close to a bevy, which was flushed by horsemen. Both ranged fairly well. At 10:26 the rain began falling heavily and work was suspended for ten minutes. After running twenty minutes thereafter the dogs were taken up and the party went to lunch.

The storm showing no sign of cessation at the end of two

hours the work was ended for the day and the party went to town.

In the evening the judges announced that Castleman's Rex won first, Wise Croxteth second, Don Fis-Hel, Midgett H. and Manitou third.

FRIDAY.

Cold and windy weather prevailed. The severe weather had driven the birds to shelter and they were difficult to find, and more difficult to secure points upon when found. Grounds were drawn which had been quite successfully worked before, but the finding results were unsatisfactory. Not only were weather conditions unfavorable, but most of the competitors showed inexperience in finding. The work therefore was necessarily light and the decisions made on narrow margins.

### The English Setter Derby.

There were three entries. The work done was wearisomely slow and inferior. It is true the weather was unfavorable, but the work would have been bad under the best of circumstances. Following is the order of drawing:

L. A. Rice's dog Pembroke's Blue Grouse (Don—Belle of Hatchie), W. B. Stafford, handler,

*with*

John Roberts's dog Jim Dandy (Braxton Bragg—Gypsy), C. E. Tway, handler.

---

Theo. Goodman's bitch Dan's Lady (Dan Gladstone—Lilly Burgess), a bye. J. H. Johnson, handler.

---

*First Series.*

PEMBROKE'S BLUE GROUSE AND JIM DANDY.—Down at 8:42 and up at 9:21. No birds found. Both ranged close to handler and were languid.

DAN'S LADY.—She was started with Coleraine for a brace mate at 9:30. Lady false pointed in weeds. She was stylish on point. It was said she pointed a roost. She ranged fairly wide and fast, going with spirit and diligence. Her work showed judgment. Coleraine, standing in the open field, nicely pointed a bevy huddled in a bunch by the side of the fence. Lady backed promptly and prettily. When the gun was fired she made a wild chase. Up at 10:10.

The other brace was taken on the scattered birds, but failed to secure any satisfactory work. They were ordered up in eleven minutes. The judges soon announced the winners: Dan's Lady, first; Blue Grouse, second; Jim Dandy, third.

### The Irish Setter Derby.

This stake had three entries. The work was poor, and this, combined with difficulty in finding birds forced decisions on very narrow margins. Following is the order of drawing:

Glenmore Kennels' Irish setter bitch Glenmore Appie (Desmond II.—Nellie), W. T. Irwin, handler,

*with*

George E. Gray's dog Sage's Tearaway (Tearaway—Tilly Boru), John Mayfield, handler.

---

Glenmore Kennels' bitch Elphin II. (Tyrconnell—Knivara), W. T Irwin, handler.

*First Series.*

GLEN APPIE AND SAGE'S TEARAWAY—Off at 10:57. Up at 11:32. No birds. Both went merrily.

Went to lunch.

ELPHIN II. had the bye. Finglas made a running mate. Off at 12:18. After a half-hour's work, Elphin going upwind, flushed a bevy. Finglas pointed a single; Elphin backed. Up at 1:04. Both moved well.

*Second Series.*

GLENMORE APPIE AND TEARAWAY.—Off at 1:14. On a bevy marked down, Appie flushed twice, and showed some unsteadiness. Poor work. Up at 2.

No further running in this stake was done to-day, although the judges had intended to finish it. Delays in running other braces prevented it. Mr. Thompson withdrew in this stake.

The Pointer Stake was begun.

### The Pointer Derby.

There were six entries, drawn in the following order:

T. G. Barstow's dog Pomme de Terre (Ossian—Clipaway II.), W. B. Stafford, handler,

*with*

A. A. Wandell's dog Trinket's Don (Donald's Sensation—Trinket), W. T. Irwin, handler.

---

W. A. Thompson's dog Pride of King Don (King Don—Meteor's Dell), J. E. Fisher, handler,

*with*

Geo. A. Castleman's dog Rex's Maan (Rex—Bird), W. B. Stafford, handler.

---

W. A. Thompson's bitch Trixey of Axtel (Axtel King Don—Patti M. II.), J. E. Fisher, handler,

*with*

U. R. Fishel's dog Dick Fis-Hel (Don Fis-Hel—Leos), C. W. Tway, handler.

---

POMME DE TERRE AND TRINKET'S DON.—Began at 2:03. Pomme stopped to a flush, held point, and in a moment a single flushed wild in the open. Pomme pointed, Don backed, broke back and ran in; nothing found. Up at 2:47.

PRIDE KING DON AND REX'S MAAN were cast off at 2:50. Pride pointed a bevy in the open; Rex backed. The bird flushed wild and both chased. Up at 3:52.

NIXEY OF AXTEL AND DICK FIS-HEL were started at 3:58. They were worked around a large stubblefield, then worked on birds scattered in the open. Both failed to point. Trixey ranged well. Up at 4:21.

This ended the day's work.

SATURDAY.

A cold, raw morning greeted the field trial party. A stiff wind blew steadily. Birds were not moving, and were, therefore, hard to find.

### The Irish Setter Derby.

ELPHIN II. ran a bye, Coleraine accompanying her. They were worked from 8:55 till 9:07. No birds found.

The judges then announced Sage's Tearaway, first; Glenmore Appie, second, and Elphin II. third.

### The Pointer Derby.

There were six entries. There was little work on birds, and the results were not very definite in consequence.

*Second Series.*

TRINKET'S DON AND PRIDE OF KING DON.—Left at 9:13 and ran till 9:32. No work on birds. Both ranged well.

POMME DE TERRE was run a bye with Coleraine, beginning at 9:37. Up at 9:55. Pomme made one point on a sparrow, and was steady to shot.

The judges then placed the dogs as follows:

Pride of King's Don first, Pomme de Terre and Trinket's Don divided second and third.

Mr. W. A. Thompson, of Attica, Md., offered as a special prize the services of Naso of Axtel to the best bitch in the Pointer Derby and puppy stake. The services of King Don to the best bitch in the All-Age.

*The Absolute Winner.*

SAGE'S TEARAWAY AND DAN'S LADY.—They began at 9:59. Lady roaded nicely to a point on a bevy, she standing in the open, while the bevy was on the other side of the fence in a cornfield. Tearaway backed well for a few moments, broke back and drew in. This disturbed Lady. She jumped on the fence, the bevy at the same time flushed and she chased. Lady was the better ranger. She worked with much dash and judgment. Up at 10:14.

PRIDE OF KING DON ran a bye with Winnie. They started at 10:20. Winnie pointed a bevy, Pride backed. Irwin ordered Winnie on. She then flushed the birds, both dogs broke in, Mr. Fisher shot and the dogs chased. Up at 10:30.

It was announced by the judges that Dan's Lady had won the absolute.

### The Puppy Stakes.

Birds were so difficult to find that it was seriously considered better to abandon the Puppy Stakes. It was finally decided that they should be run ten minutes to each brace merely to determine, range, speed, etc. This was the only alternative. There were eight starters. Two in the English Setter Puppy Stake, two in the Irish Setter Puppy Stake and four in the Pointer Puppy Stake.

ENGLISH SETTERS.

E. C. Waddell's dog Harry L., C. W. Tway, handler,

*with*

W. J. Beck's bitch Peggy B. (Gus Kneussel—Maza Mana), W. T. Irwin, handler.

Harry L., first; Peggy B., second.

IRISH SETTERS.

Glenmore Kennels's dog Donaway, W. T. Irwin, handler,

*with*

Glenmore Kennels' bitch Flyaway, W. T. Irwin. handler.

Flyaway, first; Donaway, second.

POINTERS.

U. R. Fishel's bitch Lady Fis-Hel (Don Fis-Hel—Lady Wallace), C. W. Tway, handler,

*with*

John B. McGuffin's dog Tuxedo (Ossian—Cornelia G.), C. Harvey, handler.

---

King Don Pointer Kennels' bitch Leach's Bell II. (Grand Duke—Meteor's Dell), a bye, J. E. Fisher, handler.

---

Leach's Belle first, Tuxedo second, Lady Fis-Hel third.

The absolute prize of these stakes was won by Harry L.

This ended the trials. Mr. W. A. Thompson showed some very superior pointers. Crowded space prevents a lengthy mention of them. The trials were most pleasantly conducted. There was little dissatisfaction. Every one left with a warm feeling of friendship for the club. At lunch on Friday Messrs. Mayfield, Irwin, Johnson and Harvey entertained the judges, reporters and some friends with a most enjoyable lunch. On Saturday Messrs. Mayfield and Johnson gave a similar lunch to the judges, reporters and a few friends. The manner in which the good things disappeared was the strongest testimonial of appreciation. May they always prosper. B. WATERS.

## WESTERN MASSACHUSETTS FOX CLUB.

THE fifth annual hunt of the Western Massachusetts Fox Club was held at Westfield, Mass., Nov. 16 and 17. While the attendance was not so large either at the hunt or banquet as last year, owing to the bad weather which ushered in the first day of the hunt, still, take it all in all, the meeting was a success, and will long be remembered with pleasure by those who participated. Good fellowship and hospitality will put a bright coloring on the dullest day, and even the driving rain and its attendant disappointments were forgotten in the company of the genial Westfield hunters.

The second day of the meeting made up in many respects for the inclemency of the first. It was as perfect a day as any fox hunter could wish for, but, unfortunately, it came too late to bring a number of well-known hunters who had signified their intention to be present. Among these was Mr. John R. Thayer, of Worcester.

The FOREST AND STREAM representative arrived in Westfield Tuesday night, the day before the hunt. It was raining and the Democrats were celebrating their recent victory, two circumstances tending to dampen one's ardor, if he happens to be a Republican. The hotel was crowded with politicians, the streets were muddy, and every now and then up to midnight and after, some devilish rocket would scoot skyward through the rain with a loud swish, or some equally sleep-dispelling cannon go off under the hotel windows. The night was warm and muggy, and the steam heat in the bed rooms could not be turned off. Windows wide open and a single sheet could only bring partial comfort, and refreshing sleep, during the early part of the night at least, was out of the question.

These distressing circumstances, however, only tended to brighten the reception accorded to a stranger by the club. President Roraback was everywhere at the same time, introducing those who stood in need of introduction, and putting every one else in a good humor. He was a flitting (though substantial) sunbeam. Nor were the other members of the club behind him in showing hospitality.

All Tuesday night it rained steadily. After midnight, when the Democratic enthusiasm had in measure been sated, one could hear the swish of the rain against the window and its gurgle in the escape pipes. It did not omen well for the morrow, and sleep when it came was full of troubled dreams.

The clock in the old town hall across the square from the hotel was just making up its mind to strike the hour of five Wednesday morning when the hunter's horn sounded through the silent corridors of our hostelry. I had been dreaming of that horn all night long, but despite the fact (or perhaps because of it) was so startled that I almost jumped out of bed. No doubt also the strong lungs of Mr. Alstrom, the bugler, had something to do with the electrifying effect. The night was dark as Pharaoh's Egypt. Outside the rain was beating a disheartening tattoo very dampening to the orchestral effects of Mr. Alstrom's bugle. I got up and having found a match, with difficulty dressed and went down stairs. There I met Mr. O. M. Ball, of Worcester, who was the first hunter to dress.

Wednesday was a day of disappointments. About 8 o'clock the rain let up a little and thirty or more of the hunters set out in half a dozen vehicles, driving down the broad, elm-arched streets of the town and through its western outskirt into the country.

Foxes are said to be remarkably plenty about Westfield, and before we had driven a mile we saw one. No one shot it, however, for the very good reason that it was a tame fox tied up in a farmer's yard.

The fox looked us over in a sneaking way and evidently did not like the looks of the hounds, whose heads appeared above the sideboards of the wagons. Though he felt a little worried, I doubt if he appreciated the full gravity of the situation. The truth is that all through that morning his life hung in the balance, for sundry of the hunters vowed that if they could not get another they would come back and purchase the privilege of shooting him at his stake.

"I don't like being skunked," said Mr. Ball, of Worcester, who was one of these dire plotters.

Our route led us to the west side of Palmer's Hill, four or five miles from Westfield Park Square. When we reached this point the rain, which had been toying with our hopes, decided to humor us no longer, and from a condition of neutrality developed into one of downright hostility. Down it came in torrents and we sought shelter in the tobacco sheds of a nearby farmer.

That settled our chances for the day's sport and the main body of the hunters soon after made their way homeward. A few, however, remained, and among them Fred F. Mosely and Owen S. Upson, Jr., and both of these gentlemen were lucky enough to secure a fox. I use the word "lucky" advisedly, for no one but a lucky man could hope for success under the unfavorable conditions that then obtained.

Wednesday evening at 7 o'clock supper was served in the Town Hall. About 125 members and guests were present, or about half the number who had sat down at the banquet last year. Among those present were: District Attorney Chas. E. Hibbard, of Pittsfield, who acted as toastmaster; Senator Kimball, Sheriff Clark and Mr. Chilsen, of Northampton; Major Geo. S. Merrill, of Boston; Insurance Commissioner of the Commonwealth Dr. Hatch, of Pittsfield; Secretary Knowles of the Worcester Fur Club, and O. M. Ball, of Worcester; Dr. H. H. Gamwell, A. S. Kneil, H. N. Kingsbury, J. R. Reed, R. W. Parks, L. F. Thayer, L. M. Clark, R. D. Gillett, Chauncey Allen, Chas. N. Oakes, W. B. Reed, Wm. Warren, C. M. Goodnow, John T. Way, Geo. W. Roraback, Robt. Kneil, Henry W. Ely, S. D. Connor, L. Delos Kellogg and Burton Holcomb, all of Westfield.

After the well cooked and well served supper had received due attention, the toastmaster, Chas. E. Hibbard, of Pittsfield, was introduced by President Roraback. Mr. Hibbard first apologized for the rain, and assured his audience if he had control of the weather he would have given them one of those rare days, "when it is a joy to be out and the bay of the hounds an indescribable delight." He alluded very pointedly to the "discipline of disappointment," which is every one's lot as well as the hunter's, and then introduced Henry W. Ely, of Westfield.

Mr. Ely's subject had to do with the charms of his own native place, and he painted Westfield with all the colors of the rainbow. His speech was of the hurrah kind and brought down the house more than once. It is only right to add that if ever exaggeration was warranted it was in this case, for Westfield certainly is an unusually favored town.

Mr. Ely was followed by Mr. Knowles, of the Worcester Fur Club, who told what he didn't know about speech-making. Mr. Knowles may not be a born Demosthenes, but he studied fox hunting with Uncle Nathan Harrington, and is a master of that noble art.

Robert Kneil told how President Roraback had given him his first lesson in fox hunting, placing him on his stand and telling him to keep quiet till he got his chance to shoot. Presently along came the fox (as they always do in stories), and forgetful of his preceptor's instructions as well as the fact that he was armed with a gun, he yelled at the top of his lungs, "George! Here comes the fox." Singularly enough, Mr. Kneil went on to say, the fox did not wait for George.

Major George S. Merrill, of Boston, followed in a speech which was one of the wittiest of the evening. Dr. Hatch, of Pittsfield, and Dr. Gramwell, Arthur Neil and H. N. Kingsbury, of Westfield, responded gracefully.

George W. Roraback, the handsome president of the club, was the last speaker.

The election of officers for the ensuing year was announced. Mr. Roraback, to whose efforts the success of the club is largely due, was despite his attempts to escape the honor, unanimously re-elected to the Presidency. Mr. F. S. Graves, of Pittsfield, was also re-elected First Vice-President; Wm. Warren, of Westfield, and Chas. E. Hibbard, of Pittsfield, were elected Second and Third Vice-Presidents; Secretary, C. M. Goodnow; Treasurer, Loring P. Lane; Executive Committee, H. N. Kingsbury, Robert Kneil and Jno. T. Way; Reception Committee, N. A. Harwood, Geo. E. Whipple and J. B. Cadle; Dinner Committee, Wm. Warren, T. J. Cooley, Jas. A. Lakin; Lodging Committee, R. D. Gillett, Dr. J. H. Shepard, Jno. T. Way; Master of Hounds, C. D. Allen.

A motion was made by Mr. S. S. Conner that the date of the next annual meeting be arranged so as not to conflict with either the Worcester Fox Club or the Brunswick Fur Club, as had been the case this year in the instance of the latter club. The matter was finally referred to the executive committee, and next year will not see a repetition of the blunder. There was also some talk of holding the next meeting at Pittsfield, but no definite action was taken in the matter.

When the meeting broke up the stars were shining brightly—a pleasing augury for the morrow.

Thursday dawned as perfect a day as ever President Roraback could have desired. Old fox hunters declared they had never seen such a day. The sky was cloudless and not a breath stirred the branches of the trees or the dewy grass, or even the big flag that hung in front of the big hotel. Shortly after daybreak some one—I think it was Burton Holcomb—released a captured fox in the Park Square, and after he had gotten a slight start the hounds were put on his trail. They soon caught sight of him and then fell over each other in their efforts to close their teeth on some tender part of his anatomy. But that fox knew a thing or two and did not keep to the open long. In two winks of a cat's eye he was under a fence and out of harm's reach.

This day's hunt was to the northeast of Westfield in a direction diametrically opposite that taken the day before. A four-mile drive brought us to a frame house at the foot of East Mountain that was to be the headquarters of one division of the party. Some had gone further north, while others still had left the main road at points nearer Westfield. We had scarcely entered the woods, after leaving our horses in charge of the farmer, when we heard the distant baying of the hounds, now rising in sweet melody, now almost lost to ear. We hurried on through the woods till we reached the foot of the ledges which constituted the mountain proper. Here for considerable distances the mountain side was devoid of vegetation, a tumbled mass of rocks.

The foxes like to take the dogs to such a place. They jump from stone to stone, "play checkers with them," as one of the hunters expressed it, while the poor dogs slip and slide and lose their wind and patience as well.

A number of hunters were placed on the rock slides, but all through that blessed day not a fox come that way. In my opinion, this was due to the fact that the drivers of several carriages that had managed to gain the foot of the ledges kept up a running fire of conversation the whole time. The day was preternaturally calm, and their voices could be heard at least half a mile.

To illustrate the stillness of the atmosphere, here is an incident that came under my observation during the morning. I was standing in an old pasture, three or four hundred yards from the mountain and some distance south of the hunters stationed on the ledges. Directly opposite my position was a long rock slide on the mountain side, and every now and then I could hear a slight noise as if one of the stones forming the slide had been moved in its position. Once a stone rolled clatteringly down the side a long way. From what happened next I concluded that these sounds were caused by a fox picking his way across the slide, for soon I heard the baying of a rapidly approaching hound. The hound crossed the slide, as near as I could judge by the sound, for I could not see him, just where the fox had, but he made a great deal more noise and dislodged rocks very frequently. But the point I wanted to note was this—although very nearly a quarter of a mile away, I could hear the hard breathing of the dog very distinctly. If there had been the slightest breath of air stirring this would not have been possible.

Off to the south we heard frequent shots, and those who

had seen no foxes congratulated themselves on the fact that others of the party were no doubt engaged in successfully sustaining the credit of the club. This conclusion was warranted that night when the outcome of the hunt was known. Later in the day I climbed the mountain and from the summit obtained a most lovely and entrancing view.

At my feet was a little pond surrounded by a fringe of yellow marsh grass and bordered by a bank of pines, and reflecting the craggy hill above it. A little further was a gently rounded ridge thickly grown up with chestnut trees. Beyond that the plain of the Woronoco Valley. This is a tawny yellow plain framed by the dark background of the hills. In it, each with its fringe of pines or hardwoods, as the case might be, nestled three lovely lakes, the Hampton Ponds. The dark line of hills that cut the western horizon was part of the Berkshire Hills. While I was on the mountain several of the hunters came along, following a chase to the northward. On the east side of the ridge I joined with them and finally found myself with Burton Holcomb in close proximity to Mount Tom. The hounds could be heard near the summit of a slide scarred hill off to the east. Here I left him and made my way back to the main party. No doubt he caught the fox playing along the ledges and secured the pelt, for Mr. Holcomb is one of the most successful hunters in Westfield, but of this I have no certain knowledge.

About forty hunters were out Thursday, and half that number of hounds. From early morning till sundown the woods about old East Mountain re-echoed with the musical voices of the dogs, and at almost any time during the day one in a good position could hear a chase running. Five foxes were killed, one by Dr. Cowing, of Northampton; one by Mr. Owen, of East Granby, Conn; one by Mr. Williams, of Southampton; one by Mr. Sibley, of Westfield; and one by a German farm laborer living near East Mountain.

At the hotel that evening President Roraback received a telegram from Mr. Wallace, of Farmington, Conn., who had been present the first day of the meeting, saying that together with a friend he had killed three foxes before his pack on his own stamping ground. It was certainly an ideal day for fox hunting, and no doubt other good scores were made throughout New England.

## BRUNSWICK FUR CLUB FIELD TRIALS.

THE fourth annual field trials of the Brunswick Fur Club were held at Ossipee, N. H., Nov. 15 to 19. The weather was most unfavorable, two of the three days devoted to the All-Age class being so foggy and rainy that at times it was impossible for the judges to see more than a few yards or to tell one hound from another. Yet the trials, everything considered, must be regarded as a success, and the awards as in the main correct. While a few changes might possibly have resulted had the All-Age class been run for three whole days as prescribed by the rules, still the best hounds undoubtedly came to the front. The judges worked faithfully. It is no easy task to judge a pack of twenty-five foxhounds running through the valleys and over the foothills of the White Mountains, and if mistakes were made they were due to the great difficulties which the judges encountered and not to any lack of zeal on the part of those officials. The decisions were well received by the majority of those interested. There was some grumbling, but most of the disappointed bore their defeat like true sportsmen. Foxes were very plentiful, and on Thursday no less than five were seen by one man. The country was not as suitable for a field trial as the region about Princeton; the hills are higher and there is more cover. The foxhounds entered at these trials were of the very highest quality and represented all the thoroughbred strains of the country. They made a notable pack, and the fact that all but two are owned in New England shows the great interest now taken in hounds in this part of the country. The record of the Brunswick Fur Club during the past year proves that its members will have no hounds but the best, and will spare no expense to get them. Many of those entered were veritable flyers, and the day is coming when foxes will be caught by the hounds in New England as well as in the South. The Carroll House was all that could be desired as a club headquarters, the proprietor doing everything possible for the comfort of his guests. Fox hunters are proverbially social, and the yarns spun around the great open fireplaces of the smoking room would fill a volume. Besides those mentioned in the last issue of FOREST AND STREAM there were present during the week J. Rickard, Manchester, N. H., A. E. Thomas, Strafford, N. H.; N. Q. Pope, Poland, Me.; Robert Pevey and C. M. Hill, Centre Strafford, N. H.; F. G. Stewart, Poland, Me., and many others.

On Wednesday sportsmen and hounds arrived by every train, and in the evening the Carroll House was full to overflowing. But the proprietor found room for all, and a smoking hot supper of roast coon with all the "fixins" put every one in good humor. At the club meeting in the evening, President Heffenger in the chair, the *American Field* cup and the various prizes were exhibited and E. H. Hayden, Plymouth, Mass., was admitted to membership. The entries in the Derby were made and the judges selected as announced in last week's issue.

Geo. J. Garrett, Columbus, Ga., the breeder of the celebrated July foxhounds, was heartily welcomed by the club. He is the first Southern fox hunter that has ever attended a meet here, and his presence shows the constantly increasing interest which is taken among fox hunters the country over in the annual trials of the Brunswick Fur Club. It is hoped that other sportsmen from the South and West will follow his example; they will certainly receive a cordial greeting.

### THURSDAY.

The morning was cloudy and threatening, and in the afternoon the rain came down in a steady drizzle. The ground was covered with melting snow and a dense fog hung over hills and valleys, making it difficult to recognize the different hounds in the pack.

The party was up at 5 o'clock, had a hot breakfast and left headquarters at 6:10 with the Derby entries. Just outside the village, near the county farm, the hounds were cast off in a large field at 6:30. They went off well packed, at a good pace, and soon entered cover. Here most of them showed a desire to hunt and displayed intelligence in their work, but many had never seen snow before and to hunt on it was a new experience for all. So it is not surprising that, though they came across one or two fox tracks which looked fresh, they failed to take them. Working down into the valley the pack became scattered. A number of the hounds, confused by the snow and the strange country, returned to their masters and showed but little inclination to hunt. The fog was constantly becoming more dense and it was impossible for the judges struggling up the steep sides of Batson Mountain to see a hundred yards. Now and then a hound was heard tonguing, but no one could tell whether he was trailing the pack, his master or a fox. At 10 o'clock the judges ordered the pack up, the pups having failed to make a strike. Six of the eight entries came to the horn, but Camp did not get home till Friday and Popple was away till Saturday. These two hounds, with Garrett, did the best of the little work which came under the observation of the judges in this very unsatisfactory day's work.

In the afternoon A. McDonald and E. H. Hayden went on a hunt for fur, and the former shot a fox ahead of some local hounds, wounded a second and a third was started. These hounds belonged to Mr. Buzwell, and he proudly showed seventeen coon and four fox skins nailed to the side of his barn, all captured within a few weeks.

A club meeting was held in the evening, Vice-President Kinney in the chair. It was voted to run the All-Age class two days instead of three and to devote Friday to the Derby. This change was made to accomodate members who wished to leave Ossipee on Saturday morning.

As Dr. Heffenger had a hound entered in the All-Age, A. E. Thomas, of Strafford, N. H., was appointed to judge in this class with Messrs. Gill and Turpin.

The entries for the All-Age closed in the evening. There are five classes—hunting, speed, endurance, trailing and barking—and hounds can be entered in all or any of them. Twenty-one were entered in all classes and four in special classes, as noted below.

#### All-Age Class.

JOE J.—O. F. Joslin's black, white and tan dog, 1yr. (Wild Goose and Native).

LEADS ALL—E. J. Bate's red dog, 3yrs. (Wild Goose).

GRAY JACK—A. McDonald's black, white and tan ticked dog, 4yrs. (Native).

CEPHAS—A. McDonald's black, white and tan dog, 3yrs. (Native).

HENDRICKS—Portsmouth Hunt Club's white and gray dog, 4yrs. (July)

JIM—R. Seeley's black and white dog, 2½yrs. (Buckfield—Byron).

JACK—Kinney & White's black, white and tan dog, 5yrs. (Native).

MAJOR—Kinney & White's white and tan dog, 3yrs. (Native).

BILLY—Kinney & White's white and blue dog, 3yrs. (Native).

LOGAN—Kinney & White's white and tan dog, 2yrs. (Goodman).

AGGIE—Kinney & White's tan and white bitch, 3yrs. (Goodman).

QUILTIE—R. D. Perry's black, white and tan bitch, 2yrs. (Wild Goose and Native).

CLINKER—R. D. Perry's black and tan dog, 3yrs. (Avent).

SPORT—G. P. Berry's black and tan dog, 4yrs. (Native).

BELVA—Dr. Whittier's orange and white bitch, 5yrs. (English and Native).

DUFF—J. H. Baird's black and white dog, 3yrs. (English and Native).

CLAY—N. Q. Pope's black, white and tan dog, 4yrs. (Goodman).

FRENCH—N. Q. Pope's black, white and tan bitch, 4yrs. (Goodman).

ORANGE—N. Q Pope's orange and white dog, 3yrs. (Goodman).

PEELER—N. Q. Pope's black and tan dog, 4yrs. (July).

FLEET—W. S. Russell's black, tan and white dog, 3yrs. (Golddust and English).

* CROOK—J. H. Baird's black, white and tan dog, 3yrs. (Walker).

† CHUM—N. Stewart's black, white and tan dog, 3yrs. (English).

† PADDY—N. Stewart's black, white and tan dog, 3yrs. (English).

‡ JIM BLAINE—Dr. Whittier's black, white and tan dog, 9yrs. (Chester Co.)

### WEDNESDAY.

The rain pattered on the roof of the Carroll House all night, and each foxhunter peered anxiously out of his window when the gong sounded at 5 A. M. The outlook was not re-assuring. The rain still fell and the clouds hung low on the mountains, but the snow had disappeared. After breakfast the rain stopped and the All-Age class was at once ordered out. The line left headquarters at 6:45 and was soon at the place where the Derby entries were started on Tuesday. As the All-Age lined up waiting for R. D. Perry, M. F. H., to give the signal to let them go, the picture was one to excite the enthusiasm of a stoic. In the pack of twenty-five were not only typical representatives of nearly all the celebrated strains of this country, but imported English hounds were also present. It was a scene never to be forgotten, and as many foxhound fanciers truly said, "Such hounds were never seen together before in this country." At the sound of the horn the eager pack was off with a rush. They crossed the open field at top speed and entered cover. Here the pack divided, part working the woods and part coming into the open again. The latter division, led by Clinker and Quiltie, closely followed by Joe J., Leads All and one or two others, jumped the stone walls and covered the meadows very prettily. Crook, Aggie, Hendricks and a number of the hounds meanwhile clung to the woods. The ground was full of water and the continual rain had washed out all the tracks of the preceding night. In vain the hounds worked the hills and valleys; they could not find a trail hot or cold. A few seemed to think the hunt nothing but a lark, and were now with the pack and now with their masters. Duff was a little inclined to babble, and Fleet, Paddy, Logan, Major and Belva for a time divided their attention between the judges and the hounds in the wet woods, doing but little hunting just then. But they had not been out long before the majority of the hounds divided into two packs. In the first were Crook, Quiltie, Leads All, Clinker, Aggie and Clay.

The second was composed of Orange, French, Joe J., Peeler, Gray Jack, Hendricks, Chum, Cephas, Logan and Major. Most of the other hounds, some of them used to hunting alone, were working here and there by themselves, while one or two were looking for their masters. The packs covered the ground rapidly, and at least one of the judges, as he climbed the steep hills and waded the swollen brooks, thought what an easy task it was to judge beagles compared with the work he then had in hand. The pack had not been cast off half an hour when the fog began to grow thicker and thicker. Then Jupiter Pluvius took a hand in the hunt, and first sent a little shower or two and then, to show his power, threw down the rain by the bucketful. It never rained harder, and the spectators rapidly sought shelter, leaving the judges and a few others to follow the hounds. After a little time Jack, Clay and French managed to trail a short way and encouraged us for a few minutes, but it all came to nothing. Then Belva, Jim Blaine and one or two others decided to drive rabbits as they could not find a fox, and made the woods ring merrily for a half hour. By this time it was evident that nothing could be accomplished by hunting the dogs longer, and at 9:30 the M. F. H. sounded the retreat. All the hounds were in by noon, and thus another day went by without a run. A wetter body of men that straggled into the Carroll House between 10 and 12 o'clock it would be hard to find. Even a compass carried by one of the judges was full of water. The afternoon was passed in spinning yarns, drying clothes and whistling "Wait till the clouds roll by."

President Heffenger presided over the club meeting in the evening. It was decided to run the All-Age class Thursday and Friday and the Derby on Saturday; to hold the winter meet at Westminster, Mass., and to have the annual meeting hereafter in January instead of February. N. Q. Pope, Poland, Me., was elected to membership.

### THURSDAY.

When the gong awoke us at 5 o'clock, as usual, there was not a cloud in the sky, the wind was light, and everything promised a day of perfect sport. For the first time we were able to see that we were in a mountainous region, and Mt. Washington, with its snow-capped head, looked down upon the finest pack of hounds ever seen in New Hampshire. The club left the hotel at 6:10, and a half-hour later the hounds were cast off in Reid's pasture. Joe J., Leads All, Jack, Quiltie and Clay led the rush into cover and the balance of the pack followed them closely. As they hurried on, Gray Jack among the last, did a very pretty piece of work, striking a cold track which all the leaders of the pack had overrun. Hendricks, Sport and Crook harked to him and they trailed rapidly into cover leading away in the distance. They soon jumped the fox, turned, and as they entered a swamp Cephas and Sport were a trifle in advance of the pack and all were in full cry. But the swamp, which was almost impassable even for the hounds, threw them all off and they were at fault for some time, tonguing here and there. Finally Hendricks and Crook led off to the west, a division went to the east, and one or two put in time back tracking. Hendricks and the hounds with them soon struck a trail and carried it along to the foot of the Leighton Hill and jumped their fox at 7:40. He took up the hill and crossed the road in plain view of spectators, hard pressed by the pack, led now by Hendricks and Jack. The fox was turned and the hounds were at fault for a moment, and then were seen carrying the fox down the hill at a terrible pace; Jack was now well in the lead, but, in the open, Crook out-footed him and rapidly closed the gap, while the rest of the pack in full cry but somewhat strung out, followed on. This fox had no sooner got out of sight than a second fox was seen coming down the hill just in the rear of the spectators. On his track came Cephas, Clinker and Hendricks neck and neck, but they were all thrown off at the wall and failed to pick up the track in the open, though they cast well for it.

A half hour later a third fox came down from the summit; as he was about to cross the wall he caught sight of the crowd and turned sharply back. On came the hounds with a rush over the wall and into the open, where they circled for some time in vain. At last the loss was worked by Clay, and away the pack went again into the valley toward Batson Mountain, their voices dying out in the distance, the last to be distinguished being that of Berry's Sport. Meantime Peeler tried his hand hunting by himself, and soon hustled a fox out of a clump of pines and ran him well for some time. Still further to the east Leads All and Major, at the base of Batson Mountain, jumped another fox and hustled him at great speed till they compelled him to seek refuge in the ground. The hounds were now scattered far and wide, the mountain was covered with fresh tracks and the music from the various packs filled the air. It was impossible for the three judges to see more than a small fraction of the work, hurry as they would from one place to another. About noon a hound began to trail on the north side of Leighton's Hill, the others harked to him, and soon a burst of music showed that they had jumped their fox. He led away for Batson Mountain, Aggie and Leads All in advance; but as he came to the town road two small boys turned him back, and he ran to a grove of sugar maples. The fourteen hounds were badly thrown, but at last trailed back to the maples, where they made a dead loss. All day the scent had failed to lay as it should, and many unaccountable losses had been made. When the pack divided early in the morning, Peeler, Orange, Logan, Aggie and Jim Blaine led away to the east, jumped a fox and ran him out of hearing beyond Batson Mountain.

In the evening the judges announced that the best work of the day, in the various classes, had been done by the following hounds: Hunting—First Jack, second Gray Jack, third Hendricks. Trailing—First Leads All, second Jack, third Joe J. Speed—First Aggie, second Leads All, third Peeler. Endurance—First Jack, second Crook, third Jim Blaine. Barking—First Duff, second Leads All, third Aggie. Style—First Clinker, second Hendricks, third Jim.

### FRIDAY.

The sky was dark and a heavy fog hid the mountains. The party left the Carroll House at 6:30, and half an hour later the pack went off with a rush into the pine woods at the foot of the Reid pasture. Gray Jack, showing his usual ability for cold trailing, hit a track at the edge of the woods and went off rapidly upon it. The rest of the pack disappeared in the woods trailing on a ridge between two swamps. One of the judges, by a short cut, managed to get ahead of the pack. As they came by him Aggie, who was leading, threw her head in the air and with a rush shot into a bunch of birch shoots, and from the further side dashed a fox. It was a beautiful piece of work. The others were on at once. With a sudden burst of music and at a famous pace they dashed down the ridge. The fox immediately took to the swamp, and it was lucky for him it was so near. He got quite a lead on the pack while they were checked. After a few minutes they straightened out the track and away they went toward Leighton Hill, their voices growing fainter and fainter till they died out in the distance. All of the pack were not on, some having got thrown in the swamp, and they cast here and there for a trail, but only a few showed the energy of yesterday.

The fog was thick, and it was difficult to find one's way in the dark woods. Finally the judges got out of the wilderness, and going up Leighton's Hill found Clay, Jim and Billy trailing rapidly to the east, Clay doing the best work of the three. While these hounds were trailing, Duff, Crook and Belva, further up the mountain, jumped a fox and carried him away to Moody Hill, where Duff's beautiful voice could be heard now near and then far away. Meanwhile the fog had become so thick that it was impossible to see 30yds, and the judges took stands on different parts of the mountain, hoping by good luck to get a view of the pack. After Jim, Billy and Clay had trailed for a half-hour they jumped their fox, and away they went up the hill, and the greatest run of the week was on. Clay cut out the work and set a furious pace, Jim kept close to him, while Billy, in the rear, was straining every muscle to be in the race. So for an hour or more they drove the fox around the mountain. Then Hendricks struck on with them and these four drove reynard to the ledges and back again, making the circuit in a little more than half an hour. The fog lifted. As they came again to Leighton's Hill the fox took to a stone wall and checked the pack for a few minutes. Hendricks ran the wall, straightened out the track and once more they were off in full cry, Logan and Major now harking to them. At the railroad track they were checked, but Clay, who had been doing some wonderful trailing at top speed, hit it off and once more they went to the ledges. The fox now found he had no ordinary pack after him. He dodged into a flock of sheep, ran walls and went through swamps, but all in vain. These hounds were running to kill. As the fox became hard pressed there was no time for him to play his stone wall tricks, and he was looking only for safety.

The pack meanwhile had increased in numbers, and, while Clay and Hendricks led, Clinker, Leads All, Aggie, Joe J., and others followed hard. At noon they reached Leighton's Hill again, and Hendricks was now leading with Clay a good second, Logan third, and then the pack. Fifty minutes later the terrible pace had proved too fast for many of the hounds, but Hendricks and Clay were still in the lead and gaining on the fox. For a half hour more the chase continued, the hounds with Hendricks and Clay in front were crazy with excitement as they gained on their quarry. The dash and spirit of the hounds, their wonderful trailing and extraordinary speed had never been approached at the trials in the past. As a last resort the fox, almost exhausted, with the eager pack close behind him, made for the burrows. Not a moment too soon. As he entered a hound grabbed him, but captured only his brush. It was found by Dr. Heffenger at the mouth of the den. This ended a most exciting run, in which nearly all the flyers

* Entered only in classes for endurance and hunting.
† Entered only in classes for hunting.
‡ Entered only in classes for barking, trailing and hunting.

had taken part; it lasted for five hours, and throughout the whole time Clay had been in the race, showing dash, endurance and hunting sense.

In the evening the judges held a long consultation and made the final awards: Hunting—First Jack, second Gray Jack, third Jim. Trailing—First Clay, second Leads All, third Aggie. Speed—First Hendricks, second Clay, third Aggie. Endurance—First Jim, second Jack, third Clay. Barking—First Duff, second Leads All, third Aggie. Style—First Joe J., second Hendricks, third Jim.

The *American Field* cup and medal for highest general average was awarded to Clay.

A. B. F. Kinney's speed medal awarded to Hendricks.

A. B. F. Kinney's endurance medal to Jim.

Clay is a black, white and tan hound, 3yrs. old, and was bred by W. H. Huffstetter. He is 22½in. at the shoulder, 27in. in girth and weighs 48lbs. He has a heavy coat and is a strong, well made dog. He is a Ben Robinson and Maupin cross, combining July and English strains. Owned by N. Q. Pope, Poland, Me. Hendricks has a grayish tan body, white breast and legs, with lemon ears and muzzle. He is a July hound and was bred by T. E. Murphy, Macon, Ga. He is 4½yrs. old, 23in. at the shoulder, weighs 55lbs. and is of the greyhound type. Owned by the Portsmouth Hunt Club. Jim is black and tan with white points. He was bred by A. M. Geary, and is by Rush (Byron) out of Flirt (Buckfield). This cross between Southern and native hounds gives the pluck and staying qualities of the native with the speed of the Southern. He is a compact little dog, 21in. at the shoulder and weighing 45lbs. Owned by R. Seely, Portsmouth, N. H.

A vote of thanks was given the judges, and about midnight all turned in after a hard day afield.

SATURDAY.

The early morning was cloudy and a cold north wind blew straight from Mount Washington. Later in the day the sun came out and its warmth was very acceptable. The party that left the hotel at 6:30 was the smallest of the week, as many of the members had taken the morning train for home. There were originally eight entries in the Derby, but only Nancy Hanks, Garrett, Camp, Vixen and Steve appeared to-day. Of the absentees Try and True had returned home with their master, and Popple had not been seen since the unsuccessful hunt of Tuesday. As Judges Gill and Thomas had returned home, President Heffenger had been appointed to act with Bradford S. Turpin as judge of the Derby. At 7:18 the M. F. H. gave the signal and the pups disappeared in the cover on the side of Leighton Hill. They went off well and all showed a desire to hunt. They worked so well that within ten minutes they had in real puppy style jumped a white hare, and were sending him through the cover at a merry clip. They were soon at fault and then each hound made a start for himself, and the swamp was fairly alive with flying hares and driving hounds.

The judges ordered the pack up and with some difficulty they were caught. The hounds were worked away from the swamp and then we covered a great stretch of country without making a strike. It was not until this pack had been down six hours that anything promising was found. Then in low ground a cold trail was struck. The pups worked beautifully, and after a few minutes a fox was jumped. He ran toward Batson Mountain, the pups proving themselves to be flyers, and driving their game at a killing pace. The judges unfortunately were too far off to distinguish the hounds, but from the valley watched them as they rushed up the hill. The fox took to the stone walls, and the young hounds, not understanding this trick, were at fault after a short drive. They were then taken off that we might have time to catch the afternoon train for home. The judges were unable to make any awards, and declared the Derby race off. It was unfortunate that this class could not be run, for among the entries were some young hounds of great promise that will certainly make a record later.

This ended the trials, and afternoon saw nearly all the club members on the way home. BRADLEY.

## MITCHELL KENNEL ASSOCIATION.

CHICAGO, Ill., Nov. 18.—Mr. Arthur Massey, who judged so acceptably at the recent coursing meet of the Mitchell Kennel Association, of Mitchell, S. D., is in Chicago this week, and will not leave for his home in Great Bend, Kas., until to-morrow or perhaps later, he being the guest here of his brother, Mr. Walter F. C. Massey. Arthur says that the Mitchell grounds are better for running purposes than those at Great Bend, as the ground is quite as level and not so hard, with more plow and soft fields. The hares found are larger than the Great Bend hares, some running as heavy as 15lbs. They are white-tails, great doublers and twisters, and make a good run. The Kansas jacks do not turn white in winter, but the Dakota ones do, and many were already hanging their coat.

The association is fortunate in having a fine club house, within three miles of town, with good quarters, hot and cold water, etc., and plenty of stable room. This building is the residence property of a gentleman who courteously turned it over to the club during the absence of his family, including the services of a cook and housekeeper. The same house is offered for the future meets of the club. Livery accommodations are about as they are at Great Bend.

The Mitchell Association will offer $500 toward an international meeting next year, and may make a determined pull for such a meeting. It is thought that coursing will have a boom in Dakota, and the club intends to hold further meetings. Next fall the association will also hold a field trial, dogs to be worked on prairie chickens, of which birds there is an abundance. All in all, it would seem we need keep an eye on this healthy youngster of an organization, who is apt to jump in and make some swift history—Dakota fashion. E. HOUGH.

## BEAGLE TRIALS FOR NEW ENGLAND.

*Editor Forest and Stream:*

To the beagle owners of New England and vicinity I would say that it is proposed to form a field trial beagle club for the purpose of holding a field trial in April next after the N. E. Kennel Club's show, or thereabouts, and to continue to do so every year thereafter at a time either before or after the trial held by the National Beagle Club, so that dogs can be run in both trials without the expense of extra training for each, and the long wait consequent on holding only one trial a year. It is also further proposed to add a dachshund stake and a basset stake to the trials so that the owners and admirers of these dogs may have a chance to place them in public competition and bring forward their several qualities for field work, as has been done in the case of the beagle hound. Owners of bassets or dachshunds are therefore cordially invited to come forward and join us at this first meeting and give suggestions and directions as to matters pertaining to these breeds of dogs. A first meeting will be held at Young's Hotel, Dec. 17, 1892, at 7 P. M., where the club will be formally organized. All intending to join or expecting to be present, will confer a favor by corresponding with me at an early date.

MELROSE, Mass. F. W. CHAPMAN.

An executive committee meeting will be held by the American Spaniel Club during the Brooklyn dog show.

# DOG CHAT.

### World's Fair Show.

Time is slipping along at its usual gait, and more than once the question has been asked, When are they going to make a move to get things into shape for the World's Fair show? Canada is moving apace and is getting in line with her arrangements, but little has been done in this country toward providing a satisfactory solution of the difficulties that will arise in selecting the dogs to compete from the mass of entries that are sure to be sent in. As pretty nearly every one who can scare up a dog of his own will enter it, some provision will have to be made whereby the "great unwashed" shall be separated from those that are likely to catch the judge's eye. Recognizing the importance of the dog show, Mr. Buchanan, Chief of the Department of Agriculture of the World's Fair, paid a visit to New York city last week in order to gain the views of prominent A. K. C. officials and dogmen before making final arrangements. On the evening of Nov. 17 he held a conference with Messrs. W. C. Reick, A. C. Wilmerding, James Mortimer, James L. Anthony, Thos. H. Terry, Wilson Fiske, A. P. Vredenburgh and others as to ways and means. Although a premium list has been issued it was decided to make some alterations. The money that is usually given in the open classes will be given as premiums in a special class and in open classes medals will be given. The subject of judges was also discussed. Mr. Buchanan expressed himself as satisfied that everything will be arranged without trouble, and remarked that the World's Fair managers were determined that this dog show should be a memorable one. The live stock buildings are almost completed, and New Yorkers will welcome an old friend when they see the figure of their Madison Square Diana occupying a proud position on top of them.

### Dog Show at Pawtucket, R. I.

"LITTLE RHODY" is falling into line and during the last four days of December Pawtucket will be the scene of a dog show held, we believe, in connection with the Rhode Island Poultry and Pet Stock Association. From the preparations that are being made it is very likely the exhibition this year will be a more pretentious effort than that of last year, when held at Providence. Mr. Chas. H. Jencks, of Pawtucket, will superintend and Mr. J. Otis Fellows will, as the English would say, adjudicate upon all breeds. Dr. H. S. Smith is to be the veterinarian and Mr. T. H. Adams, of Pawtucket, R. I., will receive the entries up to Dec. 17. As the association has become a member of the A. K. C., all wins will count, and therefore there is no reason why Mr. Fellows should not find a representative lot of dogs put down before him. Premium lists are not yet out but will be ready in a few days.

### Canadian Pointers.

Notwithstanding Mr. Geo. La Rue, owing to business engagement, gave up his secretaryship in the Pointer Club, he has found time to invest in some good pointers, for Mr. T. G. Davey, of London, Ont., tells us he has just sold him Revelation and Dame Bang. The former is well known on the bench and Dame Bang's honors are fresh upon her, having won the All-Age Stake and ran second in the Derby at the last International Field Trials as reported last week in FOREST AND STREAM. Mr. Davey has also sold Canadian Lillie to Mr. A. Cramer, of Chicago.

### Important Transfers.

Messrs. Toon & Symonds have just received that crack Clumber bitch, Lady Snow, having purchased her from Mr. Mercer. Mr. Mercer in turn buys from the kennel the noted Irish setter bitch Ballymoney, heavy in whelp to their Jack Briggs, together with a 12-months old bitch by Valley Boxer ex Sissy. The latter will be held at the kennels till bred to Jack Briggs. Jack Briggs, who has improved lately, will be the only representative of the Anglo-American Kennel at Brooklyn this week.

### The Great Bend Transportation Incident.

Mr. Hough wires us: "Correct unequivocally Mr. Cattanach's correction of my Great Bend statement as to the leaving behind of Judge Mulcaster. Mr. Mulcaster rode out in the press wagon as stated. Mr. Cattanach evidently refers to some other morning. I know my facts."

### Suffolk Coronet.

Mr. A. D. Stewart, of Hamilton, Ont., who lately purchased the smooth stud fox-terrier Suffolk Coronet from Mr. J. W. Morden, has resold the dog to his former owner, who bought him for a client whose name is not at present forthcoming, although it is understood that Coronet still remains in Canada.

### Toronto K. C. Local Show.

The Toronto Kennel Club held a successful local show on the evening of Nov. 15. A number of well-known local dogs were exhibited, but space does not admit of giving the full list this week. The judges were Messrs. R. W. Boyle and William Brodie.

Kennel clubs are springing up in every direction. It seems, according to the Salt Lake City *Times*, that even the city of the Mormons is not behind the times in this respect, and its club proposes holding a show some time in January next. The Pacific Kennel Club, however, at a late meeting discussed the advisability of forming a Western circuit of shows, and the secretary was instructed to confer with the Salt Lake Club with a view to its falling into line with their show.

Whippet racing will take place at Fall River on Thanksgiving day. Farrow's Nellie, that took a conspicuous part in the whippet racing at Trenton in September last, is matched to run Ford's Buccaneer for $200, and Copper's Mischief will contend with Lord's Lady for $100.

The new kennel club in Detroit, Mich., held a meeting Nov. 3 and after adopting by-laws decided to hold a dog show in the Auditorium next spring.

Mr. Harry Twyford sails for Bay Ridge Nov. 25, by the same steamer (Mohawk) that carried him to England. By the way, we have received a letter for publication commenting on the misunderstanding between Messrs. Twyford and Elliot. As these two gentlemen have seen fit to air their mutual grievance in the English papers rather than at home, we scarcely think it right to inflict our readers with a side view of it. This reminds us that FOREST AND STREAM has also received letters more or less personal in tone concerning criticisms at Canadian shows in another paper. Such matter is not of general interest and is therefore declined.

Owing to our enforced absence from the office, one or two items of news got side-tracked last week. The fact that Manatang Kennels had purchased Henmore King and Chips, two noted English greyhounds, was one of them. These dogs were purchased from Mr. C. Hathaway. Some time since we had an inquiry from a correspondent as to how these two dogs would compare with the cracks in this country, and we answered to the best of our ability. How far we were correct will be seen at the Brooklyn show this week, where the two new ones will be exhibited. The black and white dog Henmore King was whelped in March, 1884, and is by Flowdale out of Sut, and has some rare old coursing blood in his veins, and weighs when fit about 62lbs. His winnings are numerous, first at Crystal Palace, 1890, is one of them. Chips, a white and brindle bitch, was whelped in March, 1888, and is by Bird of Prey out of Bessie. She is said to be very fast in the field and a sure killer. She also has done well on the bench, and a win at Birmingham in 1890 is part of her record. Mr. Hathaway was also the owner of Charles Davis and Maud Torrington before Mr. Albion L. Page purchased them.

The Seminole Kennels have hinted recently that we might expect some news, and now we learn that the collie Ormskirk Curzon is on board the s.s. Runic on the way to New York. This dog comes from the kennels of Mr. T. Stretch.

We should have remarked in our notice of Marvel's importation last week that the excellent picture of this dog which we published was from the English *Stock-Keeper*.

In our list of names of sportsmen present at the New England field trials we unwittingly omitted that of Mr. "Bob" Leslie, who was accompanied by a Cleveland badge, and in that happy frame of mind in which a man finds himself who has won three hats on the national result. Looking over our exchanges we find in the Lynn *Item* a picture of the gallant Major "Bob" on a spirited charger at the head of the "silk hat" brigade, surrounded by a halo of illuminations and hurrah in the Democratic glorification parade that taok place in that city a few nights since. The owner of Belle Randolph, a pointer bitch of much renown, is seemingly a prophet of some account in his own country, and as such we trust he will have influence enough to put life into the dormant Massachusetts Kennel Club, of Lynn, so that we may look forward to a bench show in the "shoe" city as something more than a probability.

That pups can be carried in good health long distances by rail if properly crated is proved by Mr. Wilson, the Chicago fancier, who in acknowledging the receipt of a black and tan terrier 4 months old, by Prince Regent out of Meersbrook Empress, says he never received a dog in better shape.

Mr. Barclay Field, one of the best known supporters of field trials in England, and an ardent sportsman, died Nov. 7. For many years he had been a breeder of pointers and his dogs generally ran well up in the different field trials. He was a member of the Council of the National Association, of which Mr. Heywood-Lonsdale is the president.

The boss liar now lives in Jerseyville, Ill., and here is his latest effort, which he told to an admiring crowd at the Laclede the other day: "There was a man in southern Illinois," said he, "who invented a salve that he claimed was just the thing for cuts. If you cut your finger off, apply the salve and the finger would soon grow out to its normal length. One of the residents of the town was somewhat skeptical, so he thought he would try it on his dog's tail. He cut off the tail and applied the salve, when almost spontaneously it commenced growing, and in a few minutes was as long as ever. In the meantime his little boy had picked up the end of the tail and put on some salve, and both the man and the boy were very much surprised to see a full-sized dog grow out from the end of the tail. The father and his boy are now dead."—*St. Louis Republic.*

We note among our new advertisements this week the following offers for sale: Foxhounds, D. Rowat; setters, P. J. Schild, G. H. Kunkel, Silas Decker; beagles, Somerset Kennels, E. O. Cornforth, W. G. Mott; cocker spaniels, Coachman; King Charles spaniels, Lucy; mastiffs, P. A. Place, T. L. Dennis; fox-terriers, E. Snell; Chesapeakes, A. C. Sill; Philip Daly, Jr., wants an experienced man to take charge of kennel; C. W. Ellis wants dogs to train; F. W. Forbes wants to buy a coon and a rabbit dog.

The question of making dogs as personal property is again a subject of discussion in the Georgia Legislature. There is the usual opposition that has hitherto defeated the bill, based on the idea that once dogs become property they will be taxed. It does seem funny that these people will fight for their dogs and risk almost anything personally to protect them, and yet refuse to countenance a law which would relieve their dogs in a great measure from the dangers they now run at the hands of any unscrupulous ruffian that comes along. Yet for some cities to tax dogs and not recognize them as property does seem a little inconsistent.

Even a dog should have a name which he would not blush to bear, were blushing possible to him. When he has been called by some ridiculous and inappropriate title, the fact frequently reacts upon the owner. There was a rich and somewhat overdressed "city woman" boarding in a pretty village, this summer, and she owned a canine pet who dragged out a miserable existence under the name of "Rags." One day he was lost and his bejeweled mistress was inconsolable. She walked the road in front of the house, clad in China silk, and calling "Rags! Rags! Rags!" in tones of piercing grief. Her pet did not answer. And she became quite indignant when some of the village youths took up the cry and from a sheltering fence cried "Bones an' ol' iron."—*St. Louis Post-Dispatch.*

Mrs. C. C. Ellis, the owner of probably the best team of Basset hounds in England, is offering them for sale. Here is a chance for some of our fanciers, who seem to be waking up to the merits of this breed.

Apropos of Mr. G. F. Bowden, whose name has cropped up recently in connection with the picture of working sheep dogs we published recently, met with an accident in the hunting field, and according to the English *Stock-Keeper*, resulted to an injury to his wrist.

The Crystal Palace show this year is said to have been the best yet held by the company, both in entries and quality. Mastiffs were a good display, but the quality of St. Bernards was all in favor of the smooths. Marvel, "our new dog," beat his sire ch. Pouf and Angelo in rough challenge class. Mr. Brough brought out a new crack bloodhound in Burgundy, by ch. Beckford ex Bianca. Bulldogs showed nothing new of any moment. Irish terriers, however, were very strong, but fox-terriers were comparatively not a creditable exhibition, though Dorsay was on hand. Old Beaconsfield was beaten in black and tans by Prince Eric, who is said to be going cheeky. Collies were poor. Other terrier classes were well represented and the pet dogs are said to have been exceptionally strong. The pointers and setters were better than usual.

Major Taylor's new book is now ready for sale, and judging from a glance through its pages it is a masterpiece of plodding effort. At the same time the printing and general appearance of the book inside is scarcely in keeping with the importance of the work. The price is $5, sent post or express free.

## BROOKLYN DOG SHOW.

BROOKLYN, N. Y., Nov. 22.—(*Special to Forest and Stream*).—The second venture of the National Greyhound Club is indeed a formidable effort, and the club as a specialty club must feel proud of the way in which their fellow dogmen have supported them. The show opened on Tuesday morning, Nov. 22, and will continue till Friday night. A glance through the prize list, and we have not time for any more than that before going to press a day earlier than usual.

There are a number of prominent dogmen present, among whom I notice Messrs. R. C. Cornell, John Moorehead, Jr., R. P. Keasbey, A. C. Wilmerding, E. A. Maulce, W. C. Wixom, F. W. Chapman, Dr. H. T. Foote, R. F. Mayhew, James L. Anthony, W. Wade, Wilson Fiske, Henry Jarrett, A. D. Lewis, H. B. Cromwell, H. W. Huntington, J. W. Appleton, Geo. Bell, W. S. Stewart, James Black, L. C. Whiton, George Jarvis, C. D. Bernheimer, F. Senn, John Finlayson and a host of others whose names we must chronicle next week. The benching is well arranged, but somewhat crowded. The building has hardly sufficient light for judging purposes. The attendance this morning is moderate. Judging commenced at 11 A. M.

The judges are: In ring 1, for mastiffs, W. Wade; English, Irish and Gordon setters, pointers, W. Tallman; foxhounds and beagles, H. W. Lacy. In ring 2, for St. Bernards and Newfoundlands, A. M. Hughes; Chesapeake Bay dogs, Clumber, cocker and field spaniels, E. M. Oldham; Great Danes, A. H. Heppner. In ring 3, for deerhounds, greyhounds and Psovois or Russian wolfhounds, H. W. Smith; collies, Martin Dennis; poodles, pugs, Italian greyhounds, toy spaniels and toy terriers, Dr. M. H. Cryer. In ring 4, for all fox-terriers, German Hopkins: Bedlington, black and tan, bull, Dandie Dinmont, Irish, Scotch, Skye and Yorkshire terriers, bloodhounds, bulldogs, dachshunds and miscellaneous, T. S Bellin.

Owing to Mr. August Belmont's absence, Mr. German Hopkins is filling his place in the judges' list very acceptably.

The quality of the dogs is particularly noticeable, especially is this the case in the good showing of American-bred stock. The pointer men are very excited and competition is keen, and it savored of old times to see Mr. R. C. Cornell leading out a winner in the heavy-weight dog class. A new fox-terrier dog is another of the surprises. Many of the awards so far made are not according to hitherto "cocker," but that does not say they are not correct. The club gave an elaborate lunch to judges, friends and press. When cigars were lighted Mr. Anthony proposed the toast of the Greyhound Club and Mr. L. C. Whiton responded. The following is the list of awards up to 3 P. M.:

ST. BERNARDS.—OPEN—*Dogs:* 1st and 2d, Fred Schmitt's Roland, Jr., and Otos; 3d, Otto Langenberger's Donnar. Very high com., New York St. Bernard Kennels' Refuge II. High com., Mrs. J. Smith's White Friar and Swiss Mountain Kennels' King Regent. Com., Emma Langenberger's Achilles. *Bitches:* 1st, 3d and very high com., Col. Jacob Ruppert, Jr.'s Ellen Terry, Altonette and Miss Anna; 3d and high com., Swiss Mountain Kennels' Sunray and Princess Hepsey. Very high com., W. Gray's Judy. High com., Jacob F. Lutz's Princess Wang. *Puppies:* High com., Edward Booth's Lord Walbeck. Com., C. J. Field's Nero.

DEERHOUNDS.—CHALLENGE—1st, Dunrobin Kennels' Olga.—OPEN—*Dogs:* 1st, Dunrobin Kennels' Argyle; 2d, Henry Mollenhauer's Bismarck; 3d, J. M. Greenwood's Glencairn. *Bitches:* 1st, withheld; 2d, Iolanthe Kennels' Madge Mac; 3d, Henry Mollenhauer's Tnora.

GREYHOUNDS.—CHALLENGE—1st, Albion L. Page's Maud.—OPEN—*Dogs:* 1st, Woodhaven Kennels' Lord Neverstill; 2d, Tubby Hook Kennels' St. Regis; 3d, Wm. Schumacher's Prince Bismarck. *Bitches:* 1st, James Black's Dolly Dollar; 2d and very high com., Maybrook Kennels' Miss Dollar III. and Maybrook Nell; 3d, Wm. T. Faulkner's American Daisy. *Puppies:* 1st, Woodhaven Kennels' Snowflight. 2d, W. D. Blenus's Dollas.

PSOVIE.—CHALLENGE—1st, H. W. Huntington's Argoss.

POINTERS.—CHALLENGE—55LBS. AND OVER—*Dogs:* 1st, George Jarvis's Lad of Kent. Reserve, Hempstead Farm's champ. Robert le Diable. *Bitches:* 1st, Hempstead Farm's Woolton Game. OPEN—*Dogs*, 55lbs. and over: 1st, Robert C. Cornell's Ponset; 2d, Hempstead Farm's Hempstead Bang Bang; 3d, Rinada Pointe Kennels' Earl of Hessen. *Bitches*, 50lbs and over: 1st, Rinada Pointer Kennels' Duchess of Naso; 2d, George Jarvis's Lass of Kent; 3d, Banks & Da Russy's Bella. CHALLENGE—UNDER 55LBS. —*Dogs:* 1st, Hempstead Farm's champion Duke of Hessen. CHALLENGE—UNDER 50LBS. *Bitches:* 1st, William H. Hyland's Fan N. OPEN—UNDER 55LBS. *Dogs:* 1st, Rinada Pointer Kennels' Ridgeview Donald; 2d, Chas. Connell's Rock II.; 3d, A. G. Hooley's Ridgeview Faust. Reserve, Robert C. Cornell's Roderick. Very high com., Hempstead Farm's Hempstead Prince and Bronx Valley Kennels' Axtel King Don. High com., Otto Hillmer's Chester.

FOX-TERRIERS.—SMOOTH—OPEN—*Dogs:* Iolanthe Kennels' Ripon Stormer; 2d, Clarence Ratubone's Beverwyck Punster; 3d, L. & W. Rutherfurd's Warren Daysman. Reserve, L. B. Banks's Blemton Rattler. Very high com., L. & W. Rutherfurd's Warren Laird, E. W. Irwin's Ruxton and Woodale Kennels' Dobbin. High com., E. Rand Hollander's Hillside Ruffian. *Bitches:* 1st, Chas. Stedman's Hanks Grouse II.; 2d and 3d, Iolanthe Kennels' Ripon Regina and Miss Domino. Reserve, L. & W. Rutherfurd's Warren Faithful. Very high com., Edward Bird's Tuxedo Beauty, L. & W. Rutherfurd's Dusky II. High com., E. W. Irwin's Chinquipin Chink. Com., Woodale Kennels' Woodale Regina.—PUPPIES *Dogs:* 1st, A. D. Stewart's My Fellow C.; 2d, Wilton Kennels' Wilton Tripper. Very high com., Dr. A. W. Lawrence's Crafty. *Bitches:* 1st, E W. Irwin's Boscobel; 2d, Woodale Kennels' Woodale Dainty.

FOX-TERRIERS.—WIRE-HAIRED—OPEN—*Dogs:* 1st, Hempstead Farm's Suffolk Billy; 2d, Iolanthe Kennels' Dandy Jack; 3d, C. L. A. Whitney's Jack Trick. Very high com., Iolanthe Kennels' Carn Brea Prince, Hempstead Farm's Suffolk Grip and R. F. Mayhew's Brittle. High com., C. L. A. Whitney's Jack Prompter.

## A STRONG MASTIFF KENNEL.

*Editor Forest and Stream:*

Since the Omaha show I have strengthened my mastiff kennel very materially, having purchased Edric, winner of first in open class and defeating Elkson for special as best in that show.

It will be remembered at Chicago, 1892, Edric, being in wretched condition, was defeated by Elkson and Wellington, but at Omaha he turned the tables on both of them, defeating Wellington in the open class and Elkson for the special.

I have also purchased Caution's Own Daughter and Minna Minting. These, with what I already have, will make me a very strong kennel. C. E. BUNN.

PEORIA, Ill., Nov. 19.

## POINTS AND FLUSHES.

I WAS in error in respect to a statement I made recently concerning the judges who were to judge at the U. S. trials. Mr. J. M. Freeman was not engaged to judge. He was mentioned as a possible judge. As he had entries in those trials, he desired me to correct the error.

The Ohio Field Trials Club this year holds a membership trial. After this year's trials are run, beginning Nov. 23, the intention is to make future trials open to the United States. At present, the club has 1,200 acres and 2,000 more to add. The secretary, A. H. Smith, Canton, Ohio, writes me that there are plenty of birds, and that there will be good opportunities for the dogs to work. The grounds, five miles from city, can be reached by electric cars.

B. WATERS.

### Business.

THEY ONLY NEED A START.—Arkona, Ont., Nov. 12.—*Editor Forest and Stream:* I see by the advertisement in the FOREST AND STREAM that a subscriber can start and take a paper at any time. In seeing the paper I have found that there is some very good information. I inclose the sum of $2 for six months issues. Please oblige by forwarding the following weekly issues.

G. R. DAWSON.

## CENTRAL FIELD TRIALS CLUB ENTRIES.

### Free-For-All Stake.

*Editor Forest and Stream:*

Herewith please find list of our Free-for-all entries, numbering 14 English setters and 6 pointers:

ENGLISH SETTERS.

ORLANDO—Avent & Thayer's dog (Roderigo—Bo Peep).
BETTIE S.—Avent & Thayer's bitch (Roderigo—Bo Peep).
RUPERT—Avent & Thayer's dog (Roderigo—Bo Peep).
TREMONT—Bidford & Bryden's dog (Gladstone's Boy—Speckle Gown).
BOB COOPER—Blue Ridge Kennels' dog (Roi d'Or—Miss Nellie Y.)
PITTI SING—Thos. Johnson's bitch (Baron Doveridge—Norah).
LORA—Pierre Lorillard, Jr.'s bitch (Gladstone's Boy—Ruby D.).
COUNT ANTEO—Pierre Lorillard, Jr.'s dog (Count Noble—Gladstone's Girl).
HAZEL THE BLACK LEG—L. Shuster, Jr.'s bitch (Cincinnatus—Cornelia G.).
BRIGHTON TOBE—T. G. Davey's dog (Locksley—Ledderdale II.).
HARRY C.—Greenfield Hill Kennels' dog (Roderigo—Countess House).
ROWDY ROD—Greenfield Hill Kennels' dog (Roderigo—Juno A.).
DAISY HUNTER—J. A. & J. H. Huntington's bitch (Gath's Hope—Daisy F.).
MERLIN—C. J. Thompson's dog (Grab—Flora).

POINTERS.

RIP RAP—Charlotteville F. T. Kennels' dog (King of Kent—Hops).
MAID OF KENT—Charlotteville F. T. Kennels' bitch (King of Kent—Hops).
BOB—N. S. Simpkins's dog (Beppo III.—Belle Brandon).
GROUSE—C. C. M. Hunt's dog (Mainspring—Swan's Fly).
PRAWN—M. Heywood-Lonsdale's dog (Crab—Polly Peachem).
BLACK WONDER—J. A. and J. A. Hunter's dog (Cowell's Ike—Bang Bang's Pride). C. H. ODELL, Sec'y-Treas.

NEW YORK CITY.

I desire to correct the name of owner of Prawn and Dickon as entered in our All-Age Stake. The owner is Mr. Heywood-Lonsdale, instead of Hempstead Farm.

C. H. ODELL, Sec'y-Treas.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

### NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*The Prior.* By F. P. Barber, San Antonio, Tex., for white and brindle rough St. Bernard dog, whelped July 14, 1892, by Eiger (Bello—Gemma) out of Swiss Beauty (champion Sir Charles—Loda).

*Graphic's Dandy, Daisy S. and Sue Ranger.* By A. W. Stevens, Cortland, N. Y., for liver, white and ticked pointer dog and lemon and white bitches, whelped Sept. 18, 1891, by Graphic, Jr., out of Dap Ranger (Dash Ranger—Queen Ranger).

*Graphic, Jr., II. and Graphic's Dawn.* By A. W. Stevens, Cortland, N. Y., for liver, white and ticked pointer dog and bitch, whelped Sept. 21, 1892, by Graphic, Jr. (champion Graphic—King Bow's Dawn) out of Dap Ranger (Dash Ranger—Queen Ranger).

*Edgewood Silk Gladstone and Edgewood Dot Bondhu.* By V. L. Bassa, New Canaan, Conn., for black and white English setter dog and bitch, whelped Oct. 30, 1892, by Bow Bondhu (Gus Bondhu—Bo Peep) out of Rose Gladstone (Dan Gladstone—Belton's Princess).

*Edgewood Monk Gladstone and Edgewood Rose Bondhu.* By V. L. Bassa, New Canaan, Conn., for black, white and tan English setter dog and bitch, whelped Oct. 30, 1892, by Bow Bondhu (Gus Bondhu—Bo Peep) out of Rose Gladstone (Dan Gladstone—Belton's Princess).

*Edgewood Dell.* By V. L. Bassa, New Canaan, Conn., for blue belton English setter bitch, whelped Sept. 24, 1892, by Bow Bondhu (Gus Bondhu—Bo Peep) out of Menia III. (Rock Belton—Menia II.).

### BRED.

☞ **Prepared Blanks sent free on application.**

*Loumont Kit—Comet II.* H. M. Howes's (Somerville, Mass.) bull-terrier bitch Loumont Kit to his Comet II., Sept. 29.

*Rose—Comet II.* H. M. Howes's (Somerville, Mass.) bull-terrier bitch Rose to his Comet II., Oct. 17.

*Bonaly Belle—Suffolk Coronet.* F. R. Close's (Hamilton, Ont.) fox-terrier bitch Bonaly Belle (Blemton Trump—Hillside Baroness) to J. W. Morden's Suffolk Coronet (champion Result—champion Diadem), Aug. 21.

*Flossy—Gypsey Boy.* E. L. Stine's (Philadelphia, Pa.) beagle bitch Flossy (Little Prince—Uno) to R. Sherr's Gypsey Boy (champion Lee—Gypsey Nell), Sept. 29.

### WHELPS.

☞ **Prepared Blanks sent free on application.**

*Bonaly Belle.* F. R. Close's (Hamilton, Ont.) fox-terrier bitch Bonaly Belle (Blemton Trump—Hillside Baroness), Oct. 17, six (two dogs), by J. W. Morden's Suffolk Coronet (Result—Diadem).

*Dap Ranger.* A. W. Stevens's (Cortland, N. Y.) pointer bitch Dap Ranger (Dash Ranger—Queen Ranger), Sept. 21, eight (four dogs), by S. R. Tisdel's Graphic, Jr. (champion Graphic—King Bow's Dawn).

*Rose Gladstone.* V. L. Bassa's (New Canaan, Conn.) English setter bitch Rose Gladstone (Dan Gladstone—Belton's Princess), Oct. 30, five (three dogs), by his Bow Bondhu (Gus Bondhu—Bo Peep).

### SALES.

☞ **Prepared Blanks sent free on application.**

*Bow Bondhu—Menia III whelp.* Black, white and tan English setter dog, whelped Sept. 24, 1892, by V. L. Bassa, New Canaan, Conn., to F. W. Bennett, Killingly, Conn.

*Henmore Shamrock—Onota Peg whelp.* Irish setter bitch, by F. L. Cheney, Pittsfield, Mass., to C. H. L. Zellinsky, Flatbush, N. Y.

*Henmore Shamrock—Dorah whelp.* Dark red Irish setter dog, by F. L. Cheney, Pittsfield, Mass., to C. H. Smith, same place.

——. Pointer dog, whelped July 4, 1892, by Mr. Corliss, Worcester, Mass., to Dr. W. T. Parker, Beverley, Mass.

*Max.* Black and tan Gordon setter dog, whelped July 25, 1890, by Murkland Ranger out of Bell E., by C. T. Brownell, New Bedford, Mass., to W. D. Spaulding, Waterville, Me.

*Donald W.* Liver, white and ticked pointer dog, whelped Sept. 18, 1891, by Graphic, Jr. out of Dap Ranger, by A. W. Stevens, Cortland, N. Y., to A. D. Wallace, same place.

*Nettie Weller.* Black, white and tan beagle bitch, whelped May 17, 1892, by Tony Weller out of Topsy S., by National Beagle Kennels, Waltham, Mass., to F. C. Mackenzie, same place.

*Little Lady.* Silver fawn pug bitch, whelped Aug. 22, 1892, by Spokane out of Gladys, by Eberhart Pug Kennels, Cincinnati, O., to J. Sparrow, Pleasant Ridge, O.

*Star of Kent.* Black and white pointer bitch, whelped April 27, 1892, by Trinket's Chief, Jr. out of Duchess of Kent, by West End Kennels, San Antonio, Tex., to Mrs. E. S. Avis, Fort McIntosh, Laredo, Tex.

*Cardinal Richelieu.* Liver and white pointer dog, whelped April 27, 1892, by Trinket's Chief, Jr. out of Duchess of Kent, by West End Kennels, San Antonio, Tex., to Jos. W. Irwin, Little Rock, Ark.

*Richard Kent.* Black and white pointer dog, whelped April 27, 1892, by Trinket's Chief, Jr. out of Duchess of Kent, by West End Kennels, San Antonio, Tex., to J. M. McCain, West Lake, La.

*Imperial Kent.* Black and white pointer dog, whelped April 27, 1892, by Trinket's Chief, Jr. out of Duchess of Kent, by West End Kennels, San Antonio, Tex., to Dr. E. H. Scharnberg, Shiner, Tex.

*Doctor P.* Liver, white and tan English setter dog, whelped Sept. 8, 1892, by Cinch out of Delaware Girl, by Liberty Kennels, Hyattville, O., to Hon. T. E Marriott, Delaware, O.

*Ruth.* Black, white and tan beagle bitch, whelped June 14, 1892, by Jubilee out of Nellie Bannerman, by F. B. Zimmer, Gloversville, N. Y., to E. L. Stine, Philadelphia, Pa.

*Rachael.* Black, white and tan beagle bitch, whelped June 14, 1892, by Jubilee out of Nellie Bannerman, by F. B. Zimmer, Gloversville, N. Y., to E. L. Stine, Philadelphia, Pa.

*Rip Rap.* Black, white and tan beagle dog, whelped June 14, 1892, by Jubilee out of Nellie Bannerman, by F. B. Zimmer, Gloversville, N. Y., to E. L. Stine, Philadelphia, Pa.

*Fannie Weller.* Black, white and tan beagle bitch, whelped July 14, 1892, by champion Tony Weller out of Dot, by W. H. Child, Glenside, Pa., to E. L. Stine, Philadelphia, Pa.

*Tony Forest.* Beagle dog, whelped May 17, 1892, by Tony Weller out of Topsy S., by National Beagle Kennels, Waltham, Mass., to Lewis Steffern, Milwaukee, Wis.

*Sport.* Beagle dog, whelped May 6, 1892, by champion Fitzhugh Lee out of Virginia, by National Beagle Kennels, Waltham, Mass., to C. L. Morse, Athol, Mass.

*Jule.* Black, white and tan beagle bitch, same litter, by National Beagle Kennels, Waltham, Mass., to Dr. Baker's son, same place.

*Ho Boy.* Black, white and tan beagle dog, same litter, by National Beagle Kennels, Waltham, Mass., to W. Genthner, Noblesboro, Me.

*Prop.* Black, white and tan beagle dog, same litter, by National Beagle Kennels, Waltham, Mass., to J. H. Tilton, Wayland, Mass.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.*

S. B., Brooklyn.—Please give pedigree of English setter Wellington. Ans. Wellington (A. K. C. S. B., 11,368) by Monk out of Mattie, by Killarney out of Milo, by Dan out of Venus; Killarney, by Grouse out of Brisk; Monk, by Blue Border out of Flirt.

C. S. H., Manchester by the Sea, Mass.—Would you kindly state cause of death in wolfhound puppy, ten months old. Ate hearty but kept very thin; coat out of order. Tried for worms without any success; found blood in her fæces. I took great care of her but she died suddenly. On opening her I found only one round worm about 6in. long. Her bladder was full of water, quite thick and yellow; her passage from rectum was all blood to her inside, which looked all right bar her liver, which was purple and white and very large. Ans. Probable cause of death exhaustion from diarrhœa and hemorhage of the bowels.

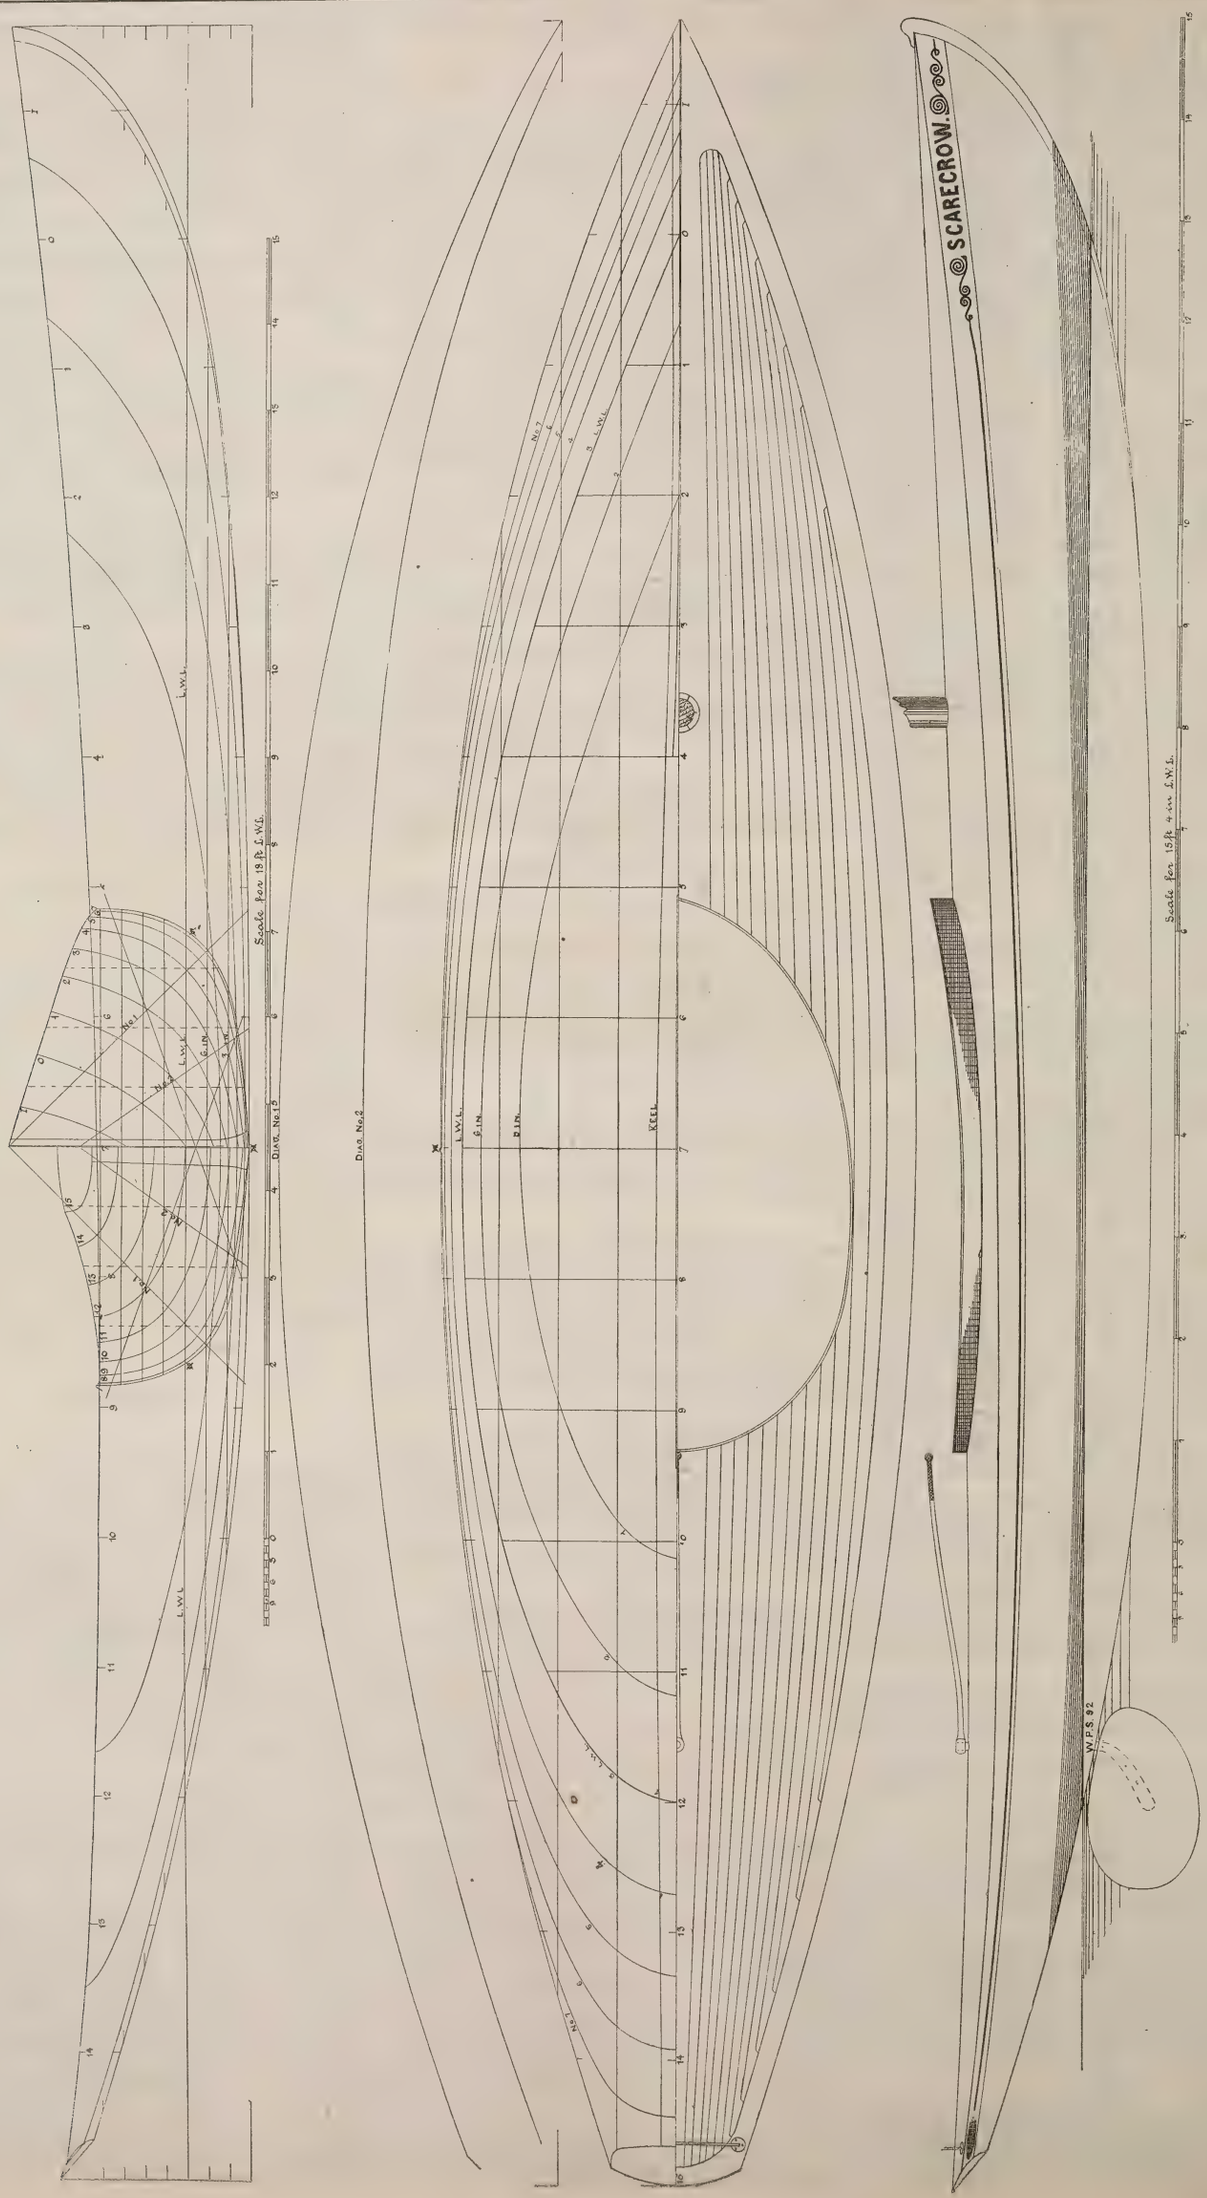
T. G., Troy, N. Y.—A dispute arose from a man's saying that a St. Bernard puppy, of my breeding, "had a very poor mouth for a thoroughbred because the roof was not black"—the flews are black, be it understood. I claim that the color (red or black) of the internal surface of a St. Bernard's mouth makes no difference in his scoring; that red is not ranked as a defect or fault, nor any points allowed in the standard to black color; that, if anything is given to black color, it would be no more than that, of two dogs scoring exactly the same otherwise, a preference might be given to the dog with a black mouth by a judge who preferred it, and would be denied it by a judge who did not prefer black. In other words, I claim that it is a fancy point not original in the breed, and finding its sole value in individual taste and selection. Ans. The idea that a pedigree dog should have a black roof to its mouth is a relic of the dark ages that does not obtain in modern dogdom. The color of the dog's mouth has no influence with a judge.

## Wonderful Word-Painting.

*Extract from Sermon of Rev. T. De Witt Talmage, in Brooklyn Tabernacle, Sunday Evening, Nov. 1, 1891.*

"WHEN last Thursday the swiftest train on earth pulled out from Grand Central Station for Buffalo, we started on a wondrous journey. The autumnal forests were in a blaze of splendor. Four hundred and forty miles of pageant! Let artists stand back when God stretches his canvas. Along by the Hudson, and up and down the sides of the great hills, there was an indescribable mingling of gold and orange, and crimson and saffron, now sobering into drab and maroon, now flaming up into solferino and scarlet. Here and there the trees looked as if their tips had blossomed into fire. In the morning light the forests seemed as if they had been transfigured, and in the evening hour they looked as if the sunset had burst and dropped upon the leaves. In more sequestered spots, where the frosts had been hindered in their work, we saw the first kindling of the flames of color in a lowly sprig; then they rushed up from branch to branch until the glory of the Lord submerged the forest. Here you would find a tree just making up its mind to change, and there one looked as if, wounded at every pore, it stood bathed in carnage. Along the banks of the Mohawk there were hills over which there seemed pouring cataracts of fire, tossed up and down and every whither by the winds. The most beautiful sight I ever witnessed was along the Mohawk Valley. Through some of the ravines we saw occasionally a foaming stream, as though it were rushing to put out the conflagration. Even the humble bush, like the bush that Moses saw, was 'burning, but not consumed.' If at one end of the woods a commanding tree would set up its crimson banner, the whole forest prepared to follow. If God's urn of colors were not infinite, one swamp that I saw along the New York Central would have exhausted it forever. It seemed as if the sea of divine glory had dashed its surf to the tip-top of the crags, and then it had come dripping down to the lowest leaf and deepest cavern."—*Adv.*

# Yachting.



## Scarecrow.

IN the accompanying design, the sneakbox type, so frequently described and illustrated in the FOREST AND STREAM, is carried to a further degree of development than in the sailing boat La Gloria, illustrated on Oct. 27, the result being a fin-keel of the same general type that has proved such a success this year in the hands of Mr. Herreshoff. With a view to speed, the lines have been fined, and in conformity with fashion, if for no other reasons, the ends have been lengthened materially; but the characteristic features of the sneakbox and pram, the shovel-bow and full waterlines, have been retained. The design is of course very similar to La Gloria, the new boat being suggested by a practical trial of the old one. The general features of the boat were planned by her owner, Mr. C. J. Stevens, of the New York C. C., the design itself being the work of Mr. W. P. Stephens. Scarecrow, whose looks it is hoped and expected will belie her name, is intended mainly for sailing about New York Bay, between the Narrows, Sandy Hook and Raritan Bay; it is not proposed to race her, and she will be fitted with a complete canoe yawl outfit of tent, cooking and sleeping gear; at the same time the main object of the owner was to secure a fast, safe and seaworthy sailing boat. While the design as given possesses the general elements and proportions of Delta and La Gloria, and may be fitted with a centerboard of moderate weight, to carry a sail plan with little or no ballast, the boat now building will be a veritable fin-keel, after a peculiar plan devised by her owner.

The fin will be of Tobin bronze, about 1¼in. thick, 6ft. long on upper edge, about 4ft. long on lower edge, 3ft. 3in. deep, and carrying on the lower edge a weight of some 400lbs. in a lead cigar or bulb. The novel feature of the design is the fitting of the fin in a centerboard trunk a little longer than the cockpit shown, this trunk being strongly built, to a height of 3in. above the waterline, fastened at each end to a watertight bulkhead across the boat, and with the floor level with the top of the trunk, thus making the cockpit quite small and self-draining.

The trunk will be kneed off so as to take safely the heavy strain, and so far as strength goes, this construction is superior to the usual one of angle irons on each side of the fin, bolted through the floors and keelsons. The fin will be to all intents and purposes a permanent fixture, being left down when at anchor and at all times in sailing; but it will be fitted with special lifting gear, by which it may be raised in a short time for hauling up or any special emergency.

The proposed rig will show a jib tacked to the stemhead and a leg-o'-mutton mainsail of the sliding gunter type, precisely as used on canoes. The spars will be hollow, made by Young, of Bridgeport, Conn. The cockpit will be narrower than shown, and nearly rectangular; but in building from the lines the arrangement of centerboard or fin, bulkheads, size and shape of cockpit and height of floor may be varied to suit the special requirements of a case. Two large hatches will be placed in the deck, giving access to the stowage room forward and aft of the well. The "nasty rudder" of all modern small racers has been adopted, as little that would injure it can pass the deep fin; but for ordinary cruising use, with the common centerboard, the plain rudder hung on a scag would be preferable. The boat is now building by Samuel Ayres, of Fifty-sixth street, Bay Ridge, N. Y., and will probably be completed within the next three weeks, though she will not be rigged and fitted up until next spring.

"SCARECROW." 18ft. Sailing Boat. Designed by W. P. Stephens for C. J. Stevens, 1892.

We propose later on to deal with the details of construction for the benefit of those who may wish to build from the lines.

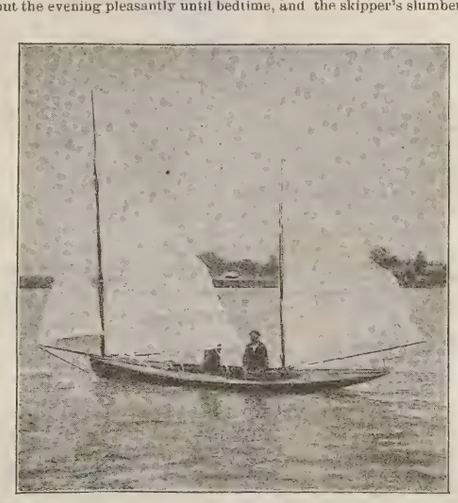
## The Cruise of the Elsa.

TOWARD the end of the summer the writer launched upon Lake Ontario a canoe yawl, built from his own designs for sailing and cruising, and from the time her keel was laid the idea of sailing her upon her own bottom to Montreal was ever present with him. She is 16ft. on waterline, 20ft. over all, 4ft. 6in. beam and 17in deep, with 9in. least freeboard, and carries a centerboard weighing 116lbs. and 250lbs. of iron ballast under her floor boards. The lines are very similar to those of La Gloria, lately published in the FOREST AND STREAM; the floor not quite so flat and the waterline not quite so full. The rig will be readily understood from the photo, the total area being about 230sq. ft.

For a month after her launch her skipper contented himself with short cruises and scrub races with the other small craft about, and worked diligently to get her into her best trim; which being at last accomplished, Elsa proved herself by no means the slowest boat on the lake. Then as the summer began to wane and the equinoctials to blow, the desire for a longer ramble became almost irresistible, and after waiting from day to day from one cause or another, Elsa at last cast off her moorings and filled away under jib and mizen to a brisk northwest wind on a bright morning in early October.

The N.W. wind is apt to be puffy and strong so late in the season, and the present case was no exception to the general rule; so the mainsail was kept in the gaskets and we (Elsa and I) jogged along comfortably and at fair speed under a weather shore. At noon the sky clouded and the barometer was away down, and the puffs began to come more viciously over the gravel beach and low clay bluffs, so that at times we were fain to luff a little, even with our shortened sail, and hug the shore close to avoid the short chop which occasionally sent a shower of spray over our decks outside.



In three hours we had run abreast of Lakeport Pier, and stood in to allow the skipper to stretch his legs and get a bite of lunch ashore under shelter from the keen wind; and refreshed and comforted as to his inner man after half an hour's shore leave, the boat was got under way again and the run continued. Ominous looking clouds gathered to windward and drifted overhead, and occasional squalls of more than ordinary violence swept out of the bays and made the skipper thankful that he had a goodly quantity of ballast under his feet.

About 4 P. M. we came abreast of the island lying off Presque Isle Point, and stood off before the wind for the narrow gap between it and the mainland. Lowering the mizen and tricing up the centerboard, we ran through without much trouble under the jib, although the rudder bumped and hammered once or twice upon the flat rock bottom, and in a few minutes the mizen was got up again and the boat laid by the wind leading for the lighthouse.

Dusk was coming on as we passed it, and the wind lulling somewhat, first a reefed and then a whole mainsail was hoisted, for the beat into the harbor. With the multiplicity of red and black buoys and rangelights, this was rather anxious work in the gathering darkness, and in the teeth of the spiteful puffs, and against the short choppy sea; but Elsa behaved nobly and clawed to windward in wonderful style, so that before the darkness became complete the skipper hailed a schooner lying alongside the wharf and inquired for the snuggest berth for the night.

One of the pleasantest features about singlehand sailing is the interest which all the water side people take in the cruiser and his boat, and their eagerness to help him, and here, as is generally the case, the local boating crank came forward with his aid and advice and in fifteen minutes Elsa was snugly berthed, and her skipper on his way to supper under the guidance of his new found friend, turned out to be an ex master of the famous Atalanta of America Cup fame and the owner of a handsome boat of his own.

A smoke and a chat with mine host on yachts and yachting filled out the evening pleasantly until bedtime, and the skipper's slumbers

ELSA.

were none the less sound that he had got over the most uninteresting and exposed portion of the coast without mishap or discomfort.

Morning showed a fierce gale from due north, tearing over the water of Presque Bay, and the skipper felt more than ever satisfied that the outside work was over for the present. Under jib and reefed mizen again Elsa's head was turned eastward toward the mouth of the Murray Canal. Just as we got under way a sail appeared at the mouth of the harbor, and soon a fine schooner loomed up, beating into the bay. Coming about off the wharves, she headed after us, and came booming along under all plain sail like a steamboat.

Elsa does not claim to be a match for a hundred ton schooner reaching in a gale of wind, but she was not going to be overhauled without a struggle, so we tucked a couple of reefs in the mainsail and staggered along with rail awash, giving the big fellow quite a chase until within a few hundred yards of the mouth of the canal, where the channel became so narrow that Elsa got only an occasional puff while the schooner's lofty sails got an almost steady wind over the tops of the trees. Our turn came again, however, for the wind headed the schooner as she entered the canal and drove her on to the lee bank, while Elsa, holding a better wind, scraped by her and taking a short bitch to windward went on her way rejoicing.

With an occasional puff from over the tree tops we managed to make a couple of miles an hour, but it was near noon before we had cleared the last drawbridge and settled our toll at the canal office, and the gray, wind-tossed expanse of the Bay of Quinte appeared ahead between the entrance piers. The schooner had meantime warped herself off, and, beautifully handled, came rushing along with a large-sized bone under her forefoot and passed us just at the entrance. The way in which she lay down as she caught the full fury of the wind out of the mouth of the Trent River showed that Elsa was going to have all she could stagger under, and sail was again reduced to jib and mizzen.

This, however, while comfortable enough to run to leeward, did not seem to be the right thing for our beat to windward into Trenton, and heading to under the lee of a little island, the jib was stowed and a close reefed mainsail substituted for it. The changed proved to be a judicious one, and Elsa soon clawed her way up into smoother water under the land, but got aground among the weeds and mud flats. She was soon clear, however, and running into a slip belonging to an old deserted sawmill on the outskirts of the town the dinner can was got out and a cup of tea was made for dinner.

The boating man soon made his appearance and chatted with the skipper, holding fast the while upon the masts of a very shaky-looking old sloop tied up close at hand. Lunch over, sail was made again, and with eased sheets now Elsa tore away toward Belleville, dashing the short, choppy seas off her bows, sending a long, foamy white streak off on either hand.

A fiercer gust than usual carried the skipper's old felt hat away, and his hands were so full of business, on even a straight keel, that the chances of his picking it up before it swept by coming into the wind then bearing down upon it seemed to be too remote to be worth the wet and hard work which it would involve, so he reluctantly let the old tile go, and coming to under the lee of an island a little further ahead, a woolen cap was fished out of the clothes bag which did duty for the remainder of the voyage.

Here we found a fishing party on bourd a steam yacht, the Juanita, with a couple of beautiful St. Lawrence skiffs in tow. They were just setting off for the afternoon, and the elabarate outfit of the fishermen, overcoats, waterproof aprons and gloves, and easy swivel chairs to sit in, while the tired boatmen pulled them about, completely abashed the homely little Elsa and her roughly togged skipper, who was glad to turn the nose of his boat eastward again.

The bay of Quinte became narrower now, and Elsa sped on and on until the great bridge near Belleville hove in sight. A number of teams were going across snd we had to heave to for a minute, and then in response to a hail the ponderous draw swung aside, and fillingaway again, we shot through and laid our course for Belleville light.

Beating up the narrow harbor, Elsa came to at last in such aristocratic company as the Norah and some others of the Bay of Quinte Y. C., and on a slip hard by was the Atalanta, being rebuit. From the momentary glimpse the skipper caught of her it seemed af if the alterations in the shape of long overhang aft and increased freeboard had been well considered and carried out, and she had quite the look of an able and handsome craft, which, in spite of their reputation for speed, can not be said of some other of Cuthbert's productions.

A half hour's run after letters and telegrams and the crew was aboard again, and sweeping out of the harbor into the wide bay. Crossing to Missisauga Point was a rough traverse and Elsa had all she wanted before she got under the lee of Point Anne. Evening was drawing on, and spying a fishing boat ahead, she was overhauled and hailed and inquiries made for a resting place for the night. The fisherman, with characteristic hospitality, immediately volunteered a meal and a shelter, and as Shannonville was some distance off and at the bottom of a deep bay, Elsa's crew was glad to avail himself of the offer.

The fisherman proved to be an old-timer, and entertained the skipper much with his experience of Lake Ontario in bygone days. True stories of rough seas and gales and narrow escapes from shipwreck such as his kind can always tell to a sympathizing audience.

The barometer rose a little during the evening, and we hoped for a fine day on the morrow, which broke sure enough with good promise of fair weather. The wind had hauled to the west during the night, and with her mainsheet paid out to its extreme end, and mizen stowed, Elsa raced away from the little cove which had sheltered her for the night, and was soon sliding over the long easy swell from the westward, at the rate of six miles an hour.

Passing Trident Point the bay narrowed again, and for an hour we had a delightful run with dry decks, a lovely landscape and the skipper taking his ease on the cockpit floor. Soon the smokestacks and steeples of busy Deseronto came into view, and the Prince Edward shores became higher and bolder. Doubling a beautiful tree-clad point, Elsa was luffed up, got under her old mainsail and mizen canvas for the long reach to Pictou.

The barometer began falling again, and the wind, which had been blowing a stiff breeze all morning, now increased to a hard gale, which came in perfect sledge hammer puffs off the bold hills to windward. Close reefs were again in order, and even with these the skipper had to keep a sharp lookout and luff repeatedly to the more vicious of the squalls.

Getting out abreast of the mouth of Hay Bay the skipper was glad to take a rest after the strain on his nerves and to run in alongside a fisherman's boat for a cup of tea and a chat. The usual kindly welcome was accorded and the shanty placed at his disposal, and as the next few miles entailed a run in the trough of the sea, which could be seen racing furiously out of Pictou Bay and breaking on the low, rocky shores to leeward, Elsa's crew did not hurry to leave the hospitable shelter.

Still the barometer went down and the sky became overcast and the sun obscured by flying scud. A little steam tug came in for the fish caught the preceding night and reported very heavy weather, and presently from the eastward came plowing in a schooner, pitching her bluff bows into it to the knightheads, and throwing showers of spray which wet her headsails and foresail half-way up to the crosstrees. Clumsy and bluff-bowed as she was she made a handsome picture as she doubled the Point and squared away for Deseronto, lazily rising and falling on the now quartering swell, and with every shred of canvas pulling as if it would go out of the bolt-ropes.

All these things looked ominous for the Elsa, but after waiting in vain for signs of a clear up, her crew, tired of inaction, concluded to try at any rate whether it was as bad as it looked, and sail was made and a course laid for Barker's Point. By careful steering she eased through the heaviest of the puffs and sea, and went along dry enough until the Point was under her lee. Then the mizen was lowered and mainsheet paid out for the broad reach. At the first touch of weather helm the boat darted off like an arrow, cut the top off a wave with her bow, and running from under it allowed it to come down in a shower of spray on the skipper's knees. In half a minute this performance was repeated, and again and again until the water was visible swashing about in the bilge.

Both of the skippers hands were busy with mainsheet and tiller, so bailing was out of the question, and it looked as if the boat would be half full before we could again reach a lee. Reluctantly he brought her in stays and headed her back with her nose to the sea. Immediately she began climbing over the steep short seas dry and easy. The skipper breathed more freely. Surely matters were not so bad as he had thought, and we went about again for a second trial. Same result as before, and savagely the helm was put down again, and as the boat came round the skipper registered a vow that never again would he go to sea in so able a boat without at least a canvas cover for the open cockpit. Doubling Barker's Point for a second time we squared away for the little harbor behind it, with the high, angry swell roaring astern. An unusually sharp sea crept up behind, got under the quarter, and up, up went the stern and down, down went the bows. The jib was stowed on the very light bowsprit, which with no supporting stay above and a taut wet bobstay below, was arched until the end was far below the sheer line.

Elsa rushed forward under the impulse of the following wave, throwing the foam off on either bow as a snow plow on a down-grade throws the snow out of a cutting, and in her headlong rush stuck her bowsprit in the sea ahead of her. For a moment the tough ash bent like a hoop and then crash! and it was under her bows and towing alongside. Luckily the inboard end with the sail on it remained and the lashings held fast, and in a few seconds more we were floating calmly under the lee of a point and clearing away the wreck.

After waiting an hour for signs of a clear up, which did not come, the skipper concluded to try and beat up for Pictou under the lee of the bluffs; but the day was too far spent, and after two miles of hard and cautious sailing darkness began to gather. Such sailing was bad enough in the daylight, but watching for the squalls sweeping down upon us first from one direction and then from another in the dark became at last a little too exciting, and Elsa was run into a little cove and made snug, while her tired crew climbed the bluffs and made for a handsome farmhouse on the top. Again, after a momentary suspicion that they were being asked to harbor a tramp the story of the solitary voyage brought hearty welcome for the voyager from the simple minded farmer, and with a tear in his voice he told how his son had spent nearly all the ready money on hand in building the fine house and then had gone off and left him in his old age to manage the farm alone with none but his hired help. The story was a sad one and was another instance like the many which we meet with in these progressive days, where a man leaves home comfort and duty behind him in search of change and wealth, which last in most cases he never gets, and when perchance he does, does not know how to use.

HENRY K WICKSTEED.

COBOURG, Canada.

[CONTINUED NEXT WEEK.]

# AMERICAN CANOE ASSOCIATION.

## Annual Meeting of Executive Committee.

THE general business meeting of the Executive Committee of the American Canoe Association was held, pursuant to the call of Lieut. Col. Cotton, the new commodore, at Kingston, Ontario, on Nov. 17.

Situated just at the point on the Canadian side where Lake Ontario narrows to form the St. Lawrence River, and just opposite the first group of the Thousand Islands, Kingston, close to that part of the river between Clayton and Gananoque, well known to A. C. A. men; and the location was very convenient in that it gave the committee an opportunity to visit any proprosed sites.

Owing to the length of the journey, but few members from the States were present, but Mr. Winne, the retiring commodore, with Messrs. Appollonio of Boston, Lawrence of Trenton, and Stephens of New York, reaching Kingston Wednesday afternoon. In the evening some of the party attended a reception and dance at the Artillery Barracks.

When the meeting was called to order in the parlor of the British American Hotel at 11 A. M., on Thursday, there were present Commodore Cotton and the following representatives. Northern Division—J. N. McKendrick, Galt; J W. Sparrow, proxy for F. Minns, Bobcageon; W. C. Kent, proxy for C. E. Archbold, Montreal. Central Division—C. V. Winne, Albany. Eastern Division—Appollonio, Boston. Atlantic Division—W. C. Lawrence, Trenton; W. P. Stephens, proxy for H. L. Quick. There were also present Messrs. E B. Edwards, Peterboro, W. E. Chrystie, Montreal, and R. E. Burns, Kingston.

Since his election in August, Mr. C. E L. Porteous has removed to Montreal, and consequently tendered his resignation as Secretary-Treasurer. Mr. Appollonio was elected temporary secretary of the meeting, and the minutes of the last meeting in camp were read and approved. The resignation of Mr. Porteous was then read and accepted on motion of Mr. Winne, and Mr. McKendrick presented the name of Mr. R. Easton Burns, of Kingston, as his successor. Mr. Burns was unanimously elected and Mr. Appollonio resigned his place to him.

Although it has been practically settled since the meet that the next camp would be on the upper St. Lawrence, no definite site has been mentioned, but Commodore Cotton had made arrangements for the committee to inspect one near Kingston, and a recess was taken in order to do so. After the arrival of the boat from Cape Vincent with Mr. W. R. Huntington, of Rome, on board, Mr. Folger, the owner of the steamer, took charge of the party and invited them on board. After a pleasant trip of half an hour, the boat landed at Long Island Park, a little peninsula on the north side of Abraham's Island, and in company with Mr. Brophy, the owner of the park, the ground was thoroughly inspected and approved by all.

After the return to the hotel, the committee resumed its sitting, the accompanying report of Secretary-Treasurer Wackerhagen, showing the payment by the retiring officers of the whole of the deficit left by their predecessors, was read and discussed. Mr. Stephens moving to accept the report, with thanks to Messrs. Winne, Wackerhagen and Huntington.

The question of the camp site was then taken up, and after an agreement was reached with Mr. Brophy by which the A. C. A. is to have entire control of the point during the month of August for a nominal rental of $1, Mr. Brophy conducting the camp store, the motion was made by Mr. Huntington, seconded by Mr. Lawrence,

that the meet he held at Long Island Park. This motion carried, the questions of date and duration of meet were discussed, and August 11 to 26 were finally selected on motion of Mr. McKendrick, after a motion by Mr. Appollonio to limit the meet to two weeks had been carried. The members were unanimous in favor of two rather than three weeks, imposing less work on the officers in command of the camp.

The resignation of Mr. Belman, Purser of the Central Division, was presented by Mr. Huntington, who suggested Mr. C. E. Wardwell to fill the vacancy, and he was elected.

Since his election, Mr. Colin Fraser, of Toronto, has moved his business to Winnipeg and consequently presented his resignation through Mr. McKendrick, and Mr. W. G. McKendrick, of Toronto, was elected in his place.

As two other members of the Central Division executive committee now come from Rome, Mr. Huntington tendered his resignation from the committee, but on motion of Mr. Stephens it was laid on the table.

Mr. Stephens then introduced an amendment to the Constitution, Art. V., Sec. 2, Par. 6, which after discussion was amended to read as follows, the words in italics being inserted: "In the event of one or more of the Division officers being chosen to fill these positions, *or of vacancies from any cause*, the vacancies so caused shall be filled from the Division to which the officers vacating the positions belonged, by the members of the *Division* executive committee, and the said vacating officers may vote on this and other questions on their Division Committee until their successors are elected." In connection with this change, Art. VI. was also amended by omitting the clause, "and power to fill vacancies until the next annual meeting of the Divisions."

Mr. Sparrow then offered the following amendment to the By-Laws, Chap. I., Sec. 2, Par. 3: To omit the clause, "Every member attending the general A. C. A. camp shall pay $1 for camp expenses;" and to substitute the following, "Every member attending a camp shall pay for camp expenses as follows: For general camp $1, and for a division camp such sum as may be determined on by the executive committee of the division, provided such sum does not exceed $1. The amendment was seconded by Mr. McKendrick and carried.

Mr. Winne called attention to the fact that the winners of the principal honors of the 1891 meet had never received the record flags to which they are entitled; and recommended that the Association should provide the flags as soon as possible. He also pointed out that this year, in the effort to clear the general Association of its debt, the officers had followed the precedent established in the previous year, of charging to each Division the expenses of mailing the Year Book and printing and mailing the transportation circular. He suggested that in the future such expense should be borne by the general treasury.

The reports of the pursers of the Northern, Central and Eastern Divisions were presented to the committee, but the reports of the regatta committee, camp site committee and pursers of the Atlantic Division were not at hand. It was understood that the regatta committee had no amendments to the racing rules to suggest.

The time of the librarian having expired, Mr. Winne nominated the present librarian, Mr. W. P. Stephens, and he was re-elected.

Mr. Dunnell's amendment, to create a board of governors, as published in the FOREST AND STREAM, was presented in his absence by Mr. Stephens, and was discussed at length, but most of those present being unfamiliar with the proposed change, it was decided to take no action at present.

Prior to adjournment, Mr. Edwards offered the following resolution, which was carried: "Resolved, That the members of the A. C. A. new present desire to place on record their appreciation of the great services rendered to the Association by Commodore Winne during his term of office, and to express to him and the other officers of 1892 their hearty thanks for their very successful management of the Association." The meeting adjourned at 6 P. M.

In the evening a camp fire was given in honor of the visitors by the Catasaqui C. C., the entertainment lasting until a very late hour.

The new camp site, of which we shall soon publish a plan, is located about five miles from Kingston. The little peninsula is about three-quarters of a mile in length and half a mile in breadth, the ground being from 6 to 11ft. above the water, a gentle incline over the whole of which tents may be pitched. An old wreck is built up to make a convenient and picturesque wharf at which large steamers can load, thus saving one large item of expense. The grounds are in good order, being used at times by picnic parties. The shores are of flat rock, and landing stages may be built very easily. The bank is only a foot or two above the beach. The land slopes gently from the middle to the shores, and is a dry, sandy loam. The committee visited it after several days of very heavy rain, clearing the previous night, and found it dry and hard. The proposed site of the main camp is on the northeast side, in an open grove of tall hardwood trees, free from underbrush. Near the head of the wharf is a kitchen and mess shed, much smaller than at Willsborough, but which can be made available at small expense. Another small building will be used as a store. A short distance to the west is a small hotel with eight rooms, which will be in charge of the camp site committee, and offers accommodation for ladies who do not care to camp under canvas. Just beyond this will be the ladies' camp, on a pretty little plateau, with shade trees about it.

The general arrangement of the camp will be as nearly perfect as possible, the wharf being in the center, the main camp on one side, the mess shed, store and hotel in the center, and the ladies' camp within convenient distance of the wharf and store without passing through the main camp. Headquarters will be opposite the head of the walk in the center of the camp, and the small number of trees will make the code signals visible from all points. There is an ice-house on the ground, which Mr. Brophy will fill this winter, and Kingston is an exceptionally good and convenient base of supplies, with excellent markets.

The river opposite the camp is over a mile wide, and offers a good choice of sailing and paddling courses in several directions. The shores of the whole island are broken by nooks and bays, and offer every attraction for short cruises, while the fishing is good. The view is by no means as grand as that from Willsborough, but no part of the Thousand Islands can be otherwise than picturesque and interesting, and what is of more importance, there is every probability of dry weather.

As regards transportation, for all coming from Montreal, Toronto and other Canadian towns, the facilities are better than to Grindstone or Stave Island, Kingston being an important point in the rail and steamboat traffic. It is directly accessible by steamer from Cape Vincent, Oswego, Rochester (Charlotte) and Toronto. Mr. Folger, of Kingston, owner of a number of river steamers, has interested himself, and promises a fast steamer, probably the old Sylvan Stream, well known to New Yorkers, to meet the morning train at Clayton and also the night express for New York and Boston; an arrangement that will fully accommodate all from the south and east. A steamer will run regularly between the camp and Kingston, connecting with trains and boats. The arrangements thus far are most satisfactory and promise a very successful meet.

AUDITORS' CERTIFICATE.

This is to certify that we have this day examined the books, papers and accounts of the Eastern Division of the American Canoe Association, and find the foregoing statements correct, and said accounts properly cast and vouchered.

(Signed) LOUIS P. DRAKE, THERON A. APPOLLONIO, } Auditors.

AUDITORS' CERTIFICATE.

We have examined the above account and believe the same to be correct. The present system of dropping members' names from the list, in our opinion renders the audit defective; and we would suggest that no names be struck off the roll without the authority of the executive committee, duly recorded in their minutes. The auditors could then accept their action as final. (Signed) J. L. KERR.

ALFRED JEPHCOTT.

# Rifle Range and Gallery.

## Military Rifles in Newark.

THE members of the First Brigade Rifle Association, who shoot every Saturday afternoon on the 200yds. ranges at the Newark Shooting Park, seem fated to get strong winds, fishy winds, hazy lights, fitful light and all the other conditions which go to make difficult shooting. There are a number of enthusiasts in the association, however, and blow high or blow low they will be found firing away on every practice day. And some of them who a few weeks ago were shooting in indifferent fashion are now, thanks to persistent and conscientious practice, making a creditable showing.

Of course the scores made on this range cannot be cited as a fair criterion of what the members could do on a range in the open, as the shooting is done from a shooting house and through a "shield." This shield is about 25ft. from the firing point, and in a line with each target is a slot 2ft. high and about 8in. wide. As a matter of course the wind does not have much effect on the ball until after it has passed through the slotted "shield." Still the members are getting practice in holding, sighting and pulling as well as becoming accustomed to the recoil of the rifle, and these points are bound to be beneficial to them when they come to shoot on an exposed range.

The Association, which is only two months old, started out with five members, but so great an interest has been created that there are now close to thirty names on the roll, and every week new accessions are made to the ranks. Any officer or member of the First Brigade, National Guard of New Jersey, is eligible to membership, and before the winter is over the projectors hope to enroll every shooting man in the brigade. The object of the Association is to foster and encourage rifle practice in the First Brigade, and the projectors hope in a short time to secure such a strong membership as will enable the Association to secure from the State Legislature an appropriation for the establishment and maintenance of a range within easy reach of the several commands comprised in the brigade. Just now there is no military range in the State other than the one on the State Camp at Sea Girt, and to get there entails a ride of from two to five hours and the expenditure of a round sum for transportation. If the Association succeeds in securing a range in the northern portion of the State it will be a boon to the guardsmen.

On Satu day the first ones to appear at the range were the shooting-doctor, Major Wallace and his hospital steward, Sergeant Wilhelm, Capt. Howard and the scribe. Later Sergt. Black appeared, then came Sergt. Ward, Corp. McMahon and Lieut. Reilly. Several members of the Newark Shooting Society were also at work on the German Ring target, these comprising Dr. De Bonneville, the well known amateur photographer and Schuetzen rifleman; Geo. A. Strong, who comes over every Saturday to relieve his minds from the cares of Wall street, and Daniel Burr, who spends the most of his time selling coffees, but never misses a weekly half-day at the range, and who is developing into a strong schuetzen. The scores made on the German ring target were not kept, but below are the results of the military rifle work:

| | | | |
|---|---|---|---|
| Capt W H Howard | 3 4 4 4 4 4 4 4 4 4 | | 4—39 |

Y'RATILIM.

### Zettler Rifle Clubs.

NEW YORK, Nov. 13.—The members of the Zettler Rifle Club met at Cypress Hill Park, L. I., for their regular bi-weekly shoot. The scores in the 50 shot series were as follows: F. Ross 1073, M. Dorrier 1068, B. Walther 1021, G. L. Hoffman 935, Dr. Gusch 933, Joe. Gunther 856, G. W. Downs 807.

The gallery season shoot began Nov 8, and will be continued every Tuesday until the last Tuesday in April of 1893. The scores for the first evening's shoot were as follows, possible 250 points: R. Busse 238, J. A. Boyken 243, M. Dorrier 244, M. B. Engel 240, H. Holges 246, G. Krauss 238, H. Ltrate 238, H. Witte 231, C. G. Zettler 243, B. Zettler 240.

*Nov. 21.*—The bi-weekly shoot of the Zettler Rifle Club took place at their headquarters on Tuesday evening, Nov. 15, with the following results. Gorman 25-ring target, possible 250: M. Dorrier 141, H. Holges 247, R. Busse 245, M. B. Engel 244, H. Strate 244, C. G. Zettler 244, B. Zettler 244, G. Krauss 241, F. C. Rops 240, G. Percival 239, B. Walther 239, J. Beltramini 233, A. Bertrand 282.

### New York Revolver Scores.

NEW YORK, Nov. 21.—The following record scores were made by the members of the New York Revolver and Pistol Club, at their last regular weekly practice shoot, held at its gallery, No. 12 St. Marks place, on the 19th instant. Distance 20yds., 10 shots on standard American target:

| | |
|---|---|
| C B Bishop, .44cal. S & W revolver | 87 |
| H Oehl, .44cal. S. & W. revolver | 83 |
| A Bertrand, .44cal S & W revolver | 83 |
| F Hecking, .38cal S & W revolver | 78 |
| E Walz, .22cal Remington pistol | 83 |

F. HECKING, Sec'y.

# Trap Shooting.

All ties divided unless otherwise reported.

### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 6.—Hedden—Castle vs, Sunderman—Smith, live bird match at Erb's grounds, Newark, N. J., followed by open sweepstakes.

Dec. 15.—Open shoot at 100 live birds, $100 entry, Erb's grounds, Newark, N. J. Entries, if accompanied by $20 forfeit, will be received up to Dec. 12, by FOREST AND STREAM, 318 Broadway, New York.

Dec. 28-29.—Jacksonville (Fla.) Gun Club's fifth annual tournament; $500 guaranteed purses; $300 in money and merchandise prizes added. Professional experts barred. Bryan Taliaferro, Sec'y.

## DRIVERS AND TWISTERS.

During Erb's tournament on Thursday, nearly everybody shot well, and afterward everybody thought they could do better work than everybody else. "Match talk" flew fast and furious, and for the time the prospects looked bright for a number of matches. Finally, however, the talk simmered down to solid business, the result of which was the arranging of a contest between a team representing Youth and one which Sam Castle called "Old Age." "Youth" will be represented by Richard Sunderman, of the New Jersey Shooting Club, and Harry E. Smith, of the Newark and Essex Gun Clubs, while "Old Age" will be personified by the Newark Gun Club veterans, Samuel Castle and Charles M. Hedden. The Youth's" team aggregates about 50 years of age, while the "Old Age" team aggregates close to 125 years. The conditions call for 25 birds per man (50 per team), modified Hurlingham rules to govern, 28 and 30yds rise, for a stake of $100 per team, the match to begin at 12 o'clock noon on Tuesday, Dec. 6, on John Erbe's "Old Stone House" Grounds, Bloomfield avenue, Newark, N. J. Each team posted a forfeit in the hands of Mr. Erbe.

The monthly shoot of the Essex Gun Club was held at Marion, N. J., on Nov. 17. The attendance was light, as several members are off after game, while others were at Erb's tournament. The first event was the club shoot, this being followed by three sweepstakes, all at ten birds. The scores:

| | Club shoot. | Sweep 1. | Sweep 2 | Sweep 3. |
|---|---|---|---|---|
| Decker | 1022222102—8 | 1112012121—9 | 0011211021—7 | 1020010011—5 |
| Moore | 1121111221—10 | 0111111011—8 | 0111111112—9 | 1111212211—10 |
| Mackay | 1112110012—8 | 1110121221—9 | 1020112120—7 | 1212121120—9 |
| Henry | 1112201121—9 | 1110122211—9 | | |
| Terrill | 2120022212—8 | | | |

Saturday will be an interesting day at Claremont when members of the New Jersey Shooting Club will shoot off a tie for second place for the Quimby diamond medal. Those in the tie are Gus E. Grieff, F. G. Moore, Richard Sunderman, E. E. Bigoney, A. F. Compson and J. H. Richmond. The shoot is sure to be a close and exciting one.

The 100-bird sweepstake to take place on Dec. 15 is creating a great deal of interest, and speculation is rife as to the probable number of entries. This will be the first event of the kind ever shot in this country, so it is impossible to state how many will enter. Still there will be enough to make the affair an interesting one. The visitors to trap grounds are becoming tired of looking at small sweeps of from four to ten birds per man, and it is for the sake of variety that the above affair is arranged. This will be only the first of a series of big sweeps to be shot during the winter.

The heavy growth of timber which formerly fringed the eastern and northeastern side of John Erb's grounds in Newark has all been cleared away and there is now a splendid foreground for either target or live bird shooting. Previously nothing could be seen beyond the fence, but now a clear view can be obtained almost to Woodside.

John Erb is very anxious to have some gun club team of ten men shoot on his grounds against a like team from the Newark Gun Club. John says he thinks the Newarks can defeat any club in the country and is willing to put up a good prize to be shot for. Is there no club in this section to take up the gauntlet?

F. G. Moore and J. H. Richmond, of the New Jersey Shooting Club, were to have shot a match at 100 live birds each at Claremont on Nov. 16, but as the rain fell heavily up to 1 P. M. the match was postponed. These men are very evenly matched and shoot a close race.

A. G. Courtney, the Lefever representative, received a warm welcome from his New York city friends and did a good trade in Lefever ejectors. This was "Court's" first business visit to this city for over a year.

G. G. Zeth, of the Altoona *Gazette*, and Edward Banks, Altoona correspondent of the Harrisburg *Telegram*, are responsible for the great interest in trap-shooting matters in and about Altoona.

Don't forget the meeting of the Interstate Manufacturers' and Dealers' Association, to be held in the Astor House on Dec. 1. Every firm anticipating joining is requested to send a representative.

Frank Class's backer announces his readiness to wager $500 that Class can defeat any man in New Jersey (J. L. Brewer excepted) in a 100-bird match. Here is a chance for a stiff pot.

Big money will change hands on the coming match between George Work and E. G. Murphy. The stake is $2,000 a side, but this is a nominal sum when compared to the outside bets.

Jerseymen are strongly in favor of having the Grand American Handicap take place on Erb's grounds in Newark, where the facilities for fast work are of the best.

The 100 bird sweepstake on Dec. 15 will take place on John Erb's "Old Stone House" grounds in Newark, and Mr. Erb will have birds to puzzle the talent.

"All the West" and a part of the East is at Milwaukee cracking away at targets and live birds, and the fun will not end until dark on Saturday night.

Rochester intends to make the 1893 tournament of the New York State Sportsmen's Association the banner event in the history of the association.

The Harrisburg Shooting Association are booming arrangements for the 1893 tournament of the Pennsylvania State Sportsmen's Association.

This will be one of the greatest shooting days of the year, and nearly every club in this section of the country will have an outing.

At the tournament on Erb's grounds on Thursday A. W. DuBray shot a 16-bore Parker at 26yds. and killed 34 birds straight.

There will be a number of open sweepstakes at live birds at the Castle-Hedden vs. Sunderman-Smith match on Dec. 6.

New Jersey gun club secretaries, send your names and addresses to W. R. Hobart, 59 Halsey street, Newark, N. J.

Billy Clark will hold a two or three days' tournament at the Wopsononock Park, Altoona, Pa., in May or June.

Now the hunters will begin to return homeward and the live pigeon shooting will begin to boom.

John Erb's Lem is considered the best dog in the country for gathering pigeons.

Col. Courtney has been booming the sale of Lefever guns in this vicinity.

The grand American Handicap is expected to draw 30 or more entries.

Smith and Willey will probably shoot another match during the season.

Miss Annie Oakley will return to Newark within a fortnight.

Send along your entries for the 100-bird sweepstake.

C. H. Townsend.

## Chicago Traps.

Chicago, Ill., Nov. 19.—About all Chicago will be at Milwaukee next week at the big Thanksgiving week tournament. This promises to be the best of the current events in this section and there will be a crowd at Dickie Merrill's town.

Calumet Heights Club has out its annual circular announcing preparations for the customary Thanksgiving jubilee, with trap and rifle matches, turkey matches, etc.

Anent the recent talk made by Jack Winston about coming up to Chicago and leaving a trail of mangled bodies behind him, Mr. Rolla Heikes issues the following challenge, signed and left at the common shooting headquarters, Billy Mussey's, yesterday:

"Will shoot Winston 500 bluerock targets for $250 a side; 100 rapid-firing system, 100 three unknown traps, 100 five unknown traps, 100 rapid-firing, known traps, unknown angles, 50 pair doubles. Or will shoot 100 bluerocks, $100, 5 unknown traps and unknown angles. Bluerock expert traps and electric pulls to be used in both the above races. R. O. Heikes."

George Kleinman, who now seems shooting in much of his old form, has this to say to Mr. Winston: "Tell him I will shoot him a 100-bird match, $200 a side, every day from Thanksgiving till Christmas." We may see a match out of this yet.

It is commonly understood that Mr. Fulford will not shoot a match with Mr. Winston, for fear of getting his feelings wounded. It is also currently believed that Mr. Fulford couldn't shoot straight enough to even wound anybody's feelings.

Cap Anson is here with the diamond for the year, but he will wear diamonds if he keeps on shooting the way he is now. He incidentally got all but one out of 30 yesterday, and when last seen was still getting them on that same string.

Yesterday, as the scores from Watson's Park will show, Mr. L. M. Hamline defeated Mr. W. P. Mussey in a 50-bird match, Mr. Mussey to add 3 birds to Mr. Hamline's score. The men broke even, and the handicap gave Mr. Hamline the race. The two will probably shoot the same race again. Mr. Mussey is also billed to shoot Mr. A. J. Atwater a 100-bird match soon. He ran his last 24 straight in the Hamline match, but the latter gentleman was pounding them down at all sorts of range and speed.

Dr. G. A. Scroggs, president of the Bone Hollow Club, of Beaver, Pa., spent a short time in the city this week, though I regretted I did not meet him. At Watson's Park Dr. Scroggs was introduced to Billy Mussey.

"Are you the man that owns that safe?" asked Dr. Scroggs.

"Same man," said Billy. "And permit me to introduce Mr. George Kleinman."

"Oh, how do you do, Mr. Kleinman," said Dr. Scroggs. "Yes, I would have known you from your picture."

George had on his overshoes.

Mr. J. J. Kleinman, brother of George, and once as well known in the trap shooting world, is disappointed about the election, and has a novel explanation of the result, which shows his deep-seated suspicion of the human race.

"I'll bet the election was thrown; that's what I'll bet," said he. "They fix horse races and trap shoots, and I'll bet a hundred dollars this here election was fixed. I'll bet Harrison got a million dollars for throwin' the race. They could afford to give him that and I bet he did it."

Mr. A. D. Cairncross, the well-known trap shot, late of Amboy, is now in business permanently in Chicago. Another strong shooter added to a lot of strong ones. E. Hough.

175 Monroe Street, Chicago.

## Shooting at Dexter Park.

The fifth and final shoot in the Dexter Park Trap League series was held at Dexter Park, on Tuesday, Nov. 15. Only four teams competed for the two trophies given by Louis Miller the proprietor of the grounds. The Unknowns were the winners of the first prize with the best aggregate score of 417; Parkways second with 407; Glenmores third with 404 and the Emeralds fourth with 400. Tuesday's shoot was much delayed and was shot off in a driving rain storm. Each team had out its full number and no subs were required. The shooting, all though the series has been of a fair average, especially with the three leading teams. The scores:

| Parkway Gun Club | | Unknown Gun Club. | |
|---|---|---|---|
| J Blake | 12211o1211—9 | W Chichester | 12ollooloo— 6 |
| E Helgans | 2202122221—10 | H Krebel, Sr | 1112212112—10 |

Aggregate total of the five shoots: Unknown 81, 83 84, 84, 85—417; Parkway 72, 82, 88, 79, 86—407; Glenmore 65, 86, 92, 83, 78—404; Emerald 78, 85, 84, 76, 77—400; Linden Grove 62, 66, 80, 81—289; Crescent 68, 78, 50—196; Wauregan 72, 74—146.

## The Smith—Willey Match.

Several weeks ago it was announced in this paper that a match had been made between Allen Willey, editor of the Hartford *Globe*, and Harry E. Smith, of Newark, N. J., but no date was given. Mr. Willey was "up to his eyes" in business, and neither man was particular about having the match take place until they could be assured of good, hard birds. So the affair hung fire until it had been forgotten by many. Not so with the principals, however, who were simply awaiting their own good time. This time came on Nov. 16, when a telegram announced to Mr. Smith that Mr. Willey was coming to town and would be ready to shoot. The early part of the day was marked by a heavy rain, but along about 1 o'clock the clouds broke and the rest of the afternoon was fairly clear with just breeze enough from the northwest to make the birds feel lively.

The match took place on John Erb's "Old Stone House" grounds where the principals and a few friends arrived shortly before 3 o'clock. The conditions of the match called for 50 live birds per man, 30yds. rise, modified Hurlingham rules to govern, for a stake of $100 a side, loser to pay for the birds. It was precisely 3:15 when the first shot was fired, C. M. Hedden officiating as referee. John Erb's famous black Lem did the retrieving.

Willey went first to the score, grassing a good right-quarterer, Smith following suit on a right-quartering driver. Willey's 4th was a strong and fast incomer that got lead enough to stop half a dozen birds but he managed to carry it a couple of yards beyond the boundary, where he gave up the ghost. This bird did not at any time rise over a yard above the ground, and everybody thought Lem would catch him, which he tried hard to do as soon as the second barrel was fired. For once, however, the grand old dog found a bird too smart for him, as with a quick twist it eluded his jaws and then went over the line, falling dead. Willey also lost his 6th, a left-quartering incomer by a slow second. His 13th and 16th were both fast birds, as was his 20th, the latter being very hard-hit with both barrels. All three were lost.

Smith's eighth was a very fast left-quartering incomer which caught both loads and carried them a yard over the boundary, where he ceased to live. His 10th and 16th were both hit hard but got away, as did his 24th, a very fast bird.

Willey's slow second lost him his 26th bird, a fast one. His 44th was hit hard, but managed to get over and fall into a charge from the gun of a "bushwhacker."

Smith's 49th was also hard hit, but this also went to the "bushwhackers."

As a whole the birds were as good a lot of flyers and lead carriers as have been trapped in this vicinity for a long time, not one of the hundred refusing flight when the trap was pulled, and every one starting off at a clipping pace. Some of them were equal to any we ever saw for speed and puzzling flight.

Willey's best ones were his 9th, 11th, 14th, 18th, 19th, 21st (dodged the first and caught the second at full 60yds.), 27th, 29th (another long second), 34th (very fast), 35th and 49th.

Smith's star birds were his 3d (killed with second at 70yds.) 11th (hit hard with a quick double, carried both doses to fences, against which it struck and fell stone dead)' 12th (very fast), 17th (a hummer and a long kill), 36th (long second on a fast bird) and 43d, (an awfully wicked zigzagger and fast). Time of finish 4:15 P. M.

Smith pulled out a winner by a total of 45 kills to Willey's 43, the score as shown by Forest and Stream's graphic score type being appended. The first line of figures show the trap from which the bird was sprung:

## Big Tournament in Nebraska.

Stanton, Neb., Nov. 16.—The first annual tournament of the Stanton Gun Club, held in this city, Nov. 15 and 16, under the management of Ted Ackerman, was fairly well attended. There were eight target and two live bird events the first day with $100 added money, and eight target and two live bird events on the second day with $125 added money. The entrances in target events ran from $1 50 to $4 and in live bird events $10 to $15. A very liberal programme and the attendance should have been double what it was. Ted Ackerman laid himself out to give the boys a good time and every one went home well pleased.

The shooting at targets was done from five bluerock traps. The birds were thrown very hard and low, making the shooting very difficult. The live birds were shot from five ground traps, made by J. A. R. Elliott, of Kansas City, Mo., and with Mr. Elliott to manipulate them they worked like a charm. The weather was clear and pleasant with quite a strong wind each day.

The shooters in attendance were Fox Stauffer, Grand Island, Neb.; Read, Parmalee and Smith, Omaha; Baldwin Bros., Creighton, Neb.; Connelly and Netheway, Norfolk; Speice and Schroeder, Columbus; J. A. R. Elliott, Kansas City, Mo.; Ackerman, Hinkle, Brown, Yorke Bros., Mathes, Luck and Good, Stanton, and Budd, of Des Moines, Ia.

The Trotter Bros. of Kingsley, and Abbott and Arff, of Charter Oak, Ia., were kept at home by sickness, but in letters to Mr. Ackerman wished those in attendance a good time. Read, Parmalee, Ackerman and Budd will attend the Milwaukee, Wis., shoot next week and are guessing how long it will take to walk home. The score:

*First Day.*

## Rocky Mt. Sportsmen's Association Tournament.

The annual tournament of the Rocky Mountain Sportsmen's Association opened at River Front Park, Denver, Thursday, Nov. 10. The attendance was very light, but those that were there came for a good time and they had it. Colorado is heavily handicapped in getting up a shoot, as there is but little outside territory from which she can draw shooters. However, the boys make up in vim what they lack in numbers, and one of these days we will send a team from here that will sweep the earth. The follwing are the scores:

*First Day, Thursday, Nov. 10.*

No. 1, 10 targets: Plank 10, Ramsey 9, Mechling 7, Young 7 King 7, Rowland 10, Mackay 8, Gallrua 7, Jackson 7, Woodworth 6, Jewett 8.

No. 2, 20 singles: Haywood 19, King 19, Jewett 16, Hewitt 15, Gallrua 15, Woodworth 15, Jackson 14, Mackay 18, Plauk 18, Rowling 18, Ramsay 17. Mechling 16, Young 13.

No. 3, 10 singles at known and 10 at unknown angles: Sterling 18, Hewett 17, Thomas 16, King 16, Young 16, Stevens 15, Root 18, Gallrua 11, Rowland 10, Jewett 10, Woodworth 12, Jackson 5, Mechling 18, Mackay 17, Haywood 16, Plank 16, Warren 6.

No. 4, 10 singles and 5 pairs: Rowland 17, Plank 16, Root 15, Jewett 15. Barton 14, Gray 11, Haywood 19 Ramsay 18, Mackay 15, Mechling 13, Young 13, King 11. Stevens 18, Thomas 16, Hewitt 14, Sterling 14, Woodworth 13, Seymour 12, Warren 13.

No. 5, 20 singles and 5 pairs: Thomas 28, Stevens 27. King 26. Sterling 25, Hewitt 23, Warren 21, Ramsay 28, Rowland 27, Plank 26, Mechling 24, Haywood 24, Jewett 23, Root 27 Gray 21.

No. 6, 10 singles, unknown angles: Ellis, Jr., 8, Hewitt 7, Stevens 7, Thomas 7, Haywood 5, Warren 2, Young 9, Mechling 8, Gallrua 7, Plank 6, King 6, Gray 6, Root 10, Sterling 9. Sedam 7, Thompson 6.

No. 7, 30 singles and 5 pairs: Mechling 36, Ramsay 33, Jewett 32, Ellis 32, Hewitt 31, Sedam 25. Root 31. Gray 23, Thomas 35, Plank 22, Stevens 29, Rowland 23, Warren 27, Haywood 26.

No. 8, 10 singles: Seymour Warren 10. Sterling 9, King 7, Thomas 7, Ellis 5, Hampson 4, Rowland 10, Ramsay 10, Adamson 9, Sedam 8. Young 8, Werley 5. Haywood 10, Plank 9, Stevens 9, Mechling 9, Gray 7, Jackson 3, Hewittt 8, Jewett 7.

No. 9. 20 singles: Haywood 18, Thomas 18, Sterling 18, Sedam 15, Gray 14, Adamson 13, King 18, Plank 18, Mechling 16, Hampson 16, Ellis 15, Warren 9, Root 19, Hewitt 15.

No. 10, 25 singles: Mechling 24, Adamson 21, Warren 20, Gray 19, Ellis 16, Robinson 13, Haywood 23, Thomas 22, Sterling 22, Plank 22, Sedam 21, Hewitt 12.

No. 11, miss-and-out match: Mechling 3, Adamson 2, Gray 1, Haywood 1.

*The Second Day.*

No. 1, 15 singles: Lauterman 14, Haywood 14, Sterling 13, Thomas 13, Root 13, Bingham 12, Plank 12, King 11, Jewett 11, Mackay 10, Rowland 10, Mechling 9.

No. 2, 10 known, 10 unknown singles: Root 18. Thomas 17, Sterling 17. Lauterman 16, Plank 16, Haywood 15, Mackay 15, Stevens 14, Ovington 13, Jewett 12, Beatty 12, Mechling 12.

No. 3, 10 singles, 5 pairs: Plank 19, Haywood 19, Ovington 17. Root 16, Jewett 16. Mackay 16, Rowland 16, Thomas 16, King 15, Mechling 15, Beatty 14, Lauterman 13, Sterling 13, Stevens 11, Bostwick 8.

No. 4, diamond badge, 50 birds, 30 singles and 10 pairs: Haywood 46, Plank 43, Thomas 42, Root 41, Mechling 40, Lauterman 39, Ovington 39, Rowland 35.

No. 5, Benjamin cup, 50 birds, 30 singles, 10 pairs: Haywood 45, Plank 43, Meeline 42, Thomas 42, Lauterman 40, Doan 39, Warren 38, Stevens 34, Jewett 32, Adamson 24.

No. 7, 10 known, 10 unknown singles: Thomas 18, Root 18, Plank 17, Mechling 17, Sterling 16, S. Warren 15, Lauterman 15, Haywood 13, Heald 12, Hampson 11.

No. 8, 20 singles: Root 20, Sterling 18, Thomas 18, Plank 18, King 18, Lauterman 17, Mechling 17, Haywood 17, S. Warren 17, Ovington 16. Hampson 15, Jewitt 14, Rowland 10.

No. 9, 15 singles: Plank 15, Root 15, Haywood 14, Lauterman 14, King 12, Mechling 12, Ovington 12, Thomas 12, Warren 11, Rowland 9, Hampson 8.

No. 10, 30 singles: Haywood 30, Plank 30, Root 29, Lauterman 29, Mechling 26, Thomas 25, Ovington 16.

No. 11, miss and out: Haywood 5, Root 4, Plank 3, Lauterman 0.

The diamond badge was won by Plank, as Haywood was not entered. As the attendance was so small the managers terminated the shoot on Friday, although the original programme was arranged for three days. Teseeby.

## Shooting at Kansas City.

Kansas City, Mo., Nov. 15.—At Independance Park, yesterday afternoon, the annual fall shoot of Kinnan & Bennett, assisted by the Kansas City gun clubs, was opened, and five events were disposed of, two of which were live birds and three targets. Quite a number of Kansas City sportsmen were present, as well as a goodly sprinkling of outside talent, the most prominent among the latter being J. B. Batcheller, of St. Joseph, and Robert Dinsmore, Md., of Troy, Kas. The day was all that could be desired for a shoot, as not a breath of air was stirring and the birds were swift. Following is the summary of events:

No. 1, entrance $5:

| | | | |
|---|---|---|---|
| J B Batcheller | 1111212222—10 | A L Bennett | 1112112212—10 |
| J B Burrell | 1120011222— 8 | R Dinsmore | 2121212002— 8 |
| Bob Mize | 1222210o21— 8 | W Baker | 2222o0o2022— 8 |
| G Marshall | 2210121110— 8 | | |

No. 2, entrance $7.50:

| | | | |
|---|---|---|---|
| J B Burrell | 2121122222—10 | R Dinsmore | 2o?1200011— 5 |
| W Baker | 0121220101— 7 | A L Bennett | 1202111121— 9 |
| J Batcheller | 1120220112— 8 | G Marshall | 010?212202— 7 |
| Bob Mize | o221221202— 8 | | |

No. 3, entrance $1 30:

| | | | |
|---|---|---|---|
| J B Burrell | 1111111111—10 | A L Bennett | 1101110101— 7 |
| J B Batcheller | 0110111111— 8 | W Allen | 0110111110— 7 |
| Bob Mize | 1111100011— 7 | W Bennett | 1100100001— 4 |

No. 4, entrance $2.45:

| | | | |
|---|---|---|---|
| J B Burrell | 1111111111111111—15 | A L Bennett | 1111111111111111—15 |

## The New Jersey Shooting Club.

The recent heavy rains played havoc at Claremont, almost inundating the grounds of the New Jersey Shooting Club. Nevertheless they held their usual shoot on Nov. 19, the scores being as appended:

No. 1, 20 birds, Keystone system: J. H. Richmond 16, Geo. S. Virden 14, E. E. Bigoney 13, H. Morris 10.

No. 2, a walking match at 10 bluerocks: J. H. Richmond 9, G. S. Virden 8, E. E. Bigoney 8, H. Morris 7, J. Horton 7.

No. 3, 10 targets, unknown angles: J. H. Richmond 9, G. S. Virden 9, E. E. Bigoney 8, H. Morris 7.

No. 4, 15 singles, Keystone system: J. H. Richmond 12, G. S. Virden 12, E. E. Bigoney 10, H. Morris 9, J. Horton 7.

No. 5, a walking match at 10 targets: J. H. Richmond 9, G. S. Virden 8, H. Morris 7, J. Horton 6.

### Coney Island Rod and Gun Club.

THE regular monthly shoot of the Coney Island Rod and Gun was rather poorly attended at Woodlawn Park, L. I., on Wednesday, Nov. 16, partly on account of the weather and some of the members were away duck shooting. Eleven competed for the Eppig diamond badge and extra club prizes at 7 birds each, club handicap, modified Hurlingham rules. The rain had interfered with the birds at the start, but as the weather improved they got away a little faster. C. Detlefsen won the badge after out-shooting John Schlieman and Dr. Van Ord. The other prizes on the tie were divided. The score:

Club shoot for diamond badge:

| | | | |
|---|---|---|---|
| H W Blattmacher | 0111100—4 | H McLaughlin | 0021121—5 |
| W Dair | 2202121—6 | Dr Van Ord | 2112121—7 |
| C Englebrecht | 3201221—6 | C Detlefsen | 1211121—7 |
| L Eppig | 1121210—6 | W Greer | 0122000—3 |
| J Schlieman | 1111112—7 | J C DeFrain | 1112011—6 |
| F McLaughlin | 0011100—3 | | |

Sweepstakes, 5 birds:

| | No. 1. | No. 2. | | No. 1. | No. 2. |
|---|---|---|---|---|---|
| W Lair | 12021—4 | 12221—5 | Greer | 01201—3 | 21222—5 |
| C Englebrecht | 22121—5 | 20210—3 | Dr Van Ord | 21122—5 | 21221—5 |
| L Eppig | 22111—5 | 11220—4 | H McLaughlin | 21122—5 | ..... |
| Schlieman | 11112—5 | 11121—5 | F McLaughlin | 00100—1 | 21010—3 |
| Detlefsen | 11211—5 | 12201—4 | Blattmacher | 21202—4 | ..... |

Englebrecht won second. Referee and scorer, J. C. DeFrain.

### Some Good Sport at Erb's.

THURSDAY, Nov. 17, was the day announced for an all-day tournament at live birds on John Erb's "Old Stone House" grounds in Newark, and on that day the weather bureau was in a good humor so far as dealing out favorable conditions was concerned. The sun shone clear and bright, and there was just the suspicion of a breeze from the east. Shooting was expected to begin at 10 A. M., and at that hour just a trio of shooters were on hand, so the start was postponed and it was well toward noon when the first shot was fired. At this hour the trio had been strengthened by one more arrival. After one o'clock, however, the shooters began to come in until the entry lists showed nearly a dozen.

The grounds were in good condition, Fred and Jimmy were full of business and "Lem," that setter who has received so many encomiums from visitors to these grounds, was eager to get to work at retrieving. Among those who were on hand during the day were "Uncle" Burt the veteran scorer of the South Side Gun Club who spends his winters at his Newark home and his summers by the shores of picturesque Hopatcong; J. Cockefair, of Bloomfield; Frank Class, R. Leonard, Frank Piper, R. S. Martin and Miss Jennie Smith, of Morristown; Eddy Collins, of Hoboken, who deplores the fact that a lame shoulder prevents his shooting; Geo. Baldwin, the St. Paul, Minn., veteran expert; Allen Willey, the Connecticut shooter and journalist of Hartford; W. G. Hollis, of Harrison; Richard Sunderman, of Bergen Point; A. W. DuBray, with his 16-bore Parker, and C. M. Hedden, Samuel Castle, John Erb and Harry E. Smith, of the Newark Gun Club, besides seven press representatives.

The birds, previous to the coming of dusk, can be classed as a good lot. In fact, up to 4 P. M. they were above the average. After that, with the failing light and the growing moisture, they did not fly so well. As a whole, however, they were good ones for tournament birds. The first six events were "Jersey" sweeps, 4 birds, $3 entry, there being 3 moneys in Nos. 4 and 6, and 2 moneys in each of the others. The scores:

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. | No. 6. |
|---|---|---|---|---|---|---|
| Erb | 1121—4 | 1111—4 | 1111—4 | 1111—4 | 1211—4 | 2021—3 |
| Du Bray | 0112—3 | 1111—4 | 2112—4 | 1111—4 | 1211—4 | 2112—4 |
| Martin | 0222—3 | 1012—3 | 1201—3 | 2121—4 | 0212—3 | 0111—3 |
| Willey | 2111—4 | 1111—4 | 1112—4 | 1111—4 | 1112—4 | 1121—4 |
| George | ..... | ..... | 1012—3 | 2221—4 | 1221—4 | 1110—3 |
| Sunderman | ..... | ..... | ..... | 2202—3 | 2222—4 | 2210—3 |
| Hedden | ..... | ..... | ..... | 1022—3 | 111c—3 | 2120—3 |
| Hollis | ..... | ..... | ..... | ..... | 2211—4 | 1112—4 |
| Smith | ..... | ..... | ..... | ..... | 2121—4 | 1122—4 |
| Castle | ..... | ..... | ..... | ..... | ..... | 2111—4 |

All the moneys were div. excepting first money in No. 5 event, for which Erb, Du Bray, Willey, George, Sunderman, Hollis and Smith tied. This was carried over and decided by the scores in No. 6 event, when it was won by Du Bray, Willey, Hollis and Smith.

It was then intended to shoot a 25-bird event, $25 entry, but as the majority preferred smaller sweeps, Nos. 7 and 8 were made at 10 birds each, $10 entry, with 3 moneys in No. 7 and 2 moneys in No. 8. No. 9 was at 4 birds, $3 entry, 2 moneys, and the final shoot was a $2 miss-and-out, 1 money. The results:

| | No. 7. | No. 8. | No. 9. | No. 10. |
|---|---|---|---|---|
| Castle | 2111112112—10 | 0122110111— 8 | 1110—3 | 1211221 |
| Hollis | 2011111011— 8 | 1111221110— 9 | 1111—4 | 1111211 |
| George | 2111111221—10 | 1012211011— 8 | 0022—2 | 21111220 |
| Smith | 1111112222—10 | 1212121211—10 | 1221—4 | 121110 |
| Class | 2211211101— 9 | 2112112101— 9 | 1221—4 | 1210 |
| Erb | 2121111111—10 | 2121111121—10 | 1121—4 | 11c |
| Sunderman | 2022001120— 6 | ..... | 2012—3 | 0 |
| Willey | 2101112112— 9 | ..... | ..... | |
| DuBray | 2211111212—10 | ..... | 2021—3 | |
| Hedden | ..... | ..... | 1021—3 | |
| Martin | ..... | ..... | 2210—3 | |

On the eighth round of the miss-and-out event the light was very dull, so Hollis and Castle decided to divide.

During the day 384 birds were trapped and out of these 344 were scored dead, this being an average of 89.34 per cent. Erb killed 49 out of 51; DuBray (16-bore Parker at 26yds.), 36 out of 38; Smith 37 out of 38; Castle 33 out of 36; Willey 33 out of 34; Hollis 37 out of 40; George 41 out of 48; Class 25 out of 28; Hedden 12 out of 16; Martin 22 out of 28; Sunderman 19 out of 27.

### Phœnix Gun Club.

THE members of the Phœnix Gun Club held their last shoot of the season at Dexter Park, L. I., on Wednesday, Nov. 16. Eight of the ten men composing the club were present and shot at 15 birds each, 25yds. rise, from H and T traps. M. Brown carried off the honors with a score of 13. There were no prizes shot but just for sport. The Phœnix is one of the oldest shooting organizations on Long Island, and has some pretty old wing shots in the ranks, the majority being over fifty years of age. The birds were good strong flyers, although it had been raining heavily. The scores:

| | | | |
|---|---|---|---|
| D Freligh | 121111101201000—10 | M Brown | 111100211112111—13 |
| C Dunlap | 210021010230000— 7 | J Smith | 111111012100111—12 |
| A Botty | 111221100101110—11 | A Rutar | 111001000211111— 9 |
| J Henry | 111211110111001—12 | J Akhurst | 201111101120012—11 |

Referee, Captain Freligh.

### Falcon Gun Club.

THIS old Long Island gun club still adheres to the old-fashioned Long Island rules at their regular monthly shoot which was held at Dexter Park on Thursday, Nov. 17. Each man shot at 10 birds, 25yds. rise, from H and T traps, gun below the elbow until bird is on the wing; if the second barrel is used in killing a bird only a half bird is scored. J. H. Miller was the winner of the medal after a close race with John Meyer and John Bohling, who also killed 8 each, but used both barrels on 2 birds. The scores:

Club shoot:

| | | | |
|---|---|---|---|
| P Moller | 1101001110—6 | C Doscher | 1102000212—4½ |
| J Bohling | 1102120111—7 | John Meyer | 1211201011—7 |
| J H Miller | 1101110111—8 | Chris Meyer | 0121110101—6½ |
| J Moller | 0001100002—2½ | J N Hermann | 1002000001—2½ |
| H Van Staden | 1001100100—4 | | |

Sweepstake, 10 targets:

| | | | |
|---|---|---|---|
| J H Miller | 1111111110—9 | Chris Meyer | 1001101111—7 |
| J Moller | 1101111100—7 | J N Hermann | 1000000111—4 |
| H Van Staden | 0111111001—7 | | |

J. Moller was second on shoot-off. Referee and scorer, R. Hooper.

### Oneida County Sportsmen's Association.

THE active season of the Oneida County Sportsmen's Association opened on April 22 and closed Oct. 28. The leading averages during the season are here shown, each man shooting at 25 targets at each contest:

| | Shot at. | Broke. | Pr ct. | | Shot at. | Broke. | Pr ct. |
|---|---|---|---|---|---|---|---|
| Elliott | 300 | 290 | 96 | Kilbourn | 375 | 323 | $86^{10}_{27}$ |
| Knowlton | 300 | 284 | $94^{2}_{3}$ | Kallies | 350 | 300 | $85^{5}_{7}$ |
| Hunter | 475 | 447 | $94^{7}_{19}$ | Pfeiffer | 325 | 271 | $83^{8}_{16}$ |
| Booth | 300 | 280 | $93^{1}_{3}$ | Dexter | 325 | 269 | $82^{10}_{13}$ |
| Gates | 300 | 268 | $89^{1}_{3}$ | Wheeler | 350 | 283 | $80^{2}_{7}$ |
| Harris | 375 | 329 | $87^{11}_{15}$ | Smith | 350 | 280 | 80 |
| Smyth | 375 | 328 | $87^{7}_{15}$ | Williams | 450 | 353 | $78^{4}_{9}$ |
| Mayhew | 325 | 284 | $87^{5}_{13}$ | Mizner | 300 | 228 | 76 |

Hunter won the club badge ten times and is now its owner. It was won twice by Gates, three times by Harris, once by Zoath, three times by Smyth, once by Knowlton and twice by Pfeiffer.

## Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

EQUUS.—You would do well to communicate with the *Spirit of the Times*, of this city, which can give you information respecting the horse and track.

J. P., Pennsylvania.—May a person coming from England to this country bring a new gun with him free of duty? Ans. If he swears that the gun is his own personal property and has been used by him abroad, it will be admitted free of duty.

The Breech-Loader

AND HOW TO USE IT. By W. W. Greener. Illustrated.

1892. Boards, 288 pages. Price, $1.00.

THE AUTHOR'S INTRODUCTION EXPLAINS

This treatise is written for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study. Published at a popular price, it will, it is hoped, reach many who have hitherto been deterred from shooting, believing it to be an expensive recreation. The author's aim is to induce all who can to participate in a manly sport, and to advance the interests of those who can look to the gun for pleasure, health or occupation. The book is not written for experts, nor for those who have special opportunities for the acquisition of the art of shooting; and in order to make it as attractive as possible to the general reader, many matters which would interest the enthusiastic shot only have been omitted.

## Hotels for Sportsmen.

# WHERE TO FIND GOOD QUAIL SHOOTING.

There is probably no place in North Carolina where better quail shooting can be had than at Mr. Airy, 70 miles from Greensboro via Cape Fear & Yadkin Valley R. R., or where as good accommodations can be found for the huntsman and his family as at **Renfro Inn.**

**Renfro Inn** is a modern, new hotel, located amid beautiful scenery and in a most healthful climate. The hotel is thoroughly equipped.

I have personally hunted in nearly every county in North Carolina, and for continuous shooting early and late I know of no place equal to this immediate section.

Having secured the exclusive privilege of the best grounds for the guests of the **Renfro Inn,** I feel assured that all sportsmen who desire good shooting and good hotel accommodations will find no better in the South.

I should be glad to correspond and give further particulars.

Address **W. A. BRYAN,**
**Renfro Inn, Mount Airy, N. C.**

Of the Montouese House, Branford, Conn.

## Bromfield House, Boston.

EUROPEAN PLAN

**MESSENGER, Proprietor.**

HOTEL ZINZENDORF.—Open all the year. Elevators, electric lights. Terms moderate. Write for rates. L. W. SCOVILLE. Manager. **Winston-Salem, N. C., U. S. A.,** in the very heart of the richest portion of western North Carolina, "the land of the sky." Average winter climate 40° F. Very dry. Protected by Sauratown Mountains from N. E. and W. winds. Fine quail shooting on the four railroads and turnpikes leading out of towns. Twelve hours to Washington, two routes, double dailies. Half way between Florida and East or North West.

## BEST OF SHOOTING

CAN BE HAD AT

**AVOCA, N. C.**

Plenty of quail, deer, wild turkey, squirrels and rabbits. Hotel good; open fires or stoves; nineteen hours from New York.

W. R. CAPEHART, Owner.
S. W. EVERETT, Sportsman in Charge.

THE FINEST GUNNING IN YEARS TO BE had on over three thousand acres of ground. Quail, partridge, rabbits, etc. Best attention and accommodations for sportsmen; first-class dogs. H. J. ROGERS, Eastport, L. I.

## Property For Sale.

FOR RENT.

## "WOODBURN HALL,"

AT NEW WINDSOR, N. Y., 2½ MILES SOUTH OF NEWBURGH-ON-HUDSON. THE HOMESTEAD OF J. BLACKBURN MILLER, ESQ.

This fine residence is offered for rent, FURNISHED, for the season or year. The house is in excellent order and contains all modern improvements. Large stable, with accommodations for 6 or 8 horses, and an extension where carriages can be washed with a hose. Abundant supply of water introduced into the stable. The location of this residence is unsurpassed, being situated on the bank of the Hudson, and commanding an extended view of river and mountains. For particulars apply to

JOHN B. HALL,
Brewster Building, Newburg, N. Y.

## QUAIL SHOOTING LODGE.

I want to sell about 900 acres of most beautiful small grain and grass farming land situated nine miles from here, immediately on R. R. Four passenger trains each way daily. Flag station at door. Purchaser can have exclusive hunting privilege on 5,000 acres adjoining. Finest quail shooting section in North Carolina. Correspondence solicited.

D. W. C. BENBOW, Greensboro, N. C.

## *SNAP SHOTS.*

THE showing which Gen. B. M. Whitlock makes in his first annual report as head of the Department of Rifle Practice in the New York State Guard is a most creditable one. When at the opening of the out-door practice season he issued his orders for the shooting by the troops there was a widespread cry of disapproval by those who thought that no improvement was possible in the old way of doing things. If results justify means then Gen. Whitlock took just the right plan, for the reports sent in to him show a greater number of skilled shooters than have ever before been reported in the Guard. The number of qualified marksmen in the State is now 6,315 out of a total enlistment of about 13,000, and a marksman means a man who has scored 30 in a possible 50 at five shots each over the 200 and 500yds. ranges. A sharpshooter goes a bit further and scores 42 in a possible 50 over the 500 and 600yds. This is very good work to get out of the Remington .50cal. supplied to the Guard, and 546 of the men managed to score as high as this.

The whole showing is a very excellent one and puts the New York guard of citizen soldiery on a very high plane of efficiency as practical, reliable fighters. It has taken years of work and talk, of preaching and teaching to get men to make these figures, but there are the scores and the men are here and there in every workshop and office of the State ready to drop into the ranks at an hour's notice as a trained army, not merely with guns in their hands, but with skill to use them effectually.

That rifle shooting may legally be promoted by a charitable bequest is the curious point of law which has recently been made by the English courts. A testator bequeathed money to the National Rifle Association of Great Britain, declaring that the object of the gift was to prevent the recurrence of such a catastrophe as that of Majuba Hill, in the South African war, where the British troops were defeated because the Boers excelled them as rifle shots. Contestants of the will urged that the bequest could not be classed as a charitable gift, since its purpose was the killing of one's enemies. The justice held, however, that it was not the killing of one's enemies, but the ability to defend one's self against them, which was the true purpose intended, and he was of opinion that this gift came within an old definition of a charitable gift, namely, "a gift to a general public use which extends to the poor as well as the rich," and gave judgment accordingly.

An interesting bit of special legislation—enacted at the demand of an individual and for the benefit of an individual, not desired by the public, and not for the benefit of the public—is embodied in a certain clause in the New York game law, which permits the use of batteries for shooting ducks on the Great Sodus Bay of Lake Ontario. Mr. E. P. Doyle, clerk of the Fish Commission, told the New York State Association meeting in Syracuse last week, that the clause was inserted at the personal solicitation of Senator Hunter. Now the Rochester *Union* informs us that the one person to benefit by the provision was a summer cottager on the shore of the bay. When, after protracted and careful consideration, a commission specially provided by the State has determined on a code of laws deemed wisest and best for the general good, it is intolerable that one man should step in and demand of the State of New York an exemption of his special bay or stream or frog pond.

To Mr. George Holmes, of Henderson county, North Carolina, we extend assurances of our most distinguished consideration; and we embrace this opportunity to express our gratitude to him for the rattler which is "in our midst."

Some weeks ago when Professor Cope's rattlesnake spitting assertion was under such searching and illuminating discussion in our Natural History columns, Mr. Holmes told us that he had a live rattlesnake destined for the FOREST AND STREAM office, to be employed in snake spitting tests. Soon thereafter the rattler of our fondest anticipation was converted into a rattler of vain regrets, by advice from our North Carolina friend that the beast had perished miserably, without ever having contributed one shred to science. The rattler of vain regrets has now in turn given way to a new rattler of lively surprise and pleasure, brought in by the expressman last Friday, and duly deposited, all alive, handsome, graceful, amiable and ready to sing his little song without unreasonable persuasion. He shall be well cared for, fed to repletion on anonymous communications, and if all goes well, given an opportunity to show us what he knows about Prof. Cope's snake-spitting theory. If any newspaper in this great and glorious country is prepared to dispute the FOREST AND STREAM'S proud claim of being the only journal to maintain an office rattlesnake we would be glad to know of it.

The FOREST AND STREAM'S rattler has been in the office less than a week, but has already given a fine illustration of the way in which insufficiency of data may lead to long and profitless discussion by observers of natural history. In presence of one visitor the snake rattled twice, each time concluding the long rattling with two very short rattles, at intervals of a second; and the observer noted that "a rattlesnake always follows his long rattle with two short ones." For the next visitor the snake repeatedly gave his long rattle, but there was no after-rattle following it. Now, it would probably require columns of newspaper discussion to convince either of these two persons that a rattler rattles as the other one heard this one rattle. Yet on quite as meager experience will a person often put forward his dictum, maintain it through thick and thin, and never budge, though the heavens fall.

We have noted before that the Vermont game and fish bill prepared by Commissioner Titcomb and his associates followed closely in form and arrangement the New York codification; and now that the bill has been approved Vermont has a law which is simple, plain and direct in its provisions, readily understood, and for that reason is likely to be better observed than a more complex and inconsistent set of laws could be. But what does the term "pheasant" stand for, in the clause which provides for the protection of "pheasant" between Nov. 20 and Oct. 1 following? The context shows that it is not a ruffed grouse nor a quail, but it may be a duck or "pheasant duck." According to Trumbull, "pheasant," "sea pheasant," "water pheasant" and "pheasant duck" are terms applied to certain water fowl. Is the Vermont "pheasant" web-footed?

One day last week a Fredericksburg, Va., wild turkey hunter, failing to return home, was sought by a search party, and discovered dead in a turkey blind. He had been shot through the head. The Coroner's jury rendered a verdict of murder by persons unknown, and subsequently a suspected individual was arrested for the supposed crime. It appears to be quite probable, however, that the unfortunate hunter met death in a way in which it has come to others skilled in the art of calling. For it has happened more than once that a caller gifted with skill perfectly to simulate the notes of the bird, has been shot in his ambush by some other hunter deceived into the belief that the turkey call came from a real turkey. Such a case was reported from Pennsylvania a fornight ago; and others will be reported so long as men shoot at sounds and at objects unseen.

THE reports of shooting casualties are this season as numerous as ever, and quite as instructive. Last Saturday a Massachusetts gunner riding in a wagon undertook to prop himself up with a gun, his hands over the muzzle. Four fingers were amputated. Monday the well-known Hebrew philanthropist, Baron de Hirsch, was wounded by the explosion of his gun. Tuesday a New Jersey farmer died from wounds self-inflicted while he was dragging his gun after him through a fence.

There is nothing in the cablegram to show that Baron de Hirsch was at fault, but every one of a score of other recent casualties may be accounted for on the score of gross carelessness. The New Jersey victim of the gun in the fence was reported to have committed suicide, and the report aroused much indignation among his friends; but in this age of the world an intelligent man ought to understand that pulling a gun muzzle-foremost from boat or wagon or fence is tempting fate in a degree little lower than that of the deliberate suicide.

If you have a gun selected for that boy of yours on Christmas morning let not these daily reports of fatal carelessness with firearms deter you from giving him the gift. A gun is a safe and sensible possession for man or boy. Life insurance companies do not discriminate against users of sporting firearms; there are no provisions in the policies that the insured must not go shooting. If gunning were regarded as an "extra-hazardous" pursuit, or even as one involving any appreciable or unusual degree of peril, public sentiment would not sanction the shooting excursions of President Harrison, nor of Mr. Cleveland. As a matter of fact, most intelligent people know perfectly well that a shotgun is a safe weapon in the hands of a man who will keep himself behind it instead of getting in front of it.

Thousands and tens of thousands of guns are used with safety. It is the ten thousand and first that does the damage we read of in the papers. See that this ten thousand and first handler shall not be of your kith and kin. Teach the boy to handle the arm after approved rules. Begin right. Caution is best instilled at the very outset. Habit is everything, and it is just as easy to acquire careful habits at the first. Give your boy a gun for his Christmas, give him with it an appreciation of its proper using, and you will have given that which will be a joy and a satisfaction to him long after he shall have reached a riper age than your own.

The fourth and last of the promised drawings by Mr. E. E. Thompson, illustrating American wild animals, is given as a supplement with this issue. It pictures the Bay Lynx, and the faithfulness of the portrait will be recognized by those who have had the fortune—good or ill—to observe the living creature at large. The publication of another series of drawings now in preparation, will be begun shortly. Readers of the FOREST AND STREAM in 1893 may look for an even more generous supply of illustrations than that which has marked the new departure of 1892.

The recent conference of New England Fish Commissioners in Boston, of which we gave meager details last week, was an occasion of general interest, and we trust that public notice may be given of the next meeting. A full report would undoubtedly stimulate thought and discussion on fish and game protection topics, and these are subjects which will profit by such open, free and general discussion.

The "Kekoskee Fish Story" has been reprinted by our London contemporary, the *Fishing Gazette*, and we confidently look for it in our Calcutta exchange, the *Asian*. It is a relation—a plain, simple, artless, ingenuous and unvarnished relation of facts, which deserves to make its way around the world.

There would be no difficulty in ridding Lake Keuka, in this State, of unlawful nets, if the protector of that district would set about it in a business way. Game Protectors Cotton, of Bath, and Clark, of Pulaski, made a raid on Keuka nets last week and had their men fined.

# The Sportsman Tourist.

## NEW HAMPSHIRE'S MOUNTAIN FORESTS.

Ye mountains of New Hampshire, her glory and her crown,
Whose rocky summits proudly rise above the tempests', frown,
Around your shoulders, broad and strong, the ancient forests grow,
While from each cliff, with joyful song, the sparkling waters flow.

They grow and gather on their path to seek the ocean main,
They freshen many a fertile vale and many a sandy plain;
At every leaping cataract upsprings a city fair,
And sounds of busy industry awake the morning air.

The sun, obeying nature's laws, draws up each drop again
In clouds, which fall as gentle dew, or burst in drenching rain.
Each leaf and flower, each mossy cup, collect the welcome store,
And down the mountain side again the foaming torrents pour.

The God who made them gave the woods a mission upon earth,
To garner up and store the rain and give the rivers birth;
And every blow the woodman strikes to bring them to their doom,
But stills some hammer's noisy din, or stops some busy loom.

Amid the sheltering foliage builds many a bird her nest;
Beneath the shade the wild deer roves, the squirrel finds a rest;
The spotted trout leaps gaily amid the sparkling foam,
And many a lovely floweret blooms in its own woodland home.

Then, when the summer sun beats down on many a city street,
And all within its stony walls are sweltering with heat,
How many strive to banish toil, with all its cares and ills,
And seek new health and strength amid the "everlasting hills."

Up many a winding pathway, through many a shady grove,
By many a mossy boulder, their wandering footsteps rove;
Or climb some rocky summit, clear in the mountain air,
To gaze upon the world below in summer verdure fair.

Oh statesmen! spare the forests which grace our native land;
Save some of nature's handicraft from lucre's grasping hand,
That when your earthly labor's o'er, beneath their shade you rest,
The "generations yet unborn" may rise and call you blessed.

CHARLESTOWN, N. H., Nov. 20, 1892. SAM'L WEBBER.

## THE CANADA GOOSE.

THE gentler songsters of our groves approach us quietly and unobserved indeed by many, until on some soft, balmy morning the ripple of a sweet little voice is heard among the blossoms, and inspection reveals our tiny friends, who are chanting their delight as they fly from twig to twig amid the scenes of their last year's home.

These little warblers are the interpreters of nature's pastorals, their songs are full of balmy airs and sunshine.

For a wilder strain we must turn to other scenes, and in stormy days of March or November listen to the trumpets of the wild geese as they mingle with the gale.

See the dark forms clearly outlined against the sombre clouds as in perfect discipline they obey the bugle calls of their leader, whose broad wings beat the air with steady and majestic strokes, in the van.

Now in single file, now in the form of a gigantic V, and again in open order, they fly in response to his clarion note as it rings down the feathered ranks, but ever on and on, until the haven reached the flight is ended and the travelers rest.

"On high, above us in the heavens,
The passage birds fly forth in bands,
Their pioneer his legion leading,
Darts forward o'er the well-known lands."

A strong, sturdy fellow is the Canada goose. Indifferent alike to storm and sunshine, he pursues the even tenor of his way, and under all circumstances you find him the same elegant and graceful creature.

Ever on the alert, quick to take alarm and to warn his trusting followers at the approach of danger, he ranks among the foremost of the waterfowl that pass and repass our Atlantic seaboard in legions during the spring and autumn migration.

There are times when a sportsman will put aside the gun and visit his game in their haunts for the purpose of observing and studying their ways and habits of life.

We will join such an one on his jaunt as he starts for the beach. A brisk walk, and crossing the rickety old bridge, we are among the sand dunes.

Once through between them, the steady boom of the surf, which has been sounding in our ears during the walk, bursts upon us with a roar as it pounds upon the sands.

Far as the eye can reach up and down the coast we see the spurting mist of the breakers as they thunder along the shore.

The breeze is heavy from the sea, and the drifting sand cuts our faces now and again as we sit on the summit of a dune that tops its neighbors, giving us an unobstructed view of the uneasy ocean, as it heaves and tumbles in foaming billows almost at our feet.

A huge wave rears suddenly upward and rolls in, a solid mass of dull green! A moment, and we see a slight curling of its crest, then with a deafening roar it dashes into snowy fragments and sends its quivering foam flakes high in air above our heads. We watch it as it races its life away down the beach until lost in clouds of mist, it plunges wildly on.

For the past few days the geese have been flying, and as we look out over the surging waters several bunches are in sight, all bound east, and silently, steadily pursuing their course.

Here comes a flock, just outside the breakers; rapidly they approach, and we count twenty-three of the noble birds as they pass in review before us, the big wings moving with mechanical regularity, their white collars and glossy plumage glistening through the driving mists.

A single trumpet note, and the whole flock rises as one, and in an undulating line heads in over the beach for the quiet waters of the beach. Let us follow.

It is interesting to watch the maneuvers of a flock of geese as they approach to alight after traveling for hundreds of miles without a halt, as is often the case in their migrations.

They manifest their delight at the prospect of a pause in the long flight by a tremendous hubbub, as each gabbles and honks in as many different keys. Now one will drop as though he had found the proper location, then another, and so on, while the main body of the flock, probably older birds, sweep steadily along, leaving them far in the rear, requiring energetic efforts on their part before they close the gap.

Now the old gander in the lead suddenly jacks his wings, and followed by the entire flock, scales down in a long descent until, with a heavy surge, they enter the water, and the feat is accomplished.

The gabble is immediately renewed with fresh vigor, and continues with gradually diminishing energy, until the excitement having passed, they float quietly upon the calm surface conversing in ordinary tones.

Shinnecock Bay, Long Island, used to be a favorite rendezvous for the geese, and unless driven off by constant gunning, they would often spend days in feeding, recruiting, and generally enjoying themselves in its waters. At such times many a fierce battle is fought between the old veterans in command of the various flocks.

Approaching each other slowly, cautiously, now retiring a little, now returning, they finally work themselves up to the fighting point and pitch into each other with bill, feet and wings. Now you see them separate with ruffled plumage, and swim proudly back to their admiring friends, who honk clamorously as they welcome their respective champions, while with outstretched necks, they hiss spitefully at his gray-coated antagonist.

There are two gunners in that blind below us, with the glass you can see their live decoys preening themselves as they stand in the shallow water.

A solitary goose is flying past, high in air. Poor fellow! That subdued *broo-oom! broo-oom!* we heard a moment ago was evidently the death knell of your companions, and now your plaintive calls ring over the bay, as you vainly seek a response from your lost ones.

See! a flock is swinging in toward the blind. Hear them honk in answer to the decoys, as with extended wings they sail up, all unconscious of the reception awaiting them in the brown sedge grass.

Three puffs of soft white smoke curl up from the blind as we watch, and we see four geese drop from the flock, dashing the spray in showers as they strike the water.

The remaining birds wing their way overhead, the one in the rear indicating by rapid wing beats the severity of his wounds. Slowly he falls behind as his comrades leave him, until, with a last despairing struggle, he gives up, and falls from that dizzy height, striking the water with a sounding splash.

There he floats, still and dead, the yellow rays of the sun touching him gently as though in sorrow at his fate.

To-morrow will see him stranded on the shallows near the meadow, where the keen-eyed gulls will soon discover him, and with wild screams of delight they will pounce upon and rend the form so lately filled with strong, warm life. WILMOT TOWNSEND.

BAY RIDGE, N. Y.

## A PUZZLE.

*Editor Forest and Stream:*

It was many years ago that I had a singular experience that I have never been able to explain on any reasonable grounds. At that time a mingling of business and pleasure led me to pass some years in the woods in southern Vermont, where, as is perhaps not generally known, one may travel for days meeting with few signs of man and his axe. Lynx and bears were quite plentiful, and sometimes a panther was to be seen or heard.

One day in December I started on snowshoes for a little settlement about eight miles distant. My way was partly through the unbroken forest and partly along an abandoned road that had connected the two places. It had snowed heavily the night before, and the day was dark and gloomy. It was nearly night, when I came to where something had crossed the path before me. The strides were long, and at first I thought were made by a man, but a close examination showed me that it was a round track and of a size that I had never seen before. It could only be made by a panther and a big one at that; and, what was more to the point, the trail was very fresh, having been made since a snow squall of half an hour before. Now, contrary to my usual custom, I was unarmed, and two long Vermont miles, most of the way through dense spruces, were before me, and at my best pace it would be dark before I was out of the woods. Possibly I may be a bit of a coward, but I will say that I had no desire to meet the gentleman who made those tracks. Yet I was not frightened. I examined the footprints carefully, following them to where they passed under a thick spruce, where the imprints were more distinct. I remember wishing I had even my Colt's revolver with me, and I think that for the remainder of my way I scanned the thickets on either side rather closely. When I returned from my trip I told my woods-mates of what I had seen, but some of them were a little incredulous as to the size of the tracks, and I did not blame them.

The next March I one day climbed a high peak of the Green Mountains in that vicinity, reaching the top about noon. There was a space of about two acres that was nearly bare of trees, only a few scattered bushes showing through the snow. It was dinner time, and I selected a fallen tree for my table and seat. It was an ideal day. The sun was shining brightly and warmly, and the first breath of spring was in the air. I had been in high spirits all the morning. The air and the sunshine was exhilarating after the dark days of winter. But no sooner had I seated myself than a strange feeling of uneasiness came over me. I felt as if I was not alone—as if I was being watched. I looked around me; all was peaceful and quiet. The ground was bare on every side of me except two little thickets, and they were probably 150 feet away. I took my revolver from its case and laid it beside me, at the same time laughing at the precaution. The creepy feeling grew upon me; I was oppressed by a sense of a disagreeable presence that I could not account for. The thicket to my left mady me uneasy, so I turned and faced it, but could see almost through it, and was convinced that nothing of any size could be lurking there. Then I turned quickly to the other thicket, half expecting that something would be visible there. Not a sign of life. It was too ridiculous; a bright day; in an opening where I could see clearly on all sides of me, and then to feel—well, not exactly frightened, but *creepy*—I who had camped out alone night after night in all kinds of places, and often with very little fire, from an innate dislike to gathering wood after a day's tramp. But—I settled myself so that I could watch both thickets, and besides kept a good watch over my shoulder.

As suddenly as it came that peculiar feeling passed away. I remember sneering at myself a little, and then as I lighted my pipe I forgot all about it. My smoke finished, I started down the mountain side, passing by the lower end of one of the thickets. After going a few rods, I stopped suddenly. There were big round tracks before me, and they came from the valley and went toward the thicket. The place was open, with only leafless maple, beech and birch, and after a quick glance to see that all was clear, I examined the tracks. I had no feeling of nervousness now, but a great deal of curiosity. There was a hard crust on the snow, but the warm sun had honeycombed its surface, and the round particles, like grains of coarse sand, displaced by the animal's foot, retained their original shape, showing that they had only recently been disturbed. The stride up the incline was about three feet, and the track measured six inches long by five and one half broad. The marks of the toes were distinct, and in some places the claws cut the icy surface an inch or more from the toes. I followed the trail to one of the thickets I have spoken of, and found that the animal had moved a little from his course and turned toward where I had been sitting. His steps were shorter here, and on leaving, he resumed his former course and passed down the other side of the mountain.

Now what puzzles me is this: On a gloomy, dark day, with night coming on, in a dense forest, I, unarmed, find recent traces of an animal I do not want to meet, yet I am not frightened, only think it wise to get out of the woods before dark. Again, at midday, with a bright sun, an open space around me, fairly armed, and in good spirits, with no thought of anything larger than a rabbit or a partridge, I suddenly become, if not afraid, at least nervous and on the alert for—what? Nothing, as far as reason tells me. Yet I find that at that time I was being watched by an animal that had an unpleasantly large, well furnished foot, with probably teeth to match—which I think I should have gone considerably out of my way to avoid meeting. Yet when I saw his tracks—the first tangible evidence I had of his presence—I was not disturbed. Can any one explain it? I cannot.

FRED. L. BALLARD.

SPRINGFIELD, Mass., Nov. 21.

## ANTICIPATIONS OF A WINTER'S CAMP.

BOSTON, Nov. 21.—I am glad that J. B. Battelle is so pluckily renewing his efforts to rear ruffed grouse in confinement. I have always believed it could be done, and there is no one to whom I would be so glad to see the honor and credit of such a success come as to our old friend "Jay Bee Bee." I hope to start in a week or so for a certain camp in the Maine woods, and I shall be on the alert for captive grouse, and if I get news of any Mr. Battelle shall hear of it.

In your issue of Nov. 17 L. D. von Iffland speaks of his surprise at the discovery that the muskrat is carnivorous. He need have no doubt that it was the muskrat that ate his snipe. If he will take a look about the haunts of any muskrat on Northern or Western lakes or rivers he will learn that the muskrat makes the fresh-water mussel one of the main articles of his diet, as the heaps of their shells will attest.

The "Angling Notes" and the fine picture of "Shelving Rock Falls" come pretty near to starting me on the discussion of the leaping and "climbing" powers of fish. There is nothing in A. N. Cheney's article that throws any strain whatever on my credulity, for I have seen such work by trout in the little New Hampshire brook where I fished as a boy as would match almost anything Mr. Cheney told.

Moreover, I saw such a fish leap once in West Indian waters as I never yet dared to put in print. As Mr. Hough said before, he got his courage up to print his "Kekoskee Fish Story," I may sometimes tell it—if I can be persuaded that it will be received in a proper spirit, and not treated as a pure fabrication and laughed to scorn. It is a very short story, but a perfectly true one, but such a whopper that I am not yet ready to "turn it loose."

I have about made up my mind to go to a new camp and a new region for my outing this year. I want a winter trip this time. I want to do some tracking and perhaps snowshoeing.

I want the fun of seeing in the snow the sure proof of what is going on in the woods. My morning newspaper shall be the white sheet on which the tiny wood mouse and chickadee and the partridge and fox, as well as the deer and caribou, have written the clear story of their marchings and prowlings. I am so eager for camp that I can hardly wait. I may not be able to get away, but what what fun I have had already in anticipation of it!

I have never seen the lake and camp to which I am going or the guide whom I have engaged, but all are well vouched for, and the guide writes me that there are plenty of signs of "big gaim."

Miss Fannie Hardy writes me that she does not personally know this guide, but that her father says "he spells like a good hunter, and that this is an almost unmistakable ear mark." I long to see Katahdin again all white from base to summit. I long to hear an owl hoot and a loon call. The owl I shall hear, but I suppose the lake will be closed and I shall miss my loon and my canoeing. But one can't have everything.

O you poor fellows who have had your vacation, do you not envy me? You must solace yourselves as best you can by planning for the next year's trip and retelling the story of how you captured that particularly big trout, judiciously adding an ounce or two to its weight whenever you think the strength of your leader will bear the strain.

I've already asked my most intimate friends which cut of the moose they prefer. It is always safer to arrange all these little things beforehand.

If the weight and measurements are what they ought to be, I will duly make report. C. H. AMES.

### Mr. Cleveland Appears to Believe In It.

WE all have noticed that many men, when they seek to appear especially wise and impressive, speak of "our business interests" as something awful and mysterious, and quite often when a proposition is under discussion its merits are no longer apparent to those *whose hair is on end* at the solemn suggestion that "our business interests" are lying in wait with numerous vials of wrath in complete readiness for those who arrive at an unaccepted conclusion.—*Grover Cleveland's Chamber of Commerce Speech.*

# Natural History.

## THE BAY LYNX.

(*Lynx rufus*).

NATURALISTS call the long-tailed, round-eared cats *Felis*, while those with short tails and with tufted ears are called *Lynx*. The panther, jaguar and ocelot are among the American forms of the genus *Felis*, while the common wildcat and the Canada lynx represent the genus *Lynx* in North America.

The lynxes which inhabit the northern and temperate regions of both the Old and New Worlds are thus described by Mr. Flower, the eminent English anatomist. They are "all of moderate size; that is, smaller than lions, tigers and leopards, and larger than the true cats, with long limbs, short, stumpy tail, ears tufted at the tip, and the pupil of the eye linear when contracted. Their fur is generally long and soft, varying, however, according to season and locality, and always longest upon the cheeks. Their color is always light brown or gray, and generally more or less spotted with a darker shade. The naked pads of the feet are more or less covered by the hair that grows between them. The skull and skeleton do not differ markedly from those of other cats, but the small anterior upper premolar tooth found in many other species is usually wanting. Their habits are exactly those of the other wild cats; they are excelled by none in the untameable savageness of their disposition. They capture their prey in the same manner, either lying in wait or noiselessly stealing within reach, and then making a sudden rush or spring upon it. Their food consists of any mammals or birds which they can overpower. In inhabited countries they commit extensive ravages upon sheep, lambs and poultry. They generally frequent rocky places and forests, being active climbers, and passing much of their time among the branches of trees."

Such, briefly, are the characteristics of this group, of which two well defined forms are generally recognized by American naturalists, while several other varieties or sub-species have been described. These are all known to people generally by the names wildcat, catamount, lynx or bob cat, the last name being perhaps the best, since it seizes at once on a characteristic feature, the short tail, bob cat being no doubt an abbreviation for bob-tailed cat.

The two best known forms are the bay lynx figured in this issue, and the Canada lynx. The former is much the more southern in its range, and so is perhaps the better known of the two. It is more common in the South and Southwest than in the East—which is only another way of saying that it does not flourish in a thickly settled country—but no doubt it still exists in every State of the Union. Both the Canada and the bay lynx are still occasionally killed in Connecticut, and the daily papers this fall have chronicled several of these captures. One of the most recent of these appeared in the New York *Times* of Nov. 26, and, though no doubt somewhat highly colored, may have a basis of fact:

"HAMBURG, Conn., Nov. 25.—Hayden Gray, School Visitor in the Alder Ridge district, and Alice Griswold, teacher of the school, had an exciting experience with a wildcat a day or two ago.

"The Alder Ridge district lies among the hills in the southern part of Middlesex county. The schoolhouse stands on a flat at the foot of a high hill.

"The day was warm, and a window on the side of the building toward the hill was open. The School Visitor had just dismissed a class that he had been examining, when a dog came tearing down the hill, and the next minute an immense wildcat sprang through the open window and landed on the floor in front of the teacher's desk.

"At sight of the animal the scholars ran screaming to a corner of the room and huddled together on top of the desks. The School Visitor, a man well along in years, climbed on top of the teacher's desk and yelled for her to come up, too. Miss Griswold is a plucky woman, and she had no intention of retreating. She stood near the stove, and, picking up a heavy iron poker, held her ground.

"Close on the heels of the wildcat came the dog, which sprang through the window and landed near the cat. The two animals clinched at once, and in less than a minute the dog slunk under the benches with one side of his scalp torn off and one forward leg so badly chewed that it couldn't use it.

"The cat was fully aroused and turned its attention to the School Visitor, who had taken occasion in the brief fight between the cat and the dog to lift a chair to the top of the desk and climb upon it. The wildcat leaped at the man. The School Visitor had picked up the school bell as a weapon, and when the wildcat reached the desk he struck the animal a blow on the head that knocked it to the floor and made it madder than ever. Digging its claws into the floor, it made another spring. This time it reached the chair and knocked it and the School Visitor in a heap on the floor.

"The cat sprang again at the man, who fought the animal off as best he could with the bell, but he would probably have suffered severely had not the teacher come to his assistance with the poker. The woman hammered the cat unmercifully with the iron bar and drove it into a corner, where she belabored it until it was dead.

"The School Visitor was scratched and his clothes were torn, but he was not seriously injured. The teacher came out of the fray without a mark."

The bay lynx is said to be rather uncommon in Maine and the Adirondacks, but becomes more abundant further south and west. In some portions of the northern Rocky Mountains, as also toward the coast in Idaho and Washington, it is very abundant, though not often seen, owing to its secretive habits.

We have seen a number of the young of this species in captivity and have always found them vicious, untameable little creatures even when very small. At all times they were ready to use their teeth and claws on the hands of those who fed them, and it really was not safe to touch them unless the hands were well protected. Even when only half as large as a domestic cat they would snarl, spit and fight most fiercely.

Chasing the wildcat with hounds is a favorite sport in some sections of the South and it may be imagined that it is exciting sport. Usually the animal takes refuge in a tree, from which it is dislodged by the shot of one of the hunters.

The bay lynx is a small animal and measures 3ft., or less, in total length, the tail being about 7in. long. Above and on the sides the fur is pale reddish in color, while the under parts are white, more or less spotted with black and brown. The inner surfaces of the legs are banded with black or brown. The tail is white beneath and brown above, with a black tip. Ears black, with a white patch within.

The illustrated supplement, which goes with this issue, gives a faithful portrait of the bay lynx, and a comparison of this sketch with that of the Canada lynx in our issue of Nov. 2 will show the different characteristics of the two.

---

CHELSTOWN, N. H., Nov. 26.—*Editor Forest and Stream:* John Danforth speaks of the "bobcat" in FOREST AND STREAM of the 17th as not a lynx. The "bay lynx" is commonly called by that name and is a common wildcat of the Southern States, but is found as far north as Canada. It gets its name from its color, as a bay horse does, and is slightly different from its cousin, the gray or Canada lynx.

Some of the early naturalists confused them and spelled the word with a big B, deriving it from Hudson's Bay, but the lynx of that latitude is the gray or Canadian.

One of these red or bay ones frightened a good many sheep and some boys in this town two summers since, and killed a few lambs, and was plainly seen several times sunning himself on a stump or stone. VON W.

A REMARKABLE PAIR OF HORNS.

## INTERESTING COLLECTION OF HORNS.

*Editor Forest and Stream:*

In conformity with a request from the curator in charge of the Smithsonian Institution, at Washington, to Mr. Albert Friedrich, of this city, this is sent you:

Inclosed you will please find a photograph of a set of most remarkable horns, of which it can justly be claimed they have no equal on earth.

The curator, Mr. F. W. True, says in his letter: "The antlers are the most remarkable I have ever seen. In the number of points it far exceeds any specimen of which I have knowledge. Whatever you wish to publish regarding it I would suggest that you send to FOREST AND STREAM, 318 Broadway, New York. This is, as perhaps you know, one of the best sporting and natural history journals."

Mr. Friedrich is justly proud of his collection, which should be seen in order to be fully appreciated. Besides the head photographed he has a grand collection of antlers and horns, numbering over a thousand specimens, of which several hundred are finely mounted, many of them with head and neck in proper style and shape, as shown in this photograph. There is a perfect museum of specialties of this nature only. Next in interest to the head and antlers referred to, Mr. Friedrich has a deer head with forty-two prongs, which is quite as unusual as the first named. But of just as much interest as the horns alone is his collection of specimens of heads, with their coverings and adjuncts, in the way of horns, of similar defensive or offensive character.

From Africa can be seen two heads, respectively, of bull and cow buffalo. From the Cape of Good Hope the *Bos arnè*, African gems-bock, ibex, *Bos tragelaphus sylvatica*, yak, a common and brindle gnu, (*Catoblephas gnu* and *gorgon*), and a hartebeest (*Alcephalus cadma*). From India come a musk deer (*Moschus moschiferus*), an axis and mountain deer.

The great State of Arizona is represented by a large number of fine elk antlers. And last, but not least, comes Texas with heads and necks in proper natural style of wild Texas mustangs, fine specimens of Texas antelopes, fawns, etc. The Canadian moose has also a representative in this collection. Two pair of Texas steer horns which measure, one pair from tip to tip 7ft. 4in., the other pair 7ft. 1in., mounted on their original heads, some very large specimens of Russian deer, reindeer, Canadian caribou, Rocky Mountain sheep and wild goats. Another interesting feature is a large collection of rattlesnake rattles, which form a fine display, under glass; the collecting of these has taken a great deal of time, trouble and expense.

Mr. Friedrich is now making arrangements for numbering, grading and classifying this collection, as they are now displayed in his place of business at 223 Dolorosa street. We are also informed by the gentleman that if the right kind of inducements were made he would remove the whole to the coming Chicago World's Fair, where it would be of special interest to hunters and sporting people of the nations. SPORT.

SAN ANTONIO, Tex., Nov. 2.

## SOME CHAT FROM TEXAS.

PECOS, Tex., Nov. 17.—I was surprised to read in FOREST AND STREAM the expressions of the Rev. Thos. Dixon, Jr., touching the robin. He says: "In my native South the robin, so far from being considered a song bird, is regarded as a disreputable, gluttonous pest. * * * In my soul I am sorry for the people whose stock of song is so low as to prize as divine the cry of the robin."

Mr. Dixon, I am told, is a Tarheel, like myself; in other words, a native of North Carolina. Now, the robin in that State when I was a boy was regarded as a very lovable bird. They built their nests in the yards and orchards, and were very familiar creatures. While their song might not be considered as divine, yet according to my recollection it was very sweet. Does not Mr. Dixon recollect the sweet old song which the little girls of North Carolina used to sing:

"Robin, robin redbreast,
Oh, robin dear!
Robin sings so sweetly
When the summer time is here."

And does he not recollect the tale of the "Babes in the Wood," which the little folks used to tell to one another, how when the babes fell exhausted from their wanderings, the robins gathered leaves and spread over them to protect them from the cold; and how the eyes of the little ones would suffuse with tears at the rehearsal? All of this is fresh in my mind, and I believe the robin was more beloved than the mockingbird, who had no such pretty or affecting tales told of him. In those days one would have been looked upon as hardly better than a barbarian who would shoot a robin. If it is not so now in the "old North State," I am sorry indeed to learn it. And why does Mr. Dixon call him a "glutton?" I have heard him charged with sometimes becoming very drunk from eating berries of the china tree, but never before heard that he was a glutton. Even when drunk his deportment was the best that any one in that condition could put on. He simply went to sleep and slept it off—which thing, according to my observation, only good drunkards will do.

We have not the robin in Texas, except in winter, and I have often wished that we had him here in summer too. He is a dearly beloved bird to me, from the memories of the Auld Lang Syne which he calls up. I am curious to know how far south the robin nests. I know he nests in North Carolina. Does he nest below that State?

As to the screaming of the panther, if that animal does not do that, then all old Texas woodsmen err; for they all say that he screams. I have several times heard what I was told was the scream of the panther; though I never saw one open his mouth and let fly with it. If it was not the panther, then my mind is exceedingly perplexed to know what it was. A few months ago I heard it at night, three several times, in a deep forest on the Trinity river. I studied it with close curiosity as I heard it distinctly, coming apparently from no great distance. Others heard it, and said it was a panther. To my ear it sounded more like the hollowing of a rather fine-voiced woman than anything else I could compare it with. Now if it was not a panther, pray what was it, Mr. Editor? You have worried me. Was it the cry of an evil disembodied spirit? Will you make my "hair stand on end?" Will you fill me with superstition? Some may say that it *was* a woman. But that could not be, for the forest was uninhabited, and uninhabitable from frequent and great inundations, and of vast extent.

And I believe that the hair sometimes does stand up from a good, genuine scare. It has happened to me on two occasions; first, during our late war, when, on a miserable foggy morning, I ran all alone into about 17,000 "Yankees," supposing them to be Confederates, and secondly, since the war, when I thought that I was cornered by about seventeen bloody Injuns, who were wild to kill me and fully believed that they had me. On both these occasions my hair actually "riz" and stood up like the wires on a scrubbing brush. I did not see it so rise up and so stand, but I distinctly felt it, and am sure that it was so. However, I got away from both the Yanks and the Injuns and did not have a hair on my head hurt. Bless that kind Providence which takes care of fools! Even to this day, when I think of these two episodes, it almost makes my hair rise up.

And does not the Bible in the passage from Job quoted by FOREST AND STREAM state point-blank that Job's hair "stood up?" And whatever that Old Book states as a fact, I believe. As Napoleon Bonaparte said at St. Helena, "The Bible is not a mere book, but a living creature." And it is a living creature that never told a lie.

N. A. T.

---

### Bird Notes.

ITHACA, N. Y., Nov. 11.—This fall, up to a very recent date, the number of robins inhabiting the sparsely wooded lowlands adjacent to the Ithaca Marsh has been astoundingly large. A strolling minstrel from that shy, reserved band of dun-coated fellows must have flitted cityward.

At any rate, a robin has been in the habit for some time past of making regular daily (usually in the afternoon) visits to a tall, wide-spreading elm standing across the street from my residence. Away up in the topmost branches the solitary representative of a blithesome race would perch, and upon the ear of the alert listener would now and then fall the faint cadence of a tuneful chirrup that sounded almost weird and strangely out of place.

A few days prior to Nov. 1 I missed my feathered afternoon caller, and now, after ten days of keen watchfulness, I have come to believe that my hope for his return must necessarily be deferred until the coming year has donned its spring overcoat and demanded something new in the way of neckties.

An incident illustrating the tenacious hold the English sparrow has upon a more or less combative existence, came recently under the notice of a friend of mine. A sparrow flew against a telegraph wire in front of the city post office with such force that it fell stunned and apparently lifeless to the stone pavement below. A boy passing a moment later thoughtlessly kicked it into the gutter. My friend, from across the street, had seen the bird fall to the pavement, and hastening over picked the sparrow up and laid it upon the casement of one of the post office windows. It remained motionless as though dead for some minutes. Then a slight quiver ran through the short, stuffy little body, followed presently by an energetic picking of the legs, then a quick, deft beating of pinions; and a moment later, with the sprightliness of a Japanese juggler, the bird flew aloft to a favorite retreat, as vigorous, voracious and quarrelsome as ever.

By the way, I don't believe the sparrow has as many enemies as it once did. There is an impudent friendliness, a persistent and effusive familiarity about the little ruffian that tends to modify the popular verdict once passed upon him. M. C. H.

## MORE ABOUT THE SCREAM.

ROCHESTER, N. Y., Nov. 21.—*Editor Forest and Stream:* I know that the discussion of the panther's scream is getting to be an old story, but I want to add my testimony to the fact that he does scream, and she, too.

I spent several months in the Spanish Range of the Rockies, in New Mexico, and heard the scream a number of times there; but the first time is the one I want to tell about.

I wish I could make your readers realize what it is, but I know I can't. No one who has not heard it can imagine what it is like. We, that is my partner and myself, were lying one night, wrapped in our blankets, in front of our house in Mora county, N. M. About 100 yds. from us was the carcass of a calf that had died that day. We were both asleep when a cry came that, to speak for myself, raised me to my feet as if some one had me by the throat. It was the most horrid, hair-raising cry that I ever heard; it actually choked me. As we got on our feet, we brought our Winchesters with us and between us managed, notwithstanding our scare, to kill the animal. It was what they call there a mountain lion, really a panther.

It seems that some coyotes were already at work on the carcass and his scream must have been one of rage, for we found two dead coyotes, one with his skull crushed and the other with a broken back.

I do not care what any one may say, I know that the panther does scream, and I will never forget the first time I heard it. H. D. MCVEAN.

### One Effect on the Hair.

THE editor of the Ashtabula, O., *Sentinel*, sends us this note of a panther-slayer's experience, and adds that Mr. Spencer describes the scream as closely resembling that of a woman in distress: "Our townsman Sylvester Spencer is not a very old man, but has been white-haired for forty years. He was always fond of hunting, and when game became scarce in Ohio, he went to Michigan and Wisconsin for large game. In 1850, when he was 32 years old, he was hunting on the Wisconsin River. One day while following a deer, which took him along a regular runway, he heard a slight noise overhead, and in looking up saw, about 12ft. above him, a large panther on a limb, just preparing to spring on him. He looked it full in the eye and it settled back for a moment, which gave Mr. Spencer time to quickly raise his gun and send a bullet through the head of the beast, and stepping aside the panther sprang at him but fell dead on the ground. During the encounter, which did not take as much time as to read this, he was not scared, but when the danger was over it came to him in full force, and the effect was so great that within twenty-four hours his hair was as white as that of a man of 80. The panther measured 8½ft. from tip to tip."

### An English View of One American Institution.

A CELEBRATED English author recently made a short tour in the United States, and speaking of his trip from New York to Niagara Falls by "America's Greatest Railroad," he makes use of the following expressions:

"I have two ineffaceable visions before me, a river of peace, the broad waters of the Hudson, a river of tumult, the roaring cataract of Niagara.

"For about 170 miles, the New York Central runs along the margin of the Hudson, and if the eye were never lifted higher than its level, it would feast on a bouquet of colors, like a rainbow spread upon the earth."

Speaking of the dining and sleeping cars, the bath and buffet and barber shop he says:

"With luxuries like these, the 1,000 miles to Chicago may become a day's holiday, and if the journey be made by the New York Central, it will be amidst some of the most exquisite spots of this vast and beautiful country.

"After the Palisades come the Highlands of the Hudson. The river itself can never be forgotten. The eye cannot escape it. It fascinates. Its majesty amidst the majestic; beauty among the beautiful. Memory cannot obliterate it.

"A word about the New York Central. It is the only line in the States having four tracks, and the only Trunk Line running into New York city. To make itself worthy of the unique position it has erected a magnificent terminus from which any part of the city may be reached in half an hour, and on rainy days without even wetting the sole of the foot. The fastest train in the world leaves here every morning for Niagara Falls, accomplishing 440 miles in less than eight and one-half hours, or deducting stoppages, in 425 minutes actual running time—more than a mile a minute."—*Adv.*

### Stood It as Long as He Could.

SUFFOLK, Va., Nov. 16.—I inclose check for one year's subscription to FOREST AND STREAM. Have done without it as long as I can stand it. A. S. ELEY.

# Game Bag and Gun.

*"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.*

## RABBITS AND FERRETS.

HARTFORD, Conn.—*Editor Forest and Stream:* You ask in the FOREST AND STREAM of Nov. 17, 1892, What place does the rabbit (or hare) hold in the popular estimation as a game animal, and how are they looked upon by the average gunner or bird shooter?

In answer to your first question, the rabbit (or hare) is not held in high popular estimation as a game animal in this section of Connecticut.

Answering your second question, the rabbit (or hare) is looked upon here by the bird shooter as an animal beneath his own or his dog's notice.

Regarding hunting rabbits by ferrets. The Pennsylvania ferret breeder claims the practice one that does not exterminate, but fosters the breeding of rabbits. This theory is not modeled upon lines altogether unfamiliar. It is one skimmed over with adroitness. The theory advanced may be sound logic, but at this writing I am not ready to accept it.

Your correspondent says, "It is not the male rabbit that holes up and is killed, while the female runs and does not hole up so often, and is saved to rear her young." This statement is rather too sweeping to be entirely consistent with facts. At this point there is more than one breach of inconsistency.

Many barrels of rabbits killed by the aid of ferrets are shipped from the State of New York to this city, and fully 75 per cent. of the rabbits killed by the aid of ferrets and on sale at our markets are females. It would seem by this silent contradiction of the finely spun fancy and vain delusion that ferrets do not foster the increase of rabbits—in New York. If I remember rightly, Fisher's Island teems with rabbits: there they are protected—that is, the use of ferrets is prohibited by the club controlling the island.

It is claimed here in Connecticut by parties who know something about rabbits that "ferreting" them is a very destructive method of extermination, but it is unnecessary to dilate upon such unsportsmanlike means of taking game. When a man, with dramatic accentuation, which becomes woefully tiresome, advocates snares for ruffed grouse, nets for catching trout, spears for taking black bass from their spawning grounds, ferrets for rabbits, he reminds me of the advice given by a colored minister to one of his flock. The stovepipe happening to fall during a revival, the minister asked one of the "bredderin" to put it in position. Brother Johnson essayed to do it, but rather slow. The old minister said, "Pick it up, brudder, pick it up; de Lord won't let it burn you." Brother Johnson, with faith in the assurance, seized the hot pipe and of course had his hands badly blistered. He dropped it with the inappropriate but forcible and dramatic remark, "De debbil he won't." Moral: Do not put too much confidence in those who advocate snares, nets, spears and ferrets, for surely you will fare as Brudder Johnson did when he picked up the hot stovepipe.

A. C. COLLINS.

AUBURN, Susquehanna County, Pa.—*Editor Forest and Stream:* I notice the communication of Mr. Decker in your issue of Nov. 17, which seems to be put forward as an excuse for selling ferrets when he knows they are to be put to illegal use; and, at the same time, get a little free advertising. Would not "I know" have been better than "I am quite sure?"

Now, Mr. Decker and I reside but a few miles apart, yet our conclusions vary widely. I am confident that rabbits are not holding their own, but, on the contrary, are rapidly decreasing. Ferrets were not used to any considerable extent in this locality until the past three years. Two years ago rabbits were very plentiful. The first time out I shot ten ahead of my beagle before noon. One year ago a considerable diminution was noticeable, and this fall, using the same dog and hunting over the same ground, three were the largest bag I have made, and often none at all.

Most of the rabbits killed are taken to the country stores and from these shipped to the cities. Ask any of the country merchants and they will tell you they are handling but a small per cent. of the shipments of two years ago.

No species of game can survive a mode of hunting where there is absolutely no chance of escape. One young fellow tells me of hunting two years ago with a ferret bred by Mr. Decker, and he killed from twelve to nineteen rabbits a day and kept it up nearly every day for three weeks. According to Mr. Decker such slaughter—"the more we hunt with ferrets"—conserves the supply. Never before have we heard it intimated that the rabbit was in the least carnivorous. We always supposed that its antipathy to anything like blood or grease was extreme. What proof has Mr. Decker that the male rabbits devour their young? Or is it a mere "theory," not a "condition?" We hope it is as well authenticated as was the fact that the old express horse Santa Anna subsisted and grew fat on an exclusive diet of bullheads.

And again, if it is only the males that hole when pursued by dogs, how does Mr. Decker account for the fact with which all rabbit hunters are conversant—that on some days every rabbit started will go straight to a hole, while on other days they will all run some time before going to earth?

And does not Mr. Decker show ignorance of the habits of game when he hints that the "true sportsman" shoots young grouse during the warm months "up among the maples and hemlock trees on the very top of our hills?" If we are at all acquainted with the habits of the ruffed grouse the heavily-timbered ridges would be the last place the true sportsman would look for them early in the season. And if they are so killed one lawless act does not justify another.

His assertions are: The more rabbits killed with ferrets the more there ir left. The male rabbits kill and eat their young. That the male only goes to earth when pursued. That the law prohibiting the use of ferrets can not be enforced. That rabbits subsist on grain. That the young grouse are found on the heavily-timbered ridges. How many of them will stand inquiry? Behold a new axiom in mathematics. Any part is greater than the whole, and the smaller the part the greater the total!

His sympathy for the "farmers' boys" makes me tired. It is so old, so very old and so very thin. When any one wishes the repeal of a protective law they always overflow with sympathy for the "poor farmer's boy," downtrodden and oppressed. It is the same self-interest sympathy whether coming from a grouse-snarer in the East, or a Pennsylvania man who wishes to hunt rabbits with a "bug." I was a farmer's boy for twenty-one years and have been associated with them ever since, and I know them to be above and beyond any such sympathy. And a large per cent. of the boys upon the farms of Susquehanna county could give Mr. Decker points on game and sportsmanship. BON AMI.

ITHACA, N. Y.—Although much ferreting is no doubt annually done in this section of the State the supply of rabbits holds out remarkably well. Good bags are scored daily now. I believe, however, that rabbits should be protected from Jan. 1 to Nov. 1. Between the ferrets, the beagles, and the breechloaders, bunnie has a small chance to thrive and multiply as the law now stands. Mart Oltz, a local trapper, tells me, with a wink of the eye that is rich in meaning, that he has already trapped over one hundred muskrats and two minks. M. C. H.

## THE LOST PARK BUFFALO AGAIN.

KENOSHA, Col., Nov. 15.—*Editor Forest and Stream:* On Oct. 5 a prospector named Boeher, who has been prospecting during the summer, came in from Lost Park with information that he had met while in there two hunters, one of whom, named Foley, he had been acquainted with in times past on the plains and knew him as an old buffalo hunter. Foley confided to Boeher that his party were there for the express purpose of getting some bison for future mounting, and that two taxidermists accompanied the outfit for the purpose of preparing the frames, that they had already killed thirteen and had arranged with a party owning thirty jacks to come after them and pack their game out of the Park.

Boeher told his story to Mr. M. F. Case, of Kenosha, with whom he stopped that night, and offered to go back with him (Case) and locate the camp of the outfit, but Case at that time was sick (is now lying at point of death) and could not go. He did the next best thing, however, and notified the State authorities, recommending that they come to Kenosha and he would supply them with the necessary horses and camp outfit to go into the Park and make a thorough hunt for the killers, also that they could get Boeher to go with them, and have him show where he had met the parties and where he had seen the evidence of their having killed some of the bison. Gordon Land, the State Game Warden, thought the matter could be attended to from other points and so sent an outfit under charge of J. P. Lower, and with Jonathan Higginson, of Buffalo Creek, as guide they entered the Park from Buffalo Creek, and after searching two or three days came to the conclusion that there had been no killing and retraced their steps to Estabrook, where they heard of a pack outfit having passed a few days previous. They started on the trail of this outfit and traced it as far as Slaghts, where all traces of it were lost. As the Park can be entered from the vicinity of Slaghts, it is very probable that the parties they were tracking were the outfit that Foley had spoken of as coming after them. Having lost the trail Lower and company returned to Buffalo Creek.

Another party in charge of Deputy Game Warden Kimball went into the Park from this end after nearly two weeks' delay, but after a three days' search they returned not having seen any traces of the buffalo hunters.

A short note appeared in one of the Denver dailies from Florrissant, saying that two taxidermists of that place had left there on a hunting expedition, and no knowledge of their whereabouts being had it was supposed that they might be the parties sought after. These men have not returned to their homes yet, and it will depend on their word where they have been, whether they are the ones wanted or not. It is very probable that they have heard ere this that they are suspected of being the buffalo slayers and it will be an easy matter for them to get rid of the pelts, head, etc., if they have them; or they could continue on to Wyoming or Utah and on returning say that they had killed their game in those States, and there would be none to dispute their word, unless this man Foley could be found and brought before Boeher.

Lost Park is a long narrow valley about ten miles long and varying from a few feet to a half mile in width, there are many gulleys running into it and the country around is very rough and heavily timbered, so that it is an easy matter for a person to keep out of the way of any searching party that might go in after them.

There is no one living in the Park and the buffalo use it a part of the year for their grazing ground; and they range from Kenosha on this side to the vicinity of Pike's Peak on the other and all along the ranges intermediate.

S. S. CARRUTHERS.

DENVER, Nov. 24.—*Editor Forest and Stream:* Mr. S. S. Carruthers, of Kenosha, sent the following special to the Denver *Republican:*

KENOSHA, Col., Nov. 23.—[*Special.*]—Mr. James Gregg, a resident of Webster, who has been hunting in the neighborhood of Lost Park, reports that in Craig Gulch he found the carcass of a freshly killed buffalo. The hide had been stripped from it, leaving the head and meat. The hide had been dragged along the trail in the direction of the Paper Mill Camp at Chase. Some steps should be taken, and at once, to place a deputy game warden in the Lost Park country, and have him take up his residence there. If some such steps are not taken, it will be but a short time till all the remaining buffalo, one by one, will be exterminated.

This is probably authentic, as the buffalo are known to range in Craig Gulch. It is to be hoped that this miscreant will be caught and an example made of him. If the authorities move quickly they can follow the trail of the hide and thus locate the killer. TESEEBY.

### Florida Quail.

TALLAHASSEE, Fla., Nov. 19.—The quail are abundant this year. On the 15th John A. Pearce and Geo. Beard killed eighty-one. Quail shooting was always good, but March 1, 1892, the close season began, and that and other causes have made the birds numerous. D. D. B.

## A FIRE-HUNT.

My experience at fire-hunting deer at night with a headlight is limited to one hunt, and the tale briefly told runs as follow:

We started late in the afternoon to go two or three miles away from home where the hunt was to commence. With me was a friend, a veteran of two wars, his face seamed and bronzed by the suns and winds of the Rio Grande in '59, and afterwards by the hardships and exposures of Civil War campaigns in Kentucky and Virginia. I was a boy of fifteen who could only follow blindly his leadership.

We reached the hunting ground, and when it grew dark my companion adjusted the lamp to his head and took the lead. Our route was through the woods along some old roads but little used, rather a wild country at that time and abounding in game. We rode slowly, and it soon became tedious to me, as I had neither lamp nor gun, and had no chance to join in the fun of shooting anything. Very soon I became tired, and although on horseback began to nod. A growing boy, living in the country, where exercise and open air are abundant, can generally sleep under any and all circumstances. After riding for two hours my friend stopped and dismounted and went out through the timber following something. He crept along and got some distance away. This was a good opportunity for me, so I slid off my horse, sat down with my back to a tree, and without ceremony went to sleep. I don't remember ever having so sweet a nap as that. Very soon the report of his gun waked me up. He came back directly and reported that he had shot at a panther but did not get it.

As he came toward me he looked quite weird and uncanny out there in the darkness. The light from his lamp sent its rays out into the deep recesses of the thick woods, making the tall forest trees to appear more majestic than ever, and the darkness and the shadows were emphasized. At 20yds. away one could not tell what the lamp rested upon. The bearer was completely obscured. Thus it is that the game is lured to its destruction. In the still watches of the night, when mankind—the arch enemy of all the animal kind—is supposed to be rapt in restful slumber, it beholds approaching from out the still mysterious darkness a something it cannot make out nor understand. As it comes slowly on the animal stands up straining its eyes and every sense to their utmost tension. It gazes and gazing wonders. Its curiosity leads to its destruction, for those eyes, wide opened in eager wonder present to the hunter a shining mark. Like balls of fire or like shining gems, they stand out in bold relief from a dark background.

We journeyed on after that shot for several hours without encountering anything worth mentioning. We sighted game several times, but killed nothing. Finally we left the timber and entered the prairie. I had long since become useless to him as company, for I was asleep half of the time. Soon after entering the prairie he got a good shot at a deer and crippled it badly, we could see it staggering about in the light of the lamp, but it got away. He was shooting with a shotgun, and as is too often the case with this weapon, the game gets away crippled to die, a loss to the hunter.

This incident woke me thoroughly, and I now felt an interest in the hunt. Very soon he shot at another, and another—three deer in all with the same results. We crippled three, but not one could we get. It was now about 2 or 3 o'clock in the morning, when my friend concluded to draw off, as he, too, was tired and disgusted with his luck. We started for home, about five or six miles distant, and when we arrived there, lay down and got a little sleep. Not much, however, for soon after daylight my friend roused me and said we must return and get those deer. I didn't feel much like mounting a horse again, but I was ashamed to say so. I was tired and sore.

When we reached the place where we shot the last deer the night before and which now came first in our route, the dogs scenting around in the tall grass soon found the deer, which was badly wounded. We dispatched it with a rifle ball through the head. The game was dressed and placed on my brother's horse and we moved on hoping to secure the others as easily. When we came to the neighborhood of the next one and were looking about for it, we discovered another hunter busying himself after the same game. It was a large gray wolf and he must have been much interested in the search, for he did not see us until we were near him. My companion jumped from his horse and fired at him hastily, missing him. The wolf started for the timber about a mile away in the long swinging gallop common to them and I started in pursuit, riding a good horse. He didn't seem to expect pursuit, and for a while did not look back, and with his start of 200yds. the race for the timber was exciting. When half way he did look and found I had gained on him so much that he changed his gait to one meaning business. He evidently realized that the race was now one of life and death to him and struck out with his best gait. Both horse and wolf warmed to the work. Glancing back I saw close up to the rear my old friend, his broad sombrero bent by the breeze, sixshooter in hand, and fire in his eye. The dogs, wild with the excitement of the chase, were close at our heels and eager to close in. When less than 100yds. from the timber I passed the wolf, dropped my rifle and fired at very short range. The wolf turned over at the discharge of the gun though it is probable I missed him. I have seen these scamps when closely pursued and shot at or roped at to turn over and run the other way.

I passed him, but as soon as I could recover my horse I turned and saw him making for the timber again, this time accompanied by my friend, who was playing on him with his six-shooter. Both of our muzzleloading rifles were empty and useless. Some of the pistol balls took effect in the wolf, but for all that he would have left us if it hadn't have been for our faithful dogs. They came up to the charge in fine style as soon as the wolf arose after my shot and took hold of him. They could not hold him, however, for the wolf's fangs were sharp and his snapping jaws sounded like the clacking of machinery. They would all bunch up together in battle, but the wolf would throw them off and spring away only to be seized again. At such times as they were momentarily separated, my companion would get in a shot with his pistol. The danger of hitting the dogs prevented him from doing better shooting. In the excitement we were all on the ground together, and our presence and encouraging yells gave courage to the dogs. The wolf became weakened from the pistol balls, one of which wounded him badly, but was still far from being whipped. My companion's pistol became empty, and it too was useless to us, for there was no time for loading muzzleloading arms. I seized a club to help the dogs, for, like all boys I was very fond of my dogs and hated to stand by and see the fine fellows used up by this skulking rascal. Before this fight my brother and I had believed them invincible.

My companion called on me to stand back, and drawing from its scabbard his heavy hunting knife, took it by the point and with a quick dexterous movement threw it at the wolf, a distance of twenty feet. The knife entered the fleshy part of the hind leg, went through and cut its way out. This weakened the wolf still more, and all of us, men, dogs and wolf, were brought to bay. The wolf's courage was that of desperation, and he looked like he was desperate enough to do anything. My friend again took up the knife and made another throw. This time his aim was perfect. The blade went straight through the animal's heart. The despairing wolf seized the handle with his teeth, rolled over and was dead.

Looking about for our horses, which had been forgotten in the excitement of the fight, we saw them going across the prairie, just rounding a point nearly two miles away. There was no alternative for us but to undertake the return on foot, and when just within sight of home we met a servant with the runaway horses.

## ADIRONDACK DEER HUNTING.

*Editor Forest and Stream:*

The season for deer hunting in New York State which opened Aug. 15, closed Nov. 1, and after to-day venison can not be legally had in possession. It appears to be universally conceded among sportsmen who frequent the Adirondack region, that deer have thus far increased rather than decreased in numbers under the existing protective laws, but it is also admitted that this gratifying state of things can not long continue, unless there are more strenuous legislative enactments or more rigid enforcement of the present statutes. While it is probably a fact that there are more deer in the Adirondack wilderness now than there were ten, fifteen, or even twenty years ago, it is equally true that the number of hunters is yearly on the increase, and at a rate with which the game can not keep pace. It is believed that there were five or more deer hunters in the wilderness during the past season, where there was one five years ago and ten this year where there was one ten years ago. Of course this means a very great increase in the number of deer killed, and it is feared the cervine animals can not multiply rapidly enough to fully replenish the stock.

In view of these facts the sentiment is rapidly gaining ground among sportsmen, and guides as well, that some steps should be taken to further protect the does, and many unhesitatingly declare in favor of the passage of an act prohibiting killing them at any time. The advisability of the adoption of such a measure has been discussed before, in fact, no longer ago than last winter, but the wisdom of it has never been seen as clearly or acknowledged as generally as at the present time, with with theseason's record of does killed at hand for reference. The record shows, as is always the case, that the percentage of does killed during the floating or jacking season was far greater than bucks, so much so that some of the hunters who have hitherto earnestly advocated that mode of hunting are now in favor of prohibiting it. Furthermore, everyone concedes that there are very many deer wounded, presumably mostly does, that escape the jack hunter only to die in the woods. The record further shows that during the balance of the open season fully as many does as bucks were killed.

The new law which limits the hounding season to the month between Sept. 10 and Oct. 11 is also the subject of much adverse criticism on the part of deer hunters. It is argued that under this arrangement the season is neither advantageous for the deer nor the hunters. The deer are not in prime condition until later in the fall, and they make long and often-times eccentric runs, being very reluctant to take to the water. Many believe that it would be better to open the hounding season Oct. 1 and close it Oct. 20, or make the dates even later than that. Probably dates opening the season the middle of October and closing it Nov. 1 or later, would be fully as satisfactory as the present. Any one who has had experience hunting deer with dogs knows that the animals will follow their runways more closely and take to the water more readily in October than in September, and the percentage of bucks killed is larger.

Many experienced hunters are in favor of doing away with hounding as wel as floating, claiming that with both abolished and the other restrictions regarding shooting provided for in the existing laws rigidly enforced, the deer would multiply so rapidly as to afford excellent returns for more legitimate and sportsmanlike methods of hunting within a very few years. There are very few hunters who would not prefer to watch on a pond or stream for a daylight shot at a deer, if the animals were so numerous as to render the chance of getting one highly probable, to floating or hounding. And still-hunting, which means taking the deer on their own grounds and pitting one's own intelligence and skill against their instinct, is the fairest and most exciting sport of all when there is game enough to warrant one in trying it. When watching or still-hunting the hunter can more readily determine whether the deer is a doe or a buck before he shoots than he can when floating or even when hunting with dogs, although it is not always a difficult thing to decide under the latter method.

No complaint has been heard concerning the clause in the new law restricting the number of deer which a person can kill to two instead of three, and it is believed to be a wise provision.

There is good reasan to believe that hundreds of deer were killed in the wilderness last winter for use in the numerous lumber camps and in the camps of the laborers employed in the construction of the Adirondack & St. Lawrence Railroad. It is said on good authority that 50 were killed by the men in one lumber camp between Forestport and North Lake. According to reports received from the Adirondacks there have been other flagrant violations of the game laws during the year, and it is believed that a special game protector should be appointed for work in that region who is active, fearless and thoroughly acquainted with the country. Portsa.

Utica, N. Y., Nov. 15.

## PATTERN AND PENETRATION.

*Editor Forest and Stream:*

Some recent experiments conducted by me, showed that when two shells were loaded (one with black and the other with nitro powder), so as to be equal in penetration, the nitro powder made a considerably closer pattern. This result is accounted for by the theory that with the nitro powder there was less pressure against the charge, at the time it left the muzzle of the gun, than with the black powder. It is doubtless a fact that the nitro powder did not make so large a volume of gas as the black, but made it instantaneously, and from the time the charge began to move, the pressure began to decrease, owing to increased room for expansion, and the absorption of heat by the gun barrel, while the black powder, no doubt continued to burn and generate gas during the entire passage of the charge from breech to muzzle, and if the generation of gas were more rapid than the increase of room for expansion, the pressure was greater at the final exit of the charge than at any other time. The theory that the pattern is very much modified by the pressure at the instant the charge leaves the gun, is supported by the well-known fact that heavy charges of powder make the shot scatter, and the scattering is partly caused by the rear shot pushing against the forward ones, and glancing aside from them, after they are no longer confined by the sides of the barrel. If the preesure ceased entirely before the charge reached the muzzle, and there was no friction between the shot and the sides of the barrel, would they scatter at all? No doubt they would for so long as they remained in a body they would compress the air in front of them, and finding less resistance at the sides would glance away from the compressed air in front. Can you cite me to any pressure tests, where pressure gauges were used both at the breech and near the muzzle, and if so, what difference in pressure was noted? Is it supposed that the shot thrown from a choke-bored gun cross their lines of flight? That is would the pellets that came out along the right-hand side of the barrel be found at the left-hand side of the pattern and vica versa? It is well-known that the different pellets of a charge are thrown with irregular force. Some will barely bury themselves in a board while other will penetrate it a quarter of an inch. What part of the charge did the weak pellets occupy and why did they not travel as fast as the others when they all left the gun with the same velocity? While writing the quertion it occurs to me that it may be caused, if there is nigh pressure at the muzzle of the gun, by the rear pellets pushing against the front ones so as to impart a part of their force to the front ones and lose a corresponding portion of their own. This, however, is not in accordance with the theory that the rear pellets glance aside from the front ones, for in that case the weak pellets would be found around the outside of the pattern, when as a fact they are found all through it. O. H. HAMPTON.

WILLIAMSBURG, Ind.

## BOSTON AND MAINE.

GOV. W. E. RUSSELL is a successful sportsman, as well as a politician who cannot be beaten. As soon as the recent exciting campaign in the Bay State was over, and it was known that the Governor had run many thousand ahead of his ticket and was elected for the third time, he hies himself down to Maine for rest and recuperation. The Governor, with Gen. Dalton and Col. Harry Hastings, has been spending a few days at Col. John E. Thayer's new camps at B. Pond, a few miles from Umbagog Lake. Did the Governor shoot a deer? is the question. If he did not he has the credit of it all the same.

Speaking of the increase in deer in Maine, Commissioner Henry C. Stanley says that it is a perfect wonder. He never begun to see them so plenty. His son, while out hunting one day this fall, actually near the village of Dixfield, shot one and saw eight or nine others.

Things are frequently put on ice, and more especially those nice pieces of venison that are coming from Maine now and then; the kind donations of friends. But other things get on ice. Our friend B. (he would be chagrined if I should give his full name to the FOREST AND STREAM) left some of his wearing apparel at camp last fall. The other day he wrote a letter to his guide, who was going up to see if matters were all right, to send so and so out to him by express. In due season the express brought a package. The boys in the office of a friend in Boston (B. lives over in Cambridge) saw where the package came from. It looked like venison, it smelled like venison, and there was some blood, or what looked like blood, on the package. At once they carried the package to a restaurant and asked privilege of putting it on ice till B. came over. Soon the owner came, in answer to the telephone. The package was brought and opened. It contained a pair of B.'s boots.

Boston Thanksgiving gunners did not have remarkable luck, so far as reported. The day was fine enough, but somehow the best of the shooting in this State has been absorbed, and Thanksgiving did not yield a great many birds. Quail shooting, though pretty fair in some sections at the opening of the season, seems to have been pretty badly run over, or at least so the Thanksgiving gunners report. Some of the Chamber of Commerce boys were out, but they do not mention a respectable bag in a single instance. L. W. DePass, assistant secretary of that institution, and Mr. Mackintosh, doorkeeper, planned a shooting trip over to Canton. They enlisted the sympathies of E. M. Gillam, of the Boston *Advertiser*, with his celebrated dog, but they brought back no birds, though having several very poor shots at grouse.

Mr. A. L. Finney, with Henry Savage of the cotton trade, and his friend Mr. P. W. Gifford, with Mitchel Wing of soap fame, have been down to East Sandwich on a hunt, and they have had an excellent time with much good sport. East Sandwich lies on Cape Cod, between Sandwich and Barnstable, and it is a good location for shooting; that is, if one has permission to shoot. It seems that of late years gunning has become such a nuisance to the residents and farmers of East Sandwich that many of them have posted their lands, and have generally kept hunters away. This has been very favorable to the multiplication of quail and other game. Now it happens that Mr. Mitchel Wing's father owns a farm of 160 acres in about the best shooting section of that town, and Mr. Gifford and Mr. Finney received an invitation to shoot there. They were quartered at the farmhouse for nearly two weeks. They had good dogs and the quail shooting was "simply fine," they say. The first day out they got only one, not being "on to" the hunting in that section. But each day after, that they tried for quail, they got from five to fifteen birds. The duck shooting was fine also. There are numerous creeks there into which the ducks come to feed. They got black ducks simply by lying in ambush near these creeks and bays, shooting some very fine birds—one, Mr. Finney says, was the heaviest black duck he ever saw. They also obtained almost every sort of saltwater duck to be obtained at this season of the year. They even bagged green-winged teal; though unusually late for those birds. But the game that surprised them the most was the foxes. They actually "ran on to" five of these fellows at different times during their stay. The farmers say that foxes are increasing very rapidly there, and are becoming a great pest; so much so that they are obliged to resort to trapping them. The hunters were not armed with rifles, and the foxes were careful to keep out of shotgun range, especially loaded with bird shot. Mr. Finney says that when he goes again he shall take a couple of hounds and a rifle along. The inhabitants tell him good stories of driving foxes down on to sandy points and shooting them. SPECIAL.

## NEW YORK ASSOCIATION.

AT the Syracuse meeting of the executive committee, the delegates reported on the working of the present law in their localities, the game protectors, and game and fish interests. Some of these reports were given last week; others follow:

### Leather Stocking Game Club.

G. P. MATTISON, of Oswego—For over forty years I have taken a great deal of interest in the protection of fish and game. I have studied the game laws up to the present time, and in our section, in the locality of Oswego, the present working of the game law is very satisfactory. We have had for the past twelve months more protection than ever before, and our game protector is doing good work, but there is a great deal more for him to do. A good deal has been said about amending the game law. I think that since the game law has been understood in this State it has done excellent service, and I do not approve of amending it. It has been amended and worked over until I fear that the gentleman who introduced the law would not recognize it. We have all the protection we need, and I would not be in favor of offering an amendment to the present law. I do not think that I would be in favor, as is my friend from Lyons, of making the season closed from Jan. 1. The open season should commence early in November and close about the first of February. If the protectors of this State would see to enforcing such an amendment, of course I would be in favor of it, but it is of minor importance in my opinion.

Our protector has done marvelous work. He has prosecuted some cases, convicted some offenders and collected some fines. I sincerely believe in the prosecution of violators, and making them pay a fine.

My friend Mowry claims for the Onondaga Sportsmen's Club the honor of doing the most work toward the protection of the game and fish in this State, or at least in this part of the State. While I have always had a great regard for his advice, yet I beg leave to differ. Our club was organized in 1860 and we protected game and fish long before his club was organized. I myself have been to a great deal of expense to have the fish and game laws printed and given to the people who were interested in hunting and fishing, so that they might know just what the law was, and thus protect the game and fish. I am willing that the Onondaga Club should have its share of the credit, but I am not willing that they should go ahead of us. But for all we have done much, still we are going to keep on doing more. I do not think that we want any more amendments, but only live up to the laws we have and see that they are enforced.

### Honeoye Falls Anglers' Association.

AARON MATHER, of Canandaigua—As I do more fishing than hunting, I shall speak more particularly of the fishing. Most of my fishing is done in Hemlock Lake. They commence fishing there as soon as the ice is out of the lake. The fishing is very extensive, and if the lake was properly looked after and this early fishing stopped we would have much better results. I avoided taking a bass out of the lake this year. Nets are set there and more protection is needed along this line. We have been catching a good many pickerel there, but these should also be more protected.

In regard to public sentiment there, the greater part of the citizens are in favor of game protection, especially on rabbits. As for the protector's work, there are four lakes along in a chain and the protector cannot look after all of them.

### Cheaper Fish Food Association.

F. J. AMSDEN, of Rochester—All that the Rochester Club has done in the line of work has come from the Syracuse clubs to us. We work up new organizations. We have started several, at Albion and other places. These organizations are determined to stop illegal fishing and shooting. The State organization has helped us by giving its strength and encouragement in this direction, and I believe it has an interest in us. I indorse what one of the speakers before me said in regard to the importance of prohibiting the transportation of birds from one county to another.

Public sentiment with us is growing. I want to say this for our game protector, Mr. Swartz, that he has been a fearless protector. He has done his work constantly, and in our fishing community there has not been so much fishing in years as there is to-day.

### Seth Green Club.

F. J. BENTON, of Penn Yan—I have fished and shot from my boyhood up. I am very much interested in the locality of Keuka Lake. I have lived there and been proprietor of a hotel for forty years, and I am one of the oldest sportsmen in the county. For the first twenty-three years that I lived there it was no trouble for an amateur to catch before breakfast, one, two or three dozen pickerel. One morning fifteen fishermen went out from my hotel, and when they came in to breakfast they had 175 salmon trout. Some weighed 12 and some 16lbs.

Keuka Lake is a great lake for trout. I know of trout being caught that weighed 29lbs. Ten years ago they ran from 15 to 16lbs., and last season 12lbs., and this year 16½lbs. Ten years ago the average fish weighed 10lbs., while this year the average fish caught did not weigh 2lbs. After the death of Mr. Parish we had no protector and have had none since until the State appointed one.

I have notified Game Protector Sheridan time and time again of nets being laid in the lake. I have lain nights and watched people set nets, and given him notice, but it was of no use. I have gone myself and taken seven and ten nets. People in former years would come and stop at the hotel and hire some one to row them around for a couple of hours and give them five dollars. Then likely enough when they got back they would be so well pleased that hey would give them another five. We could get no protection on the lake. We finally went to work with the Fish Commissioner. We called on Mr. Pond and he came up to our lake. I introduced him to the parties of the steamboat line, and the business men of the town and people that would be interested. He wanted to know what our game constable was. I said, "There is his gin mill." That man has got that lake too dead to bury.

He has cases there that he cannot prosecute. I am a delegate here to obtain your help in the matter. A great many people came there and formed themselves into a club, and own a club house, and they come there and fish for ten days and two weeks and never catch a trout. I am sent here from the Seth Green Gun Club as a delegate. We want more protection.

Before I go home, I would like to offer an amendment for the protection of birds. I would suggest the opening and closing of all shooting for birds at the same time.

### Onondaga Anglers' Association.

WALTER S. MACGREGOR (in Mr. Loftie's absence)—In regard to the local protector, Mr. Hawn, I have this to say. Mr. Hawn has made an admirable protector. He has been fearless and indefatigable in his efforts to suppress all illegal fishing in this community. In the short time since he was appointed protector, by his fearlessness he has largely conquered the depredators on Oneida Lake. He has captured a large number of the nets and caught men in the act of using them, and has successfully prosecuted the depredators; and in that short period has so changed public sentiment that, while at first he worked at the peril of his life, to-day he has substantially driven out of the lake all the nets, and has caused many of the former depredators to cease and become honest citizens and gentlemen. The larger part of the information he has received of violations of the law comes from men who were once engaged in this business, but who now heartily aid him in his efforts to suppress all illegal fishing. Mr. Hawn was the first agent of the Anglers' Association to do its work, and that work was so efficiently done that we recommend him for an appointment to the Commissioners as a protector for this district. The record he has made entitles him to high honor and respect, and we congratulate the Commissioners and the Anglers' Association that so wise a choice was made, and that he has proved to be what we claimed. In regard to Mr. Jackson, I have this to say, he has captured a great many nets in the past two years, and has caught a great many persons in the illegal use of nets, and has prosecuted them and either recovered or forced judgment settlements to be made. With the exception of one or two summer resorts on Onondaga Lake, which persist in violating the laws by using nets to supply their tables with fish, the law upon Onondaga Lake is well enforced. I have this to say, that as the result of labors of the Anglers' Association and through its agencies, the fishing upon Onondaga Lake for the past two and three years has been vastly increased, so that almost anybody who goes there now to fish acknowledges that more fish and larger fish have been caught in the past few seasons than for years past, and a public sentiment has been created that the work has been good work and has brought golden fruits.

I hear gentlemen complain that they get no protection in their vicinity. I wish to say to you, Mr. Chairman, that if the shooters wish to see more game in their community they must organize to assist the protector by giving him information of violations of the law and by seeing to it that the offenders are prosecuted. The efforts of the Anglers' Association have been to aid the protector with their own funds by securing evidence of illegal fishing, catching the men, and prosecuting them strongly and fearlessly without regard to social or business position.

It has been unfortunately true for years that the State Association has devoted its time and money not to protection, but simply to trap-shooting, and nothing was done to preserve the game and fish in this State; but, I tell you gentlemen, the time has come when we must be united and organized to preserve both game and fish.

I desire to call your attention to another matter. There has been a sentiment throughout the country against persons or associations acquiring exclusive rights of hunting and fishing, and I believe it is the duty of this association to correct this false impression and sentiment. Streams cannot be stocked with fish except by the efforts of individuals and clubs, which provide funds for that purpose, and when they have spent that money to preserve the game and fish they are entitled to enjoy it and keep it protected. A private club acquiring the exclusive right to fish and game upon a stream and which stocks it with fish, not only benefits itself but the whole community through the entire course of the stream and its branches, because the fish so planted do not all stay within the preserve, but settle down through the whole stream and its branches, so that everybody who has a right to fish on that stream or upon any portion of the stream not preserved receives the benefits. If you have ever observed the reports in the sporting journals for the past two or three years you will have observed that there has been a great increase reported both in quality and size of fish caught, and this is proof positive of the benefits received through the clubs.

In regard to prosecutions in a great many communities the people have not come to see the importance of preserving our game and food fish and are reluctant to convict offenders in criminal prosecutions. I would advise private persons and associations therefore not to rely on criminal proceedings, but to bring civil actions to recover penalties against the violators, force to judgment and press to collect. Get judgments against the parties for a full amount of the damage and costs and get them to pay you right then. Do not depend too much upon your district attorneys; they are as a rule politicians who care nothing for protection of game and fish; but organize in your community, secure evidence, make offenders pay the penalty and so aid your State authorities,

The people are just beginning to recognize that if fish and game are to be perpetuated in this State the season of fishing and shooting must be limited to a short season so that the fish and birds may breed and increase in numbers.

As to the use of nets in the Seneca River, in Seneca, Wayne and Cayuga counties. No nets under any pretense whatever ought to be allowed in the fresh-water streams, lakes or rivers in this State.

### Black River Fish and Game Protective Assoc'n.

W. E. WALCOTT, of Utica—It is some twenty years since I first visited the Adirondacks, but since then I have been there two, three and even four times a year. I am a member of the Black River Club, so I feel somewhat qualified to speak on this subject. A great deal has been said about the wildernesses of the Adirondacks as a fishing and hunting resort. It is actually becoming a more popular resort every year. The lumber companies, pulp mills and saw mills are devastating the wilderness, and to a degree which is appalling to the lover of the woods. A century will be needed to replace the timber when it has once been removed. [Mr. Walcott read from an advance proof his report on Adirondack deer written for FOREST AND STREAM, and printed to-day.]

### Caledonia Rod and Gun Club.

JAMES ANNIN, JR.—I am sent here by our club to speak more especially on the rabbit question. The rabbits in our section are unprotected. We have some birds left and some rabbits, but the law has no closed season on rabbits. The majority of our birds are killed by the pothunter and mostly by fellows who are out shooting rabbits during the winter, when they come across the partridges. For my part, I should like to see the rabbit season open and close with the partridge. The old law used to allow it to run on another month after the partridge season was closed. There is more shooting in the month of January than before. We see a gang of fellows out shooting all through the month of January.

### Special Legislation.

SECRETARY DOYLE, of the Fish Commission—Regarding this amendment permitting the setting of nets in Seneca River, it was placed in the bill through the personal solicitation of Senator Hunter, of that district, and the only way in which we can hope to remedy the matter is through Senator Hunter, as he will again be in the Legislature the coming season. In relation to the law which permits the using of batteries in Sodus Bay, I would say that this amendment was obtained through the personal solicitation of Senator Richardson. The only way to remedy these matters is through the personal work of the members with the gentlemen who have secured the amendments of the bill.

## TENNESSEE IS WAKING UP.

CHATTANOOGA, Tenn., Nov. 19.—*Editor Forest and Stream:* Tennessee sportsmen are waking up to the importance of protecting fish and game.

The Chattanooga Fish and Game Protective Association has been formed, and at the first meeting fifty-two prominent citizens were enrolled as members.

This is the outcome of a series of articles in the Chattanooga *Times*, supplemented by strong editorials, calling attention to the prevalence of the nefarious and pernicious habit of netting quail and the general non-observance of the close seasons.

Live birds have been shipped by thousands from this section, and the consequence is that they have now become scarce. Certain unscrupulous dealers when caught with live birds in their possession evade the law by proving, at least to their own satisfaction, that the birds were caught in Georgia.

It is a well-known fact that many of these birds are used in the field trials at various points, and Tennessee sportsmen are utterly disgusted, to put it mildly, at those so-called sportsmen who advertise for live birds, as they must know the result of netting in any section.

The new bill will strike directly at the root of the evil, and it will in future be an expensive matter for any person, express company or railway, to have live birds in their possession at any time.

The new organization proposes to form a combination of ten or twelve counties, to revise the law of trespass, and put forward a dog tax law, to make dogs "property" in the eyes of the law, to secure much needed legislation regarding the close seasons, killing and selling of fish and game, and for other purposes.

At an election of officers F. I. Stone was made President, Robert Pritchard Vice-President, and F. H. Woodworth Secretary and Treasurer.

The great interest manifested in the movement is made apparent by the number of members enrolled at the first meeting. At the next meeting the membership will be greatly increased and surrounding towns and cities will be represented. Tennessee sportsmen intend to preserve the fish and game and are going the right away to work to do it.

D. G. CHARLES.

### Tennessee Fish and Game Interests.

Here are some good words by the editor of the Dayton, Tenn., *Leader:*

"It has probably not occurred to many of our readers that our game and fish are rapidly becoming a thing of the past. If there is not something done, and that quickly, in the way of lawmaking protecting both our game and fish, they will be exterminated. In the way of a fish law, all netting regardless of mesh or kinds of fish caught, and all gigging and seining, except for bait, must be abolished. The law against using explosives in fishing must be enforced. In fact fishing must be limited to hook and line only. When this kind of a law is passed and rigidly enforced—say with a fine of $100 for each offence, one-half to go to the prosecutor—our fish will naturally replenish, and a good day's fishing with hook and line will again be within our reach.

"Game must be still more protected. Our deer are almost extinct now and they ought to be given a five years' rest—with a very large fine for killing or having in possession, either dead or alive, within this period. Wild turkeys would get along very well with spring and summer protection. Ducks should not be shot between the months of January and November. Ruffed grouse (pheasants) should be protected ten months in the year. The quail is our main stay. Its flesh fairly rivals the woodcock and its pursuit with gun and dog is the finest sport we have; but it too, with all of its cunning and thrifty habits, is becoming scarce. Protect the quail, gentlemen of the legislature, whatever you do. Give it protection from the net, and the small boy's trap, the whole year around and only allow it to be fairly shot during the months of November and December of each year. Make it $100 fine to break the law, and one-half to the informer, and we will have a game law that is of some value."

## CHICAGO AND THE WEST.

*[By a Staff Correspondent.]*

CHICAGO, Nov. 21.—Of course everybody has a notion that he knows where quail are thicker than they are anywhere else. Several of us were speaking in this wise last night. Mr. Leo Hamline thought there were more quail at Beeville, Texas, than any place else on earth. "You can shoot a week on one hillside there," said he, "and when you quit there'll be more quail there than when you started." Mr. Hamline was asked to explain this, but was lost in the general discussion. A bystander remarked that he knew a place where there were a good many quail. "Of course," said he, "I don't know whether they are as thick as they are at Beeville or not, but there were a good many. I went out on a farm to shoot a little while, and unhitched my horse to put it up in the barn, but the horse stepped on and killed seven quail while I was leading him over. That was before I got to shooting at all. Say, I had ——"

I don't see why it is that some folks love to pervert the truth.

### The Quail's Retained Scent.

My friend, Mr. Donald, relates to me a singular incident about the apparent faculty possessed by the quail of retaining the scent. "I was sitting on a log," said he, "and my good dog was lying beside me, when my friends put up a bunch of birds some distance further on in the wood. They flew straight toward me, and one lit on a heap of dry leaves not 10ft. from me, and hardly that far from the dog. I and the dog were not moving at the time, and the dog did not see the bird alight. The quail lay there flat on the leaves, with his wings stretched wide out. It had not been shot at at all, but it lay there with its wings wide open. Its little bead-like eye was fixed straight on mine, and it saw me well enough, but never moved a feather. I just concluded I would watch and see what would happen. I think we all sat there for five or maybe ten minutes, and the dog never paid the least attention to the quail, which lay within 10ft. of him. It was a still day, no wind one way or the other. I presume such a situation would not occur again in a thousand years. Certainly the dog never got the scent of that quail. I could hardly find the bird again after I turned my head for a moment, it lay so still, spread out on the leaves. At length I put it up and missed it, which also might not happen again in a thousand years, of course. You never saw such a surprised dog as that one, when the quail got up under his nose. This explained to me much of the mysterious disappearance of scattered quail. You can't see them; no dog can scent them until after they begin to move again. My dog had a good nose, and I had killed plenty of quail over his points that same day."

Bird dogs are in demand now, and about now almost every Chicago shooter resolves that he would keep a dog, if it wasn't so much bother and expense. 'I've got three dogs," said one gentleman the other evening, discussing this question; "one is down in Indiana, and two are at Corpus Christi, Texas. It's cheaper to go down to Corpus Christi to your dog than it is to keep a dog in Chicago."

"I think," said Billy, meditatively, "that the best sort of a dog for city use would be a cold-storage dog, one that you could freeze up when you got through using him, and take out again when you next needed him. You wouldn't have to feed that kind of a dog, and I don't know as you'd have to tip a baggage car man anything for carrying him. I don't know of any traffic regulation on a froze dog, do you, and say, they couldn't collect city license on an apparent corpse in a freezer, could they? You can keep bait that way, and I don't see why it wouldn't be a good idea with a dog. Say, once I had—"

### Saved by His Decoys.

The first cold wave caught the late mallard shooters who were winding up the season on Horicon marsh, and came near leaving a fatality to mark the annals of that club. Maj. Hanley, one of the members, had up with him a friend, Mr. R. M. Rogers, of this city, who went out on the marsh without a pusher. In the evening Mr. Rogers found himself in that part of the marsh known as the "Second channel," only a half mile or so from the club house, and in full sight of it. The storm came from the north, and the wind was so strong that, work as he might, Mr. Rogers could not push his boat up against it. He could have drifted ahead of the wind down to the dam, or indeed, clear into Horicon town, but this for some reason he did not wish or was unable to undertake. Night came on and found him on the marsh, and there he stayed till morning, ice forming in the mean time an inch thick. This was an experience just short of Mr. R. B. Organ's terrible experience one night last year on a Minnesota lake. Mr. Rogers had with him two live duck decoys, and to these attributes his delivery. He buttoned both ducks up tight under his coat, and their warmth helped him out amazingly. This is the most novel foot-warmer and pocket stove yet on record, and the facts should raise live decoys in the estimation of those hunters who go on wild grounds in wintry weather. Mr. Rogers is of a romantic turn of mind, and they do say it is a good thing to hear him tell the story of his night on the marsh.

"So long as the moon was up," said he, "I got along, for the moon sort of looked like a fire, though not a very warm one; but when the moon sank, and I bade farewell to her silvern disk passing behind the distant ridge of hills, my heart sank also in my bosom. I hugged my ducks convulsively to my bosom till they squawked in sympathy, and a tear stood in my eye. It stood there till morning, because it was froze on. Meantime I could see the gleaming light from the club house window, and could picture forth the scene of revelry within. Every time I thought of that I hugged the ducks again. I would have been very lonesome without the ducks, but my experience teaches me that four would have been better than two."

It is a remarkably easy thing to get lost on a marsh after dark, especially when the channels are involved and obscure as they are on this one. How interminably long the hours must seem to a man unsheltered, in an open boat, and with the chill of the blood which follows evening and the cooling down after a day with gun or paddle, is something, I presume, on which no one can speak who has not gone through the unwelcome experience. Mr. Rogers is to be congratulated upon his presence of mind, and also upon the presence of his live ducks.

Singularly enough, as I write the above there lies before me the newspaper account of an incident similar in some respects and more serious. In the blizzard which raged in Idaho last Monday, little Nellie Logan, of Hillside, only six years old, was lost while on the way to school. Search parties were out for three days. They found Nellie's dog, a terrier, frozen stiff. Yesterday they found the child in a sheep shed, nestled down among the sheep, whose warmth had saved her life through all the cold of the long days and nights.

By the way, speaking of Mr. Holden reminds one that that gentleman is a persecuted man, and the scape goat for the sins of others. Some time ago the compiler of a sportsman's guide wrote in to find out the name of the secretary of the Chicago Shooting Club, and some one, probably the real secretary, replied, giving Mr. Holden's name and address. Since then Mr. Holden has been receiving all sorts of literature through the mails, running from a request for the names and addresses of all the club members to a proposition to acquire an ownership in a setter pup. "This thing has got to stop," said he the other morning, excitedly, "or I'm liable to have to move. The house is beginning to think I don't do, and never did anything but shoot, or monkey around in this shooting business. Now, I'm not secretary of this blank club at all, and I only wish I could catch the fellow who said I was." Nevertheless this did not prevent his receiving the following letter, which I hope will be given literatim:

HARLAN, Iowa, Oct. 22.—*Mr. Geo. Holden:* DEAR SIR—Last spring I got in New Orleans, two black, white face, ringtail monkeys, and after I got through advertising with them, I sold them to Rev. J. H. Hummert, of Earling, Ia. Now he wants to sell them, they are coal black except under the chin, and white faces. Write him and tell him what you will give him for them. They are a fine pair, or were when I let them go. Please write him at once. Yours truly, W. W. WHEELER.

"Now, what do you think of that?" said Mr. Holden, brandishing this epistle. Wants me to buy two ringtailed monkeys, whether I want 'em or not! I ain't lost no monkeys, never heard of these monkeys, don't want no monkeys, never said a word to anybody about buying no monkeys, and what's more, I'm not going to buy any either. I think it's pretty near the last straw, that's what I think, when a fellow that ain't secretary gets held up to buy two ring-tailed monkeys with white faces, just because he is secretary, when he isn't. I want it stopped, that's all!"

### Death in the Field.

On Nov. 11 Richard Perkins, while hunting west of Chelsea, Wis., ran into a set-gun and was shot by it. When the help party got to him he was dead and frozen stiff. A hunter living in a shanty near by set out the gun. He decamped, and was pursued hotly at last accounts.

The despatches of this morning contain the following brief chronicle of still another sad incident in the hunting field: "WEST SUPERIOR, Wis., Nov. 18.—Henry Hauga, a Superior jeweler, was shot and instantly killed last night by Frederick Rasmessen while hunting near Dedham. The coroner's jury this afternoon rendered a verdict of accidental death. Just a year ago Boyd Stiffler was killed within a few rods of the place under similar circumstances."

### Some Animals.

Some time ago "Jim Corbett," one of the sea lions of Lincoln Park, this city, escaped and made his way to Lake Michigan. Later he made his appearance at Jones's Island, near Milwaukee, about eighty miles from Chicago. A party of Milwaukee newspaper men tried in vain this week to capture Jim with a lariat.

An African lion broke out of its cage in the winter quarters of the W. B. Reynolds circus at Rockford, Ill., on Nov. 16, and killed a Shetland pony before it could be secured and caged again.

R. A. Turtle has in his shop for mounting two bald eagles, both killed within a couple of weeks and within a short distance of Chicago. One was shot by Sam Booth in the sand hills near Grand Calumet Club, below the city. The other was killed by an employe of the water works at Evanston, on the lake shore north of town. This bird was seen crossing the lake, working its way against the wind at the time of the heavy storm, was two hours going apparently a couple of miles. It was much exhausted and was easily killed after it had lit in a tree near the water. On examination of this bird a singular state of affairs was disclosed. Its feet, thighs, neck and throat were found stuck full of porcupine quills. The roof of the mouth and the throat were ulcerated from the long presence of the quills, and the bird was in anything but an enviable condition. This is the only instance of the kind of which I ever heard.

E. HOUGH.

175 MONROE STREET, Chicago.

### The Sodus Bay Batteries.

IT has come to the knowledge of a local sportsman that just at the close of the last session of the Legislature last spring an amendment was slyly put into the game laws of the State permitting the killing of duck by battery in Sodus Bay. The only pleasant phase of this abominable provision is that it applies only to the waters of Sodus Bay, for the reason that nowhere else in the State could people be found who were willing to ask for or consent to such a privilege. People living in that vicinity, as well as real sportsmen all over the State, are very greatly incensed, and call loudly for the repeal of this obnoxious provision. What adds to the anger of the people in Sodus and vicinity is the statement made with the apparent force of truth, that an official of the Pennsylvania Railroad is responsible for this unsportsmanlike and disgraceful provision being upon our statute books merely to gratify the one official who chances to have a cottage on the bay.—*Rochester Union, Nov. 25.*

## VELOCITY OF SHOT.

BERLIN, Germany, Nov. 9.—*Editor Forest and Stream:* Mr. Noel Money's opinion, as expressed in his communication to the FOREST AND STREAM of Oct. 27, and pertaining to the availability of the chronograph for measuring the velocity of shot, is quite to the point. He mentions as an interesting fact that the velocity of shot discharged from a cold gun is lower than that from a shot fired from a warm gun, and wishes to know if any one can explain the cause for this phenomena.

Velocity and gas pressure are governed to a great extent by the tension created by the gases in the barrel. Cold barrels have a tendency to produce a chilling effect on the gases and to diminish the tension in the barrel. High tension generally is followed by a comparative high velocity and high gas pressure if we reverse the order of things, and as a sign of a high tension may be considered a heavy recoil.

Velocity is penetration, and if the former is below the standard figures the latter will surely prove insufficient. All gunpowders, especially the nitrous compounds, will produce a lower velocity in cold weather than in a higher temperature. Hence sportsmen in this country who are acquainted with these laws of nature increase their powder charges during the cold season.

If a certain charge of powder gives a satisfactory velocity and penetration in summer or as long as Jack Frost has not made his appearance, this charge must be increased a little less than 10 per cent. of its weight during cold weather. Such an increase is quite sufficient to balance the influence of a low temperature upon all gunpowders. Dampness also has a detrimental effect on most explosives. The effect of moisture in the atmospheric air should also be taken in consideration by the gunner. Some powders absorb less moisture than others. Black powder, for instance, is less affected by moisture than many of the nitrous compounds. Among the latter class the Walsrode smokeless powder shows the nearest approach in this respect to black powder.

ARMIN TENNER.

## WOUNDED DEER.

BREWER, Me., Nov. 19.—I am glad to see that Mr. Darling writes on wounded deer. The best shot in the world cannot get every deer which he kills when still-hunting on bare ground. Having talked with those who together have killed thousands, I judge that if one secures three-fourths of those which are badly hit on bare ground without using a dog, he is doing well.

So many write of deer falling dead or "giving a convulsive spring, only to fall a lifeless mass, that many seem to believe that this is the proper thing for a well trained deer to do; but unfortunately most of the few it has been my lot to meet did not know what was expected of them. While I have seen a good many drop at the shot, they usually struggled some, and more than half of all I ever saw shot ran from ten to forty rods and often had to be shot twice or three times at that. I have seen a small deer go fully forty rods with one shoulder and whole foreleg smashed, and two forty-six to the pound round balls fairly through behind the shoulders. I have seen a large buck with a ball weighing nearly an ounce, which smashed the shoulder and passed fairly through the lower end of the heart, go 100yds.

Many deer which go off badly wounded, and which on snow would be recovered, cannot be followed on bare ground, and eventually recover. I have skinned those which had been shot years before, and have taken a rifle ball from a deer's shoulder which passed through it and was encysted near the skin. This same deer also had several ribs broken by coarse shot, several of which I took out which had passed clear through, lodging on the opposite side. As the rifle ball showed the creases plainly, it was certain that two separate shots had been fired, and probably with quite a long time between; but in spite of these wounds the deer was very fat and showed no sign of being injured. When one remembers how many men in the late war recovered from wounds which every one thought mortal, it is no wonder that many fairly hit deer escape, and that some recover from wounds which would prove fatal to others.

M. HARDY.

### A Good Retriever.

SYRACUSE, N. Y., Nov. 24.—Mr. John Venner, of Syracuse, tells me this story of what he saw during a recent hunting trip: It was at Little Sandy Pond, in Oswego county, and connected by water with Lake Ontario, when he winged a broadbill duck. The bird at once began to retreat by swimming toward the opposite side of the pond, a mile or more away, occasionally diving to elude further danger, but gradually approaching a still more serious situation. Two eagles saw the almost helpless wanderer, and at once resolved to secure a Thanksgiving dinner. They circled around and above the duck, intently watching its progress, occasionally dipping toward it as if to make a seizure, when the bird would dive to evade the talons which were set to make it a prisoner. As the bird paddled its way along, the attacks upon it became more and more frequent, as if to worry the duck, and for twenty minutes it would hardly show its head above the water before it was in imminent danger of being kidnapped. As often as it would go down it would bob up serenely, until the poor thing was half drowned, and at an unguarded moment one eagle seized it, lifted it from the water, and choosing to float along with the wind flew directly over the blind which Mr. Venner occupied, at an elevation beyond the reach of his gun. But he chanced a shot and was surprised and made happy by the fact that the eagle at once released its prey, which fell almost at his feet. The bird was still alive but badly lacerated and bloody as a consequence of its unnatural flight.

B.

### Adirondack Rabbits.

NORTHWOOD, N. Y., Nov. 27.—Few, very few, rabbits have been killed on bare ground this year about Northwood. I know of but one rabbit (*Lepus americanus*) killed that had the full brown coat. When the four inches of snow fell the ones that had hunted all the fall went out as usual, taking their dogs with them. A party of three men shot seven rabbits.

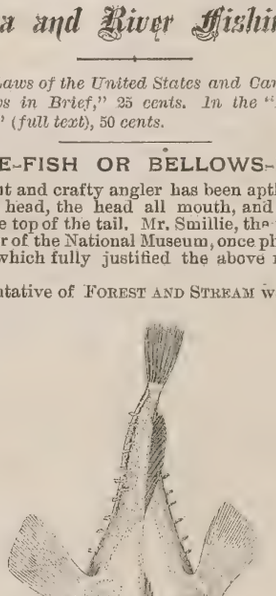
The hunters do not try to learn the regular runways of rabbits as they do of deer and foxes on bare ground, but wait until snow falls and then go tramping through the swamps until their dogs jump a rabbit, then they go on their back track till they get to the rabbit runway they crossed last, and stand there until they are most froze waiting for the game to come to them. He does sometimes, but if the dog is too fast or too slow the rabbit leads away to some other swamp or goes into some abandoned woodchuck hole.

The hunting of rabbits is kept up as long as snow lasts. The law would make little difference, except the rabbits are told of in the store if killed legally and nothing said if killed out of season. Traps are not used in their capture. The steel trap cuts a rabbit's leg nearly off at the first snap and the rabbit freed by its struggles to escape. The rabbits have not increased nor decreased perceptibly.

RAYMOND S. SPEARS.

### Without a Rival.

THE most perfect and best equipped passenger train in the country to-day is the famous F. F. V. Limited, which runs solid between Cincinnati, Washington and New York via the Chesapeake & Ohio Railway, aptly termed "the Rhine, the Alps and the battlefield line." This train is Pullman built, vestibuled throughout, lighted with electricity from headlight to rear platform, and heated with steam from the engine. The day coaches are of the latest design, luxuriously furnished, with comfortable seats, elegantly upholstered, separate toilet rooms and smoking apartment, and are looked after by polite and attentive porters—a feature that cannot be overlooked by ladies traveling alone. The Pullman Sleepers are entirely new and marvels of beauty, unrivaled in style, elegance and luxury; the dining cars, Pullman built, but owned and operated by the company, have established an enviable reputation, and altogether travelers by this train have every convenience, comfort and luxury that a modern hotel can furnish.—*Adv.*



# Sea and River Fishing.

*The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.*

## GOOSE-FISH OR BELLOWS-FISH.

THIS quaint and crafty angler has been aptly described as a fish all head, the head all mouth, and the mouth hollow to the top of the tail. Mr. Smillie, the well-known photographer of the National Museum, once photographed a specimen which fully justified the above rather loose description.

A representative of FOREST AND STREAM was attracted

GOOSEFISH, ANGLER, BELLOWSFISH, MONKFISH, FISHING FROG (*Lophius piscatorius*).

to Mr. Blackford's quarter of Fulton Market recently by the announcement of the arrival of a queer fish 6ft. long and with fishing rods on its head. Here is a picture of what he saw; the fish shrunk materially before the reporter came on the scene, but is nevertheless an interesting fellow and rejoices in many aliases.

Following it down the coast from Maine to North Carolina, it is recognized by fishermen as the monk-fish, goose-fish, bellows-fish, molligut, and allmouth. Its range extends to the other side of the Atlantic, where it appears as the angler, frog-fish, fishing frog, mermaid, etc., etc.

The goose-fish begins life in a veil-like gelatinous mass of a purplish or brownish color, in which the numerous eggs are thoroughly protected from birds and spawn-eating fish. The egg-envelope is about 1ft. in width and 30 or 40ft. long, and floats near the surface. It is a conspicuous object in the bays and sounds of New England in summer.

The young fish are occasionally taken at the surface, but usually descend to the deep waters, where their growth is rapid and the changes of shape remarkable. The adults attain to the length of 4ft. and weigh as much as 40lbs.

The goose-fish has little value in America as a food-fish, but it is prized by Italians and some people of Great Britain. It is an active destroyer of food fish, for whose capture it lies hidden on sandy bottoms, presumably with its curious rod-like cephalic spines bent forward, dangling their terminal tufts to attract the prey into its capacious mouth, where it is securely held by long and sharp slender teeth, as irresistible as the teeth of a threshing machine.

The shape of the fish and its adornment with tags and fringes of skin around the head and along the lower edge of the body give it great advantage in securing the prey, especially since its upper surface is colored in imitation of rocks and sea weeds. Geese, loons and ducks have been taken from the stomach of the goose-fish, which sometimes seizes birds at the surface, and mackerel, sculpins, sea-ravens, dog-fish, crabs, squids and lobsters have been observed in them by members of the U. S. Fish Commission. Perhaps the climax of a ravenous appetite was reached in those authentic records of gooose-fish having swallowed lobster-pot buoys and suffered capture by means of a boat anchor for a hook.

## ANGLING NOTES.

### Fish Breeding.

A FEW weeks ago *Land and Water* contained a two-column leading editorial article under the head of "Fish Breeding," which would surprise a very large number of people in this country if they could read it. In a word, the writer of the article gave fish breeding by artificial means a very, very black eye, and incidentally put a very, very small poultice on it to relieve the hurt. The article says, in brief, that the fish breeding season of 1892 is at hand, and angling clubs, boards of conservators, fishery proprietors, etc., will order ova or fry, for, as a rule, yearlings are too expensive a luxury. "We venture to think that, if intending purchasers are wise, they will keep their money; for if they make the ordinary purchase of so many thousands, and turn them out in the usual way, the result is always the same—nothing. We say most unhesitatingly that seventy-five per cent. of the money spent on fish breeding is money wasted." Where the writer gets his data for this rather startling assertion there is no evidence given. *Land and Water* is a very excellent organ for the racehorse interests and for hunting men; for I believe it speaks intelligently and with authority upon both subjects. As a medium for shooting men, too, it holds high rank, and its political articles, I presume, are sound, and its theatrical and society gossip satisfying to those interested in such matters. Its articles upon fishing as a pastime have not been given the prominence that is given to the same subject in other journals, but so far as they have gone I imagine they have satisfied the demands of the clientage of the paper. I think there was a time during the life of the late Frank Buckland when *Land and Water* took an active and intelligent interest in matters pertaining to fishculture. But why this journal should now be competent to speak oracularly upon the subject of artificial fishculture is not wholly clear to me, judging as best I can from reading the paper in the past, and more particularly from reading the very article under consideration. After due reflection it would really seem as if the editor of the fishculture department was away judging at a dog show, or riding to hounds, and the article had been written in his absence by the horse editor. Let me continue the eye-blacking: "But we always find persons who are ready to hatch a few ova, turn them out, and think of the great and wonderful things they have done for the stream, while in reality all they have done has been to waste a certain amount of money. * * * It cannot be too strongly impressed on those who think of turning down a few trout that they could employ their money better, and that the spasmodic attempts to improve our fisheries that are made from time to time by well-intentioned people are useless."

It will please be noticed that it is old Mr. Pessimist himself who pushes the pen in that paragraph, for he could not trust any of the "subs" to do the subject justice.

But there is more of it: "For instance, a man will say that he or his club have done so much for a stream; they have turned down 10,000 fry—that is to say, the produce of some fifteen trout. * * Out of the 10,000 in question it is doubtful if 100 ever reach the stage of yearlings; it is not mere death they have to dread" (probably at this point the snake editor is taking a hack at it, and besides "mere death" the poor fish dread chills and fever and indigestion). "It is the hundreds of enemies with which an uncultivated river abounds, the change of temperature, the difficulty of getting food and the struggles that beset them. If any one takes the trouble to look at the enormous number of fry and fish he can see in a stream, and the very small quantity of adult fish, he will begin to realize how utterly absurd it is to hope by simply turning down so many fry to really improve a river."

Mr. Editor, is there not an old nursery rhyme about a wiser and greater than Solomon arriving in town, and some of the outfit were in rags, and some struggled with jags—not Solomon, for he was a prohibitionist, or have I confused two rhymes? Anyway, when I read what I have last quoted the indications pointed to the arrival of a greater than Solomon, and that there was imminent danger of his giving himself away. I admit that a change of temperature to some fishes may prove more fatal than "mere death," but then there is Florida and the Riviera for such of them as can afford it, and the water can be heated or iced for such as cannot, and all things considered, I think in time artificially hatched fish will take kindly to water and live in it, even if it does not agree in temperature with what they think it should be. Perhaps the most amazing count in the indictment is the admission that "enormous numbers of fry" can be seen in these streams where it is absurd to plant them. Fishculture has not yet arrived at that degree of perfection where two-pound trout can be hatched from the egg; and I do not know of any species of trout that upon arriving at an adult age are in the habit of coming out on the bank and forming in ranks to be inspected and counted. Enormous numbers of trout fry in a stream would appear to be the best possible indication of success in stocking the stream, provided they escaped "mere death," which, by the way, they do not have to dread; and in all probability, when such fish have passed the serious ills of infancy, like "changes of temperature" and the "struggles that beset them," and have arrived at an age of discretion, they would retire to haunts of seclusion, as it is the nature of such fish to do.

Having quoted much of the arraignment, which I called a black eye to fishculture, it is but fair that I quote what I called the poultice, and here it is, spread very thin: "We are not denying that under certain conditions artificial breeding had done and will do very great good to a river, but the cases where this happens are few." This seems to contradict in a measure what preceded it, and perhaps I was mistaken in saying that Solomon was a prohibitionist. There is one theory that I nearly passed over, and that is the statement that 10,000 trout fry turned down by the well intentioned people are "the produce of some fifteen trout." I find no fault with the figures, for fifteen trout may spawn anywhere from 3,000 to 30,000 eggs, depending upon their weight and condition, but in this connection there is an assumption in the article that it is better to breed fish naturally than it is to breed them artificially. I wonder if the writer of the article knows how many fry would have been produced from fifteen trout hatched naturally? He says 10,000 by artificial means, and fish

culturists hatch from 90 to 98 per cent. of the eggs taken in this manner. I cannot tell how many eggs would have hatched in a natural way, but I do know, as I have already stated in FOREST AND STREAM, that Mr. Alexander Mowat, a fishery officer in Canada, who examined the salmon beds in Lower Canadian rivers—Restigouche, St. John and Prince Edward Island—after the water had receded and left them dry, found by actual count that only two per cent. of the eggs were vitalized.

Now I pass to another part of the same article: "But we shall be told, as one always is in these cases, to look at America, and see the marvelous things that are done there by artificial breeding. We are quite ready to admit that on paper the results are marvelous, so much so that we wonder that any official document can gravely print them. For instance, the doings of the Pennsylvania Fish Commission are wonderful. It is stated that 100,000 salmon fry were two years ago placed in the upper reaches of the Delaware River—that is, the produce of say about a dozen twenty-pound fish. The result is stated to be that last summer quite a number of salmon, measuring from 12in. to 20in., were caught. Such fish would be worth seeing. One would be noteworthy, but a number would be a feature that required some explanation, and we shall be glad to hear what the Pennsylvania Fish Commission have to say of the number of two-year-old 12in. and 20in. salmon. Is it merely an attempt to see how much people will believe, or is it put forward in sober earnest? We should dearly like to see a 15in. smolt. Again, why were they caught? Was it as curiosities or as articles of commerce? * * Indeed, the whole statement is of a nature to throw doubt on the credibility of the reports of the Pennsylvania Fish Commission. * * Truly the Americans are a great people, and not the least item in their greatness are the official statements on fishculture and the size of smolts. We must, however, protest very strongly against such statements being officially made."

Let me say in reply to this extract that we actually are doing some things over here in the way of breeding fish artificially that might, with truth, be called marvelous, but no salmon smolts 20in. long have been reared. The Pennsylvania Fish Commissioners have made no such report officially or unofficially. As a fact, Mr. H. C. Demuth, Secretary of the Pennsylvania Fish Commission, wrote me some little time ago that the report for 1890 and 1891 was still in the printer's hands, and it has not been issued. It will be one of the most magnificent reports ever issued by any fish commission, when it is completed. It is true that there was such an item printed in the daily newspapers, wholly without the sanction of the Fish Commissioners, and without foundation in fact, that salmon smolts 20 inches in length have been taken in the Delaware two years after the fry were planted, but like some other unsigned articles upon the subject of fishculture that I have read, the writer gave the best evidence in the article itself that he was stumbling along in the dark over unfamiliar ground. There were some smolts caught, it is true, but they were not as curiosities, not as articles of commerce, but because we have poachers over here, as I presume they have in England, and we have fish hogs, too, that catch baby salmon and call them trout, and do other things for which they should be sent to jail if they got what they deserved. At the time the 20-inch smolts item was going the rounds of the papers, Mr. Henry C. Ford, president of the Fish Commission, wrote me in part: "There have been many smolts taken in the upper Delaware during the past summer, though none have come under my observation. I have had correspondence with parties who have seen and recognized the fish. My correspondents made no reference to the length of the smolts, with one exception, when the writer stated that the fish he had seen were nine or ten inches in length. This seems to correspond more nearly with your experience." In other words the man guessed that the smolt was nine or ten inches long. I dave planted salmon fry and yearlings for the past nine years, both for the United States and the State of New York, and have caught a few smolts at the request of the Fish Commissioners to see how they were doing. The largest one I caught was, I think, a little over eight inches long; but it is in the Smithsonian Institution now and can be measured if necessary. This fish was planted in May and caught a year from the following October. Salmon fry are not uniform in growth. The largest yearling salmon taken in the upper Hudson one season was five inches long. Another yearling taken in the lower Hudson four days from the time the other was caught was seven inches long. These fish were hatched at the same station, at the same time. Both are figured in a New York State report. It is scarcely necessary for me to say to readers in this country that the official statements of our Fish Commissioners are to be relied upon absolutely as an expression of what they have accomplished.

A. N. CHENEY.

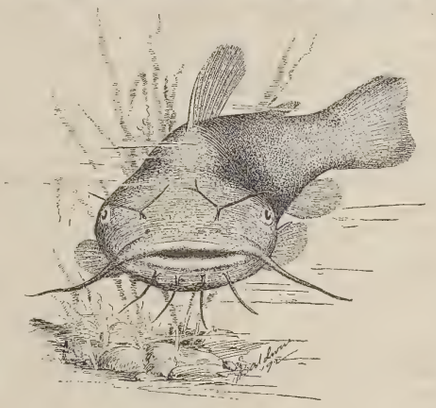
## VERMONT FISH AND GAME LEAGUE.

RUTLAND, Vt., Nov. 28.—*Editor Forest and Stream:* I inclose herewith list of officers elected at the annual meeting of the Vermont Fish and Game League, held on the 22d inst. at Montpelier. The meeting was called to be held in the parlors of the Pavilion, but as many members of the Legislature are also members of the League, and there was an evening session of the Legislature, the meeting was adjourned to the Capitol, where we met in the room of the Committee on Military Affairs. About twenty new members were elected, including one life member, Erastus Baldwin, of Wells River.

The committee appointed at the last annual meeting as a legislative committee made a report which showed that they had done their work faithfully, and it was a matter of congratulation to all members present that we now have a new chapter of fish and game laws, all the old laws having been repealed; also the fact that we have an appropriation of $5 000 for the equipment and management of the State hatchery for the next two years. You will perhaps recall that this hatchery was built from the appropriation of $2,400 made two years ago. The Fish Commissioners of the State continue to have the annual appropriation which has been made in former years of $2,000, and this $5,000 appropriation is for the especial work of equipment and maintenance of the State hatchery at Roxbury. The time and place of holding the next meeting, as well as the question of holding a banquet some time during the present winter, were left to be decided by the president.

The meeting was presided over by H. R. Dorr, president, with John W. Titcomb secretary. Jas. W. Brock, treasurer, was also present, and made a statement showing that the League was in possession of ample funds.

The officers elected were: Henry R. Dorr, Rutland, President; John W. Titcomb, Rutland, Secretary; James W. Brock, Montpelier, Treasurer. Vice-Presidents, M. S. Colburn, Manchester; C. G. Williams, Essex Junction; W. W. Miles, Barton; E. C. Smith, St. Albans; Geo. W. Wing, Montpelier; Geo. W. Hooker, Brattleboro. Executive Committee, W. R. Peake, Bristol, Addison county; C. F. Orvis, Manchester, Bennington county; James Ritchie, St. Johnsbury, Caledonia county; W.W. Henry, Burlington, Chittenden county; N. Hobson, E. Brighton, Essex county; F. J. Hawley, Swanton, Franklin county; N. W. Fiske, Grand Isle, Grand Isle county; E. B. Sawyer, Hyde Park, Lamoille county, W. S. Curtis, Randolph, Orange county; L. D. Miles, Newport, Orleans county; F. D. Proctor, Proctor, Rutland county; A. W. Ferrin, Montpelier, Washington county; Walter H. Childs, Brattleboro, Windham county; C. F. Chapman, Woodstock, Windsor county. Board of Auditors, E. C. Orvis, C. C. Warren, Wm. W. Walker. Membership Committee, M. S. Colburn, C. M. Wilds, John W. Titcomb.



## THE CHANNEL CATFISH.

AMONG the fresh-water fishes now living in the aquaria of the U. S. Fish Commission in Washington is a large and very dark specimen of catfish from the Potomac River. The species is known as the white cat, channel cat, and Schuylkill cat. The individual here referred to is remarkable on account of its color and especially because of the division of the barbels on its nose. The right nasal barbel is forked, and that of the left side doubly forked. The writer has never seen another example of the kind among the thousands of catfish which have come under his observation.

The artist, Mr. A. H. Baldwin, has represented the fish as it appears in the aquarium. The specimen is healthy and will take its food with becoming regularity. It was caught by Mr. L. G. Harron, at Bryan's Point, in the Potomac, last summer.

Prof. Ryder has studied the breeding habits and development of the common catfish, which is a very near relative of the channel catfish. His account was published in 1883 in the Bulletin of the U. S. Fish Commission.

Eggs were found in one of the aquaria on July 13. The egg mass was about 8in. long, 4in. wide, from ½ to ¾ of an

*The Channel Catfish*
*(with deformed barbels.)*

inch in thickness, and was estimated to contain 2,000 eggs, each of them about ⅛in. in diameter. "The ova were covered with an adhesive but not gelatinous outer envelope, so that they were adherent to the bottom of the aquarium and to each other where their spherical surfaces came in contact, and consequently had intervening spaces for the free passage of water, such as would be found in a submerged pile of shot or other spherical bodies. It was evident that the male was forcing fresh water through this mass by hovering over it and vibrating the anal, ventral and pectoral fins rapidly."

All of the eggs left in the care of the male were hatched, but of some detached eggs, which were placed in another aquarium with running water, scarcely more than one-half came out. The period of hatching was six to eight days, during which time the male was never seen to leave his charge, although the female apparently took no interest in the development of the eggs.

The newly hatched fish showed a tendency to school or "bank" like salmon, and to swim against the currents of water. The young began to feed on the fifteenth day after the eggs were deposited, and it was found that raw liver suited their taste perfectly. They were fed about a month on this food without the loss of a single fish. Teeth were developed in the young fifteen days after the eggs were deposited, and "they would pull and tug at the fragments of liver with the most dogged perseverance and apparent ferocity."

"It is worthy of note," continues Prof. Ryder, "that when pieces of liver were thrown into the aquarium the parent fishes would apparently often swallow them, with numbers of young ones eating at and hanging to the fragments. I was soon agreeably surprised to find that the parent fishes seemed to swallow only the meat, and that they invariably ejected the young fish from the mouth quite uninjured, the parent fish seeming to be able to discriminate, instinctively before deglutition occurred, between what was its proper food and what were its own young. As soon as the young began to feed they commenced to disperse through the water and to all parts of the aquarium, and to manifest less desire to congregate in schools near the male, who also abated his habit of fanning the young with his fins, as was his wont during the early phases of development."

According to Prof. Ryder, the early appearance of the barbels is the most interesting feature of the development of young catfishes. The barbels at the ends of the upper jaws appear first on the third day, then the outer chin barbels, next the inner chin barbels are formed. "By the seventeenth day all of the barbels have acquired very nearly the same length in proportion to other parts of the body, as may be noted in those of the adults, but they are nearly transparent and appear to be thickly studded superficially with specialized sense organs, which are probably tactile in function."

T. H. B.

## A FLORIDA HOUSE BOAT.

MR. JOHN S. DANFORTH, the celebrated Parmacheene guide and camp owner for so many years in the Maine woods, but now manager of the same camps for the Parmacheene Club, has designed and had built at Bath, Me., a floating hotel for Florida waters. His floating hotel has been navigated with safety as far as Boston, and it is now on its way to New York or has already reached there. The design of Mr. Danforth is to furnish sportsmen in Florida water with a floating home. The vessel is 125ft. in length, 50ft. beam, but only draws from 20 to 25in. of water, according to the load on board. She is designed purposely for floating up the Florida bays and rivers in water too shoal for any other sort of a craft. She has twenty staterooms furnished in good shape, and Mr. Danforth designs to take sportsmen on board and furnish them with everything they need for a fishing or hunting trip. He has a store on board, and he will sell, or let for a day or an hour, anything in the shape of fishing or shooting tackle. He designs to run the vessel 200 miles up the Indian, the Halifax and the Hillsboro rivers. The vessel has attracted a good deal of curiosity in Boston, where she was anchored at Rowe's wharf for several days. She has been visited largely by sportsmen who are acquainted with Mr. Danforth's celebrity in the Maine woods. On board Mr. Danforth has some twenty Maine guides, all anxious for a winter's sport in Florida. He has saved a good many curiosities during his many years' hunting in Maine, and some of the best of these he has on board his floating hotel. He has a moose head, the largest and the most perfect ever taken in Maine. This is perched over the cabin door and is festooned with bear traps. He has preserved a remarkable specimen of the work of beavers and has it with him on his ship. It is the stump of a white birch, nine or ten inches in diameter. This was cut down with the tree by the teeth of the beavers till the tree had fallen over, but leaving wood enough in the center to hold the stump to the roots. Mr. Danforth found this far away in the woods, freshly gnawed. It struck him as a remarkable specimen of the work of these great rodents. With his ax he cut the tree off just above the gnaw. Then he cut the stump up by the roots and below the beavers' work. It was a great load to carry, but he was equal to the task. Reaching his camps he wrapped the specimen in blankets till it was seasoned, in order that it might season with as little cracking as possible and without discoloring the wood. For his care and pains he now has on board his Florida vessel a sample of beaver wood cutting that is worthy of the National Museum. The teeth marks are as fresh as though made yesterday.

A number of Boston sportsmen are to meet Mr. Danforth in Florida this winter and have engaged accommodations on his novel craft. He also expects several members of his Parmacheene Club to join him in New York.

SPECIAL.

### Mascalonge of Upper Saranac.

*Editor Forest and Stream:*

Say ten years ago, perhaps more, pickerel, so-called then, were placed in the Upper Saranac Lake, N. Y., and I knew it, but kept silent about it, convinced, however, and awaited the result. It became known to a few, then after a while became generally known. It appalled me, the increase, with my known love of trout. To be explicit, however. Last May large quantities of so-called pickerel were caught running down through the sluiceway at Bartletts to Lower Saranac Lake weighing from 6lbs. to 19lbs. in an iron screen set for the purpose. I heard of it, and was appalled again at the thought of losing trout in the Saranac Lakes, Adirondacks, N. Y. Good Heavens! Whew! Well, in May of this year I was at Wabeek Lodge, Upper Saranac Lake, detained there by adverse winds and snow for four days. On the fifth day, down at the boat house, saw a so-called pickerel caught. The day preceding found a copy of the FOREST AND STREAM, May 14, 1891, containing a description of the pike family and cuts of mascalonge, pike and pickerel (I despise a pickerel). Rejoicing after examination of the above caught and called pickerel, I said to my guide the cuts in FOREST AND STREAM which we examined yesterday are mascalonge. He went immediately, and getting the paper we compared fish and cuts and unanimously agreed that it was so, and I still stick to my opinion, governed, dictated and influenced in my opinion by your published cuts. The great trouble is that authors disagree in their opinions regarding mascalonge and pickerel, and it leaves the question open for discussion, and creditability on the knowledge of authors. I think you are right, however, in spite of the abuse that has been heaped upon me, governed by your cuts.

R.

### Cayuga Lake Fishing.

ITHACA, N. Y., Nov. 26.—Until the late extremely cold weather local black bass anglers have kept pegging away along the east shore of the lake, meeting with enough success to warrant them in braving the discomfort of stiffened limbs and rheumatic twinges, but the most persistent of them all, Mr. F. Randolph, has quit, winding up with a hard day's work with only a lamprey eel to show for it, and so it may be said that the fishing is virtually over at this end of Cayuga Lake. The opening day on bass resulted in a catch from Fall Creek Cove alone of between 60 and 70 of gamy fellows, some of them big ones, too. This retreat, however, had been closed to all fishing for several seasons past. The total catch for the season has been very good, I am told. A good lot of perch has been taken, 15 being the best single day's catch I know of for one rod. Perch have averaged considerably larger at this end of the lake this season than at the foot. A few nice sized muscallonge were taken during the summer, Ed. Buckbee being credited with a 15lb. one. At a point over the west shore some 50 or 60 so-called German carp were taken in one week. These carp must have been hybrids. At any rate, I am inclined to that belief, though I have the affirmation of old anglers to the contrary. Taking the season as a whole I think it has been a pretty profitable and enjoyable one for local anglers.

M. C. H.

## A KEKOSKEE MEDAL.

CHICAGO, Ill., Nov. 12.—Some one, whom I do not know, but who signs himself "F. S.," has sent the following letter, dated Chicago, Nov. 10:

Your Kekoskee fish story takes first prize. It is a dandy. As facts are facts, it must be true, every word of it. I was thinking of going up there after a mess of bullheads, but after reading your story I thought I had better wait and learn if there were any left. Inclosed find your reward—a first prize medal. Although you deserve a better one, this is the best I can do for you at this time, as I have not yet got done laughing. F. S.

Now I wonder whatever on earth is "F. S." laughing at? At that story, that story of Kekoskee fish, that mere, bald, simple, straightforward story of plain facts? I am sure I don't see anything funny about it at all. It's just a plain, easy, true, honest kind of a story. I didn't make the story, and I didn't make the facts, and I didn't see anything remarkable about it, and can't understand why people laugh at it. It would make me hot if I thought

they laughed because they didn't believe the story, and I think things have come to a pretty pass when a fellow gets a medal sent to him for telling the truth. That looks a good deal like there was an insinuation somewhere.

The medal itself as it lies before me, however, is a worthy work of art *per se*, without the insinuation. It is of solid silver, with ornamental trimmings, of chased gold, bearing for its central design the conventional figure of a fish, the latter bearing blazoned the inscription "Kekoskee." I have sent this medal on to the FOREST AND STREAM office, for fear there may be some men down East who will doubt that I ever received such a medal. But I don't know what it's all about. I never saw such a fuss over a little cold truth. I have got more proof, too, if that is needed. E. HOUGH.

### Pennsylvania Fishing Camps.

FISH COMMISSIONER W. L. POWELL, of Harrisburg, Pa., informs us that one hundred and five camps were established last summer in the district guarded by Fish Warden George M. Permar, of Newcastle.

The number of fish caught was very large. A great many "salmon" (pike-perch) and pike were taken, some of them weighing from 10lbs. to 38½lbs. Catfish ranging from 7lbs. to 35lbs. were among the trophies. The black bass season was unusually good.

Newcastle is the county seat of Lawrence county, on the western border of the State. The principal fishing stream is Beaver River, in which pike of very large size have been known for many years. The mascalonge has been recorded by Prof. Cope, from Conneaut Lake, in Crawford county, and is occasionally found in the Ohio Valley. May it not prove to be the big "pike" of Beaver River?

Other waters accessible from Newcastle are Shenango River and Neshannock Creek, the latter containing black bass and rock bass. Baits of various kinds are easily obtained aud fishing is prime during the summer months.

### Pennsylvania Pike-Perch.

PIKE PERCH fishing continued to be good in the Lower Susquehanna in November. In deep water below the Columbia Dam, some very handsome strings were caught by Harrisburg anglers. At Fite's Eddy, on the Columbia & Port Deposit Railroad, Mr. Lemer captured thirty-six in one day, aggregating 75lbs., and fairly good catches were made by others.

It is well worth while to visit this part of the river on account of the scenery and the prehistoric records on the rocks, to say nothing about the fishing for black bass, striped bass and pike-perch.

### New Vermont Law.

THE Vermont bill noted in our issue of Nov. 17 was passed and has been made a law, with certain changes from the original text. The close seasons fixed by it are:

Trout, landlocked salmon, salmon trout, longe, Sept. 1–May 1. Black bass, Jan. 1–June 15. Wall-eyed pike, pike-perch, muskallonge, April 15–June 15 (except Lake Champlain).

Deer protected to 1900. Rabbit, hare, May 1–Sept. 1. (Gray squirrel and raccoon not protected.) Beaver, fisher, otter, April 1–Nov. 1. Quail, wild duck, wild goose, plover, Jan. 1–Sept. 1. Ruffed grouse, partridge, woodcock, Jan. 1–Sept. 15. Pheasant, Nov. 20–Oct. 1.

### A New-Subscriber Offer.

A *bona fide* **new** subscriber sending us $5 will receive for that sum the FOREST AND STREAM one year (price $4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price $5)—a $9 value for $5.

This offer is to *new* subscribers only. *It does not apply to renewals.*

For $3 a *bona fide* new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Ieet's handsome work, "Bird Portraits for the Young" (the price of which is $3).

# The Kennel.

## FIXTURES.

### DOG SHOWS.

Dec. 6 to 9.—First Annual Dog Show Hermitage Kennel Club, Nashville, Tenn. Robert C. Stockton, Sec'y.

1893.

Jan. 3 to 6.—Mohawk Valley Poultry and Kennel Club. F. B. Zimmer, Sec'y, Gloversville, N. Y.

Feb. 21 to 22.—Westminster Kennel Club, New York city. Jas. Mortimer, Supt.

April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.

May 3 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.

June 13 to 17.—World's Fair, Chicago.

Sept. 7 to 10.—Hamilton, Ontario. A. D. Stewart, Sec'y.

### FIELD TRIALS.

Dec. 5.—Central Field Trials, at Lexington, N. C. Col. Odell, Sec'y.

Dec. 19.—Irish Setter Field Trials, at Lexington, N. C. Dr. G. G. Davis, Philadelphia, Pa., Sec'y.

1893.

January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgarif, Sec'y.

Feb. 8.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y

## BROOKLYN DOG SHOW.

THE National Greyhound Club has scored a success. Good dogs, good attendance and good management. With these three concomitants, necessary to every bench show, continually brought to one's notice as we strolled through the aisles, the venture could not help but be a success.

Any one who saw the first dog show held by the National Greyhound Club in the American Horse Exchange in February, 1891, and noted its cold, bleak surroundings and remembered the train of distemper that followed in its wake, must have heaved a sigh of gratification and relief when they entered the Palace Rink in Brooklyn last week and saw the second effort of this energetic specialty club.

The quality of the dogs present cannot be spoken of too highly. In Russian wolfhounds, fox-terriers, bull-terriers, pointers, beagles, Great Danes, rough terriers and spaniels was this particularly noticeable. The arrangement of the stalls was as good as could be hoped for with the limited size of the building, and not many more than the 577 entries present could have been properly benched. Four judging rings were set up, but owing to the proviso that no nails or screws must be put in the flooring, the railings was a continual source of anxiety to the management, and men had to be placed in the ring to hold them up. The judging did not progress on the first day quite as quickly as it might have done, though there were plenty of willing attendants, but what with the crowd and confined space locomotion was not very easy. The gathering of prominent fanciers reminded one of a New York show on a small scale; one met a well known face at almost every step. By noon on Wednesday nearly all the specials were awarded and the club issued a marked catalogue singularly accurate, with most of the specials marked as well.

On Messrs. Huntington, Drake and Whiton's shoulders devolved the brunt of the management, aided by H. Osborn and E. F. Vacheron. Much credit must certainly be given the two first named, who held to it from first to last, one as secretary, the other as treasurer. The exhibitors spoke in glowing terms of their treatment by the club, and all seemed to have had a good time. Prizes were paid promptly and the array of specials was "glittering," the club itself being most generous in both money and medals for all breeds except the small terriers. The catalogue was arranged nicely and had few errors. Among those present, besides those mentioned last week, were Dr. J. F. Perry, G. Jarrett, John Keevan, G. Leibacher, A. W. Smith, H. S. Sands, Fred Schmitt, Col. Ruppert, Jr., W. C. Reick, J. L. Winchell, Julian Smith, Prof. Braive, Geo. W. Glazier, Albion L. Page, J. S. Bradbury, E. W. Irwin, W. H. Hyland, —Verity, Francis G. Taylor, Geo. E. Osborne, Dr. L. Sauveur, Dr. Jas. E. Hair, Jas. B. Blossom, E. H. Morris, Mr. Smyth, Thos. H. Terry, H. M. Howes, C. H. Mason. Winthrop Rutherfurd, Geo. Laick, H. L. Kreuder, Edward Booth, D. P. Foster, F. H. Clarke, Walter J. Comstock, Joe and Ben Lewis, W. Connors, Donald Munroe, Carl Heimerle, etc. The club's luncheon was a—well, *récherché* affair and quite in keeping with the style of the show. The attendance was very good, and especially on the first night did the Brooklyn 400 turn out in force. With Mr. James Mortimer's vast experience as superintendent to help things along and John Read to assist, the show could not but be kept clean and nice as a show should be. Dr. T. G. Sherwood won honors as well, did not stop a dog and was attentive to his duties throughout the week.

MASTIFFS (*W. Wade, Judge*).—The judge, who is known the dog world over as the most energetic supporter of the mastiff living, did not receive the support one would like to have seen. The good mastiffs are pretty well scattered now, and this may have been one reason, and it was not to be expected that in this instance the Mastiff Club would see fit to encourage the breed it is supposed to foster. With no challenge entries Mr. Winchell's Black Prince was the hero on this occasion, and as one passed along the bench it was no wonder that some were heard to remark "Is that a mastiff, too?" he di dlook so different from the rest. This grand dog has carried out FOREST AND STREAM'S estimate of him in the Albany report. Age has brought a dignity to his head, and certainly from the hips forward he is simply grand, and could one add four inches to the length of his body and let down his stifles, where is the mastiff that could beat him? Last week he moved a trifle stiffly and "chunkily." The well-known Merlin, second, was looking well, but was of course some distance from the winner; the other entry, Nero, was of no account. In bitches (5) there is room for difference of opinion as to the way the judge placed them. The winner, Ethel, had lost her fat to some extent, and thus looked better, but though she has a better type of head than Boss's Princess, in no other point is she superior or at all equal; much smaller, inferior in action, slightly cow-hocked, open feet, and not so well made in body. Princess is long in head; the skull is good; in the muzzle lies the trouble. This bitch afterwards took the special for best mover. She is probably a little light in pasterns for such a big bitch. Third went to Brun, second at New York last spring. She shows age, but is typical. Lady Teazle, hc., was in poor shape and looked much like a greyhoundy great Dane. Her head is the best part. A bitch that must have been overlooked altogether was Lucy II., with the best head in the class, good body and legs, only a little lacking in bone. She beats the winner. The prize was withheld from a bad specimen in the puppy class.

ST. BERNARDS (*A. M. Hughes, Judge*).—This was Mr. Hughes's debut as a judge. Though probably unknown to many of the present run of St. Bernard breeders, yet in the old Apollo, Duke of Leeds, Leila, Hector, Rigi days, Mr. Hughes was fairly in it. At this show the judge met a number of strange dogs, and if he made a mistake or two they were not very serious ones, if I except one or two cases in the rough bitch class. In challenge roughs, with Kingston Regent absent, Aristocrat, looking probably as well as we shall ever see him, had a walk-over, and in the bitch class that sterling good one, Lady Gladwin, followed suit. The open dog class introduced us to several second-rate dogs, from a bench show point of view. The winner proved to be Roland, Jr., that won at Danbury last month. He has a good, strong head, his profile being more pleasing than full face. His feet are faulty and he needs more swell of rib and twenty pounds more flesh. Second went to Otos, a new one to us, though he won at Mount Holly. A son of Ben Lomond, his head is a little on the Aristocrat order, beautiful markings, but eye like his daddy—full and showing the haw all round. He is very flat-sided, good legs and action, and has a rich orange body color—a handsome dog, but no crack. Donnar, third, has a nice head, deep square muzzle, stands back on pasterns, and inclined to cowhocks, body fairly good, a nice brindle, small sized. Vhc. went to Refuge II., well known. Though he stands out in front his fine head, very massive bone and good body make him a hard dog to judge. He has the component parts and excellent breeding to be a good stud dog, which he has effectually demonstrated, and his place is in the kennel, where he would not be exposed to defeat for faults only due to bad raising, probably. He should have been third. King Regent is even worse in front, good head, massive and well-marked, excellent body; only in his legs and action is he at fault. When dogs cannot hope to win, through these defects, why imperil their standing in the stud when their fine blood is bound to reproduce itself and be appreciated by breeders who study blood lines rather than prize cards. Percival, a dark brindle with poor expression, and White Friar, a big white dog, a handsome animal in his way, but a St. Bernard misprint, were the other hc. dogs. Achilles, c., a broad blaze still further spoils a long and narrow head; good forelegs; small sized. The bitch class (11) turned out a better lot all round. Miss Anna's sweet head cannot be denied, and despite her rather slack back and faulty pasterns and feet, her improved condition, great depth of body and intense quality no doubt influenced the judge in putting her over Sunray, who was just about looking her worst, shedding coat. She is finely built as we all know, but she has not the head quality the other possesses. Altonette, third, is improving in head with age. Judy, vhc., has a plain weak head, feet turn out, no chest, flat-sided, eye large and light, otherwise a large roomy bitch; there were better ones for the place; Ellen Terry, proving in whelp at last, deserved her three letters. In the hc. lot Princess Hepsey is a pretty little bitch with washy body color, but a heavily-marked head that is an engaging one, hardly enough stop, coat inclined to curl. Princess Wang is rather plain faced and a bit straight behind. Zenith and Guess Noble were left out of it and harshly treated. Zenith stands on good legs and feet, though they turn in a little at times like a foxhound's; her head is well shaped and if she had the shadings there are not many better; good body and symmetrical—in fact, is up with the winner. When shown she had bowel complaint and would scarcely stand up. Guess Noble, another left in the cold, though in indifferent condition, has head, especially skull, size and legs that must not be passed over. Perhaps she had too much white on body for the judge; she also moved a bit lame when I saw her. The neglect of these two bitches was unfortunate and unaccountable; they were afterwards given hc. Lord Walbeck won in puppies, a promising one with great bone. Duke of Alton, a big one of rich coloring, is faulty behind. In smooths there was no aspirant for challenge honors in dogs, but in bitches Empress of Contoocook in nice condition is always a great attraction.

Open dogs (4) were few but choice, and the struggle between Scottish Leader and Leicester was very keen. It's all a question of fancy; the two dogs are as different in aspect as possible. Although owing to the babyish tactics of the owner of Leicester we were unable to put both dogs together, we know them, and the decision that put his dog second is not so wrong as he imagines. Neither dog is right in head. Leicester is too houndy, on the Apollo order, and Leader has too square a look and not enough quality. At New York last spring Leicester had all he could do to beat Melrose at ten months old. At Rochester, six months after, Leader beat Melrose, and leaving out the latter's condition, he (Melrose) had only his superior quality to question the decision with, so the Brooklyn awards is not out of the way. The third winner, Czar O. is not in it with the winners—a leggy, plain sort of dog, with a long insipid-looking head. In bitches (5) that exaggerated type of her mother, Bellegarde, won easily over Charmion, both well known. Bellegarde's dewlap and loose skin would do for two bloodhounds almost, but nevertheless she brims over with quality and was looking very well. In fact, the condition Mr. Booth had his dogs in was very much to his credit. Bessie of Contoocook, third, has a beautiful skull and pleasant face; she dips in back a bit. The puppy prizes were won by two pups by Leicester. The Dutchess Kennels won the kennel prize.

[*Special Report.*]

GREAT DANES (*A. H. Heppner, Judge*).—My first impulse, as I glanced over the class previous to judging, was to resign and to call some one to perform the work who has a less pronounced idea as to what a Great Dane should be. I felt that with such material it was not a question of picking a real fine prize dog, but to compare them among themselves and give the one that comes nearest to the type the best prize, which should have been a vhc. in this show. I therefore cannot give you the desired explanation why I gave prizes to the respective dogs, but I will try and explain why I did not withhold them, as I intended, with precisely the same propriety that the first prize should have been withheld, a second prize should not have been given. There would have been no award in the challenge class nor any in the puppy class. The question whether the breed is far enough advanced in this country, where I know of only about ten real first-class specimens, or whether all prizes should have been withheld, waiting for a perfect dog to come along, was an open one until the dogs were brought before me into the ring.

Challenge Class.—First, Pascha shows age, is coarse and snipy, with an abundance of throat; has a good stern, but moves like a mastiff and is wide in front.

Open Class.—After this award had been made Maloc naturally came in for first, as he is better than challenge Pascha. When I saw Maloc on his bench afterward he did not look like the same dog that he had made of himself in the ring. His handler seemed to have trained him for the very purpose of showing himself. On the bench when I took my notes he had a brutal expression, too much loose skin about the face and wrong in eye. Ears wide apart, giving the skull the appearance of being round (like Imperator) and too large. He appears lippy. In the ring, however, he showed himself entirely different. His ears came up within 3in. of each other; the loose skin was drawn up tight and formed the folds on the forehead and between the eyes; the round skull disappeared and the corners and parallel and sharp lines became visible. He was then nearly a typical dog of enough merit for the first prize and beat in this position challenge Pascha and easily lowered the glories of Nora for the special for best dog or bitch. I wish to emphasize that Maloc showed in the ring a great deal of character, and came nearest the ideal dog before any in the show, as stated before, about as near as to get a vhc. in good company. He is wide in front and his movement under excitement in the ring with Pascha and afterward when beating Nora for best dog or bitch was better than either of his rivals. He showed more character and breeding than either of the two right through. His stern is in a bad condition from "striking the wire," but there is nothing missing. In making this award I also bore in mind that I was judging under the rules of the German Mastiff Club of

Chicago. This standard calls for just such a dog as Maloc. Under it Hannibal was placed after Helios. I recommend Maloc to the fanciers of Chicago, as there is no dog in America or abroad that to my knowledge, when properly shown, resembles more strikingly the illustration on the front cover of the monogram of the Chicago club, which is given as the ideal dog. I will gladly state his weight and size, which is of the most importance for Chicago, when requested. He would be a good acquisition in line with what Chicago has and fancies. Had a dog of the right type competed, I am mildly sure, however, that this ideal would not have been in it. Second, Duke, is an extremely light dog, who needs 25 per cent. more substance right through in order to be typical. With his other faults, such as a light eye and small, snipy head, he is the limit, beyond that nothing could be tolerated as a great Dane. Third, Stanley, a massive dog, the largest I ever saw for his age, claimed to be 14 months. Size is very much his only merit at present; he is not of noble bearing nor clean cut; he is decidedly weak and straight behind; he showed no temperament in the ring and had a sort of melancholy bearing unbecoming to a Dane. There is something common about his head that I do not like. The indentation between the eyes is too wide and promiuent. He is beefy, but may make up as he fully develops. Stern is wrong, eye too large and not set deep enough. Vhc., Pascha II., is more a mastiff than a great Dane. He, Fritz, a dog that shows some breeding, but is wide in chest, has no neck and is short in head; he is undersized. Cæsar, c., is a dog to be hitched before a milk cart or to drive cattle. The open class, bitches, was the best in the show. Nora, first, is a brood, but not a show bitch, and as to the point of money value at the present situation of the breed, I would consider the former worth double as much as the latter, but would keep her away from a show. She was shown with about 25lbs. of fat that interfered with her movements. Her head lacks character and is snipy. Her ears are thick and large. She has more throat than any dog or bitch in the show, barring none. She is not my fancy for a show specimen. Fanny, second, would have beaten the former and taken the prize for best in all classes, had she not been very weak in front. In puppies Schult Nero, first, is a nice upstanding puppy, with an undesirable color of white and brown; harlequins should be black and white, blue and white, porcelain and white, and brown and white, as named. Pascha III., second, and Flora, third, are both too young to be successful at a show. Peter, vhc., and Pascha, hc., are puppies and should stay home for another year. No special merit for any in this class. A. H. HEPPNER.

NEWFOUNDLANDS (*A. M. Hughes, Judge*).—Until Mr. Vicary comes back and brings those promised cracks we must put up with the indifferent representatives of this breed that one meets with at most of our shows, and Brooklyn was no exception. First prize was withheld and second given to Pascha, a curly, long-headed specimen with good legs. The dog numbered 89, but not on the catalogue, was the best by far; straight coat, deep, fairly well made head, but his good temper had evidently never been developed. Whether he was shown or not I cannot say.

BLOODHOUNDS (*T. S. Bellin, Judge*).—Probably the best collection since Mr. Brough's team came over in 1888. Judith represented the "400," but she was hardly looking so well as usual, just off a litter. Victor, however, in open dog class made up for it, as I never saw this fine hound looking better, and he won well over his three younger competitors from Mr. Glazier's kennel. Javert, second, is a promising dog, rather shallow in body, bit out in front at times, still the forelegs are straight, well-shaped head with scarcely length enough, good wrinkle, peak and leather. Jean Valjean has a better body and is stronger in loin and quarters, but loses to the other in head, especially skull and wrinkle. Marius I like the best all round—best in body, bone, perhaps hardly so straight in forelegs as the others, as good a head,

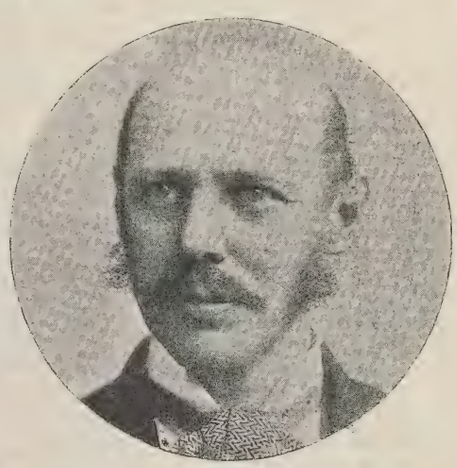
SMOOTH ST. BERNARD SCOTTISH LEADER,
Winner First, Brooklyn, 1892.
Owned by Swiss Mountain Kennels, Germantown, Pa.

losing only a little in peak to Javert. Benison was alone in the bitch class. This is not her first time of winning.

DEERHOUNDS (*H. W. Smith, Judge*).—With nothing from Mr. Thayer's kennel the quality in this breed was below par, though a couple from the Dunrobin Kennels helped to mend matters. Our old friend Olga, not in as good condition as we would like to see her, was the only challenger. In open dogs (4) Argyle, a frequent winner and oft commented upon, beat Bismarck in size and bone. Gleucairn is short-headed, stary-eyed, not straight in front, falls away in quarters; good coat. First was withheld in bitches, though Madge might well have been so honored. She has a nice head, good loin and quarters and legs, needs more rib. Thora, third, I had better say nothing about, as I believe she was prick-eared. Dunsloy in the dog class deserved a letter for his excellent coat.

GREYHOUNDS (*H. W. Smith, Judge*).—In view of the fact that this show had its being in the love certain men have for the longtails it is surprising there was not a better display of the breed. This does not mean that there were no good ones present, but the quality of the rank and file was hardly as good as seen at some other shows. Highland Chief and Balkis were simply on exhibition, at the same time old Balkis was in good fettle and could have held his own with any there. Maud Torrington with Ch. Harmony out for specials only, was the sole challenge aspirant. She was in fair shape; one foot needs attending to; nail has been torn. In open dogs (9) Lord Neverstill made his debut at an Eastern show, and in view of the many nice things that have been said of him we could like to have seen him in better shape. He has only just come from Kansas, was five days in transit, and worse still, was shipped when drawn fine for the slips, he having run at the Great Bend meeting. He looked a little flat in loin and his pasterns were not as we have seen them. His grand quarters and second thighs were noticeable, however; St. Regis, second, is stilty in front, does not show much power behind, fair ribs, loin and head, could be improved in pads and pasterns; Prince Bismarck is fine in pasterns and feet. The dogs of the Maybrook kennels, Dover and Baritone, should have had letters, Greenshine, their new dog, must depend more on his breeding than his good looks. Open bitches (11) had another crack at the head of affairs, Dolly Dollar, the New York winner, she was in fine fettle; second went to that smart little bitch Miss Dollar, recently commented on; America Daisy, third, is whippety and open-footed; Maybrook Nell vhc. Quality ended with the two first, though had Spider better feet she would deserve notice. Snowflight, the puppy class (3) winner, should not have beaten Dollas, for the latter is superior in ribs, loin and especially legs and feet, in fact the best Gem of the Season pup yet put down. Specials, of course, were numerous, but Mr. Whiton with Lord Neverstill took the lion's share and the kennel prize as well.

CRAIG F. R. DRAKE,
Treasurer National Greyhound Club.



RUSSIAN WOLFHOUNDS (*H. W. Smith, Judge*).—One had only to walk along this bench to note the progress this breed has made in the last two years, for here was the best exhibit of "Russians" our shows have yet seen. There was not a bad one there. Argoss, who is causing so much heartburn in Psovie circles, had a walkover for his first challenge prize. He looked much better than at Rochester. Princess Irma looked delicate and as full of quality as ever. Then came three dogs, either one of which would have been thought much of a year ago. Sarvanates won. He is slightly coarse, and, excepting in coat and head, built on Argoss lines. His loin and quarters are just as good as the black and tan dog's, and both exceed anything yet seen here in this respect. Osslad is plain in head, carries his ears like a greyhound, when they should be held back. In general outline, quality and head I liked Leekhoi for the place, though his thin condition told against him. In the bitch class (9) present was a smasher, and the prize went to the best, Zerry, beautiful body, especially strong in loin and quarters, a sort of pocket Argoss, good legs and feet, head hardly so good as Modjeska, say, Armeda, second, runs the other close, is better in ribs and bone and a bigger bitch. Vinga, third, a rather fat, plain-bodied bitch, nice head and legs; Viewga, vhc., has rather a nice outline, though quarters fall away too quick, stands out at elbow at times, but has good straight bone and feet; Palma is faulty behind, good chest, ribs, forelegs and feet and a very sweet head. Raskeda and Modjeska were hardly treated without a mention, especially the latter, whose sweet quality and general outline is at once noticeable. The puppies (4) were promising, first going to Peter the Great, whose ears are not right—carried too high and forward—a big, well-formed young dog. Krimena, second, loses in front and head. The Marlborough Kennels took the persimmons in the way of specials and deserved them. Mr. Huntington has gone into the new breed with the thoroughness and ability which he displayed when he was a greyhound man.

CHESAPEAKE BAY DOGS (*E. M. Oldham, Judge*)—This was an in and out for the only dog present of the three entries. Pride, the recipient of first honors, was in a similar position in New York this last spring. He looked bare in coat.

FOXHOUNDS (*H. W. Lacy, Judge*).—The fox hunting season being now in full blast it was perhaps too much to expect that the hunts round New York would be better represented. Nevertheless there were some good hounds shown, especially those from the Pembroke Hunt of Chestnut Hill, Pa. As it would have been manifestly unfair to both judge and exhibitors for the American and English types to compete on the same basis the breeds were divided at once, on the fact being brought to the notice of the officials. The American hounds Elite and Picket were first put down, and in casually looking them over the judge thought Picket the best, he is as far as general build goes, but when it comes to moving it was at once seen that Elite was the better on the leg, Picket being very faulty in hind action and front. In English dogs Denmark, one of the Pembroke's new importations, was at once picked for the winner, his fine front, good body and excellent head and expression beating the big headed and none too well fronted Gambler decisively. Rascal has some good parts, but is entirely spoiled by his very wide chest and bowed forelegs. Femur, well known at our shows, was alone in American bitches. Ransome, another good English hound, with whom little fault can be had, beats Sprightly in head, front, ribs and loin and general carriage. The specials went with the awards.

POINTERS (*W. Tallman, Judge*).—Though the number of pointers on hand was comparatively small considering the season of the year, the exhibit was most gratifying and some of our best specimens were paraded before Judge Tallman, who as usual acquitted himself in a creditable manner, and we should say he is now one of the most careful and conscientious sporting judges we have. In challenge heavyweights, Lad of Kent scored again, his opponent being Robert le Diable, whom he excels in shoulders, feet and hind legs. That grand bitch Woolton Game was alone in the corresponding class, and was put down in good fettle considering her late maternal duties. In open dogs (4) first went to a good headed one in Ponset, he showing a little blotch when I saw him, his toes could be closer and stifle more bent, but otherwise he won well from Hempstead Bang Bang, who needs more rib and is rather narrow chested yet, good action. Earl of Hessen's head is faulty before the eye, good front, body and quarters, but feet are not just true. The bitch class brought out three good ones, first going to Duchess of Naso, who beats Lass of Kent in head and expression, both are well made bitches and there is little between them. Bella, third, has a sweet head, is a bit heavy in shoulders and ears don't hang right; in body and legs she will do. In lightweight challenge dogs Duke of Hessen had no trouble in defeating Inspiration and was put down in fine condition; Inspiration being the reverse. Duke afterwards won the special for best dog, beating Lad of Kent in head, neck and shoulders, Duke losing somewhat in hind parts. Fan N. in fair shape had a walkover. Ridgeview Donald scored in open dogs (7), though small and too much cut out before the eye and faulty in pasterns, his good body outline and carriage excelled Rock II., second, who is now so well known. Ridgeview Faust, third, is heavy in shoulders and weak in pasterns; his head is good and of nice expression. Rhoderick, reserve, is too broad in skull, plain in muzzle and feet could be better, and his set on of stern could also be improved. Axtel King Don and Hempetead Prince, vhc., have their faults, the one being rather long cast and the other heavy in shoulders, open feet and drooping in quarters. Bloom of Kent has improved since Lewiston show and won nicely over Westminster Ina; though plain in muzzle she beats the other in head, Ina not having enough stop; she is also heavy in shoulder and wide-chested. Gaynell of Kent, third, is a smart-looking bitch, rather plain-faced and light in body. Reserve went to Miss Arkos, who loses in cleanness of shoulder, not square enough in muzzle and chest too wide; good rib, loin and quarters. Westminster Kate was thin and has a narrow, plain head. Daisy is plain in muzzle and shoulders not clean enough. Princess Lillie's light bone and poor head is against her. The Hempstead Farm Kennels won the puppy prizes with Bang Bang and Prince, and also took the kennel prize.

ENGLISH SETTERS (*W. Tallman, Judge*).—Some individual dogs were good, but on the whole the breed was not well represented. It is a bad time of year for dogs of this breed to be anywhere but in the field. In challenge dogs Francis S. and Francis G., both Philadelphians, entered Edgemark and Breeze Gladstone respectively, and the judge was certainly unkind in that he kept Francis G. so long on the tenter hooks of suspense, capping the climax by showing a decided preference for Edgemark up to the last moment. Breeze beats the other considerably in head and front, but is beaten himself in hindparts. No challenge bitches entered. That sterling good dog Glendon, looking better than ever before, could not be denied in open dogs (6), his splendid head, body and quarters making up for his turning out of toes, though his legs are straight. The Earl, second, is big, coat not O.K. and needs furnishing out in body. Benzine, third, is well known: he needs more stop to have a good head and coat is too wavy. Pride of Bronx, reserve, is faulty in front, good head. Sir Frederick, vhc., needs no describing: he was in fair shape. Kent's Rex, hc., is a little out at elbow, but I thought his good head, bone, ribs and quarters entitled him to another letter. Bitches (7) were headed by Donna Juanita, whose fat condition would have handicapped her in close competition; as it was, her good head, though muzzle is not just right, legs and body, in spite of her adipose matter, pulled her through. Doretta, second, is narrow throughout, head and all, body needs filling out. Kate Noble II. is plain in muzzle, fair skull, good legs and is nicely ribbed up. Daisy Bright, reserve, deserved her letters and so did Albert's Daisy, just fresh from her victory at Assonet. Neva B., hc., is not right behind and would do with more rib; a rather slack bodied bitch. Deceive, the winner in pups, and also most of the others, had gone home when I came to their benches. The kennel prize went to quite an inferior kennel, hc, being their best in regular classes.

H. W. HUNTINGTON,
Secretary National Greyhound Club.

IRISH SETTERS (*W. Tallman, Judge*).—There is no mistake about it the red dog is having its epoch, both on the bench and in the field. Here they formed one of the sights of the show. Competition between the two principal kennels being as keen as the Brooklyn air. Old Tim, looking in great shape, ran away from a wonderful challenge dog class of seven, all good dogs and true. Kildare was the runner up; this dog's coat is the most correct in texture of any on the bench. In the next class Norna for the first time lowered the colors of old Laura B. Of course there must come a time when age will tell and the old heroes must give place to younger blood. At the same time Laura is an exception so far, and only in gaiety of carriage, trimness of general build and cleanness of throat and shoulders does she lose to Norna, and is better in head, legs and body. In open dogs the winner, Montauk, Jr., has recently been commented on. Tim's Dandy, second, is an improved dog and has no glaring fault. Lad, third, is short and thick in skull. Young Glencho, reserve, is rather bloodhoundy in head, would do

with more swell of rib. Rob, vhc., has a thick, round skull, short neck and heavy shoulders. Ostler Joe, hc., has an English setter head and light body. Seminole Blarney is faulty in skull and quarters. The bitch class (12) was brimful of quality, or one might say a red hot one, and evidently the judge thought so, giving no less than six vhc. cards. The recipient of the blue ribbon, Fly, I thought rather lucky, as her feet turn out and her head is faulty in skull. Rose Sarsfield, well known, might with equal justice have been placed over her, better head and legs and quite as good body, and better color—at least so it struck me. Third went to Claremont Heather, recently commented on, Delphine getting reserve, and she is a bit flat-faced, but pretty good otherwise. Of the vhc. lot Alice Kent is well known and deserved her letters. Molly F. is not just right behind and head would do with more pronounced stop. Belle Ida has often been spoken of in FOREST AND STREAM and well deserved her three letters: she is rather faulty in quarters. Bonnibel, hc., I liked as well as any of them, nice skull, bit plain muzzle, but a good outline and color all over. Agnes, vhc., has a very long head, wide in chest and turns her feet out. First was withheld in puppies, second going to Topsy of Bay Shore, a snipy-headed bitch. The kennel prize went to the Oak Grove Kennels in a close competition, both Joe Lewis and Will Conners having their dogs in fine fettle, the Oak Grove Kennels having much improved in this respect.

GORDON SETTERS (*W. Tallman, Judge*).—Scarcely a new face among the lot, Ivanhoe defeating Rexmont in the challenge dogs, beating him in head. In bitches it was Duchess of Waverley and Flomont; the latter is plain in markings to the other. Comus won in dogs over the coarse headed Duke of Wellington; he has the best shaped head but shows little tan and is faulty in loin. Brillmont, third, is beaten in head, muzzle especially. Several well known faces took prominent positions in the bitch class, headed by Princess Louise, second going to Venus, rich tan but no pencillings, nice body and outline but not square enough in muzzle. Sallie Beaumont has been out before. Reserve went to Dorothea, straight behind, head well formed, short neck and heavy shoulders. Lady Beaumont should rest on her laurels as her tan is very washy, is short-necked, chunky-bodied, but has a nice shaped head. She won first at New York last spring. Roscoe won in puppies from an inferior litter brother. To Dr. Dixon went the kennel prize.

SPANIELS (*E. M. Oldham, Judge*) —Mr. Oldham made his second appearance in the ring and acquitted himself creditably. He had not such a difficult task before him as when he first donned the ermine at Toronto, at the same time he was well supported here. In challenge fields (3), Beverley Negus, although rather below himself, beat Bridford Ruby everywhere but in head. Beau looked rather ragged. In open black dogs (2), Judex could not be denied, though very fat. Warwick was second at Toronto; he loses in head to the other. In bitches (2), Dame Trot, shown in nice shape, won over Rosedale Bess, who beats her in head, but her coat is curly and wavy. In any other color (3) the blue went to The Shrew, whose good forelegs, head and lengthy body won well over Fancy, the Philadelphia winner. Mt. Vernon Prince is too coarse in head, rather high on legs, but they are well formed. The challenge cocker class (2) was divided, and this allowed Fascination and I Say to score each a blue ribbon; they deserved them, for they were in the usual Toronto condition. Open dogs (3), first went to Middy, who beats Donovan in quality, coat and front, though Donovan has a fairly good head and body; bit full in skull. Nigger, vhc., has a shelly body, is plain-faced, full-eyed, wavy-coated and a bit out in front. In the female division (9), Troublesome, a few pounds heavier, carried out her owner's intention when he named her; she is filling out, but will never be much more than a toy. Maid of Perth, second, a nice cocky type, rather snipy in muzzle, but good body and legs. Miss Chip, another of Jersey's get, was well placed, beating Woodstock Dora in head and front. Watnong Nell, vhc., is a little scooped out before the eye, nice body, but forelegs not just the thing. Miss Waggles we have all seen before. Any other color dogs had a Chestnut for winner, one of the cockiest little chaps one would wish to see, a capital body, nice head and legs, a little out of coat now: in fact, all these cockers are wanting in coat nowadays. Rollo, second, has a rather coarse head, too long in skull and broad, stands on good legs, nice height, does not always stand true, good body, if it is a little long. Watnong Dandy is plain in muzzle, but has a rare little body, though a bit small-sized. The others were of no account, though very pretty. In bitches Beauty had no difficulty in scoring over Nellie, a pretty liver and white, but toyish. George Bell, as usual, scooped up most of the specials in cockers, and A. E. Foster accounted for the field division. Judex beat Beverley Negus, and Troublesome scored over I Say for best cocker bitch.

COLLIES (*Martin Dennis, Judge*).—This breed, on the whole, was not conspicuously prominent in quality, and many of the dogs were at their worst as regards coat and should not have been shown. It does surprise one to think that exhibitors who wish to get good records for their dogs, and who are experienced in the business, will risk defeat where condition and coat play such an important part. In challenge dogs, The Squire, keeping well, is a better dog than Ormskirk Shep, and proved it here with something to spare, in head, front and loin. That perennial beauty Metchly Surprise was alone in her class. Open dogs (10), Mr. Jarrett showed his hand again with Toronto Wonder that he purchasad in the Queen City last September; carefully handled he will take the eye of many a judge. That handsome collie Woodsnansterne Trefoil, a black, tan and white that Mr. Mortimer brought over, is a capitally made dog, good long head, beautiful expression, good body and fair coat at present. Chrysolite, third, is well known; he cannot beat the others in head, but was looking well here. Conrad II., looking the shadow of his Toronto self, being all out of coat took vhc., while Roy K., a very handsome dog with the most profuse frill and coat in the show, a fairly good head bit broad in skull, capital legs and body, I thought harshly treated. Bitches (6) brought out a nice lot from the Hempstead Farm Kennels, but wofully lacking in coat. Their Deboran has a nice long head but ears not well carried, or seemed not to be, capital loin, ribs and quarters and good front, coat open but of good feel. Ormskirk Susie, second, is rather domy in skull but beautiful in expression, but I like their Ormskirk Julia, third, better in face and head, which is sweet in expression. Minnie Sefton is small and seemed to lack substance, nice ears and expression. Bertha II., hc., might have done better, though faulty in head. Puppies (3) found the winner in Meda, who excels Jeanness in head and body but is beaten in coat. Hempstead Farm won the kennel prize.

POODLES (*Dr. H. M. Cryer, Judge*).—The class did not require much judging, the winners being conspicuous, Dexter getting his new cords nicely now and well shown had a challenge class made for him In the open (7) it did not take long to pick out Fritz, a son of Styx, as the best, beating Tell in muzzle, loin, bone and cords. Fannie, reserve, a pup, went home early. Tom, vhc., is wooly-coated and weak in muzzle. Prof. Dodd's Educated Mickey was an attraction to those who like funny things.

BULLDOGS (*T. S. Bellin, Judge*).—A first-rate show of these dogs, some of the best on view. Saleni of course beat Carisbrooke and Soudan in the challenge class, and Pathfinder, from the same kennel, won the ribbon in open heavy dogs (5), second going to Rustic Sovereign, who loses in ears, foreface and shoulders, which are not out enough; Barney C. won't do for this company. In heavy bitches (4) Miss Verne was given second; a little flat in skull, not out at elbow sufficiently, and cloddy in body. Lady Regent, vhc., is also deficient in volume of skull, but is better in front than the winner. Governor, vhc., does not like the common herd, and showed it. He is a bit on the leg, not broken up well in face and not out enough at shoulder. In dogs under 45lbs. (3) two sons of champion Harper were to the front. Wal Hampton has hardly sufficient volume of skull, but has a good deep muzzle and fair layback, body and quarters good, and is fairly out at shoulder. Heathen is a black and brindle, tremendous skull, good chop and wrinkle, body correct, and fairly well out at elbow. Battos, well known, seemed to have been overlooked. In bitches (4) first went to Magpie, whose good head and characteristic shoulders offset her open feet and weak pasterns. Rose is rather narrow in skull and not broken up enough in foreface. Dolly Tester's lack of skull volume and faulty chops, though she is well out in front, probably suggested her vhc. Rock Rose carries one ear down, has a long, narrow face and forelegs are far from straight; she seemed to be in whelp.

BULL-TERRIERS (*T. S. Bellin, Judge*).—One could scarcely remember ever seeing a better exhibit of these dogs even in New York. Looking down the bench it was hard to pick out a bad one among the favorite sizes. In challenge dogs (2), Carney met defeat again at the hands of Streatham Monarch, who looked in great shape while Carney was shown a bit below his figure. Challenge bitches gave rise to a hot tilt, Edgewood Fancy and Attraction, being placed as named; Fancy bests the latter in shoulders and front, the other having gone a bit there, both are good. Duchess of York not in good trim, came vhc., she was outclassed and cheeky, while Royal Rose is but a memory of real self. Heavy open dog (8) was a hard class to select from. Diamond King getting a bit wide in front won from Aristocrat who is rather "bully" in front and has too much stop. Billy Bulger, a serviceable sort of dog, a winner at Pittsburgh, took reserve. Cornet II. is well known and rather hardly treated. Woodcot Bill has a good head and eye, feet open, in fact he could be improved in front. Bully was outclassed here. The novice winner Fidget at New York won from the well known Grove Duchess in bitches (9), beating in head and body. Early Rose took the reserve number, beating British Queen in head and front. In the lightweight dogs Sir Rudolph won nicely, good head with correct eye, a little heavy in shoulder and not quite true in front, but for this he would be bad to beat, I had a better look at him here, as at Danbury he was cross. Dusty Miller, well known, came second, he is getting heavy in shoulders and cheeky. Snap Eye, reserve, is rather round in skull, coarse in tail and bit out in front. Woodcot Scamp, at present has a fairly good head but inclined to thicken, good body and legs. Autocrat Victor, hc., is short in head, feet open and fore legs hardly straight, nice body. In bitches (3) Woodcot Lily is a little round and full in skull, muzzle plain, otherwise good. Nettle I thought lucky, too much stop, front too wide and bone light. Luce, hc., has a short chunky head. Under 20lbs., Tubby Hook's Sailor and Soda Mint took the money, the former is a little out at elbow, skull round and muzzle not strong enough, something on the English terrier order, Soda is a "wee wan" too small to criticise much as you cannot get them like the heavier ones in build. Edgewood Wonder is a good stamp, nice long head, good body and legs, shoulders perhaps a little heavy, good carriage of stern in action. Some fair pups were shown. Frank Dole's aggregation took the kennel prize.

DACHSHUNDS (*T. S. Bellin, Judge*).—Probably the best lot of dachshunds ever seen in public at an American show. Mr. Manice has got together a capital lot and is not afraid of letting them be seen. Windrush Rioter and Janet were alone in their respective challenge classes and never looked better, having been regularly hunted this fall. In open dogs (5) first went to Jay, the new one; nice lengthy head, but little open, strong on his pasterns, good crook and chest, coat somewhat rough on a loose skin. Tack, also an importation, has a nice head, scarcely enough peak, throws out in front, good bone, strong pasterns, nice chest and lengthy body, with plenty of loose skin. Our old friend Superbus II., of the thick head, took reserve, while Don Quixote II. scarcely fulfilled his promise, but is a sweet little dog, nevertheless: in body, legs and coat he is good, he may improve yet; had distemper. Fritz was outclassed here. In bitches Mr. Manice's new ones, Jargonelle and Jane Shore were first and second; the former is very strong on her pasterns, chest well let down, good crook, skull a trifle high and muzzle could be stronger, excellent body, loin and quarters, nice skin and length. Jane, little full in brow and faulty in ears, muzzle trifle plain and tail coarse, about her only apparent faults. Kate and Vic, hc., are not in it with these two. Glenrose's Dack is more like a dachshund in name than reality—stick to beagles Glenrose. The Manice kennel, of course, took the kennel prize.

BEAGLES (*H. W. Lacy, Judge*),—The number and quality combined was admitted by beagle men present to have scarcely been surpassed at any previous show. In view of this it was hardly fair for the judge to be compelled to judge them by such an uncertain light and in such a crowd as there was in the press room. But beagle men are proverbially in a hurry to have the agony over, and they had their way. Tricotrin, Roy K., and Racer, Jr., showed for challenge dogs over 13in., Roy holds Racer safe and Tricotrin beats Roy in front, body and action, especially behind. Tricotrin is faulty in head and carriage of stern. Elf, looking better than I ever saw her, was alone in her class. In open dogs Sherry easily disposed of his rivals, an improved dog, and was well shown, good legs, head, body and carriage of stern. Trifle, third, was at Danbury, and barring a rather cloddy appearance, he deserved his position. Jack Rowett had his front to blame for his reserve card. Pulboro Crafty is too coarse and big, had a bit off his tail. Thunderer is too long, faulty head and heavy front. Bitches were warm, very. Emeline, looking as I never saw her, so much different to Nanuet, where her fat snowed her under; here she was a different animal and turned the tables on Parthenia, who had gone off and lost her beautiful body outline, especially loin. Winnie K. beat Pearl for card honors in front and shoulders. Under 13in.: Royal Krueger looked in great shape, but had no competition, and champion Lou had little difficulty in beating the light-bodied Ava W. in that respect and head. Rockland Boy beats Little Wonder in coat, legs and quarters, but the latter has the best head. The bitch class was bad to judge, but Butterfly repeated her Nanuet victory, being in better shape, too. Marjory, though fat, is very typical, good body, legs, deficient in muzzle and not clean enough about neck and shoulders. Evangeline is faulty in front, body and head. Queechy deserved her letters. The specials were keenly contested. In smaller dogs Rockland Kennels' sorty pack had more substance and were more level. Over 13in. Hornell-Harmony's more level lot were fairly in it. For best beagle I thought Elf beat Royal Krueger in cleanness of shoulders, forelegs and carriage of stern.

FOX-TERRIERS (*German Hopkins, Judge*).—Mr. Hopkins judged very acceptably in place of Mr. Belmont. In challenge dogs Raffle beat Suffolk Toby, the wire, very narrowly. Open dogs (10) brought out a new one, of good style, rather thick and full in skull, and muzzle could be better, but otherwise good. Beverwyck Punster is well known now, and Warren Daysman, third, is round in skull. Blemton Rattler, reserve, was well placed. Of the commended lot that good terrier Dobbin well deserved his letters. Ruxton was at Toronto. In bitches (12) Grouse II. won another blue ribbon, followed by Ripon Regina, a new face, bit heavy in shoulders, pinched muzzle, soft coat, otherwise good. Warren Faithful is faulty before the eye, good legs. Tuxedo Beauty is full in eye, space will not admit of extended notice of all the card winners. My Fellow won in dog puppies, pressed by Wilton Tipper. Boscobel, the bitch winner, won at Toronto. Open wires (7) Suffolk Billy, first, has an excellent head, dips a little behind shoulders, coat could be harder. Dandy Jack, second, is rather light in loin, otherwise good. Jack Trick is a wiry sort, big ear, light in body. Suffolk Grip, vhc., is rather coarse in head, good front and bone, and Carn Brea Prince is also coarse in head. In bitches (5) Jess Frost, first, is faulty in head, but stands on good legs, nice body and coat. Vic Broom pressed her close, especially better in head and front. Carlisle, reserve, well shown, is a trifle full in skull, and could be straighter in front. Suffolk Tassel, third, was the Pittsburgh winner. Carlisle Glory won well in puppy class (3). Messrs. Rutherfurd won the kennel on a close call.

DANDIE DINMONTS (*T. S. Bellin, Judge*).—All the winners are well known and it is always a tight go between King o' the Heather and Amphion.

SCOTCH TERRIERS (*T. S. Bellin, Judge*).—A nice show of these game terriers; the winners in the dog class (4), Kilroy and Kilcree, are now well known, and rightly placed. Ashley Plug, reserve, too full in skull, crooked front and poorly shown. Colored Preacher's feet turn out and he is coarse in skull, good coat. In bitches (4) Culblean, first, is not straight in front, nice body and action. Wankie Daisy, second, is a little out in front and body long, nice head, ears big. Thistle Down was too fat and wide in front.

IRISH TERRIERS (*T. S. Bellin, Judge*).—A capital show of them. The winner, Crib's, front should have put him well back to the others. Jackanapes and Romulus were equal second; the former has too much coat and cloddy in body, wide in skull but good front. Romulus, a drop ear, has a nice head and is better than the other for place; faulty in loin, perhaps. Merle Grady, equal third, has a good head but too dark in muzzle, excellent front, out of coat and rather soft, nice body; should have been higher up. Fenian, also equal third, has a nice head, though with too much stop and a bit heavy in shoulders. Bagman, vhc., is out at elbows. This was evidently a hot class to judge, but there need not be so many equals given. The bitch class was smaller (4) but choice. Candour, the Toronto winner, beats Dunmurry slightly in head and feel of coat only, both clinkers. Colleen Rue has been out before, and Kilmurry is faulty in pasterns and feet. A Breda Bill pup won in puppies, only entry. Candor won the special.

BLACK AND TAN TERRIERS (*T. S. Bellin, Judge*).—The exhibits in these classes have been ding-donged round till their names have become household words in the fancy. Jasper lost on condition, head and front principally to Merry Monarch. Queen III. smothered Carmencita. Lady Salisbury I could not find.

BEDLINGTON TERRIERS (*T. S. Bellin, Judge*).—With exception of Parilla, all well known. He loses to a good one in head and strength of jaw, but has a better feel of coat than the winner, Editor.

Skye terriers are both well known, and the Yorkshires were not high class, but I thought Prince should have beaten Beauty in the dog class; better head, coloring and coat. Toy terriers were poor, as usual.

PUGS (*Dr. H. M. Cryer, Judge*).—There was no Bonsor or Sprake in this lot, and quality was very poor, especially when a Curtis takes the challenge prize. Little Fritz in dogs won nicely in skull and muzzle over Dixie, who has been repeatedly commented on. Duke Howard's nice skull and muzzle got him the reserve. Little Jewell has gone off. Vega, the bitch class winner, won in Pittsburgh; she seemed wide in front and head small. Puppies were poor.

TOY SPANIELS (*Dr. H. M. Cryer, Judge*).—Outside of Romeo and Belle there was little to commend. A nice Jap in Tootsie beats Tamah, a frequent winner, in general quality, coat and head. The Italians were poor; a very delicate little thing of nice size was the winner; others known. Two fair smooth sheepdogs were shown in miscellaneous, and should, as a more recognized breed, have been put over the Chinese.

H. W. L.

## LIST OF AWARDS.

MASTIFFS.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st, J. L. Winchell's Beaufort's Black Prince; 2d, Mrs. Chas. Wallack's Merlin *Bitches:* 1st, B. F. Lewis's Ethel; 2d, J. L. Winchell's Boss's Princess; 3d, Miss L. H. Pusey's Brun. High com., J. R. Collins's Lady Teazle. *Puppies:* Prizes withheld.

ST. BERNARDS.—ROUGH-COATED.—CHALLENGE—*Dogs:* 1st, Col. J. Ruppert, Jr.'s Aristocrat. *Bitches:* 1st, Col. J. Ruppert, Jr's Lady Gladwin.—OPEN—*Dogs:* 1st and 2d, F. Schmitt's Roland, Jr. and Otos; 3d, O. Langenberger's Donnar. Very high com., New York St. Bernard Kennels' Refuge II. High com., O. Langenberger's Percival, Swiss Mountain Kennels' King Regent and Mrs. J. Smith's White Friar. Com., Emma Langenberger's Achilles. *Bitches:* 1st and 3d, Col. J. Ruppert, Jr.'s Miss Anna and Alronette; 2d, Swiss Mountain Kennels' Sunray. Very high com., W. Gray's Judy and Co), J. Ruppert, Jr.'s Ellen Terry. High com., Swiss Mountain Kennels' Princess Hepsey and J. F. Lutz's Princess Wang. *Puppies:* 1st, E. Booth's Lord Walbeck; 2d, C. M. Bull's Duke of Alton; 3d, J. Reiner's King Victor. Very high com., P. H. Roeder's Lord Percy. High com., C. B. Dake's Lady Charlton. Com., C. J. Field's Nero.

ST. BERNARDS.—SMOOTH-COATED.—CHALLENGE—*Dogs:* No entries. *Bitches:* 1st, Col. J. Ruppert, Jr.'s Empress of Contoocook.—OPEN—*Dogs:* 1st, Swiss Mountain Kennels' Scottish Leader; 2d, D. P. Foster's Leicester; 3d, Miss L. Osborne's Czar O. *Bitches:* 1st, Col. J. Ruppert, Jr.'s Bellegarde; 2d, H. Schierloh's Charmion; 3d, C. B. Dake's Bessie of Contoocook. *Puppies:* 1st and 2d, R. E. Cochran's Nemo and Dayma.

GREAT DANES.—CHALLENGE—*Dogs:* 1st, G. Leihbacher's Pascha. *Bitches:* No entries. OPEN—*Dogs:* 1st, Jos. Livingston's Maloc; 2d, Dr. W. H. Shepard's Duke; 3d, Paul Clagstone's Stanley. Very high com., H. F. M. Podeyn's Pasha II. High com., Charles Fischer's Fritz, H. A. Lawson's Pasha L. and David Schmidt's Pasha. Com., John Frank's Cæsar. *Bitches:* 1st, H. F. M. Podeyn's Nora; 2d, Phil. Heckelmann's Fanny; 3d, G. Leihbacher's Louise. Very high com., H. A. Lawson's Fitz. *Puppies:* 1st, M. Schuli's Schult Nero and John Condou's Surpass; 2d and 3d, Martin Hahnle's Pascha III. and Flora. High com., Charles Fischer's Pascha.

NEWFOUNDLANDS.—2d, Chas. Sutter's Pascha.

BLOODHOUNDS.—CHALLENGE—1st, J. L. Winchell's Judith. OPEN—*Dogs:* 1st, J. L. Winchell's Victor; 2d, George W. Glazier's Javert. Very high com. and high com., George W. Glazier's Jean Valjean. *Bitches:* 1st, George W. Glazier's Benison.

DEERHOUNDS.—CHALLENGE—*Dogs:* No entries. *Bitches:* 1st, Dunrobin Kennels' Olga. OPEN—*Dogs:* 1st, Dunrobin Kennels' Argyle; 2d, Henry Mollenhauer's Bismarck; 3d, J. M. Greenwood's Glencairn. *Bitches:* 1st withheld; 2d, Iolanthe Kennels' Madge Mac; 3d, Henry Mollenhauer's Thora.

GREYHOUNDS.—CHALLENGE—1st, Albion L. Page's Maud Torrington.—OPEN—*Dogs:* 1st, Woodhaven Kennels' Lord Neverstill; 2d, Tubby Hook Kennels' St. Regis; 3d, Wm. Schumacher's Prince Bismarck. *Bitches:* 1st, Jas. Black's Dolly Dollar; 2d and very high com., Maybrook Kennels' Miss Dollar III. and Maybrook Nell; 3d, Wm. T. Faulkner's American Daisy. *Puppies:* 1st, Woodhaven Kennels' Snowflight; 2d, W. D. Blenus's Dollas.

PSOVIE.—CHALLENGE—*Dogs:* 1st, H. W. Huntington's Argoss. *Bitches:* 1st, H. W. Huntington's Princess Irma.—OPEN—*Dogs:* 1st and 3d, C. S. Hanks's Sarvanates and Leekhoi; 2d, H. W. Huntington's Ossiad. *Bitches:* 1st, H. W. Huntington's Zerry; 2d, very high com. and high com., P. H. Hacke's Armeda, Viewga and Palma; 3d, C. S. Hanks's Vinga. *Puppies:* 1st, C. S. Hanks's Peter the Great; 2d, H. W. Huntington's Krimena.

CHESAPEAKE BAY DOGS.—1st, Robert Milbank's Pride.

FOXHOUNDS.—AMERICAN—*Dogs:* 1st, Dr. H. T. Thurber's Elite; 2d, Tubby Hook Kennels' Picket.—ENGLISH—*Dogs:* 1st, The Pennbrook Hunt's Denmark; 2d and com., Rockaway Hunting Club's Gambler and Rascal. *Bitches:* 1st, The Pennbroke Hunt's Ransom; 2d, Rockaway Hunting Club's Sprightly.

POINTERS.—CHALLENGE.—55LBS. AND OVER—*Dogs:* 1st, Geo. Jarvis's Lad of Kent.—50LBS. AND OVER—*Bitches:* 1st, Hempstead Farm's Woolton Game.—OPEN—*Dogs:* 1st, Robert C. Cornell's Ponset; 2d, Hempstead Farm's Hempstead Bang Bang; 3d, Rinada Pointer Kennels' Earl of Hessen. *Bitches:* 1st, Rinada Pointer Kennels' Duchess of Nason; 2d, Geo. Jarvis's Lass of Kent; 3d, Banks & De Russy's Bella.—CHALLENGE.—UNDER 55LBS—*Dogs:* 1st, Hempstead Farm's champion Duke of Hessen.—UNDER 50LBS

—*Bitches:* 1st, W. H. Hyland's Fan N.—OPEN—*Dogs:* 1st, Rinda Pointer Kennels' Ridgeview Donald; 2d, Chas. Connell's Rock II.; 3d, A. G. Hooley's Ridgeview Faust. Very high com. reserve, R. C. Cornell's Roderick. Very high com., Hempstead Farm's Hempstead Prince and Bronx Valley Kennels' Axtel King Don. High com., Otto Hilmer's Chester. *Bitches:* 1st, W. C. Root's Bloom of Kent; 2d, Rinada Pointer Kennels' Westminster Lu; 3d, A. S. Hoffman's Gaynell of Kent. Reserve, Rinada Pointer Kennels' Miss Arkos. Very high com., Lennox Kennels's Westminster Kate. High com., Mme. Salvotti's Daisy. Com., A. G. Hooley's Princess Lillie. *Puppies:* 1st and 2d, Hempstead Farm's Hempstead Bang Bang and Hempstead Prince. Com., N. Gerold's Nic.

ENGLISH SETTERS.—CHALLENGE—1st, F. S. Brown's Edgemark.—OPEN—*Dogs:* 1st, Rosecroft Kennels' Glendon; 2d, A. G. Hooley's The Earl; 3d, W. C. Downington's Benzine. Reserve, Bronx Valley Kennels' Pride of Bronx. Very high com., Seminole Kennels' Sir Frederick. High com., Lenox Kennels' Kent's Rex. *Bitches:* 1st, J. M. Wood's Donna Juanita; 2d, G. E. Scheffler's Doretta; 3d, F. G. Taylor's Katie Noble II. Very high com., reserve, H. D. Ogden's Daisy Bright. Very high com., Dr. J. E. Hair's Alberts' Daisy. High com. and com., Messrs. R. H. Alberts, Jr., and W. E. Briggs's Neva B., Gwynnie. *Puppies:* 1st, Bronx Valley Kennels' Deceive; 2d W. H. Brush's Eastern Queen; 3d, Sunset Kennels' May Win. Com., Messrs. R. H. Alberts, Jr., and W. E. Brigge's Alberts's Ruby.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, Seminole Kennels' Tim. Very high com. and reserve, Oak Grove Kennels' Kildare. *Bitches:* 1st, Oak Grove Kennels' Norna. Very high com., reserve, Seminole Kennels' Laura B.—OPEN—*Dogs:* 1st, Seminole Kennels' Montauk, Jr.; 2d, G. Langran's Tim's Dandy; 3d, Redstone Kennels' Erin's Lad. Very high com., reserve, G. Langran's Young Glencho. Very high com., J. P. Allen's Rab. High com., Seminole Kennels' Seminole Blarney, D. F. Keller's Tipperacue and Sunset Kennels' Osbie Joe. Com., F. H. Major's Lord Chumley and C. H. Jackson's Chester. *Bitches:* 1st, C. T. Thompson's Fly; 2d, Oak Grove Kennels' Rose Sarsfield; 3d, Seminole Kennels' Claremont Heather. Very high com., reserve, Seminole Kennels' Delphinne. Very high com., G. Langran's Young Juno. Redstone Kennels' Belle Ida, Oak Grove Kennels' Molly F. and Alice Kent, and H. Hawkes's Agnes. High com., Oak Grove Kennels' Bonnibel. *Puppies:* 1st, withheld; 2d, Miss E. Truslow's Topsy of Bay Shore. High com., Seminole Kennels' Henmore Chief.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st, Dr. S. G. Dixon's Ivanhoe. Reserve, Smith Bros. Rexmont. *Bitches:* 1st, Dr. S. G. Dixon's Duchess of Waverly. Reserve, J. B. Blossom's Flomont. —OPEN—*Dogs:* 1st, J. B. Blossom's Comus; 2d, Dr. S. G. Dixon's Duke of Wellington; 3d, E. H. Morris's Brillmont. *Bitches:* 1st, Dr. S. G. Dixon's Princess Louise; 2d and 3d, J. B. Blossom's Venus and Sallie Beaumont. Very high com., reserve, W. C. Gleason's Dorothea. High com., Prof. L. P. Braive's Lady Beaumont. *Puppies:* 1st and high com., C. E. Mather's Roscoe and Carmen Sylvia.

SPANIELS.—ALL BREEDS OVER 28LBS.—CHALLENGE—1st, A. E. Foster's Beverly Negus. Reserve, R. P. Keasbey's Bridford Ruby.

FIELD SPANIELS.—BLACK, OVER 28LBS.—OPEN—*Dogs:* 1st, A. E. Foster's Judex; 2d, Dr. S. J. Bradbury's Warwick. *Bitches:* 1st, A. E. Foster's Dame Trot; 2d, R. P. Keasbey's Rosedale Bess. —ANY OTHER COLOR OR BREED, OVER 28LBS.—OPEN—1st, Dr. S. J. Bradbury's The Shrew; 2d, R. P. Keasbey's Fancy. Very high com., Dr. G. A. Longest's Mount Vernon Prince.

COCKERS.—ANY COLOR, NOT OVER 28LBS.—CHALLENGE—Equal 1st, G. Bell's Fascination and I Sav.—BLACK, NOT OVER 28LBS —OPEN—*Dogs:* 1st, Swiss Mountain Kennels' Middy; 2d, Dr. J. E Hair's Donovan. Very high com., John Rodger's Nigger. *Bitches:* 1st, G. Bell's Troublesome; 2d, A. C. Wilmerding's Maid of Perth. Reserve, Swiss Mountain Kennels' Miss Chip. Very high com., Dale & Thomas's Woodstock Dora and A. C. Wilmerding's Watnong Nell. High com., F. W. Kitchell's Lady Jane, Swiss Mountain Kennels' Miss Waggles and J. F. Terew's Minnie. Com., John Rodger's Nell.—ANY OTHER COLOR, NOT OVER 28LBS.—OPEN —1st, Geo. Bell's Chestnut; 2d, A. C. Wilmerding's Rollo. Very high com., A. C. Wilmerding's Watnong Dandy. High com., Lizzie Jones's Boss and Frank Jones's Tiger.

CLUMBER SPANIELS.—1st, Swiss Mountain Kennels' Beauty; 2d, Frank Jones's Nellie.

COLLIES.—CHALLENGE—*Dogs:* 1st, Seminole Kennels' The Squire. *Bitches:* 1st, Seminole Kennels' Metchley Surprise.—OPEN —*Dogs:* 1st, Chestnut Hill Kennels' Toronto Wonder; 2d, Hempstead Farm's Woodmansterne Trefoil; 3d, Seminole Kennels' Chrysolite. Very high com., Hempstead Farm's Conrad II. High com., Mrs. Russell Keith's Roy K. *Bitches:* 1st, 2d, 3d and very high com., Hempstead Farm's Deborah, Ormskirk Susie, Ormskirk Julia and Minnie Sefton. High com., Seminole Kennels' Bertha II. *Puppies:* 1st, John Hughes' Meda; 2d, Robert Buckle's Jeaness.

POODLES.—CHALLENGE—1st, E. H. Morris's Dexter.—OPEN—1st and very high com. reserve, M. W. Reid's Fritz and Fannie; 2d, Chas. Priem's Tell. Very high com., Mrs. A. Lagarde's Tom.

BULLDOGS.—CHALLENGE—1st, Wheatley Kennels' Saleni; 2d, Chas. A. J. Smith's Carisbrooke.—OPEN—45LBS. AND OVER—1st, Wheatley Kennels' Pathfinder; 2d, Iolanthe Kennels' Rustic Sovereign. Very high com., J. A. & W. H. Finlayson's Governor. Com., W. L. Titus's Barney. *Bitches:* 2d, Dr. D. L. Haight's Miss Venn. Very high com. Wheatley Kennels' Lady Regent.—UNDER 45LBS.—*Dogs:* 1st and 2d, Hempstead Farm's Wal. Hampton and Heathen. Very high com., J. A. & W. H. Finlayson's Governor. *Bitches:* 1st, C. E. Cox's Magpie; 2d, E. K. Austin's Rose. Very high com., J. H. Matthew's Dolly Tester. High com., Iolanthe Kennels' Rock Rose.

BULL-TERRIERS.—CHALLENGE—*Dogs:* 1st, J. Moorehead, Jr.'s Streatham Monarch. *Bitches:* 1st, Tubby Hook Kennels' Edgewood Fancy; 2d, F. F. Dole's Attraction. Very high com., George House's Duchess of York. High com., Castle Point Kennels' Royal Rose.—OPEN—30LBS. AND OVER—*Dogs:* 1st, Retnor Kennels' Diamond King; 2d, P. C. Petitt's Aristocrat. Reserve, R. Carson, Jr.'s Billy Biger. Very high com., H. M. Howes's Comet II. High com., F. F. Dole's Woodcot Bill. Com., W. Wedgwood's Keno. *Bitches:* 1st, reserve and high com., Castle Point Keunels' Fidget, Early Rose and Wild Rose; 2d, H. M. Howes's Grove Duchess. Very high com. Retnor Kennels' British Queen. Com., William Wedgwood's Beauty.—UNDER 30LBS. AND OVER 20LBS.—*Dogs:* 1st and very high com., F. F. Dole's Sir Rudolph and Woodcot Scamp; 2d, Retnor Kennels' Dusty Miller. Reserve, C. Trowbridge's Snap Eye. High com., H. M. Howes's Autocrat Victor. *Bitches:* 1st, F. F. Dole's Woodcot Lily; 2d, Retnor Kennels' Nettle. High com., W. Wedgwood's Luce.—UNDER 20LBS —*Dogs:* 1st and 2d, Tubby Hook Kennels' Sailor and Soda Mint. *Bitches:* 1st, F. F. Dole's Edgewood Wonder. *Puppies:* 1st, Castle Point Kennels' Castle's Pride. Com., W. Wedgwood's White Duke.

DACHSHUNDS.—CHALLENGE—*Dogs:* 1st, Edward A. Manice's Windrush Rioter. *Bitches:* 1st, E. A. Manice's Janet.—OPEN—*Dogs:* 1st, very high com. res., and very high com., E. A. Manice's Jay, Superbus II. and Don Quixote II.; 2d, Hempstead Farm's Tack. High com., L. O. Seidel's Fritz K. *Bitches:* 1st and 2d, E. A. Manice's Jargoenlie and Jane Shore. High com., Charles Pfizer's Kate and Vic.

BEAGLES.—CHALLENGE—OVER 13IN.—*Dogs:* 1st, Hornell-Harmony Kennels' Tricotrin. Reserve, Rockland Beagle Kennels' Roy K. *Bitches:* 1st, Hornell-Harmony Kennels' Elf.—OPEN—*Dogs:* 1st, Hornell-Harmony Kennels' Sherry; 2d, George Laick's Trifle. Reserve, Rockland Beagle Kennels' Jack Rowett. Very high com. and high com., Waldingfield Kennels' Pulboro Crafty and Thunderer. *Bitches:* 1st, Rockland Beagle Kennels' Emeline; 2d, Glenrose Beagle Kennels' Parthenia. Reserve, Hornell-Harmony Kennels' Winnie K. Very high com., George Laick's Pearl.—CHALLENGE—13IN. AND UNDER—*Dogs:* 1st, Hornell-Harmoney Kennels' Royal Krueger. *Bitches:* 1st, Rockland Beagle Kennels' Lou; 2d, Hornell-Harmony Kennels' Ava W.—OPEN—*Dogs:* 1st, Rockland Beagle Kennels' Rockland Boy; 2d, Hornell-Harmony Kennels' Little Wonder. *Bitches:* 1st, Glenrose Kennels' Butterfly; 2d, Mrs. R. F. Mayhew's Majory. Reserve and very high com., Hornell-Harmony Kennels' Queechy and Evangeline. High com. and com., Rockland Beagle Kennels' Zellah and Lady Vera.

FOX-TERRIERS.—SMOOTH.—CHALLENGE—*Dogs:* 1st, L. & W. Rutherfurd's Raffle. Reserve, Hemnstead Farm Kennels' Sulfolk Toby. *Bitches:* No entries.—OPEN—*Dogs:* 1st, Iolanthe Kennels' Ripon Stormer; 2d, C. Rathbone's Beverwyck Punster; 3d, L. & W. Rutherfurd's Warren Daysman. Reserve, L. B. Banks's Blemton Rattler. Very high com., L. & W. Rutherfurd's Warren Laird, E. W. Irwin's Ruxton and Woodale Kennels's Dobbin. High com., E. R. Hollander's Hillside Ruffian. *Bitches:* 1st, C. Stedman's Hanks Grouse II; 2d and 3d, Iolanthe Kennels' Ripon Regina and Miss Domino. Reserve, L. & W. Rutherfurd's Warren Faithful. Very high com., E. Bird's Tuxedo Beauty and L. & W. Rutherfurd's Dusky II. High com., E. W. Irwin's Chinquipin Chink. Com., Woodale Kennels' Woodale Regina.—PUPPIES—*Dogs:* 1st, A. D. Stewart's My Fellow C.; 2d, Wilton Kennels' Wilton Tripper. Very high com. reserve, Dr. A. W. Lawrence's Crafty. *Bitches:* 1st, E. W. Irwin's Boscobel; 2d; Woodale Kennels' Woodale Dainty.—WIRE-HAIRED—*Dogs:* 1st, Hempstead Farm's Suffolk Billy; 2d, Iolanthe Kennels' Dandy Jack; 3d and high com., C. L. A. Whitney's Jack Trick and Jack Prompter. Very high com. reserve, R. F. Mayhew's Brittle. Very high com., Iolanthe Kennels' Carn Brea Prince and Hempstead Farm's Suffolk Grip. *Bitches:* 1st, Iolanthe Kennels' Jess Frost; 2d, R. F. Mayhew's Nic Croom; 3d and high com., Hempstead Farm's Suffolk Tassel and Suffolk Venus. Very high com. reserve, T. S. Bellin's Carlisle Glory. *Puppies:* 1st and 2d, T. S. Bellin's Carlisle Glory and Carlisle Crib; 3d, R. F. Mayhew's Brimstone.

DANDIE DINMONT TERRIERS.—1st and 2d, Edward Brooks's King o' the Heather and Amphion. High com. and com., John Ferguson's Sir Robert and Meg Merriles.

SCOTCH TERRIERS.—*Dogs:* 1st and 2d, Henry Brooks's Kilroy and Kilcree. Very high com. and res., Richard Elliott's Ashley Plug. Very high com., Chesterford Park Kennels' The Colored Preacher. *Bitches:* 1st and 2d, Henry Brooks's Culblean and Wankie Daisy. Very high com., Henry Brooks's Thistle Down.

IRISH TERRIERS.—*Dogs:* 1st, Thos. Wise, Jr.'s, Crib; equal 2d, Iolanthe Kennels' Jackanapes and Hempstead Farm's Romulus; equal 3d, Walter J. Comstock's Merle Grady and Hempstead Farm's Fenian Boy. Very high com., H. O'Connor's Gaitees, Toon & Symonds's Jack Briggs and E. C. Le Montagne's Bagman. High com., Thos. Wise, Jr.'s Shaun Rue. *Bitches:* 1st, Chestnut Hill Kennels' Candour; 2d, Walter J. Comstock's Dunmurry. Very high com., Thos. Wise, Jr.'s Colleen Rue. Com., John Herlihy's Killmury. *Puppies:* 1st, Chestnut Hill Kennels' Nellie.

BLACK AND TAN TERRIERS.—CHALLENGE—1st, Rochelle Kennels' English Lady.—OPEN—*Dogs:* 1st, Rochelle Kennels' Merry Monarch; 2d, Frank F. Dole's Jasper. *Bitches:* 1st, Frank F. Dole's Queen III.; 2d, Rochelle Kennels' Rochelle Carmencita. Very high com. reserve, Iolanthe Kennels' Lady Salisbury. Very high com., Rochelle Kennels' Rochelle Majestic.

BEDLINGTON TERRIERS.—1st, Wm. H. Russell's Editor; 2d, Harris R. Childs's Parilla. Very high com., Wm. H. Russell's Christmas Carol and Martin A. H. Thelberg's Qui Vive.

SKYE TERRIERS.—1st, C. A. Shinn's Sir Stafford; 2d, K. K. Carner's Endcliffe Maggie.

YORKSHIRE TERRIERS.—*Dogs:* 1st, J. Selig's Beauty; 2d, J. A. & W. H. Finlayson's Prince. *Bitches:* 1st, J. A. W. H. Finlayson's Nell; 2d, W. H. Cooper's Maggie. Very high com., Morris Rothschild's Harry.

TOY TERRIERS.—1st, Morris Rothschild's Jerry; 2d, Mrs. May Lavitt McFeeters's Baby. Very high com. reserve, New York Pug Kennels' Gipsey. High com., Henry Stoetzel's Gyp.

PUGS.—CHALLENGE—1st, Mrs. M. M. Ballentine's Curtis; 2d, New York Pug Kennels' Nellie Bly. Very high com., J. Brombach's Bradford Rowdy.—OPEN—*Dogs:* 1st, J. Bowden's Little Fritz; 2d and high com., Seminole Kennels' Dixie and Little Jewel. Very high com. and reserve, Howard Kennels' Duke Howard. Very high com., Mrs. S. S. Bowden's Ivy Boy. *Bitches:* 1st, Mrs. M. M. Ballantine's Vega; 2d, Mrs. S. S. Bowden's East Lake Sister. *Puppies:* 1st, Mrs. M. M. Ballantine's Lady Muff; 2d, J. Bowden's Midget; Harry. Very high com., Seminole Kennels' Bonnie's Baby.

KING CHARLES SPANIELS.—1st and 2d, Mrs. F. Senn's Romeo and Yankee Boy. Very high com. reserve, J. Brombach's Duke of Wellington.

BLENHEIM, PRINCE CHARLES AND RUBY SPANIELS.—1st, Mrs. F. Senn's Bell.

JAPANESE SPANIELS.—*Dogs:* 1st, Mrs. R. L. Crawford, Jr.'s Tootsie. *Bitches:* 2d, Mrs. F. Senn's Tamah.

ITALIAN GREYHOUNDS.—1st, F. H. Hoyt's Trixie; 2d and very high com., J. Brombach's Golden Rod and Pansy.

MISCELLANEOUS.—1st, P. A. Raby's Tootsey; 2d and very high com., Hempstead Farm's Blue Light and Hempstead Maid.

SPECIALS.

MASTIFFS.—Best dog, Beaufort's Black Prince; bitch, Ethel; best mover, Boss's Princess.

ST. BERNARDS.—Kennel, Dutchess Kennels; rough dog, Aristocrat; bitch, Lady Gladwin; best smooth dog, Scottish Leader: bitch, Empress of Contococook; best American-bred rough dog, Roland, Jr.; bitch, Princess Hepsey; American-bred smooth dog, John Keevan's Patrol; bitch, Empress of Contococook; best rough puppy, Lord Walbeck; smooth, Nemo.

GREAT DANES.—Best kennel, G. Leibacher's; best dog, Maloc; bitch, Nora; Great Dane Club specials, best dog in open, Duke; bitch, Nora; dog puppy, Pascha; best American-bred, Nora; best solid colored dog, Duke; bitch, Fritz; best Harlequin dog Schult Nero; best brindle dog, Maloc; bitch, Nora; best dog or bitch, Maloc.

NEWFOUNDLANDS.—Best, Pascha.

BLOODHOUNDS.—Best dog or bitch, Victor.

DEERHOUNDS.—Best dog, Argyle; bitch, Olga; W. K. C. challenge cup, Argyle.

GREYHOUNDS.—Kennel, Woodhaven Kennels; best dog, Lord Neverstill; bitch, Maud Torrington; best in show, Lord Neverstill; Munro challenge cup, Lord Neverstill; also best American-bred that has won at a public meeting, Lord Neverstill.

RUSSIAN WOLFHOUNDS.—Kennel, Mr. Huntington's; best dog, Argoss; bitch, Zerry, best dog pup, Peter the Great; bitch, Krimena; W. K. C. challenge cup, Argoss.

FOXHOUNDS.—Best dog, Denmark; bitch, Ransome.

POINTERS.—Kennel, Hempstead Farm; best dog, 55lbs. and over, Lad of Kent; bitch, 50lbs. and over, Woolton Game; best dog, under 55lbs., champion Duke of Hessen; bitch, under 50lbs., Fan N.; best dog, Duke of Hessen; bitch, Woolton Game; best that has run at field trials, champion Duke of Hessen.

ENGLISH SETTERS.—Kennel, R. H. Alberts, Jr., and W. E. Briggs; best dog, Gleudon; bitch, Donna Juanita; Polhemus cup, Gleudon.

IRISH SETTERS.—Kennel, Oak Grove Kennels; best dog, champion Tim; bitch, Norna; best in show, champion Tim.

GORDON SETTERS.—Kennel, Dr. Dixon's; best dog, Ivanhoe; bitch, Duchess of Waverly.

SPANIELS.—Kennel, Geo. Bell; best field dog, Judex; bitch, Bridford Ruby; best cocker dog, Fascination; best bitch, Troublesome; Spaniel Club prizes—Best brace field spaniels, Judex and Beverly Negus; best brace cockers, Fascination and Troublesome; best field spaniel other than black in open class, The Shrew; ditto cocker, Chestnut; best field spaniel, Judex; best parti-colored field spaniel, Fancy; service of Fascination, Maid of Perth; best cocker get of champion Doc, Maid of Perth.

COLLIES.—Kennel, Hempstead Farm; best dog, Toronto Wonder; bitch, Deborah. Collie Club—Best dog, open class, Toronto Wonder; bitch, ditto, Deborah; best puppy, Meda.

BULLDOGS.—Best dog, Pathfinder; bitch, Saleni; Bulldog Club medal for best in show, Saleni.

BULL-TERRIERS.—Kennel, Frank F. Dole; best dog over 30lbs., Streatham Monarch; best bitch, ditto, Edgewood Fancy; best dog under 30lbs. and over 20lbs., Sir Rudolph; best bitch, ditto, Woodcot Lilly; best dog under 20lbs., Sailor; best bitch, ditto, Edgewood Wonder.

DACHSHUNDS.—Kennel, E. A. Manice; best dog or bitch, Janet; best dog, Windrush Rioter; bitch, Janet.

BEAGLES.—Kennel over 13in., Hornell-Harmony Kennels; under 13in., Rockland Kennels; best kennel, not less than five, any size, Hornell-Harmony Kennels; best dog or bitch over 13in., Elf; best ditto under 13in., ch. Lou; best in show, Elf; Beagle Club specials, best dog, ch. Royal Krueger; bitch, Elf.

TERRIERS.—Fox-terriers—Kennel, Messrs. Rutherfurd; best smooth dog, Ripon Stormer; bitch, Hanks's Grouse II.; best wire-haired dog, Suffolk Billy; bitch, Jess Frost; best American-bred under two years, Beverwyck Punster; best wire-haired dog in open or puppy, Suffolk Billy; bitch, Jess Frost. Dandie Dinmonts —Best dog or bitch, King o' the Heather; best brace, Sir Robert and Meg Merriles. Scotch terriers—Best dog or bitch, Kilroy; kennel, Henry Brooks. Irish terriers—Best dog or bitch, Candour. Black and tan terriers—Best dog or bitch, Queen III. Bedlington terriers—Best dog or bitch, Edith; bitch, Parilla. Skye terriers—Best, Sir Stafford. Yorkshires—Best in show, Nell.

PUGS.—Best brace, Curtis and Vega; best dog, Curtis; bitch, Vega (2); pug breeders' challenge cup, Little Fritz; best in show, Curtis.

Best King Charles spaniel, Romeo. Best Japanese spaniel, Tootsie. Best brace Italian greyhounds, Golden Rod and Pansy. Best exhibit by resident of New York city, Hempstead Farm. Best ditto in Brooklyn, H. W. Huntington's Russian wolfhounds.

---

Information comes to us from Chicago that Mr. H. J. Nichols, who is so well and favorably known as a fancier of Great Danes and owner of the great Melac, cannot be found by his friends, who fear that something serious may have happened to him. We sincerely trust that this is not the case. Two days before he left Chicago he sold Melac and his other dogs to the Cumberland Kennel Club, of which Mr. H. L. Goodman is manager. This will put that kennel in the very front rank in this breed. Mr. Nichols was a prominent Mason.

## EASTERN FIELD TRIALS CLUB'S FIELD TRIALS.

A WHOLE week of pleasant weather from Nov. 21 to Nov. 26 favored the trials, there being therefore no weather considerations to interrupt the work.

The judges managed the running most skillfully, a most important consideration in testing the qualities of setters and pointers in actual competition. This refers more particularly in respect to picking out a route through fields and cover so that the route will be continuous, or at least so that there will always be room to work, thus affording every opportunity for the dogs to work continuously. But few judges can avoid tangling up the competition in woods, doubling back on the same course, or see-sawing here and there as one obstruction after another appears to interrupt the work. The judges were Messrs. H. Merriam, Memphis, H. B. Duryea and Washington A. Coster, the genial secretary of the club. He appeared, however, to have an idiopathic case of utter weariness which cut off his active service as judge about ninety-nine per cent.

The annual meeting of the club was held on Thursday night. The Board of Governors was elected as follows: W. Hay Bockes, James L. Breese, W. A. Coster, J. Otto Donner, C. Oliver Iselin, H. B. Duryea, C. C. Gray, F. R. Hitchcock, Jos. H. Hunter, Pierre Lorillard, Jr., H. Hulman, Jr., H. Merriam, G. T. Leach, P. H. O'Bannon and Edward Dexter. The conditions of the stakes for 1893 remain the same as this year, excepting the Champion Stake, which was abolished, and a committee was appointed to make another stake instead. The club meeting then adjourned and the Board of Governors held a meeting.

Mr. C. Tate was named as a candidate for membership. A committee, according to time-honored action, was appointed with power to look up new grounds. The election of officers resulted as follows: President, Pierre Lorillard, Jr.; Vice-presidents, H. B. Duryea and Herbert Merriam; Secretary, Washington A. Coster. The new stake is called the New Subscription Stake. It is a free for all. $50 subscription which is transferable. The club adds $250. to go to first. Dogs to be named the night before starting. Heats to be two hours' duration and so arranged that a dog which runs in the morning will next time run in or about midday. Fifty per cent. sweepstakes to first, thirty to second and twenty to third.

The lunches served on the grounds were about as unappetizing as they could be consistently with a claim to a part of civilization, yet, to use a doggy term, they were "sorty," or much alike. Coffee was absent. Four or five plates were considered ample for twenty-five or thirty people, yet no sportsman should be so dudish as to expect much when he has the privilege of paying $2 50 per day for a little food and a good deal of inattention. To get waited on though imperfectly required a vigorous individuality and a persistent nature.

### The Members' Stake.

THE Members' Stake was run off this year under circumstances which never before occurred in the history of the club so far as the knowledge of your reporter reaches. The circumstances were the absence of the reporters and therewith the absence of any detailed history. FOREST AND STREAM had three staff representatives out in one week at different field trial events. Nothing could bear more direct testimony to the growth of field trials and the energy of FOREST AND STREAM in rising equal to the situation. In fact, there is not another paper in America which could send so many trained men to do such work.

But in respect to the Members' Stake, I was told that the work was only fair, and that birds were rather scarce.

Mr. W. A. Coster, the genial secretary, and Mr. Josiah Collins, Seattle, Wash., were the judges.

Following is a brief history of the proceedings:

P. Lorillard, Jr.'s lemon and white dog Count Anteo (Count Noble—Gladstone's Girl)

*with*

George Leach's black, white and tan dog Guy (Gladstone's Boy—Lady).

---

W. B. Meares's black, white and tan dog McMurdo (Roi d'Or—Mildred C.). *with*

P. Lorillard, Jr.'s liver and white bitch Antevolo (Count Noble—Trinket II.).

---

Herbert Merriam's black and white dog Nat Goodwin II. (Nat Goodwin—Royal Myrtle)

*with*

P. Lorillard, Jr.'s black, white and tan bitch Lora (Gladstone's Boy—Ruby's Druid).

---

Count Anteo, first; Guy, second; Antevolo, third.

Birds were scarce.

### The Derby.

The starters on Sunday night numbered 23 after the drawing was completed. In the morning, one of them, Mr. Herbert Merriam's Nat Goodwin II., was found dead in his kennel. It was a sad loss to his owner and handler. The dog was a valuable one.

The judges are Messrs. A. Merriman, Memphis, H. B. Duryea, Red Bank, N. J., and Washington A. Coster.

There are many of the old guard here with a sprinkling of new faces, and there is a steady growth perceptible from year to year in the evolution of the sporting costume. Where a few years ago the larger part of the spectators were content to appear in ordinary citizen's dress, a sporting costume now is worn.

The order of running is as follows:

Nahmke Kennels' lemon and white bitch Nahmke Alice (Nahmke Philip—Mercy), Tom Aldrich, handler,

*with*

F. R. Hitchcock's black, white and tan bitch Bess (Chance—Bessie Avent), John White, handler.

---

C. W. Tate's black and white dog Quail (Dakota—Rose), Frank Bevan, handler. *with*

Avent & Thayer Kennels' black, white and tan dog Lochinvar, (Chance—Bessie Avent), J. M. Avent, handler.

---

Royal Robinson's black, white and tan bitch Gaiety (Lone Jack—Gay Rhœbe), Geo. Gray, handler,

*with*

Blue Ridge Kennels' black, white and tan bitch Dick Fox (Chance—Countess Rush).

---

Hempstead Farm Kennels' liver and white bitch Hempstead Game (Duke of Hessen—Woolton Game), A. Cameron, handler, *with*

Fairmont Kennels' black, white and tan bitch Belle of Kentucky (Dad Wilson—Bohemian Girl), C. W. Barker, handler.

---

Nahmke Kennels' orange and white dog Nahmke Philip II (Nahmke Philip—Mercy), Tom Aldrich, handler,

*with*

Blue Ridge Kennels' orange and white dog Hope's Mint (Gath's Hope—Dashing Lady).

---

Avent & Thayer Kennels' black, white and tan dog Kingston (Chance—Bessie Avent), J. M. Avent, handler,

*with*

Pierre Lorillard, Jr.'s black, white and tan bitch Dot Rogers (Roderigo—Gladstone Girl), C. Tucker, handler.

---

Pierre Lorillard, Jr.'s liver, white and tan bitch Maiden Mine (Vanguard—Georgia Belle), C. Tucker, handler,

*with*

Avent & Thayer Kennels' black and white dog Bonair (Roderigo—Juno A.)

Charlottesville Field Trial Kennels' liver and white pointer dog Jingo (Mainspring—Queeny II.), Capt. C. E. McMurdo, handler,
*with*
Avent & Thayer Kennels' black, white and tan dog Chevalier (Jean Val Jean—Lucy Avent), J. M. Avent, handler.

Pierre Lorillard, Jr.'s liver, white and tan bitch Rod's Sue (Roderigo—Gladstone Girl), C. Tucker, handler,
*with*
Luke W. White's liver and white pointer bitch Graceful II. (Duke of Hessen—Concave), owner, handler.

Hempstead Farm Kennels' liver and white pointer bitch Hempstead Blossom (Duke of Hessen—Woolton Game), A. Cameron, handler,
*with*
Charlottesville Field Trial Kennels' black and white pointer dog Conscript (King of Kent—Hops), C. E. Buckle, handler.

Avent & Thayer Kennels' black, white and tan dog Hamlet (Chance—Bessie Avent), J. M. Avent, handler,
*with*
Herbert Merriam's black, white and tan dog Nat Goodwin II. (Nat Goodwin—Royal Myrtle).

Herbert Merriam's black and white bitch Tan (Rowdy Rod—Eva), a bye, S. C. Bradley, handler.

As Nat Goodwin II. had died before starting, Tan was brought up to run with Hamlet.

The work done was inferior on the whole. Some sportsmen who were present were of the opinion that it was a good average Derby, but there was but very little good work done to sustain that opinion. Birds, it is true, were scarce, but when found there were many errors committed and many lost opportunities. Many times the handlers flushed birds which the dogs had run over. The pointing work was positively inferior. The scenting was thought to be bad some of the time, etc., but excuses did not change the fact. The dogs ranged well, apparently, and gave one the impression that they were good workers. A few of them were good workers. Most of them picked out the easy going, the open fields or the open, cleanest places in cover, the latter being avoided when possible. A dog which picks out easy, comfortable going may run across birds, but he does not find them in the proper sense of the term.

First prize was won by Mr. P. Lorillard, Jr.'s, Rod's Sue, bred by Capt. Pat. Henry, Clarksville, Tenn., who gets the Breeder's Cup, value $100. She showed excellent "bird sense" in her work, hunted out the likely corners for birds and stayed diligently out at her work, working pleasantly and cheerfully.

Kingston, second prize winner, and Bonair, third, work much alike. They both are diligent workers and perform well on birds generally, but there is not the judgment in their work nor the thoroughness in beating out their ground, that Sue displayed.

The prizes were $500 to first, $250 to second and $150 to third.

## MONDAY.

The weather was clear and comfortably pleasant. Ten braces were run during the day. Birds were far too scarce for field trial purposes. Some of the braces worked diligently, but the returns in finds were few. The judges managed the running skillfully. A mild breeze blew during the day. There were a good number of spectators, among whom were Messrs. Bayard Thayer, Boston; Pembroke Pettit, Virginia; Edmund H. Osthaus, Teledo, O.; Major J. R. Purcell, B. J. Fisher, Ashboro, N. C.; Ernest Tate, North Carolina; F. R. Hitchcock, P. Oliver Iselin, New York; Herbert Merriam, Weston, Mass.; Edward Beadel, New York; Edward Dexter, Buzzard's Bay, Mass.; J. E. Orr, Brooklyn, N. Y.; Jos. H. Hunter, Washington, D. C.; Major J. M. Taylor and V. M. Haldeman.

### *First Series.*

NAHMKE ALICE AND BESS—Were started at 8:55 about two miles from town, and were worked about twenty-five minutes before a find was made. Alice pointed a bevy. Bess called up to back got wind of birds and backed to order, moved on and was in motion when the birds flushed, although she did not flush them. Alice was steady and Bess unsteady to caution. Each pointed a single in woods. Bess next pointed a single which she willfully flushed. Alice again scored a point. Bess worked her ground nicely and was the wider ranger. Her style was poor. Alice ranged well, too, and her style was pleasing. Up at 9:27.

QUAIL AND LOCHNIVAR—Began at 9:30. Quail soon pointed a bevy and was backed by Lochnivar, the latter being prompted by a caution. Quail was notably steady and reliable on point. Lochnivar pointed a bird and after it was flushed went on hunting. Several birds which he ought to have pointed were flushed where he had left. Working in the woods Lochnivar flushed a single. Quail worked independently. Lochnivar had the better style. Pace and range about alike, although Lochnivar did not stay out at his work so steadily as he should have done. Up at 10:12.

GAIETY AND DICK FOX were started at 10:32, and soon Gaiety was lost for a few moments. As Dick and his handler worked into a corner a bevy flushed not far from Gaiety. She presumably was pointing it. On scattered birds, Gaiety pointed twice snarply and well. She did her work stylishly. Dick flushed a bird. Gaiety showed excellent range and pace, and worked without pottering.

HEMPSTEAD GAME AND BELLE OF KENTUCKY—At 10:02 were started. In a few minutes Game pointed a bevy. Next she pointed a bird, moved on and flushed it. She pointed soon a bird and held point. Belle was next to point, held point for a few moments, jumped a fence and then pointed steadily on a bevy. She was stylish in her work and displayed excellent judgment. Each dog pointed separate birds and Belle flushed one. Belle carried herself with dash and style, and was far superior in the latter part of the heat. She started a bit slow. Up at 11:35.

NAHMKE PHILIP II. AND HOPE'S MINT were started at 11:40, and were taken up at 12:24. Nothing found. Mint was far the better ranger.

KINGSTON—DOT ROGERS.—After lunch they began at 1:22. Kingston pointed a bevy prettily in a thicket, he standing in the open. Dot was not near to back. The scattered birds took to the treetops. Sent on, in a short distance Kingston pointed another bevy. Steady to shot. Kingston flushed a bird in the open, then a lot more flushed wild close by. Each scored a point. Up at 2:16. Kingston was the better finder and pointer of birds. Dot ranged the wider, yet both were but fair in this respect.

MAIDEN MINE AND BONAIR were started at 2:23. Bonair pointed a bevy, Maiden backed, broke back and flushed a lark, Bonair still holding his point. Steady to shot. On the scattered birds in woods Bonair pointed once and Maiden pointed twice, singles each time. Bonair was the more independent ranger. Both went at good speed and ranged well. Up at 2:57.

JINGO AND CHEVALIER commenced at 3:20 in the open. Jingo flushed part of a bevy, then pointed, and the remainder flushed wild. Both pointed scattered birds in woods. Chevalier flushed twice, singles, and Jingo pointed one. Up at 3:57. Neither made more than an average performance. The work on birds was mixed, good and poor, but far short of what the opportunities for good work afforded.

ROD'S SUE AND GRACEFUL II.—They began at 4 o'clock. They went over a rise and a bevy was seen to flush, but whether one of the dogs did it or not could not be determined. Each pointed a single. Grace backed nicely. Both were steady to shot. Sue pointed a bird prettily, but spoiled the work by breaking in and flushing the bird, and chased wildly. Sue false pointed. Soon she found and pointed a bevy, and was backed. She finished by making a sharp point on a bird in the leaves in the woods. Sue showed far the better range and judgment in working out her ground. She made a very superior showing in every way, barring some unsteadiness. Up at 4:51.

HEMPSTEAD BLOSSOM AND CONSCRIPT.—Began at 4:57 in open ridge and were worked till 5:23, no find being made. Both were faulty in the manner in which they beat out their ground, they picking the most open and easy places to run through. This brace finished the running for the day.

The club held a meeting on Sunday night, at which the following new candidates were elected to membership: C. W. Thomas, J. F. Simmons and R. H. Woodrum, Roanoke, Va.; G. G. Pabst, Terre Haute, Ind.; Edward Brooks, Hyde Park, Mass.; J. D. Orr, Brooklyn, N. Y.; C. O. Iselin, New Rochelle, N. Y.; B. J. Fisher, Ashboro, N. C. Mr. Washington A. Coster was appointed to act in place of Mr. R. L. Cook, who could not attend. The club holds its annual meeting this week, on Thursday.

## TUESDAY.

The conditions seemed favorable for good work. The weather was clear and cool, traces of frost being visible here and there, and a thin skimming of ice topped the still water. The apparent scarcity of birds, however, made many heats most imperfect tests in every way. When good finding dogs were at work, birds were not so scarce.

HEMPSTEAD BLOSSOM AND CONSCRIPT.—Their unfinished heat was resumed at 8:43. Both made many errors and lost a number of opportunities to point. Blossom pointed a bevy in grass in a hollow, which was the only good work on birds in the heat, both having flushed several times. At 9:05 Blossom was taken up and Conscript sent on scattered birds. He pointed one well, made a doubtful point on another and flushed one. The heat ended at 9:10. Both had good speed, ranged well, but picked out the open, clear places to run in.

HAMLET AND TAN—Began at 9:16. Hamlet made two false points and Tan flushed a bevy in a bottom. The birds were followed into pine woods. Both made game and the bevy flushed. Up at 10:08. Both ranged well. No point made.

NAHMKE PHILIP II. AND HOPE'S MINT—Were given another opportunity, not having been tested on birds yesterday. They began at 10:23. A bevy flushed close to Mint, but it could not be told whether or not she was in fault. Philip pointed where the bevy had flown from and a single bird flushed near him. Mint made a point on a single. They failed to get any work on the scattered birds. Up at 10:40. Both ranged irregularly and did not cover much ground.

### *Second Series.*

The judges selected fourteen dogs in the order given in the reports of the heats hereinafter. It was most difficult to make the selection, but about four or five dogs were all that were worthy of consideration. There were so many dogs which had done a little good work and much poor, and others which had little opportunity to do any at all, that it was necessary to run the greater part over again if more than four or five were taken in. Much delay was caused by not having dogs up to run promptly in turn.

NAHMKE ALICE AND QUAIL—Began at 11:19. Alice pointed a bevy. Quail backed nicely. On the birds in woods Alice pointed; nothing found. Quail pointed a single nicely. Both were steady to shot. Alice was now over-cautious. Quail made three points in succession, doing some good work. Quail now was over-cautious. She next flushed a bird, and soon afterward flushed another. Up at 11:35. Neither showed a wide range. The greater part of the work, however, was done in cover, which did not admit of wide ranging. Quail showed quickness and accuracy in locating and pointing her birds, but toward the last became overcautious to a damaging extent.

GAIETY AND HEMPSTEAD GAME were cast off at 11:40 and taken up at 12:05. No birds found. Gaiety beat out her ground with judgment and had the better range. Game picked out open ground to run in and dallied with scents too much and too often.

The party went to lunch.

DICK FOX AND KINGSTON—Started at 1:38. Dick made a false point. Kingston got tangled with a bevy in some way. Some who saw it said he flushed an outlying bird, then pointed the bevy; others said he pointed the bevy. The dogs were separated at the time and all the reporters happened to be with Dick. The birds were followed into woods. Dick pointed some scattered birds nicely and was backed well. He next pointed and went on. Soon he pointed, and Rose failed to flush. The spectators afterward flushed the bird close by where the point had been made. Kingston false pointed, Dick backing nicely. Up at 2:15. Both made a poor showing considering their opportunities. Kingston was the wider ranger. Dick was close and slow in his range.

HEMPSTEAD BLOSSOM AND BONAIR—Made an ordinary showing. They began at 2:20 and ended at 2:42. In a stubble near the edge of the pine woods Bonair pointed a bevy. At the same time Blossom dropped to a point, probably on foot scent, as she was only about 20yds, from her competitor. Blossom made two flushes. She appeared to be off her nose.

HOPE'S MINT AND ROD'S SUE—Began at 3:12. Sue pointed in the open field near pine woods. She moved on down wind about 30yds, and pointed again, probably on foot scent. Moved on, and a few yards further down wind a bevy was reached. The judges and handlers flushed the bevy. In woods Sue pointed a single and Mint backed. Moved on. The latter next flushed a bird. In the open field Sue was drawing on a bevy when she flushed one and the rest flushed wild all around. In pine woods on scattered birds Mint flushed a single. The handlers were over eager and flushed a number of birds which they would not have done had they given their dogs a chance. Sue pointed and the bird was flushed after she was ordered on, her handler failing to flush. Sue next ran sharply into a pretty point on a single. Mint flushed a bird. Sue pointed; nothing found. Up at 3:45. Sue much the better performer. Mint made a poor competition in every way.

BELLE OF KENTUCKY AND GRACEFUL II. began at 4:00. Belle roaded nicely about 150yds, to a bevy and pointed it promptly with head and tail erect; steady to shot. The birds were followed. Belle pointed stylishly; nothing found. Belle pointed a bird and it flushed after she moved on. Grace made three flushes and two points. Belle next pointed—foot scent probably. She next pointed a single nicely and held point stanchly till a judge rode up. Grace was roading a bevy in the open and Belle flushed it. Grace pointed scattered birds in woods. Belle pointed a single well. Grace pointed and moved on, and the bird flushed. Belle was much the better performer. She located her birds quickly and showed judgment and enthusiasm.

BESS AND CONSCRIPT.—A delay was caused by the wagons and dogs not being at hand. The brace was started at 4:49 in the open field. Conscript pointed a bird in pine woods and was steady to shot. Bess pointed one well, but was not staunch. Her handler was not near her at the time. Conscript took a long cast in the open stubble and pointed a bevy in a strip of heavy weeds. The birds flushed wild and Conscript remained steady, though his handler was not near. Bess pointed a bird nicely. Soon she made a good point on a bird in the open field. Conscript pointed a bevy in sedge, Bess backing unsteadily. Up at 5:15. Conscript had the greater range.

This ended the day's work. On the way back to town Mr. Avent turned out a captured fox to give a chase. He had some of his pack of foxhounds with him. The poor fox appeared frightened and bewildered. It was difficult to drive him into the woods. He appeared to have more confidence in concealment than in his legs. After some difficulty he was driven into the woods. Soon the dogs were started and the tale is soon told. After a "chase" of three or four hundred yards, piercing tones of distress told that the hounds had captured and were killing the fox. To the writer such seemed to be an act of downright cruelty.

## WEDNESDAY.

The morning opened bright and mildly cool. Birds were found in fair numbers during the day. In the afternoon the temperature was lower, although not uncomfortable. A stiff wind sprung up in the latter part of the day and blew steadily. The conditions were favorable for good work. Mr. Coster did not judge on this day. The judging was done by Messrs. Merriman and Duryea.

### *Third Series.*

BELLE OF KENTUCKY AND BONAIR—Began at 8:56. Belle pointed up wind of a bevy. She abandoned the place, took a cast through the stubble, making game betimes. Bon pointed at the same place, then also took a cast. On returning, Bonair pointed near the same place as at first; he, too, took a cast in the open stubble. Returning, he pointed the bevy near where Belle had first pointed. Steady to wing. On the scattered birds in woods, Bonair roaded to a flush on a bird. Belle next pointed on the scattered birds nicely; Bonair backed. He dropped next to a point on a single and was backed. Up at 9:40. Bonair was the better ranger, though both were irregular, yet diligent and painstaking.

ROD'S SUE AND KINGSTON—Were started at 9:43 in the open. Soon after starting Sue cast beautifully to and fro on a side hill in stubble, gradually narrowing up wind, in her ranging, to a point. It was a beautiful piece of work, but nothing was found to the point. The result proved that there had been birds feeding on the stubble. Over quite an area ahead, both dogs made game. About 200yds. ahead, in a hollow, Kingston pointed; nothing found. Soon afterward, on a side hill in pines, Sue pointed; nothing found. King, after moving on, pointed; nothing found. Sue pointed, then moved on about 100yds. and pointed the bevy, doing a good piece of work. Steady to shot and wing. The scattered birds were followed. Each pointed and was backed and the result was nothing. The dogs were cast off to find another bevy. Across a hollow, Sue pointed; nothing found. Sue found a bevy; she roaded on and pointed it, and Kingston joined in the point. Up at 10:47. Both ranged well. Sue worked out the difficult corners and thickets pluckily and with judgment. Both had good range, but Sue the better. She was cheerfully obedient.

HOPE'S MINT AND CONSCRIPT—Were started at 11:06 in the open field. Conscript flushed three times on scattered birds which had been marked down, and which had been flushed by stray, self-hunting dogs. Mint flushed a bevy and chased. It was a good opportunity to point. Conscript was steady to order. The birds were followed. Conscript pointed a bird nicely. Steady to shot. Conscript pointed a bird and nosed it up. Conscript pointed a bird, then flushed it. Up at 11:40. The heat was a poor one.

BELLE OF KENTUCKY AND BONAIR—Were started at 11:54. Bonair pointed a bevy across wind, and was steady to shot. The birds were followed. Bonair pointed and nothing was found; next he dropped to a point on a single. Bonair was taken up at 12:07 and Belle run alone. She was taken up at 12:18.

The party then went to lunch. After lunch the judges announced the winners as follows: Rod's Sue first, Kingston second, Bonair third.

This ended the Derby.

### The All-Age Stake.

The running in the All-Age Stake was next begun. There were sixteen starters, drawn to run as follows:

Blue Ridge Kennels' chestnut and tan dog Bob Cooper (Roi d'Or—Miss Nellie G.), D. E. Rose, handler,
*with*
C. C. M. Hunt's lemon and white dog Grouse (Mainspring—Swain's Fly), S. C. Bradley, handler.

Pierre Lorillard, Jr.'s black, white and tan bitch Lora (Gladstone's Boy—Ruby D.), C. Tucker, handler,
*with*
Major J. R. Purcell's white and tan dog Jupiter (Tom Bowline—Belle C.), handler, owner.

Pierre Lorillard, Jr.'s lemon and white bitch Miss Ruby (Gladstone's Boy—Ruby D.), C. Tuckrr, handler,
*with*
Greenfield Hill Kennels' black, white and tan dog Harry C. (Roderigo—Countess House), S. C. Bradley, handler.

Pierre Lorillard, Jr.'s liver and white bitch Antevolo (Count Noble—Trinket II.), C. Tucker, handler,
*with*
G. T. Leach's black, white and tan dog Guy (Gladstone's Boy—Lady), S. C. Bradley, handler.

Pierre Lorillard, Jr.'s lemon and white dog Count Anteo (Count Noble—Gladstone's Girl), C. Tucker, handler,
*with*
Westminster Kennel Club's liver and white dog Hempstead Duke (Naso of Kippen—Lass of Bow), A. Cameron, handler.

Avent and Thayer's black, white and tan dog Rupert (Roderigo—Bo Peep), J. M. Avent, handler,
*with*
Fairmont Kennels' lemon and white dog Promotion (Lord Graphic—Belle Bishop), C. Barker, handler.

Hempstead Farm's liver and white dog Sanford Druid (Exon Don—Sanford Quince), A. Cameron, handler,
*with*
Blue Ridge Kennels' black, white and tan bitch Gossip (Roderigo—Belle of Piedmont), D. E. Rose, handler.

A. P. Heywood Lonsdale's liver and white dog Prawn (Crab—Polly Peachem), A. Cameron, handler,
*with*
S. Dill's black, white and tan dog Count Gladstone (Count Noble—Ruby's Girl).

Some of the work in this stake was excellent. Lora, the winner of first, particularly distinguished herself by her skillful work on birds, bevies and singles, in this respect she showed quickness, sharpness, rare judgment and accuracy. In ranging she worked out her ground admirably, turning to the whistle and taking her casts properly. She was hunting out likely places for birds and never showed a disposition to select a cast simply because the going was easy. She appeared to be a sweet tempered bitch withal and was most pleasantly obedient.

Count Gladstone was a rather unpopular second. He ranged with fire and dash for awhile, and had a most vigorous appearance of being a worker and finished performer, but his working powers apparently extended but little further than promising appearance. Toward the last he tired perceptibly, and pointed—when he did point—slouchily and often inaccurately. He had opportunities on birds in plenty, but his work on them was bungling and erroneous. Aside from his excellent way of going, which was not sus-

tained, he had less than ordinary merit, and good going without good performance on birds is worthless.

Harry C., third, made a much better all-round showing, though inferior to him only in the one quality of speed and range. Yet his speed and range were well sustained throughout.

Miss Ruby's work throughout the race was of a much higher order, though in her heat with Count Gladstone she did not work independently, the speed of the dog being too great for her to permit working out her ground independently, as she had done in previous heats, he often taking her cast from her. She, however, is a bitch of excellent working powers.

*First Series.*

BOB COOPER AND GROUSE began at 1:35. Grouse showed a most determined intention to find birds and was quick, accurate and sharp in his work. Bob made a poor showing.

LORA AND JUPITER.—Down at 2:40 in an open weed field. Lora soon pointed a bevy; Jupiter backed nicely, and both were steady to shot. This was a good piece of work. Lora pointed a bird in woods. She next pointed a bevy and Jupiter backed. Both steady to shot and Jupiter retrieved nicely. Up at 3:22. Lora showed excellent abilities.

MISS RUBY AND HARRY C. began at 3:26. Miss pointed a bevy prettily in the open and began what was the best heat of the meeting up to that time; Harry backed to caution. Both were steady to shot. Miss pointed a single, and next stopped to wing on a bevy. On the scattered birds Harry made three good points, Miss behaving steadily and backed when she had opportunity, both doing good work. On the scattered birds, Harry stopped to a point as a bird flushed. Both ranged well and worked on birds skillfully. Their performance was very superior. Up at 3:55.

ANTEVOLO AND GUY.—They began at 4:00 and were ordered up at 4:18: No birds. The wind had been gradually rising. This ended the day's work.

## THURSDAY.

Birds were found in sufficient numbers to make a fair competition notwishstanding that a stiff cold wind blew steadily from the north. The weather was clear. The judiciary was strengthened by the appearance of Mr. Coster for active service this day, he having been absent yesterday from the arduous duties of the judgeship. Mr. Coster went calmly through a couple of heats, where after the strong constitutional *ennui* irresistibly asserted itself, and by easy stages he detached himself from the active duties of judging and at last returned to town. These remarks are not intended in a spirit of censure. Quite the contrary. All praise is due a man who can judge dogs at a field trial satisfactorily, at the same time being elsewhere. Or, being

CASTLEMAN'S REX,

Winner First, Pointer All-Age Stake, Columbus, Ind., 1892.

present, can judge accurately by riding comfortably at the rear. An aversion to effort always marks a keen perception of what is comfortable. I have been accused of a robust constitutional *ennui* myself, and it is such a polite term that no one having heard it would use the term laziness instead. Nevertheless, it is not a good accomplishment to imitate. Three active industrious judges are better. The judges to-day were Messrs. Duryea and Merriman, with Mr. Coster now and then part of the day. The question of what a judge is for, is not herein considered.

ANTEVOLO AND GUY were started at 9:06. Guy made game in open weeds and pointed up wind of the birds. Antevolo about 50yds. down wind dropped to a point on the bevy and was steady to shot. On the scattered birds in woods, Antevolo pointed; nothing found. Guy pointed the scattered birds. He next picked up two good single bird points and was backed. Steady to shot. Good work. Guy next made a barren point, and was backed. Each next got a good point on single birds. Up at 9:34. Guy took wide casts and beat out his ground with judgment. Antevolo showed a fairly good range.

COUNT ANTEO AND HEMPSTEAD DUKE—Were started at 9:50. Count pointed and Duke backed. Nothing found Count drew on and pointed again, and Duke, about 150yds. away, backed prettily. Moved on and Count found and pointed the bevy. Both were steady to shot. On the scattered birds Duke pointed one in heavy weeds, then flushed one. At the same time Count pointed a bird a few yards away. Up at 10:25. Both worked with good judgment and ranged fairly well.

RUPERT AND PROMOTION—Began at 10:30. Promotion, in open field, pointed a bevy and held his point staunchly some minutes. Rupert was disobedient and could not be brought in in time to back. Both were steady to shot. In woods Promotion pointed a single and Rupert backed. Promotion nosed up a bird in grass. He next roaded to a flush on a bevy which Rupert was pointing. Promotion next pointed a bird. Up at 11:16. Rupert was by far the wider ranger. Promotion was troubled with *ennui* betimes.

SANFORD'S DRUID AND GOSSIP—Began at 11:19. Some birds were marked down. Both made some unsatisfactory points. After beating about in the woods awhile Druid cast out into the open field a short distance and pointed another bevy. Gossip pointed a single. Both were steady to shot. Up at 11:52. Both ranged fairly well.

PRAWN AND COUNT GLADSTONE.—Off at 12:05. Count pointed a bevy in thick cover. He next nicely pointed a single bird in pine woods. Each made a point which proved worthless. Up at 11:54. Count ranged fast and well.

After lunch the judges announced that there were twelve dogs in the second series. They ran as given herewith.

*Second Series.*

LORA AND BOB COOPER.—Lora made an excellent showing on scattered birds. The heat began at 2:51. A bevy was seen to flush about 150yds. ahead in an open sedge field, and Lora was in that vicinity. It could not be seen what was the cause of the flush. Lora pointed twice nicely, and Bob flushed the second bird from her point. Bob next pointed footscent. Rose's gun accidently discharged, the contents going up in the air. It is a most praiseworthy manner of discharging a gun accidentally, if accident there must be. Some of the handlers when flushing have the gun bearing on the judges and they (the handlers) do not seem to suffer the least alarm. The handlers all like the judges. A judge, moreover, is not made in a day; therefore, handlers, please be careful. Lora pointed a rat near an old pen, and Bob

A. T. QUICK,

Chairman Field Trial Committee, A. F. T. Club.

false pointed twice. Bob was the speedier. Lora worked her ground with good judgment and made a praiseworthy exhibition on scattered birds.

GROUSE AND COUNT ANTEO.—Began at 3:30. Grouse false-pointed and was backed. Count pointed a bird on a side-hill. Up at 4:08 Both were industrious and speedy. A large part of the heat was in hard going or cover. The opportunities on birds were few.

GUY AND RUPERT—Began at 4:17. Both pointed a bevy; that is, when the judges and reporters saw them they were so doing, but which, if either, got the point first, will never be known. Both pointed the scattered birds in woods. Each made a point on bare ground; footscent probably. Rupert made a false point in the open. Guy pointed in the open He moved on, making game. Rupert then was sent on and pointed near the same place where Guy had pointed. Guy cast off in the wrong direction. Rupert was sent to the opposite course and in about 40yds. pointed the bevy, which flushed wild. The birds were followed. Rupert was very disobedient and required a deal of loud whistling and orders to get him to work on any system. Rupert pointed a bird on the point of a side hill. He next pointed a bird and at the same time Guy flushed one and was a little unsteady. Avent flushed a bird and killed it. It fell in front of Guy a moment after he had made the flush mentioned and he ran to it and retrieved.

ANTEVOLO AND HEMPSTEAD DUKE—Were started at 5:00 They ranged moderately well. Antevolo pointed larks. She moved forward and flushed larks; kept on about 20yds. and pointed for a moment, then moved on and flushed a bevy. In woods, Antevolo pointed and Duke pointed or backed, seemingly the latter, but a bird was flushed near by him by his handler. Next, Duke made a point and Antevolo a flush. Antevolo went on about 15yds. and pointed a bird, and Duke going on behind pointed where Antevolo had just flushed. Up at 5:21.

## FRIDAY.

Mild, clear weather favored the trials. Birds were found in sufficient numbers for a good competition. Messrs. Dur-

SEC'Y W. J. BECK,

American Field Trial Club.

yea and Merriman were the judges. The stake was concluded on this day. The competition was fairly good.

GOSSIP AND HARRY C. began at 9:12. Gossip pointed near a bevy, then moved on. Harry, coming in, pointed the bevy, which flushed as the handlers walked to it. At 9:23 Harry was ordered up and Gossip sent on alone after the scattered birds. She failed to take advantage of several good opportunities to secure points and flushed four times in succession, being off her nose apparently. Up at 9:35. Harry was much the better ranger.

COUNT GLADSTONE AND MISS RUBY were started at 9:45. Count flushed a bevy by a fence. On the scattered birds Count pointed one and was steady to shot. At the same time Miss Ruby pointed or backed. Sent on, Miss wheeled prettily to a point on a single, Count turned when called by his handler, caught scent and pointed near Miss. Count was headstrong and disobedient. He pointed a single in woods. The judges here cautioned the handlers against rushing. The caution was much needed, for, some of the time it was more like chasing birds than securing points. Besides, it made the judges look undignified when wildly running through the woods, and it distressed the reporters to work so hard. There is too much enthusiasm when the reporters keep up with the judges, when the judges keep up with the handlers and the handlers try to keep up with the dogs. Count false-pointed in woods. In the open he ranged with great dash and speed, but not with the best of judgment in beating out his ground. One of the handlers flushed a bevy which was marked down in an open field. Miss pointed the scattered birds. The handlers were again kindly but firmly cautioned to take their time, which again was a good thing in itself, and a much needed precedent for all judges to note. There is no reason for handlers to rush frantically through scattered birds, wildly whistling and shouting at their dogs, and there is no justification for it when done. Miss pointed a bird in thicket and Count backed or joined in the point. Miss pointed; nothing found. Miss was ordered up at 10:36 and Count sent on alone. Count pointed in sedge; nothing was found, but a bird flushed near horses too far away for him to point. Count pointed again; foot scent perhaps. He flushed a bird, next he flushed scattered birds. Up at 10:37 after showing a very inferior performance on birds. He pointed often in poor style, was hesitating and uncertain on trail, and lost many opportunities to point. Miss did not range independently through the heat, and Count fell off in pace and range toward the last.

This ended the second series.

*Third Series.*

LORA AND RUPERT—Began at 10:46. Rupert opened the bird work by a flush on a bevy. Lora beat out her ground with excellent judgment. She crossed a hollow and pointed a bevy in the open near the edge of pine woods. Rupert backed. Steady to shot. Sent on, Lora pointed a bevy in stubble; good work. On the scattered birds, Rupert pointed one. Up at 11:39. Rupert was hard to handle. Lora showed excellent judgment in her work.

COUNT GLADSTONE AND HARRY C. were cast off at 11:59. Count soon showed signs of fatigue. He made a false point. Sent on, he again false pointed, one of them unmistakably so, for his handler beat out the cover thoroughly ahead of him without finding, the dog meantime standing staunchly. Harry was working on separate ground and flushed a single Up at 12:25. Harry went better, judgment and range both considered. Count's poor showing was enough to put him out of the race, for he really had not done one pretty piece of work on birds, while he had made many errors.

HARRY C. AND RUPERT.—After lunch, at 2:19, they were

GLENMORE KENNELS' FINGLAS,

Winner First, All-Age Irish Setter Stake, and Absolute Winner, Columbus, Ind., 1892.

started. Rupert false pointed and Harry backed. Harry pointed a bevy and got a good point on one of the scattered birds. Up at 2:59. Rupert had a slight advantage in speed, while Harry was a much better worker on birds.

LORA AND COUNT GLADSTONE.—They were started at 3:27. Count pointed a bevy slouchily up wind of it. His handler, walking up to him, flushed it. The birds were followed. Lora soon pointed and a bird flushed wild some yards away. Lora moved on, her handler moved forward, too, and the scattered birds flushed wild all around. Count made a false point. Lora pointed a bird and Count flushed it. Count made a false point. Lora made a good point on dry leaves. Lora flushed a bird. Count pointed; nothing found. Lora pointed a bird nicely on dry leaves. Count pointed in pines; nothing found. Count flushed a single bird. In the open Lora pointed a bevy and was backed by Count. Both were steady to shot. Count had demonstrated that he could do no better on birds, and it was difficult for him to do worse. On the scattered birds he made a point on one. He next pointed a dead bird. Lora took a cast across a hollow and was lost for several minutes. She was found pointing a single bird. Count was showing weariness, shortening range and speed. Sent on, Lora pointed a bevy. In woods each got a point on a single bird. Count pointed two birds in a hollow in a thicket. Lora pointed twice nicely on singles. Count pointed on footscent. Up at 4:29 and the competition was ended.

The judges soon announced that Lora won first, Count Gladstone won second and Harry C. third.

The stake was open to all pointers and setters which had never won a first prize in any open stake at any recognized field trial in America, First prize $500, second $250, third $150. Forfeit $10 and $20 additional to fill.

A fox hunt was arranged to take place after the trials ended. A drag was run to where the fox was turned loose, and the hounds killed the fox within 200yds. of where he was started. It is poor sport when conducted in this manner.

### The Champion Stake.

There were five starters in this stake, all famous competitors and winners. These were two pointers and three setters. The pointer Rip Rap added a most important victory to his own list of winnings and to the credit of the breed at large. He appeared to be in his oldtime form with the added accomplishments which come with time and experience. He was more obedient, and the wilfulness exhibited last year was hardly apparent this year.

Rip Rap is a handsomely built dog and his pace is swift and well sustained. He picks out the likely places for birds and goes to them with judgment and skill. On scattered birds he works quickly and accurately, carrying a high nose. His work is uniform and he makes few errors. He was closely pressed for the prize by that excellent performer, Lora, and won from her on a very narrow margin.

The following is the order of running:

The Charlottesville Field Trial Kennels' liver and white pointer bitch Maid of Kent (King of Kent—Hops), C. E. Buckle handler,
*with*
Pierre Lorillard, Jr.'s black, white and tan setter bitch Lora (Gladstone's Boy—Ruby D.), C. Tucker, handler.

Avent & Thayer Kennels' black, white and tan setter dog Orlando (Roderigo—Bo Peep), J. M. Avent, handler,
*with*
Greenfield Hill Kennels' black and white setter dog Rowdy Rod (Roderigo—Juno A.), S. C. Bradley, handler.

Charlottesville Field Trial Kennels' black and white and ticked pointer dog Rip Rap (King of Kent—Hops), Capt. C. E. McMurdo, handler, a bye.

SATURDAY.

The weather was mild and pleasant. Part of the afternoon was uncomfortably warm, and hardly any breeze was perceptible. Messrs. Duryea and Merriman were the judges.

MAID OF KENT AND LORA were started at 9:05. Maid flushed a bevy in the open. Lora pointed a bevy. Steady to shot, Lora pointed a bird nicely. Maid made a no-bird point. In going up a side-hill, both dogs were ahead, out of sight. A bevy was seen to flush near them. Maid pointed some scattered birds, Lora pointed, no bird; footscent probably. In an open field, Lora pointed. Nothing found. Maid backed prettily. Up at 10:35. Lora ranged the better and showed excellent judgment in beating out her ground. She also was quicker and sharper on her birds.

ORLANDO AND ROWDY ROD were started at 10:38. Rowdy soon pointed a bevy. Orlando brought up to back, pointed the same bevy. Worked on the scattered birds, Orlando pointed; no bird. In the open, Orlando pointed a single bird well. He next pointed one, then, moving on, flushed one. Rowdy pointed one which flushed wild, He next made a point to which there was nothing. Orlando pointed a bird in woods. His next point proved barren. Rowdy in pines pointed a bird well. Orlando pointed; Rowdy backed; nothing found. Orlando next pointed a bevy, which flushed wild in the open. Working on scattered birds, Orlando pointed; nothing found. Rowdy pointed a bird and was backed. Orlando roaded on trail and a bird flushed wild. He next pointed uncertainly; nothing found. They were cast off in the open, Orlando was lost. When found he was pointing a bevy. On the scattered birds, Orlando made four points on singles and stopped once to wing. Rowdy backed. He flushed one bird. They were sent on for another bevy. Soon both struck a trail and made game. They went on the back track at first, then roaded into the woods and lost the trail. Working on and returning through the thicket, the bevy was flushed. Orlando pointed a bird and was steady to shot. Rowdy pointed; no bird. He next dropped to a point on a single. Up at 12:06. Both made errors in locating and pointed on scent. They ranged fairly well.

RIP RAP was run alone after lunch, starting at 1:51. He made good finds on two bevies. Two more bevies were found. He made eleven points on singles and scattered birds, and flushed but two or three. Up at 2:43. He went with dash and confidence, was quick and firm in his points, ranged with judgment, and was under good control.

*Second Series.*

ORLANDO AND LORA.—Started at 2:50. A good deal of work was done in this heat. Many times Orlando showed indecision and an indication to stop on scent and foot scent. Lora ranged with better judgment, was quicker and more accurate in her work on birds, her work in this respect being admirable. The heat ended at 3:19. Mr. Avent was told by the judges to hold Orlando in reserve, that he might or might not be called to run again.

LORA AND RIP RAP—Began at 3:30. Soon after starting Rip found and pointed a bevy. Lora, 30yds. away, backed nicely. On the scattered birds, Lora made two good points on singles and flushed one. Rip pointed one nicely. Rip turned down the valley about 150yds. and pointed a single. Up at 3:42. The race was very close.

RIP RAP AND ORLANDO—Were cast off at 3:49. Rip pointed, roaded on carefully to locate and, drawing a trifle too close, flushed a bird and the rest of the birds flushed wild. Orlando pointed up wind of scattered birds. Rip pointed a single nicely on a side hill in pines and was backed. The bird flushed wild. Rip showed better speed, range and judgment in searching, and he was more accurate and skillful in his work. Up at 4:13.

The judges promptly declared Rip Rap the winner, and he undoubtedly is the grandest pointer, taken all in all, of which the public has knowledge at the present day.

This finished the trials. B. WATERS.

## PHILADELPHIA K. C. TRIALS.

HIGH POINT, Nov. 27.—*Special to Forest and Stream:* The Derby of the Philadelphia Kennel Club was drawn to-night and had twenty-one starters, namely: Rod's Sue with Hempstead Game, Delphic Duke—Conscript, Tan—Bonair, Rosebud—Hempstead Blossom, Dot Rogers—Sandy Gladstone, Maiden Mine—Lochinvar, Hamlet—Delphic Daisy, Report—Graceful II., Roger's Spark—Kingston, Chevalier—Redemption, Brighton Clip, a bye.

It will be seen that this is largely a repetition of the Eastern Derby, thirteen of the twenty-one starters having run in it. The weather is threatening a rainstorm.

HIGH POINT, N. C., Nov. 28.—*Special to Forest and Stream:* The Derby commenced this morning with twenty-two starters. Weather cloudy, favorable for good work. Hempstead Game was inferior to Rod's Sue in judgment, ranging and on birds. Game was speedy, but liked the soft places. Conscript was run with Fan and did an average heat. Bonair and Hope's Bud worked well and merrily, but were too keen on birds. Dot Rogers out-pointed Hempstead Blossom, finding birds and doing well on singles. Sandy Gladstone and Maiden Mine ran an ordinary heat in favor of Maiden. Lochinvar and Report did not find birds. Hamlet did better work in ranging than Graceful, though the latter was speedy. Rogers Spark and Delphic Duke were next down, the latter handled by a negro. After running about 20 minutes the handlers protested Delphic's handler on account of color, declaring that they would not work with him. Club then retired Delphic Daisy and Delphic Duke. Redemption in heat with Kingston was outclassed. Brighton Clip and Chevalier ran well, the former doing capital work on singles. Hoosier Girl, in her bye, did but ordinary work.

HIGH POINT, N. C., Nov. 29.—*Special to Forest and Stream:* Twelve were kept in second series. Dot Rogers and Chevalier first down, the former faster, and better ranger and more independent; Dot unfortunately gave chase once. Lochinvar and Report, though put down on marked birds, failed to point. Bonair and Graceful ran for an hour, but were inferior in work. Hope's Bud and Hempstead Blossom did mixed work, irregular in ranging, though speedy. Rod's Sue outpointed Hoosier Girl in every way. Hamlet proved superior to Brighton Clip in range and speed, the latter showing good nose and pointing well, but not courageous enough on birds. Lochinvar ran alone to test bird work; was only ordinary. Rod's Sue and Hamlet ran in the final. The bitch was higher class all through, speedier and better ranger, very obedient and a merry worker. Judges decided Pierre Lorillard, Jr.'s Rod's Sue first, Avent & Thayer's Hamlet second, Pierre Lorillard, Jr.'s Dot Rogers third. The All-Age has twenty starters, namely: Bettie's Guy with Prawn, Harry C. with Lena, Count Anteo with Coleraine, Count Gladstone with Grouse, Rupert with Jupiter, Hempstead Duke with Miss Ruby, Pete with Finglas, Merlin with Brighton Tobe, Antevolo with Heinenken, Lora a bye. B. WATERS.

## OHIO FIELD TRIALS CLUB'S TRIALS.

THE Ohio Field Trials Club was organized late in the summer with the following officers: President, Daniel Cobaugh; First Vice-President, Henry Weber; Second Vice-President, Dr. J. M. Meyer; Secretary, A. H. Smith; Treasurer, W. F. Koons.

This organization was effected too late in the season to expect a large entry, particularly from outside, very few field trial patrons knowing of its existence. Hereafter it will be a go and open to all. The trials were run on the club's preserve midway from Canton and Massillon, on the line of the Inter-Urban Electric R. R., connecting the two cities. The grounds are beautifully situated and well adapted for trials. All the fields are in a high state of cultivation, principally in wheat, which insures plenty of cover and feed for the birds, which are quite plenty.

All the corn is cut in this section and the fields are covered with what is known here as tumble grass, which bears a seed a favorite feed of the Bob White. About 4,000 acres are under control of the club. The electric road runs through it. A switch, or siding, and a telephone office are on the grounds. The cars pass here every thirty minutes. Dogs are carried to the grounds free. The fare for the round trip is 10 cents. Handlers competing here are at this expense only for themselves and dogs, and should bear this in mind when making their entries. A large bank barn on the grounds is open for the accommodation of dogs free—no $1 or $2 stalls, no rigs to hire and no saddle horses are used. The country is open and rolling, no briars or dense thickets to run in. Every dog and handler has a fair field and no favor. The drawing for the trials took place in the parlor of the Hurford House, Canton, Tuesday evening, Nov. 22, and resulted as follows:

For pointer and setter puppies whelped on and after Jan. 1—First prize, Hurford House special silver cup; other specials for second and third by business men of the city. All dogs were handled by owners.

### The Derby.

W. F. Kron's orange and white English setter dog Ranger Caper (Caper Dick—Daisy,
*with*
H. Strunk's liver and white pointer bitch Daisy Beaufort (Don Croxteth—Lady Beaufort IV.).

W. L. Alexander's black and tan setter bitch Belle Lorain (Pilot—Ruby),
*with*
J. O. Eckroat's black pointer bitch Niger Ale (Springfield—Lady Beaufort).

A. H. Smith's blue belton English setter dog Handy S. (Paul H.—Belle Bardell), a bye.

At the finish Belle Lorain, quite a good puppy, with lots of bird sense, a good nose, staunch and steady to wing and shot, good disposition and obedient, won first. The rest in order: Second, Ranger Caper; third, Handy S.; fourth, Daisy Beaufort.

### The All-Aged Pointer Stake

was run next in the following order:

G. V. L. Mellinger's liver and white pointer dog Moxie (Springfield—Lady Beaufort)
*with*
P. W. Swartz's liver and white pointer dog Don Croxteth, by Croxteth.

H. Strunk's liver and white bitch Lady Beaufort (Jerry Lady—Beaufort II.)
*with*
A. Dannemiller's liver and white dog Damon.

C. E. Alexander's liver and white dog Dick
*with*
J. O. Eckroate's black and white bitch Gipsey G.

G. E. Leininger's liver and white bitch Primrose (Vanitus Bang—Bird Eye)
*with*
H. Loeffler's liver and white dog Cirge.

The work in this stake, taken as a whole, was only fair, a good deal of pottering, Moxie alone doing good, first class work, and was awarded the prize. The others in the order below:

First, Moxie; second, Primrose; third, Lady Beaufort.

### All-Age Stake.

Ten and one-half brace faced the judge in the All-Age Setter Stake. Some of the work was dull and listless while other was cheerful, prompt and in good style. The poorer dogs were weeded out after the first series and the remainder were soon gotten into good shape after the first and second prize winners had run together. The following was the order of running:

J. L. Arnold's black and tan dog Penn (Front—Bess)
*with*
W. L. Alexander's black dog Scout.

W. J. Alexander's black dog Sailor
*with*
W. F. Koon's orange and white dog Dick Caper (Caper Dick—Daisy).

W. Weber's black dog Front (Blain—Queen)
*with*
Daniel Colargh's black dog Fred.

J. Mackerly's black and white bitch (Royal Ranger—Daisy Queen)
*with*
A. C. Hall's black and white dog Ranger.

B. Cornell's black dog Duke (Royal Ranger—Melborn)
*with*
Dr. J. M. Myer's black and white bitch Matrix (Gun—Blitzen).

First went to Penn, a nice, upstanding black and tan dog, has an elegant nose, so staunch on point, steady to wing and shot, obedient to command, ordinarily fast, a wide, careful ranger, attends strictly to business and endowed with an abundance of bird sense, perhaps a trifle slow among scattered birds.

Second to Scout, an all black dog, very large and leggy, prone to potter, contracted in his range and speed, but has an elegant nose, is very staunch, steady to shot and wing, and obedient to command.

Third divided between Matrix and Duke, the first a nice little black and white bitch, a merry, stylish hunter, and in time will make a good one, is now 14mos. old. The fates were against her. Duke is nice mover, an oldtimer, fit to retire or be sheared.

First Penn, second Scout, third Matrix and Duke.

*Absolute Winner.*

The prize, an elegant solid gold medal. The running was begun on Thursday at 1 o'clock, between the pointer Moxie and the black and tan setter Penn, and cast off in a large clover and stubblefield. They started off rather tardily, but warmed up soon and ranged wide and well, Moxie being the quicker and at times faster.

The clover proved blank as well as a corn and wheat stubble. In making a cast off to the right in the fourth field Moxie dropped to a bevy about 100yds. away. He maintained his point nicely until Penn was brought up to back which he did promptly. The birds were flushed by Mr. Mellinger. Both dogs steady to wing and shot. When cast away Penn found an out-lying bird that failed to go with the covey. Moxie pointed next and this was duplicated by Penn. Cast away, Moxie dropped to a point and as he did so three birds flushed. Ordered on Moxie quickly pinned another. Cast again Penn comes in and finds one, Moxie makes a rush and drops to a beautiful point, then another and another. His quick, snappy way of getting to his game, and his elegant nose and great bird sense won for him the admiration of the spectators, who were invited by the judge to witness the heat, and the absolute prize of the Ohio Field Trials Club.

While Penn is not an ordinary dog by any means, he was outclassed in company with Moxie, whose work on scattered birds could hardly be excelled. His quickness and precision in locating game was grand. Down 40m. The winner is a nice bodied little dog, stoutly built, hunts for body scent, but at times is apt to go to foot. Very stanch and steady, and all right if let alone; a very good dog poorly handled. He is a grandson of Mainspring. The club furnished lunch for everybody. At 3 o'clock all boarded the cars and in a few minutes everybody was in town. John Bolus, of Wooster, O., did the judging, which from appearances and the manner in which every one took their medicine gave universal satisfaction. Thus ended the first Ohio field trials.

KILLBUCK.

## POINTS AND FLUSHES.

HIGH POINT, N. C., Nov. 28.—The morning train yesterday stopped at High Point according to schedule. It did so the day before and probably will do so to-morrow, but it will be a long time before such a galaxy of field trial talent alights from it again. There were a large part of the Philadelphia Kennel Club and many of its admirers. Among them were Col. B. Ridgway, Germantown, Pa.; Walter B. Smith, St. Davids, Pa.; Dr. Wm. Jarvis, Claremont, N. H.; E. W. Clark, Jr., S. Murray Mitchell, Henry G. Sunnott, J. H. Winslow, W. G. Wilson, E. G. Dougherty, Francis G. Taylor, F. S. Brown, Gerhard Schriever, Alex. Glass, John Mink and Charles H. Phelps, Philadelphia; W. Tallman, New York, and J. Leisinning. All were apparently in good spirits, and eager for the morrow with its competition.

### Rip Rap and Maid of Kent.

I mentioned, in a recent issue of FOREST AND STREAM, having seen a photograph of a painting by Mr. Ed. Osthaus, of Toledo, O. It represents a most spirited and realistic field scene. Rip Rap is on a point and Maid of Kent is backing, each one in a spirited attitude. The coloring is most exquisitely fine and the portraits are excellent. Mr. Osthaus has visited the trials here this year and already has had a number of orders for portraits placed with him. Some portraits of Rod's Sue, Antevolo, Count Anteo, Conscript and Cosette, taken since his arrival, excite much admiration.

### Field Trial Grounds.

The signs seem to indicate that it is a mistake for two clubs to hold their trials on the same grounds. There are many reasons against it. The birds are so constantly disturbed and persecuted the first week that they go into hiding, are difficult to find, and are wild and cunning in the second week. Moreover, dogs which competed in the trials of one club, in the first week, have learned the grounds, the haunts of the bevies, etc., and have a positive advantage over dogs which have made their beginning in the trials of the second week.

All else being equal, a dog which knows the grounds and the haunts of the bevies will make his competitor look very inferior in a competition on such grounds. It may be an advantage to the club financially, but it is not for the best interests of a competition. Of course it may be inexpedient for a small club to own or lease grounds of its own, hence such club can only do the best it can. But there is a disposition on the part of the larger and stronger clubs to use the same grounds, as a record of the trials will show.

### A New Stake.

An effort is being made here to inaugurate a new subscription stake, to be run under the auspices of the U. S. F. T. C., at New Albany, Miss., next February. Mr. Pierre Lorillard and J. M. Avent have signified their intention to subscribe to it if at least two more can be secured. Subscription $250 each. The heats to be seven hours long, three hours in the forenoon and four hours in the afternoon. With two ready to subscribe, it would seem to be almost a certainty that two more will be anxious to do so. It will be a most thorough test and will settle some questions of long standing relative to the endurance of the modern setter, if it takes place. Unfortunately, it often happens that, from the owner's standpoint, good dogs are most plentiful when the opportunity for competition is furthest away.

The famous English setter bitch Daisy Hunter, owned by Mr. J. A. Hunter, Bloomington, Ind., strayed from Mr. Hunter's home on Nov. 16, and has not since been heard from. She is a valuable bitch. Mr. Hunter has offered $100 reward for her return. If she has been killed, he offers $50 reward to any one who will give him information of the person who did it. Daisy has orange ears, a white and orange ticked body, has only nine teats, is about 45lbs. in weight and is handsomely built. Any one having knowledge of her whereabouts could not do a better deed in sportsmanship than to notify Mr. Hunter.

B. WATERS.

## GLOVERSVILLE DOG SHOW.

*Editor Forest and Stream:*

The Mohawk Valley Poultry and Kennel Club is feeling mighty smiling this season. They have secured the large rink in Gloversville for their show. It is almost in the heart of the city and is large enough to bench 300 dogs, besides having plenty of room for the poultry exhibit and a large judging ring. The specials are coming in in great shape, and inquiries from all over the country for premium lists, which will be out Dec. 1 or thereabouts. Mr. C. H. Mason is to judge all classes and the Glove City will surely be heard from this year.

We invite the whole fraternity and promise the fanciers a good time. F. B. ZIMMER, Sec'y.

GLOVERSVILLE, N. Y., Nov. 26.

An important move was consummated during the Brooklyn show in fox-terrier circles. Mr. C. D. Purroy and "our only" German Hopkins have joined forces, and the Grove Kennels will now be under the joint proprietorship. They have already about a dozen bitches and one or two promising young dogs and intend importing a good dog for stud purposes. Mr. Purroy has been successful in making both ends meet with his kennel so far, and we all know what Mr. Hopkins is with a fox-terrier, so another year may see them prominent in the fox-terrier world as "breeders, exhibitors and owners." We hope so.

Mr. W. C. Reick's crack St. Bernard arrived on the steamship Teutonic last Wednesday in good condition. We shall defer further notice of this celebrated dog until we have had an opportunity to see him.

# DOG CHAT.

## Central Field Trials.

We have received the following communication from the secretary of the Central Field Trials Club: "Nov. 27, 1893, Central Field Trials at Lexington, N. C.—C. H. Odell, Sec'y."

Messrs Guy Welton and Thos. Blake have been appointed a committee to confer with the A. K. C. about dates for the City of the Straits first dog show next spring.

Realizing that next year the Brooklyn show must be a greater one than that held last week, the N. G. C. are in hopes that they can secure the Twenty-third Regiment armory. The attendance last week was said to have been nearly 18,000.

Seminole Kennels purchased during the Brooklyn show the Irish setters Young Glencho and Tim's Dandy, the latter second and the former vhc. reserve in the open dog class. This purchase will still further strengthen Dr. Sauveur's good team.

The judging of the specials given by Messrs. Alesop & Sons at Brooklyn Thursday evening, was one of the events of the show. Mr. Huntington's Russian wolfhounds made a grand showing and there was little hesitation in giving him the ribbon for the best owned by a resident of Brooklyn. The other special was for the New Yorkers on the same basis. The Hempstead Farm Kennels showed 5 pointers, 5 collies, 2 bulldogs, 2 Irish setters and 4 wire-haired fox-terriers. Messrs. Rutherfurd, 5 smooth fox-terriers; Retnor Kennels, 4 bull-terriers; Tubby Hook Kennels, 4 bull-terriers, 1 greyhound and 1 foxhound; Woodlawn Kennels, 4 greyhounds; A. E. Foster, 3 spaniels; Col. Ruppert, 5 St. Bernards; E. A. Manice, 7 dachshunds; F. Senn, 5 toy spaniels. These made a splendid display, and as the special was for best exhibit, several very level teams had to go out and the issue was left between Hempstead Farm and Col. Ruppert. Taking it altogether the decision that gave the "ale" to the former could not be cavilled at. Mr. Mortimer has made his presence felt in the firm already.

During the judging of fox-terriers at Brooklyn a lady was heard to remark, "Well, Mr. Belmont may be a handsome man, but I don't like his style of dress," alluding to "our only German's" gaiters.

Mr. John Hefferman has had little luck with his St. Bernard bitch Lady Hibernia that he purchased from Mr. Booth. She died last Sunday week from the effects of poison. The death of this bitch is much to be regretted, as she was undoubtedly the best on the Pacific coast.

Frank F. Dole has sold Sir Rudolph and some bull-terrier pups to a fancier in Massachusetts.

The National Greyhound Club held a meeting Nov. 25 at the close of Brooklyn show. The Luse case was brought up and Mr. Luse suspended and ordered to show cause before February, 1893, meeting why he should not be disqualified for entering a greyhound in the Derby at the late Great Bend coursing meeting, that was over age. The case of Mr. Purbeck and Echo was referred to a committee, and Mr. Whiton's resignation as vice-president was laid on the table.

There is some slight difference between baby shoes and raw meat. The resemblance in parcels, however, led to an amusing incident at Brooklyn. Mr. Whiton giving Andy McGregor a small parcel of what he supposed was scraps that his servant had put up for Lord Neverstill, Andy in a hurry threw paper and all to the dog, when a handsome pair of new baby shoes fell out before his Lordship, who naturally turned up his nose at such lean fodder, and Andy hurried away.

Owing to the change of time in going to press last week, several telegrams from our representative, Mr. Waters, giving results of winning at the E. F. T. C. trials, arrived too late.

Mr. A. F. Hochwalt, of Dayton, Ohio, writes us that he and Mr. Windle have purchased the well-known pointer Rush of Lad (19,521). He is by champion Bow out of Gladiola, she by Naso of Kippen out of Glauca. Lad is a young dog, but he has already sired some good ones, chief among which may be mentioned Lad of Rush, who won first in the recent U. S. trials Pointer Derby. He will be placed in the public stud after the shooting season.

## ROD AND GUN AND CAMERA.

AS a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM.

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us.

From time to time we shall reproduce by the half-tone process samples of the work submitted, and should the interest in FOREST AND STREAM'S Amateur Photography Collection prove to be what is anticipated, we may ask for an expression of opinion by a vote of all our readers after the manner of the successful and famous "Camp-Fire Flickering Vote." Such popular vote will be quite uct from the award by the committee.

# Yachting.

MR. HERRESHOFF writes us that the formula suggested by him in which bulk is employed as a divisor with the purpose of increasing the size of body, is as follows: $L \times \frac{\sqrt{S.A.}}{15\sqrt[3]{D}}$ or $L \times \frac{\sqrt{S.A.}}{15\sqrt[3]{T}}$, D representing displacement and T the gross Custom House tonnage. The first formula would probably attain the end in view, but there is a practical difficulty in its application, in that it would be necessary to dock each vessel and have her lines taken by the measurer; also making public the displacement, the very element which designers strive hardest to conceal. To the second formula, the one favored by Mr. Herreshoff, two serious objections present themselves; in the first place, Custom House tonnage fails to measure modern yachts, being inaccurate in all cases, and opening the way to endless discussion in the case of some new craft. In the second place, such tonnage would still place a premium on boat in the air in place of boat in the water, and would so contribute to long ends and excessive freeboard at the expense of under-water body.

IN commenting on the case of pilot Walsh and the yacht Amelia, the *Marine Journal* calls for a U. S. statute preventing any amateur sailor from navigating any craft in the North River below Harlem, this side of Riker's Island in the East River, or above Bay Ridge in the Bay. Such a measure as this would be as ridiculous as the ruling of the Inspectors of Steam Vessels in the Medusa case, that it was a yacht's duty at all times to get out of the way of a tugboat. In the case of the Amelia it was clearly proven that the yacht was run into while on her course and with proper lights displayed.

WHATEVER the opinion may be as to the merits of the changes recommended by the council of the Y. R. A., every credit is due to that body for the fair and thorough manner in which the recent inquiry, like that preceding the adoption of the present rule in 1887, has been carried out. The full minutes of the evidence, a copy of which we have just received, bear testimony to the liberal nature and wide scope of the investigation, and make most interesting reading. We hope to quote from them at length next week.

WHILE there is nothing radical in the proposed changes, the council, as we think, wisely, declining to attempt to dictate as to form, detail and construction of hull, the recommendations as to marking of waterline, limitation of crew, and measurement of fore triangle are all excellent. No doubt the inquiry, with the possibility of amending the rule at any time when the necessity is apparent, will exercise a certain restraining influence on the freaks.

THE Council has positively declined to tax either fore or after overhang, its view of the matter being similar to that advanced by FOREST AND STREAM, that excessive overhang at either end carries its own penalty.

THE Herreshoff 84-footer, now well advanced, has been thus far as carefully guarded as Thistle was, and with even less cause. It is very amusing, after the abuse which it showered on Mr. Watson and the Royal Clyde Y. C., to read the Boston *Herald's* justification of the American firm for doing precisely the same thing. What is still more amusing is that forced admission by the *Herald* that its alleged dimensions and elements of the new yacht are pronounced incorrect by the Herreshoffs.

A CORRESPONDENT calls attention this week to the abuse of the term "rating," which has become so general in this country. No American yacht clubs recognize a rating rule, and none have ever adopted an official definition of the term rating; and under the secircumstances it is absurd and misleading to employ a term having already one specific meaning to yachtsmen which is widely different from several attached to it in this country.

LORD DUNRAVEN has laid down his views on international racing in an article in the *North American Review* for December, the subject being treated in a very broad and liberal manner. One remark is of especial interest at this time: "No challenge ever has been made or will be made under the terms of that [the new] deed."

## British Measurement Rules.

The inquiry into the present and prospective results of the Y. R. A. rating rule which was instituted by the Y. R. A. last August has just terminated, the following report appearing in the *Field* of Nov. 19:

A meeting of the Council of the Yacht Racing Association was held at the Royal London Yacht Club, Nov. 15, to consider the report of the Measurement Committee and the evidence of the yacht designers on the rule for the rating of yachts in competitive sailing. There were present Sir G. C. Lampson, Bart. (in the chair), Major Frank Willan, Major P. Hewitt, Mr. A. Manning, Mr. W. M. Dumaqe, Col. A. D. McGregor, Mr. T. B. C. West, Mr. C. E. Newton-Robinson, Mr. G. E. Lake, Mr. W. Baden Powell, Sir G. A. Leach, G. C. B., and Mr. Frederick Cox.

The committee and the yacht designers recommended the adoption of the Seawanhaka rule, that rule being a little easier on sail than Y. R. A. when the square root of the sail area is greater than the length of load line.

The council now, after a discussion lasting about four hours, decided to recommend that the existing rule be retained, and agreed to report to a general meeting, Dec. 6, as follows:

"As the present rating rule will expire at the end of 1893, the council appointed a committee to consider the working of the rule, and its probable effect on yachts and yacht racing, should it remain in operation longer than its assigned period of seven years (dating from 1887 inclusively). This committee obtained the views of the following yacht designers: Messrs. G. L. Watson, C. P. Clayton, W. Fife, jr., J. M. Soper, A Richardson, A. E. Payne, C. E. Nicholson, and H. W. Ridsdale, to whom the council desire to express their thanks for the trouble they have taken in attending the committee, and for the assistance and information they have been good enough to afford.

"The council having given the most careful consideration to the subject of the rating rule at present in force, and to the views of the yacht designers and others, agree in the view generally taken that, up to the present, the length and sail area rule has produced a fine seaworthy, and fast type of vessel; and the council think that the yacht designers, in their objections to the rule, have given too much weight to the anticipated effect in the future of the rule on yacht designing from the 'accommodation' point of view, and seem to have somewhat under-estimated the importance of speed.

"The council think that, in the designing of racing yachts, speed conjointly with seagoing qualties, should have first consideration; and they are of the opinion that no sufficient reason has been given for at present altering the existing rule, which they recommend should be maintained.

"With regard to details of measurement, the council, having considered this question, together with the evidence submitted, have come to the conclusion that neither overhang should be taxed, nor form be in any way dictated. The council are of opinion that overhangs, according to present practice, are not in themselves dangerous, though they may be rendered so through weakness of material or faulty construction. The responsibility of a dangerous overhang therefore rests with the constructor. This view is borne out by the evidence of the yacht designers.

"The yacht designers recommended that the load water line, which is to be measured for rating, should be marked at the bow and stern. The council agree with this suggestion, and recommend that this be done by the owner, and that Rule 15 be varied so as to allow ballast to be altered, subject to the conditions that it is not to be shipped, unshipped, or shifted after 9 A. M. of the day previous to the race, and that the weight of ballast on board shall at no time exceed that which was on board when the yacht was measured. The marks shall at all times be clear above the surface of the water when the yacht is lying in smooth water, in her usual racing trim.

"It was the unanimous opinion of the yacht designers that the total number of persons on board during a race should be limited in the classes of 10 rating and under, and the council recommend that such limitation be carried out after consultation with the yacht clubs as to the specific number to be allowed on board in each class.

"With regard to the method of measuring sails, the council recommend that in the fore triangle the perpendicular, I, be taken from the deck at the foreside of the mast to where the line of the luff of the foremost headsail when extended cuts such perpendicular; the base, J, from foreside of mast to where the line of the luff of foremost headsail cuts the bowsprit, other spar or hull as the case may be; and in the classes of 10-rating and under the actual area of the headsail or spinnaker be taken.

"The council have given very careful consideration to the question of building to a specified standard of strength or scantling. The naval architects, in their evidence, objected to any supervision by Lloyd's, and did not think it desirable that the Y. R. A. should appoint an expert for the purpose.

"The council consider that many of the alleged defects in the existing boats, to which the naval architects referred, are mainly due to lightness of the structural design, and, owing to the great difficulty and expense of satisfactorily supervising the design and construction of racing yachts, the council consider it is better to leave the matter to the owners and their designers to safeguard the interests concerned.

"The foregoing recommendations, if adopted, will come into force at the expiration of 1893.

"The council do not recommend that the rating rule should be continued for any fixed term, as vested interests are guarded by General Rule 12, which provides that no alteration can be made in the rules except by a two-thirds majority, both of meetings of the council and of the association.

"(Signed on behalf of the Council), G. C. LAMPSON,
"Vice-President."

The *Field* also publishes the following report of another important meeting:

"A meeting of Clyde Yacht Club delegates was held in the Bath Hotel, Nov. 14. The various clubs were represented as under: Royal Northern, Messrs. Steven and T. F. Donald; Royal Clyde, Messrs. Ure, Neil, and W. York (secretary); Royal Western, V.-C. J. Stewart Clark and Messrs. M'Glashan and Thomson; Royal Largs, Messrs. J. Hilliard and Craig; Mudhook, Mr. Robert Wylie; C.C.Y.C., Messrs. J. Connell, W. A. Wylie, A. Mitchell, E. M. Richmond, and R. Harvey Pirie (secretary); West of Scotland Y. C., Messrs. Jas. A. Jarvie, Thomas Lamu and J. M'Kirdy. The questions to be dealt with were matters affecting two of the most popular classes on the Clyde, viz., the 17ft. l.w.l. and 23 l.w.l. boats. A reduction of sail area was sought for the former, and a fixed restriction of sail area and length over all for the latter. Ere discussing these matters, the various owners, both of present and prospective boats, were asked in rotation to give their views on the subject. This done, they withdrew, and, after long and careful discussion, the following rule was adopted: 'That the sail area of the 17ft. l.w.l. class be reduced from 530 to 470 square feet, and that, as before, the mainsail will contain not more than 75 of the total sail area.' In dealing with the second and more important class, a considerable diversity of opinion was shown as to whether the sail area should be limited or unlimited. In the end, a motion in favor of the former was carried, and the measurements for this class have now been settled not to exceed 23ft. l.w.l. and 30ft. over all, with a sail area restricted to 750 square feet. In the absence of reliable data as to existing boats, the settlement of fore triangle proportion was relegated to a sub-committee, whose ruling will be given in a day or two. In addition, no plate, fin, bulb keels, or centre-boards will be allowed in these classes, and the rules made will hold in force for five years. A vote of thanks to Vice-Commodore J. Stewart Clark concluded the meeting."

## Lord Dunraven's Letter.

THE looked-for letter from Lord Dunraven arrived on the Germanic on Nov. 18, and a meeting of the Cup committee was held to consider it. The letter reads as follows:

DUNRAVEN CASTLE, BRIDGEND, GLAMORGAN, Nov. 7.

SIR: I have to acknowledge the receipt of your letter of the 20th of October, containing the reply of your committee to my letter of 16th of September.

On the general terms of the races we seem to be at one. With regard to your remark that "as to the details of sailing the match alluded to in your letter, we think they can be easily arranged after a challenge has been made in proper form by a qualified yacht club," I take it that the details would be arranged within the propositions made in former letters.

With regard to your proviso "that no yacht of the specified rig, either now existing or under construction," I am quite agreeable to sail any such yacht without any penalty beyond taking or giving the ordinary trial allowances according to the New York Y. C.'s rules; and as my letter seems to have been ambiguous on this point, I may say it was under that rule of measurement and scale of time allowance that I proposed the match should be sailed. In 1893 I suggested that in calculating time allowance the mean of the rules in use by the challenging and challenged clubs should be taken, but the committee did not then see their way to agree, and I have no wish to reopen the question. In respect of the final clause of your letter, I stipulated that "should I win the Cup, the club obtaining the custody of it should hold it, open to a challenge on the same conditions as those under which I challenged." To this I adhere, as being only in accordance with my own idea of fair play, and no yacht club would place itself in the posititon of having the power to expect, or of appearing to expect, as the party challenged, terms different to those under which it challenged. But, feeling that your committee, with, I am sure, equal faith, believe in the absolute fairness of the conditions laid down in the deed of 1887, I had no intention of barring a challenge under these conditions. To make these perfectly clear I am quite willing to substitute for my former stipulations, "It is to be understood and agreed that should I win the Cup, the club obtaining the custody of it should hold it subject to a challenge on precisely similar terms to those under which I challenged, provided, always, that the club shall not refuse a challenge in accordance with the conditions laid down in the deed of 1887, and is at liberty to make any arrangement mutually agreed upon, as provided for in the deeds of 1857, 1882 and 1887."

I trust that no difference now exists between us, and on your cabling me that a challenge on the terms of my former letter, as herein modified, will be accepted, I shall at once endeavor to arrange for a formal challenge being sent through a qualified yacht club. I remain, yours faithfully, DUNRAVEN.

The following reply was sent by cable:

"NEW YORK, Nov. 21.—Lord Dunraven, 27 Norfolk st., London: Committee will recommend the club to accept a formal challenge based on your letter of the 7th November if reference to former deeds is omitted. PAINE."

On Nov. 26, at 12:40 P. M., the following cable was received and posted in the club house:

"ADAIR, Nov. 26.—General Paine, New York Yacht Club, 67 Madison ave., New York City: Secretary of Squadron wires me challenge mailed Oddie to-day. Reference to the former deed is omitted.
"A. CASS, Sec. America Cup Committee."

Mr. Canfield added at the bottom: "The above is not signed, but is undoubtedly from Lord Dunraven."

The greater part of Lord Dunraven's letter relates to minor details which are of no importance until the vital question has been settled. The main point in the letter lies in the final clause but one, which amounts to nothing less practically than the abrogation of the new deed of gift.

If the terms thus proposed by Lord Dunraven should be carried out by all parties in any future contests for the Cup, the dimension clause would be a dead letter, and other provisions of the new deed would share the same fate. While the committee in its reply accepts the substance of Lord Dunraven's terms, it still keeps up a show of maintaining the new deed by demanding that all allusions to the true deed as that of 1882 be withdrawn.

If the last telegram is genuine, it would appear that the Royal Yacht Squadron had at last withdrawn its objections and consented to challenge.

Even though a race should result, the position is a most unsatisfactory one. There have been so many indefinite statements throughout the whole negotiations that it is almost impossible that a series of matches can be arranged and sailed, and the cup won again or lost, without serious misunderstanding, and in the event of any dispute in the future, no man can say what conditions really govern the matter. While in common with all yachtsmen, we are anxious for a resumption of international racing; we are firm in the belief that a patched agreement like the present one can only result in further quarrels and ill-feeling between the two nations.

The *Field* of Nov. 26 says that according to telegrams the New York Yacht Club sends to English papers, Lord Dunraven is trying to negotiate a new deed and the club is trying to circumvent him. This is not edifying, but it represents the situation. The New York Yacht Club is making certain concessions as to what it will accept as a challenging yacht in order to obtain a match during the time of the Chicago Columbian Exhibition. The America's Cup

Committee appear to take it for granted that they will now get the deed of gift accepted by the British yacht clubs.

The *Field* further says: "We very much doubt if this achievement is more practicable now than it was six years ago. We on this side of the Atlantic hold the deed illegal as containing stipulations which render the winning of the America's Cup impossible. The Cup Committee now virtually say: "We admit this, but we make certain concessions regarding conditions, under the mutual agreement clause, so that you may have a possible chance of winning, but it is a thousand to one you will not win, and the deed must be confirmed by the club backing your challenge. We think the feeling on this side to be that if any British yacht club consents to back a challenge under the deed, the full conditions of the deed must be complied with. We cannot imagine a British club placing itself in the humiliating position of backing a challenge made under concessions wrung from the New York Yacht Club in its anxiety to bring about a match, especially as, after all, the cup, if won, might not be given up. Fortunately, no Brish club is likely to be so lacking in spirit as to authorize a challenge. Yacht owners rejoice at the decision of the Council of the Royal Yachting Association recommending the retention of the rule of rating.

### The Word Rating Abused.

*Editor Forest and Stream:*

The sports editor of one of the illustrated weeklies has been writing of yachts measured and classed under the Seawanhaka rule as "raters," and now the New York *Press* is guilty of the same misuse of language. What sense can there be seen in calling a boat of 25ft. sailing length a "25-rater?" Do they mix and confuse yachting terms in this way from a wish to appear to know more than authorities like the FOREST AND STREAM? Or are they simply ignorant?

"Rating" is a technical English term for size in yachts. A yacht's rating is found by a well known rule. There is no more sense in calling a 25-footer a 25-rater than there would be in calling her a 25-tonner. It is just as incorrect and misleading. It is absurd to borrow the word rating without the rating rule. To call a boat a 25 rater that is only a 24-rater under the rating rule is a farcial misuse of yachting terms. A class for elementary instruction to some yachting writers would be a boon to their long-suffering readers.

CHATHAM, N. B., Nov. 21. J. L. STEWART.

### Building Notes.

MR. WATERHOUSE is securing estimates on the fin-keel 46-footer for Mr. C. H. W. Foster; it is not decided whether to build in steel or wood. He has also an order for a 20ft. catboat for Nova Scotia, and a 21ft. cutter for New Bedford, as well as a new sail plan for the Burgess 21-footer Molly Bawn, of Montreal.

Stewart & Binney are preparing an exhibition of models for Chicago.

Mr. A. Cary Smith is very busy with large steamers, having an order for a Sound steamer 336ft. over all, 51ft. beam, 70ft. over guards and 13ft. 6in. loaded draft, with 600 tons of freight. The hull will be of steel and the vessel will be somewhat similar to the smaller but very successful Richard Peck. Mr. Smith has also several yachts in hand

Seabury & Co. are at work on a composite steam yacht, of their own design, for Mr. J. H. Hanan, of New York, the dimensions being: Over all, 154ft.; l.w.l., 130ft.; beam, 20ft.; draft, 8ft. Mr. A. Cary Smith is superintending both design and construction.

### Canadian Canals.

WE are advised that on Nov. 2 an Order in Council was passed by the Dominion Government, on the recommendation of the Minister of Railways and Canals, extending the courtesy of free passage through the Dominion canals to all pleasure yachts attending the Chicago Exhibition in 1893. The passage of vessels through the St. Lawrence Canals is limited at present by the minimum dimensions of the lock chambers, which are 200ft. by 45ft., with 9ft. of water over the sills. The dimensions of the locks on the new Welland Canal are 270ft. by 45ft., with 14ft. of water on the sills and the same depth of channel throughout. The St. Lawrence canals are being enlarged, and when completed will be of the same dimensions as the latter, but the work will not be finished for some years. There is no limit to the height of spars, as the bridges crossing the St. Lawrence and Welland canals are all swing bridges. We hope shortly to publish some charts and tables of distances from the sea to Chicago.

## YACHT NEWS NOTES.

A few weeks since we were favored with a visit from a handsome and stylish young Englishman, who introduced himself as a son of Mr. Dixon Kemp, the editor of the *Field*. Though professing to be temporarily embarrassed, he made no request for assistance of any kind, but left, after a pleasant chat on yachting, with a promise to call again. A few days later the same person, by name William Henry Bant, was arrested in New York for swindling a number of Americans by means of forged letters, his victims being mainly mechanical engineers or literary men. The man is about 24 years old, of medium height and slender build, smooth face and light mustache, gentlemanly address, and well posted on mechanical and yachting subjects. He has traveled in all parts of the world, is a ready talker, and as his career proves, a dangerous confidence man. From descriptions it seems probable that he is the same sharper who imposed upon English yachtsmen last winter as a son of Mr. Herreshoff. Both claimed to have been on the stage and to be making their way home after unsuccessful dramatic ventures, "Mr. Herreshoff, Jr." at the Cape of Good Hope, and "Mr. Dixon Kemp, Jr." in Australia.

On Tuesday, October 25, the steam yacht Athena, built by the London and Glasgow Engineering and Iron Shipbuilding Company, Limited, to the designs and under the superintendence of Mr. St. Clare Byrne, of Liverpool, made her steam trials at the measured mile at Skelmorlie, the mean of her several runs, with and against the tide, being 12.26 knots per hour, the guarantee being 12 knots and the indicated horse-power 504. She also had a trial of three hours at full speed, everything working very satisfactorily. The engines are triple-compound surface condensing; the cylinders are 13 in., 21 in., and 34 in. by 54 in. stroke, fitted with Joy's valve gear, so as to save length in the engine room. The air, feed, and bilge pumps are worked off the intermediate pressure engine by levers. The circulating pump is one of Drysdale's centrifugal pumps, worked by a special engine. In addition to the ordinary duplex feed donkey, a special duplex pump is fitted to pump bilge, and circulate water through the condenser in the event of the centrifugal pump becoming deranged. Steam is supplied at 160 lb. pressure by a single-ended boiler 11 ft. 6 in. in diameter by 9 ft. 3 in. long, having two corrugated furnaces 3 ft. 6 in. mean diameter.

SINCE the conviction of Pilot Thomas A. Walsh, of the tug F. W. Devoe, for manslaughter, in causing the sinking of the yacht Ameita, and the drowning of two men, his fellow pilots have labored hard for his release, and the case will soon come up on an appeal. The trial was a fair one, and the evidence as to the actions and position of the tug, as well as the condition of Pilot Walsh, seemed perfectly conclusive. It looks as though his fellow pilots were working to aid a guilty man to escape a just punishment, rather than to secure the reversal of an unjust conviction. The two victims are long since buried, and the collision so much a thing of the past, that there is a fair possibility of Walsh's final escape.

According to the *Yachtsman*, the dimensions of the Herreshoff fin-keel Wee-Win are; over all 23ft 9in., l.w.l. 15ft. 7in, beam 4ft. 8in, least freeboard 8½in., draft of hull 7in, draft with fin 2ft 11¾in. The sail allowed by the rule is about 192 sq. ft. The yacht has raced very successful in the Half-rating class this past season. Her general form is similar to the Scarecrow, published last week.

The fund for the three widows and twelve children of the lost seamen of the yacht Caterina has amounted thus far to £425.

Emperor William, owner of Meteor, has announced his intention of presenting to the Royal Yacht Squadron a new trophy in the shape of a challenge shield, to be sailed for at Cowes by yachts exceeding 100 rating, belonging to any recognized yacht club; the trophy to become the property of any yacht winning it three times.

The 20 rating class, which has fallen through of late though one of the best classes under the new Y. R. A. rule, with such boats as the two Dragons, Chiquita, Vreda and Jessica, will be revived on the Solent next year with at least four new yachts.

A German yachtsman, a member of the suite of Prince Henry of Prussia, has ordered a yacht from Fay & Co. of Southampton, and she will be designed by Mr. Soper, the firm's designer.

With the first snow comes the club book of the Biscayne Bay Yacht Club for 1893, a reminder that there is plenty of good yachting in a warm climate for those who are fortunate enough to be able to get away from New York or Boston to latitude 25 degrees.

On December 2, Captain Nathan Appleton will deliver a lecture on "Columbus and Santo Domingo," before the Massachusetts Yacht Club at its town house, 15 Hayward Place, Boston. The lecture will be illustrated by a stereopticon.

The new Alva for Mr. W. K. Vanderbilt is now building at Laird's yard, Birkenhead, from the designs of Mr. St. Clare J. Byrne. She will be much larger than the old yacht over 300 ft. long and of upward of 2,000 tons. She will be very strongly built, with ample bunker capacity, and will be in commission next summer.

Corsair steam yacht, will be altered this winter, her round stern being replaced by the square quarters found in most British steam yachts. Her deck will also be relaid. She has gone to the builder's yard at Philadelphia.

The yacht Flora Temple, Raine and Doman were at Beaufort, N. C., the latter two sailing for Florida.

The Ohio Y. C. is active in formation of the Ohio Naval Reserve, a constitution similar to that of the New York N. Y. being adopted on November 22.

## Canoeing.

THE report of the Secretary-Treasurer of the A. C. A. is doubly gratifying in that it not only shows the Association at last out of debt, but Com. Winne and his fellow officers have demonstrated that by wise and economical management it is possible to run the Association for a year at an actual profit of over $500 in place of a deficiency nearly as great. Under the circumstances, no one would have objected if the results of some very severe economy had been apparent at the meet, but on the contrary the camp of 1892 compared very favorably in all ways with those of preceding years, the transportation being incomparably better than in '89, '90 and '91. This year, too, the principal receipts of the Association, from the four divisions and the camp dues, have been less by over $100 than in the two preceding years. The task of showing a surplus of $500 in place of a very serious deficit has entailed much unnecessary work on the officers, more than they should be called on to bear; but at the same time the balance sheet of 1892 should be one of the most valuable of the assets of the A. C. A., as it proves beyond question that with good management and due economy a reasonable surplus may be looked for every year.

THE question of a change of rules is now before the club, and preceding the general meeting, which took place on Nov. 23, a camp-fire was held on Nov. 2 for the purpose of discussing in advance all proposed changes. The owners of the racing canoes took no part in the discussion; but proposals were made for the establishment of a "general purpose" class, and for the abolition of the absurd limit of "clench-build" for the second class. We shall know by next week the results of the general meeting.

A CORRESPONDENT this week questions the record of the paddling trophy race at the meet, and suggests that the course was short. From the care and accuracy with which both paddling and sailing courses were this year laid off there is little possibility of error in the distances. If any error exists in the paddling times it is in the timing, not in the course. In the sailing races leg after leg was timed by different watches, so that no error was possible, the same high speed being shown in different races.

FOR the first time in twenty-seven years the Royal C. C. is called on to choose a new captain to fill the vacancy caused by the death of John MacGregor. Mr. MacGregor was the founder of the club and has held the office of captain since its organization, though of late years the position has been purely an honorary one. The club really needs an active and energetic head which shall keep it at the front in British canoeing.

THE canoe yawl has grown quite rapidly in favor of late in England, and many improvements over the old boats have been made. One of the latest of the Thames yawls, Jennie, built by Turk, of Kingston, has just been purchased by Mr. A. C. Coddington, of Philadelphia, and will be seen here next season.

### A. C. A. Finances.

THE statement which we published last week was not intended for publication, but was an abstract of the Treasurer's report. The complete official report, as it will appear in the Year Book, is as follows:

REPORT OF TREASURER FOR SEASON 1892.

| | | | |
|---|---|---|---|
| To Central Division—full income | $239 57 | By lease camp site | $1 00 |
| To Eastern Division, 30 per cent. receipts | 123 90 | By camp site committee | 374 67 |
| To Atlantic Division, 30 per cent. receipts | 90 30 | By regatta committee | 16 50 |
| To Northern Division, 30 per cent. receipts | 46 50 | By cartridges | 4 50 |
| To four Divisions, mailing, etc | 39 12 | By tents, etc | 72 00 |
| To Year Book | 529 00 | By transportation committee | 146 49 |
| To camp dues | 228 00 | By stamps for camp use | 13 00 |
| To camp site committee | 186 44 | By express on trophy and | 2 45 |
| To regatta committee | 47 59 | By expense tracing same | 2 42 |
| To signal officer | 10 10 | By carrying mail to camp | 15 80 |
| To stamps sold | 5 35 | By entertainments | 195 45 |
| To sale lumber, etc | 60 00 | By Year Book | 387 50 |
| To sale torches | 12 00 | By general office expenses | 40 49 |
| To entertainment com | 151 00 | By paid Atlantic Division loan | 200 00 |
| To protest fees | 3 00 | By paid Central Division loan | 200 00 |
| To sale cannon and tent | 15 00 | By badges for camp | 19 10 |
| To interest on deposits | 4 67 | Balance | 530 42 |
| To loan Atlantic Division | 200 00 | | $2,221 79 |
| To loan Central Division | 200 00 | | |
| | $2,221 79 | | |

STATEMENT OF DEFICIT FROM 1891—PAID 1892.

| | | | |
|---|---|---|---|
| To deficit as shown by Secretary-Treasurer, 1891 | 499 67 | By these amounts paid by Sec'y-Treas, 1892— | |
| To other items rendered on account 1891 | 29 17 | E. K. Baber, camp account 1891 | 428 50 |
| | | Rankin Publishing Company, book account, 1891 | 71 17 |
| | | Walter Young & Co., printing account, 1891 | 3 75 |
| | | L. H. Clark camp account, 1891 | 12 44 |
| | | S. Hemmenway & Son, for second prize flags, account, 1891 | 12 98 |
| | $528 84 | | $528 84 |

SUMMARY.

| | | | |
|---|---|---|---|
| To receipts from all sources for season 1892 | 2,221 79 | By total expenditures for season 1892 | 1,691 37 |
| | | By 1891 deficit paid 1892 | 528 84 |
| | | Balance | 1 58 |
| | $2,221 79 | | $2,221 79 |

### Paddling Canoes and Courses.

*Editor Forest and Stream:*

Having read some comments on the course for sailing races at the A. C. A. meets, it occurs to me that the course for the paddling races should be changed as well. It seems to me that a straight course does not tend to improve the "all around" boat, but to develop a racing machine pure and simple. We all know that the canoe that will paddle a straight course best is not the best on a narrow, crooked river. And if we wish to develop the best canoe for all around work, an all around course is the course on which to test it. Who wants a canoe so fined down that its practical usefulness is gone. The records of the last A. C. A. meet say, about four.

C. H. W.

[The paddling races at the meet are practically confined to special racing canoes except in the open class, single blades.]

### Atlantic Division Report.

THE report of the Atlantic Division was not received in time for publication last week. The report is most satisfactory in showing a substantial balance in hand with an increase in membership.

AMERICAN CANOE ASSOCIATION, ATLANTIC DIVISION.

PURSER'S REPORT.—F. L. DUNNELL, PURSER.

| *Receipts.* | | 1892 *Expenditures.* | |
|---|---|---|---|
| Oct. 15, by balance from purser, R. Hobart | $200 02 | March 21, to loan to A.C.A. | $200 00 |

### Paddling Records.

*Editor Forest and Stream:*

The London *Field* need not worry over the time made in the sailing races at the last A. C. A. meet. If the sailing course was measured in the same way as the paddling course, there is nothing wonderful in very fast time being made.

I am surprised that the FOREST AND STREAM in its report of the trophy paddling contest should say the course was a full mile. The time announced is so absurdly fast for that distance that an old canoeist—such as the canoeing editor is—should not have been deceived. Here in Toronto we claim to know something about fast paddling. The five fast men mentioned by you as being absent, and thus depriving the trophy race of interest, all live in Toronto or vicinity. Mr. Johnson was champion paddler of America for several years; Harry McKendrick was also champion for one year, Mr. Muntz for another. I am quite certain that none of the three could do a mile under 8.46, yet we are asked to believe that five men—four of them quite unknown as fast paddlers—finished the mile in times varying from 7.36 to 8.46!!!

No, Mr. Editor, don't ask us to believe that course was a full mile. It is too much.

If Mr. Knappe will come to Toronto next summer and paddle over the mile course of the T. C. C. in that time he will then be a couple of hundred yards ahead of our men and can take back with him to the States the handsomest and most valuable cup ever offered as a paddling trophy.

When Ford Jones won the A. C. A. trophy for three years in succession he was not considered even then the champion sailor, as he did not win the New York Club's international cup. On the same ground paddlers may fairly take the position that the Toronto cup is that which carries with it the title of champion paddler of America. While the Toronto Club has not been so many years in existence as the New York Club it may fairly claim to be as representative of the paddling interests as the New York Club of the sailing. BOREAS.

### The Knickerbocker C. C.

Will hold a smoker in the boat house, foot of 152d street and Hudson River, on Saturday, Dec. 3, at 8 P. M., to which the canoeists of New York and vicinity are invited. L road to 125th street, and cable to 152d street.

### A Notable Railway Route.

THE TRAVELER of '92 is not content with ordinary transportation facilities. He demands fast and frequent trains, sumptuous coaches, smooth roadbed and enjoyable scenery. The route which affords these commands public patronage. The West Shore Railroad has a happy combination of all. Under its present management it is doing more than ever to satisfy modern tourists for business or pleasure. The summer pleasure-seeker needs no introduction to it, for along its line are more prominent places of resort than any railway of 400 miles in the country. Now the summer tourist has sought winter quarters, but the business man who goes to and fro and the travelers of both sexes who are ever making a tide of ceaseless motion, know the result of selecting the "West Shore," when going from East to West, or *vice versa*.

Its three through expresses between New York, Albany, Utica, Syracuse, Rochester, Buffalo, Niagara Falls, Chicago, St. Louis and the West are models of comfort, and the system of through Wagner sleeping cars makes long tours possible with the minimum of personal discomfort.—*Adv.*

## Rifle Range and Gallery.

### THE REVOLVER CHAMPIONSHIP.

CHAMPION revolver shot Geo. E. Jantzer will on Saturday evening next meet Wm. E. Petty in contest for the Winans Trophy at the St. Mark's Place Gallery of the N. Y. Pistol Club. Mr. Jantzer took the trophy from the initial winner, Mr. Louis Bell, and subsequently Mr. Jantzer successfully defended it after a challenge from Mr. Henry Oehl, the President of the N. Y. Pistol Club. Mr. Petty is a member of the New York police force and was a competitor when the Winans Trophy was first opened for contest early in 1891. He did very well then and has since carefully perfected himself in his favorite sport of fine pistol scoring, and now feels that he can give plucky little champion Jantzer a close run for the lead.

### Jersey's Military Riflemen.

THE usual weekly shoot of the First Brigade Rifle Association was held at the Newark Shooting Park on Dec. 26, with seven members present. The light was bad all the afternoon and the wind, while not strong, was very variable and tricky. The scores:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Major Wallace | 4 | 4 | 4 | 5 | 4 | 4 | 4 | 4 | 4 | 4 | 4—41 |

Y'RATILLIM,

## New York Rifle Practice.

THE rifle practice of the New York State National Guard closed on Nov. 5, and the returns have already been tabulated by Gen. Whitlock and his assistant, Capt. N. B. Thurston. The figures show a very large increase in the number of qualified marksmen, the exact returns for the several organizations standing:

| | 1892. | 1891. | 1890. | 1889. | 1888. |
|---|---|---|---|---|---|
| Seventh Regiment | 1,077 | 1,047 | 1,014 | 1,043 | 919 |
| Twenty-third Regiment | 645 | 572 | 586 | 642 | 549 |
| Twenty-second Regiment | 319 | 177 | 157 | 174 | 141 |
| Seventy-first Regiment | 378 | 199 | 156 | 150 | 96 |
| Twelfth Regiment | 340 | 286 | 237 | 200 | 140 |
| Ninth Regiment | 327 | 178 | 170 | 273 | 143 |
| Thirteenth Regiment | 225 | 223 | 180 | 277 | 220 |
| Forty-seventh Regiment | 225 | 128 | 135 | 161 | 153 |
| Fourteenth Regiment | 193 | 81 | 85 | 140 | 109 |
| Seventy-fourth Regiment | 187 | 178 | 162 | 156 | 143 |
| Sixty-ninth Regiment | 164 | 123 | 86 | 156 | 110 |
| Eighth Regiment | 159 | 76 | 75 | 76 | 61 |
| Tenth Battalion | 147 | 113 | 117 | 100 | 96 |
| Sixty-fifth Regiment | ... | 118 | 102 | 142 | 212 |
| Thirty-second Regiment | ... | 43 | 57 | 63 | 43 |
| Separate Companies | 1,798 | 1 679 | 1,211 | 1,420 | 1,441 |
| Staff and Departments, etc. | 71 | 40 | 23 | 22 | 19 |
| Aggregate | 6,315 | 5 261 | 4,584 | 5,219 | 4 595 |

Of these bodies the Seventh, Twenty-second, Seventy-first, Twelfth, Ninth, Sixty-ninth and Eighth are New York city regiments, while in Brooklyn the Twenty-third, Thirteenth, Fourteenth and Forty-seventh are located, as was the Thirty-second prior to its disbandment.

The regiments are rated by a State Figure of Merit, which is obtained by adding the per cent. of those present for practice to the per cent of the rank firing and dividing by 2. The showing in this way is:

| | Per Cent. Present for Firing. | Per Cent. of Firing by Rank. | General Figure of Merit. |
|---|---|---|---|
| Seventh Regiment | 91 60 | 41.27 | 66 44 |
| Twenty-third Regiment | 62 90 | 34 05 | 48.33 |
| Tenth Battalion | 52.96 | 41 20 | 47.08 |
| Seventy-fourth Regiment | 37.23 | 43.14 | 40 19 |
| Twelfth Regiment | 51.84 | 28 20 | 40 02 |
| Seventy-first Regiment | 47.58 | 26 78 | 37.18 |
| Twenty-second Regiment | 48.99 | 23.64 | 36.32 |
| Thirteenth Regiment | 34.84 | 27.24 | 31.29 |
| Forty-seventh Regiment | 35 17 | 24.32 | 29.75 |
| Eighth Regiment | 33 72 | 23.59 | 28 66 |
| Ninth Regiment | 39.99 | 20.51 | 28 25 |
| Fourteenth Regiment | 25.84 | 18.63 | 22.24 |
| Sixty-ninth Regiment | 17.17 | 17.84 | 17.51 |

The leading companies in each brigade gain a prize of $50 each, and are as follows: First Brigade, Company F, Seventh Regiment, Capt. George W. Rand, 71 51; Second Brigade, Company A, Twenty-third Regiment, Captain H. C. Everdell, 56.54; Third Brigade, Twenty-seventh Separate Company of Malone, Captain George W. Crooks, 78 45; Fourth Brigade, Forty-second Separate Company of Niagara Falls, Captain M. B. Butler.

## Work at Conlin's Gallery.

CONLIN'S GALLERY, Thirty-first street and Broadway, New York.—The following scores have been made on the new British revolver target in the last month. This target has given great satisfaction to all the shooters. Almost every evening there is expert shooting by some of the well-known amateurs, with both rifle and revolver, and the exhibition of skill is sometimes marvellous. Many new scores and pictures have been added to the record parlor and will prove interesting to lovers of shooting.

Revolver scores, reduced target, 12yds: George Bird, two full scores: W. E. Carlin, full score; H. C. Faile, full score and one target of 41 in a possible 42.

Revolver, 20yd. target at 12yds.: Dr. C. T. Adams, two full scores, also made in 18 shots 124 out of a possible 126, and 121 possible 126. F. G. H. Blanchard, one full score. J. B. Millerlust, of Canada, one full score. Dr. Adams shot 6 times at 6 different ace spots and hit 5 out of 6 shots.

Rifle scores: Dr. J. G. Knowlton, 111 shots, 110 bullseyes at 12yds., and 20 shots in 20 different positions, 116, possible 140.

L. Boullon, of Paris, 20 shots in 35 seconds, 138 possible 140, and 10 glancing shots 59, possible 70.

Major D. Crocker of the Seventh Regiment made the two first full scores on this target, one on the 12 and 20yd. target.

E. Tipping made two full scores on the 12yd. target and one on the 20yd. target.

Capt. Money, the well-known live bird shot, made a full score.

H. S. Satteoltee, of Paris, made a full score.

G. P. Work made some fine shooting with a repeating rifle, such as cutting down bullets, splitting cards and hitting threads and pipes while practicing at 12yds.

C. Alkan made 69, possible 70, on the reduced target.

## Murphy Defeats Work.

THE cold weather on Nov. 22 did not deter sportsmen from visiting the grounds of the Westminster Kennel Club at Babylon, Long Island, to witness the shooting match between Edgar G. Murphy and George Work. There was a gale blowing across the traps and the light was very bad. The birds were a carefully selected lot and were splendid flyers. The conditions were 200 birds per man, 30yds. rise, for $1,000 a side. The boundary was about 40yds.. The match began at 10:20 A. M. and was ended a few minutes after 3. W. B. Smith of the Tuxedo Club was referee. The scores:

| E Murphy | G Work |
|---|---|
| 20122021112220110222—16 | 11222110001121110112—16 |

## Col. E. Harrison Sanford.

RIFLEMEN the country over will hear with regret that Col. E. Harrison Sanford is dead. In the early years of Creedmoor he was one of the most skillful of military shots and one of the most enthusiastic in the ranks of the long range shooters.

Of abundant means and leisure he brought to the modern rifle world of this country, during its opening seasons, an intelligent appreciation of the difficulties to be met and overcome in placing American rifle shooting on the high plane it now occupies. He was an important figure in those days both on the range and in the board of directors of the National Rifle Association. During the winters Mr. Sanford enjoyed the sport of ice yachting on the stretches of the upper Hudson. Young in years, but experienced in many lines of sport, the sudden death of Col. Sanford removes a model sportsman from a very large circle of friends who admired his many high-minded qualities.

## The Forest and Stream Trophy.

ON Thanksgiving eve the FOREST AND STREAM Trophy, emblematic of the championship of New Jersey rifle clubs, was formally presented to the Miller Rifle Club, of Hoboken.

The occasion chosen for the presentation was the reception and ball given the Miller Rifle Club by their sister association, the Lady Miller Rifle Club. Mr. J. B. Burnham made the speech of presentation in behalf of FOREST AND STREAM, and President Dewey responded for the club.

After the presentation dancing was indulged in to a late hour.

## Winter Rifle Shooting.

JERSEY CITY, Nov. 21.—The Hudson Rifle Club has issued a challenge to the Empire Rifle Club of New York City to shoot a 5-men team match, best two out of three, each man firing twenty (20) shots. First match on Hudson ranges, using the H. R. C. American 25-ring target. Second on the Empire ranges, using the E. R. C. target. Third on neutral grounds selected by the club winning second match and using the standard 12-ring target. It will be an entirely friendly affair and will be the "ice-breaking" of many a match with the rifle clubs around New York, Jersey City, Hoboken and other nearby towns.

Mr. Chas. E. Bird, the secretary of the Hudson Rifle Club, has issued a challenge to Mr. E. Fisher, of the Miller Rifle Club, of Hoboken, to a series of 100-shot matches, best two out of three, for a medal or trophy, said matches to be in three consecutive weeks. There is no doubt that this will be a very interesting contest, as both men have plenty of "grit" to stand the strain. Three different ranges will be used during the contest, and some high scores are looked for from both of these gentlemen.

Next week the Eagle will give some of his views on "How Rifle Shooting may be Revived," in answer to that question in the issue of Nov. 11. Now that the ball has started let some of the old riflemen give their views and let this winter bring forth more enthusiasm in rifle shooting than ever it has been before.

Where are Dorrler, Ross, Coppersmith, Rebhan, Hansen, Zettlers and all other well-known shooters? Send in your views and make things lively during the cold months. THE EAGLE.

## Hudson Rifle Club.

## New York Revolver Shooting.

NEW YORK, Nov. 28.—The following record scores were made by the members of the New York Revolver and Pistol Club at their last regular weekly prabtice shoot, held on the 26th inst., at their gallery, No. 12 St. Mark's Place, 10 shots on Standard American target, distance 23yds., .44 cal. S. & W. revolver:

G. E. Jantzer 95, C. B. Bishop 83, B. Walther 81, A. Bertrand 75, F. Hecking 75, F. G. Allen 66, E. Walz (22 cal. Stevens pistol) 82.

F. HECKING, Sec'y.

# Trap Shooting.

All ties divided unless otherwise reported.

### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 6.—Hedden—Castle vs. Sunderman—Smith, live bird match at Erb's grounds, Newark, N. J., followed by open sweepstakes.

Dec. 15.—Open shoot at 100 live birds, $100 entry, Erb's grounds, Newark, N. J. Entries, if accompanied by $20 forfeit, will be received up to Dec. 12, by FOREST AND STREAM, 318 Broadway, New York.

Dec. 17.—Elliott vs. Fulford, at Kansas City, Mo.; 19, at Indianapolis, Ind.; 22, at Pittsburgh, Pa.; 24, at Williamsport, Pa.; 26, at Harrisburg, Pa.

Dec. 28-29.—Jacksonville (Fla.) Gun Club's fifth annual tournament; $500 guaranteed purses; $300 in money and merchandise prizes added. Professional experts barred. Bryan Taliaferro, Sec'y.

1893.

Jan. 17-18.—Hamilton (Ont.) Gun Club tournament, live birds and targets.

Jan. 10-11.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament. New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.

May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.

May 23-25.—Knoxville Gun Club tournament, $1,000 added to purses. Also valuable merchandise prizes.

June 12-16.—New York State Sportsman's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry building, Rochester, N. Y.

Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh, N. Y.

## DRIVERS AND TWISTERS.

A. G. Courtney, an excellent photograph of whom appears herewith, is immensely popular among gun men and shooters all over the country, and since his reappearance in the field as salesman for the Lefever Arms Company, of Syracuse, N. Y., he has been given a royal welcome. "Court" has the happy gift of being able to agree with everybody on any subject, and this makes and retains the

A. G. COURTNEY.

friendship of all with whom he comes in contact. He is now in the National Capital, from where he will soon start South, taking in all the shooting towns until he reaches Jacksonville, Fla., where he expects to be during the Jacksonville Gun Club tournament. After that he will strike across the country and take in everything as far as Texas. He will not return home until February. He says the new Lefever ejector has proved itself the best in the world and will soon crowd out all its competitors.

We have received a very pleasant letter from Roger Van Gilder, of the Knoxville (Tenn.) Gun Club, who states that programmes for the May shoot will be out early in 1893. The club will use two sets of 5 traps each and experts will shoot from known traps and unknown angles in all events, the North handicap being applied to all others. Full details are not yet settled, but the main programme will probably comprise 10 events each day, each at 20 targets, $3 entrance, with $30 added in each event, purses to be divided into 5 moneys. There will be special prizes for the best five scores each day and heavy prizes for the best averages in all events for the three days. The club is also considering the feasibility of running a team match, each team to comprise 5 men from any regularly organized club, each man to shoot at 60 targets (20 each day), entrance $30 per team, the Knoxville Gun Club to add $100 to the purse, the teams making the highest aggregate number of breaks during the three days to be declared the winners. The club will also attempt to secure from the sporting goods houses throughout the country a trophy to go to the team winning first place. This should draw a big crowd. In all the club will add $300 on each the first and second days and $400 the third day.

Baltimore, Md., Nov. 25.—The Standard Gun Club held its annual shoot at Actos's Park yesterday afternoon. The cold weather kept many away, but the shooting was above average. The entries were from all parts of the State. The club put up a handsome silver cup, lined with gold, on which was engraved, "Individual Championship Cup of Maryland, won by ————, Nov. 24, 1892. Donated by Standard Gun Club, of Baltimore, Md." This prize was won by M. H. Hunt, of Owings Mills, who broke 43 clay pigeons out of a possible 50. The other scores were: W. H. Buckbee 40, J. Devall 39, R. B. Bond of Jessups, Md., 38, Richard Cantler 34, F. W. Clements 33, H. M. Hefline 31, Thos. Evans 31, D. Franklin 28, H. E. Lucas 27, Geo. Baughman of Westminster, 25, M. Willey 22, A. C. Chase 19, H. Kalter 16. The wind was against the shooters. The winner of the cup is the recognized champion of Maryland. Out of the first 25 pigeons Mr. Hunt broke 22. Of the next 25 he broke 21. The occasion was the first shoot for the annual prize cup. One will be given each year. The Standard Club has a membership of about 60, and has a meet every Tuesday.

The usual holiday shoot was held on John Erb's grounds in Newark on Thanksgiving Day, the events being at six live birds each, $5 entry. The birds were a good lot, but the cold weather kept a good many shooters away. Those who took part in the sport were R. H. Breintnall, C. M. Hedden, Samuel Castle, John Erb, H. E. Smith, Clinton McGall, W. G. Hollis and R. Goodale. The scores follow:

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. | No. 6. |
|---|---|---|---|---|---|---|
| Hedden | 101115-5 | 201221-5 | 101011-4 | ——— | 111010-4 | 100111-4 |

PORTLAND, Ore., Nov. 12.—For some time past the sportsmen of Portland and vicinity have felt the need of an organization that will afford better protection to the game in this part of the State, and this feeling has taken the shape of a movement among the sportsmen of the city to reorganize the Multnomah Rod and Gun Club, with the object of promoting legitimate sport and protecting the game. The old club is at present represented in the Pacific Coast League by a massive gold medal valued at $250. Prominent among those who have avowed their intention of becoming charter members of the club are S. A. Green, D. P. Cartwright, Sherman D. Brown, Charles Herrell, George Clark, Robert Townsend, Robert Inman, C. E. Hughes, W. A. Storey, H. T. Hudson, James F. Caraher, Charles Starr, Fred. Henion and others. Such an organization in this city would have great influence in putting a check on the indiscriminate slaughter of game.

The ninth shoot for the Teipel medal took place at Teipel's Park, Covington, Ky., on Nov. 10, with seventeen entries. The conditions were ten live birds per man. Keiser and Condell tied on 10 each and shot off, miss-and-out, Keiser winning on the third round. The scores:

| | | | |
|---|---|---|---|
| Mercer | 1210212112—9 | True | 1011001122—7 |
| R Trimble | 2021111101—8 | Jeck Art | 1122220212—9 |
| Tug | 0112220111—8 | Duff | c003212122—7 |
| Belding | 1212226121—9 | Keiser | 2112122211—10 |
| Van | 222c221102—9 | Modoc | 1201011110—7 |
| Condell | 2111212221—10 | Woods | 1o1000—w |
| Schreck | 2102100212—7 | Dan Krout | 2101010201—5 |
| Wells | 2010102221—7 | McKnight | 01o2002022—6 |
| E Trimble | 22290—w | | |

Several Altoona sportsmen went out to the Juniata ball grounds on Thanksgiving Day and passed a few hours trying for honors in a contest at ten live birds each. The day was intensely cold, the ground was covered with and the air full of snow, while a brisk wind blowing away from the shooters caused the birds, once on the wing, to fly fast and far. The result was that the boys were obliged to shoot straight and quick or be content with "goose eggs." The score is shown below, the shooting being under Hurlingham rules:

| | | | |
|---|---|---|---|
| "Quirk" | 1221210222—9 | Parker | 0010211100—5 |
| Clark | 2022222110—8 | "Dock" | 0201221000—5 |
| Manlove | 2202110121—8 | "Edwards" | 0001120000—3 |
| Killitts | 0111221221—9 | | |

The *Commonwealth* of Covington, Ky., says: "The FOREST AND STREAM, a journal with a spicy Trap and Trigger column, wonders if there is a gun club in America that could put forth ten men to compete with the same number of men from the Newark, N. J., Gun Club. The *Commonwealth* will say that there is a gun club in Covington at present that can not only compete with, but can beat any ten men now in a gun club, not only in Newark, but in any section of the country. If the Newark Gun Club don't believe it let them come on to Kentucky and her boys will show them that this statement is correct and can be backed up by facing the trap."

WAUKEGAN, Ill., Nov. 24.—The Bachelor Club gave its second trap shooting contest to-day, open to all amateurs of the country. Contestants were not as numerous as was expected. Each was allowed ten clay pigeons. The first prize, worth $30, was won by William Dunnill, of Fox Lake, who scored 9; second prize, $10, by C. Hoffmann, of Waukegan, score, 8; third prize C. Kilpatrick, Waukegan; fourth prize, C. J. Spencer, Highland Park. The winner of the first prize also scores for the $150 presentation prize, which has to be won three times. Kilpatrick and Dunnill have now each scored once for this prize.

At the Union Gun Club's first day the total amount of entrance money in the ten regular events was $13.50. Those who shot through and the amounts they won were as follows: Hobart $12.46; Smith $10.22; Miller $10.14; Drake $9.44. Beside this Hobart received $1 and Smith and Miller $2 each as average money. Sigler shot in seven events, paid in $8 and drew out $7.68. This leaves each man a loser by the following sums: Hobart 4 cents; Smith $1.28; Miller $1.36; Drake $4.06 and Sigler 32 cents. But oh, what a lot of fun for the money!

The Coney Island Athletic Club proposes to offer an engraved gold cup, emblematic of the team championships of Kings County, N. Y. Every club of amateur shooters in the county will be invited to contend for the prize. The conditions under which the cup will be shot for are as follows: Each team to consist of five men, and each man to shoot at fifteen live birds; one shoot to be held each month for seven consecutive months, commencing in January, 1893, and the team winning it most times will be presented with the prize as its personal property.

TOWANDA, Pa., Nov. 25.—The following scores were made yesterday during a storm of rain and snow by two members of the Towanda Gun Club. Events Nos. 1 and 3 were at 10 targets, No. 2 at 10 live birds:

| | No. 1. | No. 2. | No. 3. |
|---|---|---|---|
| Snider | 0011111101—7 | 1201010110—6 | 0010001111—5 |
| Montague | 1011111111—9 | 1031010110—6 | 0113011001—5 |

The members of the Rochester Rod and Gun Club will go to Syracuse on Dec. 6 to shoot with the Onondaga County Sportsmen's Club and take supper with that organization at the Vanderbilt House.

Agent Brown, of Burton, and W. H. Wheeler, of Hempstead, shot a match at Burton, Tex., on Nov. 21. The conditions were 50 live birds per man, for $100 a side. Brown won with a clean score against 46 by Wheeler, who lost three birds dead out of bounds.

The Hamilton (Ont., Can.) Gun Club will hold a live bird and target tournament on January 17th and 18th, and will offer over $1,000 in gold as prizes. This will give an excellent opportunity to American trap shooters to take part in a pleasant shoot and incidentally see what a Canadian winter is like.

In No. 4 there were three moneys, and in each of the others two moneys. Ties were all divided, except that for first money in No. 6 event, which was shot off, miss-and-out, and won by McGall, who killed 13 straight. Smith lost his thirteenth, Erb his seventh and Castle his first bird.

T. B. Ware is likely to become the owner of the championship medal of the Spokane (Wash.) Rod and Gun Club, he having won it five times already. The conditions are 20 singles and 5 pairs of targets, and in the last contest Ware broke 29. If he wins the medal twice more it will become his property.

W. G. Clark and Edward Banks of Altoona went hunting on Wopsononock Mountain and had good success. Among the trophies they brought back was a 30-lb. wild turkey gobbler, which they declare to be the finest specimen they ever saw. They are having it mounted.

The following officers have been elected by the Oskaloosa (Ia.) Gun Club: President, Joseph Stumps; Vice-president, G. W. Shockley; Secretary, C. V. Hoffmann; Treasurer, H. W. Seevers; Captain, Wm. Chew; Directors, Marq. Barr, E. McMains, Perry Timbrel.

The dates for the Fulford-Elliott matches have been arranged as follows: Kansas City, Mo., December 17th; Indianapolis, Ind., December 22d; Williamsport, Pa., December 24th; Harrisburg, Pa., December 26. Each match will be called at one o'clock, P. M.

We were in error in stating that at the 1893 Knoxville shoot the Parker handicap would be used. Experts will shoot from known traps, unknown angles, in all events, and others will shoot under the regular North sliding handicap.

Miss Annie Oakley is enjoying herself among the quail in the vicinity of her old home in Woodland, Dark county, Ohio, and finds an abundance of sport.

The Colt Hammerless, New Haven and Bristol Gun Clubs have each won four victories in the Connecticut State League tournament, and this will give an added interest to the next contest, to take place in Bristol this month.

At the November cup shooting of the Maplewood, N. J., Gun Club, the cup was won by W. N. Drake who broke 48 out of 50 targets. J. W. Smith broke 44; Dr. Fisher, 37; Ed. Reeves 38, and W. J. Smith 36.

W. F. King and H. McWhorter shot a 50-bird match for $100 a side at the Eagle Hotel, Pittsburg, Pa., on Thanksgivig Day. McWhorter being the winner. He had previously beaten King in a 25-bird match.

W. F. Tappan and Edward Banks, of Altoona, went to Lipton Run for a few hours' shooting on Nov. 25 and secured eight grouse. Three of these are en route to Herr "Bilderbach," of Wilmington.

The White House (N. J.) Gun Club will hold a live bird and target shoot, open to all, on Saturday. Plenty of good birds have been secured and a big shoot is expected.

A ten bird match was shot on the River road, near Paterson, N. J., on November 23d between Smith Hill and Eugene Pier for $30 a side. Each man killed 9.

The Hedden-Castle vs. Smith-Sunderman match at Erb's on December 6 will begin at 12 o'clock and will be followed by open sweeps. Bring plenty of shells.

J. H. Outwater and Wm. Richards shot a 25-bird match at Hackensack, N. J., on Nov. 16. Outwater killing 13 to his opponent's 7.

The Auburn (N. Y.) Gun Club house was recently broken into and about $50 worth of property destroyed.

On the first day of the Union Gun Club tournament 875 targets were thrown from one to four P. M.

Don't forget the 100 bird match to take place on John Erb's Newark grounds, December 15.

The Elgin (Ill.) Gun Club has been fitting up a new shooting house.

Dr. Carver says he will not shoot any matches until next spring.

C. H. Townsend.

## Thanksgiving at Baltimore.

Baltimore, Nov. 26.—*Editor Forest and Stream:* The Standard Gun Club held a Thanksgiving shoot at their shooting grounds on Thanksgiving. The day was a clear one overhead, but with the thermometer at freezing point and the wind blowing a perfect hurricane from the northwest from early morn till night, had a tendency to keep many a shooter at home, and made the shooting very difficult, which accounts for the poor and miserable scores made.

The day was set forth for a great day for Maryland's trap-shooters, as the great championship race for the championship of Maryland was to be shot for, this race has been the talk of some time, and would no doubt, had the weather been more favorable, brought many more shooters in line. The race was won by W. H. Hunt, of the Standard Gun Club, who made a most creditable and remarkable score, considering the weather, of 43 out of 50. This score would certainly have been beaten had the day been a calm one, as many of the good shots dropped away below their average. The prize, a handsome silver cup, was donated by the Standard Gun Club, and when won becomes the individual property of the winner. Each year the club will donate a similar one for the championship of Maryland.

The following are some of the events and the race in detail:

Championship race:

| | |
|---|---|
| Hunt | 1111111011111111111011011111011111111011111101111—43 |

H. E. Lupas, Secretary.

## Putney Thanksgiving.

Putney, Vt., Nov 25.—The second annual turkey and chicken shoot of the Putney Rod and Gun Club was held Thanksgiving Day and proved a very pleasant and successful time. The weather was cold enough to make an overcoat necessary to insure comfort, but at 10 o'clock about a dozen shooters and a number of spectators were on hand waiting for the signal to start. Matches Nos. 1, 2, 4 and 6 were at 5 singles, 30 cents entry, and No. 8, 10 singles, 40 cents entry, the purses being divided into three moneys of 50, 30 and 20 per cent. Nos. 3 and 7 were at 10 singles, 75 cents entry, with a turkey for first prize, one pair chickens for second and one chicken for third. No. 5 was at 10 singles, 60 cents entry, with one pair chickens for first, one chicken second and one chicken third. The net profit to the club was about $12; and the closing shoot for the season of 1892 was one of the pleasantest events of the season to those who took part. Below are the scores made in all the regular events:

| | No. 1. | No. 2. | No. 3. |
|---|---|---|---|
| Crosby | 01110—3 | 11101—4 | 1111001110—7 |

| Tallett | 1111—4 | Kingsley | 1111—4 |
| Paddock | 1111—4 | | |

J. C. Ayers, Sec'y.

## American Manufacturers' Association Prospectus.

The object of this Association, which is composed of the leading manufacturers of guns, ammunition, sporting goods and artificial targets in America, is for the purpose of increasing the interest in trap-shooting and to exhibit to shooters a full line of each member's goods in different parts of America at a minimum of cost.

In becoming a member of this Association it is hoped that each one will have a tent and display a full line of their goods, as one of the principal reasons for forming this Association is to make ten expositions during the year 1893 in different parts of America of the products of American makers of firearms, ammunition, targets and sporting goods. We also wish to impress on the minds of the shooters of America that this Association is not gotten up for the purpose of seeing how many targets we can throw in a day, but to see how large a number of shooters we can get together, and how pleasant a time we can give them and show them a full line of American makers' goods in guns, ammunition, targets and sporting goods; and then give the shooters $100 a day to come and look at them.

We propose to employ a competent man as manager—Mr. John Parker, of Detroit, Mich.—at a salary to be determined by the board of directors, and expenses while away from home; such manager to have the management of all shoots, keeping in good condition all members' goods, packing and shipping the same from one place to another; receive all moneys at the different shoots and turn them over to a treasurer, who must be a member of the Association, and who will make all disbursements on vouchers from the manager. The manager must be impartial as to the different makes of goods displayed, and must agree not to participate in any of the shoots. He must make a report in full of each shoot, a copy of which must be mailed to each member and to all the leading sporting papers.

To take ten expositions and tournaments of two days each, commencing in February, 1893, and ending December, 1893, at points to be decided on by the board of directors.

This Association to add $200 cash to the purses of each tournament, making $2,000 in cash, given to the shooters of America by this Association during the year 1893. The Association to charge three cents each for all targets thrown, and the make of target used at the different tournaments to be agreed upon by the club under whose auspices each tournament is held. To pay each club on whose grounds the tournaments are held one cent each for all targets scored, and the club or clubs to whom we pay this money agreeing to use the same for improving their grounds and appliances.

Each member of this Association to have a full-page advertisement in each of the programmes, and a thousand or more of them to be distributed at each shoot. Assessments to be paid as required, the first to be $50, and the total amount for the year not to exceed $350. Address all communications to the secretary, who will answer any inquiry in his power.

178 Broadway, New York. G. Harry Squires, Sec'y.

## Rutherford's Thanksgiving.

Rutherford, N. J., Nov. 24.—Inclosed please find scores made by the Boiling Springs Gun Club to-day. The day was raw and windy, and the scores and attendance was light in consequence. The live birds were a grand lot, as good as ever shot at. On Dec. 17 we shoot the last match of series against Passaic City Gun Club. On the same day we will also shoot-off the tie for fifth place for the merchandise prizes of the New Jersey Trap-Shooters' League, against the same club. The regular monthly shoot of this club, at bluerock targets, will take place Dec. 7 at 2:30 P.M.

No. 1, 5 live birds, $2 entrance, 1 money:

| | | | |
|---|---|---|---|
| Meyer | 10111—4 | Paul | 01110—3 |
| Peck | 11101—4 | | |

## Thanksgiving Day Sweepstake.

Louis Miller; the proprietor of Dexter Park, held his regular Thanksgiving Day sweerstake shoot and quite an extensive programme was got through with. The morning was devoted to target sweepstakes under the rapid-firing system, with electric pulls and the afteonoon to live bird shoots under Hurlingham rules. Darkess put a stop to the sport and closed a pleasant day's shooting. The scores, Nos. 1, 2, 4, 6, 7, and 8 at 10 targets each, 3 and 5 at 15:

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |

## The Guaranteed Purses at Watertown.

Watertown, N. Y., Nov. 22.—*Editor Forest and Stream:* In view of a statement recently made to the Manufacturers' and Dealers' Association by Mr. H. A. Penrose and published in your issue of Nov. 17, to the effect that at Watertown the club held a meeting and requested that the purses be withdrawn, it is simply justice to the Watertown Club to make the following plain statement of facts:

On the first day of our Manufacturers' and Dealers' Association tournament Mr. Penrose declined to adhere to the programme of guaranteed events, as the weather was excessively hot, and the attendance in consequence rather small.

At a meeting of the club, held at the Otis House in the evening Mr. Penrose entered uninvited and stated to the members assembled that if the Watertown Club would consent to give up the regular programme and shoot sweepstakes for the remaining two days he would donate the targets, beside paying printing bills and freight on the fixtures, at the same time considering the shoot simply postponed to some more favorable time in the future, when he promised to give us another shoot with guaranteed purses.

The club, upon vote, reluctantly yielded to Mr. Penrose's proposition and gave up the regular programme. The blame for the failure of the shoot would never have been publicly attached to the association or to Mr. Penrose had not the latter placed the club in a false position, thus making the above statement necessary.

J. C. Ayers, Secretary.

## Thanksgiving at Red Bank.

The Riverside Gun Club held a live bird shoot on its grounds at Red Bank, N. J., on Nov. 24, with the wind blowing a gale from the North. The birds were a lot of "hummers" and some brilliant shots were recorded. Events Nos. 1 and 5 were at 5 birds, $2.50 entry; Nos. 2 and 4 at 10 birds, $5 entry, and the others were miss and out affairs. The results:

## Sweepstake Shoots at Woodlawn.

It was proposed to hold a big live bird and quail sweepstake shoot at Woodlawn Park on Thanksgiving Day, but on account of the cold weather the quail shooting had to be postponed. Seven events were shot off at live birds and some fair scores were made. Several of the shooters left early so as to participate in the Atlantic's shoot at Coney Island. The scores:

## Emerald Gun Club.

The members of the Emerald Gun Club had a good day's sport at the traps on Wednesday, Nov. 23. The printipal event was the regular shoot for the two class medals at 10 birds each, club handicap. Dr. Leveridge and L. Henry killed 9 each and the former took the first class medal and Henry the second. The latter failing to kill all of his birds with his first barrel was barred from wearing the first medal and becoming his personal property. A small sweepstake was shot off after the regular shoot to finish up the birds and allow the members to get home out of the cold. The scores.

## Prospect Heights Gun Club.

The members of the Prospect Heights Gun Club held their usual Thanksgiving Day shoot at Parkville on Thursday, Nov. 24. It was at first proposed to shoot at 100 targets each, but the wind was too strong, so it was decided to shoot at 50. The prize was a handsome diamond stud and W. H. Atkinson was the lucky winner with 45. The score:

| | |
|---|---|
| C S Reynolds | 1011100111010110101011111000111010111110111—35 |

| W H Atkinson | 1110111111011111111111011111111111111111111111111—45 |

Referee, J. W. Sevoir.

## Linden Grove Gun Club.

The last shoot of the season of the Linden Grove Gun Club was held on Friday, Nov. 25 at Dexter Park. The contest was for the best averages for the annual prizes. F. Ibert, G. Major and J. Birmel killed 7 straight, John Schlieman being second with 6. The birds were a goood lot and fast flyers. The score:

| | | | |
|---|---|---|---|
| P J Eppig | 2202101—5 | J Birmel | 2121121—7 |
| F Ibert | 1122212—7 | G Major | 1211212—7 |

| F Weisenborn | 2101200—4 | M Euler | 1101101—5 |

Referee and scorer, C. A. Dellar.

## Parkville Gun Club.

The regular shot of the Parkville Gun Club was held on the grounds at Parkville, L. I., on Saturday, Nov. 19. The contest was for the club medal at 50 targats each, under A. A. rules. Only five entered, and W. V. Nichols was the winner. The scores:

| | |
|---|---|
| W H Atkinson | 1100111010101100111011111101101101101111101111111—37 |

## THANKSGIVING DAY AT WHEELING.

WHEN, on Wednesday, Nov. 23, we boarded a B. & O. train and started for Wheeling, W. Va., to attend the first annual trap tournament of the West Virginia State Sportsmen's Association, the air was rather cold and raw, but the sun was shining brightly, and we were inclined to think that Thanksgiving Day might for once be ushered in with fairly good weather that would attract a goodly number to the shoot and convention. After leaving Washington, however, the sun went under a cloud, the air got more chill and damp, and by the time historic Harper's Ferry was passed the snow, beautiful but unwelcome snow, was falling at a rate that caused us to feel decidedly blue. For it must be remembered that the success of nearly all tournaments, whether State or club affairs, is greatly influenced by the state of the weather on the day preceding the shooting, as it is then that the most of the contestants are compelled to leave their homes in order to be on hand for the opening events. West Virginia is scattered over a considerable amount of territory, and at least one-half of the club delegates would have been compelled to leave home on Wednesday in order to reach Wheeling in time for the fun. The coming of the snowstorm convinced us that the attendance would be seriously affected.

Passing Martinsburg, Cumberland, Piedmont and Grafton, the snow was still falling, the mountains had taken on a white covering, and the wind blew fiercely through the gorges. When we reached Wheeling, however, the fall had ceased, although there was no promise of an improvement in the weather. The following morning when we poked our heads out of doors the outlook was bad as ever, the thermometer showing its mercury very low, the clouds being dark and heavy and the wind chilling one to the marrow.

However, we were here and compelled to make the best of what should come. It was not the day for sight-seeing, so at an early hour we boarded an electric car, which soon carried us over the Ohio River to Wheeling Island and within a stone's throw of the grounds of the Island City Gun Club, where the shoot was to take place. Although the weather had given us a chilling greeting to the city there was nothing chilly about our reception at the club house of the Island City Club, either as regards the temperature of the room or the welcome accorded us by the genial sportsmen who were gathered therein. The welcome accorded to FOREST AND STREAM showed conclusively that South as well as in all other sections it has firmly established itself in the hearts of all true sportsmen as the great and only exponent of all land and water sports and pastimes.

In the shooting house we found Dr. Myer, R. B Burt, J. A. Penn, G. W. Lemon and J. E. Wright, the famous "Big Six" of the Island City Gun Club who won the great team race at Atlantic City in July; R. S. Cowen, of Bellaire, O.; Messrs. Bell and Smith, of the local club, and last but not least the ever popular A. G. Courtney with his great Lefever ejector gun. "Court" had been "doing" Pittsburgh and vicinity and was en route to the Sunny South, but concluded to drop off and see the boys at Wheeling and have a little shoot.

"But where are all the delegates from the outside towns?" we asked.

"Where are they?" said J. A. Penn, "the most of them are just where all of us ought to be in such weather—toasting their shins at the family fire. I have letters from a large number of clubs promising the attendance of delegates, and had yesterday's outlook been at all favorable each and every one would have been on hand; but as soon as the temperature dropped and the storm began we gave up all hopes of a large turnout. Then again some would not be away from home under any circumstances on Thanksgiving Day and others are off in the fields after game, so that altogether we have the short end."

The grounds of the Island City Gun Club are situated on the extreme end of Wheeling Island, which is separated from the rest of the city of Wheeling by the fast rushing Ohio River. The foreground is such as to make the shooting extremely difficult. From the club house to the water's edge is a wood toward which the targets are thrown, the shooting being done toward the north. To the north-west of the grounds, on the opposite side of the river, are several large iron mills and foundries, from the tall chimneys of which heavy clouds of dense black smoke are constantly pouring, this making the foreground still worse. The scenery from the grounds is very rugged, lofty mountain peaks being seen in all directions. On the extreme top of one of these peaks, northwest of Wheeling proper, is located a cemetery, which can be seen from any point in the city. The club has a small but comfortable club house, which on this occasion was provided with a roaring fire that was appreciated by all.

The shooting was done from 5 expert traps, the Parker three-class handicap being used. Outside the club house it was bitterly cold and the wind was strong and cutting. The targets were thrown hard, the traps being at their highest tension, but nevertheless the wind would cause them to take erratic flights. In consequence high scores were the exception. Those who were obliged to shoot under the three-trap expert rule were not able at any time to do any fair shooting, the shooting from known traps at unknown angles being of itself a hard handicap for the day.

While the crowd was small, it was still an extremely jolly one, not even the bad weather having any effect on the spirits of the shooters. Several bottles of spirits fermenti, however, were lowered during the day. There were five events shot off previous to noon, when a recess was taken for dinner, the most of the local contestants going to their own homes. J. E. Wright and FOREST AND STREAM were invited to take dinner with the genial George W. Lemmon, who resides within a half-mile of the grounds, and so urgent was the invitation that they could not resist. And the way Mrs. Lemmon's delicious turkey and concomitants did suffer at their hands was a caution. Portly "Court" took dinner with John A. Penn, and the labored manner in which the Lefever man walked upon his return to the grounds showed that he, too, had been trying to do justice to his host's treatment.

As soon as the clan had been mustered the fun recommenced, the event of the afternoon being the 50-target race for the championship of West Virginia, this being shot at known angles. This event was also a sweepstake, the entry fee being $5. The race was a hard-earned victory for George W. Lemmon, who was closely pressed by J. E. Wright. According to the terms of this match the winner holds the championship subject to one challenge every sixty days, when he will be obliged to accept or forfeit his title. Mr. Lemmon is likely to have his hands full, as we were informed in the evening that every member of the club proposed to challenge him. As he is only required to accept one challenge every sixty days, some one will have to make a long wait.

It was about 4 P. M. when the fun was ended, and soon after the party had left for their respective domiciles. "Court" and "we" refused an urgent invitation to dine out, and repaired to the McLure House in Wheeling. After supper a "session" was held at the furniture house of John A. Penn, where a couple of local newspaper men put in the evening in copying scores and the rest of the party discussed the past, present and future of trap-shooting, while "Court" expatiated on the good qualities of the Lefever ejector and showed wherein it was "the best" ejector in the world.

It had been announced that the State Association would hold a convention in the evening to elect directors and discuss the game and fish laws, but the meeting was not held, as only the local men would have been at hand. The meeting will be called for some later date this winter, when it is to be hoped that the members of the various West Virginia sportsmen's clubs, as well as individual sportsmen, will evince enough interest in the question of game and fish protection to be present. Judging from expressed opinions of those met at Martinsburg and Wheeling, there is great need of legislation, and now that the Wheeling people have showed their earnestness in the matter, they should receive support from the entire State. The next call will be issued for some day other than a holiday, so there will be no excuse for non-attendance. Due notice of the meeting will be given by FOREST AND STREAM.

Below will be found the result of the events shot.

Extra at 10 singles, $1.35 entry: Wright, Penn, Lemmon and Burt 8 each, Myers 7, Cowen 5.

Previous to leaving Wheeling we were furnished by Mr. Penn with the scores of a tournament held by the club in October, these scores never having appeared in print. The shoot was an open one, and in some events there were 18 entries. There were a number of merchandise prizes in several events. The Parker handicap was used. Among those present were Elmer E. Shaner, "Jim Crow" and "Old Hoss," from Pittsburg, and J. E. England, from Alleghany, Pa. The scores follow:

No. 1, 10 singles, $1 entrance: Shaner 7, Crow 7, Penn 9, Lemen 8, Beekman 8, Myers 8, Burt 7, Wright 9, Dinger 7, Miller 6, England 9.

No. 2, same.—Experts: Penn 7, Wright 5, England 6. Semi-experts: Lemon 9, Beekman 7, Myers 9. Amateurs: Miller 5, Dinger 7, Burt 9, Crow 7, Shaner 8

No. 5, same.—Experts: Lemon 8, Myers 7, Burt 9. Semi-experts: Shaner 7. Amateurs: Crow 7, Wright 9 Verger 8, England 9, Dinger 5, Penn 8, Beekman 3, Miller 8, McCoy 10.

First average was won by J. E. Wright, second by J. A. Penn, third by E. C. Myers.

C. H. TOWNSEND.

## Atlantic Rod and Gun Club.

THE attendance at the regular monthly shoot of the Atlantic Rod and Gun Club was rather poor on account of Thanksgiving, the majority of the members preferring a hot stove to facing the cold wind at the seashore. Bonden furnished a fine lot of birds, with the expectation of seeing some matches shot off. The regular club shoot and sweepstake contests were held up till dark. The scores:

| | | | |
|---|---|---|---|
| C E Morris | 2112122111—10 | M Bonden | 0101220002—5 |
| D Monsees | 2112002111— 8 | G Nostrand | 1122012c12—8 |
| J B Voorhees | 101c211111— 8 | R Richards | 2000200000—2 |
| T F Buckley | 0110212222— 8 | | |

Sweepstake, 5 birds, $2 entrance, two moneys:

| | | | |
|---|---|---|---|
| C E Morris | 21112—5 | C Furguesen, Jr. | 11111—5 |
| D Monsees | 21121—5 | W F Sykes | 00110—2 |
| C Meyer | 12201—4 | | |

Sweep No. 2: C. E. Morris 4, Monsees 4, Voorhees 6, G. Morris 3, Richards 2, Buckley 3, Hegeman 4, Van Brunt 4, Sutherland 2.

Sweep No. 3: C. E. Morris 5, Monsees 5, Richards 2, Hegeman 4, Van Brunt 2, Sutherland 3,

Referee and scorer, C. A. Dellar.

## Keystones and Pigeons at Springfield.

NO MATTER what time of the year the Union Gun Club chooses for the holding of a tournament the fates seem to conspire against them so far as weather conditions go. It was pretty generally known that the club would hold a tournament on Nov. 22 and 23, and a good number of shooters in various sections had promised to attend. On the morning of the first day, however, the conditions were such as to cause a good many to change their minds. The clouds looked very much as though a snowstorm was en route, the air was heavy and damp and a strong wind was blowing. During the early hours there were frequent dashes of snow, and taken altogether the prospects were not encouraging. At noon the sky cleared and the sun appeared, but by this time the mischief was done, and when the shooting began it was with just five entries. The shooting on this day was at Keystone targets from five Keystone traps. The light discs were flitted about in merry style by the frisky wind and the shooting was extremely difficult.

The club announced that cash prizes would be paid for first, second and third averages in all programme events, and these were paid despite the light attendance, thus showing good faith by the management. There were 135 targets in the regular programme, and of these J. W. Smith broke 117, securing first average money ($2). Miller got $2 for breaking 116, Hobart $1 for breaking 114.

Events Nos. 1, 4, 7 and 9 were at 10 targets, $1 entry; Nos. 2, 3, 5, 8 and 10 at 15 targets, $1.50 entry; No. 5 at 20 targets, $2 entry, with three moneys in each event. The results follow:

| | No. 1. | No. 2. | No. 3. |
|---|---|---|---|
| Smith | 0111011100— 6 | 101111111111111—14 | 111110101111101—12 |

*The Second Day*

was announced to be live-bird day, and good attendance was counted upon. But alas, alas and alack-a-day, the good attendance resolved itself into the coming of one man, and one man only. The comer was Harry E. Smith, of the Newark Gun Club, and he was full of shoot. His only opponent was E. D. Miller. The two, however, had lots of fun, shooting three matches instead of confining themselves to the regular programme events. The first match was at 50 live birds each, the second and the third at 25 each. Both men were in fine form, each killing 92 out of the 100. The scores:

| | |
|---|---|
| Smith | 2111111212012o1111111122—23 |

## The Carterets Own the Cup.

THE fourth annual competition for the club team trophy offered by the Larchmont Y. C. took place on November 29 on the club grounds in a driving snow storm. The only teams entered were those of the Larchmont Y. C and the Carteret G. C. of Bergen Point. The cup was first put up for competition in 1889, and was open to teams representing the following clubs: Westminster Kennel Club of Babylon, L. I.; Country Club of Westchester; Carteret Gun Club, of Bergen Point, N. J.; Tuxedo Gun Club and Larchmont Yacht Club. The Carterets won it in 1889 and 1890, the Larchmonts in 1891, and the Carterets in 1892. The conditions of the competition are as follows: Open to teams of four men from subscribing clubs, 25 birds per man, 30yds. rise and 50yds. boundary, five traps, under modified Hurlingham rules. The contest was started at 12:56 o'clock and finished at 3:15 o'clock.

In 1889 the Carterets won with 88 kills; in 1890 they again won on 88; in 1891 the Larchmonts won with 90 kills to the Carterets 89.

The conditions on Tuesday were bad, there being a blinding snowstorm from the northwest blowing directly into the faces of the shooters, and at times hiding the traps from view. The result of the match was a victory to the Carterets, who thus become final owners of the $500 trophy by virtue of three victories. The scores follow:

## New Utrecht Rod and Gun Club.

THE attendance at the weekly shoot of the New Utrecht Rod and Gun Club was rather slim on Saturday, Nov. 19, at Woodlawn Park, Gravesend, L. I. Only seven competed for the gold medal at 20 targets each, 22yds. rise, A. A. rules. Dr. Wynn won it with a score of fifteen, which is about the best he has made at targets under the rapid firing system at five traps. He also got a good share in the sweepstakes that were shot at five live birds each, five unknown traps, modified Hurlingham rules. The scores:

| | | | |
|---|---|---|---|
| Bennett | 0111110011110000101O—11 | Dr Wynn | 0111111110101011101—15 |
| Adams | 1001100101001110101—11 | Sykes | 0001100111010100100— 9 |
| Wingert | 1101110001100011110O1—11 | Blatt-Hegeman | 0011001110101011101—12 |
| | | macher | 0110101100111001101—11 |

Sweepstake shoots, 5 live birds, 28yds. rise, $1 entrance, two moneys:

| | 1st. | 2d. | | 1st. | 2d. |
|---|---|---|---|---|---|
| Dr Wynn | 11212—5 | 11111—5 | Adams | 10200—2 | 12001—3 |

| Bennett | 10111—4 | 12111—5 | | | |

## Van Brunt Defeats Hegeman.

A MATCH shoot at 50 targets each was shot off at Woodlawn Park on Thursday, Nov. 24, between A. A. Hegeman and M. Van Brunt, both members of the New Utrecht Rod and Gun Club, for a stake of $25 a side. Both shooters are evenly matched, but the high wind bothered them considerably. Van Brunt won by the score of 34 to 30. The return match to be shot off on Christmas Day. The score:

| | |
|---|---|
| A A Hegeman | 0110110110010101101110101—15 |
| | 1101001011110011010101011—15—30 |

## MILWAUKEE BIG WOLF SHOOT.

MILWAUKEE, Wis., Nov. 25.—Mr. S. A. Tucker, representative for so long of the Parker gun, and one of the most esteemed shooters of the country, this evening said a few things to the writer which will do admirably as comment on the Milwaukee tournament now closing.

"Tournament is not much good any longer," said Mr. Tucker, "and everybody knows it. This tournament is a success in only one way, and that is as a success for the shooters. The $500 added money is a price for their attendance, and they are here. But who are they? They are the old familiar rounders you meet everywhere, say half of the fifty men who break 75 per cent. of the targets and burn 75 per cent. of the ammunition used in the trap shoots of America. You don't see a half dozen Milwaukee shooters here, and you don't see one young shooter. They are scared away, and they well may be. This is a crowd of wolves, and they will get all there is to eat. You never saw such a systematic dividing and dropping for place in your life. There is no sport to it. No one is here for the sport. It is not a sporting event. Nothing is shot to a finish, and the only question is for the combine to figure out the best possible divisions, and to shoot so as to get into the softest place.

"I wish your paper, which is fearless enough in anything it thinks is right, would take up this question. The time is coming when we will have to have honest shooting. This way of shooting is not honest. It makes trap shooting as rotten or more rotten than any other form of sport that is practiced. If horse racing were half as corrupt as tournament shooting, the public would not endure it. It will not endure this sort of shooting when it comes to realize it, and that is why I say there should be a stand made against it.

"I don't believe the amateur can be protected by any system of handicapping. He comes to a shoot with his eyes open. But I do believe that crooked shooting and dropping for place can be done away with in one season. Of course if managements do not care to take this stand there is no use talking, but if they will, they can at one step go far toward restoring the confidence of the amateur in shooting tournaments. Let the rule be, the three highest scores take the money, no division of ties allowed. No one could drop for place then. Or let managements promptly bar any man detected missing a target or bird intentionally, and ask him to leave the grounds. As it is now, the boys say that because a few will drop back in this way all have to do it to protect their own money. I don't doubt this is true, but if the bar on place-shooting were once established I think square shooting would naturally come to the front and our events become much more sportsmanlike. Of course not all such dropping could be detected, but a man could not deliberately fire in the air, or cut the shot out of his cartridge, or not put any shell in his gun on his last bird, and a good and sharp committee could make a man shoot again on a suspected bird until they had evidence enough one way or the other.

"I believe if the management would hang up the announcement, 'No handicap, open to the world, honest shooting only,' it would more justly invite the confidence of the general public than any recent tournament had done. An indifferent shooter need not be a fool. He may not want to present his money to a combine. But if he thought he stood a show to scratch into a good hole alone once in a while, without one or two experts dropping back on him, he might be willing to keep on shooting for a while."

Mr. Tucker speaks sturdily and wisely in this. I do not doubt that many of the gang of wolves, among whom I have many friends, will think this is hard doctrine, but at the same time there is not one of them who will not admit in his heart that it is true and just. There never a was shoot where all the arts of the "machine" were more openly and unblushingly practiced than at this one. As to class of the shooting, it is enough to say that there were present such Western shooters as Heikes, Budd, Elliott, Parmalee, Grim, McMurchy, Geo. Kleinman, Tucker, Lindsley, Rexroat, Sanford, Bingham, Stannard, Williamson, Eich, Anson, Dicks, Organ, Mussey, Bennett of Kansas City, Ackerman of Nebraska, etc., etc. As our friend Eddy Bingham would say, these were "not overlooking anything." Among the above names are those of a few men who came out for the fun of it, or out of courtesy to Dick Merrill. The others were there for revenue only.

The shoot, as viewed from the professional shooter's standpoint, was a success, inasmuch as the added money made the purses fat things for the shooters, but for the management it was not a successful affair. Dick Merrill will probably lose $150 to $200 on his tournament, and his associates having cheerfully declined financial complications, this loss will be a personal one for him. He was disappointed that the Milwaukee shooters did not support the tournament. The South Side Gun Club, of Milwaukee, did not give this tournament, but should have supported it. It has over 100 members, but of these only three or four, I believe, attended the shoot. The crowd of wolves scared them out. Mr. Merrill was disgusted at this, but after all how could he expect a different result? He hung up too much money. He split on the rock which has wrecked many a tournament of late, and tried to run a shoot which should invite the wolves and the lambs also. The lambs declined to mingle. If Mr. Merrill had sat down and mailed checks direct to the rounders early in the week he would have pleased them quite as well, would have avoided a tiresome formality, and would not have had to stand out in the cold for days refereeing matches as he did. I think this system of mailing out checks would simplify tournament matters very much in shoot open to the world. The motto, "Open to the world" sounds liberal and very American, but it is a very misleading motto. "Open to the world" really means "Open to a dozen shooters who are exercising a trade, and who will drop and divide equitably with each other to the exclusion of those who shoot for sport and not for business." An open shoot is really a closed shoot. It is an airtight thing. It is an hermetical, airtight, lead pipe, sandbag cinch, if you can figure just how that looks. The South Side Gun Club was on to it. Now, if Mr. Merrill and the general public and the wolves themselves will kindly refer back to Mr. Tucker's remarks, they will, I think, find in them cheap and nourishing food for thought.

The accommodations for the shooters at National Park were good. The target background is poor, but the live bird grounds are good. The live birds were a mixed lot, of course, but included some screechers. Cap Anson found some of these latter, which caused him to gaze over the fence with a look of mingled disdain and surprise. Live birds were shot from King traps, at 20 cents, the U. S. pigeon targets at 3 cents. The weather was wintery for the most part. Wednesday, the first day, was raw and windy. Thursday, Thanksgiving day, was the only pleasant day of the shoot, and was fair and warmer. Friday and Saturday came off blustery and blizzardy, so that shooting was rather a duty than a pleasure. Under such circumstances it was personally a great comfort to belong on a newspaper like FOREST AND STREAM, because it has such a red hot circulation.

Although this gay crowd of wolves are devoid of conscience altogether, physically speaking it would be hard to find a finer lot of men, and socially every shooter in the land knows them for the jolliest and most companionable aggregation out of jail. It is no sport to attend a wolf tournament, because the boys won't shoot to a finish and show us any fun; but there is a lot of pleasure in visiting around among them and hearing the talk, wise and otherwise, but good-natured always, which fills the air from the score to the cashier's desk. The regulars of the present American trap circuit live lives which would be too much for a Georgia mule, but they do not change and never will grow old. Following are the scores:

*Wednesday, First Day, Nov. 23.*

No. 1, 10 live birds, $10, $50 added:

| | | | |
|---|---|---|---|
| C Grim | 1122011122—9 | Yale | 1201211011—8 |
| C W Budd | 1111222112—10 | L Ackerman | 1112122010—8 |
| A C Anson | 1212201121—9 | J C Read | 1110201210—7 |
| R O Heikes | 0221222121—9 | Geo Hoard | 1201112112—9 |
| H McMurchy | 1001011101—6 | J E Lewis | 1110112111—9 |
| T Parmalee | 2111111110—9 | J A R Elliott | 2121111220—9 |
| M C Sanford | 1111212111—10 | | |

No. 2, 10 U. S. pigeons, $1.50: Bob White 9, Sanford 9, Heikes 8, Elliott 9, Ackerman 5, Grim 8, Skinner 6, Fogg 8, Howard 7, Rex 8, McMurchy 4, Case 5, Tucker 9, Budd 10, Reed 7, Anson 4, Parmalee 9.

No. 4, 15 U. S. pigeons, $2, $15 added: Heikes 11, Sanford 14, Budd 13, Fogg 12, Ackerman 13, Reed 12, Parmalee 10, Grim 14, Skinner 9, Rex 13, McMurchy 8, Anson 9, Bob White 10, Elliott 11, Lehman 13.

No. 6, 20 targets, $3, $25 added: Grim 18, Sanford 17, Skinner 14, Parmalee 18, Rex 19, Stannard 14, Meixner 13, McMurchy 13, Read 14, Fogg 14, W. Ackerman 13, Bob White 16, Budd 16, Heikes 20, Lehman 13, Elliott 17, Carmichael 16, Yale 14, Ackerman 19, Bennett 18.

No. 8, 15 targets, unknown angles, known traps, $2: Grim 12, Fogg 8, Budd 13, Stannard 13, Parmalee 14, Heikes 15, McMurchy 11, Sanford 18, Lewis 5, Elliott 14, Read 10, Ackerman 11, Lehman 11, Meixner 9, Weise 8, Anson 9.

No. 10, 12 targets, $1.50: Grim 10, Budd 10, Sanford 7, McMurchy 8, Stannard 9, Heikes 9, Ackerman 10, Okershauser 6, Fogg 10, Yale 9, Meixner 7, Case 6, Parmalee 7, Read 4, Anson 9.

*Thursday, Second Day, Nov. 24.*

No. 3 was begun Wednesday, but not being concluded, was finished Thursday morning. In this shoot the largest single winning of the tournament was made. Mr. Read, of Omaha, was alone on second, and won $81. Parmalee, Lindsey, Grim and Elliott divided $108. The third and fourth men were not so fortunate, dividing $54 and $27.

No. 3, 15 live birds, $15, $45 added:

| | | | |
|---|---|---|---|
| Elliott | 2111112111221222—15 | Anson | 1220212121111022—13 |

| Anson | 111101010101001111—14 |
| McMurchy | 111111111111001111—18—32 |
| Parmalee | 111111111101111101—18 |
| Budd | 111111111111101111—19—37 |
| Yale | 010111011110001110—13 |
| Hanson | 001100011111101011—12—26 |

No. 22, merchandise shoot, 50 targets, $5: Bingham 45, Sanford 47, Keller 36, Grim 48, Budd 45, Anson 38, Bennett 37, Heikes 46, Elliott 41, Ackerman 43, Parmalee 43, Stannard 43, Lehman 39, Read 30, Meixner 43, McMurchy 45, Deiter 41, Rex 47.

There were 18 shooters in this merchandise shoot, and every man got a prize, which certainly should have been satisfactory enough. The awards were determined by lot and were as follows: Heikes, Deiter, Bennett, Sanford and Elliott each 100 Peters shells; Ackerman, 1 year's subscription to FOREST AND STREAM; Meixner, 1 year's subscription to *American Field*; Stannard and Keller, 1 keg wood powder; Bingham, 1 expert bluerock target trap; Grim, 1 silk vest; Budd, 1 split bamboo rod; Anson, 1 gun case; Read, 1 hat; Rexroat, 1 box cigars. McMurchy received a handsome pair of striped pants (so billed), and Frank Parmalee acquired the useful commodity of a half barrel of pickled pig's feet, nearly all of which he had eaten before dark. "If I h-h-had a w-w-whole b-b-barrel of 'em," said he, "I c-c-c'could give up my kwisky at the b-b-bwoth."

No. 24, 10 targets, $1.50 entrance, $10 added: Parmalee 10, Ackerman 8, Bennett 7, Grim 9, Anson 9, Eich 7, Richards 9, Meixner 8, Heikes 6, McKinney 6, Tucker 7, Keller 5, Bingham 9, Elliot 9, Sutherland 5, Strasberger 4, Kennicott 7, G. Kleinman 6, Rex 10, Hansen 8, Read 7. McMurchy 8, Manniers 9, Lehman 8, Ruble 8, Morrison 4, Budd 9, Stannard 8, Wester 9, Deiter 6, Lindsley 6.

No. 26, 15 singles, $2 entrance: Rex 13, Read 11, Bennett 13, Hansen 8, Grim 13, Keller 10, Meixner 11, S. Mennier 8. Ackerman 12 Strassburger 8, Kennicott 10, Sanford 13, Lehman 13, Elliott 14, Bingham 12, McMurchy 12, Stannard 13. Tucker 12, McKinney 8, Heikes 15, Eich 12, G. Kleinman 8, Budd 13, Parmalee 15, Ruble 12, Morrison 9, Anson 11, Dillingham 5, Rumley 11.

Extra, 15 targets, $2 entrance: Bingham 15, Budd 13, Lindsley 10, Keller 10, McKinney 14, Skinner 12, Hansen 9. Grim 14, Read 9, Stannard 9, Yale 10, Sutherland 7, Sanford 15, Tucker 15, Deiter 14, Richards 10, McMurchy 12. Bennett 12, Anson 10, Ackerman 13, Heikes 13, Rex 13, Parmalee 15, Elliott 14, Ruble 12, Carmichael 10, Meixner 14.

*Friday, Third Day, Nov. 25.*

No. 9 (concluded from day previous), 15 live birds, $10, $45 added:

| | | | |
|---|---|---|---|
| Elliott | 1202112122121—14 | Eich | 2121111122212—15 |
| Lindsley | 1212001001111—11 | Anson | 1111221010112—13 |

No. 23, 10 singles, $1 50: Kleinman 5, McMurchy 9, Grim 10, Rex 10, Willard 7, Sanford 9, Bingham 8, Ackerman 10, Read 7, Parmalee 8, Tucker 6, Keller 6, Lehman 8, Elliott 9, Heikes 9, Ruble 10, Budd 9, Bennett 8, Anson 7, Deiter 6, Eich 9.

No. 30, 15 singles, $2: Read 9, Ackerman 12, Keller 10, Bingham 13, Rex 14, Grim 13, McMurchy 14, Willard 11, Tucker 14, Parmalee 15, Heikes 11, Sanford 13, Elliott 11, Budd 14, Anson 10, Lehman 11, Lynds 10, Bennett 14, Eich 9, Deiter 14, Kleinman 8, Ruble 12.

No. 32, 25 targets, $3: Heikes 24, Bingham 22, Keller 22, Elliott 25, McMurchy 22, Ackerman 23, Sandford 23, Read 15, Parmalee 20, Rex 24, Lehman 19, Grim 24, Budd 24, Lynds 15, Bennett 18.

No. 34, 10 targets, $1 50: Ackerman 9, Read 6, Keller 9, McMurchy 7, Sanford 7, Hansen 6, Parmalee 9, Elliott 6, Tucker 9, Grim 9, Budd 10, Deiter 9, Bingham 9. Willard 6, Lynds 8, Heikes 8, Eich 8, Rex 7, Ruble 10, Lehman 9, Anson 8, G. Kleinman 11, Bennett 9.

No. 36, 15 singles, $2: Ackerman 13, Read 8, Keller 12, Bingham 11, Sanford 13, Elliott 11, Grim 13, Heikes 15, Deiter 14 Anson 10, McMurchy 14, Parmalee 15, Budd 13, Rex 11, Tucker 11, Bennett 13, Kleinman 14. Lehman 11.

Extra sweep, 20 targets, $2.50: Heikes 19, Sanford 18, Parmalee 18, Read 11, Keller 15, Rex 18, Bingham 13, Grim 18, Deiter 15, Budd 19. Kleinman 10. Ackerman 15, Elliott 16, Anson 14, Lynes 10, Lehman 16, Stony 16, Bennett 17, McMurchy 17, Wadsworth 13, Rubel 13.

Extra sweep, 15 targets, $2: Read 10, Bingham 11, Kellel 13, Sanford 12, Heikes 13. Bennett 11, Hobbs 7, Budd 12, Story 13, Tucker 13, Lindsley 7, Parmalee 14, Rex 14, Alderman 10, Grim 14, Elliott 14, Heikes 11, Grim 13, Sanford 14, Bennett 11, McMurchy 12, Anson 11 Parmalee 13, Read 13.

AMONGST THEIR MIDST.

*Milt. Lindsley* (to a Milwaukee American)—What's der best powder in der huil vorld? Vood powder!

*H. McMurchy* (in response to request that he say something bright for publication)—What's the matter with a nickel-plated Sm—say, do you know who stole the surcingle off my Norfolk? I'll catch cold here in the graft.

*Dick Merrill* —When will I give another tournament like this in Milvowka? Not in the vinter ven the days are short—not in a thousand years!

*S. A. Tucker*—That game of billiards McMurchy and I played against Heikes and Willard was the only square game those fellows were in this week. No sir, Mac and I didn't drop for second place.

*Frank Parmalee* (translated)—Did you hear that dream Jim Elliott had after his Chicago matches? Well, Jim dreamed he went to heaven, and St. Peter says, says he, 'Who are you?' 'I'm Jim Elliott, a shooter from Kansas City,' says Jim. 'Oh no! You may be from Kansas City,' St. Peter says, says he, 'but you're no shooter.' (Not translated)—"S-s-say, I was t-t-tickled to d-d-death w-w-when the r-r-ref-ref-refer, referee called 'N-n-n-no, no b-b-bird' on me, that time the b-b-bird walked off. I s-s-stood there t-t-ten, ten m-minutes t-tryin' to say "N-n-n, no (you know what I mean) m-m-mys-self!"

*R. B. Organ* (referring to a dachshund, in the lunch tent)—Here's Dick Merrill's prize dog, Paul Bo. Bow-legged enough, isn't he?

*C. E. Willard*—Was it you and Roll Organ that worked a confidence game on Milt Lindsley, matching coppers? Well, a Jerseyman never ought to be allowed to come out into this country without a guardian.

*Mary Jane Eich*—I have shot the choke out of my right arm—burt the bone somehow. Guess I'll have to lay off for six months.

*Mr. Bennett, of Kansas City*—Why is my arm tied up? Why, a fellow shot me full of No. 8 shot, out quail hunting in Kansas the other day. He put 150 shot holes in my coat. Most of them were stopped by a silk shirt I had on, but I caught it in the hand and wrist. I am always going to wear a silk shirt out hunting after this. No, I was not near a chicken roost.

*Jim Elliott, of Kansas City*—W. W. Greener says my new pair of Greeners are the finest he ever sent to America. Will I shoot them in Chicago? Say, if I should come to Chicago and say "Five hundred dollars" out loud, all the Chicago shooters would go jump in the lake. Wait till I eat this man Fulford, then I'm coming to Chicago, and I'll hang out a large shingle painted red all over.

*Cap Anson*—These trap shooters make me dizzy. In base ball I can wink my eye for a hundred, and the bet goes. In trap shooting it's all talk and no business transacted. If I pull out my money to make a little bet, I have to run to catch sight of the fellow's coat tails around the corner.

*Charlie Grim*—I will shoot, run, jump, hop-step-and-jump, wrestle, kick, hitch-and-kick, flip, play mumble-peg or marbles with any man, woman or child on earth, and I won't drop for place either.

*Eddie Bingham*—That's me, too. I'm a dead game sport. I'll shoot anything, pigeons in the winter time and craps in the summer time. What! Why, of course, pigeons are better in the winter.

*Rolla Heikes*—I ain't sayin' a word, am I?

*Michael Cassius Sanford*—No, the development of my left eyelid did not come from winking to another fellow for a divide. I wouldn't drop for place—that is—(and he winked the other eye).

*George Kleinman*—Yes, I have on my overshoes, but I left my skates at home, it seems like.

*Charlie Budd*—Don't believe a word Tucker tells you about my horse. It's a corking good horse, if you get where the road is all down hill. Got a colt, too. I'm quite a farmer now. You don't want to believe anything Tucker tells you about my rolling stock. I ain't going to take him out riding any more, nohow. It's too hard on the horse.

*G. W. Rexroat*—Come and see me. I've got some quails and some guns and some dogs.

*B. Dicks*—Milvowka ist eine schöne, hein? Reminds me of Evanston, where the theological school is.

*Jack Ruble*—Ain't you shy 4 cents on this change, cashier?

*Plumber Read* (of the ticket agent)—What time does the 4:15 train go out?

*The Agent*—Three seventy-five, you son of a gun!

*The Wolves*—Good-bye, Dickie. When you want to be an "angel" again, let us know.

*Dickie*—I don't want to be an angel any more. Not in a thousand years. E. HOUGH.

175 MONROE STREET, Chicago.

## Thanksgiving Day at Peekskill.

FOR a raw chilly day, with the wind blowing a gale from the north, and the thermometer ten degrees below the freezing point. The Peekskill Gun Club turned out strong to enjoy, if possible, a live bird shoot.

The two doctors, Horton and Mason, chose alternately each a man from the numbers present, until all were taken, several of whom had never before faced a trap, and thus two teams were the contestants. The defeated ones agreeing to give a pigeon supper—if enough birds were killed.

The birds proved a strong lot, most of them "Homers" once upon the wing, went off like a streak. Dr. Horton shot exceedingly well, some of his kills were marvelous. One of Halsted's birds after receiving the contents of both barrels towered to a height of 30 or 40ft. and there hovered for at least half a minute. It was amusing to see Johnny hunting through his pockets for a third shell to use on the hoverer. The bird finally sailed off and fell dead just inside the bounds. Dr. Mason had hard luck—no less than three of his birds fell dead just outside. Following is the score of kills out of ten, excepting Col. Robertson and C. Leut who shot at five each:

| Horton's Team. | | Mason's Team. | |
|---|---|---|---|
| Dr Horton | 9 | Dr Mason | 4 |
| Halsted | 7 | Wessells | 7 |
| Wygant | 7 | Richmond | 7 |
| Soder | 5 | Turner | 6 |
| Hill | 3 | Dain | 4 |
| Evenughim | 7 | G Leut | 3 |
| Robertson | 0—37 | C Leut | 5—36 |

Saturday evening at 9 o'clock the club sat down to the pigeon dinner, at Wessell's. The birds were cooked and served in royal style with all the accompanying Blue Points, consomme, plum pudding, celery, coffee and cigars and were enjoyed by all.

We understand that a return match will be shot by the same teams on Dec. 9. PEEKSKILL.

## Erie Gun Club.

THE cold weather of Wednesday last had considerable effect on the attendance at the regular monthly shoot of the Erie Gun Club at Wooplawn Park, Gravesend, L. I. The contest was for the club's medal and extra prizes. C. Detlefsen and John Plate were the only straight scorers with 7, the former winning the medal on the shoot-off of the tie. H. Janskowski took the second prize and the others divided. The scores:

| | | | |
|---|---|---|---|
| C Plate | 1120102—5 | H Janskowski | 2012222—6 |
| C Detlefsen | 2212112—7 | J Smith | 1012011—5 |
| M Elssasser | 0011222—5 | C Mohrman | 0012202—4 |
| J Plate | 2121112—7 | W Hartje | 2110001—4 |
| H Dohrman | 0120021—4 | J A Still | 2000101—3 |
| D Lynch | 1200301—3 | | |

Sweepstake shoot: C. Plate 4, Detlefsen 5, Elssasser 5, J. Plate 4, Dohrman 1, Lynch 1, Janskowski 2, Smith 4, Mohrman 3, Hartje 3, Still 4. Referee and scorer, C. A. Dellar.

## Sweepstake Shooting at Dexter Park.

SWEEPSTAKE shooting at live birds was in order at Dexter Park on Saturday, Nov. 26. Only four participated, but some lively shooting took place. The first event was to decide a bet of $50 made by E. H. Blinn, that his brother Alec would kill 40 out of 50 live birds. This feat he failed to accomplish, the birds being picked and all fast blue rocks, Blinn only killing 15 out of 26. He will try again next Saturday. In the sweepstake shoots that followed he did some good shooting. The scores:

| | No. 1. | No. 2. | No. 3. |
|---|---|---|---|
| M Enler | 00020—1 | 00012—2 | 02222—3 |
| J Schwartz | 11000—2 | 00202—2 | 12212—5 |
| A Blinn | 11120—4 | 02221—4 | 11121—5 |
| H Victor | 01201—3 | 22222—5 | 11111—5 |

Match at 5 birds, $10 a side, 25yds. rise:

J Schwartz 01020—2 H Victor 12000—2

Draw; too dark to shoot off. Referee, C. A. Dellar.

## ANSWERS TO CORRESPONDENTS.

T. H. D., Gananoque.—About how old is a mascalonge that weighs 40lbs.? Ans. Nothing definite is known to us about the rate of growth of the mascalonge. Hatching operations have been conducted at Chautauqua Lake under the supervision of Monroe Green, of Caledonia, but the fry were liberated at a very early age. Perhaps Mr. Green may be able to tell something about the growth of the fish; the books are silent upon that subject. One thing is certain; increase in size is extremely variable, according to the food supply.

### *THE AMATEUR PHOTOGRAPHS.*

THIS is the last month for receiving work submitted in the FOREST AND STREAM Amateur Photography Competition. All photographs must be mailed to us not later than Dec. 31. Nothing bearing a later post mark will be received.

Full details respecting the terms of the competition are given in another column (page 491), and these instructions in circular form will be sent on request to any address.

The collection of views already received is most interesting; and we shall give the readers of this journal the privilege of seeing many of the views reproduced in its columns.

### *SNAP SHOTS.*

NOVEMBER shad have been reported in the Hudson this year. Although only a pair were taken, the capture is unusual. We published, Jan. 8, 1891, an account of shad lingering in Maine as late as October, and making holes in soft mud and sand in flats which are uncovered at low water. Another curious circumstance was recently discovered by Mr. L. G. Harron in the U. S. Fish Commission water tank at the Bryan's Point hatchery on the Potomac. A shad about 3in. long was caught when the tank was emptied to prevent freezing. It was in company with a young alewife, a white perch and a gudgeon, or so-called smelt. A number of fish of several kinds were observed swimming about when the water had been drawn low, but most of them escaped. These fish have lived through the summer and fall in a tank without change of water, subjected to temperatures varying from nearly 90° to almost freezing point; yet the shad brought home by Mr. Harron is as large as its brethren which passed the summer in the Potomac. Truly there is something to be unlearned even about shad.

"Bon Ami" gives elsewhere an account of some large "salmon" (pike-perch or wall-eyed pike) in the Upper Susquehanna. We expected to hear of these big fish for the species grows enormously large in waters north of Pennsylvania. There are a good many expert anglers in Harrisburg and points further down the river who will scarcely agree with "Bon Ami" in his estimate of the game qualities of the "salmon," which is a great favorite and, fortunately, increasing in numbers.

Now that the prolonged negotiations between the New York Yacht Club, party of the first part, and Lord Dunraven and the Royal Yacht Squadron, party of the second part, have brought the two parties to a point where a match seems possible, it would be a relief to all yachtsmen to know that contention and argument were finally to give way to real sailing. Under the present conditions, however, it is too much to expect that this most desirable consummation will follow, as it is most evident that the challenger is repeating the identical mistake made three years since, in sending a challenge under the impression that it was not under the terms of the new deed. His retreat on that occasion was by no means a graceful maneuver, but it was a far easier task than that which lies before the Royal Yacht Squadron if it ever learns sufficient about Cup matters to understand the position which it has just assumed, and to wish to withdraw again, as in 1889.

We would be glad to receive for publication notes of meetings and of work undertaken and accomplished by game and fish protective associations in the United States and Canada. Reports of methods which have proved successful would be of special interest and value for the information of others who might adopt them.

The "pheasant" of the new Vermont law, several correspondents tell us, is the English pheasant. An importation of these birds was put out on the farm of W. S. Webb, of Shelburne, and the overflow has stocked the covers of the vicinity. Secretary John W. Titcomb, of the Vermont Fish and Game League, sends us a copy of a special act adopted by the last Legislature protecting pheasants and English partridge for two years from Jan. 1, 1893. We shall watch with much interest the undertaking to provide new game for Vermont.

The present organization of the New York State Association for the Protection of Fish and Game makes a wise provision for individual membership, that persons who are not connected with any club, but who are interested in the purposes of the Association, may give it their adherence and support. The membership fee is merely nominal. Doubtless many individual sportsmen will welcome such an opportunity to declare themselves on the side of protection. The secretary is Mr. John B. Sage, of Buffalo, who will on request send copies of the constitution and application blanks.

Bills are now before Congress which provide for the segregation of a part of the Yellowstone National Park and the granting a right of way to a railroad through it, and to-day we print a plea for the preservation of the Park and against these two propositions. This article will be issued in pamphlet form, and we shall be glad to supply copies of it in quantities to those sufficiently interested in the Yellowstone Park to be willing to distribute them among their friends who are not readers of FOREST AND STREAM. We ask the cooperation of every one of our readers. The pamphlet will be furnished without charge.

The FOREST AND STREAM'S office rattlesnake—of which the entire force was so proud—which might have shed light on many a vexed and venomous question of ophidian lore—for which our fond fancy had pictured a career of usefulness, scientific achievement, distinction, honor and renown rarely won by a reptile of his inches—and whose rattle sounding in our ears might have prompted many a day dream of mountain heights and reverie of mossy ravine—our rattler is no more. When poked at with a pencil last Friday he failed to respond; his skin is now tacked on a board to dry. The FOREST AND STREAM is not so proud as it was last week. Science is temporarily retarded. Winter has set in, and the office snake den must go untenanted.

Field trials, coursing meets and bench shows have multiplied of recent years beyond the most sanguine expectations of those who took part in the affairs of ten years ago. The growing number and importance of kennel events have come to demand at this particular season an amount of space in our pages, to supply which compels us to restrict the several other subjects. The due balance will shortly be restored, however, and an increased number of pages will be devoted to the shooting and angling departments.

With the enlarged opportunities afforded by the increased number of pages, dating from last January, we have given a more generous supply than ever before—and than has ever been given by any journal—of good reading in all of the special fields to which this journal is devoted. For 1893 the columns will be no less bountifully supplied. The FOREST AND STREAM will maintain its well-established reputation as an entertaining, instructive, outspoken, independent, progressive and clean journal for sportsmen. With the initial number of the year an entire new outfit will add to the typographical beauty of these pages, but no radical changes will be made in the features which have become so familiar.

# A STANDING MENACE.

## COOKE CITY vs. THE NATIONAL PARK.

### Statement of the Case.

COOKE CITY is a small mining camp located just without the northeast corner of the National Park. Its promoters claim that it is the center of a region of vast, though undeveloped, mineral wealth; that it is kept in a backward state solely on account of its inaccessibility, and that this inaccessibility is due to the existence of the National Park, which includes the only practicable railroad approach. They claim that Cooke City is in the same case with a land owner whose property is entirely hemmed in by another man's possessions; and that as the land owner has in law an easement over his neighbor's land to enable him to get out and in, so Cooke City has an indefeasible right to be allowed to use the only practicable outlet which nature has given her. They claim that the refusal of the Government to concede this right is working ruin to the interests of Cooke City and injury to hundreds of investors.

The United States bases its action in rejecting the demands of Cooke City upon the purposes for which the Park was created. The Government holds that the granting of these demands and the fulfillment of these purposes are incompatible objects; that railroads must not be permitted to enter the Park, and that whatever, not absolutely necessary for the comfort of travelers, tends to disturb the natural state in which the Park was discovered, must be strictly excluded.

The map discloses the geographical features of the question. The proposed route enters the Park where the Yellowstone River crosses its northern boundary; ascends the river to the mouth of the East Fork (or Lamar River); ascends the latter to the mouth of Soda Butte Creek: and ascends the Soda Butte valley to Cooke City. The right to use this route is sought by two distinct measures, all bills for the relief of Cooke City falling under one head or the other. One measure seeks to secure a simple right of way to build a railroad, and is represented by House Bill 4 545. The other measure, in order to evade the technical objection of having a railroad *within* the Park, purposes to cut off and restore to the public domain all that portion of the Park including and lying outside the proposed right of way. This is the so-called segregation project, and is represented by House Bill 2,373, establishing the boundaries of the Park.

The case of Cooke City is clearly that of a few individuals against the general public, and the burden of proof rests upon her to show that her case is one of such extremity as to justify the sacrifice of the interests of the many to those of the few. An examination of the question point by point will show how far she has succeeded.

### I.—Wealth of the Cooke City Mines.

It is not intended to go out of the way to say anything to the prejudice of Cooke City property. But when the public is asked to make a great sacrifice for the promotion of private interests, it is both its right and duty to inquire if those interests are of such magnitude as to justify the sacrifice. In this connection there are a few highly significant facts.

(1) It is generally conceded, even by those most interested, that the ores of the Cooke City mines are of very low grade. It matters not that a few tons of picked ores have been shipped to a distance and there reduced, yielding a margin above all expenses. It is an undeniable fact that the vast bulk of the ore is not of this quality.

(2) The Northern Pacific, the only railroad system anywhere near Cooke City, has steadily refused to build there, basing its refusal on purely business grounds. Thomas F. Oakes, President of the Northern Pacific, said in his evidence before the House Committee on the Park investigation last winter, "There is nothing in the Cooke City mines, and we did not want a railroad there."

Question by the Committee: "Your conclusion was arrived at after investigation?"

Answer: "Yes, sir. We had a report upon it by experts. There is a very large quantity of exceedingly low grade ore. The maximum value would not exceed twenty dollars to the ton, and most of it would not be over six dollars to the ton. If there had been one-tenth of the

deposit and the ore had a value of fifty or sixty dollars a ton, we would have made an effort to get a railroad there; but there is nothing there for a railroad. That is my judgment."

And it is the judgment, be it noted, of a shrewd business man, in whose calculations sentiment found no place, but who was ready to build through the Park provided he had anything to build for.

(3) Still more convincing is the argument that comes from the fact that Cooke City is still without a railroad. Does any one for a moment suppose that, when railroads have subdued all manner of engineering difficulties in the great mining regions of the West, they would pause before the very tame obstacles that bar the entrance to Cooke City if they had a tolerable inducement to build there? Enterprise invades every profitable field, but it has always shaken the dust of Cooke City from its feet.

## II.—Accessibility.

"But," it will be said, "the obstacles that bar the entrance to Cooke City are by no means tame—they are very serious. There is but one practicable route and that is through the National Park."

Let us see. The only expert testimony quoted in the Committee's report is that of Gen. Anderson, at the time chief engineer of the Northern Pacific Railroad. Even he bases his conclusions upon "information derived from Army officers who have had occasion to pass through the country." Railroad companies do not ordinarily decide upon the practicability of routes from such meagre information as this. But Gen. Anderson virtually admits that a railroad could be brought into Cooke City from outside the Park on grades not exceeding 150 feet to the mile, or three feet to the hundred. Now what are some of the actual grades on Western railroads? The following are found in the Union Pacific system:

| MAXIMUM GRADE TO THE MILE. | FT. |
|---|---|
| Denver to Graymont, Col. | 185 |
| Denver to Central City, Col. | 171 |
| Elcho to Park City | 190 |
| Wallace to Burke, Idaho | 211 |
| Pendleton to Spokane, Wash. | 158 |

The following pertains to the Northern Pacific system:

| MAXIMUM GRADE TO THE MILE. | FT. |
|---|---|
| Elkhorn Branch | 211 |
| Helena and Northern | 327 |
| Drummond and Phillipsburg Extension. | 211 |
| Coeur d'Aléne Branch | 211 |
| Wallace to Burke | 248 |

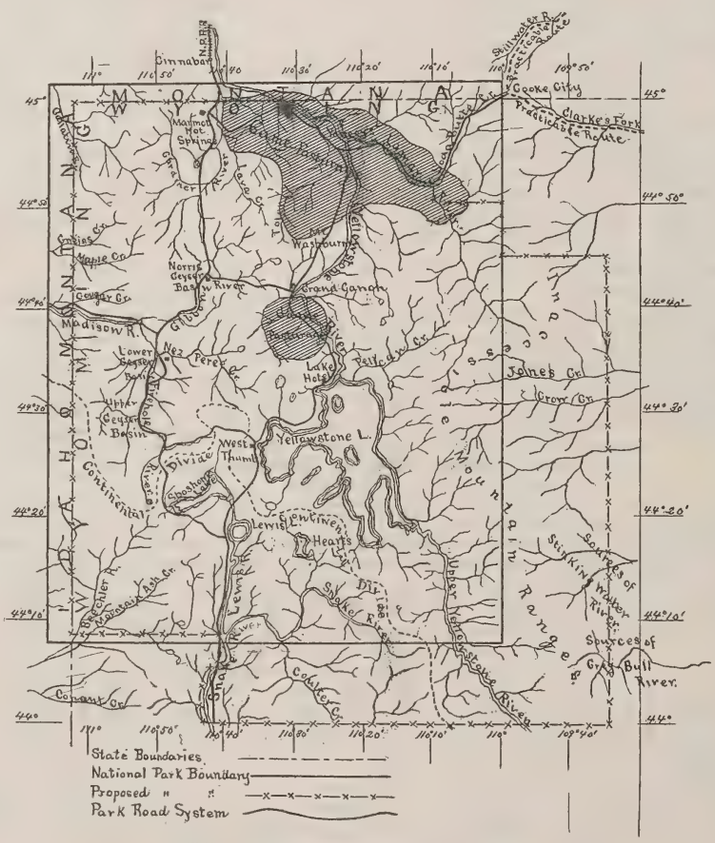
It has been demonstrated by actual surveys over one route and by reconnoissances over another that a railroad can reach Cooke or its immediate vicinity without exceeding any, except possibly the least, of the above grades.

Fortunately we are no longer in the dark upon this subject. A complete railroad survey has been made from Cooke City north to Stillwater on the Northern Pacific Railroad, a distance of 75 miles. The "profile of graded line of definite location," as determined by this survey, shows no grade exceeding 3½ per cent. or 185 feet to the mile.

A preliminary survey via Clark's Fork from Cooke City to Red Lodge, Montana, about 75 miles, where the Northern Pacific has already extended a branch line, shows no grade exceeding 2½ per cent. or 132 feet to the mile.

A careful barometric reconnoissance by Capt. W. S. Staunton, U. S. Engineers, in 1881, over the Clark's Fork route, shows even lighter grades than the above.

It may once for all be taken as demonstrated that railroads can reach Cooke City from outside the Park by several routes, none of which present difficulties of construction or operation that are not far exceeded on existing lines in other parts of the West.



But how is it in regard to the Yellowstone route? It seems hitherto to have been accepted as by common consent that this line is an easy and practicable railroad route. The fact, however, is quite otherwise. Not only are there several excessive grades, but for 15 miles after crossing the boundary of the Park the route passes through a cañon of the Yellowstone where lofty vertical walls of rock abut directly upon the river. To pass this cañon would under any circumstances be a problem of grave difficulty. But if the railroad is restricted to the right bank—as it is in the Segregation Bill—the difficulties would be practicably insuperable; no railroad could afford to surmount them. If the railroad is allowed to cross and recross she river—as it is in the Right of Way Bill—its construction is open to special objections of a very serious nature, which will be considered in a subsequent paragraph.

Looking at the question of distance, we may assume that the object of any branch line to Cooke will be to give an outlet to the great railroad system to the north. Now the distance to the Northern Pacific by the Park route will be about 110 miles; by the Stillwater route only 75 miles; and by the Clark's Fork route about 136 miles. But the Park route for half its length lies through the National domain where the railroad would not be permitted to take up or lay down a pound of freight. No way traffic is here possible. The other lines lie entirely through territory which may be developed and made a source of revenue to the railroad.

## III.—Injury to the Park.

Injury to the Park will follow the passage of the pending bill in three ways.

(1) *Change in the Park Boundary.*—The friends of the Segregation Bill raise the point that the location of the present boundary is unknown, never having been surveyed and marked; that the new line will be a natural boundary, the bed of a stream, the precise location of which everyone will know. As to this point it may be said that the present boundary, although unmarked (a defect easily remedied by legislation), is only too well known to please that very class of people who are so much exercised about its exact location. It is itself a natural boundary, the most perfect that can be found this side of the ocean. It passes along a range of inaccessible mountains. No settlers can inhabit there. Poachers and law breakers cannot ply their obnoxious trades over this impassable barrier. But place the boundary along the beautiful valley of the Yellowstone and its principal tributary, and a regiment of soldiers could not patrol it sufficiently to protect the Park. The present boundary is the best possible for the National Park, for it is simply a huge, impassable, protecting wall of mountains. The propose boundary is the worst possible, for it allows an undesirable population to locate on its very borders. It is worthy of note that, with the friends of these bills, the "natural boundary" argument seems to have no value except as to this particular portion. For 250 of the 275 miles of boundary an artificial line seems good enough.

Park

gain. It robs the Park of beautiful and accessible scenery, of a magnificent game preserve. It gives in exchange an inaccessible mountain region, which tourists will never visit, and which heavy winter snows render incapable of supporting game.

### V.—Precedent.

Congress has always been very loth to let any railroad enter the Park lest it open the way to their general construction there. The desire to avoid establishing this precedent has led some faithful friends of the Park to support the Segregation Bill, because under that bill the railroad is left out of the Park.

But such a course is simply jumping out of the frying pan into the fire. It is impossible for Congress to pass an act without creating a precedent. The question therefore, is not one of avoiding a bad precedent, but of choosing between two bad precedents. Of these two evils, then, supposing that one must be accepted, which is the least?

Under the Segregation Bill, surely every evil that applies to the Right of Way Bill will exist. The railroad in both cases occupies precisely the same territory. The ruin of an important tourist route, the danger from fires, the frightening away of game will be the same in one case as in the other. But the Segregation Bill carries with it far greater evils. It cuts off a large and important part of the Park. It permits objectionable people to hover on the very borders of the reservation where the policing of the Park will be most difficult. In short, it enhances ten-fold every evil which would result from the Right of Way Bill. As a precedent, we can easily imagine what will be the result to the Park if it is thus to be cut down for every attempt to get a railroad across its territory. Certainly the Segregation Bill will form the graver precedent. If it ever, unhappily, comes to a question of choice, Congress should by all means favor the Right of way Bill and reject the other.

This is the view of the Superintendent of the Park, as is shown by the following quotation from the report already referred to: "If a line through the Park is essential, then a right of way confined to the north bank of the streams is unquestionably preferable to a cut-off."

### VI.—Previous Attitude of Congress.

It is said that these bills in one form or another have frequently met the favorable recommendation of Congressional committees, and that therefore there must be something in the claims of Cooke City. Why have they received favorable report? Except for routine official reports the case on the part of the Government has thus far gone by default.

The Park is public property. What is everybody's business is nobody's business, and no one feels called upon to assume the burden of defending a public institution. Had one tithe of the energy, persistency and money been expended in the defense of the Park that have been expended against it, these bills would never have seen light outside of the committee room. Judging from their reports, the committee could have received only *ex parte* evidence.

To show how utterly erroneous are the data upon which they have based their recommendations let us examine a few statements from their reports:

"Cooke City is pronounced by mining experts the most valuable and extensive mining district in the world."

(Compare Section I., above, "Wealth of the Cooke City Mines.")

"The road proposed is the only practicable route to reach these mines."

(Compare Section II., "Accessibility.")

"There are no objects of interest along this portion of the river."

(Compare Section III., "Injury to the Park," paragraph, "National Features.")

"It is capable of complete demonstration that the part of the Park through which the road should pass is utterly valueless to the Park; it is a portion thereof which will never be sought by tourists; access by wagons across it to said mines must result in far more injury to timber growth by fires and consumption than from a railway."

Every word of this is absolutely and unqualifiedly contrary to fact.

"We ask no cutting down with any speculative object in view." (Quoted in report.)

The effrontery of this statement is scarcely less than sublime. See a subsequent Section, IX., "Real Animus of the Movement."

And so it goes throughout the reports. Is it strange that favorable reports have been secured when they are based upon such utterly one-sided information.

### VII.—Views of Government Officials.

But how stands the case with those persons whose official duties have made them thoroughly familiar with the question? The Secretaries of the Interior, Superintendents of the Park, and Engineer Officers in charge of the Park improvement, have (with very few exceptions, mostly explicable on the grounds of personal interest) taken a strong stand against the whole movement. In short, simply to understand the case is to pronounce the building of any railway along the Yellowstone River prejudicial to theinterests of the Park.

### VIII.—Relief for Cooke City.

Admitting the force of all these arguments, there are still many who think that something ought to be done to relieve the situation at Cooke City. They are right, and the peculiar thing about the Cooke City case is that effective relief is at hand if she will only accept it. We do not now refer to the practicable railroad approaches from the outside; nor to the well-known fact that an important railroad system is at present looking in that direction, and not improbably will soon give Cooke City a far better outlet than the one she now seeks. We refer to an entirely different form of relief. For ten years it has been a part of the Government project for the improvement of the Park to build a substantial highway over the route sought by the railroad. The grades will be no heavier than those of the railroad, and over them a team could haul from three to five tons. It is capable of demonstration that freighting could be contracted for at rates but a trifle if any in excess of the railroad freight. Time is not an important element in the delivery of such freight as ores. The cost of the railroad would be at least three million dollars. The wagon road will cost Cooke City not a cent. The difference in the cost of the railroad and the wagon road, in this case amounting to the full cost of the railroad, will pay the wagon freights for fifty years to come.

But this is not all. The money for the railroad will be largely spent in Eastern car shops and steel manufactories, and in the hire of inported labor. A single freight train per day will yield but little money to the community. In the case of the wagon road every cent spent in its construction goes to people in that vicinity. The freight contracts would give employment to hundreds of persons and the raising of grain and hay for forage to hundreds more. The commercial business in wagons, supplies and the like would materially enhance the prosperity of both Livingston and Cooke. In all respects the wagon road will be of more permanent benefit to these two towns and to the surrounding country than the railroad. The wagon road is something that can be had just as soon as the Government is relieved of the menacing spectre of the Segregation Bill. The railroad is, to say the least, a doubtful possibility. Very few believe that it will be built even if the right is obtained.

### IX.—The Real Animus of the Movement.

It will now be asked, If such is a correct presentation of the case, why does Cooke City persist in her demands? The explanation is not hard to find. But to clearly grasp it, it is necessary to understand the relation of the town of Livingston to the project. Livingston is on the Northern Pacific at the north terminus of the Park route, and she hopes equally with Cooke City to profit by the proposed railroad. She wants the Cooke City business to pass her way. For this reason she contributes the major part of the expense of the Cooke City lobby in Washington. The fact also explains why the Park route is persistently demanded, where for Cooke City alone the other routes would be better. Now hundreds, perhaps thousands, of persons have bought land or taken up mines at Cooke City or have bought town lots in Livingston. These people have invested purely on speculation. They purpose to develop no mines, to build no mills or smelters. They are waiting for the "unearned increment." They have been allured into investment by the fraudulent representations of that class of professional boomers and land sharks who have been the curse of every Western community. They are paying assessments, interest and taxes, and are eager to sell. To these people "wagon road" has an ugly sound. Nothing but the magic sound of "railroad" is adequate to the inception of a boom, and a boom of all things is what they are after. The permanent good of the towns is to them a matter of entire indifference. "Only let the bill be a law for one week and I don't care," said a hard-up mine owner the other day. A grand movement to "unload" undesirable property—such is the true "inwardness" of the whole scheme.

Finally the movement receives the unanimous support of all that objectionable population whose methods of gaining a livelihood are, to say the least, very questionable. To quote again from Captain Anderson's report: "There is gradually settling about the Park boundaries a population whose whole subsistence is derived from hunting and trapping." These people seek no greater bonanza than to invade the rich game fields to be thrown open by the Segregation Bill, and to dig that region full of holes in the futile hope that they may find mineral there.

### X.—Duty of the Government.

In a case like the present one it is the manifest duty of the Government not to rely upon an *ex parte* presentation of the case, but to send a committee of investigation to the ground, aided by expert assistance, to study the subject in all its bearings. It should examine the question of accessibility to Cooke City, of tourists' routes, of game, of forest fires, and of all other matters relating thereto. It could then form a fair judgment of the case. It would see that justice to Cooke City requires the immediate carrying out of the National programme adopted in 1883, that of building a good wagon road to the northeast corner of the Park. By doing this it would set the vexed question permanently at rest.

It is urged that the Government is placing a question of mere sentiment before that of actual material wants. So it is, and very properly. The National Park is founded in sentiment. It is a legislative recognition of the existence in human nature of something higher than the sordid love of gain—than the mere question of dollars and cents. No one supposes that the wonderful geyser formations, the Grand Cañon of the Yellowstone, or the multitudes of game in the Park will ever materially simplify the problem of daily bread. This question of sentiment was settled when the act creating the Park was passed. The people for twenty years have scrutinized the act and have declared that it is good. These same considerations of sentiment should therefore control future Park legislation.

To all that class who unblushingly place their little interests above a great public interest, who without scruple would inaugurate measures which must lead to the ruin of the National Park, Congress should oppose but one answer, and that should be written in distinct characters on every border of the Park:

"THUS FAR SHALT THOU COME AND NO FURTHER."

## The Sportsman Tourist.

### MAROONING IN HIGH ALTITUDES.

BY CHARLES HALLOCK.

#### Chapter II.

IN my introductory sketch of the wonderful mountain region which the completion of the Pacific extension of the Great Northern Railroad has so recently made accessible to the tourist and sportsman, I made bold to assert that Lake Macdonald, situated in the main range of the Rockies, was destined to become the most popular resort in America. In thus hypothecating its transcendent claims I indulge in no rhapsody, for extended travel has made me something of an expert in comparative physiography. Certainly, if Luzerne and the high Alps have in course of time become the Mecca of tourists from all parts of the world, this rare Rocky Mountain gem with its superlative attractions has at least an equal chance.

Right here in our own America we have the counterpart of Switzerland, though on a grander scale; and it is reached without the tedium and hazard of an ocean voyage. Furthermore, it is exempt from all those unconscionable exactions and petty vexations which always mar a visit to foreign lands. For here there are no restrictions on tourists, no tolls or fees to pay, no tips to dole, and no streams and forests posted. Everywhere the physical scope is enlarged. The outlook is extended and amplified. There are more dominating peaks, rising from six to nine thousand feet. The glacial areas are broader, the waterfalls more copious, and the varieties of mountain climbing found more numerous and nimble. Mont Blanc, with its conspicuous elevation of 15,000ft., alone is lacking in the landscape.

Most mountain ranges are disappointing to the sightseer. Standing in groups they do not show their full proportions like isolated peaks. But on Lake Macdonald the enraptured beholder may stand at the outlet and gaze northward up the entire length of the sheet through a vista eighteen miles in length, and see the sharply cut outlines of no less than nine bald peaks defined against the sky, the humblest of which is higher than Greylock or Mount Washington.

The glaciers of this region, I venture to submit, are of themselves enough to insure the successful future of Lake Macdonald. There are two within easy access. These must attract crowds of curious visitors every summer, to whom the wonders of the Muir and Humboldt glaciers have so often been recited. No need any more to toil up the precarious precipices of the Matterhorn with alpenstock and safety ropes, or undertake the interminable voyage to Alaska, or even to climb Mt. Ranier or the Selkirks with infinite hardship, camping out on the snow night after night, and shivering in its icy breath. In this favored location an omnibus next year will take the visitor a couple of miles over the level road from the depot at Belton, Mont., 45 miles west of the summit, to the outlet of the lake. A steam launch will carry him to the head of the lake, from whence it is but an eight miles' horseback ride over a mountain trail to the edge of the *mer de glace*, where all the wind phenomena of the "Silent City Mirage" of the Muir Glacier are duplicated with fidelity. The glacier covers an area of 25 or 30 miles. Of course it is not an iceberg maker. Like those of Europe it is a spent glacier, whose remnants are annually wasting away by melting and evaporation from lack of replenishment. Yet many glacial phenomena are exhibited to the observer, and the attentive student may witness the visible demonstration of dynamic problems which have perhaps before seemed puzzling. In the morning a thick mist gathers over it, but as the tardy sun gradually comes over the encampment of the mountains the veil lifts, and all the knobs and spiracles of ice which roughen the surface of the ice field become distorted by the refraction of the vapor, and transformed into spires, domes, pinnacles and turrets, like the strange vraisemblances which we notice on semi-arid plains in the fervent heats of midsummer.

We all know what cumulative success followed Paul Smith's venture at St. Regis Lake in the Adirondacks, and how from small beginnings in a log cabin in the fifties, his hostelry enlarged until it could not hold the hundreds of eager guests who sought its commons. The humble germ of just such a great caravansary now stands at the outlet of Lake Macdonald, beside which St. Regis is tame and insignificant. A two-mile walk from the railroad depot, over a dry, smooth, level trail, through a forest of tamarack, pine and fir, brings us to the pebbly margin of Macdonald Creek, and as we emerge from the inclosing forest we discover the hospitable log cabin with its spacious

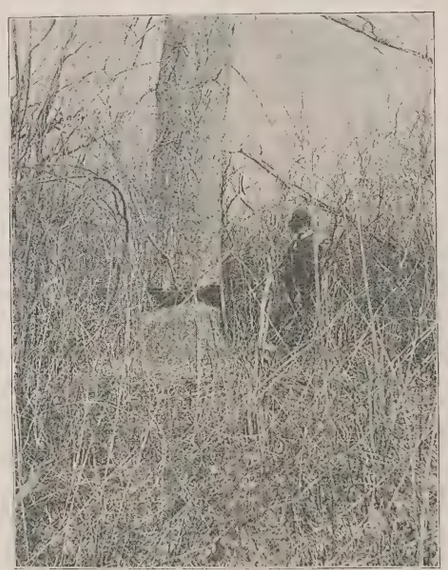
verandah directly opposite, at the edge of a pine grove, and quite above the reach of the annual spring rise, which raises the level of the lake some seven feet or so, and sends its gelid overflow whirling on its way to its junction with the Big Fork of the Flathead, four miles below. Beside the main cabin, which is 20x16ft. in size, there are a store house, ice house, root house, vegetable garden and other belongings. The interior appointments are very comfortable and the table is excellent. There are four double berths and room for half a dozen shakedowns. The regular tariff is fifty cents a meal, with no charge for lodgings. When guides go out with a party on a long hunt the charges are $5 per day per man, with animals furnished and everything found.

Quite a large fleet of skiffs, canoes and batteaux are drawn up on the beach along the bank, and by taking the creek one may run down to the station in an hour, the end of the route being up stream for the distance of a mile. Visitors have, therefore, the choice of a land or water route, going or returning. By the trail they can often pick up a timber grouse, a rabbit or a fool hen, and by the creek a deer and occasionally a mallard or a sprigtail. One morning we shot a veritable canvasback. What was that bird a-doing there? Deer tracks are plenty along the creek, and it is no trick at all to take a fire pan of an evening, run down a mile or so with the canoe and bring back a saddle of venison.

There is another hunter's cabin half way down the creek, and Charley Howe has a comfortable log sporting house on the lake shore a half mile east of Frank Geduhn's. His charges, I believe, are the same as Frank's where I put up. There is a private trail from the Flathead River crossing to his camp. At the head of the lake there is also a log house, with roothouse, storehouse and fenced garden belonging to Mr. Geduhn, and a shack belonging to one Mr. Crimmon, who contemplates erecting a saw mill a short distance above Goat Creek, which is the chief of three copious mountain streams flowing into the north end of Lake Macdonald and swarming with small brook trout (*S. mykiss*) in the spring. Goat Creek is but a quarter of mile east of the upper cabin. It is a favorite camping ground for Flathead Indians, who make periodical visits to this location in quest of venison and bucksin, capturing hundreds of deer at each battue. It washes the very feet of a mountain so high that the morning sun in early October does not appear over its crest until half-past nine o'clock. Excepting these five habitations named there are no houses on the lake. All else is a wilderness, whose denizens are seldom disturbed by man.

Mr. Geduhn has an efficient working partner named Milo Apgar, who is very much of a gentleman and keeps shaved up most of the time, a sure shot with gun or rifle. He has also a helper named Amos Damon, who is handy with push-pole, spear and paddle. These getlemen have built their snug premises with their own little hatchets and are holding down two quarter sections of government lands. They have done a great deal of work in cutting trails over the tablelands and divides, and up the sides of the mountains to sundry test pits, where they have prospected for ores, which are known to abound in all this region. They have cut and blazed through the forest from the railroad station and from the foot of the lake to its head, which a pack mule can traverse in six hours, and at low water in autumn animals can follow the beach the entire distance from one camp to the other excepting where rocky headlands project into the lake. Each of these promontories is a lovely site for a Swiss chalet or Queen Anne cottage, and indeed the whole forested beach along the western shore affords eligible building sites right on the water front. On the eastern side the land slopes more abruptly and the mountains plunge into the unmeasured depths at a steep incline. Yet there are several desirable building locations. I am prepared to see within the remnant of my lifetime this romantic lake well occupied with the summer homes of visitors. Perhaps a new Geneva will spring up.

From the upper cabin there are also trails to the Goat Creek Glacier, and to Knife Lake, which is a feeder of Lake Macdonald lying four miles north, and to Camas Lake, seven miles back. Knife Lake is ten miles long and a half mile wide, a huge deep trough in the mountains. Camas Lake is four miles in diameter and round. An Iowa sportsman named Ackerman, who was one of a party of fourteen who visited this lake was drowned there last September, and it is likely to be known hereafter as Ackerman's Lake. The water is very cold and deep, and the body has never been recovered. Both lakes are located in deep mountain clefts, with high peaks all around them, and it is possible that their depth is as great as the surrounding eminences. The same is true of Lake Macdonald, whose depth has been partially tested but never ascertained. It is a long and narrow body of water. Its width is four miles.



All this Rocky Mountain region is one grand preserve for big game. Moose, elk, deer, bear, caribou, sheep, goats, and mountain lions occupy in great numbers, and their beaten trails run all over the table lands and across the divides, and down the flanks of the mountains to lake side and river margin, where sharp-toed Oreopali clamber in single file in quest of precarious sustenance, and the herds of caribou cross in their periodical migrations, and the black bears and deer come out of cover to drink or forage in grassy meadows fringed with willows and red service berries. Very convenient for hunters are these natural byways, for they are always practicable for pack animals, and hunters calculate to go in with horses wherever they hunt, so as to carry the provisions and bring out the meat.

I have never before known caribou to occupy such altitudes excepting in Alaska. They seem to forage on the high table lands just below the snow line, except in the month of April, when they come down into the valleys to drop their young. There is no doubt of their abundance, as many mounted heads and full specimens which I have seen bear abundant testimony.

Frank Geduhn and a party of three visiting sportsmen came down to camp while I was there with the meat and entire skins of two fine goats ready for mounting. They were a very large female and a full grown kid. A breakfast was served of the meat of the kid, but I did not enjoy it, and wouldn't blame Jacob for selling his mess to Esau. It had a taste something like the odor which emanates from the domestic Billy when dead to windward. The hunters scooped their game by stalking the high cliffs on foot, after securing their pack animals, by picking them off the rocks at long rifle range. To secure their quarry they were obliged to let a man down a precipice 150ft. high with a rope. The meat was first sent up and the man hauled up afterward.

Besides big game, the mountain climber will find quantities of blue grouse half the size of turkeys which come into season about Aug. 1, and make a pleasant change from the regulation diet of sour venison and salt pork. The best period for hunting game of all kinds is from Sept. 1 to Christmas.

The autumn months in these high altitudes are delectable. The highest average October temperature in twelve years has been 54.4° and the lowest 42.9°; the highest day temperature 82°, the lowest night temperature 12°. The first killing frost occurs about the middle of the month, the same as in St. Paul, and yet the altitude of the lake level is 2,700ft. above the sea. During my visit the surface of the lake was scarcely ruffled for six days. It was continuously like a mirror. It was so calm that an awkward dragon fly plumping into drink made a whirl as big as a cart wheel, which could be seen twenty rods away. Ducks a half mile off loomed up as large as turkeys, and a rowboat could be seen for half the length of the lake with its bulk apparently clear of the water. By day the marvelous mountain view was pictured in sublime reflections. The garniture of firs which clothed the slopes, the scores of the avalanches, the snow patches on the summits, and all the selvedge of the shores were presented in such literal duplicate that a photograph makes no distinction between substance and shadow. At night the glory of the stars was repeated from infinite heights to infinite depths, and the round, full, harvest moon seemed regent of an illimitable macrocosm. In the sunshine continued rowing induced perspiration; but the instant the boat passed into shadow, the temperature dropped 20° at least. On shore bumble bees and butterflies hovered in the delicious atmosphere over the lingering flowers of fall. Berries of many kinds and seed pods held on tenaciously. Magpies, ravens, bluejays, crows, tallow birds and other representatives of the family

TREE GNAWED BY BEAVER, FOUNTAIN CREEK, COL.

From a photo by Geo. G. Cantwell.

Forest and Stream Amateur Photography Competition.

Corvidæ chattered loquaciously at the edges of the cabin clearings. Black squirrels ran up the limbs of trees and scolded. For myself, I sat with my pipe and watched their pranks, enjoying the *dolce far niente*.

At this period of low water in the lake and streams the overflow is transparent as crystal, and it pours over a bed of parti-colored pebbles which pave the bottom; simulating cornelian, beryl, topaz, turquoise, amethyst and ruby. The roadbed of the mountain division of the Great Northern Railroad is ballasted with the same mosaic of beautiful stones. This water is so transparent that more than one incautious wader has stepped from 10in. of shallow into a pool over his head. It seems to magnify objects on the bottom and bring them right up to the surface; and it is so icy cold that a person falling in beyond his depth receives a shock which renders him almost helpless. In such gelid water mountain trout disport.

The cream of trout fishing is from June 15 to the end of August, though I killed several dozen trout on flies in the Moyea River in Idaho as late as the first week in October. During the spring freshets deep holes are formed in the channel, out of which barrels of the beauties may be taken by any device that offers. In the fall they run into deep water and few are taken, though I captured one with a trolling spoon at the edge of an offshore ledge in the lake which weighed a pound. At the same time bull trout marked with red and yellow spots seek the head of the lake where the inlet forms a gravelly shoal, just as they do at Magog and Sebago, in pursuit of the round whitefish (*Coregonus quadrilateralis*), which gather there in great numbers to spawn. Here also are found the squawfish, a species of small whitefish, the black sucker, and the red ribbon sucker, both of which grow to large size. The latter has a red stripe an inch wide extending along the lateral line from head to tail. His back is dark brown and his belly white. To my taste the whitefish are the best flavored of all.

One day Milo and I set out in a skiff from the foot of the lake for an 18-mile pull to the upper cabin. Damon took a canoe and paddle. There was never a more perfect day. Damon stopped en route to gather knots and birch bark for spearing, and so we reached the cabin first. It had been untenanted for several days, and when we entered we found everything in confusion—loose articles scattered about, utensils upset and playing cards strewn all over the floor. It looked as if a monkey and parrot had been having a picnic.

Milo said, "That confounded mountain cat had been here again."

In the course of our setting things to rights I discovered his nest inside an empty soap box which had stood on end, serving as a washstand. It was made of a stolen towel folded in shape of a turban, and lined with hair from a deer skin mat and cotton picked from a bed coverlet.

When we had swept and garnished the room we went out for a couple of hours and then returned. To my dismay I found that the mischievous scamp had carried off my hair brush, tooth brush, bag of tobacco and a pack of cards, which I had thoughtlessly left on a table in the center of the room. To get them he must have taken a flying leap from one of the sleeping bunks. Of course, I went directly to the soap box and found the missing articles, and just in time to rescue them from going through a big crack in the plank floor. I incontinently despoiled the nest, reclaimed the towel and set a figure four trap for the marauder, but did not catch him, though he was active throughout the night. Milo said he was of a maltese color, 7in. long, with black eyes and a 6in. tail like a squirrel. Several of them, I afterward learned, made their nests in the storehouse, though it is said that they usually nest in hollow trees.

I could tell you, Mr. Editor, of an 18 mile pull down that placid sheet of water, of spearing fish by torchlight on the shoals, of catching fool hens with a slip noose on a pole, of partridge shooting in the coverts, of horseback rides over the trails, of shining deer along the creek at night, etc., but this would be only a trite recital of adventure oft repeated for your readers. So, with the somewhat superficial sketch of the most magnificent mountain lake in the world, I close my second paper.

Sitting on the point of land at the outlet and gazing up toward the high escarpments of the grizzled peaks which flank the upper end of the lake, I seem to see, in my mind's eye, of course, a statuesque group of mountain goats standing, with a white-bearded patriarch in the middle. The old fellow has a far-away look, and the eyes of all are turned toward the place of the rising sun in contemplative pose. For generations past these hirsute servitors in the hill sanctuary have fed and lounged in safety upon their high perch, but now they scent calamity in the air. In the far distance they hear the rumble of the coming locomotive, and the shriek of the whistle evokes the echoes of the cañon. They see the coaches of the Great Northern Railroad filled with armed men pressing toward the battlefield. On they come! They mount the dizzy heights. They scale the Marias Pass. Sharp cracks of rifles are repeated along the serried lines. Volley after volley crashes through the defiles, diminishing at last until they cease and die away. That is the death rattle of *Aplocerus Columbianus*. His generation has lived its day. They are wiped out altogether, and no trace of them is left save a whiff of a musky odor which is wafted eastward on the Chinook breeze.

## Natural History.

### GILBERT WHITE.

THROUGH Selborne's dewy fields I seem
To see thee pass as in a dream,
Around thee still the quiet haze
That mellows all those elder days:
To listen as thou walkst along
The linnet's or the red-breast's song,
To mark the missel-thrush or teal,
Or in the pond the wary eel,
While from the "Hanger," loud and clear,
The cuckoo's voice assails thine ear;
The squirrel runs along the bough
With sprightly grace, whilst keenly thou
Dost mark the swallow's glancing flight,
The distant circling of the kite,
The cricket's chirp, or slender track
Of snail with house upon his back;
For bird and beast, however small,
Were by thy love encompassed all.

I think of thee as nature's priest,
Who never at her altar ceased
With sacred rites to minister;
And when from distant Finisterre
The swallows came, with sudden wing,
They brought for thee the joyous spring
While in the leafy month of June,
When all creation seemed in tune,
As oft at eve across the vale
Was borne the song of nightingale,
Thy heart leaped up to greet the bird
Whose strains of melody were heard:
And e'en when Boreas wildly blew
His trumpet harsh, and snow-wreaths flew
Before the blast, thou still couldst find
A pleasure in the ruffling wind;
The rabbit leaped across the snow;
The leafless boughs swung to and fro;
The small birds sought within the brake
A shelter from the whirling flake;
Or when closed in the wintry night,
And burned the sea-coal fires so bright,
As while alone thou ponderedst o'er
Some volume of forgotten lore—
Perhaps 'twas Ray or Scopoli,
Or Derham's sage "Theology"—
The staring owl cried through the dark
Responsive to the watch-dog's bark.

T. J. CHAPMAN

### Eggs Killed by Heat.

I CAN corroborate "West Virginian" in regard to the killing of quail's eggs by heat. I have repeatedly found nests of dead eggs in my meadows, and have taken note that these nests were exposed to the direct rays of the sun. Once I brought a thermometer to the nest and tested the heat, which about noon was 125° on the ground, with a south exposure on a rather steep hillside facing the sun.

Necessarily, as I have found in experience with incubators, eggs would be quickly killed by exposure to this temperature. One year I noticed that after a heavy crop of clover was mown on a field, many eggs in the nests were killed, although I know the hen birds did not leave them, as they stayed long after the mowing. H. S.

## ANOTHER MINK TRAGEDY.

HIGHLANDS, N. C.—For a couple of months I have been trying to solve the problem of a dead mink I found lying in my barn on my return to my home here. The mink had been dead but a short time, and had no wounds upon it except at the throat where two small holes had let out its life blood. How it came to its end has troubled my mind ever since, until I read the account of a mink tragedy in FOREST AND STREAM of last week. There were no cats in the barn, and the rats "instinctively had left it" as well, during my absence from home. I at length concluded that two male minks must have had a quarrel in the barn and one had become a victim of the fight.

The barn is close to the dam of one of my ponds, and has been frequented by minks in pursuit of the chickens which sometimes took up a night's lodging in it. But as they were removed to other quarters the minks must have had the building all to themselves. I skinned the body, which could not have been dead many hours, and the marks in the throat showed that only one firm and deadly grip had been taken. The graphic account of the tragedy referred to brought the whole thing to my mind's eye, and this occurrence must have happened in precisely the same manner. It is interesting to know that these cruel beasts have no bowels of compassion even for each other. H. S.

## PHEASANTS IN CONFINEMENT.

LONDON, Ontario.—I am only a novice in the business, and consequently my *ipsi dixit* may not carry much weight, but I think there are many who would like to keep a few of these pheasants if they knew how easy it is to do so, and how much pleasure they would have to watch these most beautiful birds. I have had them for over two years, and I feel that I have lost many years of pleasure in not having them before. They are most interesting from the day they leave the shell till they strut about showing off their variously colored plumage. There is no bird that flies that can be compared to the various species of *Phasianidæ*. One is only more attractive than the other.

My collection consisted of Reeves, Swinhoe, Lady Amherst, versicolor, silver, golden and ring necks. There are many others, but even this lot gave me plenty to do to look after and care for, but I found it was very simple work. All they needed was plenty of room, plenty of food, green and hard, with fresh water, and not to be disturbed too much.

My coops are not very large, but I find they thrive very well in them. They are 4ft. wide by 12ft. long, with a covered space of 4ft at one end. The outside rim is 5ft. high and covered with wire netting. I should advise 1in. mesh, as in that way it will be rat proof as well as sparrow proof. I find these little thieves take almost as much food as the pheasants. I have the coops covered with 2in. mesh. Added to this, my coops are in a small grass plat surrounded by a 6ft. board fence with several catalpa trees growing in it, which affords shade in the very hot days.

I allow all my birds out in this inclosure, having first cut the wings of any that is particularly wild. They won't fly unless frightened by the appearance of a stranger or any animal, such as a dog or cat. It is wonderful to see how soon they know their own coop, and when it is necessary they go to their own place much more easily than chickens.

This next summer I intend to cover this whole inclosure with old fish nets supported on high poles, so that the predatory cat may not get in nor the birds fly out if disturbed. Always get the birds to their coops before roosting time or you will find them perched up on the trees or fences; and it is quite a business to get them in, but if driven in before that time, say at 5 P. M. in summer and 4 P. M. in winter, you will have no trouble.

I feed my birds twice a day, the same as my chickens. In the morning soft feed, corn meal, barley meal, oat chaff, one part to three parts of millings, and added to this occasionally boiled vegetables and meat or Spratts biscuit and ground oyster shell. I give lots of lettuce leaves when I can get them or any other green food. The grass from the lawn mower is splendid in winter, with cabbage, beets, apples, etc. The second feed is wheat, buckwheat, corn, barley, etc. I don't stick to any, but just change about from one to another. German millet is much appreciated, also hemp seed. Pheasants don't eat very much, so that the actual cost of feeding is very little.

I have three houses and runs covered with about four inches of fine gravel, and a dust box in each of them, as they dearly love to dust themselves, especially when the sun shines. Fresh water is given daily, oftener in the hot weather. I find that even in our Canadian climate they prefer to roost in the open on the very coldest night, and I have seen them in the early morning with an inch of snow on their backs and the thermometer 10 or 12 below zero. It does not seem to affect them as much as the extreme hot days of summer.

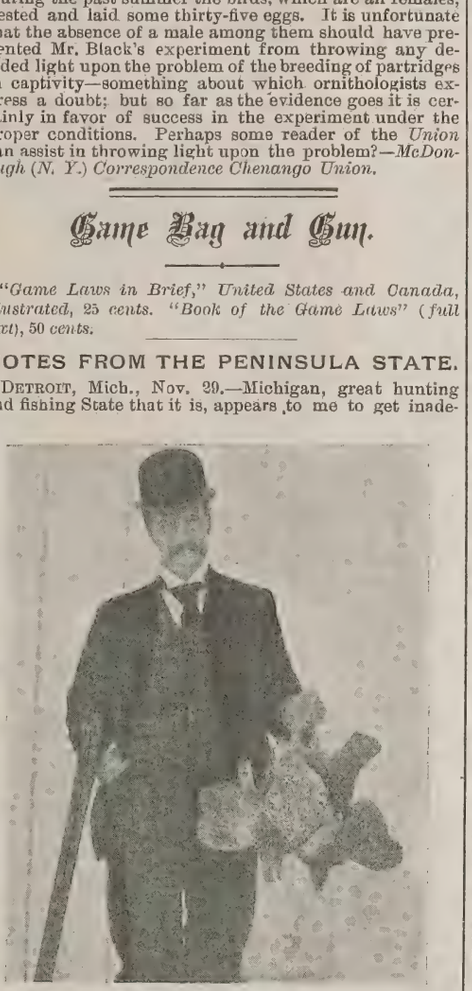
They are usually very amiable, but sometimes the cock birds are very cruel to the hens and it is necessary to separate them: this happens in the fall and winter, but they are quite peaceable in the breeding season, which begins about the middle of March.

For the most part pheasants are polygamous and you may have four or five hens with one cock, but with silvers I think they mate with one hen only; but I am not sufficiently acquainted with the various breeds to know definitely, but I do know that if you have two silver hens with one cock the eggs of one only are fertile.

Pheasants sometimes will lay their eggs in a nest, if they have a retired spot, but for the most part they drop them anywhere, and I find that if they are disturbed much at this time that the eggs will come while the birds are flying, and consequently they are broken. It is necessary to pick up the eggs as they are dropped, as pheasants are egg eaters to a very large extent; they generally lay their eggs in the afternoon or evening. They lay, generally, alternate days, sometimes two days and stop one. I find that in confinement they produce fourteen or fifteen eggs each, but if they have larger runs they are said to lay twice that number.

Hen pheasants sometimes set in confinement and bring out their young, but I think this is the exception and not the rule, therefore it is necessary to be provided with foster mothers for their eggs, and as hatching and rearing of the young pheasants is quite a large subject I will give it in another paper. I do not intend going into the wholesale raising of pheasants such as is done in England for the restocking of coverts, and also in this country by Mr. V. de Guise, of Mahwah, N. J., but to give how I raise a few for pleasure and the having. M. B.

### Grouse in Confinement.



Mr. Clark Black, of this town, is the possessor of a group of interesting tame partridges. The birds, which are three in number, were taken by Mr. Black a year ago last summer, soon after they had left the nest, and at present they have lost their natural timidity sufficiently to associate with the poultry and to permit Mr. Black's young daughter, who has made them her special charge, to capture them with her hands. Further than this, they will take food from the hand of other members of the family and are easily approached except by strangers. During the past summer the birds, which are all females, nested and laid some thirty-five eggs. It is unfortunate that the absence of a male among them should have prevented Mr. Black's experiment from throwing any decided light upon the problem of the breeding of partridges in captivity—something about which ornithologists express a doubt; but so far as the evidence goes it is certainly in favor of success in the experiment under the proper conditions. Perhaps some reader of the *Union* can assist in throwing light upon the problem?—*McDonough (N. Y.) Correspondence Chenango Union.*

## NOTES FROM THE PENINSULA STATE.

DETROIT, Mich., Nov. 29.—Michigan, great hunting and fishing State that it is, appears to me to get inade-

ED. BANKS AND HIS GROUSE.

See "Drivers and Twisters."

quate representation in the columns of the old reliable FOREST AND STREAM. "Kingfisher," with his realistic letters from that heart-stirring camp on Carp Lake, has done his part, it is true, and "Kelpie" occasionally drops in a line or two in behalf of the Wolverine devotees of rod and gun. But there are wide territories and countless incidents of sports afield in the State that are never heard of. Here in the peninsula State the angler may find a long array of brooks, rivers, streams and lakes, from the cold spring rivulet to the wide waters of Lakes Huron, Michigan, Erie, Superior, and St. Clair, the swift and magnificent Detroit, St. Clair and Sault Ste. Marie rivers, and the hunter revel in the deep and untrodden forests of the upper and lower peninsulas and the islands of the lakes. Here the trout and grayling and bass and maskalonge, game to the backbone, and all their lesser brethren of fresh-water findom, are ready for the fly and the less aristocratic live bait; here the black bear, the Virginia deer, the lynx, the panther, the wild duck, the Canada goose, the partridge, quail, all the snipe family, an occasional wild turkey and a few pinnated grouse are still to be found in their season by the gun that is not handled by a porker on two legs.

Most of the fish and game appear to be increasing in numbers, owing to the increase in effectiveness of the machinery employed in enforcing the game laws of the State. State Warden Charles S. Hampton, of Petoskey, has proved himself energetic and impartial in his work, and during his two years' incumbency of the office has taught the violators of the law that the office of chief game warden was not created for the mere purpose of drawing another fat salary from the pockets of the taxpayers. There has been a change in the State administration, and a new game warden is to be appointed. It is to be hoped Gov.-elect Rich will have the foresight to select a man who will be as efficient and intelligent as Mr. Hampton.

The Turtle Lake Club, which owns practically the whole of Turtle Lake, 40 miles into the wilderness west of Alpena, is composed mainly of Detroit business and professional men. E. H. Gillman, one of the most enthusiastic of Michigan sportsmen, is the ruling spirit. A number of members of the club have been up there lately after deer. They took a party of guests with them, including a judge or two, a few doctors and lawyers, and several others. They are just returned and report a most successful hunt. Thirty-three deer fell to their guns, and feathered game beyond counting. John C. Merrill, of Lock Haven, shot a white (albino) fawn weighing 87lbs., which he presented to Howard Barnes, of Detroit, who will have it mounted.

Some idea of the game conditions existing close to the most populous portions of the State is given in a letter from Algonac which lately appeared in the *Detroit Free Press*. Algonac is a small town on the American side of the St. Clair River, near its mouth, 30 miles from Detroit and contiguous to the famous St. Clair flats. The writer says:

"From a sportman's point of view the fall of 1892 has certainly made itself worthy of remembrance, as having afforded more game and consequently better sport, than has been enjoyed by St. Clair and Wayne county sportsmen during the past five or six years. All species of game are exceedingly plentiful and in fair condition.

"More ducks have been killed in the St. Clair marshes this year than has been the case for several seasons previous. When one takes into consideration the immense number of guns which have been at work this fall among the duck on the St. Clair flats, and also the large bags which have been made by both sportsmen and pot-hunters alike, the question arises in one's mind, 'Where do such countless numbers of duck come from, and how long will they last?' and this latter question is a very pertinent one.

"It is conceded by the majority of sportsmen that it can be but a question of time ere the mallard, red head and other species of duck which are obtainable in such large quantities now will follow the much prized canvasback, the ruffed grouse and the wild turkey, formerly so common, into almost total extinction. The statement of Chris and Henry Smith, of Algonac, more skilful duck hunters than whom do not pull trigger in America, to the effect that in a day's shoot resulting in perhaps a bag of 150 ducks, only an odd flock of canvasback will be decoyed, is proof of this assertion.

"The only game bird which seems unaffected by the onward march of civilization, and which, in the estimation of many, is the most royal game bird in America, is the quail, and they are as plentiful or even more so than ever. In spite of the reports published in sporting columns early in the fall to the effect that the heavy rains had drowned the first broods, quail are to be met with in large bevies in almost any direction. Large bags have been made in the country around here and Robert's Landing in St. Clair county, and a staunch dog, a good gun and above all a man to hold it straight, go far to make up the wherewithal of a day's enjoyable sport. Algonac can be recommended as a good center for a week's shoot. It is centrally located for both marsh and field shooting, accommodation can be obtained at a very reasonable figure, and it is within easy reach of Detroit by boat.

"Grouse, though not so plentiful as quail, can be found in fair numbers in this vicinity, while the gray rabbit, deemed nothing short of vermin by some, can be found under nearly every brush pile. Owing to the extreme dry weather prevalent in the early fall, no large bags of snipe and woodcock were made, although snipe were killed at a later date this season than is usually customary for them to be found.

"A sight which is well worth a journey to see is the Smith Bros.' boat house on Sunday after the result of a week's shooting is all sorted ready to ship to Detroit and Eastern markets. A *Free Press* correspondent paid them a visit last Sunday, and found the two well-known hunters literally up to their knees in ducks of every size and variety, from the weighty mallard down to the diminutive butterball. On inquiry Mr. Smith stated that canvasback and pintail, though quite as numerous as heretofore, are too well educated and too wary to be killed in any quantity. Immense quantities of redheads are shipped to New York and there sold by the restaurant keepers as canvasback, which species they closely resemble, both in color and flavor."

Some time ago I noticed in FOREST AND STREAM an inquiry from Walter B. Savary, of Tacoma, Wash., who quoted a news telegram from Detroit in the Boston *Traveler*, which told a story of an eagle in Presque Isle county, carrying off a child six months old. Mr. Savary doubts that an eagle is capable of lifting a child of that age, which ought to weigh at least 10lbs. I am sorry that I cannot set Mr. Savary's mind at rest on this subject, but I can at least do so as regards this particular incident. In the course of my duties as a daily newspaper editor I had this eagle case investigated. As I suspected, I quickly found that the whole thing was a "fake." The story originated in the imaginative brain of a special correspondent in Detroit, who took this means of increasing slightly a depleted exchequer.

The big Monroe Marsh has afforded some excellent duck shooting this fall. This marsh is owned mainly by wealthy Eastern gentlemen, only three Michigan men possessing shares. It is shot over only four weeks in the year, two in the spring and two in the fall, and night shooting is confined to one evening a week. This policy, with a most rigid warden system, has naturally made the marsh each year a better hunting ground and a favorite stopping place for the birds on their migrations north and south. W. J. HUNSAKER.

### Ithaca Marsh Ducks.

ITHACA, N. Y., Nov. 26.—This fall the best duck shooting experienced in years has been enjoyed on the Ithaca marsh bordering the head of Cayuga Lake. No phenomenal bags have been scored, but the shooting, all the same, has been uniformly excellent considering the comparatively limited extent of marshland. Very few ducks were shot in October, but in the early days of November the fun commenced in good earnest, culminating this week in some tumultuously exciting morning shoots. In the evening the birds invariably flew high and well out of reach of the 8-bores, but in the early morning they just as regularly flew low and decoyed beautifully. About thirty birds were scored the 22d. Between forty-five and fifty the 23d, fifteen of that number falling to the guns of Walker and Miller, and the remainder being scored by Billings, Brown and Billy Hill. A good majority of the ducks bagged on this date were redheads, mallards and black ducks. The flight on Thanksgiving morning was not satisfactory, but a desultory fusilade was kept up during the day, the score being, as near as I can learn, between thirty and forty birds. Since the 24th, owing to the freeze up, the shooting has been decidedly poor. M. C. H.

## BOSTON DEER HUNTERS.

Capt. James H. Jenkins, the well known sportsman's friend and game warden of West Barnstable, Mass., utterly denies the story that has recently been published extensively in the Boston papers, to the effect that deer are being hounded and killed in that section, in considerable number. In a letter to Mr. F. R. Shattuck, a well known conservator of game and fish in Boston, Capt. Jenkins says, in reply to a newspaper clipping sent him, that he believes the whole story to be false. No deer have either been hounded or killed openly in that section this season.

Still the happy hunters are returning from Maine with deer, with the report that has been repeated a good many times this season, that the deer were never so plenty in that State. They are even killed quite near the settlements. Mr. Geo. R. Cutting, of Andover, Me., a son of Charles H. Cutting, one of the best trout guides in the country, writes me: "My Dear Mr. — I wish that you could have been here to have gone deer hunting with me on the first snows. I have been out only twice and have killed two deer and fired at another, without hitting him. I have shot one of the finest bucks I have ever seen. I have sent the head to be mounted. I value it at $25. The law will not let me kill but one more deer, and I am going after that to-morrow." Now this is a case where a smart man, a guide and a lumberman, shoots his three deer, the meat of which he will probably use in his own family. Undoubtedly he is only one of the hundreds, living in the backwoods towns, and having enterprise enough to gout out and get a supply of venison. Great has been the preservation of game in Maine. It is very easy to remember back only a few years when the killing of a deer, even as far back as Andover, was a very rare occurrence. So it is in the other towns in that State. I have it second-hand that between 300 and 400 deer have already passed over the railroad through Bangor, the property of sportsmen. It is also mentioned, from good authority, that a taxidermist at Bangor has already some 400 heads of big game, the results of this season's shooting; the heads to be mounted. This sounds like a big story, and yet from the source through which it comes to me it should be true

For some reason the reports of caribou killed in Maine this season are very meagre. I have no positive account of any being killed by Boston sportsmen, except the one killed by Dr. Heber Bishop, already mentioned in the Forest and Stream. There are a few newspaper accounts of these animals being taken by hunters, but even such accounts are very few. The number of moose killed has been larger than usual, as already mentioned, but there are no very late accounts.

Waltham gunners are not out of the race this season, though not very much has been said about them in the papers. There are a good many real sportsmen in that city, both with rod and line and rifle and shotgun. Mr. A. W. Tompkins, now of the firm of Foster, Weeks & Co., Boston, since the death of Mr. Foster, who was not wholly unknown to the readers of the Forest and Stream, has just had a day out with some friends. They went up to their camp on the Sudbury River. They spent most of the day in gunning on the Sudbury Meadows. The grass was something like a couple of feet high and filled with snow. The swamps were only partly frozen, and the snow and grass made it next to impossible to tell exactly where the meadow left off and swamp began. Such a condition was naturally the cause of several struggles to gain dry land. At last a black duck was sighted in a creek. Very carefully Mr. Tompkins crept up, but the duck was alarmed and flew, giving only a long-distance snap shot, that proved a dead failure. But by watching and waiting in the snowy grass for a long time the duck was seen again to come down into the creek but further up. Another crawl in the wet and snowy grass gave a better shot, and the bird was pitched into the water by his own gravitation and was dead. But he was on the other side of the creek, and Mr. Tompkins had to go up half a mile to cross and down as far to get where the duck was. This resulted in one rubber boot full of water, cold as it was, and the other about as bad. One of the other boys got a partridge, and at the camp, with its new kitchen, they enjoyed a game dinner, all the more for having earned it.

Mr. E. E. Jennison, a druggist at Waltham, has recently returned from the Maine woods with a moose that weighed over 800lbs. Mr. Jennison was so much pleased with his success that he has given a "moose supper," and invited all his friends. Special.

## CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

Chicago, Ill., Nov. 27.—Some gentlemen of New York must have been big-game hunting in the West this fall, or else must have been buying some trophies. At any rate, they have been having some fine trophies mounted here in Chicago, as I learn from the Chicago taxidermist, R. A. Turtle. Mr. Turtle's books show that on Oct. 7 Mr. Edson Bradley (of Paris, Allen & Co., New York) left for mounting 4 mountain sheep heads, 1 mountain goat head, 1 brown bear skin, 3 deer skins, 1 mountain sheep skin and 1 wildcat skin. On Oct. 9 Mr. E. N. Dickerson (of 64 East Thirty-fourth street, New York) left 4 mountain goat heads, 4 large skins of the same and 1 small skin, 2 mountain sheep heads, 3 mule deer heads, 1 mule deer skin, 1 mountain sheep skin and 1 brown bear skin. Certainly the two above represent very fine collections of game, and perhaps the New York gentlemen may favor Forest and Stream readers with stories of the hunts.

Mr. Turtle also has in hand a small-mouth black bass caught by Calvin S. Smith, of Chicago, weight 5lbs. 10oz. He mounted also the large brook trout (over 11lbs.) which lately furnished some of the Chicago boys a fine supper after losing its skin. Another interesting piece of his work is a pair of wild mallards, lately killed by Walter Dupee in Washington Park, of this city.

Some of these things I learned last week in course of a little hunt down at Water Valley with Prof. Turtle, or rather, Dick Turtle, as he should be called when out shooting. Dick dearly loves a gun, and handles one well—well enough, I know, to beat me quail shooting on a screeching windy day, such as we had, though on rabbits I feel that I could say a thing or two. We met bad weather and found but little game, but we found a lodge in the wilderness of the Kankakee country. This is no less than the studio box of Arthur Pierson, an artist of no mean ability, who for six months has been studying the Kankakee scenery, with which he is thoroughly in love. Mr. Pierson has spent eleven years in Paris, would rather speak French than English, and would rather paint than do either. His little lodge is a thoroughly cozy and comfortable affair, highly decorated and well furnished within, and here lives, altogether Bohemian and quite alone, the only man I ever knew who appreciated the full possibilities of the Kankakee country from the standpoint of an artist. The artist of America has shown himself so far eager chiefly to do Old World subjects. The artists of the West have commonly gone to the East or to Europe. The West has had few artists for itself. The world does not know how singular, how striking, how grand or how beautiful some of the pictures of the West will be when finally they are put on canvas. I hope Mr. Pierson will not grow weary, and that he may find inspiration equal to his task. His lodge has been put up since I was last at the Water Valley, but I hope to sleep there again sometime, with a brocaded fez for a nightcap and an embroidered afghan over my flannel shirt.

### The Possum Club.

Your uncle, Bill Werner, whose new catering establishment is at 93 Thirty-fifth street, has concluded that the Possum Club is something that should not willingly be let die, and as the cold winds of autumn brought to ripe maturity the flash of the skin-tailed varmint, he jumped himself together and made a vow by the great horn spoon that he couldn't wait any longer, and would not only call the Possum Club men together every winter on his own hook, but would do it now, right away quick. So he did, and on last Tuesday evening a Possum Club supper was held, Mr. Werner as host, and nine enthusiastic and hungry possum-eaters as guests. There were present Messrs. L. M. Hamline, C. B. Dicks, F. A. Place, W. P. Mussey, Tom Patterson, Gib Harris, O. A. Malcolm and E. Hough, of Chicago, and Geo. I. Maillet, of Crown Point, Ind. There was a whole lot of possum—that is, there was at first—and if anybody thinks possum isn't good, he is hereby invited to attend a meeting of the club and eat some of Bill Werner's sort. It is the main purpose and chief mission of the Possum Club to promote, set forth, establish and support the great fact in natural history that possum is good to eat. Any doubter of this proposition will upon making himself known be taken to the club headquarters and filled so full of possum he can't talk, all objections being thus silenced.

After the club had been in session for some hours, with no sound to break the silence save the chug of the possum going to his long home, Mr. Maillet rose and made the formal motion of confidence in the administration which is put every evening, Mr. Mussey being called to the chair.

"I move you, sir," said Mr. Maillet, "that it be the sense of this meeting that possum is good to eat." This was carried in due form, and the meeting then went into the stage of the second business meeting. Mr. Werner was thanked for his happy idea and its pleasant fulfilment, and then was politely asked to leave the room, which he did under protest, as he was afraid to leave the silverware. In his absence Messrs. Mussey, Place and Hough were chosen a committee to select a suitable souvenir to present to Mr. Werner at the next meeting, to be held two weeks from date. Mr. Place then moved that each man bring a friend to the next meeting. This was objected to, and it was shown that the old Possum Club plan had developed a large, loose and incoherent body, with no real membership. It was resolved on motion to make the new club a close corporation. The Chair and Mr. Werner were chosen as committee on membership, they to select a third member. These reported the following for members: Messrs. C. B. Dicks, T. W. Patterson, L. M. Hamline, F. A. Place, R. A. Turtle, O. A. Malcolm, G. B. Harris, Geo. I. Maillet, Bernard Waters, Geo. Holden, A. C. Anson, D. Rad Coover, A. E. Thomas, Ed. Bingham, R. B. Organ, Abner Price, F. Donald, C. S. Burton, W. N. Low, R. S. Cox, M. J. Eich, W. P. Mussey, Wm. Werner, E. Hough. Any of these failing to accept and qualify will be replaced. The club will not go much beyond this size, as Mr. Werner's quarters will not seat more. No meeting of the Possum Club will in the future be held elsewhere than at Bill Werner's. This is part of the constitution.

Mr. B. Borders, of Winamac, sent me up an invitation to be present at the Winamac annual Thanksgiving hunt, a side hunt on the old system of points, a custom of very questionable value to the game supply, perhaps, but productive of plenty of fun. The conditions of the hunt are stated as follows:

"Parties wishing to join in this grand hunt will deposit sixty cents with either captain, the losers to pay the supper. All hunters must report at 7 P. M. Wednesday at the office of M. A. Dilts. Supper at Jellison's new dining room. The game will count in points as follows: Prairie chicken 50, pheasant 50, quail 10, squirrel 15, rabbit 15, mallard duck 25, small duck (any kind) 20, wild goose 200, swan 300, brant 200, coon 100, opossum 100, wolf 1,000, fox 500. M. A. Dilts and T. B. Hedges, captains."

Mr. Max Middleton, of the Globe Training Kennels, Servia, Ind., writes a friend that the quail are not as abundant as usual, but that coons are plentiful, and that his old coon dog was never in better voice in his life. There is talk of a grand coon hunt before long, in which the Possum Club entire may join.

Mr. Chas. Zutavern writes me from Great Bend, Kas.: "I have just noticed an item in the *Evening News* in regard to two fellows shooting quail. You having enjoyed some of that sport here, I thought you would be interested. Such shooting is likely to affect the future quail shooting in this locality, if there is not a way in which such butchery can be stopped. The item reads, 'Barney Cone and Howard Bishop have broken the record on quail hunting, one having shot sixteen and the other fifteen at a single shot.'

"I was up by Heizer on the Walnut about a week ago and found lots of quails. Found four ducks in a popcorn field of not over two acres. I am going to take a Thanksgiving quail hunt on Blood Creek, and expect a fine time. Hope if you are out here next year to enjoy another hunt with you, that is, if the butchers will leave the quail alone. Please let me know if there is any way to stop this abominable work.

"Dick Taylor had two ribs broken and was injured internally by his horses backing the mowing machine on him, but at this time he is getting along finely."

I do not know of any provision in the Kansas law against this destructive and unsportsmanlike style of shooting. The only thing that will stop it is general sentiment against it. The local newspapers may be ignorant of sportsmanship, as the paper quoted certainly is, and if so sportsmen should go to the editor and show him that he does wrong in commending and not condemning such things as these. Farmers certainly should not allow on their lands persons who will thus destroy the game. Thus gradually tabooed, such shooters may come to learn better ways. It is hard to exterminate quail by fair wing-shooting. Pot-shooting, trapping and hard winters are the worst enemies of this bird.

About the accident referred to by Mr. Zutavern, Mr. Taylor himself writes thus simply:

"I have not shot a gun off since you were here. Am laid up for the time—had three ribs broken by a mowing machine, a near thing for me. Cal Crülly has had Dick off hunting for over a week. He killed 26 the other day along the hedge row and then went on to Hoisington for supper. While he was eating some one stole all his birds but 4. He was pretty mad. The horse that ran off, old Ned, sends his regards, and I must say he seems ready for another gallop.

"The Young American Coursing Club has sprung into existence here since you left, run by the boys of the place. They ran off a 16 dogs stake on my place last week. Will send particulars."

### Some Freezers.

If anybody wants to do a little protecting, and is hunting for game freezers, he can find a freezer at Estherville, Ia., one at Emmettsburg, Ia., one near Lake Whitewood, Dak., several in Nebraska (details later), a number in Minnesota and several in Illinois, known but not named here.

### Self-Hunting Dogs.

A correspondent propounds to me the following question: "Can you not give some remedy to make one's dogs in the country stay around home and not go off hunting by themselves? It destroys half the pleasure of keeping them to have to keep them confined."

I presume these dogs are what Mr. Waters, of the Forest and Stream kennel wisdom department, would call self-hunters of a pronounced type. Mr. Waters is away from Chicago at the field trials, and I am a little shy on kennel wisdom, but the best way I could think of to make such dog learn to hunt to the gun and no other way, would be to take them out hunting often as possible with the gun, and so teach them the true inwardness of the bird dog idea. Last week I spoke of a Kansas bird dog whose owner lets every one take him out shooting. This dog is within a quarter of a mile of good game ground, but he never goes out hunting by himself, though he will follow any gun. He knows the relation of the gun to the bird very well, and so do all really good bird dogs. A tramp fox-terrier or a cur with a leaning toward rabbits can entice a good bird dog away from home and about ruin him in a little while. Such evil associations should be broken off. I used to have a bird dog which was very fond of visiting, and I fell into a habit of lamning him every time I caught him away from home except on my invitation. In this way he came to love his home, because he never could figure just where he was going to meet me away from home. Unless it were in the case of an old dog that had been running practically wild and unworked for a time, I should think good feed and good treatment at home, with plenty of field work with the gun, would gradually overcome this sort of trouble. As a bird dog grows older, he commonly "learns more sense" and stays more and more closely at home. One dog is not so apt to go out on a hunt without a shooter as are two or more dogs. I think a bird dog ought be kept away from other sorts of dogs as much as possible, and as much as possible near human associations. They "learn more sense" that way, too, and so come to see the fun of hunting only when the gun comes out.

### North Carolina Quail.

From Mr. J. B. Burnham, of the Forest and Stream office, I have the following, which I am very glad to print. I have never shot in North Carolina, and what little I know of that country is gathered from friends who attend the field trials there each fall. The information in Mr. Burnham's letter suggests the very natural inquiry: Why do not the owners of sporting hotels and sporting grounds, whose privileges are for sale, advertise them in Forest and Stream? It would only be business to do so, and it would be a paying form of business, too. My inquirer here is a case in point. My ignorant reply might drive a shooter away from Carolina. A fact stating advertisement might take him there. That is the difference. The letter reads:

I have just seen your reply in Forest and Stream of Nov. 3 to Mr. Geo. L. Eddy in regard to quail shooting in North Carolina. I think your answer is rather misleading, as there is plenty of the very best quail shooting to be had in that State without annoyance of any kind. As told in Forest and Stream of Sept. 23, Dr. Capehart, of Avoca, N. C., has 10 000 acres of preserved quail land that is free shooting territory to guests of his hotel, House Dunkinfield. This place was advertised in Forest and Stream last winter and will be again this season. The shooting there is first class, as I have been informed by gentlemen who shot there last winter. Lincoln, N. C., is another locality where visiting sportsmen can shoot to their heart's content over good ground, leased by hotel owners.

Some other points in North Carolina where a visiting sportsman would be reasonably sure of good quail shooting without annoyance at the hands of the "Farmer's Alliance" are Winston, Salem (Hotel Zinzendorf), Elizabeth City, Edenton, Bellport, Mount Airy, etc. In South Carolina Norman Bros., proprietors of the Carolina Hotel, at Rock Hill, guarantee plenty of quail on preserved land. E. Hough.

175 Monroe Street, Chicago.

### A New-Subscriber Offer.

A *bona fide* **new** subscriber sending us $5 will receive for that sum the Forest and Stream one year (price $4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price $5)—a $9 value for $5.

This offer is to *new* subscribers only. *It does not apply to renewals.*

For $3 a *bona fide* new subscriber for six months will receive the Forest and Stream during that time and a copy of Dr. Van Ieet's handsome work, "Bird Portraits for the Young" (the price of which is $3).

### The Iron Nancy Hanks.

The Empire State Express is the Nancy Hanks of the rails. On Thursday she left Rochester for Buffalo, and for ten miles kept up a speed of ninety-five miles an hour. This was done under unfavorable conditions, the road having at that part the heaviest grade on the whole Central system. The entire distance from Rochester to Buffalo, sixty-nine miles, was made in seventy-one minutes.—*The Budget.*

## A PANTHER ON A LEDGE.

DID I ever hear a panther scream?

Well, I can't say that I ever have, even after an experience of many months where they were plentiful, and signs could be found at any time, and after losing a horse or two by reason of the varmints, but the evidence, to my mind, that they do scream is certainly more convincing than that the woodcock when startled whistles "Johnny Get Your Gun" or some other ditty with his bill.

But if I cannot bear positive evidence in regard to the panther's scream, I can give some facts in regard to hair standing on end, even if I cannot describe the sensations, for it was not my hair.

In the fall of 188–, in charge of a surveying party, I was in the Sierra Madre, on the line between Chihuahua and Sonora, and one morning sent a negro man several miles to the rear to bring in a station flag which was no longer required.

As the flag was on an elevated ridge and not approachable very near by riding I had no expectation of Charley's return before 2 or 3 o'clock in the evening, and had loaned him my rifle, instead of the shotgun he usually carried, for there was a possibility of deer, bear, or even Indians on the lonesome ride.

About noon, glancing up the rough trail leading into the valley in which we were camped, I saw Charley returning, forcing old Sorrel to rather a dangerous gait, and on his near approach perceived at once that something exciting had happened, for an "ash of roses" tint on a real black face is unmistakable evidence of troubled feelings within.

Charley threw down the flag and dismounted, rifle in hand; then after glancing around him worked the lever, removing a cartridge from the chamber and replaced it in the magazine, looking anxiously at me as he did so, for it was an imperative rule that no gun was to be brought into camp loaded.

To my natural question—"What's up?"—came Charley's answer, "Say, boss, wha' kind o' beasteses hus got in dis country?" ('Twas only after considerable inquiry that I found he had seen some animal.) "Absut nine feet long, yaller, gray or brown, big paw like a cat and dat stared at him wid big eyes wide open." I concluded he had met up with a Mexican lion.

The badly demoralized darkey was, however, at last drawn out to tell the main facts, and it appeared that he had climbed up to the ledge or shelf on which the flag was fixed, which ledge was some 7ft. in height and nearly perpendicular. A fallen rock below and some crevices above offered means of scaling. So Charley carefully pushed the rifle up, and mounting the rock, with a spring succeeded in gaining equilibrium on the edge of the ledge.

There, not 6ft. from him at the foot of the mound staying the maguay pole and flag, the lion was stretched out just aroused from his nap in the morning sunshine.

Charley said he screamed—that is, Charley did—and "that de ha'r on his head stood straight up an' push his hat off and den he let go all holts and came down flam."

The situation for the scared negro was then hardly bettered, for he dared neither to retreat down the mountain nor attempt to regain the rifle, which was still on the ledge; but recovering his wits to some extent, with heavy hunting knife in hand he decided to get the rifle, as the attempt could be made out of sight.

The rifle recovered, the next move was to hold it above his head with both hands and shoot in the supposed direction of the lion and instantly to jump under protection of the rocks.

No startling results following Charley cautiously crept under the protection of the ledge to the end of it, and with exceeding doubt as to the propriety of the move, gained the line of the flagstaff, and after a careful survey no lion being in sight, advanced and removed the flag.

No time was lost in retreat and return to camp, and Charley when joked about his knotty wool rising up only answered: "'Fore God, Massa, dis nigga's wool rizz'd right up straight'r dan dat roached greaser's," referring to the Mexican cook, who wore his hair *à la* pompadour.

There was probably no imagination in the affair, but Charley's wool had subsided to its usual tightly knotted state. J. V. B.

TEXAS.

## *THE BREECHLOADER AND HOW TO USE IT.

IT is perhaps not generally known that the first use of small shot in firearms was by German peasants and shepherds about the middle of the sixteenth century. They used the single barrel wheel lock musket, but about a hundred years later double barrel guns had been made, and again a century after that, these double barrel guns were bound together by ribs. In the early part of the present century the flint lock fowling piece was thought by the sportsmen of the day to be an admirable weapon, and among our readers there may be some who can remember the discussion which followed the introduction of the percussion cap. It seems but a few years ago since the sporting papers seriously discussed the question as to whether the breechloader was as good a gun as the muzzleloader. What will be the next improvement in shotguns?

The latest work on this subject is from the pen of Mr. W. W. Greener. It would, perhaps, be difficult to name any one more competent than this gentleman to write on guns. For many years he has been a manufacturer of shotguns and is thoroughly familiar with all the technical details of these weapons; he has made a study of all the earlier history of the fowling piece, and he is also a sportsman of large experience. His earlier works, which are familiar to many of our readers, while they contain much valuable information, are yet sometimes technical, but in the present volume he has given us a work which is thoroughly popular and must be read with interest by every man who uses a gun. It will be of especial value to those who have only recently taken up shooting, and yet every sportsman, no matter how wide his experience may be, will gain from its perusal some new ideas, or will find here confirmed facts that he has learned from his own shooting.

In his brief introduction to this volume of nearly 300 pages, Mr. Greener says: "This treatise is written for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study. Published at a popular price, it will, it is hoped, reach many who have hitherto been deterred from shooting, believing it to be an expensive recreation. The author's aim is to induce all he can to participate in a manly sport and to advance the interest of those who can look to the gun for pleasure, health and occupation.

"The book is not written for experts, nor for those who have special opportunities for the acquisition of the art of shooting; and in order to make it as attractive as possible to the general reader, many matters that would interest the enthusiastic shot only have been omitted."

Mr. Greener wastes little time in introducing his subject and almost immediately enters upon a consideration of gun barrels, describing how they are made and what metals should be used for them. In this connection he gives an interesting figure of bulged and burst barrels, of which he writes as follows: "All bulges shown in the illustration were caused by placing a small charge of shot between two felt wads (as a thick felt, then the shot, then a thin felt) at the spot where the bulges are and firing an ordinary charge from the gun. The burst was effected by increasing the charge of shot between the wads, the bulges appearing about 15in. from the breech end after firing. As many as five thick wads may be placed in any part of the barrel of the gun fired without causing a bulge, but as proved by experiment often the small quantity of ¾oz. of shot placed between wads at any place in the barrel will cause a bulge, even as near as 9in. from the breech. Different sizes of the bulges in the illustrations were caused by different charges of shot. The shape of the burst indicates the extent of bulging before bursting."

There is much in Mr. Greener's chapter on the shape and dimensions of gun stocks which is interesting, and many of our readers will be surprised at statements made here and at figures given showing the way in which gun locks can be changed and twisted to fit special conditions. The cuts on page 99 are very curious and the figure of the rational gun stock given on page 87 is also quite novel. Readers of FOREST AND STREAM who so frequently write in to know how they may free their guns from rust should read the statement that "water boiling hot kills rust." This probably means that if the barrels are greatly heated by boiling water and then wiped off, they dry so speedily that all dampness is removed, while the subsequent oiling prevents the rust from taking hold. On this same page see also the statement that a wire knitting needle or a bodkin is the best implement to use in putting lubricants on a gun, a fact which is by no means so well known as it ought to be.

The discussion of pattern and penetration is interesting reading, and these are subjects with which every one who uses a gun should familiarize himself. It is, of course, a well-known fact, that pellets of shot reach the target at different times; that is to say, that some pellets travel faster than others. These different rates of velocity Mr. Greener calls stringing, and they mean that at the time when the first pellets of a charge would strike the bird at 40yds., the slower pellets have not then reached a distance of 30yds. from the muzzle of the gun. About 5 per cent. of the pellets of a charge arrive simultaneously at the target. These are closely followed by about 25 or 30 per cent. and it is this 30 to 40 per cent. of the pellets which practically represents the killing value of the charge, for the remaining pellets either do not reach the mark in time to do any good or else drop from the charge, or turn off to one side or the other from the line of flight. If, therefore, some effective means could be devised of making all the pellets go together, the range and so the killing power of the gun would be greatly increased. This was the purpose of the old wire cartridge of muzzleloading days which sometimes did execution at astonishing distances.

The question of choke bores *vs.* cylinders is one upon which Mr. Greener has written a great deal and about which he feels strongly. He is an ardent advocate of choke boring and would carry it in many cases to the extreme of its limit. The importance of the system has been abundantly demonstrated in many ways, but, of course, its value depends largely on the character of the ground to be shot over. For shooting partridges in the open or grouse on the moors, or ducks or prairie chickens, the value of this system of boring can hardly be over estimated, but for some of our shooting here, such as quail, woodcock or ruffed grouse in the thick covers of the Southern and Eastern States of America, we are inclined to believe that the cylinder bored gun is often more useful than a choke bore.

Perhaps no chapter in Mr. Greener's book is more interesting than the one which treats of gunpowders, shot, cartridge cases, loaded cartridges and so on. In speaking of the nitro powders he states that the best wood powder gives about 30 per cent. solid residue and 70 per cent. available gasses, and that therefore one-half the charge of powder by weight is equivalent to a full charge of black powder, in which there is 65 per cent. of solid residue and only 35 per cent available gas. He states that the smokeless powders are rapidly superseding black gun powder for most sporting purposes.

Very useful and valuable is the chapter on How to Use a Gun, and it is fully illustrated by figures of position while performing most of the acts incidental to shooting. The danger of a gun is insisted on everywhere, and yet it is shown that a gun properly used is as safe as any other implement.

The concluding chapter of the volume is devoted to pigeon shooting from the traps, a sport which continues to grow in favor in England. In this chapter are given the rules for shooting at Hurlingham and many hints for success in shooting at the trap. The remarks on pigeon shooting scores are devoted very largely to those made by Americans, Messrs. Brewer, Fulford, Bogardus, Carver and Elliott being the names most frequently mentioned. Something is said of inanimate targets, the old-fashioned glass ball and the various so-called clay-pigeons manufactured in this country. Rules for inanimate target shooting are given and some records, as well as some description of how experts shoot, the experts being all Americans. The volume closes with a letter extracted from the London *Field* on grouse driving by Sir Frederick A. Millbank.

The subjects discussed in this valuable book are fully illustrated by cuts and engravings, many of them full page and of great excellence and beauty, and the work is one which ought to be in the hands of all sportsmen. We do not recall any volume which at so small a cost contains so much useful and pleasantly told information.

* The Breechloader, | and How To Use It, | by | W. W. Greener, | author of "The Gun and its Development," "Modern Shotguns," "Choke-Bore Guns," "Modern Breechloaders," etc. | Illustrated. Cut. | Forest and Stream Publishing Co., | New York | 1892. | Price $1.

## Camp-Fire Flickerings.

"That reminds me."

A HARTFORD insurance man gave his son Toots a toy gun a few days ago, which Toots proceeded to break on the first day, and so badly did he smash it that his papa could not fix it, much to Toots's sorrow.

When prayer time came Toots said as usual, "God bless papa and mother and make Toots a good boy;" then he passionately but irreligiously added, "but I'd a blame sight rather you'd fix my gun." A. C. COLLINS.

HARTFORD, Conn.

## ROD AND GUN AND CAMERA.

AS a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM.

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us,

# Sea and River Fishing.

## ANGLING NOTES.

### The Lion and the Lamb.

To a man up a tree it would appear that some of the people in the Adirondack wilderness are unduly exercised concerning the appearance of the pike, or so-called pickerel, in some of the trout lakes in that region. I say some of the people, for it is only a few of the people in the Adirondacks who propose, through fear of what the pike may do to destroy other fish, to introduce black bass to destroy the pike in the waters where they are unwelcome. Others of the people propose to fight the pike in a common sense sort of fight and keep them down to a point where they will do little or no damage to the trout in the same waters. It appears to the man up a tree that the people are unduly excited, because in other waters (streams where the trout and pike meet on more common ground, or in more common water, than in a big, deep lake) where the lion-like pike and the lamb-like trout consort together, the anglers who are most interested in these fish express no alarm that one will destroy the other. In these other waters a Chinese wall fifty feet high has been erected to keep out the black bass, but no one, so far as I can find out, has ever entered a protest against the presence of the pike in trout streams.

I have a letter before me written by Mr. William Senior ("Redspinner"), angling editor of the London *Field*, to Mr. R. B. Marston, editor of the London *Fishing Gazette*. Mr. Senior had been fishing some trout and grayling water in Hampshire, and this is an extract from the letter: "The grayling did not rise at all. All the fish I saw rise I killed—trout 2½lbs., trout 1½lbs. (about), pike 3lbs. (about) and three grayling, one about 1¼lbs., the others small. No wind, water glassy, everything deadly still."

In justice I must say that in another part of the letter there is an explanation that "killed," so far as the trout are concerned means, in this instance, caught, after which they were returned to the water alive. But think of it—pike, trout and grayling in the same water, and no proposition made to introduce black bass to kill the pike! No, these British anglers bear the ills they have, and do not trouble themselves to fly to others that they know not of.

### Ditto.

Mr. Edward Marston in the little book "Days in Clover," which I mentioned a week or two ago, writes of his catch in the Wye on one occasion as follows: "A few roach, some fair sized perch, a small trout now and then, and an endless number of the pestering little samlets, which we, of course, threw back to their own element, were all we could boast about." This is still worse. Roach, young salmon and small trout, all at the mercy of the deadly and to be dreaded yellow perch that has cleaned out some of the trout waters in the United States according to official report. But that which follows is perhaps the cap sheaf, and is found in the same volume: "Piscator waded, he threw his flies over every inch of the water, he spun his minnows in the finest style across every pool and up and down every stream, but neither pike, nor salmon, nor trout, nor grayling rewarded his energy." This was also in the Wye, so the deadly perch must have been lurking about too, although they are not mentioned with the pike, the salmon, the trout and the grayling, that were so unsuccessfully sought after. The author mentions these different species of fish in the same water rather as if they constituted one happy family instead of a devouring brood that lived chiefly to prey one upon another. I wonder after all if there is not a heap of rot that is being preached about the destructiveness of some of our fishes? Most fish are built that way, and it is to be expected that they will keep their stomach lined and well lined, and even modern fishculture cannot change the inherent nature of a fish. To be sure, there is a certain amount of ill-advised stocking of waters with unsuitable fish that is going on most of the time, but the impulsive, rushing Yankee is learning wisdom slowly concerning the kind of fish to place in certain waters, and he is not working in the dark to the extent that he has been, only to repent of his haste later.

### Contradictions.

There can be no fixed rule to follow in the practice of stocking different waters even with the same species of fish, to say nothing of the uncertainty of results in many cases of stocking different waters with different species of fish. I know beyond the peradventure of a doubt that in a pond that fairly swarmed with pike the introduction of black bass was the means of wholly and entirely exterminating the pike, so that to-day not one is to be found. Yellow perch were in the pond with the pike, and they are there now with the bass apparently undiminished in numbers. Yet Herr von dem Borne tells me that in Germany the pike are destroying the introduced black bass in many waters where they have been planted. In one of the Adirondack lakes in which the pike have made their appearance unheralded and undesired, and where it is proposed to plant black bass to destroy them because they prey upon the trout, a large trout was caught during the past summer and in its stomach was found a number of young pike, which it had eaten. In still another lake in another State it is claimed that the introduction of black bass destroyed the yellow perch and made the trout, upon which it is said the perch had been feeding, as plentiful as in the days remembered so sweetly by the oldest inhabitant. Some of the apparent contradictions regarding the habits of fish can be reconciled when the varying conditions that existed in each instance are explained, but the best rule to follow in stocking new waters with a new fish is to go slow. This "blowing your horn if you don't sell a clam" has worked injury that the horn-blowers have found out when it was too late to fill the cart with other merchandise.

### Snipe on a Fly.

Not long ago I gave in FOREST AND STREAM under the sub-heading "Caught on a fly," a short list of beasts, birds and things that had been caught at one time or another by anglers when fly-fishing for fish alone. I

ventured the opinion that this list might be added to materially, but no one has yet made a contribution, therefore I will add to it. Last summer an English angler, while fishing for trout had his fly taken on the back cast by a snipe. The bird was not hooked by accident for it took the fly in its mouth. I regret that I cannot tell where I read of this curious capture, but think it was in *Land and Water*. The name of the angler was given as well as other particulars, and all things considered it was perhaps the strangest capture of any that I have mentioned, and deserves to rank with Frank Forester's story of a snipe roosting on a fence—at least I think it was Forester who related it; with the Pennsylvania sportsman's tale of a wounded snipe diving four times and swimming under water like a duck, and with the oil painting of the race horse Black Maria tied to a tree.

### Size of Yearling and Two-Year-Old Trout.

A question that is constantly popping up to be answered is how large are certain fish at a certain age, and when I hear the question my thoughts go back to a can of yearling salmon that I once received to plant. The fish were all hatched at the same time from the same lot of eggs, and were kept together in the same pond until they were about fourteen months old, yet they varied in size from about 2 to 6in. in length. Varying conditions of food make even a greater difference in growth. I planted some brown trout in the famous Half-way Brook in Warren county, N. Y., and their growth was so remarkable that a native fisherman told me that he knew that it was impossible for trout at two years of age, which was their age at the time, to grow to the length that those fish did. They, however, were babies compared to some two-year-old brown trout reared by Mr. Thomas Ford, the English fishculturist, who has had trout 7in. long at eight months, and over 8in. long at a year. Three trout at two years of age weighed ¾, 1¼ and 1½lbs. respectively. They were left in a pond as yearlings, and 18,000 fry were put into the pond not knowing the yearlings were there. At the end of the following year there were only about 1,800 yearlings to show for the 18,000 fry, the three two-year-olds having accounted for the others. A. N. Cheney.

## PLAYING YOUR FISH.

Several years ago, being on the Peninsula of Alaska, trout streams plentiful and trout everywhere abundant, I started out one day to have some sport with my rod. I had often fished a certain stream with grand results, and this day decided to return to it again. It was in the salmon season, in which trout take roe bait, and this was used, and many a shining coat was laid away in my creel. At length, coming to a fall over which the waters fell and were churned to foam in the pool beneath, an ideal place for a fisherman to stand, by the roaring waters and the drifting spray, and drop his bait lightly amid the shifting foam, fish after fish was drawn from the cool waters.

Beside the stream grew blue berries and salmon berries in profusion. My appetite having been sharpened by the jaunt and the cool air, I began to gather and eat the fruit by the stream, paying little attention to my line, which was trailing with the current, when suddenly my hook was struck by some roe-eating monster of the brook, and off it started as if it had just received a telegram of a great feast to be held at the mouth of the river. I also started in the direction of the supposed feast, not wishing to lose my gear. It soon came to shallower water and I was able to comprehend what was taking my tackle and myself toward the sea. This plaything was an old, mouldy dog salmon, with sores along its sides and back, its fins and tail chafed and worn, and with a general appearance of dilapidation and decay. Yet this ancient and mouldy individual was game from the end of its decaying nose to the tip of its blighted tail. Talk about fun; there was fun "for an onlooker." In my endeavor to save my line and hook, not having any spare ones, I rushed after this *Salmo non grata* in frantic haste, and filled first one long rubber boot and then the other, and at last fell sprawling in the ice-cold stream. I arose with great dignity, or at least all I could command, and smiled a smile which at once congealed and thawed not for many a day. With a quick jerk on my rod I broke from the fish and saved my rod and line, and this grand fish kept on its way to the sea with a grin on its decaying features that haunts me to this day.

All the talk about playing your fish goes for nothing; this fellow played me. E. P. H.

## POTOMAC NOTES.

The cold rains beginning of Thanksgiving week settled the Potomac bass fishing. Many of our anglers had kept their tackle ready, intending to spent the 24th on the river, as the fishing had been fair up to the 18th, but they were doomed to disappointment, and all owing to the absence of the Government rain-makers in the eastern United States. The river resolved itself into a flowing mud puddle, the stores at once removed their stock of fishing tackle out of sight, so as to have "fresh goods" next year, and the fishermen so fortunate as to have guns, and the time to use them, at once set to cleaning out the rust spots, lubricating the working parts and planning with friends for a hunt.

Quite a number of good bags of quail have been made, any number of rabbits have come to grief, and a few wild turkey, grouse and pheasants have been secured within a radius of fifty miles of Washington.

Mr. John Pollock spent a week in Virginia, right in the Blue Ridge, and brought home three good turkeys. The largest, a gobbler, weighed 22lbs., a hen of 15lbs., the other still smaller. A very large flock was seen, and John's friends, living in the section, have shot several since. I was talking with a gentleman from Virginia last evening and he tells me that the practice of baiting turkeys is kept up. Many are mowed down in this manner.

In western Maryland there are usually more rabbits than you can shake a stick at. One of our ardent rabbit hunters succeeded in bagging twenty-three in one day in Frederick county recently. As Harry puts it, "they grow on bushes up there."

The manner in which quail are hawked around the streets here is a sorry sight. Whence they come, no one knows. They reach us in barrels, the regular, every-day kind, in which apples, turnips, cabbages and other produce is shipped, and are offered on the streets as the pseudo-hunter's own capture, "fresh from the covers."

Ducks on the Potomac? Yes, and steam launches and big-guns, too. Two weeks since a party of legitimate sportsmen went down the river and found ducks in fair numbers attempting to alight on the Potomac. A large flock would settle, when tu tu-tu-tu tu-tu-tu a small steam launch would steam up rapidly toward the game, and if near enough several gunners would rise in their places and fire a parting salute at the birds. The gentlemen of the small boats found it out of the question to get near enough to the many flocks seen that day, as the ever-present launch would be down on every fresh arrival before they could fairly settle. Is this not a great violation of the law, and the breach committed right in the shadow of the dome of the Capitol. Bon.

Washington, D. C., Nov. 28.

## SHARKS OF THE SOUTHERN SEA.

The northwestern coast of Australia thirty-five years ago was a land seldom visited by the whites and by these only from vessels touching at isolated points along the coast, as in the case of the whalers. No white settler was to be found in all that region. The aboriginal tribes alone roamed over its desolate waste; no European had at that time crossed that continent, either from east to west or from north to south, the central and northwestern portion of the continent being sparsely populated by the natives of the country, who stand the lowest in the scale of humanity of all the savage tribes I have ever encountered. The North American Indian, the digger of California, the Esquimau of the Far North, the inhabitants of the South Sea Islands all built themselves some kind of an habitation and made some attempt at clothing their bodies. It seems the natives of Terra del Fuego most nearly approached them in degradation.

These people roamed the desolate plains adjacent to this coast, clothed in nature's garb, and lying down to sleep wherever they might be when night overtook them. No implement of iron was seen among them. Their weapons were made entirely of wood—a hard wood spear with the points hardened by charring in the fire, this being used by a hand or throwing board, and the boomrang were their principal weapons.

During the years of 1857-'8-'9 I had many opportunities of observing the habits of these people, and their mode of defending themselves from the attacks of the ferocious sharks which are found in the shallow waters of this region in immense numbers, being peculiar to these tribes alone, are deserving of description. Having no boats, these natives are able to visit islands lying several miles from the main land, also ships at anchor, their aid to navigation being a small log of driftwood. They usually select one three or four feet long and say eighteen inches in diameter; this being rolled to the water, the native seats himself thereon with legs and feet straight out before him. His weight entirely submerging the log, and using his hands for paddles, away he goes.

AUSTRALIAN NATIVE AND SHARK.

The sharks in these waters are so ferocious they often seized our oars when rowing, yet these natives launch the little craft into the shark-infested sea, their only weapons being a few straight, tough sticks, a little larger than a lead pencil, from twelve to eighteen inches in length, sharp-pointed at the ends. The log protects the person of the native from attack from beneath, and the shark can only approach at the side, and as he ranges alongside the log looking for a chance to seize his prey, the native with a skillful thrust of the little stick stabs the monster in the gills. This is the vital point to strike a shark. I have seen them cut with a whale spade across the belly in such a manner that their entrails protruded and dragged behind them, yet not ceasing to feed on the blubber of the whale lying by the ship, and yet a slight cut across the gills of the largest would turn him from his meal with a countenance so full of woe as to touch the heart of any one except a sailor, and casting a look of reproach at its human tormentor, it dives into the depths of the ocean.

A shark struck in the gills never renews the fight. This fact being known to the native, he has no fear of the return of the monster after a wound in this vital spot, therefore, when the shark turns away, the native replaces the little spear in his hair and paddles along with as little concern as if he had killed a fly.

When given food on the ship, the natives would gorge themselves, rubbing their bellies to make good stowage, and when they could eat no more would seek a quiet place to lie down and sleep. Hard-tack and molasses gave them them the greatest delight of any food offered them. In person they were very thin—skin and bones best describes their condition—but they are possessed of great endurance as travelers, marching great distances and subsisting the while on a land so barren that a white man would soon be overcome in it with both hunger and thirst; but nearly all kinds of creeping things are food for them—grubs, worms and snails being toothsome articles.

The appetite of the shark is something wonderful; one specimen taken by us and examined contained in its stomach one barrel of blubber from a whale recently killed by us, one-and-one-half barrels of lean from the same source, the crown or upper shell of a green turtle 18 inches across, the partially digested remains of four sea snakes, "which are very venomous and the bite of which is most deadly to man," the bones of various fishes, the beaks of cuttle fish, and two sea fowl—"shags"—recently devoured. In addition to the above, the liver filled a 45-gallon cask, and 32 young sharks were found in the belly with the egg-like attachment by which the young is nourished in the belly of its mother. These young fish were about 14 inches in length and rather slender in body.

It is well known that the young of the shark is born fully developed and, under the instruction of its mother, is soon able to forage for itself and prey upon the smaller fishes.

It is often stated that the shark must turn belly up to seize its prey; this is simply nonsense. The shark takes its bite in any position, and when fastened to the object, with a few vigorous strokes of its powerful tail it so twists its body that the strong serrated teeth soon cut through the toughest substance. Smaller bodies are swallowed whole like the turtle above mentioned.

The movements of the shark are sluggish and it views its prey with a suspicious eye unless the object is familiar to its sight, or blood be following; in the last case the shark awakens to instant activity and rushes to the conflict with vigor.

That the shark is capable of rapid motion, a battle I once witnessed from the masthead on a ship between his highness and a swordfish will prove. It being a calm day, the vessel had little headway, and the sea was perfectly smooth. Which was the attacking party I know not, but when first seen a commotion in the water was noticed. Examining the spot with my glass, there plainly to be seen were a large shark and a swordfish, about ten or twelve feet apart, lying motionless in the water, their bodies glowing in the sunlight. Then there was a rush and the two had changed places and were heading for each other again with the same alert appearance. Again and again this took place before my eyes, aided by strong glasses. The movements of the two were like a flash of light and for a half hour there was no advantage on either side. Whichever may have been the aggressor it soon became evident that the shark avoided the formidable beak of the swordfish. Neither could run away, and so they passed out of sight with the battle undecided, and it may be both wishing themselves in some far distant sea. E. P. H.

## SPAWNING SEASONS AND HABITS.

Under this heading we propose to publish notes and comments upon the reproduction of the game fishes of the United States, and we invite anglers and lovers of natural history generally to contribute their observations on these subjects:

### The Smelts.

The smelts are well known in salt water on both sides of the continent and in Eastern lakes, especially of northern New England, landlocked varieties are found. The best waters for landlocked salmon are well stocked with smelts, which furnish abundant and choice food for their larger relatives.

Smelts ascend rivers from the sea in early spring to spawn; the landlocked form runs up tributaries of the lakes for the same purpose. In the Raritan River, N. J., the eggs are deposited in March. In Maine lakes spawning is in progress in May and June. The fish crowd up the streams at night only, and their small, golden, adhesive eggs coat every rock, twig and blade of grass in their line of ascent.

By July 1 the young smelt have grown to the length of from ½ to ⅝in., and constitute the favorite food of young trout and salmon.

It is an easy and remunerative task to transfer the naturally fertilized eggs to waters stocked with salmon.

## VERMONT FISHING INTERESTS.

Highgate, Vt., Nov. 26.—*Editor Forest and Stream:* It is a most fortunate thing for the interests of fish and game protection that the columns of your widely-read journal are ever open to correspondence on this subject, which will be read by nearly all those who are in a position to give the much-needed assistance in carrying out this work.

A journal like yours is an "educator," and when it has taught the intelligent public the breeding habits of our food and game fish there will then be no difficulty in making and enforcing suitable laws for better protection.

In your issue of the 24th inst. we note the following: "We are told that the Vermont proposition to license netting in Missisquoi Bay is of the nature of a retaliatory measure against Canadian fishermen." Such was claimed by the friends of the bill before it was passed, and now that it has become a law, as we before predicted, the mask is thrown aside and the true object of the bill appears, as will be seen by the following, which is taken from the last issue of a local paper, the acknowledged champion of the net fishermen: "Spring fishing once more. Hurrah! Don't forget that Editor ——— has always been on our side," etc., etc.

This means the undoing of the good work performed here by our former Fish Commissioner, the Hon. Herbert Brainerd. After our spawning fish have been destroyed then our legislators will be called upon for an appropriation to defray the expense of restocking the waters of Lake Champlain. The editor of that paper in an editorial in the same issue descends to personal blackguardism which in itself shows the rottenness of his cause.

We were surprised to read in the late report of our present Fish Commissioners that the wall-eyed pike or pike-perch (*S. vitreon*) of our lake, mostly spawn in the waters of Missisquoi Bay, on the Canada side of the line. Can it be possible that our Commissioners know so little about the spawning habits of this fish, which is the most important food fish in our lake? The pike-perch, like the salmon, only spawn on gravelly bottoms of streams where there is a moderately stiff current, and the only stream of this description emptying into this part of the lake is the Missisquoi River, which is on the Vermont side of the line. We can perhaps account for this mistaken statement of our Commissioners from the fact that they had but recently been appointed Commissioners, and that their report was necessarily hastily gotten up, and not being posted they accepted information received from persons interested in having it appear that this fish spawns in the Canadian waters of Missisquoi Bay.

We also notice among the recently elected officers of the State Game League the name of Capt. Hawley who,

when a member of our Legislature some years ago, was a most determined advocate for the interests of the net fishers.

The Captain is a most courteous gentlemen of great social abilities, and unless he has changed his opinions about the evils of net fishing his influence in the League is to be feared, though before the end comes he will be found on the right side. STANSTEAD.

## CHICAGO AND THE WEST.

[*By a Staff Correspondent.*]

CHICAGO, Ill., Dec. 1.—Mr. C. C. Lamos, of this city, starts soon for an extended trip in California, with San Diego for objective point. He is looking forward to the coast visit with great expectations of sport and pleasure.

Mr. R. S. Cox, of Chicago, is just back from a long stay at Rice Lake, Canada, where he and friends have had excellent sport at duck shooting and fishing for muscallonge and bass. Mr. Cox speaks of the latest Canadian game law as Draconian in the extreme, especially for Yankee shooters.

Mr. Charles Grubbs, of Montgomery Ward & Co., Chicago, has been carrying light for that firm into the wilds of Colorado and New Mexico, and incidentally improving his own health during a stay of three months or so. He comes back physically much improved, having gained 28 pounds, though morally he is no better, having lost conscience altogether in the matter of fish stories. Mr. Grubbs says that the best sport he found duriug his stay in the remote West was in fishing for mountain trout. He had good fishing in the Gallinas and other tributaries of the Pecos. Duck shooting he found good at the lakes near Las Vegas.

The regular meeting of Calumet Heights Club will be held at the Grand Pacific Hotel, Wednesday evening, Dec. 7.

The Chicago Fly-Casting Club holds a special meeting at Club Room A of the Grand Pacific Hotel, Friday, Dec. 9, at 7 P. M. Action will be taken on proposed amendments to the constitution and general business of different nature will come up. A good attendance is desired.

E. HOUGH.

175 MONROE STREET, Chicago.

### Some Heavy Pike-Perch.

AUBURN, Susquehanna County, Pa., Nov. 28.—*Editor Forest and Stream:* In reply to inquiries by "A. C. P.," in your issue of Nov. 17, you put the maximum weight of the wall-eyed pike as found in the Susquehanna at 10 and 11lbs. Individuals considerably heavier are occasionally taken.

Charles Vaughn, of Mehoopany, Wyoming county, took one from the river at that place with hook and line, on Sept. 7, that measured 34½in. in length, and weighed 12½lbs. Lowell Fassett took one behind the lower island opposite Scottsville, of the same weight. A Mr. Brown, of Syracuse, I think, who makes an annual trip down the river and makes a specialty of pike fishing, and is very successful, was seen by a friend while in camp at Mehoopany this season, and he gave the weight of his heaviest fish as 14lbs. One was found dead in an ice jam near Skinner's Eddy several years ago that weighed 24lbs. One measuring 31in. and weighing 10½lbs. was taken a short distance above Lanesboro by A. Hilborn on Nov. 7.

As a game fish they are not to be compared with the black bass. At least such is my experience. Our common pickerel (*Esox reticulatus*), pound for pound, will make a much better fight. When hooked it neither runs nor leaps, but remains nearly stationary and tries to dislodge the hook by swinging the head from side to side, and such efforts are often successful. I consider its flesh superior to that of the black bass. BON AMI.

### Pike, Pickerel and Company.

NEW YORK, Nov. 3.—*Editor Forest and Stream:* On looking over your paper of to-day's issue I saw an article on pike, pickerel and mascalonge. In it you stated that the common pickerel seldom exceeded 6 to 8lbs. in weight "and its limit is said to be 10lbs." As to this I can say I myself caught a pickerel 11lbs., and a great many of my friends have caught some from 12 to 15lbs., and that I can vouch for.

Where my friends and I caught these fish is on the borders of this State, at Cape Vincent, on the St. Lawrence River, and three miles from Lake Ontario.

I have two pictures, one of the pickerel I caught, which was 11lbs., and another of two pickerel, 15 and 15½lbs., caught by relations of mine. The former picture I will send you a print of, although it is a poor one, as I have the negative. E. H. P.

[In the absence of the photograph mentioned, we are in doubt what member of the pickerel family is referred to in the foregoing notes. If our correspondent will turn to FOREST AND STREAM of Aug. 25, 1892, page 162, he will find figured there a "pickerel;" but that is really the pike, and not the pickerel described in our issue of Nov. 3. There is no clearer key to the pike family known to us than the one published in our columns.]

## WITH A FLY-ROD.

### A Sentiment to Go with a Gift.

III.

*My Dear Friend:*

May this little gift prove a veritable "open sesame" to you when "casting about" for treasure in lake and stream. T.

IV.

Good rods will bend but will not break.
They yield to force, but yielding bear
A greater strain than if they were
Stiff and unyielding in thy hand,
So when in straits by fortune's lack,
Yield gently till the storm be past,
But always ready first and last,
Again to straighten and spring back.
And in misfortune's darkest hour,
With hand on reel take up the slack;
Keep the line taut, and reel it back.
In patience thou wilt find more power,
Than by unreasoning struggles still,
To break thy heart by strength of will.

H. STEWART.

# The Kennel.

## FIXTURES.

### DOG SHOWS.

Dec. 6 to 9.—First Annual Dog Show Hermitage Kennel Club, Nashville, Tenn. Robert C. Stockton, Sec'y.

1893.

Jan. 3 to 6.—Mohawk Valley Poultry and Kennel Club. F. B. Zimmer, Sec'y, Gloversville, N. Y.

Feb. 21 to 22.—Westminster Kennel Club, New York city. Jas. Mortimer, Supt.

April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.

May 3 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.

June 13 to 17.—World's Fair, Chicago.

Sept. 7 to 10.—Hamilton, Ontario. A. D. Stewart, Sec'y.

### FIELD TRIALS.

Dec. 19.—Irish Setter Field Trials, at Lexington, N. C. Dr. G. G. Davis, Philadelphia, Pa., Sec'y.

1893.

January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgarif, Sec'y.

Feb. 8.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y

## A NEW GREAT DANE CLUB.

*Editor Forest and Stream:*

For some time it has been evident to a great number of lovers of the great Dane that, although there is existing in Chicago a club calling themselves "The German Mastiff or Great Dane Club of American," if the interests and popularity of the dog were to be pushed to the front, more life should be infused into the cause than seems to have been done lately.

Many letters, appeals, and offers of membership have been sent to this close corporation, consisting of a very few men in Chicago and some eight or ten scattered over the East, without exciting any apparent interest or reply, except that they did not care to take any more members outside of Chicago. Not only that, but it seems impossible for a member already elected to find out what his membership consists of, what his duties or privileges are or any information whatsoever.

This peculiar state of affairs has induced a number of New York and Brooklyn men to come together and form a club that will be more liberal and progressive, and include all of those who have the interests of the great Dane at heart East and West, North and South, and who may wish to be associated with this movement. The club solicits members wherever they may be situated to join us in this work, which shall be a live one and tend to develop the breed by exciting an interest in breeding (and importing, if necessary) in the right direction, so that before very long the great Dane will be known from coast to coast by everybody, and we will have dogs bred in this country that can be sent back to Germany and win their prizes fairly in any competition, where now we have not a dog as yet bred in America that is anything like ideal. The club aims to do for the great Dane what England has done for the St. Bernard, and why not aim high? America has the money and push to make a grand success of it if those interested will only be enthusiastic and work in right lines.

Germany to-day stands to the front in breeding, as it is almost, one might say, her national dog, but it is simply due to the vast amount of material that she has to draw from, rather than any systematic policy that she has adopted to produce a certain type; she knows what she wants, but does not go at it in the right way. She has a stud book but few of her dogs are ever registered. She breeds a "Hannibal;" why may not we do as well, or better if we go at it with our eyes open, taking advantage of what she has learned, adopting her standard of type, and adding our American business methods and ideas. Then and then only will she cease sending her second-rate dogs here for us to make champions of. Our prize winners shall bear some resemblance to each other, which, sad to say, is not often the case now, and judging will not then be such a thankless undertaking.

By the courtesy of the National Greyhound Club, on the last evening of their successful show in Braoklyn, a meeting was called. Mr. Heppner being secretary and delegate for the German Mastiff Club, declining to take any active part in the meeting, Dr. Shepard was made temporary chairman, and read the following letter from the well-known artist, G. Muss-Arnolt:

TUCKAHOE, N. Y.—*Gentlemen:* Unavoidably prevented from being with you to-night, I cannot let the occasion pass without addressing you. I am very sorry that it cannot be orally, but Mr. Heppner's able tongue will be more than a substitute. Please listen to my few remarks with the idea that an absolutely impartial, unbiased lover of our grand breed speaks to you, as I am in no other way interested than to see this breed, through your able assistance and enthusiasm, brought to the front. Of course we are the pioneers, and I hope every one of you present will be fully up to the demand made on all pioneers—that is, to sacrifice a great deal personally for the total result we are striving for, and that is, first, to have only great Danes, as far as possible, up to our German standard, which also those eminent breeders, the English, have adopted.

Have your future judges instructed to judge only after that standard, and let them relegate back to its place every specimen not in harmony with our standards, and we will succeed in a wonderfully short time to drive our present mongrels to the background where they belong. Have no regard for any one who is short-sighted enough to overlook this vital question, or you will sooner or later stumble, in fact, over the allusion of the dissenters that we are partial, which they are bound to make and are already making.

We want as a club, and individually, to be almost over stern in discountenancing everything looking like a mongrel, as we intend to make the great Dane proper known as such, and not the mean, surly brutes we as an average now find on the benches. Let us educate ourselves, also, as far as possible, and I should think Mr. Heppner could get us for the club the best "doggy" journal of Germany, out of which those articles referring to our great Danes could be translated regularly for the benefit of all members.

Thanking you for having listened to my remarks I beg to submit my personal choice in the matter of officers for the club to your consideration, fully knowing the personal qualifications of each proposed for the places: For president, Mr. Chas. Bernheimer; secretary, Dr. Shepard; treasurer, Mr. Chas. Fischer; delegate to A. K. C., our friend Heppner, who has till now done more for our breed than anybody else, and my highest ambitions are to see each and every member strive to outdo the other in this direction. My compelled absence from your meeting is one of the hardest disappointments I have had of late, but I rest assured in the thought of your sincere enthusiasm to make it a success, to which end I will do all in my power. Yours sincerely,

G. MUSS-ARNOLT.

The meeting then proceeded to the election of officers, of which the following were chosen: Mr. Chas. Bernheimer, 749 Broadway, N. Y. city, president; Mr. William Young, 206 Eleventh street, Brooklyn, vice-president; Mr. Chas. Fischer, 251 Thirteenth street, Brooklyn, treasurer; Dr. W. H. Shepard, 202 Fifty-second street, Brooklyn, secretary.

It was regularly moved and seconded that the president appoint a committee of five to draw up a constitution and set of by-laws, to be presented at the next meeting. Carried, and Mr. Bernheimer appointed Mr. Heppner, Mr. Jas. Mortimer, Mr. Muss-Arnolt, Dr. Shepard and himself.

Regularly moved and seconded that the club be called the Great Dane Club of America. Carried.

Regularly moved and seconded that the club apply for membership in the American Kennel Club. Carried.

Moved and seconded that the secretary draw up a paper, stating the objects of the club and reason for forming such and forward it to the different sporting papers. Carried.

Mr. Bernheimer then presented the club his check for $50 to start the treasury, for which he received a vote of thanks.

Moved and seconded that the annual dues be made $5 for each member. Carried.

As it was late and members were anxious to get their dogs home from the show, the meeting adjourned to meet again as soon as the committee is ready to submit the constitution and by-laws. W. H. SHEPARD,

Sec'y Great Dane Club of America.

DEC. 1.

## POINTS AND FLUSHES.

LEXINGTON, N. C., Dec. 4.—The weather is almost perfect for enjoyable field work, though a bit too warm for energetic exertion of man or dog. If this pleasant weather lasts to the end of the trials, it will be a most fortunate circumstance, yet such is not to be expected at this season of the year.

It is rumored that the dogs of the Fairmount Kennels, owned by Col. B. Ridgeway, will be offered for sale soon. The Colonel was somewhat discouraged at the failure of his dogs in not making a stronger competition at the Philadelphia Club's trials. It is to be earnestly hoped that the Colonel will reconsider his determination, and remain in the guild of field trial men, for he is of the right sort.

Mr. Frank Richards, the well-known field trial handler, is lying seriously ill at this place, a threatening fever prostrating him. Mr. Geo. E. Gray will handle his entries in the Central trials, which begin to-morrow. All heartily wish the genial gentleman a speedy recovery, none more so than myself.

Very enjoyable sport was had at High Point following a drag after the hounds, but the race of Thursday night was the most enjoyable of all. After the conclusion of the Philadelphia club's trials, nearly all of the field trial party rode to town after Mr. Avent's hounds. Among the party were four ladies who had graced the trials by their presence during the day. It was a most dashing ride. Mrs. S. C. Bradley, the wife of the celebrated handler, led at the finish, passing Mr. Avent, who is not a slow rider himself. Mrs. Bradley, in galloping through pine woods, was swept off the saddle, but managed to keep on the horse and regain her seat, keeping pluckily in the chase the while.

Rarely was such an exodus seen from a hotel as that witnessed at the Bellevue, at High Point, on the evening of Thursday, the day on which the trials ended. The hotel is well known to field trial men. On a large board nailed to the front of the hotel is inscribed the following beautiful legend, painted in a number of gruesome tints which do not harmonize:

THE BELLEVUE.

Delightful Summer and Winter Resort. First Class Accommodations. All Conveniences of Modern Civilization. George T. Leach, Owner and Proprietor.

The grim irony of it! It would be funny were it not so sad and expensive.

The members of the Eastern Club are patient and long-suffering men, bearing the poor accommodations and exorbitant rates uncomplainingly, but the gentlemen from Philadelphia insisted very properly on something more than poor fare and worse service.

One party of four, who went on a day's shoot and took lunch with them from the hotel, were mildly surprised at noon to find three delicately carved sandwiches and two apples, which represented four lunches. The farmer at whose house they stopped to eat their lunch, was moved to compassion and invited them to dine with him, which they gratefully did. Many of the rooms were occupied by two, three and four people. Fires were 50 cents extra a day. Each occupant had 50 cents extra added to his bill for fire, so that where four occupied a room, there was a charge of $2 per day for fire. It is only fair to say that the sportsmen were too intelligent to pay for one fire three or four times over. Two, and part of the time three waiters, were supposed to wait on all the guests, some thirty in number. The waiting was largely on the part of the guest. Dogs were fed at the rate of 25 cents per day for each dog. Every one who had any business connection with the field trial men seemed to think that they were anxious to get rid of their money. One handler paid $8 for eight dogs' housing for four days in a small cheap barn, in which there were twelve or more other dogs. Another handler paid $2.50 per week for a stall in a barn about 14x16. The three stalls it contained rented for $7.50 per week.

Field trial clubs owe, to themselves and their patrons, accommodations which will not be ridiculously exorbitant. Simply furnishing grounds for a competition does not afford all the facilities for a field trial.

The Eastern Club's entries fell off largely this year, but I firmly believe it was not from any unpopularity of the club as a club. No club membership stands higher or is more esteemed than that of the Eastern, and deservedly so. The true cause is in the apathy of the club. It has got so matter of course that the trials are run in a most perfunctory manner. The grounds are growing up to brush and are less valuable for field trial purposes each year.

Now, what incentive is there for a handler or owner to go to a place where he is charged an exorbitant price for anything even the most trifling—sometimes four or five times its value. I firmly believe that, if the Eastern Club would get a little energy in its policy, select new grounds, and show that it is a live club, it would be one of the greatest in the land, and hold the prestige it is now in some danger of losing.

The large number of clubs which have sprung up does not, as many seem to think, lessen the chances or support of any club. On the contrary, the increase in the number of clubs helps each individual club. Any handler or owner would fit more dogs to run in two trials than he would to run in one. More handlers would enter a competition where there was a circuit than would enter where there was but one trial. More trials mean more money to compete for, more business to attend to, more records to make, more friends to meet, etc. It is absurd to consider the increase of trials as indicating their decline. What is wanted is the energy which is implied by the vulgar but expressive term hustle—less *ennui* and more hustle. B. WATERS.

## CONGRATULATION ON LADY BARTON.

*Editor Forest and Stream:*

Please permit me through your valuable paper to acknowledge receipt of many telegrams, also numerous letters from different parts of the United States congratulating me on Lady Barton's winnings both at Great Bend and Winfield, Kan. Many thanks. D. C. LUSE.

GREAT BEND, Kan., Nov. 29.

## PENNSYLVANIA KENNEL CLUB FIELD TRIALS.

THE Pennsylvania Field Trials Club held its trials commencing Nov. 28, at High Point for the first time, it being the ninth field trial held by the club, and the first one of the club's trials open to the world.

There was a good attendance of members, jolly sportsmen all. The trials were a success, the dogs started were of excellent field abilities, the stakes filled well and the weather during the week was most pleasant. The club has demonstrated its ability to hold a field trial equal to the best in the land, and it is to be hoped that it will continue in the good work in future years. It is rumored that it will come out stronger next year than ever, making some departures in field trial matters in the way of energetic management, larger prizes and better grounds.

The grounds of the Eastern Field Trials Club were not satisfactory. They have grown up so much to brush and briers, and are so rough withal, that each added year decreases their value for field trial purposes. The town itself is, from a field trial standpoint, an excellent one to leave, for most of the residents, who can make any business contracts of any kind with the sportsmen, discard all standards of fixed values and merrily pluck the stranger.

The judges were Messrs. Washington A. Coster, Saratoga Springs; Dr. W. Jarvis, Claremont, N. H., and W. Tallman New York. Their judging, as a whole, gave good satisfaction, there being less than the average "kicking," which, from immemorial usage, appears to be a part of field trials. I heard one sportsman say that a kicker, nine times out of ten, is a man who can not stand the gaff, but I do not know just what he meant by the expression, there being a foreign word in it. The man who cannot take defeat quietly and calmly at a field trial is lacking in gameness.

The order of running the stakes was changed from that advertised in the programme, the Derby being started first instead of the Members' Stake, the latter stake being run while the All-Age Stake was run, thus saving time and obliging some owners.

### The Derby.

The competition was not of a high grade, considered as a whole. As will be noted in the list of dogs started, this stake was largely a repetition of the Eastern Field Trials Club's Derby. There were 22 starters.

The winner, Mr. Pierre Lorillard, Jr.'s, Rod's Sue, was far superior to her competitors in every respect. She beat out her ground in a most pleasing style and with excellent judgment.

Hamlet, winner of second, made a creditable competition, though of a class inferior to that of Rod's Sue.

Dot Rogers, owned by Mr. Lorillard, did some excellent work on birds, and made a strong bid for second place. In many respects she was superior to Hamlet.

Following is the order of running, which is different from the order of drawing, the retiring of Mr. Cardeza's Delphic Duke and Delphic Daisy disarranging the drawing:

Pierre Lorillard, Jr's., liver, white and tan bitch Rod's Sue (Roderigo—Gladstone Girl); C. Tucker, handler,

*with*

Hempstead Farm Kennels' liver and white bitch Hempstead Game (Duke of Hessen—Woolton Game); Angus Cameron, handler.

---

Charlottesville Field Trial Kennels' black and wite dog Conscript (King of Kent—Hope); C. E. Buckle, handler,

*with*

H. Merriam's black, white and tan bitch Tan (Nat Goodwin—Royal Myrtle); S. C. Bradley, handler.

---

Avent & Thayer Kennels' black and white dog Bonair (Roderigo—Juno A.), J. M. Avent, handler,

*with*

Fairmount Kennels' black, white and tan bitch Hope's Bud (Czar—Zoe W.), C. W. Barker, handler.

---

Hempstead Farm Kennels' liver and white bitch Hempstead Blossom (Duke of Hessen—Woolton Game), A. Cameron, handler,

*with*

P. Lorillard, Jr.'s, black, white and tan bitch Dot Rogers (Roderigo—Gladstone's Girl), C. Tucker, handler.

---

S. Murray Mitchell's lemon and white dog Sandy Gladstone (Breeze Gladstone—Delaware), H. B. Anderson, handler,

*with*

P. Lorillard, Jr.'s, lemon and white bitch Maiden Mine (Vanguard—Georgia Belle), C. Tucker, handler.

---

Avent & Thayer Kennels' black, white and tan dog Lochinvar (Chance—Haidee), J. M. Avent, handler,

*with*

Francis G. Taylor's lemon and white dog Report (Breeze Gladstone—List Noble), H. B. Anderson, handler.

---

Avent & Thayer Kennels' black, white and tan dog Hamlet (Chance—Bessie Avent), J. M. Avent, handler,

*with*

Luke W. White's liver and white bitch Graceful II. (Duke of Hessen—Concave), owner, handler.

---

J. W. M. Cardeza's lemon and white pointer dog Delphic Duke (Dick of Delphos—Genesta), Olden Smith, handler,

*with*

L. Gardner's black, white and tan bitch Roger's Spark (Roger—Dora Deane), J. H. Lewis, handler.

---

Avent & Thayer Kennels' black, white and tan dog Kingston (Chance—Bessie Avent), J. M. Avent, handler,

*with*

J. H. Winslow's liver and white pointer dog Redemption (Graphic—Vandalia), S. C. Bradley, handler.

---

Avent and Thayer Kennels' black, white and tan dog Chevalier (Jean Val Jean—Lucy Avent), J. M. Avent, handler,

*with*

Thomas Hallam's black white and tan bitch Brighton Clip (Canadian Jester—Lassie), owner, handler.

---

J. A. Hunter's orange and white bitch Hoosier Girl (Dad Wilson—Daisy Hunter) a bye, owner, handler.

---

### MONDAY.

Heavy clouds and a foggy atmosphere were unfavorable signs, but gradually the fog lifted and the weather became clearer, though cloudy. Birds were found in sufficient quantities for the competition. The work as a whole was poor.

*First Series.*

ROD'S SUE AND HEMPSTEAD GAME—Were started at 9. Sue soon wheeled to a point on a bevy in open weeds and the bevy in a few moments flushed wild. Game flushed a bird. On the scattered birds Game made two flushes. Up at 9:30. Sue had the wider range and better judgment, and her work on birds also was better. Game had good speed and a dashing way of going, but took the open, easy places to run in.

CONSCRIPT AND DELPHIC DUKE—Were next in order, but, the latter being absent the next available dog was taken, after some discussion as to what was the correct procedure. Some thought that the braces could not be rearranged. On reading the rules, however, it was learned that the dogs were not drawn in braces. The rule reads: "Dogs shall be drawn by lot and numbered in the order drawn. Each dog shall run in the first series with the next available dog in that order." Each brace is therefore made up in turn as the judges call it.

CONSCRIPT AND TAN—Began at 9:50. Conscript roaded to a bevy which flushed wild. In woods, searching for the scattered birds, each pointed a bevy and were steady to shot. Conscript flushed a single bird, soon after which he flushed some scattered birds. Up at 10:18.

BONAIR AND HOPE'S BUD—Began at 10:22. Bud pointed a bevy, then pressed forward and flushed it. In woods, Bud pointed and drew on alternately, locating and pointing the bevy and was steady to shot. In a thicket in a hollow, each handler claimed a point, but no one could see the dogs before the birds flushed. Bonair flushed a bird; then Bud pointed one in pines and Bonair backed, Bonair pointed in pines; nothing found. At the same time, Bud pointed, drew on by the bird and missed it. Barker flushed it as he walked forward. Both worked merrily, ranged fairly well, but their work on birds was imperfect and unskilful.

HEMPSTEAD BLOSSOM AND DOT ROGERS—Were cast off at 11:03. Blossom dropped to a point in open sedge; no bird. Dot pointed a bevy and Blossom backed. The latter next false pointed. Each secured a good point on single birds. Blossom dropped to a point; footscent probably; next she pointed scattered birds. Two bevies were flushed in pines by the horsemen. Both dogs did some faulty work on the scattered birds, Blossom pointing inaccurately and Dot making a flush. Up at 11:31. Blossom had good speed, but preferred the easy places to run in. Dot made a fairly good showing on birds, but did not stay out at her work so well as she should.

SANDY GLADSTONE AND MAIDEN MINE—Commenced at 11:36. Both were found pointing a single bird in pine woods. It was said that Sandy was the first to point. Sent on. Both dogs roaded a bevy. They flushed two or three outlying birds, then pointed the rest. By the side of a ditch Maiden pointed a bird and was backed. Steady to wing. Sent on, Maiden pointed a bird. Sandy went by and roaded to a flush. Up at 12:05. Sandy made a poor showing.

LOCHINVAR AND REPORT—Began at 1:25 after lunch. Report pointed larks; Lochinvar backed. Report made two false points. Up at 2:16. No birds found. Both showed fairly good range.

HAMLET AND GRACEFUL II.—Were cast off at 2:17. On the scattered birds of a bevy flushed by horsemen, Hamlet pointed and the birds flushed wild. Moved on, Hamlet pointed in woods, Grace refused to back, went ahead and pointed a bird and was unsteady to wing. She appeared to be headstrong. Next, she roaded and pointed, then wilfully flushed the bird. She next pointed a bird. Hamlet made a point to which there was nothing. Up at 2:51. Grace had speed and dash, but liked the easy going places. Hamlet beat out his ground better and was not averse to working in thickets. The work of both on birds was indifferent.

DELPHIC DUKE AND ROGER'S SPARK.—The former was not present when called in the morning, but was on the grounds at this juncture and ready to start. They began at 2:58. It was observed that Delphic Duke's handler was a negro, or a gentlemen of terra cotta tinting. As the heat progressed, dissatisfaction among the handlers began to grow rapidly. Spark flushed an outlying bird and the horsemen flushed the rest of the bevy in the open weeds. In the woods, Spark flushed a bird. A protest or objection against the colored man from most of the handlers was entered, with a threat that they would not run if the negro was not barred. The dogs were ordered up at 3:30 while the matter was being considered. The objection was entirely on account of color. There is no doubt but that the competition should be exclusively for white men, but there is also no doubt but what the club should have acted with some sort of decision on the matter so soon as it was known that the negro would handle.

The club, knowing that the negro would not be acceptable to the handlers, should not have permitted him to start at all. The matter of a negro handling in field trials had been discussed at a club meeting a long time ago, and the sentiment was positively against it. The officers, in respect to this matter, held that they could not know the sentiment of the handlers until after the negro had begun handling and a protest against him was lodged. While they might not officially know it, they could easily have learned the sentiment of the handlers by a little inquiry. As the matter stood, nearly every white handler refused to go on with the competition unless the negro was excluded. A flimsy attempt at a compromise was attempted, when Mr. F. S. Brown, with the consent of the colored man, attempted to handle Duke in the heat, which was resumed at 3:29. Of course Duke would not work for a stranger when his handler was close by, and of course this was certain to be the case before it was attempted. At 3:35 another objection was raised on the ground that Duke was not present within twenty minutes when called to run after the heat of Rod's Sue and Hempstead Game. This was really a frivolous objection, inasmuch as the management had already condoned the matter and allowed the dog to start. The rule on this subject is as follows: "Rule 12—If absent more than twenty minutes it may be disqualified at the discretion of the judges."

The judges did not disqualify the dog. On the contrary, he was held in and called to run with Spark and did run. An objection at that juncture founded on the twenty minute limit was not well taken. Delphic Daisy was summarily barred, ruled out or something or other, which meant that she could not start. The intention of the club was most commendable, but the awkward manner in which it managed the matter was most unskillful. The better way, one which would have been praiseworthy, would have been to meet the issue squarely and fearlessly on its merits. Mr. Cardeza on the following day telegraphed his resignation from membership and demanded the return of his entrance money. The club assured him that it would be returned.

KINGSTON AND REDEMPTION—Began at 3:45. Soon after starting Redemption pointed a bevy and was steady to shot. An open field was beat out before the dogs were taken on the scattered birds in woods. Redemption pointed a bird, then wilfully flushed it. He next flushed a bird and chased it. Kingston pointed in pines; the bird was flushed after he moved on. Each made a false point. Up at 4:16. A poor heat.

CHEVALIER AND BRIGHTON CLIP began at 4:24. In an open stubble Clip had caught scent and was nicely drawing on to locate when Chevalier came in ahead independently, caught scent and pointed. The birds were further on. After the handlers had beaten out the ground ahead the dogs were sent on. Clip was the quicker and got to the bevy first, drawing nicely with head well up and pointing with confidence and judgment. Both were steady to shot. On the scattered birds Clip made a most skillful exhibition of single bird work, pointing bird after bird quickly and accurately. She made six or seven points. Chevalier made two, and one to which nothing was found. Up at 4:54. Clip was somewhat deficient in range, but was industrious and fairly speedy. Chevalier had fairly good range.

HOOSIER GIRL had a bye and ran alone, beginning at 4:56. She had only a moderate range and did not work her ground with the best of judgment. She roaded and pointed a bevy nicely during the half hour in which she ran.

This ended the first series and the running for the day.

### TUESDAY.

The sun shone clear and bright, and the temperature was pleasantly warm. Birds were found in plentiful numbers. Twelve dogs were kept in the second series, more than there was any good reason for.

*Second Series.*

DOT ROGERS AND CHEVALIER—Were started in an open field at 8:57. Chevalier flushed a bevy. On the scattered birds he pointed one in pines. Dot made a very skilful draw to a point on a single bird in pines. Chevalier followed Dot about constantly, and showed no independence or self-reliance. He pointed a bevy. Dot passed close by it without recognizing scent. In pines Chevalier pointed a bird. Dot flushed a bird and chased it, but she was not habitually unsteady. Chevalier roaded and pointed in pines; nothing found. Up at 9:35. Dot was the faster and wider ranger, beat out her ground better and was sharper on birds. There was too much rushing in this heat by the handlers.

LOCHINVAR AND REPORT—Were cast off at 9:45 to work on scattered birds in pines. Report was run alone from 9:45 to 10 without finding. Neither succeeded in scoring a point.

BONAIR AND GRACEFUL II.—Began at 10:11. After much searching about by both dogs, Graceful pointed a bevy in the open and was steady to shot. Next, she pointed some scattered birds, then moved on and flushed them. In the open and along the edge of pine woods, Graceful roaded and pointed, but failed to locate anything, Bonair was the better ranger. Up at 11:09.

HOPE'S BUD AND HEMPSTEAD BLOSSOM—Began their heat at 11:24. Bud, closely followed by Blossom, going down wind, ran into a bevy and Blossom dropped to wing. No points were made on the scattered birds. In the open the spectators flushed a bevy, which was followed. Blossom pointed the bevy in woods. She next pointed a bird. Blossom pointed at the edge of creek, then crossed over, roaded, and the bird flushed ahead of her. Up at 12:05. Both had good speed and range.

ROD'S SUE AND HOOSIER GIRL.—After lunch, at 1:43, they were started in an open field. Sue beat out her ground prettily and merrily. Girl had a narrow range and a pottery way of working. Girl flushed a bevy. She next false pointed. Sue made two points on single birds and one to which nothing was found. Girl flushed twice and made one false point. Up at 2:05.

HAMLET AND BRIGHTON CLIP—Began at 2:10. Soon Hamlet pointed a bevy in weeds, and was steady to shot. Another bevy flushed wild about 80yds. away in the same field. In pines, on the scattered birds, Clip made two points on single birds. She showed timidity in her work. Hallam handled skillfully and quietly. Hamlet was the bolder and wider ranger. Clip could do fine work on birds, but was lacking in confidence.

LOCHINVAR was run alone, beginning at 2:30, to test his abilities on scattered birds. He made two points, but showed a disposition to potter now and then. His range was ordinary. Up at 2:39.

*Third Series.*

ROD'S SUE AND HAMLET—Were started at 3:18 to comply with the rule which requires the first and second to be run together. Sue showed far superior range and judgment. Hamlet pointed a bevy which Sue had caught scent of by good ranging. Hamlet came in by luck, so he caught scent and pointed the bevy. Sue, close behind, pointed or backed. Both were steady to shot. In woods, Sue pointed a bird. Hamlet pointed and there were three birds to his point. Up at 3:38, and the judges announced Rod's Sue first, Hamlet second, and Dot Ranger third.

The prizes were $100 to first, $200 to second and $100 to third. Ten dollars forfeit, $10 additional to fill.

The judging was quite good and gave satisfaction to the majority.

### The All-Age Stake.

There were twenty starters, many of them famous in the history of field trial competition.

The winner of first, Harry C., is well known. He is a well built dog, an excellent performer and runs uniformlly well.

Lora, the winner of second, is a worker of rare merit, and outclassed Harry in every respect, save the one feature of working on scattered birds in which they both excelled. She beats out her ground with admirable judgment and marks the flight of birds as accurately and eagerly as could the most keen eyed enthusiast. In quality of work she also surpassed Harry by far.

Miss Ruby, third, also is an excellent performer, but she did not display the range and speed of the others. Her work, however, was very uniform and reliable.

Following is the order of running:

Avent & Thayer Kennels' black, white and tan bitch Bettye S. (Roderigo—Bo Peep), J. M. Avent, handler,

*with*

Geo. T. Leach's black, white and tan dog Guy (Gladstone Boy—Lady.

---

Heywood-Lonsdale's liver and white pointer dog Prawn (Crab—Polly Peachem), A. Cameron, handler,

*with*

Greenfield Hill Kennels' black, white and tan dog Harry C (Roderigo—Countess House), S. C. Bradley, handler.

---

Chas. Heath's black and white bitch Lena (Prince Lucifer—Juneau), Wm. Tell Mitchell, handler,

*with*

P. Lorillard Jr.'s lemon and white dog Count Anteo (Count Noble—Gladstone Girl), C. Tucker, handler.

---

Glenmore Kennels' Irish setter bitch Coleraine (Fingal III.—Aveline), W. T. Irwin, handler,

*with*

A Dill's black, white and tan dog Count Gladstone (Count Noble—Ruby's Girl), John White, handler.

---

C. C. M. Hunt's lemon and white pointer dog Grouse (Mainspring—Swain's Fly), S. C. Bradley, handler,

*with*

Avent & Thayer Kennels' black, white and tan dog Rupert (Roderigo—Bo-Peep), J. M. Avent, handler.

---

C. C. Cushing's liver and white pointer dog Jupiter (Tom Bohne—Belle C.), Major J. R. Purcell, handler,

*with*

Hempstead Farm Kennels' liver and white pointer dog Hempstead Duke (Naso of Kippen—Lass of Bow), A. Cameron, handler.

---

P. Lorillard, Jr.'s lemon and white bitch Miss Ruby (Gladstone's Boy—Ruby D.), C. Tucker, handler,

*with*

Chas. Heath's black, white and tan dog Pete (Prince Lucifer—Junean), Wm. Tell Mitchell, handler.

---

Glenmore Kennels' Irish setter dog Finglas (Fingal III.—Aveline), W. T. Irwin, handler,

*with*

C. T. Thompson's Irish setter dog Merlin (Grab—Flora), J. White, handler.

---

T. G. Davey's black, white and tan dog Brighton Tobe (Locksley—Leddersdale II.), T. Hallam, handler,

*with*

P. Lorillard, Jr.'s white and liver bitch Antevolo (Count Noble—Trinket II.), C. Tucker, handler.

---

Major J. R. Purcell's liver and white pointer dog Heineken (Flockfinder—Ion), owner, handler,

*with*

P. Lorillard, Jr.'s black, white and tan bitch Lora (Gladstone's Boy—Ruby D.), C. Tucker, handler.

Mr. Lorillard's dogs distinguished themselves most favorably, showing up in strong form in nearly every detail of field work. He is to be congratulated on his pluckiness in competing year after year till he developed a string of strong competitors. He is a good loser and a good winner. There can not be too many like him in field trial matters.

WEDNESDAY.

A pleasanter day could not be well imagined, although a trifle too warm through the midday hours. There were birds enough for field trial purposes. Messrs. Avent and Tucker gave the field trial party a lunch, one of the lunches which is excellent in itself, and doubly so by contrast with the meagre and slovenly-served lunches of the preceding days. There were two stuffed roast turkeys, cooked to perfection and served hot, cranberry sauce, roast pig, good bread, butter and crackers, pickles, eggs, cake and pies galore, and excellent hot coffee. It was neatly spread and was served with politeness. It was not furnished by the Bellevue Hotel. Now as to the contrast of previous days. The lunches were largely dry bread ham or beef sandwiches, the meat and bread was cut with a sharp knife and a steady hand, making a morsel of most wonderful thinness, yet tough and surviving. Some cheap sardines, on some days, reinforced the zephyr sandwiches, and the happy guest had a choice between water or cheap beer to drink, coffee being too much to expect when guests are paying from $2.50 to $3 per day at a country hotel largely devoted to cold draughts of wind and perpetual inconvenience.

*First Series.*

No brilliant work was done in this series. There was a great deal that was commonplace and some which was poor.

BETTYE S. AND GUY—Started at 9:15 and ran 33m. They took a wide cast. Bettye was close on to a bevy when Guy ran into it in the open field and flushed it. Bettye dropped to wing. In woods on scattered birds each pointed. Bettye flushed a bird. In sedge, Bettye pointed; nothing found. Bettye dropped to point on a bevy in sedge. Guy flushed an outlying single and dropped. In the open, Bettye made a good point and Guy backed. Steady to shot. Neither did well considering the opportunities. Each ranged well, Guy the more earnest in seeking birds and beating out the likely covers with the better judgment. Bettye made the better work on birds.

PRAWN AND HARRY C. began at 8:53 and ran twenty-six minutes. Harry took a long cast up a stubble field and pointed well. Prawn backed. No birds were found to the point, but when the dogs were sent on they roaded. Harry roaded from the stubble into pines and pointed the bevy, which probably ran from his point. Both were steady. Both ranged with judgment and at good speed, Harry the wider ranger. The work on birds, however, was small in quantity.

LENA AND COUNT ANTEO started at 10:21 and ran thirty minutes. Both made game and the bevy flushed wild on the other side of a fence. Lena made two good points on birds, one of which she wheeled into sharply and prettily. Antonio flushed twice carelessly and made one good point on scattered birds. He made a point in sedge and was backed; nothing found. He was the speedier and wider ranger.

COLERAINE AND COUNT GLADSTONE were started at 10:58 and ran thirty-two minutes. Count went very fast from the start, too fast, in fact, for he was racing and not hunting. No dog can run at such racing speed and maintain it long. Count paid but little attention to the gun, ranging where he pleased, staying as long as he pleased, and working out such ground as he pleased. He was headstrong and disobedient, except when close to his handler. Coleraine ranged close at ordinary speed. Count was led on chain with studied slowness across a large field, the handlers being brought together, Coleraine working in the meantime. It appeared to rest Count a good deal.

GROUSE AND RUPERT began at 12:28 and ran thirty-six minutes. In pines some work was done on a bevy, but the dogs were partially hidden in the thicket so that it was difficult to see what was done. As near as we could determine Grouse pointed the bevy and Rupert flushed a bird. On the scattered birds Rupert false pointed. Grouse on bare ground flushed scattered birds. Grouse false-pointed and was backed. Both ranged well at good speed. The work on birds was poor.

JUPITER AND HEMPSTEAD DUKE—Started at 12:07. Down 24 minutes. There was a lot of ordinary work done on scattered birds during the heat, the circumstances all favoring quantity. Duke made a good point on a bevy and was

O. M. Ball, E. S. Knowles, Pres. Geo. W. Roraback, Mr. Owens with Ruby.

WESTERN MASSACHUSETTS FOX CLUB HUNT.

promptly backed by Jupiter. Both were steady to shot. In weeds in an orchard, Jupiter pointed a bevy and was backed. Both steady to shot. Jupiter next made two flushes on singles, then flushed scattered birds. Jupiter pointed and the bird was flushed after the dogs moved on. Duke made three more good points, one of which was on a bevy. Jupiter made one more point which was on a single, but which flushed as he moved on to locate better, and being brought up to back, pointed the bevy with Duke. The latter was much the better ranger. He was over fond of backing and would back Jupiter roading.

The party then went to lunch.

MISS RUBY AND PETE—Began at 1:58 and ran 32 minutes. A bevy flushed near both dogs, but no one could see which dog was in fault, if either was. Miss pointed a bevy in pines. Moved on. Pete pointed, and at the same time about fifteen yards further on, Miss pointed the bird. Pete in pines pointed; nothing found. Both backed well. Miss ranged the wider and kept up her fling more regularly.

FINGLAS AND MERLIN.—Began at 2:32 and ran 29 minutes on excellent ground, but neither would go much out of gun shot. No birds were found.

BRIGHTON TOBE AND ANTEVOLO—Commenced at 3:13 and ran 29 minutes. Antevolo flushed a bevy. It was followed Tobe was roading on this bevy in sedge in pines and Tucker accidentally flushed it. Antevolo showed some wildness and was headstrong. Tobe made game and pointed on bare wheat; nothing found. Antevolo flushed a bird. Antevolo pointed a bevy in a thicket and Tobe backed. Antevolo was getting steadier. Both were steady to shot. Both ranged well, although irregularly betimes, Antevolo the wider.

HEINEKEN AND LORA—Were started at 3:46; down 30m. A single was flushed before the heat began. Lora saw it. When cast off she cunningly followed directly in its course. She went into a stubble and pointed a bevy which was scattered about feeding. When cast off Lora followed directly in the course of the scattered birds and disappeared in a hollow. As the judges rode up a bevy was seen to leave the hollow. Lora when seen was cautiously drawing to where it had flushed from, it appearing that she had been pointing and that the bevy flushed wild. Lora when sent on followed the course of the birds into the woods. She got a point on them. She marks the flight of birds very accurately, and thus by her intelligence has a great advantage over every dog in this stake. Lora found and pointed a bevy. Heineken backed well. Lora was much the better pointer and was quite skillful in all the details of the competition.

GROUSE AND RUPERT—Were put down at 4:25 and ran 6m. Grouse soon pointed a bevy, which flushed wild. Rupert

J. M. Freeman. Royal Robinson. W. A. Thompson.

JUDGES AT AMERICAN FIELD TRIALS CLUB TRIALS.

made three good points on the scattered birds. Each backed well. Grouse made one point which was birdless.

This ended the day's work.

THURSDAY.

No pleasanter weather could be desired, though it was too warm for such dogs as were not in first class condition or which ran too hard for their endurance.

*Second Series.*

Too many dogs were taken into this series. About four were all that were necessary to continue the running on a proper grasp of the situation. One of the handlers referred to this series as a "consolation stake." There is positively nothing gained by trying to toady to owners and handlers, if such were the intention. If it was done as a matter of deliberate judgment, it did not show a keen discrimination. Some of the dogs taken into this series showed no merit whatever equal to the occasion. It costs the owner of a poor dog quite as much for team hire as it does the owner of a good dog. It is much better to prune the matter according to its merits.

JUPITER AND RUPERT started at 9:17. Rupert was much the better and wider ranger of the two, though he was a bit irregular and faulty in his casts and he also seemed a bit stale. In an open field he flushed a single bird of a bevy, then he stopped to wing and pointed. Jupiter backed well. On the scattered birds Jupiter flushed. He showed a disposition to point too often. He flushed a bevy and the heat ended soon thereafter. Down 15m.

COUNT GLADSTONE AND ANTEVOLO—Began at 9:40 and ran 17m. Count rushed out of sight from the beginning and but one or two glimpses of him were caught in the first ten minutes. He was unmanageable, showed no disposition to work to the gun and was simply racing, not hunting. His speed was great, but it was such as ends any dog's efforts in about an hour. Antevolo pointed a bevy near the edge of a pine thicket, she being up-wind of it. Antevolo followed Count much of the time, and showed some wildness. On the scattered birds Antevolo dropped to a point on a single, which flushed wild. Count could not be kept under control to work on single birds, he breaking away and keeping out of sight.

HARRY C. AND BRIGHTON TOBE—Were cast off at 10:15 and worked fifteen minutes. The judges flushed a bevy. Harry pointed two birds and was steady to shot. Tobe pointed scattered birds and Harry, called in, pointed or backed. Tobe, sent on, pointed a single. Harry showed superiority in every way. Tobe was a bit slow on birds, and showed an inclination to potter sometimes.

LORA AND BETTYE S.—Were started at 10:33. Down 33m. Lora located and pointed a bevy skillfully in the open field, doing it prettily and accurately, she going down wind on one side of it, then catching scent and drawing quickly to it. Bettye was lost for some minutes, and when found the indications were that she had been in the woods working on the scattered birds of Lora's bevy, Lora having been stopped till Bettye was found. The scattered birds could not be found, though one or two were flushed by the spectators. Bettye false pointed. Lora showed superiority in every respect.

LENA AND MISS RUBY—Commenced at 11:10. Down 10m. Lena soon dropped in sedge to a point on a single bird, was steady to shot and retrieved the birds nicely. In the open, Ruby pointed a bevy and was backed; a good, clean piece of work. Both were steady to shot and wing. Neither showed wide range or more than ordinary pace.

COUNT ANTEO AND HEMPSTEAD DUKE—Began at 11:27 and were run 31m. Duke dropped to a point on a bevy in the open. Count in the open near edge of pines, false pointed and Duke backed promptly. Duke flushed a bevy in the open. The scattered birds were followed. Duke pointed; Count backed to order; nothing found. Duke pointed to one side near the edge of pines. He was across wind from it and did not have the bevy located. Count passed close to it. He made a poor showing of point work, considering his opportunities. He was the better ranger. Duke was given to a fondness for pointing, and would make game around the likely corners by sight, so that, with making game also by scent, he appeared to be making game a large part of the time.

The party went to lunch and partook of some good coffee and the sandwich which altereth not, though it is a toil and a spin to eat it. The lunch had one redeeming fault, however, in that it was the last one.

*Third Series.*

HARRY C. AND LORA—Were started at 1:47. A bevy was seen to flush ahead near the dogs, but whether or not the dogs were in fault could not be determined. Sent on, Lora followed in the course of the scattered birds. Lora pointed a single. Harry next pointed a single and was steady to shot. Lora backed. Harry made two points and a flush and Lora pointed a single. Lora pointed a bevy in weeds. Lora made two points on singles, and Harry made two also. At 2:20 the judges ordered the dogs up and held a consultation which lasted thirteen minutes. Everything indicated that this was the heat which determined first and second winners, and everything indicated that the judges were not unanimous in their decisions. The dogs were again sent on. Lora soon made a long cast, skirted along the edge of woods, steadied and shortened pace as she turned into the woods in a manner which indicated that she was drawing on birds. Dr. Jarvis and myself galloped to where she disappeared, and as we were about turning into the woods where Lora disappeared I heard a bevy flush in the woods. When we got into the woods Lora was working across a hollow as if following marked birds. Soon afterward Harry C. came in and made game and pointed in the woods, probably on the footscent of the bevy which I had heard flush. Up at 2:55. Lora showed the better range, she working outside of Harry in looking for bevies. She beat out her ground with excellent judgment. She showed most excellent ability in finding and locating bevies. On scattered birds she was sharp quick and accurate, yet in this respect she had little advantage over Harry. She remained out at her work, beat out her ground with judgment and was quite easily handled. Harry showed excellent qualities and performed well, but he was not in Lora's class.

MISS RUBY AND HEMPSTEAD DUKE began at 3:17. Miss soon pointed a bevy in the open. Duke 200yds. away pointed and nothing was found to his point. On the scattered birds Duke picked up several good points in woods, but he was too ready to point on conjectures. Miss also did some good work on the scattered birds. Miss was the wider and better ranger, as the class of her work on birds was superior. The heat ended at 3:27.

The judges held a consultation and announced Harry C. first, Lora second, and Miss Ruby third. The prizes were $400, $200, and $100 respectively. Forfeit $10, $20 additional to fill.

The stake was quite well judged, so far as picking out the three best dogs are concerned, but they were not placed correctly according to their running. Lora was a higher class performer, and in the quantity of work done she also excelled. In a conversation with Mr. Coster, one of the judges, he assured me that Lora was his choice for first, but that he had been overruled by his associates, therefore the decision was not unanimous. Dr. Jarvis did not, I am quite sure, hear the last bevy flush in the heat between Lora and Harry, but had she found none, or flushed one or pointed it, she had done good enough work and enough of it to excel all the others.

### The Members' Stake.

This stake was run on Thursday, Mr. John N. Lewis, of Ramsey, N. J., being judge. Mr. Lewis is a famous breaker and field trial handler.

It seemed as if the members had some secret methods of handling which they did not desire to become public property, or their dogs were dark horses, since they went aside by themselves and gave the press representatives no encouragement to follow the stake. They did not inform said representatives that they could not go, but they assumed an air of modesty and exclusiveness which implied that they would enjoy their stake better without any spectators, so the press voluntarily denied itself the pleasure of seeing much interesting competition.

As to the competition, some of the rumors were that it was good, and some said that it might have been better, one or the other of which may be accepted as being true and part of the record. Also, it is said that some of the members were satisfied with the results, and some others were more so than some others, which all may be taken in evidence that the stake was interesting. All the history of the stake is hearsay and the above is the summary of it. The following is the order of running:

*First Series.*

S. Murray Mitchell's lemon and white dog Sandy Gladstone (Breeze Gladstone—Delaware), F. G. Taylor, handler,

*with*

Walter B. Smith's black, white and tan dog Gath (Gath's Joy—Dart), owner, handler.

---

Pennsylvania Kennels' black, white and tan bitch Nanon (Ben Hill—Mary), F. G. Taylor, handler,

WESTERN MASSACHUSETTS FOX CLUB HUNT

Pres. Roraback and Party.

*with*

Walter B. Smith's orange and white dog Ben Hur Franklin (Ike—Leda), owner, handler.

---

Pennsylvania Kennels' black, white and tan dog Ben Hur of Riverview (Ben Hill—Zoe W.), F. G. Taylor, handler,

*with*

Fairmount Kennels' lemon and white pointer dog Promotion (Lord Graphic—Belle Bishop).

*Second Series.*

Nanon with Ben Hur of Riverview.

Nanon with Promotion.

First, Nanon; second, Ben Hur of Riverview; third, Ben Hur Franklin and Promotion. Prizes, $30, $20 and $10, first, second and third respectively. Ten dollars forfeit and $10 additional to fill.

### Brooklyn Show Awards.

Breeze Gladstone won first prize in the challenge class at Brooklyn, also won the National Greyhound Club's medal for the best dog, also the Polhemus cup for the best dog or bitch.

## ROBINS ISLAND FIELD TRIALS.

ON Friday, Dec. 2, the Robins Island Club resumed the annual running of their field trials. Since the organization of the club, some eleven or twelve years ago, there have been but two omissions. The first occurred when the night before the trials were to commence the club house caught fire. The next omission was last year, principally owing to the fact that two of the most enthusiastic workers at the field trials were engaged in business matters, and two others equally as energetic in the cause were confined to the house by illness.

George W. Green, the secretary of the club, is one of the most enthusiastic of the shooting men belonging to the club. Indeed, in this regard the club has been most fortunate in its selections. I can recall five men in the short history of the club each of whom have done everything to advance the interests of the club. The first was the late Leander Waterbury, then the late Samuel B. Duryea, then W. H. Stanley, and now Geo. W. Green.

More progress has been made in the last two years than ever before. True, at times large numbers of live quail have been purchased and forwarded to the island. But this present season three kinds of game are to be found upon Robins Island, each of which kind furnishes capital sport to the shooting man. These are the native quail, the English pheasant and the English partridge. Each of the latter kind has thriven wonderfully in their new home, the pheasant perhaps the better of the two. Superintendent Glessing was for many years one of the game keepers for the Baron Rothschild on his estate some forty miles east of Paris. Here the breeding of pheasants was most largely gone into. On this estate and the adjoining one, owned by Baron Rothschild's brother, some 8,000 birds were successfully raised each season. So that Glessing came to Robins Island with all the knowledge and experience necessary to run with success the pheasantry started by the club. Last year nearly 200 birds were raised and had it not been for the crow black birds the number would have been doubled. It was found, but not until a good many chicks had been killed, that these birds were carrying them off one after another in hawk-like fashion. The crow blackbirds breeding upon the island, it required some shooting to exterminate them. It was done, however, and Mr. Glessing looks forward with confidence to a great result in pheasants the coming year. A pheasant house has been constructed, divided into three compartments. Each has a yard attached some 30ft. long by 10ft. wide. Each of these compartments has running in it nine hens and a cock. When the writer examined these last Saturday they appeared to be in full vigor and in the very pink of condition, the plumage glistening in the sun like burnished metals. Already this season seventy-five pheasants have been shot by visiting members and their friends and the writer can attest that a large number are still roaming the grounds at will.

The pheasant is a warv fellow, ever on the alert and apt to rise away ahead of dog or man. When flushed he rises high in air and goes off uttering a peculiar *kluk-kluk-kluk*, which is more like the hoarse call of the crow blackbird (purple grackle) in matiug time, than anything I ever heard. Quite a number were put up during the trials. Of these but one lay to the dogs, and he was a beauty. Singular to say, the tail feathers of this cock bird were a pure white color, a marked contrast to the deep, invisible green of the bird's head and neck.

The English partridges have not done so well. They prefer the open fields and have become the prey of the marauding hawks which it appears to be impossible to rid the island of. They are shot at every opportunity, are caught in traps set upon poles in dozens of places, yet they still come. As fast as one is killed another takes its place. The rascals no doubt in migrating find what a "butcher's hall" the game of the island makes for them, and they naturally stop to enjoy the meat. Dozens and dozens are killed each year, and to that extent are the quail and the partridge spared.

The departure for the island was made on Thursday afternoon. Vague rumors of a heavy snowstorm at the eastern end were floating around, but as the train was ready at Long Island City the few present concluded to go on as far as Robins Island, at all events. The party was but four members—Wellington, Green and Austen and your correspondent.

Cutchogue reached half an hour later, it was found that winter reigned supreme. The snow was piled in long drifts and in depths varying from a foot and a half to four feet. Farmers had to turn out and shovel the roads clear the day before, as they were simply impassable. To add to the discomfort a heavy snow squall set in, blinding for a short time in its intensity. The station master was jocose. He saluted the party with "Had company here last night, your Mr. Swan (a member of the club) got here to take yesterday afternoon's train. After he got here he couldn't get away to train, no vehicle, couldn't walk. Passed the night in the station. Got off at 11 this morning; funny wasn't it?" Perhaps it was to him, but I would much like to know what Alden S. Swan had to say about it. New Suffolk duly reached after numerous delays, for riding up and down little short hills and hollows may be provocation of good digestion, but it is fatal to comfort. The sail from the main land was soon accomplished. A stiff wind making double reefs necessary saves time immensely, especially if the breeze be fair, which it was on the present occasion. The wharf reached, but little time was lost in the transfer of baggage to the club house.

After supper Secretary Green handed in the following entries:

### The Puppy Stake.

W. L. Wellington's orange and white Countess (Tardy Jack—Wanda).
Dr. S. Fleet Speir's black and white Prince of Wales (Duryea's Ned—Princess Juno).
G. W. Green's orange and white Buff (Roy—Queen Gladstone).
E. H. Litchfield's black and tan Douglass (Argus—Laura).
L. H. Bullard's orange belton Gluck (pedigree not given).

The order of running was drawn:
Prince of Wales against Buff.
Countess against Douglass.
Gluck a bye.

### All-Aged Stakes.

Chauncey Marshall's black setter Topsy.
L. H. Bullard's orange and white Bessie.
Dr. S. Fleet Speir's orange and white Dixie.
Dr. S. Fleet Speir's orange and white Joe.
Dr. S. Fleet Speir's Washington.
W. Flint's Frank.
G. W. Green's liver-colored setter Mack.
G. W. Green's blue belton setter Belton.

Dr. Speir's Washington, on account of sickness, and Flint's Frank, owing to lack of work, withdrawn. This left six to run. The judges were to use simply their own judgment and to be hampered by no given rules, the best dog in their judgment to win. Unfortunately the judges failed to come, with one exception. Judge Calvin E. Pratt, of the U. S. Supreme Court, sent a letter of regret, stating that it was impossible for him to come the weather was so against him. Mr. McLaughlin was detained upon urgent business. Mr. C. F. Lewis could not come, so no one of the old judges were on hand save Mr. Jacob Pentz, the judging by consent of all being left in his hands. That gentleman stated that, while he appreciated the compliment, it was preferable that some one should join him in the work. Mr. Austen kindly consented to assist in every way possible.

The drawing for the order of running:
Mack against Dixie.
Belton against Bessie.
Topsy against Joe.

### FRIDAY.

After a delightful breakfast Friday morning the first brace of the Puppy Stake was called.

PRINCE OF WALES AND BUFF.—They were cast off at edge of woods back of club house and hauled over the open pasture lots where in 1878 Charles T. Raymond's Lemonade made such a striking feature at that year's Eastern Field Trial Club's meeting. Prince showed much the more style in going and was faster in spots. Buff ran with an easy manner but not in handsome fashion, for he goes with head and tail both down. After the opening spin a turn was made to the bush lined bluff at west of island. Buff soon flushed a single outlying bird which in turn started a full bevy some yards ahead. Both dogs steady to wing. Moving on a grand cock pheasant flushed wild away ahead of dogs, his plumage flashing in the sunlight as jewel encrusted. Dogs steady. Soon a single flushed wild ahead of Prince. Buff so far proved the better ranging. Out to the marsh and both point. Nothing found. Then along south to ice pond. Prince pointed. A big bevy flushed wild. Glessing shot and killed. Prince broke at the shot and chased birds. Tried for a retrieve. Neither dog did it in proper style, the Prince almost refusing to fetch. On the way to the dead quail Buff flushed a cock pheasant. From here the island was crossed to east, hunting along past old feed house and the new pheasantry to the rye stubble beyond. In the blackberry cane lot almost at the north shore, Wales threw up his head and began roading. Buff came along, took the scent and roaded also. A big bevy of birds flushed to side of dogs, both steady to wing. The birds followed. Prince drew up in a bit of wire grass and stood for a second or so, then went on again. At the left away off another big bevy flushed wild and sought the cover of the scrub and oak timber. This last lot having been plainly marked down, were followed. Location soon reached. Both dogs making game simultaneously, so both moved along, the birds flushed wild ahead of them, Buff unsteady to wing. Wales comes in to his handler at the "whirr" of the birds. This patch of woods was thoroughly hunted without result. Small wonder. The snow was a foot deep in the lightest thickness. It was a blanket crushing down the tangles of weeds almost to the ground, but leaving hundreds of places with room enough for a bevy of birds to find harbor under the mass of snow and weeds. A turn to the north and another bevy flushed wild all of fifty yards away. Working in that direction a single bird flushed in front of Buff. That dog commenced roading again, but was checked by handler. The bird got up wild at the sound of the human voice. Another single flushed in front of Wales. Buff then got a point. Green put up the bird, Buff steady to wing. Dogs taken up. Time down just two hours.

COUNTESS AND DOUGLASS.—Instantly taken from the following wagon and started from where the others were taken up. Both went off speedily, ranging out well and quartering their ground nicely, Douglass especially going with a good deal of style. He is a handsome Gordon and showed beautifully against the snow. The dogs had been worked south and then west to the open. Douglass commenced roading, when fifty rods away a cock pheasant flushed wild. Douglass dropped to wing. Countess coming up at that moment caught sight of the black dog and backed capitally. Then both dogs made game and did some pretty roading side by side, Countess working off to right, Douglass to left. Both stopped and pointed. A crippled bird was in front of Douglass. In front of Countess a full bevy was flushed. Shot at and a kill. Neither dog retrieved well, but Countess's work the better. On again toward the old clay pit, Douglass pointed; handler claimed a point, but after a few seconds' stop he roaded along again. Then Countess got a point. Douglass came up and backed the bitch handsomely. Handlers put up a big bevy. Moving over to edge of bluff, Douglass drew to a point, Countess backing him. While standing a cock pheasant flushed itself ahead of the dogs; both steady. Then Douglass flushed a bevy, followed by a flush for Countess on a single. Then Countess got a point in a few seconds. Douglass called in for a back, refused, walking in and taking scent alongside of the standing Countess, but only then stopping to order of handler. Bird flushed by handler. Dogs taken up, time down 1h. 10m. Time, 12:30 P. M.

It was then decided to go to club house for lunch and afterward commence with the first brace of the All-Aged Stake, leaving the bye puppy to run off the next morning. At the club house a complete change of raiment was necessary, every man being wet through to the hips. Rubber boots proved but little protection, for when floundering through snow drifts the snow dropped in over the tops, giving one's feet an ice bath at every mile of travel. At half-past 2 another start was made.

MACK AND DIXIE.—The usual course followed, a spin of some minutes over the open pastures to west and then toward the little bluff, which with its cover was ever a favorite spot for hiding birds. At a little bit of rye field, Dixie running fast down wind, slackened his speed, threw up his head, and before he could draw up away whirled a startled bevy to closer cover. Moving on, a single outlying bird jumped in front of Dixie. Moving after the bevy toward the salt marsh Dixie flushed a single. Both dogs were going fast and well, Dixie showing the most style. Out to the big sedge grass meadow back from the sands to the bluff it hunted along, the hunters availing themselves of the old railrad bed. At very point of bluff, Mack, running fast, wheeled almost round and stopped fast, his body almost bent double. Dixie, who had been off hunting a wounded quail, called with difficulty in to back, came up, refused the back and went up to Mack, taking the scent himself. Green flushed the bird, killed with a capital second barrel as it flushed, Dixie unsteady to shot. Mack located dead bird, but refused to retrieve it. Moving past the break in the bluff, but still going south, Dixie drew to a point. Mack called in for a back did so, but in faint manner. Green jumped from the height of the bluff down on the tangle of sand-hidden bushes. Out bounded a big bunny, shot at and missed. Both dogs steady to fur and to shot. Still going south Dixie on the way flushed a single. Then he drew to a point; point claimed and allowed; nothing found. He moved on a few yards, jumped a half dozen times and picked up a crippled bird, Dixie hard to manage and headstrong. Quite a tramp was had before birds were found again. Then Mack got the point, bird flushed wild ahead of him, dog steady to wing. Then Dixie pointed, Mack backed handsomely. Bird flushed by Green, shot at. At report Dixie broke shot and chased the flying bird. Mack steady as a clock. Dogs ordered up. Time 3:35, having been run 1h. 5m.

BELTON AND BESSIE —Turned down where the others had been taken up without any delay save that of taking them from the accompanying wagon. They were hunted easterly along the edge of the timber which covers all the center of the island from west to east. Neither dog ranged off well, for the snow was in drifts every rod or so, in which the dogs sank up to their bellies at every leap. Rounding a little promontory of scrub oak which jutted out into the open, Belton drew suddenly into a most beautiful point. Bessie also stopped. It was a pretty picture and a "Kodaker" should have been present. A big bevy flushed wild at approach of men. Austin and Green each fired a single shot. The result was astonishing. The birds jumped, bunched, and no less than five birds fell. One was but wing-tipped and it started off running with head up as if untouched. This was too much for Belton. In spite of the cautions of his owner, in he dashed and never stopped his run until he had the bird in his mouth. He brought it in. Then Bessie retrieved but not in best fashion. Then Belton brought in one in similar manner. Bessie had been a little unsteady as the birds rose, but checked herself to order of handler. These birds were followed over the hills. A long hunt ensued before the birds were found again. The ground was thoroughly hunted along the 50ft. high east bluff toward the south. At the deep cut known as the "Ravine" both dogs straightened out and moved ahead slowly.

They were just moving, that was all, when a single bird flushed not a yard ahead of them. In a second the air was full of quail. They got up on both sides of the dogs, in front of the handlers, and seemingly from everywhere. At least 40 birds in the bunch. Green shot and killed. Bessie, sent in, retrieved the dead birds in most excellent style. Then, moving on, Bestie soon drew to a point. Belton backed staunchly. The bitch moved on a few yards and stopped again. Belton stopped as she did. Austin flushed the bird. Both dogs steady. Moving forward slowly, both dogs drawing, a single bird flushed wild ahead of them. Then the judges and handlers flushed a half-dozen birds. All those flushed had flown in direct line toward South Point. They could not be found, and a move was made toward the west. As the party walked along a bevy of birds flushed wild to the rear of the handlers. A moment after a cock pheasant flushed away ahead of the dogs. At this time all hands got in the wagon and were driven to the spot known as the sink hole, where, as grain had been reaped last summer, it was thought birds would be found. Reaching there, the dogs were cast off once again. Circling the spot, it was drawn blank. As the dogs came back Bessie pointed stiff, as did also Belton, within 50ft. of the waiting wagon. Austin flushed the bird, which proved to be a beautiful cock pheasant. It was not shot at. Dogs ordered up. Time, 4:45. Time down, 1h. 10m.

### SATURDAY.

Gluck had the bye. An early start was made this morning, for 9 o'clock saw Gluck and his running mate, Buff cast off at the usual starting place. Gluck is quite puppy-like in manner, seeming more disposed at the start to follow Buff than to hunt out for himself. Nothing was found in the pasture lots to east of club house. These were hunted carefully along the edge of the woods easterly. Then along the edge of the briar lot north to the beach. Then next along the beach to the bluff so often mentioned. Down the bluff and across to the marsh beyond. Glesssing claimed point for Gluck. Judge allowed the claim and ordered the bird put up; nothing found. Back from the bluff to the hills. Gluck flushed a quail directly in front of him, then stopped and pointed staunchly where the bird got up from. He then got a good stiff point and stood nicely. A big bevy of birds flushed from under his nose. Gluck steady to wing. Birds followed. A single flushed in front of Gluck but some distance ahead of him. Shot at and missed. Gluck steady to shot. The spot on the sandspit where the birds were thought to be thoroughly hunted out but nothing found. Gluck ranged well, quartered his ground well, but was not under good control. Back to the bluff again. At its edge a cottontail bounced out in front of Gluck. This was too much. Away went hare, away went dog. Back the dog would not come despite the warnings or the coaxings of his handler. The dog was wild with excitement. Ordered up as he had no chance of winning. The last of the all-aged braces put down at once.

TOPSY AND JOE.—Feeling that the last marked down birds were out in the sedge of bushes of the sand spit, the dogs were at once cast off there, Topsy ranging well and going fast ran up a single. She ran completely to the end of the marsh meadow, then called back to more carefully hunt her ground. Green, Glessing and Austin had crossed the marsh and stood at the lower end of the sedge grass. Topsy came along and wheeled to a point in front of them. Joe coming up on the other side also pointed. Austin flushed the birds and one shot followed. Away went both dogs after the birds. It was exciting but faulty. Back to the rolling land east of bluff. At a little patch of bayberry bushes out flushed wild a brace of English partridges and a brace of American quail. The partridges flew a mile. The quail dropped to cover after a short flight. Moving on, Topsy got another point in less time than it takes to write this paragraph. The birds flushed wild. Joe broke again. Topsy steady only to command of handler. Afterward a single bird flushed. Topsy made a couple of jumps but came back. Moving forward Joe established a point at the crest of one of the little hills. Topsy called in to back, did so for a second, then left her back, ran around and ahead of Joe for some distance, wheeled around and pointed the birds, the dogs facing one another, but some yards apart. Birds flushed to order. Shot at, one killed. At the report away went both dogs again like two demons in as mad a canine race as was ever seen. Coming at last, Topsy retrieved the dead bird in good style. The work of the dogs was excellent, but they were both simply crazy with excitement. Ordered up. Time down, 45m.

*Summary.*

Puppy Stakes—First, W. L. Wellington's Countess; second, E. H. Litchfield's Douglass.

All-Aged Stakes—First, George W. Green's Mack; second, L. H. Bullard's Bessie.

Thus ends the Robins Island Field Trials of 1892.

PECONIC.

## CANADIAN KENNEL CLUB AFFAIRS.

HAMILTON, Can., Nov. 30.—*Editor Forest and Stream:* I beg to inform you that the sub-committee lately appointed by the executive committee of the Canadian Kennel Club to investigate certain charges preferred by Mr. George Bell, of Toronto, against Dr. Wesley Mills, of Montreal, has decided to go no further with its work for the present, as Dr. Mills, by virtue of his office as president of the Canadian Kennel Club, has declared the meeting of the executive committee at which the sub-committee was appointed to be illegal and unconstitutional, and has ordered the members of the sub-committee to refrain from investigating the charges. The annexed letter from Dr. Mills will explain itself. A. D. STEWART, Chairman Sub-Committee.

COPY.

COTE ST. ANTOINE, Montreal, Nov. 26.—*A. D. Stewart, Esq.:* I have your letter of Nov. 24. By Article 2, Sec. I. of the by-laws of the C. K. C. it is provided that "two weeks' notice of such meeting (of the executive committee) shall be given to every member of the committee." Such two weeks' notice was not given of the meeting of the executive, therefore that meeting was unconstitutional, and the affairs of the club are just where they were before it was held. Those who are so anxious to manufacture a case against Dr. Mills must therefore just exercise a little patience.

WESLEY MILLS, M.D., Pres. C. K. C.

Our New England readers will be pained to learn of the death of Mr. Chas. G. Wheelock, who at one time owned the Arlington Heights Kennels of St. Bernards. Some time since Mr. Wheelock took up his residence in California. It seems on the 15th of last month he was driving with Mr. J. Irving Crowell when he was thrown from the buggy and died on the 23d from the injuries he received. Mr. Wheelock seems to have made himself popular in his new home, and his sudden taking off will be a shock to his many friends in the East. Mr. Wheelock at one time owned such dogs as Scotch Bonivard, Home Rule, Hesperard, etc,

## COURSING.

### THE INTERSTATE MEETING AT MERCED.

[*Special Report.*]

MERCED, Cal., NOV. 17.—The fourth annual interstate coursing meeting was commenced on the Moran ranch, some seven or eight miles from Merced, Cal., on Tuesday last, Nov. 14. The day was beautifully fine for coursing purposes and the dogs were of the very best description, the soil being of a sandy nature, making it perfectly safe for dogs to travel over. The fact that but one dog was only injured to the extent of a toenail, shows the nature of the ground over which the coursing was held. The game, too, was plentiful, and here it must be said that they were, without exception, the greatest travelers that have ever been met with by any coursing club on the celebrated plain. Their extraordinary performances of Tuesday and Wednesday last will ever stamp them as the greatest heart breakers that hounds ever met with in any quarter of the globe. Tommy Hall's (the Merced coursing enthusiast) opinion of them, when questioned as to the hares likely to be found on the new grounds, was well sustained—"Hares!" said Tommy, "no, they're not hares, they're flying machines, and if you go down to the grounds any afternoon you will find them hard at work training. They know this meeting is coming off and Nancy Hanks can't have a shoe with one of them. I took Joe McAuliffe down there last week to freshen him up a bit, and slipped him and another dog after a little leveret I came across; I followed them for four or five miles and lost them; the other dog came back last night, and Joe McAuliffe and the little hare are up in Alaska now, hitting out for the North Pole. I tell you they're all Democrats this year; you can't stop 'em."

Tommy's opinion of this was fully borne out during the two days' coursing, for only five of them met death at the hands of their determined and swift pursuers.

There was a large crowd of spectators, male and female, in vehicles and on horseback.

On the eve of the coursing all the hotels in the solid looking little town were well filled, and of course "dog" was the only question debatable. The all-important ideas of free trade or protection were for the moment forgotten, and the probability or possibility of Mr. Watson's splendid imported greyhound and the other Eastern dog being able to get away with the California dogs seemed for the time to be the most important questions.

The Eastern dogs had many backers, especially Royal Crest; but the favorite with nearly all was the celebrated California dog Skyrocket, and yet in the very first course he was called to run he fell a comparatively easy prey to a dog that has not heretofore been looked upon as a flyer, and which in the very next course fell a much easier prey to Mr. Watson's handsome little bitch Dry Time.

On Tuesday morning the coursing field was reached after a pleasant ride of an hour about 9 o'clock, and immediately the field officers commenced to arrange for the day's sport Hon. Judge Pennie, of San Francisco, officiated as president of the meeting, and surely a more genial, whole-souled gentleman could not well be chosen. Mr. William Faney, of Fresno, and the well-known Mr. John Grace, of San Francisco, did the judging, the former gentleman doing the business in the forenoon and the latter in the afternoon. Mr. J. R. Dickson had the management of the field, assisted by Messrs. Seal and Wormington, and most assuredly Mr. Dickson's job was no sinecure, for the crowd was difficult to manage; but after the first three or four courses he had the excited spectators well in hand and kept them so during the balance of the meeting. Mr. Wm. Halpin wielded the flag, and a more efficient flag steward it would be difficult to find. The slipping was intrusted to Mr. James Wren, of San Francisco, and surely no finer or better work was ever seen on a coursing field. In California this gentleman is looked upon as a slipper in the same light that Mr. Grace is looked upon as a judge—*nulla secundus.*

To describe accurately each course is simply impossible, as almost in every instance the hares led the dogs such merry dances that none but the judge and possibly the riders who were allowed to go to pick up the dogs could see the major portion of each course, hence the short description of each event.

*First Round.*

ROYAL CREST AND LOOKOUT were the two first called to slips, and on being placed in Mr. Wren's charge they were soon ready for their work. The slipper had moved out but a few yards, when a little black-eared jack sprang from his couch and instantly the dogs were put straight on his tracks and slipped. Both dogs went off with a great burst of speed, Royalty having a slight advantage. Both went somewhat wide in their run toward the game, Royal Crest pushing to the front, and after driving his game from its line of running by a strong wrench, another hare came in the way, which Lookout followed. The black dog, however, stuck to his game, and after a run of over two miles killed and of course won.

SHANNON BOY AND DUKE OF MILPITAS.—This was a runaway affair, Shannon Boy never having a show, the Duke running his game to earth at the end of a three-mile run.

BAN GIRL AND JOHN MITCHELL.—This pair were slipped to another traveler, but he was at first inclined to dodge a little. After Mitchell drove him from his line of running he then straightened out and made for some safe quarters that were only a few miles away, and after leading his pursuers a will-o'-the-wisp-like journey, made good his escape. Mitchell won.

BLACK JOE AND DEXTER.—The former, in consequence of distemper breaking out in his owner's kennels, did not appear, the latter ran a bye.

DEPEND ON ME AND PETER JACKSON.—On this pair being slipped, the former dog shot out strong for his game and led Peter to the hare by a length and eventually took a turn out of the flying game just as they were all disappearing from view. Here Peter put on a spurt, and as they again appeared in the distance the pugilist's namesake was in the lead. The judge eventually returned after a three-mile trip and gave the course to Depend On Me.

BLUESTONE AND AL FARRON.—The pair being slipped the former dog shot out of slips and led his opponent a couple of lengths, and in less than 500yds. reached his game, turned it and got another wrench from it; the hare then straightened out and evidently recollected that his presence was needed up in Shasta county somewhere, and made tracks accordingly. Al Farron, too, took it into his head that he would bid good bye to his opponent, which he did, but he never got near Mr. Jack, though he tried long enough, so Bluestone got the verdict.

WHITE JOE AND JOE MCAULIFFE.—McAuliffe never gave this dog even a look at the game and won a straight course, puss getting away.

MERCED CHIEF AND YOUNG JESSIE.—The former dog, though hitherto supposed to be of very little account, showed on this occasion that there was more in him than he ever got credit for from any of his former owners, and in a pretty course beat what was known to be a smart bitch.

REDWOOD CHIEF AND DAZZLE.—Immediately after these dogs were slipped the black dog Dazzle shot out to the front followed closely by his opponent. The black dog got the turn and the next, and then the Chief, from the distance, seemed to have command of things and worked his game well, and eventually the hare fell between them. Dazzle got the flag. At this decision, the owner of Chief kicked a bit.

PENNYROYAL AND WILLIAM O'BRIEN.—The latter dog, it may be said, did everything in this course.

PRESTO AND FITZ.—This was another one-sided course, Tom winning everything in a long run.

DAN C. AND GANE.—This was a fine course, both dogs showing great speed, but the latter had always the best of it and won handsomely.

NATIVE SON AND DOLLY VARDEN.—This was also a fine course, the Son at first having the best of it, but Dolly had more grit and the Son, too, got blinked a bit in the stubbles, which marred his chances. Dolly won.

BLACKSTONE AND NATTY.—This was a runaway course, Natty doing all the work from start to finish, and of course winning.

MOLLY S. AND WILDFLOWER.—Molly S. had a very soft thing in this flower. She outran her and outworked her, and killed her game. Possibly Wildflower should not be thought too little of, though, for she was the first that met what turned out afterward to be the winner, and which effectually snuffed out the hopes of more aristocratic greyhounds than poor Wildflower.

SKYROCKET AND MOUNTAIN HARE.—When this pair was called up there was considerable excitement, as Skyrocket has had almost an unbeaten record for the last two years, having been defeated but once during that time, though he had met all kinds of dogs both in the inclosed parks and in the open, and treated them all alike, one after another falling before his speed and dashing cleverness. No one could be tempted to back the other dog at any odds—"no one was so poor as to do him reverence." Well, they were handed to the slipper and in a short time a perfect flyer popped up. The dogs were slipped and as usual Skyrocket dashed to the front as if shot from a catapult, and made desperate efforts to reach his game; they had gone fully a mile before he succeeded in bringing puss around, and here his opponent came in and began to dispute possession. Again the hare broke away and again Skyrocket dashed in pursuit, but Mountain Hare closed up with him and before they had traveled another quarter of a mile gave him a clear go-by by several yards, and during the balance of that fearful long course Skyrocket never got in again, Mountain Hare eventually killing his game and winning the course.

SWEDE AND DRY TIME.—This was the first short course of the meeting. No sooner were the dogs slipped than the fawn bitch dashed to the front and in less than 400yds. she brought her game around, and so quick were her movements that she did not give puss time to recover herself before she had her fangs deep in its back and the course won.

DAVID D. AND WHITE CLOUD.—This was a one-sided affair, the Cloud being too swift for David, who was never in it from start to finish.

SHORT STOP AND SIR JOHN.—These dogs were considered two of the best in the field, and each of them was warmly supported by their respective friends. On being slipped the former led to the hare by a clear length, but a mile was traveled before Short Stop drove puss from its course and got another turn before Sir John got in for a point. The hare then broke away, and after a considerable distance was gone ever Sir John was seen to be in front in vain pursuit of the flying game, which he failed to reach. When the judge returned he sent the flag up for Short Stop.

JOHN GRACE.
Coursing Judge.

J. R. WRENN,
Slipper.

CORK REBEL AND GILE.—On this pair being sent off both dogs shot out well, Gile having the best of it. For a few seconds it looked as if the Rebel would have a show, but the hare broke away and Gile had all the rest of a great run to himself. He won.

JOHNNY REX AND JUDGE MORROW.—The former dog is known as the greatest flyer of our coursing fields, and was looked upon by the Merced people as their forlorn hope when all others fail, but unfortunately he was attacked by distemper last week and of course could not appear. His opponent ran a bye. Great sympathy was expressed by all for Mr. McInerny, the genial Merced sportsman, over this occurrence.

It was now 3 o'clock and as the first round of the card was finished it was decided not to commence the second round so that all the dogs could start equal on the following morning.

During the evening betting on the dogs left in after the first round was pretty brisk, Royal Crest was in good demand as was also Gile and the other Sacramento dog, Gare.

### WEDNESDAY.

Sharp at 9 o'clock this morning all were again ready on the trysting grounds.

*Second Round.*

ROYAL CREST AND DUKE OF MILPITAS.—The crowd had scarcely moved when a regular buck-jumper went bounding away like a rubber ball. When the slipper got his dogs fairly in line he let them go, the Duke shot out, and by a sudden turn of the hare got well placed fully three lengths ahead of Crest. This advantage he held till he turned the hare, and in the next 100yds. he again scored the hare and then the dogs were lost to the spectators. The course was a very long one and most trying on both dogs. When judge (Fahey) returned he sent the white flag up for the Duke of Milpitas, but said that at the finish of course Royal Crest had full command of the hare, but lost the course by killing his game before his opponents score was wiped out.

JOHN MITCHELL AND DEXTER.—Mitchell ran away from Dexter and won a one-sided course.

DEPEND ON ME AND BLUE STONE.—This was a pretty course full in view of the crowd. Depend On Me winning with plenty to spare.

JOE MCAULIFFE AND ROY.—This was one of the courses that was but little seen by the crowd, with the exception of the first portion of it, in which the young imported dog gave splendid promise of future greatness. Joe won the course.

MERCED CHIEF AND DAZZLE.—This was another regular grueler over miles of ground. The Chief won.

WILLIAM O'BRIEN AND TOM FITZ.—Quick as lightning O'Brien shot out from slips and led by two lengths, he eventually turned the game and got on to plowed ground, where the judge said he was defeated by Fitz.

GARE AND DOLLY VARDEN.—Dolly was completely outclassed and lost.

NATTY AND MOLLY S.—This was comparatively a short course and really looked as if Natty had the best of it, but the judge said no.

MOUNTAIN HARE AND DRY TIME.—In this course great things were expected from the blue dog from the manner in which he polished off Skyrocket in the first round; but it is the unexpected that occurs in coursing, as well as other things, and so it was in this case, for the New York bitch again made a short job of it, and fairly smothered both her opponent and the hare in a very few seconds, and won a sharp course.

SHORT STOP AND WHITE CLOUD.—This course, a long one, was altogether in favor of Short Stop.

GILE AND JUDGE MORROW.—Gile showed great speed in this course, as indeed he did in his first one, and it was soon evident that Morrow was in a bad place and could not hold his own, Gile eventually killing and winning, but just then another hare came along and Gile's eagerness for another mess of hare made him drop the one he was mauling and go in pursuit of a demon that must surely have come there out of dire revenge for the death of his kin. This hare seemed to play with Gile for he would allow the dog to come so near him that he would open his mouth to make a grab at him, while puss would give a switch to the right or left and in place of a mouthful of fur Gile would find only a mouthful of California air. The dog was eventually picked up nearly half dead, while puss bounded away as if well pleased with her revenge.

This last course finished the first ties and luncheon was then announced, a capital one, by the way, sent out from the El Capitan and Cosmopolitan hotels.

As soon as luncheon was over Mr. Dickson called up and Mr. Grace went into the saddle to finish the balance of the meeting.

*Third Round.*

DUKE OF MILPITAS AND MITCHELL.—No sooner were the dogs slipped than Mitchell shot out and led the Duke a long run to the hare, getting first turn; the Duke then got in, but the rest of the course was Mitchell's, a long one too, the hare, as usual, escaping.

DEPEND ON ME AND JOE MCAULIFFE.—This was a sharp, short course, in which quick work was done by both dogs and a clever kill secured McAuliffe the verdict.

MERCED CHIEF AND TOM FITZ.—These dogs chased a demon of a little hare for about three miles. Fitz won.

GARE AND MOLLY S.—In this course Gare led the bitch for a considerable distance until the hare got into some plowed ground, where Molly laid him out cold, the hare escaping.

DRY TIME AND SHORT STOP.—In this course—a very long one—Short Stop had the best of it at first, taking the hare away from the bitch, but in the long lead to some cover the bitch passed him and did some clever work, and when the judge came back he sent the flag up for the bitch.

*Fourth Round.*

JOHN MITCHELL AND JOE MCAULIFFE.—This was a splendid course, and possibly had more work done in it than in any course of the meeting. Mitchell certainly had the best of it in the first portion of the run, but in the latter portion the superior condition of Joe told in the long run and the subsequent work, and together with a splendid kill no doubt secured him the verdict from Mr. Grace.

TOM FITZ AND MOLLY S.—Molly had the best of this course from the start and won.

DRY TIME AND GILE.—This course was not a long one, but Dry Time made a dash to reach the front, when the hare swerved to the other dog. She tried hard to shoulder him off, but he was too heavy for her and he swept her from his path, and the gallant little bitch that came 2,000 miles to contest for this stake went down before the prowess of the Sacramento dog.

*Fifth Round.*

JOE MCAULIFFE AND GILE.—After a short rest Gile was again called up to meet Hall's flyer, and on being slipped this grand dog went immediately to the front. Though closely pressed by McAuliffe, he shouldered him off and in an awful long run completely beat him to a standstill, the hare escaping. Joe had thus to put up with third position in the stake.

Molly S. ran a bye.

*Final.*

After the usual half-hour's grace Molly S. and Gile were placed in slips for the final tussle. It did not take long to find a hare. The course was an uninteresting one. Molly did all that was done, and Master Jack escaped without much trouble. Molly S. won the course and stake, Gile second, Joe McAuliffe third; Dry Time, John Mitchell and Tom Fitz divide fourth money.

The crowd gathered around the president's carriage and cheered him to the echo, as well as all the other officers. The Sacramento people were heartily congratulated on their good luck in being the possessor of such splendid greyhounds, as well as for their gentlemanly and sportsmanlike conduct throughout the meeting.

No finer coursing was ever seen in California, and certainly no better dogs ever went from slip in any county than many of the hounds that took part in this meeting. As for the hares—well, they were just a little too good for anything, and if Tommy Hall could manage to put a stop to their training next year it would be all the better for coursing.

The following is the summary of the running:

*First Round.*

| | | |
|---|---|---|
| J. H. Watson's blk and w d, Royal Crest, | beat | W. Creamer's blk and w d, Lookout. |
| Jas. Shannon's blk and w d, Duke of Milpitas, | beat | Ed. Kellier's blk d, Shannon Boy. |
| D. D. Roach's f and w d, John Mitchell, | beat | T. McInerny's blk and w b, Ban Girl. |
| John Hough's w and br d, Dexter, | beat | A bye. |
| T. J. Cronin's blk and w d, Depend On Me, | beat | Geo. Dougherty's blk d, Peter Jackson. |
| Dr. Proctor's blk and w d, Bluestone, | beat | J. J. Rademaker's br d, Al Farrow. |
| Thos. Hall's blk and w d, Joe McAuliffe, | beat | T. McInerny's w d, White Joe. |
| E. H. Mulcaster's f d, Roy, | beat | T. McInerny's blk and w d, Ban Boy. |
| Robt. Boyd's blk and w d, Merced Chief, | beat | J. J. Racemaker's br and w b, Young Jessie. |
| T. McInerny's blk and w d, Dazzle, | beat | Wormington & Seal's Redwood Chief. |
| P. G. Fitzpatrick's w d, Wm. O'Brien, | beat | Thos. Ford's blk and w d, Pennyroyal. |
| T. McInerny's blk and w d, Tom Fitz, | beat | Wormington & Seal's w and blk d, Presto. |
| J. McMahon's blk d, Gare, | beat | D. D. Roach's blk and w d, Dan C. |
| D. D. Roach's blk and w b, Dolly Varden, | beat | J. Shannon's w d, Native Son. |
| P. O'Connell's blk and w d, Natty, | beat | T. J. Hanrahan's blk and w d, Blackstone. |
| P. W. Sheehan's w and blk b, Molly S., | beat | P. C. Egan's blk b, Wildflower. |
| D. D. Roach's blk and w d, Mountain Hare, | beat | M. Curtis's blk d, Skyrocket. |
| J. H. Watson's f b, Dry Time, | beat | P. O'Connell's br and w d, Swede. |
| Wormington & Seal's w b, White Cloud, | beat | David D. Doust's blk d, David D. |
| M. C. Curtis's br and w d, Short Stop, | beat | Thos. Ford's br and w d, Sir John. |
| J. McMahan's blk d, Gile, | beat | Thos. C. Shea's f and w d, Cork Rebel. |
| W. Creamer's f and w d, Judge Morrow, | beat | A bye. |

*Second Round.*

| | |
|---|---|
| Duke of Milpitas beat Royal Crest. | Tom Fitz beat Wm. O'Brien. |
| John Mitchell beat Dexter. | Gare beat Dolly Varden. |
| Depend On Me beat Bluestone. | Molly S. beat Natty. |
| Joe McAuliffe beat Roy. | Dry Time beat Mountain Hare. |
| Merced Chief beat Dazzle. | Short Stop beat White Cloud. |
| | Gile beat Judge Morrow. |

*Third Round.*

John Mitchell beat Duke of Millpitas. Tom Fitz beat Merced Chief.
Molly S. beat Gare.
Joe McAuliffe beat Depend On Me. Dry Time beat Short Stop.
Gile, a bye.

*Fourth Round.*

Joe McAuliffe beat John Mitchell. Molly S. beat Tom Fitz.
Gile beat Dry Time.

*Fifth Round.*

Gile beat Joe McAuliffe. Molly S., a bye.

*Final.*

P. W. Sheehan's white and black bitch Molly S., by Hook's Gimlet out of Lady S., beat J. McMahon's black and white dog Gile, by Mohran out of Pride, and won the stake—$400. Gile took $200; Joe McAuliffe, $100; Dry Time, John Mitchell and Tom Fitz, $20 each.

J. R. D.

## BRUNSWICK FUR TRIALS.

*Editor Forest and Stream:*

It may be of interest to the many fox hunting readers of the FOREST AND STREAM to know that the work done by the different strains was watched with interest. The Julys Hendricks and Pealer showed great speed and endurance and their splendid feet carried them through the week's work without a particle of foot soreness or lameness. They were quiet on a cold trail, but after the fox was up were free with their voices. Pealer was out of condition and did not show up as well as he will in the future.

The only Wild Goose entered was Leads All. He is a dog of remarkable speed combined with fine trailing qualities and has a beautiful voice. When checked he cast wide, showing great hunting sense.

The work done by the Goodmans was very uneven. While Clay, Logan and Aggie showed dash and splendid all-round hunting qualities, French and Orange exhibited little desire to hunt, and were devoid of ambition, preferring a sunny corner under a rock to driving a fox. I understand that Clay, Aggie and Logan were bred by W. H. Huffstetter, but French and Orange came directly from Mr. Goodman.

The Avents had but one representative, Clinker. His magnificent work last year, when he won the American Field Cup, is well remembered. At that time he showed speed and wonderful ability to cut ahead and get away with the fox. This year he did not do himself justice, being out of condition from a severe attack of distemper.

The heavy English hounds, Chun and Paddy, were withdrawn before they had time to show their quality. But if there is anything in looks their endurance must have been wonderful.

The Buckfield-Byron cross showed its valuable qualities in Jim, and Jack, a native, did very fine work especially in his first hard day's work.

BRADLEY.

## COURSING ENGLISH HARES IN NEW JERSEY.

IF any of our readers are fixed for coursing, I can tell them where a bit of sport is to be had within two or three hours' ride of this city. The place is Jobstown, New Jersey, reached via Pennsylvania Railroad from Jersey City, and the game English hares. Jobstown is a somewhat out-of-the way sort of a place, so any one anticipating the trip had better call at a Pennsylvania ticket office and secure a time-table and such other information as may seem necessary. There is a good hotel in the village, where they feed well and charge moderately.

I was down there last November, and brought home three hares that averaged eight pounds apiece after the entrails had been removed. This was their weight after drying out for several days. I should say a fully developed hare would weigh about eleven pounds, fresh killed. I was told some had been killed weighing fifteen pounds and over.

It is not much fun to shoot them after the novelty wears off. That takes place when you have carried your first hare two hundred yards or less, according to your muscle. But with a good greyhound, I should say it would be rare sport. The hares use altogether in the fields, so that you can have an uninterrupted view of the chase. An ordinary rabbit dog cannot run fast enough to keep one of them awake. I was out once with two setters, both young dogs and good runners. I shot at a hare, breaking one fore leg. The hare got about fifty yards start of the dogs. They caught him after a chase of three-quarters of a mile. On other occasions I saw uninjured hares lose these dogs in a few hundred yards. This was especially the case if the hare ran up-hill.

The hares are quite numerous all around Jobstown, and while most of the land is posted, I do not think the farmers would object to coursing. In fact, I am certain they would not. The hares are increasing very rapidly, and do an immense amount of damage, especially to young fruit trees.

W. L. HALL.

## THE WORLD'S FAIR SHOW.

*Editor Forest and Stream:*

The months are rolling on with their usual rapidity and the time will soon be at hand when the World's Fair bench show at Chicago will be in full swing. I have this day written to Mr. W. I. Buchanan, chief of the Bureau of Agriculture at Chicago, respectfully suggesting that much interest would be added to the show if the stalls and cages containing the dogs on exhibition could be marked so as to show at a glance the country from which each dog was sent. Thus, the American dogs could be distinguished by a neat tablet, on which could be engraved the Stars and Stripes; the Canadian dogs could be distinguished by the maple leaf, the English dogs by the rose, and so on *ad infinitum*. Not only would the tablets add to the interest of the show, but exhibitors themselves would prize them highly as souvenirs of the great exhibition, and I am confident that I have only to suggest this idea to insure its being heartily taken up by the kennel press.

You can do much to help this project with your pen, and if you see this matter in the same light as I do, I am sure that dog lovers everywhere will be glad if you will urge it for all it is worth.

A. D. STEWART.

HAMILTON, Canada.

## IT COST $26.66 A WORD.

IN this city last week, in the Supreme Court, Jacob C. Schuyler, of Page county, Pa., won his libel suit against Leslie C. Bruce and Hamilton Busbey, of the *Turf, Field and Farm*, and got a verdict for $2,500. The libel was in a letter written by Col. Wm. C. Kennerly, of Page county, who writes over the name of "Old Dominion." The expensive little $2,500 paragraph was this:

> We have in my county a man by the name of Jacob C. Schuyler, hailing from Lebighton, Pa., and who has established what he terms a training kennel, and with a great flourish, claiming the name of it as "The Tammany Training Kennels, by Prof. Schuyler." Upon my honor as a man and my character and reputation as a sportsman, I denounce this man as a consummate and unmitigated humbug and his kennel as a pest house, from which dogs are weekly dragged out to rot upon the highway.

The defendants, through Messrs. Whitehead and Peshall, conceded that this was a libel, but contended that they had given Schuyler a chance to fire back at "Old Dominion" through their columns, and they seemed to think that this giving a man full scope for wordy warfare should compensate him for having his business broken up by a libel. Let us hope that the lesson of the verdict may prove wholesome. Heaven knows a lesson was needed.

## THE WINFIELD COURSING MEET.

WINFIELD, KAS., Nov. 20, 1892—I took a nasty cropper on Friday and broke my left arm at the elbow (for the fourth time), and in the melee I lost my notes of courses. So the best I can do for you is to send you the inclosed.

Mr. Lowe protested the Meteor—Prince Charlie course, but I scarcely think he can get any satisfaction out of it.

The weather was fine with the exception of Thursday, which was a miserable, rainy and raw day. The local attendance was good, and the crowd very hard to control.

### All-Age Stake.

For 16 or more greyhounds. Winner gets 50 per cent. of entrance and silver cup valued at $50, donated by citizens of Winfield. Runner up, 25 per cent; third, 15 per cent. and fourth, 10 per cent. of entrance. Entrance $10.

*First Round.*

| | | |
|---|---|---|
| J. W. Ramsey's r b Meteor (Jack Denton—Pearl Sidle), | beat | D. L. Luse's bdl and w b Belle of Eltham (Tester—Bit of Fashion). |
| H. L. Lowe's w and bdl b White Lady (Lord Neversettle—Parters), | beat | R. Howard's blk b Slipper (Unknown). |
| J. J. Fairbanks's b b Winnie (Lead—Wilkins's Minnie), | beat | E. Martin's f b Queen (Unknown). |
| H. C. Lowe's w and bdl d Prince Charlie (Lord Neversettle—White Lips), | beat | Q. Van Hummel's r and w d Van's O'Rell (Babazoun—Carmine). |
| D. C. Luse's w and bdl d Living Yet (Trales—Dick's Darling), | beat | J. R. Ballard's f d Buckskin (Cochran's Frank—Ribbon). |
| D. C. Luse's r b Lady Barton (Trales—Dick's Darling), | beat | J. Weakley's bdl b Whalebone (Brindle Jack—Fly). |
| H. C. Lowe's blk and w d Prince Rupert (Lord Neversettle—White Lips), | beat | E. Burgess's b d Sarsfield (Spring—Belle of Denver). |
| H. C. Lowe's bdl b Nancy (Lord Neversettle—Partera). | beat | D. C. Luse's w and bdl d Lord McPherson (Trales—Dick's Darling). |
| H. C. Lowe's blk and w d Voltaire (Lord Neversettle—White Lips), | beat | D. C. Luse's Lady in Black (Trales—Dick's Darling). |
| I. A. Robinson's bdl d Cap (Unknown—Grasshopper), | beat | Q. Van Hummel's bdl b Viola (Babazoun—Verdure Clad) |

*Second Round.*

Meteor beat White Lady. Lady Barton beat Nancy.
Prince Charlie beat Winnie. Voltaire beat Cap.
Prince Rupert beat Living Yet.

*Third Round.*

Meteor beat Prince Charlie. Lady Barton beat Prince Rupert.
Voltaire a bye.

*Fourth Round.*

Meteor beat Voltaire. Lady Barton a bye.

*Final.*

Lady Barton beat Meteor.

### Members' Stake.

Entrance $2 50, winner 50 per cent. of entrance and silver plate donated by citizens of Winfield; runner up, 25 per cent. of entrance; third, 15 per cent., and fourth 10 per cent.

*First Round.*

| | | |
|---|---|---|
| Cliff Steven's bdl d Cap S. (unknown). | beat | J. W. Ramsey's f and w b Blondie (Brindle Jack—Old Blondie). |
| J. R. Cochran's r d Golddust (Brindle Jack—Minnie). | beat | S. S. Raper's f d Clothershorse (unknown). |
| J. R. Cochran's f d Jayhawker. | a bye | J. W. Ramsey's Meteor. Drawn. |
| A. J. Bonnewell's f d Nero (unknown). | beat | E. B. Condit's bk d Midnight (unknown). |

J. R. B.

## ANOTHER DISTEMPER CURE.

*Editor Forest and Stream:*

The following will no doubt be hailed with joy by all lovers of that noble animal the dog, as I now consider that the dreadful disease, distemper in dogs, has to a very great extent been overcome.

During September I lost in my kennels no less than eleven dogs by distemper. In the beginning of October I procured one of Coulter's vaporizers, and although I had some eight or nine dogs down in different stages of the disease at time of procuring the vaporizer, since using it I have not lost a single one.

My manner of treatment is as follows: I procured a large packing case and bored a hole in the bottom and placed the box up from the floor high enough to allow the vaporizer to sit under with the top put through the hole in the box, having first charged the instrument with eucalyptus oil and carbolic acid equal parts. I then placed the sick dog in the box and put the cover on, allowing sufficient ventilation so as not to smother him, and then set the machine in operation. I let the patient stay there from fifteen to twenty minutes, and I must say that I have yet to see a case, no matter how clogged the eyes, head and throat may be with putrid matter, that it does not clear right out after a few treatments.

C. A. STONE,
Sec'y Toronto Exhibition Bench Show.

TORONTO, Canada.

## THE FIELD TRIALS AT CHATHAM.

*Editor Forest and Stream:*

I have read with much interest the report of the International Field Trials at Chatham, Ont., in your issue of Nov. 17. In speaking of Lucy C. your reporter says she is the pride of Davidson's heart. Why should she not be so? A bitch that ran through her stake, finding and staunchly pointing more coveys of quail than the balance of the dogs in the stake, and never making a false point, or flushing a bird, backing on sight and steady to wing and gun—ought she not to find a warm place in any sportsman's heart? None of the coveys she found got up wild, as all were tramped up to her point. She made none of those down wind excusable flushes we read of, or false points where a bird might have been last year, but did her work from beginning to end without an error. I would ask your reporter whether fourteen is the balance of a covey of sixteen, or two the balance of sixteen. Lucy C. had swung around a hill, and not coming in sight, I went to the top of the hill to look for her. On getting to the hill top she was standing, with head and tail up, at least one hundred yards off, out in the field, the birds between her and the fence. In the meantime Howard was working on the birds alongside the fence which flushed not within one hundred yards of the others. The covey before Lucy C. was tramped up and shot at and went over into the slashing. Lucy C. then made a sensational point, with her front feet on the upper side of a log and hindfeet on the ground. Howard being asked to come up to back, pointed one in a pile of brush before reaching Lucy C.; that being tramped out he then came up to where the bitch was pointing and refused to back, going around the brush pile and pointing the same birds. On going over the fence out of the slashing into a pasture field, Lucy C. again pointed a covey. On this covey being flushed they went down in plain sight within the field. Your informant ought to recollect this. As the next two dogs were put down they went direct through their handlers and all, and on returning through them, the birds would stand no more such nonsence, but flushed, and both dogs started after them in a little go-as-you-please race. Those two coveys, with the two your reporter gives her credit for finding when down with Lady Spot, and the one when down with Mingo, Jr., make five coveys to her credit, out of the nine pointed in the Amateur Stake. Lucy C. is not for sale. When I want to find birds she can find them, if they exist and live in the neighborhood. I have used her many a time before to find coveys, and singles for other dogs to work on, but always considered her superior to those which could find nothing for themselves unless taken on marked birds. In many cases the necessity of logs and brush piles is very apparent to getting a point at all, as bare ground does not afford the bird protection enough from being flushed, or caught if it doesn't flush.

JOHN DAVIDSON.

MONROE, Mich.

## NASHVILLE AWARDS.

[*Special to Forest and Stream.*]

NASHVILLE, Tenn., Dec. 6.—The Nashville show opened this morning with 165 entries. The excellent management and arrangements deserved a better entry and quality of dogs. Among those present are Dr. Van Hummel, Ben Lewis and John Naylor, who are here with some noted dogs. The weather is beautiful but the attendance so far is not encouraging. Judging was commenced at 4 P. M., Messrs. Davidson and Mortimer giving satisfactory awards as follows:

MASTIFFS.—*Dogs:* 1st, Jewett's Beauregarde; 2d, Fall's Robert Lee. *Bitches:* 1st, Lewis's Ethel; 2d, Jewett's Winnie B.

GREAT DANES.—CHALLENGE—1st, Cumberland Kennels' Melac; 2d, Shoquoquon Kennels' Pedro.—OPEN—*Dogs:* 1st and 2d, Cumberland Kennels' Theseus and Norman; 3d, Brown's Prince Leo. Very high com., Anderson's Sander. *Bitches:* 1st, 2d, 3d and very high com., Cumberland Kennels' Minerva, Phœbe, Charmion and Geller. High com., Shoquoquon Kennels' Jackson's Juno. *Puppies:* 1st and 2d, Shoquoquon Kennels' Jackson's Juno and Hager's Halka.

ST. BERNARDS.—*Dogs:* 1st, Anderson's Casper; 2d, Rahl's Fernwood Bruce, Jr.; 3d, Cumberland Kennels' Count Bruno. Very high com., Kraemer's Sir Harry Bedivere. *Bitches:* 1st and 2d, Cumberland Kennels' Silvern and Lady Watch; 3d, Mayo's Lady Herbert.—NOVICE—Fernwood Bruce, Jr., Sir Harry Bedivere. SMOOTHS—*Dogs:* 1st, Fulghum & Johnson's Lord Milton; 2d, Cumberland Kennels' Prince Ivo.—NOVICE—The same.

BLOODHOUNDS.—1st, Pollock's Belhus, Jr.

NEWFOUNDLANDS.—*Dogs:* 1st, Condon's Surpass, 2d, Whalley's Jumbo. High com., Johnson's Sport. *Bitches:* 2d, Cayce's Nellie Bly.

RUSSIAN WOLFHOUNDS.—*Dogs:* 1st, Anderson's Philos IX. *Bitches:* 2d, Williams's Kaluga; 1st withheld.

GREYHOUNDS.—CHALLENGE—Anderson's Master Rich.—OPEN—*Dogs:* 1st, Van Hummel's Van Orell; 2d, Williams's Salvator.

FOXHOUNDS.—1st, Williams's Ranger.

POINTERS.—CHALLENGE—Winslow's Inspiration. Other entries absent, excepting two indifferent puppies.

ENGLISH SETTERS.—*Dogs:* 1st, Smith's Max Noble; 2d, Downington's Benzine. *Bitches:* 1st and 2d and very high com., Shriever's Nettie G., Cleo S. and Cosette.—PUPPIES—*Dogs:* 1st, Shriever's Livingstone. *Bitches:* 1st and 2d, Shriever's Rosa Bonheur and Glass.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, Oak Grove Kennels Seminole. *Bitches:* 1st, Oak Grove Kennels' Edna B.—OPEN—*Bitches:* 1st and 2d, Oak Grove Kennels' Rose Sarsfield and Alice Kent.

GORDON SETTERS.—CHALLENGE—Dixon's Ivanhoe and Duchess of Waverly.—OPEN—*Dogs:* 1st and 2d, Dixon's Duke of Wellington and Duke. *Bitches:* 1st and 2d, Dixon's Prince Louise and Dago.

COCKER SPANIELS.—*Dogs:* 1st, Bennett's Jack; 2d, Bowman's Romeo. *Bitches:* 1st, Patterson's Tess De Urbeville; 2d Bennett's Mate. Very high com., Boman's Juliet.

COLLIES.—Chestnut Hill entries absent. *Dogs:* 1st and 2d, Argyle Kennels' Roslyn Terry and Argyle Mac. *Bitches:* 1st, Argyle Kennels' Maud Marion. *Puppies:* 1st, Argyle Kennels' Argyle Sandy.—NOVICE—1st and 2d, Argyle Kennels' Argyle Mac and Madcap Bess.

POODLES.—*Dogs:* 1st, Lewis's Biglow. *Bitches:* 1st, Dixon's Paris.

BULLDOGS.—CHALLENGE—*Dogs:* 1st, Illwis Kennels' Bo'swain. *Bitches:* 1st, Illwis Kennels' Duchess of Parma.—OPEN—*Bitches:* 1st and 2d, Illwis Kennels' Peckham Lass and Lady Nan.

BULL-TERRIERS.—CHALLENGE—1st, Dole's Bonnie Prince. No other entries.

DACHSHUNDS.—CHALLENGE—1st, Manice's Gula Y.—OPEN—*Dogs:* 1st, Seidel's Fritz. *Bitches:* 1st, Manice's Jessie Victoria.

BEAGLES.—CHALLENGE—1st, Middleton Kennels' June M.—OPEN—*Dogs:* 1st and 2d, Cockrill's Doctor and Deane. *Bitches:* 1st, Glenrose Kennels' Parthenia; 2d, Cockrill's Susie.

FOX-TERRIERS.—*Dogs:* 1st, Leinster Kennels' Dixie Tartar; 2d and 3d, Rustic Kennels' Rustic Risk and Risk of Sharon. Very high com., Thompson's Gamester. *Bitches:* 1st, withheld; 2d, Rustic Kennels' Julip. Iolanthe Kennels' entries absent.

WIRE-HAIRED TERRIERS.—1st, withheld; 2d, Rustic Kennels' Pincher.

IRISH TERRIERS.—1st, Withheld; 2d, Connor's Galtces.

SCOTCH TERRIERS.—*Dogs:* 1st, Chesterford Park Kennels' Colored Preacher; 2d, Elliott's Ashley Plug. *Bitches:* 1st, withheld; 2d, Elliott's Feather Brain.

SKYE TERRIERS.—CHALLENGE—1st, Shinn's Sir Stafford.—*Dogs:* 1st, Barr's Sir Thomas.

YORKSHIRE TERRIERS.—*Dogs:* 1st, Oliver's Dick York. *Bitches:* 1st, Oliver's Minnie York.

BLACK AND TAN TERRIERS.—CHALLENGE—*Dogs:* 1st, Rochelle Kennels' Broomfield Sultan. *Bitches:* 1st, Rochelle Kennels' English Lady.—OPEN—*Dogs:* 1st, withheld; 2d, Thuss Brothers' Reaper. *Bitches:* 1st and 2d, Rochelle Kennels' Majestic and Carmencita.

PUGS.—CHALLENGE—1st, Cumberland Kennels' Sprake.—OPEN—*Dogs:* 1st, Falls City Kennels' Simple Ben; 2d, Howard Kennels' Duke Howard; 3d, Cumberland Kennels' Comet. High com., Sparks's Link. Com., Schardt's Snip. *Bitches:* 1st, Ballantine's Vega; 2d, Davies's Toadie; 3d, Cumberland Kennels' Bonita. High com., Cumberland Kennels' Goldie. *Puppies:* 1st, Davies's Sprake Pattie.

KING CHARLES SPANIELS.—1st, Central Kennels' Royal Roy.

ITALIAN GREYHOUNDS.—*Dogs:* 1st, Cumberland Kennels' Prince. *Bitches:* 1st, Cumberland Kennels' Prince.

Best dog owned in Kentucky, pug Simple Ben. Show of Great Danes very good, indeed.

H. W. LACY.

## THE CENTRAL'S FIELD TRIALS.

THE supporters of the popular Central Field Trial Club are already gathering in force. The three judges, Messrs. J. M. Tracy, N. Wallace and W. S. Bell, are here. Also Messrs. J. L. Adams, Louisville; Edward Dexter, J. H. Hunter, Capt. B. F. Fisher, E. H. Osthaus, W. Tallman, V. M. Haldeman, H. Merriam and Major J. M. Taylor. There is also a large attendance of handlers.

The Pointer Derby has thirteen starters, namely, Hempstead Game with Lad of Rush, Croxie O'Bannon, Jingo, Ginger Ale, Hempstead Blossom, Graceful II., Duchess of Highlands, Kent's Maid, Early Dawn, Conscript, Croxie Kent, Lady Peg a bye.

LEXINGTON, N. C., Dec. 5.—(*Special to Forest and Stream*).—The Setter Derby has twenty-three starters, namely, Kingston, Brighton Clip, Hope's Mint, Hamlet, Nahmke Alice, Chevalier, Gladstone's Pet, Fan, Clem Gladstone, Cecil II., Dot Rogers, Dick Fox, Bonair, Winnipeg, Maiden Mine, Lochinvar, Nahmke Philip II., Duff, Gaiety, Sir Kent, Rod's Sue, Roger's Spark a bye.

LEXINGTON, N. C., Dec. 6.—*Special to Forest and Stream:* Pointer Derby decided this morning. Jingo first, Lad of Rush second, Graceful third. Nine heats of the setter Derby were run off. Nahmke Alice was disqualified for being absent when called. Weather pleasant.

# DOG CHAT.

### W. K. C. Show of 1893.

We are in a position to deny the rumor in a Western contemporary that the W. K. C. will charge a $10 entry fee and give prizes of $50 and $40 at their coming show. The entry fee will as last year be $5, and there will be no material change in the value of premiums. If any change is made it will be in providing a more liberal classification for some of the terriers, etc. The management intend to bench only on the main floor, and with that end in view the entries will be limited to a certain number. It will therefore be to the interest of those owning good dogs to enter them as early as possible, as the rule will be first come first served.

### Death of Lady Melrose.

We understand that Mr. E. H. Moore's troubles are not yet ended in that, in addition to losing about a dozen puppies and young dogs, the well known Lady Melrose has followed her litter brother to the dog's unknown. This is hard misfortune and enough to break any man's fancier heart. But we know what Mr. Moore is made of and there is little doubt that the owner of the Melrose Kennel will still have to be reckoned with at future shows. Lady Melrose was by champion Ben Lomond out of Recluse and whelped in 1889, and though not shown so often as her litter brother still had a number of prizes to her credit.

We have nothing to do with the trouble that Mr. Eberhart seems to have got into in regard to the pug photograph "mix up" that a contemporary is making so much of, but as showing another side of Al Eberhart's character we publish an extract from a letter written to us by Mr. C. S. Wixom, the well-known beagle and greyhound breeder. In speaking of the photograph affair Mr. Wixom goes on to say: "He [Mr. Eberhart] may be all that 'they' would have us believe but after the treatment I once received at his hands it will take a great deal of proof and argument to make me believe anything crooked of him. If you remember at Cleveland show, 1891, I was not feeling well, and on Friday, the last day of the show, quit after my return to the hall from dinner. I was taken very ill. For my own part I did not expect to leave the building alive. Mr. Eberhart was in the exhibitor's room when I was assisted there by a friend. He soon, with the superintendens's aid, had a physician in attendance. He got permission to have my dogs removed at 4 P.M. He, with Joe Lewis, put my dogs in their crates, procured an express wagon, loaded my dogs and sent them to the depot, got a hack for me, went with me to the hotel, got sleeping car berths made up and saw my dogs on board, etc. Probably I had other friends present who would have done the same, but Al G. Eberhart *did* this for me. We were almost strangers the week previous. Now with this experience staring me in the face I assure you it will be a long time before I believe any intentional wrong on Mr. Eberhart's part. He made a mistake—we all do that, but as for crookedness, I do not believe it possible with the generous, big-hearted whole-souled fellow. Put me down as a firm friend always of 'square deal' Eberhart."

Dogs have more than once played important roles in the detection of crime. We remember years ago that a brutal crime was brought home to a man in Blackburn, England, through the agency of a half-breed hound who tracked a murdered child to a chimney where the murderer had stuffed portions of its body. The recent Althorp horror in England affords another instance where a hound's intelligence and keen nose led to the discovery of the hidden remains of a young woman who had been murdered. The dog belongs to a whip of the Pitchley hounds, one of the principal packs in England. Two days before the discovery the whip was riding past a ditch accompanied by his dog when he noticed the dog suddenly stop and jump about in a most unusual manner whining piteously. Having no suspicion of the truth he called the dog off and thought no more of the incident. Two days after he rode past the same place, again accompanied by the dog who as before showed similar signs of distress. Still the man did not attach any importance to it at the time, but on thinking the matter over when he returned home, he thought probably there might be something there and to make sure informed a laborer of the occasion, who, on going to the ditch discovered the poor girl's body wrapped in a sack.

Dr. William Jarvis, the well-known Irish setter breeder, went South last Monday week and will do his winter's quail shooting at Blacksburg, N. C., putting up at Cherokee Inn. He will then be within easy reach of the Irish setter trials, which take place in a couple of weeks at Lexington, N. C.

Mr. A. F. Satto, Jr., who advertises some trained setters in this week's issue, is giving up his kennel owing to his removal to Denver or Chicago first of the new year, speaks very highly of his pointer and Irish setter's abilities in the field, especially the former, and over whom, (which he terms a meat dog) he has shot thousands of quail, chicken, snipe and woodcock, and is particularly good both on bevies and singles.

The stud book number of Rush of Lad, whose purchase by Messrs W. H. Windle and A. F. Hochwalt we noted last week, is 15,921. His sire was champion Lad of Bow.

Col. Jacob Ruppert, Jr., of this city, has just purchased by cable three St. Bernards from Mr. George Booth, of Hull, known as the owner of Lady Gladwin and Marquis of Ripon. They are Kingstonian Count (Scottish Prince—Septima), standing 34in. at shoulder, weight 200lbs., and having a large, massive, typical head (29in. around skull, 18in. around the muzzle); Kingstonian Beauty (Lord Bute—Altonella), 29½in. at shoulder, 165lbs., winner of five firsts in three shows, and Kingstonian Countess (Scottish Prince—Lady Glen), 29in. at shoulder, winner of first at Birkenhead '92, and second at Kennel Club show, London, in the same class where Kingstonian Beauty took first. They will be shipped from Hull by the Wilson line next Saturday.

### A GOOD COURSING COUNTRY.

*Editor Forest and Stream:*

I shall be extremely obliged if you will permit me, through the medium of your paper, to inform the members and all sportsmen interested in the American Coursing Club that recently while attending the coursing meeting of the Mitchell Kennel Club I made a very careful inspection of their ground and also elicited information which in my opinion will prove exceedingly beneficial in reaching the very acme of perfection in coursing; and, I may add, that I consider the grounds there better than any I have ever seen in England or America. The chief points to be noted are, jacks are plentiful, larger than the Kansas jack and give the dogs a much better opportunity of showing their ability than they get at Great Bend. The soil, too, is of such a nature that I will guarantee no dog in running a course will lose a pad or a toenail, as was frequently the case at all Great Bend meetings.

Barbed wire and all other fences are conspicuous by their entire absence for thirty miles.

Having given our four-footed friends due attention I will proceed with the facilities offered to ourselves.

The Mitchell Kennel Club Association, of Mitchell, South Dakota, has a fine club house situated about four miles from Mitchell, which will be placed at the disposal of the coursing gentlemen by the kindness of Mr. P. E. Page. It is fitted throughout with hot and cold water, with bath rooms and every other accommodations. There are also two large rooms which could be used for dogs and horses.

I consider that Mitchell would be a good place to hold the International Coursing meeting of 1893, as it is within easy distance of Chicago, which in all probability foreign competitors will make their rendezvous.

The Mitchell Kennel Club will contribute $500 to the International Stake, which tends to show that they are in every way prepared to entertain and encourage this great and growing sport in America.

I trust that this will have the approbation of all coursing gentlemen, and that the offer of the Mitchell Kennel Club will meet with due appreciation. ARTHUR MASSEY.

GREAT BEND, Kan.

### ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.*

L. O. B., Gladstone, N. J.—I have a pointer pup that has small boils that discharge matter on his head and parts of his body. What can I do for him? Ans. Treat for worms. Apply boracic acid ointment to the boils.

G. A. F., Arlington, Mass.—We do not know of any Scotch staghound; we presume you mean deerhound, located anywhere near Savannah, Ga. If you will communicate with Mr. John E. Thayer, Lancaster, Mass., he may be able to advise you, as it is possible he may have shipped one so far South.

H. K., Brooklyn, N. Y.—Is there a breed of dogs known as retrievers? Ans. Yes, but there are very few owned in this country, there being no demand for them. In England, however, where pointers and setters are not, as a rule taught to retrieve, these dogs are almost invariably used to bring in the dead birds. There are two divisions of the breed, curly-coated and smooth, and they form important classes at the dog shows in England.

W. R., Philadelphia, Pa.—My setter dog is 13 years of age, and is getting very hard of hearing. He scratches his ears now and then a little; have looked in the ear, but see nothing. I noticed it about three months ago. Is it age? Is in good health. Ans. Put a few drops of the following lotion into the ears twice a day. At the end of a week syringe ears and thoroughly cleanse with warm water and alcohol (2 parts to 1);

| | |
|---|---|
| Ung. hyd. nit. | ʒ i. |
| Ol. amygd. | ʒ i. |

Mix. Use as directed.

R. A. R., New York city.—Can you give in your next issue a remedy for a weeping eye in a St. Bernard dog? Also what is a good regular diet for one about 10 months old and a kennel dog? Ans. Try the following lotion:

| | |
|---|---|
| Zinci sulph. | ℈i. |
| Tr. opii | ʒ ii. |
| Aq. ad. | ℥ vi. |

Lotion.

Apply four or five times a day with a piece of sponge. Bread and meat or dog crackers with a little meat.

G. R. R., Rutland, Vt.—Please give me the pedigree, as far as you know it, of a mastiff bitch, Quakeress, owned and registered by G. S. Roberts, of Vergennes, Vt., some years ago. Ans. Quakeress (A. K. R. 4,374), fawn bitch, whelped Feb. 17, 1886. Breeder, Miss Walker, Bristol, England. Owner, Mr. George S. Roberts, Vergennes, Vt. By Slatter's Prince Imperial out of Penultima, by Young King II. (Young King, E. 8,426—Madeline) out of Julia, by Young King (E. 8,426) out of Ball's Juliet. Slatter's Prince Imperial, by Crown Prince (The Emperor—Merlin) out of Idalia, by Dixie's Turk out of Brenda. You must send to American Kennel Club, 44 Broadway, N. Y. city, for registration blank. The fee for registering is $1.

J. H. M., San Angelo, Texas.—Your valuable publication comes to our club. I have a setter bitch, about six months old, that seems perfectly healthy except that she seems weak in the loins. Her bowels seem in good fix and she eats heartily, but occasionally has a little fever. Just a little run seems to weaken her loins and makes her run sideways. If you can give me an idea of diagnosis and treatment you will greatly oblige. Ans. Treat for worms and then give the following mixture:

| | |
|---|---|
| Syr. hypophosp. co. | ʒ iv. |
| Tr. nucis vom. | ʒ ii. |
| Aq. ad. | ʒ viii. |

Mist.

Give one dessertspoonful three times a day.

W. J. D., Analomink, Pa.—Will you kindly tell me what to do for a spaniel which I think has canker of the ear. He is scratching his ears a great deal and also shaking his head. When he scratches his ears as if the trouble was deep in. I notice no discharge from his ears, although there is noticeable at times a sour smell, though not very strong. Sometimes the outside of his ear feels hot, but that is not very often. Otherwise he is in first-class condition. Ans. Give a dose of Epsom salts and pour a little of following lotion into the ear twice a day:

| | |
|---|---|
| Liq. plumbi sub acet. | ʒ iii. |
| Acid carbolic | mxv. |
| Glycerine | ʒ iss. |
| Aq. ad. | ʒ iii. |

Mix. Lotio.

B. GLADSTONE, New York City.—I have a young English setter, by Breeze Gladstone, who is about 1½ years old. Recently two warts have appeared on the loins. They are quite large and separated like the petals of a flower. Can you tell me how to remove them, or if wise to do so. Also, ever since I have had him (nearly a year) the top of his nose has been dry and rough, almost cracked at times. Is this as it should be? He is kept on table scraps and has a warm house filled with straw. I keep him indoors till bedtime and this cold weather he is not anxious to go out to his house. Is it harmful to do so or does it make him more susceptible to cold? Ans. Remove warts with a pair of scissors and then cauterize with nitrate of silver. The nose is probably the result of distemper and will always remain so. It is not harmful to keep him out of doors.

# Yachting.

IN view of the expressed determination of that portion of the New York Y. C. which created the new deed of gift to stand by the document to the last, and of the equally positive protest of foreign clubs against the deed as unfair and illegal, it has long been evident that a race would be possible only through the back-down of one party or the other, in short, the process commonly known as "eating crow."

Unlike the recent political disturbances of a seismitic nature, in which one party did all the laughing while the other sat at the table with wry faces and upturned noses, the repast in the present case has been a joint banquet at which the New York Y. C. has crossed legs under the mahogany with Lord Dunraven and the Royal Yacht Squadron.

As might have been expected, the shrewd framers of the new deed, though unable to utterly decline the invitation, have secured much the best of the bargain, and have been able to choose the comparative tidbits and less objectionable portions, leaving the bones and unsavory carcass to their august opponents.

As regards the New York Y. C., it in the first place assures a race for the America Cup, of which it is this year greatly in need. In the second place this race is sailed under the new deed of gift. These two points alone would be no small victory for the astute diplomats of the club, but their triumph is more marked by the fact that the challenger is the same Royal Yacht Squadron which three years since denounced the new deed and its sponsors.

ON its side the New York Y. C. makes several "generous concessions;" it for the first time in the history of the Cup distinctly recognizes the right of a challenger to a mutual agreement, and in connection with this agreement it binds itself not to outbuild a challenger. These two points are very important ones, long since called for in common fairness, but denied to former challengers. With them go two trivial ones, the granting of five races in place of three and the starting according to Lord Dunraven's suggestions.

AS TO the Royal Yacht Squadron, in challenging under the new deed, which is exactly what it has done in spite of all alluring offers and verbal intricacies, it has completely deserted the stand which it took in 1889, it admits the legal right of the New York Y. C. to impose any conditions to govern the Cup, and it accepts such conditions with one exception as fair. Not only has it swallowed the bigger share of the bird with good grace, but by way of *pousse café*, it has, at the dictation of the New York Y. C., promptly and humbly withdrawn all disagreeable allusions to former deeds which might in any way reflect on the present one.

In return it gets something and nothing; it is allowed to challenge without disclosing other dimensions than the waterline, and it has a guarantee against outbuilding both important points. The waiving of the ten months' notice amounts to little, as Lord Dunraven gave all necessary notice in August, and could easily have given a full year if his challenge had been immediately accepted.

So far as the formal document governing the Cup is concerned the R. Y. S. must, in the event of winning, hold the Cup under the new deed, as the New York Y. C. has in no way bound itself to execute any new paper in handing over the Cup. It is true that the R. Y. S. need not exact all dimensions from a future challenger, but neither would it have been compelled to do so had it accepted the new deed in toto from the start. As concerns the prime conditions governing the Cup, they are as laid down in the new deed and cannot be otherwise without the formal alteration of that instrument by the New York Y. C.

Lord Dunraven's position in the matter is a most curious one. That he is a man of more than average ability as a writer and thinker is proved by his recent articles on yachting, as well as by his reputation outside of the sport. He poses just now as the patron of international racing, anxious to secure its resumption on a fair and permanent basis, and he has just published an article on the abstract conditions of the subject. At the same time he proclaims again, as he did three years since, his utter inability to form an opinion on the one vital point which has been in dispute for five years, the legality and fairness of the new deed. He is capable of treating most minutely of every petty detail of starting races, but in the one great issue his mind is a blank. We leave it to our readers to reconcile his acceptance of the terms of the New York Y. C. with the following extract from his article, published last week:

"Though no other expression of their views was sent by any other British club to the New York Y. C., there is no doubt whatever that the Royal London Club expressed the universal opinion of yachting clubs and yachting men in the United Kingdom. *No challenge ever has been made or ever will be made under the terms of that deed.*"

WHILE we have never shared the opinions of Lord Dunraven and some American yachtsmen as to the desirability of the 90ft. cutter class, and its permanency in the event of continued international racing, we believe that fair and free racing for the America Cup will be of the greatest benefit to both sides. At the same time we have no confidence in the permanent resumption of the sport on such a basis of misunderstanding and temporary agreements as underlies the present negotiations.

OWNERS of prospective cup defenders are almost as numerous as the members of Mr. Cleveland's new cabinet. Among them are Com. Gerry, Vice-Com. Morgan, C. O. Iselin E. M. Fulton, Jr., R. S. Palmer, Archibald Rogers, Henry Bryant, and one or two syndicates.

LORD DUNRAVEN falls into serious error in assuming that the America Cup was given by Messrs. Stevens and their colleagues to be raced for by one vessel against a fleet, as it was originally won; the first deed of gift mentions explicitly a mutual agreement as the proper basis for a match; the conditions laid down being operative only after the failure to reach a mutual greement, and even in them there is nothing that gives color to the right to put the fleet in defense. As a matter of fact, Mr. Ashbury had a better legal right to a mutual agreement under the first deed than Lord Dunraven has under the third, the mutual agreement clause in the latter being subordinate to the clause dictating exactly and definitely the method of challenging.

THE opinion of the rating rule expressed by the designers is on the whole a very favorable one, and a justification of the action of the Y. R. A. in originally adopting it. The testimony is practically unanimous as to the excellence of the boats first built under the rule, and though it is admitted that the later boats are decidedly inferior, it has not been proved that all of their faults are directly attributable to the rule. Light construction, one of the disadvantages of the later craft, would have come before this under almost any rule; while the bulb or fin-keel would have been just as successful, in fact more so, under the old Thames or the 1730 rule. It must be remembered that these and other evils against which yachtsmen cry out today, and which are urged as good grounds for the change of one rule or another, are merely due to super-refinement in yachting, and would have come just the same under any ordinary rule. The bad results which many deplore have by no means been located as definitely attributable to the length and sail area rules.

MR. WATSON'S remarks on the value of overhang and the actual shortening of the loadline corroborate the opinion expressed by us on the advent of Gloriana, that her superiority lay in the peculiar form of the diagonals rather than in the fact that her stem ran out to a fine point of so many feet actual overhang.

THE British designers have made a curious error in regard to Harpoon, setting her down as a bulb keel boat, and crediting her with the defeat of Wasp. However much the old Beatrix was improved by her heavy board of 3½ tons, she was not the equal of Wasp, taking a place between that boat and Gloriana. As the representative of a distinctive type, Harpoon is in many ways more of a ship than the fin-keel.

### A New Valkyrie.

THE new challenger, as is announced by Lord Dunraven, will be a steel cutter, designed by Watson, presumably built by the Hendersons, and named Valkyrie. She will be about 85ft. l.w.l.

## The Y. R. A. Measurement Conference.

THE evidence of Messrs. Watson, Clayton, Soper, Fife, Richardson, Payne, Nicholson and Risdale, given before the Council of the Y. R. A. at the meeting of Oct. 25, is too lengthy to reprint in full, but portions of it are highly interesting to Americans in view of the similarity of the Y. R. A. and Seawanhaka rules, and in particular of the fact that the Herreshoff fin keels appear to be the main disturbing element, though in reality but little more extreme than many of the smaller British yachts.

The following letters and notes give a very good idea of the origin and scope of the inquiry, and of the ideas of the designers:

The following letter was issued to the yacht designers by direction of the Council of the Yacht Racing Association:

SEPT. 27, 1892.

DEAR SIR—I am directed by the Council to ask you to be good enough to state your views, as concisely as possible, on the working of the existing rule for the rating of yachts; and the probable effect of the rule on yachts and yacht racing should it remain in operation longer than its assigned period of seven years.

If you suggest any alteration to the existing rule, please be good enough to state, as shortly as possible, your reasons for making the alteration, and what you consider will be the effect of the alteration.

Please let me have your reply on or before Oct. 12 next.

I am, etc., faithfully yours, DIXON KEMP, Secretary.

---

The replies are as follows:

108 WEST REGENT ST., GLASGOW, Oct. 11, 1892.

*Dixon Kemp, Esq., Sec. Y.R.A., London:*

DEAR SIR—I herewith enclose two or three copies of the joint note which was drawn up at the meeting of yacht designers in London on Thursday last. We were all really unanimous on the subject, and felt that some modification would need to be made in the rule, so as (in the lower classes at least) to get more body. We shall all of us be very pleased to give the members of the Council any further assistance in our power should they require it. Meanwhile, I am yours very truly, G. WATSON.

---

PRIVATE.—For the use of the Council of the Y. R. A.

LANGHAM HOTEL, LONDON, Oct. 6, 1892.

We (C. P. Clayton, William Fife, Jr., Charles Nicholson, Arthur E. Payne, H. W. Ridsdale, Joseph Soper, and G. L. Watson) have met together for the consideration of the questions put before us in the circular of the Council of the Y. R. A., dated September 27, 1892.

We have considered that, besides the saving in time to the Council and to ourselves, it would be more satisfactory for many reasons to have such a preliminary meeting for interchange of ideas on the important issues raised in this circular, and we trust that this course of action will be approved of by the Council. We may state that we are practically unanimous in the opinions hereinafter expressed, the only exception being on the one point of taxing overhang, Mr. Ridsdale feeling that he could not go with the majority in this.

We would, then, most respectfully submit to your Council that, as designers of racing yachts, we have no desire whatever to interfere with the present rating rule. It has the merit of being the existing rule, and is a perfectly fair one for racing yachts together by, as indeed is any rule whatsoever, so far as designers are concerned, provided its conditions are clearly stated beforehand. But as naval architects, and if we may be permitted to say so, as trustees for the yachting public, we think it our duty to point out any deteriorating tendency in a rule. We cannot help fearing that the present length ank sail area rule has such a tendency, and is leading if it has not already led, to an unwholesome type of boat.

We take it that the general yachting public require in a yacht, that she shall be safe in all conditions of wind and weather; that she shall combine the maximum of room on deck and below, with the minimum of prime cost; and that she shall be driven as fast as may be with the least expenditure of labor, *i.e.*, that she shall have a moderate and workable sail area. Therefore, as but few men can afford to build for racing, and for racing only, and that as the racer of to-day is the cruiser of a few years hence, any rating rule should by its limitations encourage such a wholesome type of vessel.

On the above assumptions we have based our advice, and it is for your Council, as representing the general body of yachtsmen, to determine whether these assumptions are correct or not.

We are all agreed, then, that the present length and sail area rule is a most admirable one for classification and regulation of time allowance of racing yachts. But we are also of opinion that the tendency of this rule is such as to induce a vessel of so large dimensions, relative to displacement and internal capacity (*i.e.*, the useful room on board the ship) that it is advisable to so alter or modify this rule that a type of vessel having more body may be evolved.

We suggest that length and sail area (as being the leading elements in speed) should be preserved in some form, but modified so as to make it to the interest of builders to produce a bigger bodied boat.

The direct method of doing this would be to introduce displacement or register tonnage in some way, as a divisor in the formula, but we foresee so many difficulties in the practical working of this that we are not prepared to advise it.

By taxing breadth and draft, or alternatively, girth, and by reducing the rax on sail, we think this result may be arrived at indirectly. As to the precise value that each element should take in such a formula, we at this stage are not prepared to venture an opinion.

The above on the general principles of the rule.

But we also feel that the details of measurement, etc., require revision.

On the Hull. The overhang, at least forward, should be taxed, as it may be carried to such an extent as to be a source of danger, but it need not be taxed excessively or to extinction.

The L.W.L. should be marked forward and aft.

Should girth or draft be used in the formula in centerboard vessels, some proportion of the drop of board should be added, and a limit should be placed on the weight of the board.

In the smaller classes at least, the crews should be limited.

On the sails. The perpendicular of fore triangle should be measured from top of deck to where the line of luff of sail would cut mast.

That the question of limiting the relative area of mainsail to total sail in the various classes be considered.

Mr. Alexander Richardson, of Liverpool, was unable to be present at this meeting, but this note has been submitted to him, and receives his endorsation.

NOTES OF CONFERENCE OF YACHT DESIGNERS.

OCTOBER 6, 1892.

I. Conference of Naval Architects at Langham Hotel, October 6, to answer Y. R. A. Circular, September 27. All thought this Conference advisable, and that it would strengthen the Y. R. A.

Result of Conference sent Y. R. A. October 11.

II. It was unanimously agreed to at at this meeting:

(1) That one measuring rule is as good as another for class or time allowance racing,

(2) That the value of a rule depends upon the type of vessel the rule tends to produce.

(3) That under the Y. R. A. rule the first productions, viz: "Dragon," "Deerhound," etc., were good.

(4) That all later productions have been gradually deteriorating.

(5) That if obliged to continue designing under the rule, and produce more speed, that productions will be still worse.

(6) There was a general desire for a rule that would tend towards the production of vessels with more compact dimensions, and with more proportionate displacement or register tonnage, viz., larger vessels.

(7) No combined attempt was made to scheme out a rule that would produce this result; firstly, because they were not asked to do so; and, secondly, because there was no time to do so. They simply advised that beam and depth or girth should be considered in the formula. That sail area might also be taxed, but not to the extent of the present rule, and all agreed that unlimited sail area tended towards big displacement.

III. Re defective details in present rule. Head sails, marking L.W.L., etc.

IV. Objectionable qualities produced under present rule:

(1) Excessive draught.
(2) Fin and bulb keels.
(3) Small registered tonnage to dimensions.
(4) Weak construction.
(5) Overhangings, specially forward.
(6) Mast in bow and big mainsails.

Taken in detail, objectionable:

(1) Excessive draught, objected to under 1730 rule, but worse and very objectionable in this.

(2) Fin and bulb keels, three-quarters, and more than three-quarters of draught going into steel fin, or hanging lead fin; bad for grounding; source of weakness, no body. The "Wee Win," has 7 inches depth of body; "Wenonah," about 16 inches. The 35 feet "Herreshoff" craft, built for Alexander (?) Morgan, in 1892, has 2 feet depth of body. The C.B. boat "Beatrice," having being fitted with bulb fin, beat "Wasp" and "Gloriana." This points to something of the sort being necessary in our 20 rating class, if not in larger vessels.

Nothing else likely to succeed in the smaller classes.

Compare the 35-feet "Morgan" boat to "Eclipse." What is she as a vessel?

(3) Small registered tonnage, decreasing in all classes. If it continues, there will not be 5 feet head room in a 40-rater, and generally small cabin space,

(4) Weak construction; dimensions are increasing, and displacement decreasing. The girth of mid section has increased in all classes, viz., about 2½ feet in the 2½ class, up to 6 feet in the 40 class.

Mid sections under the old rule were compact, with strength in their shape. Modern sections with straggling dimensions, due to unrestricted beam and draught. Hollow in shape, with deep hanging keels, and mast forward, a long way ahead of lead keel straining vessel.

Compare Lloyd's numerals on old-fashioned vessels, and compare same to numerals of modern vessels. (Such numerals are a fair test for real size.)

For Lloyd's numerals the length is taken stem to stern-post on deck, beam extreme, with the half girth of mid section.

If there is much counter, part of this length is added:

The ever all lengths—L.W.L. length—of same yachts are as follows: "Wee Winn" (18 feet 6 inches L.W.L.), 23 feet 9 inches overall; "Wenonah" (25 feet L.W.L.), 38 feet over all; "Dacia," 33 feet 8 inches L.W.L., 48 feet overall; "Herreshoff," 35 feet L.W.L. boat, 52 feet over all; "Gloriana," 72 feet over all, 46 feet L.W.L.

This over all can only be used to advantage in vessels of small middle body.

Lloyd's numerals in such vessels are enormous in proportion to displacement or register tonnage; large deck area to cover with planking, and large side to cover with planking. Generally no margin of displacement to cover this, and so the tendency is towards weak construction.

All agreed that building to a Lloyd's class, or under some regulated range of scantlings was not advisable, as the strength of a vessel did so much depend upon the sizes of scantlings, as upon the way they were put together.

V. Overhangs. All agreed that overhang forward was a source of danger. Three N.A.'s spoke of having been in doubt of their own boats giving out in a seaway when in them; they thump heavily in a head sea.

It was generally agreed that counters might be left alone.

Mr. Fife had some proposal for preventing excessive overhang, which Mr. Watson thought might be sufficient.

Mr. Watson however proposes, × cosine of angle of stem to L.W.L. by ½ freeboard. Add this forward where angle was less than 45°, and aft where less than 15°; *i.e.*, add the excess to length. (See letter.)

Mr. Clayton thinks it best to leave counters alone, as not dangerous as long as mast stands, and there is way on the boat, and allow 23° forward; anything under to be added to L.W.L., at the rate of 1 inch per degree, *i.e.*, 33°, 5 inches, and 20°, 15 inches. He thinks 15 inches, as it affects speed and sail area, of equal value in craft of all sizes.

VI. Bow, mast, and top-sail rig. Fit and proper in craft of 5 rating and under, but objectionable in 10 rating. Mr. Fyfe spoke against this in "Doreen." Mr. Payne had been asked to design two-sail 20 rater. All agreed a most objectionable rig, expensive to work, etc.

VII. All agreed that the interests of designers and owners were identical; that changing rules of measuring meant hanging up work. All prepared to go on designing under any rule, but thinking bad productions would ultimately affect racing boats; as such boats were soon out-classed, and unless after racing for cruising, etc. Designers wishing to act honestly towards their employers, wished that they should clearly understand what sort of craft they might expect if the Y. R. A. rule is continued.

VIII. All agreed that it would take several days to make a new rule. Designers more used to evade than manufacture rules of measurement, and said, if a new rule made, each ought to scheme out under it what he thought best, and also give his imagination scope in thinking out what somebody else might produce.

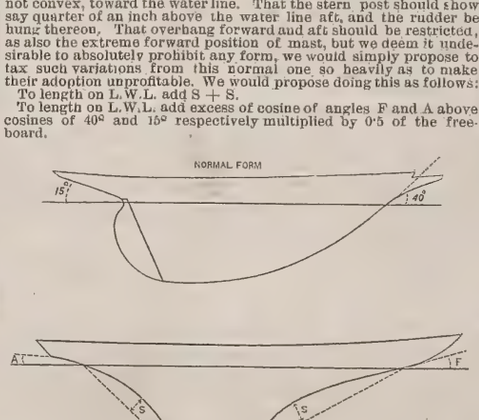
Agreed designers ought to criticise any new rule *in all its details*, so as to obtain, if possible, something perfect to start with and complete; alterations afterwards are objectionable.

---

MORLEY'S HOTEL, Nov. 8, 1892.

*To the Yacht Racing Association Measurement Committee, London:*

GENTLEMEN—We understand that you do not consider our letter of October 6 sufficiently answered the questions put in your circular letter of September 27, and that you expected us to formulate some rating rule instead of the present one. We cannot see that your letter bears this interpretation.



Our opinions, as expressed in that letter of October 6, practically remain unaltered; but so far as we are able to interpret the wishes of yacht owners, as stated in the public prints, and more especially as expressed by your Chairman and majority of your Committee, we now take it that speed, and speed before other good qualities, is what is to be aimed at.

We consequently withdraw any suggestions made in that letter as having been made under a misapprehension as to your requirements.

But while it may be determined to retain a length and sail area rule, either in its present or in some slightly altered form, we would most respectfully suggest that at least in the classes above 5-rating (if, indeed, a lower line should not be drawn), that the tendency toward abnormal and unshipshape form should be curbed in some way. The main direction in which we would propose such limitation in form would be in the outline of longitudinal section, and we would suggest that this should be bound by a fair line, concave, or at least not convex, toward the water line. That the stern post should show say quarter of an inch above the water line aft, and the rudder be hung thereon. That overhang forward and aft should be restricted, as also the extreme forward position of mast, but we deem it undesirable to absolutely prohibit any form, we would simply propose to tax such variations from this normal one so heavily as to make their adoption unprofitable. We would propose doing this as follows:

To length on L.W.L. add S + S.

To length on L.W.L. add excess of cosine of angles F and A above cosines of 40° and 15° respectively multiplied by 0·5 of the freeboard.

Where the mast is forward of the limit as per following table, such distance to be added to length on L.W.L.

In 10 raters or the equivalent corrected length from foreside mast to fore end of water line not less than ·3 of L.W.L.; in 20-raters, ·31; in 40-raters, ·32; above 40-raters, ·35.

We would further submit for your consideration the advisability of altering the relative value of sail and length by adoption of the Seawanhaka Rule, rating of course, by corrected length, in which event these length ratings might be arranged somewhat as follows:

| | | | | |
|---|---|---|---|---|
| 40 | Rating, | 60 ft. | corrected length. | |
| 20 | " | 48 " | " | " |
| 10 | " | 39 " | " | " |
| 5 | " | 32 " | " | " |
| 2·5 | " | 26 " | " | " |
| 1 | " | 19 " | " | " |
| ·5 | " | 15 " | " | " |

We would advise that all existing boats should be allowed to race without restriction.

G. L. WATSON.
C. P. CLAYTON.
WILLIAM FIFE, JR.
C. E. NICHOLSON.
ARTHUR E. PAYNE.
J. M. SOPER.

RIDER.

I do not go with the majority in putting restrictions on the form of the vertical longitudinal section, either above or below the water line.

On all other points I entirely agree with present report.

H. WHEATLEY RIDSDALE.

The examination of each designer by the committee developed considerable divergence of opinion over details; the designers one and all expressed themselves as unable to suggest without further study a really satisfactory rule, though several rather crude suggestions were made. The following extracts cover some of the more important points touched upon:

Now, inasmuch as you have pointed out to us in your letter the danger of the heavy overhang, what would you suggest to get rid of that which you consider a dangerous element—the excessive overhang? I have given that some consideration, and I have had one or two proposals, and I think probably the best way of limiting it would be to tax the angle that the stem and ridge of counter make with the load waterline. The useful part of overhang is near the water, and my suggestion would be to multiply the co-sine of this angle by half the freeboard and add it to the length. That would be, as it were, take the mean length of the length above, and the length on the waterline.

That would be equivalent to taxing about how much of the overhang? Half of it. The useful bit of your overhang is pretty near the water. I would multiply the co-sine of that angle by half the freeboard. I should be inclined to allow an angle of 45°, and tax anything under that.

You take it it is important it should be taxed in some way? Yes.

Sir G. Leach—Will you explain, Mr. Watson, how the overhang becomes the serious danger you say it is. Is it weakness of construction? It leads with shallow-bodied boats to flat sections that hammer in a sea-way.

When she lists over then she throws the side of the overhang as it were against the sea? Yes, and it becomes a bottom as it were and strikes the sea with terrible force.

Is it likely if the overhang is only useful for a very short distance up that constructors would give very long overhangs? Yes, especially in the smaller classes.

Then it must be useful? Yes, it is decidedly useful.

Even beyond what you at first said? No, that would about make it; a man would debate as to whether he used overhang or not.

If it is no use, he would not extend the overhang to a dangerous extent? Not if it was of no use. As if he felt that useful as it was, he was paying too dear for it in length.

That being the case, are the builders likely to extend the overhang very much? If the shorter overhang is sufficient for useful purposes, why should they extend it to any great length? What you want to tax is the flatness of the angle of the stem with the water. I have seen boats thrash the sea in a very ugly way, and Mr. Fife spoke very strongly of having sailed on board a boat which he thought was going to break up, she struck the water so fiercely. I was suggesting an angle of 45°, as permitting you to make a nice looking bow, and being as much as was useful in a seaway, but not as much as is useful for speed, provided you could get it for nothing.

There was no difficulty in constructing it strong? When we knock the bow of a boat in we shall probably make the next one stronger.

You can make it stronger? Yes; but putting breasthooks in the bow of a boat does not improve her seaworthiness.

Would there be any difficulty in taking that angle in practice. If that was going to be the only measurement the least little change of waterline would immediately alter the tangent? There would be great quarreling.

Mr. Dixon Kemp—A correction for the angle would be made with every measurement? You could easily take a height at a distance out.

The Chairman—I take it you did not propose to interfere with it aft? I think it is as necessary to tax it aft as forward. I would put a minimum angle aft.

What angle would you put aft? I think it was 15° or 16°. I would limit the angle to what would be the extreme flatness of a good-looking stern, and if a man wanted to make anything particularly ugly let him pay for it.

Do you think overhang improves a boat's chance for speed except in so far as it dodges the waterline? I think it does; in a seaway she goes drier and more buoyantly.

It is not entirely due to being able to crib a little length on the measured length of the load waterline? When a boat makes waves under the lee bow she meets an easier ribbon.

The Chairman—She gains more in speed than she gains in length.

Mr. G. B. Thompson—I wanted to know whether it was the load waterline or the bow? I do not think you lengthen the load waterline at all, but it makes an easier ribbon line.

Mr. Prestcott Westcar—Do you think it would be sufficient if a tax were put on forward of so much per cent. of the load waterline? If you have a certain amount of overhang allowed, that is the kind of stern you would get (sketching a counter cut off). I have no objection to it except that it is abominably ugly.

Mr. Baden Powell—You have talked about the useful bit of length, and you have told us practically it is what may be immersed when she is sailing? No: there is really very little immersed when she is sailing in smooth water at least.

Then what is it useful for? Why do you call it useful? You say it is owing to this low piece of overhang you meet the water at a better angle? Yes, an easier angle.

That ought to make a better sea boat? Yes, when used in moderation.

That is a question of section. I am talking of the angle at which the stem (it is probably the keel) comes out of the water. The angle at which it comes out is useful in that it catches the water better? Yes, you meet it at an easier angle.

An therefore it must give the boat better sea-going powers? It lets her get through the water easier

Would there be any objection to the useful piece of overhang, supposing that the load waterline were marked, and that marks were bound to be kept above water in smooth water when she was lying still. Would there be any objection to that overhang? Limiting it, do you mean?

Supposing the load waterline had to be marked and the marks kept above water, would there be any objection to having any length of overhang? Yes, a man is bound to keep his marks above water or he would be over the rating.

But he has no water marks? If he has a conscience he has.

Taking that as the load waterline when at still water that would be above the water. When he is at speed he immerses that. Do you think that is objectionable? Not so objectionable aft.

But you think, supposing he were to have the same sort of bow, it would be objectionable? Yes.

Why? Because if you have a flat bow you are bound to have more or less flat section unless you have an extremely deep, narrow boat, and then there becomes no objection whatever.

Then it amounts to this, that it is a question of section, whether it is a bad thing or a good thing? It is a combination of the great overreach and the section.

The overhang is weight and windage? Yes.

Those are both dead against overhang? Yes.

The Chairman—Now the next subject is the centerboard. You think some limit should be placed on the centerboard. How would you propose to do that? According to the rating of the vessel. It would not want to be the same proportion in a big ship that it would be in a little ship. It would want to be a sliding scale. A rule could be very easily devised for that.

You think it would be desirable to have such a rule? I would certainly limit it, especially if we limit draft of water.

Sir G. Leath—Is it your idea that the centerboard should be merely a centerboard and not ballast? I think it should be limited to a reasonable workable weight. In a metal plate you would get a smooth working thing, and you can make a nice clean fit in the keel. Let it be a tenth of the rating in small classes and less as you come up.

Major Willan—I understood you to object to my proposal to limit the overhang because it was grandmotherly. Would this not be equally grandmotherly? Well, it might.

Mr. Baden-Powell—If you must limit the weight of a board in the first place, how are you to get at the weight. Supposing the case is down below the cabin floor? I think we are all sufficiently honest for that. If a builder declares it is a certain weight I think we may take that.

Assuming it was fixed, would not that drive men at once to give up the centerboard boat which could go into shoal water and go in for bulb keel boats—are not you limiting that most useful type of boat because it would only affect the small boat? My idea was to give a pretty generous boat.

If you limit it, you advise a man not to have a centerboard but a bulb keel, when he can carry what weight he likes. It would be a great tax on the measurers to have to consider the centerboard? You would have to ask him show me the weight of your board.

I should like to ask you what your objection to the weighted centerboard is? You go to such an expense in the structure of the boat.

Do you think a weighted centerboard require more expensive structure than a fin with a lead bulb at the bottom of it? Yes; I am inclined to think so.

It has nothing to do with the trouble of working it well, the winch or whatever it is? Men always want to save trouble.

That is a secondary consideration? Yes.

Mr. Manning—I think if Mr. Watson would consider that question and make any suggestion by which the boats could be properly built it would be very valuable. Even now there are boats built which in a month are leaking like a sieve, and probably that has led to the outcry about the unserviceable nature of the boats, especially in the small class? It would be an extremely difficult boat to do much in. For instance, the Winonah has probably a lighter hull than any of the 2½ raters, but is as tight as a bottle, and stands any amount of hammering about; but she is built with a double skin.

That answer rather emphasizes my point that it is very desirable that some authority (you say Lloyd's is impossible) should exist to see that the boats built for racing are scientifically built? Then you come to the man of moderate means again. Is he to be debarred from racing altogether?

Do you consider that the difference in cost of the hull of a boat very lightly built, and yet strong enough to keep tight, is increased over one that is thrown together in the most unscientific way? Every

pound you lighten the structure of a boat, and at the same time preserve the strength, costs money.

I happen to have had shown to me estimates for ½-raters, 1-raters, and 2½ and 5-raters, by a builder in America, built in what is called first and second class of building, and I was surprised to find that the extra cost of production at his place was not very much in excess of the price charged by some of our builders for what I call baskets and sieves, notwithstanding the fact that, as we know, labor is a much more expensive item in America. I hope the committee will pardon me for trespassing so long, but this is an important question, and we should be very gratified to you if you could devise some means by which good boats and strongly built boats could be insured? I will give it my consideration.

Mr. Clayton expressed an opinion that the bulb-keel would be the only successful type in sizes under 50 ft. l. w. l., and favored a rule with limitations on hull only, and leaving sail unrestricted. Mr. Payne favored a tax on forward overhangs, but not aft, and further expressed his opinion that in attempting a new boat to beat his 40 rater Corsair, he would be compelled to turn out a less desirable craft in all respects save speed. One of his answers was rather amusing, as follows: In answer to the remark by Mr. Manning, "I think you naval architects are desirous of preserving a good wholesome type of cruiser?" he said, "I think that we are desirous of preserving a good amount of business for the future. We are afraid that the boats developed will become so unsatisfactory that people would not continue to build them." Another remark of Mr. Payne's is interesting: "I should like to add that as regards the development of the present rule without any safeguarding, in my opinion would be that a capsizable centerboard boat would be built; I feel absolutely certain of that, and that the same boat will excel as a racer."

The common opinion of the designers seems to be that thus far the rating rule has produced a good type of boat, but that the type is rapidly degenerating through mainly the reduction of displacement, and that the immediate result must be the fin-keel in even the 20, if not the 40 rating classes.

## The Royal Yacht Squadron Challenge.

The following formal challenge from the Royal Yacht Squadron was received by the Aurania on Sunday, though the text was already known in New York, having been cabled from London, on Friday, Dec. 2:

ROYAL YACHT SQUADRON CASTLE, }
COWES, Isle of Wight, Nov. 25. }

*To Secretary J. V. S. Oddie:*

I am requested by Lord Dunraven to forward to you a formal challenge for the Cup on the following conditions, which I understand have been agreed upon between Lord Dunraven and a committee appointed by the New York Y. C. to conduct negotiations and arrange all the details, viz.:

Conditions agreed upon between Lord Dunraven and a committee of the New York Y. C. and contained in Lord Dunraven's letters of Sept. 16 to Mr. Oddie, and of Nov. 7 to Gen. Paine:

First—Length of load waterline of the challenging vessel to be the only dimension required; this to be sent with the challenge and the Custom House register to follow as soon as possible.

Second—Any excess over estimated length of load waterline in challenging vessel to count double in calculating time allowance, but the challenging vessel not to exceed, in any case, such estimated length by more than two percentage; the yacht that sails against the challenging vessel not to exceed the estimated length of the load waterline of the challenging vessel more than two percentage, and any excess of length beyond the estimated length of challenging vessel in load waterline to count double in calculating time allowance, provided that no yacht of specific rig existing or under construction Oct. 20, 1892, and available for use by the New York Y. C. in defending the Cup, be barred or penalized beyond taking or giving ordinary time allowance according to the New York Y. C. club rules.

Third—It is to be understood and agreed that should the cup come into the custody of the British Y. C. it shall be held subject to challenge under precisely similar terms as those contained in this challenge, provided always that such club shall not refuse any challenge according to the rules laid down in the deed of 1887.

I, therefore, in behalf of the Royal Yacht Squadron and in the name of Lord Dunraven, a member of the squadron, challenge to sail a series of matches with the yacht Valkyrie against any one yacht or vessel constructed in the United States for the cup, and would suggest that the match be sailed in August or September, 1893. Lord Dunraven would be glad if the precise dates can be left open for the time, but, if your committee so desire, he will name the exact date on hearing from them.

The following are the particulars of the challenging vessel:

Owner, Lord Dunraven.

Name, Valkyrie.

Length, load water line, 85 feet.

Custom House measurement will follow as soon as the vessel can be measured for registration.

Shall be much obliged if you will send your replying letter soon, so that the matter can be laid before the committee.

RICHARD GRANT.

In an interview reported by the Associated Press, Lord Dunraven, after outlining the above terms of the challenge, spoke as follows:

"A challenge embodying those terms was forwarded in my behalf by the Royal Yacht Squadron to the New York Y. C. on Saturday. The name of my vessel will be the Valkyrie; rig, cutter; length on load water line, 85 feet.

"The committee appointed by the New York Y. C. having assented to these terms there is sure to be a race unless the New York Club refuses to accept the recommendations of its committee, and declines to ratify this acceptance, which is improbable in the last degree. The race will probably be sailed in August or September, but I asked that the date be left an open question for the time being.

"The details will be practically the same as were settled upon at the time of my abortive challenge in 1889. The best out of five races sailed over the outside courses will decide the contest, three out of the five races to be sailed to windward.

"Mr. G. L. Watson will design my vessel, and she will probably be built on the Clyde."

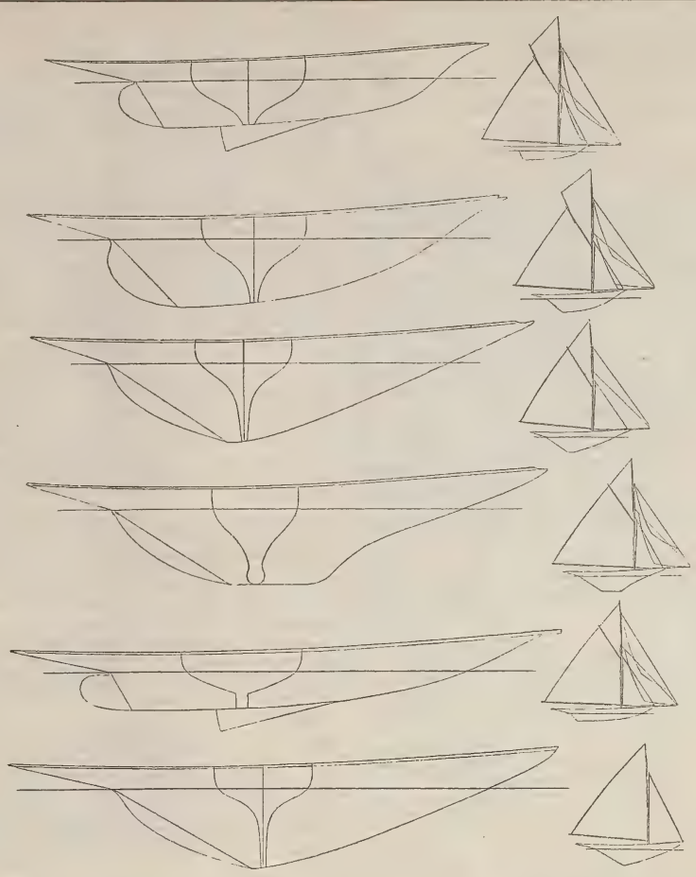
Lord Dunraven has also given the Associated Press representative copies of letters which passed between him and Secretary Oddie of the New York Yacht Club, Gen. Paine of the committee, and H. Maitland Kersey, Lord Dunraven's representative in New York, showing the course of the negotiations which led up to the New York Yacht Club committee's acceptance of the conditions embodied in Lord Dunraven's statement.

In the last letter to Mr. Kersey, Lord Dunraven writes: "Personally, I am not particularly anxious to mention the former deeds, for I do not know or care whether the new deed is illegal or not; but the opinion that it is illegal is fully expressed here, and, for all I can tell, when I ask the club to challenge I may be met with the objection that they cannot derive power to make mutual arrangements from a deed they consider illegal. I won't ask the club to challenge until I am sure that it will be accepted. I cannot have the Valkyrie fiasco repeated. I aimed to sail a match on conditions which would not require an expression of opinion from the British club that the deed is fair or illegal and would not involve a surrender by the New York club of their opinion that it is perfectly fair and legal. I think that if the committee will properly consider my propositions, they will see those conditions fulfilled."

The challenge, which is practically identical with the above wording, was received at the club house on Monday morning. A meeting of the committee was held on Tuesday, and it was decided that the committee would take no action, but would submit the challenge to the club at a special meeting on Tuesday of next week.

## Lord Dunraven on International Yachting.

The current number of the *North American Review* contains a long and exhaustive article on international yachting, which subject, however, the author has considered in the abstract rather than in practical form as applied to the America Cup.



Lord Dunraven prefaces his article with an enthusiastic exordium of the sea and sailing, with a good word for the designer, sailmaker and skipper whose skill are so important in racing. He points out the great decline in the racing of large yachts of late years, attributing it to three causes—the advantages offered by steam, the specialization of the racing yacht as distinguished from the cruiser, and the lack of international racing. To this third factor he attributes serious importance, and the latter half of the article is devoted to a discussion of the conditions under which it may become permanent.

The importance to both countries of international competition has been repeatedly proven, in fact nearly all recent improvements in design, construction and racing rules may be credited to such yachts as Madge, Clara, Puritan, Volunteer, Mayflower and Minerva, which have demonstrated their superiority in certain respects. At the same time we cannot share Lord Dunraven's optimistic view, that international racing may be permanently established, with races sufficiently often, as every year or second year, to induce the maintenance of a regular class of 80 or 90ft. racing cutters.

A race next year will prove valuable to both sides through the incidental excitement which it creates among yachtsmen and the wide interest awakened among the general public; but with a race every year this excitement would soon disappear to a great extent, and we have no idea that yachtsmen would be impelled to build regularly a new supply of 90ft. racers.

Lord Dunraven sums up the history of the Cup races, but falls into error in assuming that the original deed sanctioned the sailing of a fleet against one vessel. This was done by the New York Y. C. only in face of the active opposition of Com. Stebbins and Mr. Geo. L. Schuyler, the latter protesting strongly against it in a letter still on record.

The writer's comments on the various points of an international match, such as courses, nature of challenge, outbuilding, etc., are very fair and to the point, and he makes clear a difference which American yachtsmen have always refused to recognize, between a mere challenge cup, open to all yachts, to be sailed for at a club regatta, and a trophy intended to denote national supremacy to be contested for by but one representative boat of each nation. As a mere abstract proposition he suggests a committee of three American and three British yachtsmen who shall draw up rules to govern international racing for some trophy, and that the first holder of this trophy should be decided by lot. The most notable point in the whole article, relating to the new deed of gift, we have commented on elsewhere.

## Alloys Used in Yacht Building.

We are indebted to the *Mechanical World* for the following table of the various alloys used in ship and yacht building. While yachtsmen are all familiar with Muntz metal, gun metal and yellow metal, few are informed as to the composition and uses of each, and the table will be found useful for reference:

COMPOSITION OF ALLOYS IN EVERY-DAY USE IN BRASS FOUNDRIES.

| | Copper. | Zinc. | Tin. | Lead. | Phosphorus. | Aluminum. | |
|---|---|---|---|---|---|---|---|
| | lb. | lb. | lb. | lb. | lb. | lb. | |
| Admiralty metal.. | 87 | 5 | 8 | — | — | — | For parts of engines on board naval vessels. |
| Bell metal..... | 16 | — | 4 | — | — | — | Bells for ships and factories. |
| Brass (yellow)..... | 16 | 8 | — | ½ | — | — | For plumbers, ship and house brass work. |
| Common bush metal..... .. | 64 | 8 | 4 | 4 | — | — | For bearing bushes for shafting. |
| Gun metal..... | 32 | 1 | 3 | — | — | — | For pumps and other hydraulic purposes. |
| Hard-gun metal... | 16 | — | 2½ | — | — | — | For heavy bearings. |
| Manganese bronze | 85 | 5 | 6 | 5† | — | — | Metal for propellers. |
| Muntz metal..... | 60 | 40 | — | — | — | — | Metal from which bolts and nuts are forged, valve spindles, etc. |
| Phosphor bronze.. | 92 | — | 8* | — | — | — | For valves, pumps and general work. |
| Phosphor bronze.. | 90 | — | 10* | — | — | — | For cog and worm wheels, bushes, axle bearings, slide valves, etc. |
| Naval brass..... | 62 | 37 | 1 | — | — | — | Used by the Admiralty for bolts, nuts, etc. |
| Brazing metal..... | 16 | 3 | — | — | — | — | Flanges for copper pipes. |
| Brazing solder.... | 50 | 50 | — | — | — | — | Solder for the above flanges. |
| Aluminum brass.. | 60 | 40 | — | — | — | 2 | For large spindles, etc. |

* Phosphor tin. † Manganese copper.

The wreck of the Alva still lies where she first sunk, a serious danger to all vessels rounding the Cape. On Saturday the coal barge Beechwood, in tow of the tug Plymouth, struck the wreck and began to leak badly, being kept afloat by the tug's pumps. On Friday night in a gale the schooner Ethel Emerson, from New York for New York for New Brunswick with a cargo of fuller's earth, struck the wreck and was so badly damaged that her crew abandoned her in their boat, being picked up by the tug Herald. The vessel is reported as still afloat. Bids have been received by the Government for the removal of the wreck as follows: Kelly & Fausant, Atlantic City, $5,916; Johnson & Townsend, $12,395; Chapman Derrick Wrecking Co., $16,874.

Mr. W. E. Waterhouse, formerly head draftsman for the late Mr. Burgess, has just taken into partnership Mr. Albert S. Chesebrough, a nephew of Mr. N. G. Herreshoff, and for six years associated with the Herreshoff Mfg. Co. as draftsman. Mr. Chesebrough, whose mother is a sister of the Herreshoffs, is a graduate of Brown University, Class of '89. At the Bristol works he has had a valuable experience in designing and construction, and with the experience gained by Mr. Waterhouse in all of the Burgess boats from Puritan down, the new firm is well equipped for a successful business. They are now at work on a design for a steam yacht 98ft. over all, 78ft. l.w.l., 15ft. beam.

## Yacht Measurement in France.

As we have already noted, the measurement question has lately been very thoroughly discussed by French yachtsmen, both in printed discussions and in the congress of the Union of French Yachts, the result being the adoption by the latter body of a new formula of measurement.

One of the chief points in all recent measurement discussions has been that of taxing extreme dimensions, such as beam and draft, as in the fin-keel, and putting such a premium on displacement or area of midship section as shall encourage a rather roomy yacht of strong and compact form. The Y. R. A. Council has declined to recommend any such measures, nor are they likely to be adopted by any American clubs; but the French congress, on the contrary, has incorporated in the new rule just adopted a limit of girth which is likely to attain this end, whatever the finally resulting type or types may be.

The new rule is $\frac{\left(L - \frac{P}{4}\right) \times P \times \sqrt[4]{S\,A}}{180}$; or, P being the greatest girth of the yacht, the l.w.l. is multiplied by girth and square root of sail area, the product being divided by a constant.

One argument in favor of the new rule for French yachts is the importance of moderate draft in most French rivers and harbors, the difficulties attending the use of an extremely deep boat being much more serious than in England or America.

The accompanying sketches of various designs possible for a total measurement of 5, were made for the *Yacht* by M. Caillebotte, one of whose designs was reproduced in our columns some time since.

Whether one type will ultimately result, and if so, what its merits and defects will be, cannot be foretold at present; but the experiment of the French will be most interesting, and not a little instructive to American and British yachtsmen.

## YACHT NEWS NOTES.

Of late years the subjects of yacht design and construction have been thoroughly treated of by experienced writers, but on the subject of sail making there has been no modern work, the only books relating to it at all being limited to naval and mercantile sails. This deficiency has at last been largely filled by Mr. Samuel B. Saddler, in a book entitled "The Art and Science of Sail Making." The author is a practical sail maker, formerly employed by Ratsy & Lapthorne, and familiar with the making of yacht sails. The book is thorough and practical, dealing in detail with the cutting of sails, and containing a number of tables and diagrams. It is, however, intended for the practical sail maker and not the novice or amateur, and there is a wide field left untouched which we hope the author may deem it worth while to treat of in a future edition. While sail making is not an art to be acquired by an amateur, there are many who desire or are compelled to make their own sails, and to whom an elementary work on the same practical plan as Mr. Saddler's more advanced book would be most valuable. To any one familiar with sail making the book will prove a valuable aid. It is published by Crosby, Lockwood & Son.

A number of gentlemen connected with shipping have taken up the organization of the Society of Naval Architects and Engineers for the purpose of promoting a knowledge of shipbuilding and designing. The organization thus far includes President Clement A. Griscom; Vice Presidents, Theodore D. Wilson, Chief Constructor of the Navy; Charles H. Cramp, George W. Melville, George W. Quintard, New York; Irving M. Scott, San Francisco; Gen. Francis A. Walker, Boston, and W. H. Webb, New York; W. L. Cappa, Secretary and Treasurer; members of the Council, H. T. Gause, Wilmington, Del.; Gen. F. W. Wheeler, West Bay City, Mich.; W. H. Jacques, Bethlehem Iron Works; Gen. T. W. Hyde, Bath, Me.; J. W. Miller, New York; C. H. Orcutt, Newport News, Va.; Nathaniel G. Herreshoff, J. F. Parkhurst, Cleveland, O.; Naval Constructors Hichborn and Bowles, of the navy; Charles H. Loring, Capts. Sampson and Chadwick, of the navy, and Harrington Putnam, of New York.

The coming election in the New York Y. C. is likely to bring some very important changes. It is certain that Com. Gerry will not be re-elected, and more than probable that Vice-Com. Morgan will succeed him, in which case the present Rear Com. W. Butler Duncan will become Vice-Com. Mr. Ralph L. Ellis is mentioned as Rear-Com. The other officers and the regatta committee will remain as at present. Vice Com. Morgan sailed last week for Europe, and it is likely that he will purchase a large steam yacht abroad.

On Nov. 29 articles of incorporation of the Valiant Y. C., of New Utrecht, Kings county, were filed with the Secretary of State. The managers are Henry V. Harding, William H. Turton, Henry B. Hardaburg, Edgar D. Williams, Julius A. Grudchos, George W. Mason, Henry W. Jones, John Noermann and Thomas W. Kelley, all of Brooklyn.

At Ayers's shop, Bay Ridge, the new Scarecrow is nearly completed. Mr. Ayers has an order for a second boat on the same lines.

Sagamore, steam yacht, chartered by E. M. Fulton, sailed on Dec. 3 from Norfolk for a five month's cruise in the West Indies.

Sybilla, steam yacht, J. F. Betz, Jr., of Philadelphia, has sailed on a gunning trip to the North Carolina sounds.

If we want to do anything, we must put heart in it, whether it is to go a-fishing, go woolng, chasing deer or advancing the cause of Christianity.—*Rev. Dr. John R. Paxton.*

# Canoeing.

## The Cruise of the Elsa.

(Continued from page 457.)

AFTER a night's rest in the guest chamber on a feather bed, which the skipper did not appreciate, he turned out eagerly into the gray morning to see what the prospects were for getting ahead. Barometer still obstinately refusing to rise, but the wind light with a little south in it. A start was made at 8 A. M., and a quiet, enjoyable run followed, past the stone mills and the "Lake of the Mountain," a natural curiosity which we were recommended to examine, but did not like to waste the fair wind for, past Fredericksburg and Adolphstown until we bore down upon the extreme eastern point of the Prince Edward Peninsula.

Between this point and Amherst Island is a channel locally known as the "Gap"—some three or four miles across. The storm signal was up at the lighthouse and the wind coming down in heavy puffs out of the southwest, driving a heavy roll in from the lake, and a steam barge and consort were making for a lee under the point. Things looked bad again, but the wind was well aft this time, so we concluded to try the passage, and putting a reef in the mainsail and snugging everything else down close, Elsa was headed for the open.

It was bad enough with the swell of the Bay of Quinte meeting that of the lake nearly at right angles and raising a nasty cross chop, but the lake wind came steady though strong, and there were none of the angry spitfire squalls of the day before, and the little boat though tossed about in marvellous fashion, went along easily and comfortably with a dry deck. Leaving the bay behind us the swell became more and more regular, and Elsa sped along, rising and falling upon the great broad-backed rollers in most exhilarating fashion, until just as the sun reached the meridian we rounded to opposite the little village of Bath, and to give the cook a holiday, went to the old-fashioned country hotel hard by the wharf for dinner.

The morning's run had been a good one and the spirits of the crew were high.

Again Elsa was under way, and we sped down the now comparatively sheltered north channel toward Kingston. The dreaded "nine mile point" was ahead of us, and seeing the angry look of the weather it was hardly expected that we should go further than Collins Bay, but getting abreast of it with the afternoon still young we concluded to run out to the point of Amherst Island at any rate and have a look at the open.

The survey being more encouraging than we expected, and the wind lulling a little, the temptation to get ahead was too strong, and out we went. The wind had now got round due south, and occasional rain squalls drifted in from the lake, but there was nothing more than a stiff breeze blowing, and the great swells were so long that we did not realize their size until we met a steamer coming west rolling to her guards, and a little later a great lighter, sloop-rigged, pitching to her hawse pipes.

On a close reach Elsa danced along gaily, and in an hour we had the Cape Island Light abeam and the spires and masts of Kingston in sight ahead. As it became dusk the wind died almost away, and we ran slowly past the wharves looking for a berth. A great iron steamer came majestically out the Campana bound for Chicago. As 6 o'clock struck we ran into a snug little slip and made fast alongside a couple of other small craft, and the skipper begat himself to a hotel with the half-regretful, half-relieved consciousness of having successfully wrestled with Lake Ontario during the equinoctials, and that henceforth his lot would be cast on sheltered waters, and that he had little to try his nerves except perhaps a bump on a sunken rock near by the Thousand Islands.

Morning broke bright and clear, the first really fine day yet, and the white-caps were chasing one another down the lake gaily and fast as Elsa turned her stern toward Kingston. The storm signal, which had so far confronted us at every port, was down at last, and the wind was back in the west again. With keen enjoyment the skipper took his seat on the weather deck. A fair wind, a blue sky, a good boat under him and a good breakfast inside, what sailor man would not be happy under the circumstances.

Ahead, everything was new and strange, and as the boat bowled along with a creamy streak on either bow, he made up his mind that nothing short of Brockville, fifty miles off, would satisfy him for a day's run. "L'homme propose." Six miles down, and just as the islands began to get thick and close, and the navigation intricate, a slight "clink!" was heard astern, and the man at the stick meeting her at the next scend, felt no resistance; the tiller lines were slack. The horrible truth rushed upon the skipper. The nut at the top of the rudder shaft had gradually worked loose and the rudder had dropped off into deep water. This was bad, but it would have been worse yesterday, and uncomplainingly the crew got out the single sweep, and with considerable exertion at last got the boat before the wind again.

Steering with an oar in half a gale of wind with a following sea is no easy work on the Elsa, and the crew had little leisure to enjoy the lovely scenery at first, but soon we got into the river-like channel inside Howe Island and the work became less arduous.

The run was hugely enjoyable after all, in spite of the mishap, and the inevitable delay ahead at Gananoque. Sweeping through the narrows at last we ran into the mouth of the river just after noon and inquired for a blacksmith. We were in luck as regards the locality of the mishap at any rate, and if there are better boat blacksmiths than J. J. Moore I have never struck them. Before the skipper had finished his dinner the new rudder was well under way, and at 3:30 it was finished, with shaft and doubling plates riveted on either side in the neatest way, complete. Mr. Moore makes a specialty of boat work and finishes in beautiful style with a coating of pure tin, which is handsomer than the ordinary galvanized surface, at very moderate cost. With the consent of the FOREST AND STREAM I tender him this free advertisement in grateful acknowledgment of his excellent and rapid work.

At 4 P. M. Elsa was under way again, and bowling down river under whole mainsail and mizen. Soon we swept past Stave Island, and as the sun sank in the west, taking the wind with it, we ran into the meadows at the "Fiddler's Elbow," and felt the first decided current.

We had left Lake Ontario behind us, and were drifting on the eddying bosom of the mightiest of North American rivers. It was the loveliest evening and the loveliest scene we had met with for many a day; westward stretched the placid surface of the lake, dotted with fairy isles and rocks, and just ruffled by the dying wind, the whole brilliantly lit up by the setting sun. An old paddle steamer passed us, bound for Kingston, with two great lighters in tow, the quiet breathing of her engines and the light streak of smoke from her funnel as she went by rather heightened than detracted from the quiet beauty of the scene. Against a dark island gleamed the white sail of a skiff which we had outrun all the way from Gananoque. To the east there showed the white lighthouse standing on a dark rock and marking the entrance to the river running swiftly away into the murky and mysterious looking east. A boat stole out of the gloom between the islands and glided toward the lighthouse, leaving the light keeper to his charge. A little further down the channel one of the great turreted mansions of the wealthy summer residents showed dimly between the trees, its rather staring facade and gaudy paint softened by the lazy atmosphere into harmony with the landscape.

As we glided into the channel the river seemed a type of young manhood setting out from his quiet, peaceful home for the great unknown world. On it goes, sometimes chafing and foaming angrily against opposing rocks and anon resting in quiet expansion, gathering sediment as the man gathers wealth in its struggles with the world, and dropping it again in the lakes as he spends it in the intervals of rest and pleasure. Smaller streams join with him at every bend and increase his power and dignity. Sometimes he divides his force into different channels the better to overcome the opposition to his progress; but the division is only momentary, and the channels reunite when the opposition is overcome. In the prime of his life he meets his consort, the Ottawa, and together they go rolling past the wharves of Montreal, and settling down to a steadier but no less majestic swing, go sweeping past the cities of men, serving his purposes and carrying his commerce, but none the less exacting their own tribute of sediment in return.

Below Quebec the course expands, and the beginning of the end is felt when the chill salt current of the Labrador coast is met, but the river still quietly and slowly presses forward, and still clings to its sedimentary wealth until at Cap des Monts it loses itself and its gains in the all-absorbing ocean.

Musing thus, Elsa and I glided slowly down between the islands until a prodigious coughing and spluttering is heard, and with a shower of sparks a fussy, practical little steam launch goes darting by, waking the echoes with its unearthly screeching steam whistle. Confound a steam launch anyhow. "What business has such an article in fairyland." But if the launch has broken the skipper's reverie it has not spoiled his appetite, and the darkness and chilly air warn him that he had better seek a resting place for the night.

Twinkling lights appear ahead and voices from unseen people in the gloom are heard. Elsa's nose is turned shoreward and in a few minutes she is alongside a wharf piled with cord wood, and her crew is making a hearty meal in the house which held the lights and conversing as gallantly with the young ladies who owned the voices as a solitary traveler of a somewhat retiring and bashful temperament, and carrying a few gray hairs in his head withal can be supposed to do with propriety. Darlings they were by name, darlings the skipper pronounced them in his heart to be for the interest and hospitality they tendered.

* * * * * * *

In the standard sensational novel of the day these stars represent an interval of years during which the hero is absent in a foreign land making his fortune. In the present case they represent a few days during which the skipper went home to attend to some pressing business, while Elsa rested quietly behind an angle of the wharf, rocked occasionally by the swell of a passing steamer.

On a bright October afternoon the skipper stepped off the train and wended his way to the wharf to find everything in good shape, and in a few minutes sail was made and we shot out into the stream. The wind was east and up the river, but with current under us we made good headway for a mile or two. Presently a steam yacht came down and hailing her we asked for a line, when rather to our surprise the yacht immediately lay to and tendered it. It was the old story of the pretty boat and the solitary cruiser winning their way to the sympathies of the captain, and not only did he tow us to opposite his home port, Alexandria Bay, but three or four miles below, and the only remuneration which he would hear of was a model, or the "lines," of the little cruiser, which had taken his eye and which we gladly promised to forward.

With a hearty "Good-bye" Elsa was cast off again and filled away for a long stretch toward the American shore. Coming about, she approached the Canadian as dusk was coming on, and headed for a solitary light. On landing the crew readily found a supper, but a bed was denied us owing to an already full house, and we were directed to the next house, a half mile lower down, and warned to look out for reefs and shoals. Out we went cautiously into the dark and soon arrived opposite the house in question. The night was so serene that we were tempted to run a little further and lay for a harbor further on, but after being half scared to death by bumping over a reef and nearly running foul of a spar buoy, the skipper concluded that beating through the Thousand Islands on a dark night was too trying to the nerves, and made for the landing. Again we found a friend and a boating man who sent us on our way rejoicing at gray dawn.

It was almost calm, the first calm we had had, but the current and an occasional air, "now east, now south," brought us six miles on our way before 9 o'clock.

A great dredge came out from the New York shore and at once went to work in the channel, and a great black steam tug went by quietly but steadily, cutting a furrow through the calm waters. Away over in the marshes on the Canadian shore we could hear the popping of guns and even the voices of men at work. Presently came a steadier air from the westward, a slight murmur came from under Elsa's bows. The murmur grew louder and louder until it became a roar, and in half an hour we were bearing down on Brockville wing and wing at a good 6-knot gait. In an hour we were abreast of the outskirts of the prettiest—probably of Canadian towns. A sail appeared ahead, which we overhauled hand over hand, and at 11 A. M. we rounded to at the boat house of Mr. McLean, a St. Lawrence skiff sailer, well known to fame.

Four hours were enjoyably spent in his society, and we visited Sauvé's boat building establishment together. Elsa's style and model were pronounced upon favorably, and Mr. McLean went so far as to say she was the prettiest boat hailing from west of Brockville. As this covered Clayton, Alexandria Bay and Gananoque, the declaration was rather a sweeping one, and may be set down as judicious flattery, but it was pleasant to the skipper's ears at any rate. At 3 P. M. we concluded we had lost sufficient of the fair wind, and that if we wished to make any sort of a day's run we must start at once. So Elsa was headed down wind again, and with mainsail and mizzen winged out we made some 13 miles without touching tack or sheet.

HENRY K. WICKSTEED.

COBOURG, Can.

[CONCLUDED NEXT WEEK].

## CANOE NEWS NOTES.

A new boat building company has recently been organized at Gananoque, Can., under the name N. Gilbert Boat Building Co. Mr. Gilbert has made a reputation through the very successful St. Lawrence River skiffs designed and built by him, as well as by some handsome sailing canoes. He is personally a very skillful woodworker, having been in charge of the machinery of the Gananoque Carriage Co. for some years, and he has devised a system of canoe and boat building in which modern woodworking machinery is largely used. The company is just putting up a line of open Canadian canoes, and other models of canoes and boats will be built as fast as the moulds are ready. Planking, ribs, stems and all parts for any required number of boats are got out to exact size by machinery, the parts being put together with varnish in the seams.

A meeting of the executive committee of the Atlantic Division was held on Nov. 30 at the Astor House, at which it was decided to hold a division meet from July 2 to 12, the camp ground being available to campers until July 16. The site will probably be on Pleasure Bay, near Long Branch, N. J.

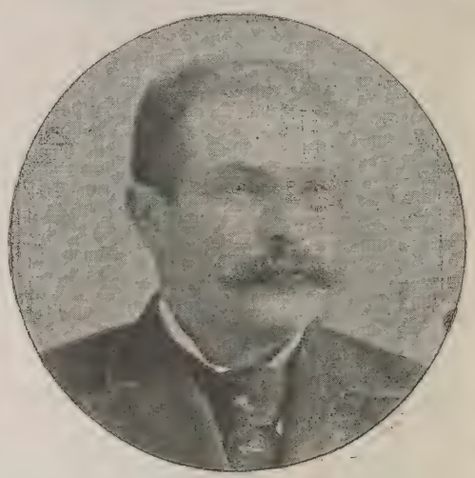
The Knickerbocker C. C. had a very large attendance of canoeists at its smoker on Dec. 3.

The Hoboken C. C. held its smoker, as announced, on Nov. 16.

# Rifle Range and Gallery.

## THE REVOLVER CHAMPIONSHIP.

W. E. PETTY, a member of the New York Police Force, is now the holder of the Amateur Revolver Championship of America, and the custodian of the Winans Trophy, the emblem of that championship. He won it from Geo. E. Jantzer at the gallery of the New York Pistol Club, No. 12 St. Marks place, in this city, on the evening of Dec. 3. The match was a very interesting one, and the record as made shows that the men are each of them experts of experts in getting shots closely bunched about the very small black of the 5in. cardboard disk upon which the measurements are taken.

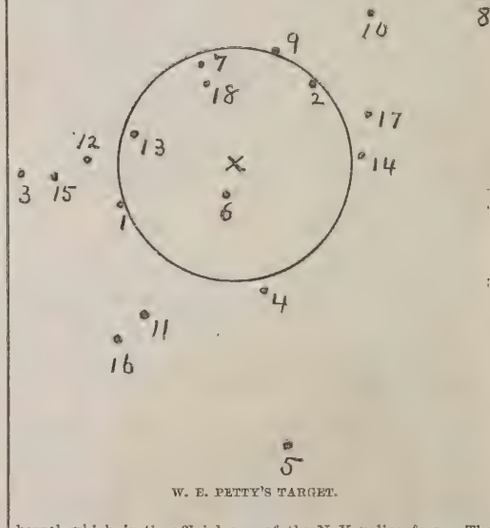


Roundsman Petty has not been satisfied since he shot in the initial open to all competitors, which introduced the match and the trophy to the revolver shots of this country. In that struggle by over forty of the best revolver shots of the country he came in fifth with a score of 22.33in. for his 18 shots. In that same match Jantzer put up a score of 20.40in. Dr. Louis Bell was the first holder of the trophy on his score of 17.52in. His winning record was announced on June 9. Mr. Jantzer was promptly at hand with a challenge, and on the afternoon of Aug. 3 the pair of revolver sharps met at the St. Marks gallery and fired a record which was decidedly off the championship standard. Jantzer won with a score of 22.5in. against 26.6in. for Bell.

The next challenge came from Henry Oehl, the president of the N. Y. Pistol Club. The shooting when they met on Oct. 15 was fair, but each of the men has shown better scoring in private practice and club matches. Only one full string of 6 consecutive shots on the 5-inch disk was made by each, Jantzer scoring 6.82 inches and Oehl 7.73 inches in the 6 shots. The result of this failure to keep the strings on the measuring disk was that the record of this match was taken on 16 shots, and the figures were Jantzer 19.11 inches, Oehl 19.82 inches.

The fourth and next match in this series was that of Saturday evening last, when Jantzer, after his two victories, was compelled to acknowledge the superior ability of his official friend. The two have done much practice together, and their instructions and advice each to the other has been of mutual help. In the match they each used S. & W., .44cal., 6in. barrel revolvers, firing a light charge with a round bullet. It was a fair square test of shooting ability and neither man had any fault to find with his weapon for not responding to his demand upon it. The opening shot of Petty's second string fell just off of the disk, and this he thought might be due to the cleaning the barrel received after the first round. At any rate, it was not cleaned during the remainder of the match. Jantzer's method of cleaning was by a current of breath down the barrel after each shot.

The arrangements of the match under the care of the Zettlers was, of course, perfect, and the shooters did not lack for good-natured raillery and advice at each shot, with Oehl and "Barney" Walther, Bishop and the rest of the clubmen there. The measuring of the targets was done by President Oehl, who is an expert manipulator of the machine by which Messrs. Zettler have decided so many important rifle and revolver contests.



When the figures were totaled it was seen that the shooting had been of a high order, and Jantzer had lost, but he had not been

W. E. PETTY.

beaten by any "fluke" shooting but by close, clean skill from first to last. Mr. Petty has the best single shot, the best six-shot string and the best three strings out of five under the conditions.

Mr. Petty ought to win and win again and again, if intelligent attention to his pastime of revolver shooting goes for aught. He is strictly temperate, never using either drink or tobacco. In build he is solidity from sole to crown. He was suffering somewhat from weak eyes, a remainder of a recent attack of measles. Roundsman Petty frequently gives his fellow officers an exhibition of fancy shooting, lying down, snap work, side wise, backwards, any way in fact, and with the .38cal. S. & W. 3in.

W. E. PETTY'S TARGET.

barrel, which is the official arm of the N. Y. police force. The very skill of Mr. Petty only makes the absolute helplessness of the other 3,000 policeman as revolver shots the more conspicuous.

The record of the match of Dec. 3 stands as follows:

WM. E. PETTY.

| 1st string. | 2d string. | 3d string. | 4th string. | 5th string. |
|---|---|---|---|---|
| .53 | .. | .58 | .56 | 1.42 |
| .54 | 1.81 | 1.67 | .65 | 1.55 |
| 1.25 | 2.50 | .62 | 1.03 | .63 |
| .73 | 1.02 | 1.13 | 1.19 | 1.61 |
| 1.72 | .39 | .98 | .66 | .95 |
| .13 | .62 | .86 | .48 | 1.33 |
| **4.90** | | **5.84** | **4.57** | **7.49** |

Record strings, **4.90, 5.84, 4.57.** Total, **15.31in.**

GEO. E. JANTZER.

### The Winner Challenged.

NO. 12 ST. MARKS PLACE, New York.—*Editor Forest and Stream:* I hereby challenge W. E. Petty to shoot a match with revolvers for the Winans trophy.

B. WALTHER.

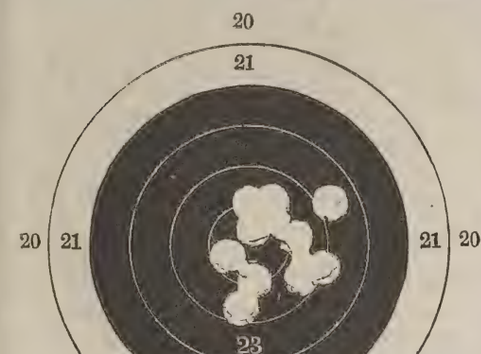
### Cincinnati Rifle Association.

CINCINNATI, O., Dec. 4.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores as appended below. Conditions, 200yds., offhand, at the standard target. Payne used open sight; Martin shot from a rest and Schuster used a sporting rifle. The scores:

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Gindele | 85 | 86 | 88 | Wellinger | 84 | 79 | 88 | |
| Simon | 80 | 80 | 77 | | | | | |
| Louis | 79 | 75 | 68 | Drube | 76 | 76 | 81 | |
| Martin | 85 | 74 | 73 | | | | | |
| Weinheimer | 72 | 75 | 78 | Topf | 73 | 70 | 64 | |
| Schuster | 56 | 48 | 37 | | | | | |
| Payne | 83 | 79 | 82 | | | | | |

### New York Rifle Club.

NEW YORK, Dec. 5.—The following scores were made by the members of the New York Revolver and Pistol Club at their last regular weekly practice shoot, held on the 3d inst. at headquarters, No. 12 St. Mark's Place. Ten shots on standard American target, distance 20yds., .44cal. S. & W. revolver: G. E. Jantzer 89, C. B. Bishop 86, B. Walther 84, H. Oehl 84, A. Bertrand 81, F. Hecking (.38cal.) 72, E. Walz (.22cal. Stevens pistol) 82.



F. HECKING, Secretary.

### John Rebhan's Pattern.

INCLOSED will be found the target made on the Hudson Rifle Club range by Mr. John Rebhan, treasurer of the club, in the regular weekly competition.

John has been an enthusiastic shooter for a number of years, both on long and short ranges, and has competed in tournaments and matches with almost all the well-known riflemen. When he sets his mind to it he generally "gets there." Although the competition has been rather lively during the past few months, he had not reached a very high notch until the above was made.

It will be noticed that it is a very good pattern and his holding excellent. Although he leads in first team, he is closely followed by Bird, Hansen, Malz and Mahlenbrock, and before the season

JOHN REBHAN'S PATTERN.

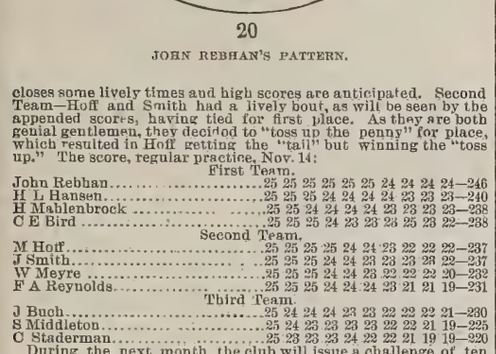
closes some lively times and high scores are anticipated. Second Team—Hoff and Smith had a lively bout, as will be seen by the appended scores, having tied for first place. As they are both genial gentlemen, they decided to "toss up the penny" for place, which resulted in Hoff getting the "tail" but winning the "toss up." The score, regular practice, Nov. 14:

First Team.

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| John Rebhan | 25 | 25 | 25 | 25 | 25 | 25 | 24 | 24 | 24 | 24 | —246 |
| H L Hansen | 25 | 25 | 25 | 24 | 24 | 24 | 24 | 23 | 23 | 23 | —240 |
| H Mahlenbrock | 25 | 25 | 24 | 24 | 24 | 24 | 23 | 23 | 23 | 23 | —238 |
| C E Bird | 25 | 25 | 25 | 24 | 23 | 23 | 23 | 25 | 25 | 23 | —238 |

Second Team.

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| M Hoff | 25 | 25 | 25 | 25 | 24 | 24 | 23 | 22 | 22 | 22 | —237 |
| J Smith | 25 | 25 | 25 | 24 | 24 | 23 | 23 | 23 | 23 | 22 | —237 |
| W Meyre | 25 | 25 | 25 | 24 | 24 | 23 | 22 | 22 | 22 | 20 | —232 |
| F A Reynolds | 25 | 25 | 25 | 24 | 24 | 24 | 23 | 21 | 21 | 19 | —231 |



Third Team.

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| J Buch | 25 | 24 | 24 | 24 | 23 | 23 | 22 | 22 | 22 | 21 | —230 |
| S Middleton | 25 | 24 | 23 | 23 | 23 | 23 | 22 | 22 | 21 | 19 | —225 |
| C Staderman | 25 | 23 | 23 | 23 | 24 | 22 | 22 | 21 | 19 | 19 | —220 |

During the next month the club will issue a challenge of ten men to the Empire Rifle Club, of New York city, and it is expected that not only good scores will be made, but that a good time in general will be enjoyed by those two clubs, who are great friends of one another.

C. E. Bird is also to issue a challenge for a 100-shot match with E. Fischer, of the Miller Rifle Club, of Hoboken. THE EAGLE.

### A Perfect Score.

A RUN of 25, 25, 25, 25, 25, 25, 25, 25, 25, 25—250; made Oct. 7, 1892, by David Miller, on the Miller Rifle Club range, Hoboken, N. J. Rest, 10 shots, 80ft.

### Jersey's Military Shooters.

The First Brigade (N. G. N. J.) Rifle Association held its weekly shoot on the 200yds. ranges at the Newark Shooting Park on December 2, with the usual unfavorable weather conditions. The wind varied from 5 to 20 miles an hour and was "fishy" at that, while the light was so poor that the sport had to end at 4 p. m. The attendance was not as good as usual, there being only five member present. The majority of the members are tied up by business, but after the holidays they will be present in force. Within a few weeks a number of the members will come together in a fifty-shot match which may possibly be made an open affair. The scores made on Saturday were as appended.

R. MCNEIL, JR.

### The Lancaster Cork Gun Wad.

The Lancaster Cork Gun Wad, for which patent is now pending, is an invention which should prove of great value to sportsmen. The manufacturers claim that the wads have all the advantages of felt wads with none of the latter's disadvantages. They are one-third lighter, which makes them much less likely to pass through the shot charge and disturb the pattern than a heavy wad. They contain no grease, oil or chemicals, and do not require an extra wad over the powder, insuring a shorter shell. The manufacturers claim that they also keep the barrels of a gun cleaner than any other wad, and that the recoil is less. Send for price list.—*Adv.*

## Trap Shooting.

All ties divided unless otherwise reported

### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 15.—Open shoot at 100 live birds. $100 entry, Erb's grounds, Newark, N. J. Entries, if accompanied by $20 forfeit, will be received up to Dec. 12, by FOREST AND STREAM, 318 Broadway, New York.

Dec. 17.—Elliott vs. Fulford, at Kansas City, Mo.; 19, at Indianapolis, Ind.; 22, at Pittsburgh, Pa.; 24, at Williamsport, Pa.; 26, at Harrisburg, Pa.

Dec. 26.—Hartner's all-day target tournament, Orangeville, Baltimore county, Md.

Dec. 27-30.—Watson's live bird target tournament, Watson's Park, Burnside, Ill.

Dec. 28-29.—Jacksonville (Fla.) Gun Club's fifth annual tournament; $500 guaranteed purses; $300 in money and merchandise prizes added. Professional experts barred. Bryan Taliaferro, Sec'y.

1893.

Jan. 2.—Hartner's all-day target tournament, Oradgevilie, Baltimore county, Md.

Jan. 2.—Towanda (Pa.) Gun Club's all-day tournament.

Jan. 2.—South Side Gun Club's "annual," Newark, N. J.

Jan. 17-18.—Hamilton (Ont.) Gun Club tournament, live birds and targets.

Jan. 10-11.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.

May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.

May 23-25.—Knoxville Gun Club tournament, $1,000 added to purses. Also valuable merchandise prizes.

June 12-16.—New York State Sportsman's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry building, Rochester, N. Y.

Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh, N. Y.

## DRIVERS AND TWISTERS.

WILL H. CRUTTENDEN, the well-known "Crutty" of kingbird target fame, sends us his views in regard to the existing evil of dropping for places where the pots are divided into percentages alone. Just so long as purses are divided into percentages just so long will there be "playing for holes," no matter how much the shooters or the public may oppose the practice. The only way to do away with "dropping" is, therefore, to do away with purses, and this Mr. Cruttenden proposes shall be done by the introduction in all events of an innovation of the "jack rabbit" system. As is known under the "jack rabbit" system each break pays ten cents and whatever balance remains in the pot is divided into 50, 30 and 20 per cent. for first, second and third moneys. Mr. Cruttenden suggests an improvement upon this plan by paying to shooters twenty cents for each target broken, this doing away, of course, with any other division. The entries in all events would be at the uniform rate of ten cents per target, the shooter paying for the targets. The man who under this system could scheme to make a penny by dropping a bird would have to do some tall thinking. It is possible, of course, to use any handicap that is desired in order to place the contestants on as near an equality as possible. We are inclined to think that this plan of "Crutty's" would come as near, if not nearer than any other to give us honest shooting. Clubs can still add money for their shoots if they wish, but instead of putting it into "pots" or "purses" and tempting shooters to play combinations, let them increase the price they pay for each target that is broken. And they need not confine themselves to the above stated uniform entry fee, but can vary that if they choose. Taken all in all the suggestion is worth acting upon, as the only possible manner in which a shooter can get any money under the system is by breaking targets. Once this plan is adopted and we can forever bid "good-bye" to "combinations" and "wolf shoots." What club will be the first to try the experiment?

On Saturday, Dec. 17, will occur the first of the series of five matches between J. A. R. Elliott, of Kansas City, Mo., and E. D Fulford. The match will take place in Kansas City, but not on the famous "Side Hill Park," where Fulford refuses to shoot. That this series will be hotly contested no one can doubt who has formed an unbiased opinion of the two men. Some infer, because Fulford made such a poor showing against Budd, that he (Fulford) is "no shooter," so far as first-class work is concerned. To this ruling we beg to take exception. Elliott has been beaten and he has not always succeeded in making phenomenal scores, but still no one would think of classing him as a third-rate man. And there is no reason for placing Fulford in the third class because he killed 81 out of 100 birds at Watson's Park. Let the public withhold its judgment as to the relative merits of the two men until they have seen them shoot.

Henry C. W. Matz, the popular president of the Reading (Pa.) Shooting Association has secured possession of the "Three Mile House" at Shillington, just outside of Reading. He has a half-mile track for horse or bicycle racing, and inside the track he has arranged traps for both live bird and target shooting. The grounds are enclosed with a high fence and the foreground is perfectly clear. The grounds are nearly as level as a floor. The grounds may be reached via the electric cars from 9th and Franklin streets, or 3d and Penn streets, Reading. It is more than likely that the Reading Shooting Association will shortly remove to these grounds from the Black Bear Inn, and that they will hold a three days' tournament there in February.

FORT DODGE, Ia., Nov. 28.—Below find scores of the Thanksgiving shoot of Fort Dodge Gun Club. The birds were a good lot, some very fast, right-quartering incomers, as the wind helped the birds in that direction. The day was raw and cold, and we quit at noon in favor of turkeys. The first event was at 15 live pigeons, 30yds. rise, No. 2 at 5 Peorias:

| | No. 1. | No. 2. |
|---|---|---|

| Carter | 122011112100011—11 | 01111—4 |
| Pray | 111120022002210—10 | 11110—4 |

In our account of the recent shoot at Wapsononock Shooting Park, Altoona, Pa., we mentioned the fact of having snapped a picture of Edward Banks, Altoona correspondent of the Harrisburg *Telegram*, as he returned from an hour's outside shooting, bringing with him three grouse which he had shot. On p. 489 is an excellent half-tone reproduction of said picture, showing Mr. Banks, his snow-spectacles, Wopsy gun, Juniata smile and last, but not least, the trio of grouse, which he afterward presented to "Uncle Jake." The attention of the public is called to the particularly graceful attitude assumed by Mr. Banks while the picture was being taken.

Tournament matters have been intolerably dull for several weeks, incidental, of course, to the open game season when everybody who can possibly spare the time goes shooting afield. Target tournaments are as a matter of course almost an unknown quantity from the early part of November to March, when live birds afford more interesting sport to the majority of shooters. Club shoots run along the same as usual, but these are rather lightly attended just now as another result of the game shooting. Soon the hunters will have returned from their jaunts, and after a week or two devoted to straightening out back business, the trap sport will again become lively.

The White House (N. J.) Gun Club held an all-day's shoot at live pigeons on Dec. 3. A big supply of pigeons was on hand, but the attendance was light. The birds were a good lot. There were five events at 4 birds each, $3 entry, and here are the scores:

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. |
|---|---|---|---|---|---|
| Cramer | 1110—3 | 0011—2 | 0211—3 | 1200—2 | 0220—3 |
| Bishop | 1210—3 | 2111—4 | 0011—2 | 0022—2 | 0111—3 |
| Brown | 1001—2 | 1002—2 | 2021—3 | 0010—1 | 1100—2 |
| Apgar | 0110—2 | 1110—3 | 1121—4 | 1220—3 | 1010—2 |
| Large | 0000—0 | 0001—1 | .... | .... | .... |

Next Thursday, Dec. 15, there will be shot on John Erb's "Old Stone House" grounds, in Newark, the first open 100-bird sweepstake ever shot in this country, and one which is bound to create an interest, even though the entry list be small. The entry fee is $100 per man, all will shoot at 30yds. rise and the shoot will commence at 10 A.M. Entries will be received at this office up to Monday, Dec. 12. The entries will not close at that time, however, but will be received up to 12 o'clock, noon, at Erb's grounds. Mr. Erb promises a good lot of birds for the shoot.

We understand that Mr. L. G. Duff Grant, secretary of the Smokeless Powder Co., of London, has been in New York for some weeks, the object of his visit being to arrange for the manufacture of his company's Smokeless powder in this country. Their business in the United States, due to the energy of their agent, Mr. George H. Sampson, of 23 Park place, New York city, and 147 Pearl street, Boston, Mass., has made very rapid progress; and their SS Sporting powder is now justly considered one of the best in the market.

The South Side Gun Club, of Newark, N. J., will hold its regular "annual" on Jan. 2, 1893, on its grounds near the Emmett street station of the Pennsylvania Railroad. Plenty of holiday lunch will be dispensed, and those who run short of ammunition can procure an assortment on the grounds. These "annuals" are a familiar and popular institution, and always attract a big crowd of shooters.

Judging from opinions expressed by shooters in various parts of the country the American Manufacturers' Association has about struck the keynote of a successful career. If the association wants to cater to the mass of shooters, let it adopt the "Cruttenden Jack Rabbit," system and do away with all "pots."

The lay press seems to take strange delight in botching trap news. The *Evening World* of Dec. 2 says anent the grand American handicap: "The match will be at 100 birds, $50 entry * * *." The grand American handicap will be at 25 live birds, $50 entry, and entries will close on Dec. 30.

At the shoot of the Rochester Rod and Gun Club on Nov. 30 the following scores were made out of a possible 100 targets per man: Smith 84, Meyer 83, Newton 80, Richmond 80, Tassell 77, Beyer 77, Norton 73, McVean 72, Borst 70, Van Ostran 68, Richman 66.

John H. Hartner announces all-day target tournaments at Orangeville, Baltimore County, Maryland, for Christmas Day, December 26, and New Year's Day, January 2. Keystone targets will be used and will be charged for at the rate of two cents each.

The Island City Gun Club of Wheeling, West Virginia, whose "Bix Six" team won the July match of the Atlantic City (N. J.) Gun Club, is willing to pit its team against a team of six men from any club in America at 25, 50 or 100 targets per man.

It has been suggested that at the expositions of the American Manufacturers' Association all the goods handled by the subscribers should be exhibited in one large tent. It is likely that this plan will be adopted.

The Massachusetts Rifle Association held its regular trap shoot at Walnut Hill on Nov. 30, and during the afternoon "Climax," one of the contestants, shot a brace of quail in the timber growth skirting the range.

Let some club come to the front with a target tournament programme, every event to be shot under the "Cruttenden Jack Rabbit" system. Put yourselves on record as being opposed to combinations.

John M. Watson, proprietor of the famous Watson's Park, at Burnside, Ill., announces a live bird and target tournament to be held on December 27, 28, 29 and 30th. The events will be open to all comers.

Carl Von Lengerke, the younger of the Von Lengerke family, is making quite a reputation as a bicycle racer. On Thanksgiving Day he won a gold stop-watch by finishing first in a one mile race.

The team match announced to take place on Erb's Newark grounds on Tuesday between Castle and Hedden, Smith and Sunderman, was indefinitely postponed.

At the November shoot of the Freehold (N. J.) Gun Club Burtis broke 19, Hall 17, Gummere 14, Van Schaick 14 and Davis 12 out of a possible 25 targets.

At the medal shoot of the East Park Gun Club at Decatur, Ill., on Nov. 30, J. L. Peak won with a total of 23 breaks out of 25 targets shot at.

The United States Gun Club, of Oakland, Cal., has leased a large tract of marsh land near Novato and Petaluma.

The Essex Gun Club will hold its monthly shoot on Al Heritage's Marion grounds on Thursday, Dec. 15.

C. H. TOWNSEND.

### The Pot-covers' Thanksgiving.

THANKSGIVING, Nov. 10, the day set for the final shoot of the Pot-cover Trap Club for the season '92, was about as disagreeable as regards weather as it could well be. It snowed hard from 10 A. M. till 3 P. M. Then the floodgates of heaven were opened and the rain came in torrents till late at night.

But a few inches of snow and a bucketful of rain, more or less, make small difference to the Pot-cover men. Some of them had to drive twenty miles, yet there was only one absentee. The snow made a beautifully soft bed for the missed targets to alight in, and the breakage was reduced to a minimum. One young man, a guest of the club, had a good many missed birds. He lives in what a friend of mine calls the "rhubarbs of Fredericton," and has for some time been spoken of as a probable addition to the membership roll. He is a nice young fellow, but somewhat given to speaking in a laudatory way of his past and future achievements. This practice is rated below par among the boys, and they fear that if he is elected a member it may introduce an element of discord, of which at present there is none. He had invitations to take part in several of the shoots held earlier in the season, but never accepted. He has, at sundry and divers times, however, whispered around among the outsiders that some day he was coming down to show the lads a score "as was a score." It was folly, he thought, for fifty to eighty per cent. men to harbor the delusion that they could shoot. He could hit apples and potatoes thrown in the air, every time, and he could smash bluerocks just as easily.

Thanksgiving Day he came, and, as I was not there, what he did can best be told in the words of a correspondent who will, I think, forgive me for making him contribute a paragraph to his favorite paper.

He says: "It was a fearful storm; but to my surprise I found four representatives of the club from Scotch Lake, and also Mr. S., our 'mortified choke' man. He was distanced. To use an election phrase, 'he didn't save his deposit.' Although he has frequently entertained us with stories of shooting partridges on the wing from a moving wagon, it is a fact that, with both feet on terra firma, he could not hit bluerocks. He could strike the iron trap-screen, and he did it so often that the trapper thought it prudent to lie low till he heard the command 'cease firing.' He broke two out of his first ten, and his next score was on his fortieth bird. He retired with three out of fifty."

The moral would appear to be: It is good to keep quiet, for you can't pretty much always tell how things will turn out sometimes.

With the Pot-cover rule—gun below elbow till after shooter calls "pull"—and unknown angles, I can certify that there is a chance for a bluerock to act as a great leveller of conceit, even when the victim is a passably good game shot.

My introduction to the sport was recent enough to leave a very distinct impression on my memory. My first bird was a left quarterer, and I caught and smashed it within twenty-five feet of the trap. There was a feeling of elation similar to that so aptly described by Mr. Hough in the story of his double on spoonbills. "Ugh! big Injin, me! Waugh-hoo! I'll do that some more!" And in trying to carry out this very laudable intention I missed nine consecutive birds. Then I retired for quiet meditation and when next I came to the score I got fifty per cent.

Mr. S. evidently made the mistake of trying to "paste" his birds too close to the trap, else he wouldn't have spattered the trap-screen.

While most live birds rise and go away with a gradually accelerated flight, the reverse is true of the "saucer." It starts with lightning speed, slows up and falls. It is good enough for straight-away shots, but the ideal target for quarterers and cross-shots would be fish-shaped, with a rocket in its tail, which would be exploded by the trap-arm. This would give it the gradually increasing speed of the live bird. Some ingenious and enterprising citizen of the United States will one day give us a target on this principle.

L. I. FLOWER.

NEW BRUNSWICK.

### The Traps at Watson's Park.

BURNSIDE, Ill., Nov. 29.—Score made here to-day by the following named at 100 bluerock targets each from 5 unknown expert traps and Nordt's electric pull; entrance $10, divided 50, 30 and 20 per cent:

RAVELRIGG.

### Shooting on the Pacific Slope.

SPOKANE, Wash., Nov. 25.—The members and friends of the Spokane Rod and Gun Club had a pleasant time yesterday on their trap grounds, shooting live pigeons, turkeys, chickens and bluerock targets. Several hundred spectators were on hand and the day was an extremely lively one. Expert traps were used for the first time in this State, and these, with North's electric pull, were a revelation to the natives. The target events were all shot from known traps at unknown angles. The weather was very cold, but nevertheless the shooting lasted until the last glimmer of daylight.

In the turkey matches the range was 75yds., with the turkey's head as a target, and while this is closer shooting than most people imagine, the aim of those who participated was so true that the supply of turkeys was exhausted shortly after noon. The best shot of the day was made by Police Sergeant Charles Barlow. Joe Warren had wounded a turkey slightly and when it was released from the box it flew across the river and lodged in a tree fully 500yds. from the place where the marksmen were standing. Nearly all of the men began shooting at the turkey. Sergeant Barlow watched them for a short time and then coolly took aim with his heavy Remington and at the first shot brought down the turkey, shooting it through the neck. Joe Warren killed 10 turkeys and 7 chickens, the latter at 60yds. Joe Draper, of the Northern Pacific, killed 4 chickens in 6 shots. E. M. Shaner, Captain Merriam and W. H. McFarlan made several excellent shots.

There were three events at live birds and four at targets. No. 1 was at 10 bluerocks, $1 entry; No. 2, at 6 singles and 2 pairs, $1.50 entry; No. 3, at 20 singles, $2 entry; No. 4, at 10 singles and 5 pairs, $1.50. The scores:

No. 1.—Royer 6, Carson 5, Ware 5, Drake 2, Moore 1.

No. 2.—Ware 6, Moore 6, Royer 4, Drake 2, Carson 2, Knight 2, Draper 0.

No. 3.—McBroom 18, Ware 12, Moore 13, Royer 11, Eckhardt 11, Carson 9, Knight 8, Draper 7, Mason 7, Drake 4, Millins 3, Bolster 1.

No. 4.—McBroom 16, Ware 14, Eckhardt 11, Mason 9, Royer 9, Carson 9, Troch 9, Moore 8, Drake 5, Knight 4, Bolster 4, Draper 4, Stern 2, Millins 2.

Live bird events, No. 1 at 10 birds, $3 entry: No. 2, 5 birds, $2.50 entry; No. 3 at 10 birds, $5 entry:

SPOKANE.

### About Handicapping

CLEVELAND, O., Nov. 17.—*Editor Forest and Stream:* Among the notes under the heading of "Drivers and Twisters," in your issue of Nov. 10, was a request to the shooters of the country to express themselves on the handicap question.

There is no question but that the system of handicapping a man for all time on the basis of one or two meritorious performances has been proven by the experience of the season just past to be very faulty and altogether wrong. The handicap itself was altogether too severe, and about the only persons who attended more than one or two tournaments where they were compelled to shoot in the expert class were those that were there in a business way and who generally were losers unless they had the opportunity to divide up the average money that was given for that class. With targets thrown 45 or 50yds. and the regulation height, I very much doubt if there is a man in the country that can average 80 per cent. day in and day out at that kind of shooting, and any one knows that 80 per cent. is not in sight at a tournament nowadays.

The system of handicapping by making winners of first and second money in the first event shoot from known traps and unknown angles in the second event, and allowing all others to shoot known traps and angles, and changing back and forth after each event, has been pretty generally tried and proven very satisfactory in the majority of places.

The addition of this handicap making the winners of first money shoot from the three center traps at both unknown traps and angles, the winners of second to shoot from the five traps at known traps and unknown angles, while the others shoot known traps and angles is a step in the right direction and will be used the coming season quite extensively. Some complain that it is too complicated and delays the shooting; but in my opinion that is the best point about it, and if some one would get up a handicap that would still more delay things at the average tournament he would be a benefactor to the trap-shooting fraternity.

To diverge from the subject of handicap I would say that the great necessity at the present time is to introduce new features at tournaments or go back to the old style of shooting and get rid of the everlasting monotonous grind that is the main feature of tournaments as now conducted and the principal cause of the decreased attendance at them.

In days past it was possible for a man to go to a tournament and win enough to at least pay his expenses there and back, and it was at the same time possible for a poor shot to attend the same shoot, have a good time, meet a great many old friends and not lose any very great amount of money.

Nowadays a man goes to shoot and shoots at from 200 to 250 targets a day, divides after each shoot whether he gets his entrance back or not, and finds that though he may have shot honestly and fairly to the best of his ability, and broken 90 to 95 per cent. of his targets, he is a loser, while some one who has hunted holes all day has broken far fewer targets and may have won more money.

Just figure out the expense of the average tournament to the one attending it and you will not wonder at the decreased attendance, but will wonder that the attendance has kept up as well as it has.

Take a tournament where there are thirty entries and the programme calls for 200 targets a day for three days, and you will see that the cost for targets and cartridges for each one will be $30, or $900 for all, to say nothing of hotel bills and railroad fare and incidental expenses, amounting to half as much more.

All this should be changed, and programmes should not call for more than 100 targets per day, two or three of the good old "one man up, five unknown traps" events should be given, and time should be given for a man to take at least a long breath between shoots.

There will not be as many targets thrown at tournaments perhaps, and the management will not make so much money, but the general result will be to relieve the feverish and unhealthy condition of affairs and place the sport of trap shooting on a better and more permanent basis.

There is no denying the fact that trap shooting as now conducted is getting to be more and more of a gambling scheme with a most horrible "rake off," and that every lover of the sport for the sport's sake, which includes the pleasure of meeting other sportsmen in a friendly trial of skill with enough of money consideration in it to make it interesting, should use his best efforts to bring it about is to discuss the matter fully in the columns of the sporting papers, which are always open to any one. PAUL NORTH.

### Sacramento Trap-Shooters.

SACRAMENTO, Cal., Nov. 25.—The Pelican Gun Club held a live bird shoot at Agricultural Park yesterday, a large number of our crack local shots being on hand. There were also present E. Merrill, of Stockton, and Crittenden Robinson, of San Francisco, who rank among the best shots in the State. The judges were J. O. Kane, Les. Morrison, and F. M. Woodson, the latter also being official scorer. The weather was delightfully cool and crisp, and the birds were a good average lot. The shooting was under the American Shooting Association rules. The Pelican mascot—a big fat bird of the pelican tribe—looking solemn and wise, was staked out near the refreshment tent.

The first event was a sweepstake at 6 live birds, $2.50 entry, 3 moneys. The results:

| | | | |
|---|---|---|---|
| C Robinson | 111111—6 | H Gerber | 110110—4 |
| G Wittenbrock | 111111—6 | L Mauldin | 111010—4 |
| C A Merrill | 111111—6 | L Nicolaus | 100011—3 |
| W Gerber | 011111—5 | J B Griffen | 110001—4 |
| E Nicolaus | 111101—5 | N King | 100101—3 |
| G Zentgraf | 110111—5 | W A Boase | 000111—3 |
| J Gerber | 110111—5 | F Ruhstaller | 010100—2 |
| A Damm | 101111—5 | | |

The event of the day followed in the form of a sweepstake at 15 live birds, $5 entry, three moneys:

| | | | |
|---|---|---|---|
| C Robinson | 111111111111111—15 | H Stevens | 001111111101111—12 |
| E Nicolaus | 111111111111111—15 | F Gotobed | 111001011111110—11 |
| C A Merrill | 111111011111111—14 | H Gerber | 1100110111w |
| Wittenbrock | 111111111011111—14 | FRuhstaller, Ji | 0100111011w |
| J Gerber | 111111111111110—14 | G Zentgraf | 111100110w |
| L Mauldin | 101110111111111—13 | J M Morrison | 011101110w |
| W King | 111110101111111—13 | J B Giffen | 001111110w |
| C Coons | 101111111111110—13 | W A Boase | 101101100w |
| W C Gerber | 101111011111110—12 | F Ruhstaller | 101111110w |
| A Damm | 101101111111011—12 | L J Nolaus | 10111010w |

No. 3 was another 6 bird event, $2.50 entry, three moneys:

| | | | |
|---|---|---|---|
| W E Gerber | 111111—6 | E Nicolaus | 111011—5 |
| F Gotobed | 111111—6 | L Mauldin | 011011—4 |
| G Zentgraf | 111111—6 | F Ruhstaller | 111100—4 |
| R Helms | 111111—6 | F Coons | 1C00w |
| C Robinson | 111101—5 | G Wittenbrock | 1010w |
| H Gerber | 101111—5 | J M Morrison | 1010w |
| J B Giffen | 011111—5 | C A Merrill | 110w |

In each of the above events the three highest scores took the moneys. PELICAN.

### Glenmore Rod and Gun Club.

THE Glenmores held their regular monthly shoot for the Claws diamond badge, at Dexter Park, L. I., on Wednesday, Nov. 30. The attendance was not as large as usual on account of the death of a relative of one of its members, and a notice had been sent out to postpone the shoot, but too late to prevent the fifteen members who were present to shoot for the trophy. W. Hartye was the winner with a straight score of 11 killed. The ground being covered with snow made the shooting difficult, especially at light-colored birds. Louis Miller has had during the past two weeks as fine a lot of flyers as have been trapped all through the year. The scores:

| | | | |
|---|---|---|---|
| J A Eppig | 1111022—6 | W Vorbach | 2112012—6 |
| R Phister, Jr | 1111111—7 | W Hartye | 1111111—7 |
| C Englebrecht | 1211121—7 | J A Still | 1020002—3 |
| L Eppig | 0112111—6 | F Thompson | 1020111—5 |
| W Letoris | 2110022—5 | T T Edgerton | 2102001—4 |
| G Pfohlman | 1122122 | J Young | 2112202—6 |
| J W Gastiger | 2021202—4 | C W Vincent | 1021120—5 |
| M Hayden | 0120002—3 | | |

First sweep, 5 birds:

| | | | |
|---|---|---|---|
| M E Hayden | 21002—3 | L Eppig | 22121—5 |
| C Englebrecht | 10122—4 | W H Hartye | 01111—4 |

Second sweep, 3 birds:

| | | | |
|---|---|---|---|
| C Englebrecht | 212—3 | W Thompson | 122—3 |
| L Eppig | 111—3 | R Phister, Jr | 121—3 |
| J Young | 211—3 | G Pfohlman | 220—2 |
| J A Eppig | 222—3 | J A Still | 021—2 |
| C Vincent | 121—3 | T T Edgerton | 122—3 |

Vincent won shoot-off.

### Waverly Gun Club.

THE members of the Waverly Gun Club held their last club shoot of the season at Dexter Park, on Monday, Dec. 5. Only seven competed for the annual club prize and a gold medal donated by the president, George Helmstead; at 10 targets each, 20yds. rise. O. Hillmer won the medal with 8, and it is now his private property. M. Schultz was second, with 7, but he took the club's annual prize of $25, having been the winner of three shoots out of nine. The other winners during the nine months were: O. Hillmer, twice; W. Tomford, H. Van Staden, C. Mohrman and George Helmstead once each. Yesterday's scores:

Club Shoot—20yds.

| | | | |
|---|---|---|---|
| C Mohrman | 01000101000—3 | J Mohrman | 10110100010—5 |
| M Schultz | 11111010001—7 | H Herman | 01100100011—5 |
| O Hillmer | 01011111111—8 | G Helmstead | 01011011110—6 |
| H Van Staden | 00010101001—4 | | |

No. 1, 5 birds; No. 2, 6 birds; No. 3, No. 4 and No. 5, sweepstakes, 6 birds:

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. |
|---|---|---|---|---|---|
| C Mohrman | 10000—1 | 001010—2 | 111101—5 | 000111—3 | 000000—0 |
| M Schultz | 11101—4 | 101101—4 | 010111—4 | 111111—6 | 100000—1 |
| O Hillmer | 10110—3 | 111100—4 | 111111—6 | 111011—5 | 111000—3 |
| H Van Staden | 01011—3 | 011100—4 | 110100—3 | 100101—3 | ..... |
| J Mohrman | 10101—3 | 000010—1 | 000000—0 | 110000—2 | 001000—1 |
| H Herman | ..... | 000010—1 | ..... | ..... | ..... |
| G Helmstead | 01100—2 | 010001—2 | 011101—4 | 011011—4 | 110001—3 |

All ties in first four sweepstakes decided in the next.

### Do Away With Pots.

NEW HAVEN, Dec. 2.—In the last issue FOREST AND STREAM, page 484, I notice quite a spicy article from your Western correspondent, E. Hough, for which he will no doubt have the thanks of most of the trap-shooters. He deals well directed and telling blows. I have no doubt that his remarks will be a benefit to many who have in the past attended tournaments for the fun there was in it; but as he truly remarks, to visit tournaments to be devoured by wolves it is quite time to call a halt and devise some means whereby the wolves will be obliged to seek some other food besides lamb chops. I think the inclosed scheme would be about the stuff.

Any number of known traps and angles, "say, 24 to 28yds. rise," the shooter to pay 10 cents each for targets, to receive 15 cents for all targets scored dead to him. Any one can shoot for targets 2 cents each, but will not be entitled to any dividends. Usually in 10 bird events with the division of purse, 4 moneys, the shooter who only scored 6 would get nothing if 7, 8, 9, 10 was scored. In this scheme any contestant who scores one or more targets will receive a dividend pro rata for the number of targets scored to him. There will be no dividing moneys, no shooting down ties, no dropping for places. For example, 10 target events, 10 shooters, targets 10 cents each, purse $10:

| | |
|---|---|
| A scores 10 | Receives $1 50 |
| B scores 9 | Receives 1 35 |
| C scores 8 | Receives 1 20 |
| D scores 7 | Receives 1 05 |
| E scores 6 | Receives 90 |
| F scores 5 | Receives 75 |
| G scores 4 | Receives 60 |
| H scores 3 | Receives 45 |
| I scores 2 | Receives 30 |
| J scores 1 | Receives 15 |
| Dividends | $8 25 |

The above example holds good for any number of targets or shooters. FAIR PLAY.

### The American Manufacturers' Association.

DEC. 1.—The second regular meeting of the American Manufacturers' Association was held at the Astor House yesterday, and lasted something over three hours.

There was a great deal of interest shown, and much healthy discussion and exchange of ideas as to the best methods to pursue.

Among those present were Mr. Elliott Smith, president of the American Wood Powder Co.; Mr. Money, of the American E. C. Powder Co.; Mr. Webster, president of the Cleveland Target Co.; Mr. Hunter, of the Hunter Arms Co.; Mr. Stake, of Schoverling, Daly & Gales; Mr. C. H. Mowry, editor of the *Sporting Goods Gazette;* Mr. T. H. Keller, of the U. S. Cartridge Co.; Mr. G. H. Squires, of Henry C. Squires.

The meeting was called for the purpose of electing a board of directors, receiving new members and to discuss any other matters of importance that might come up.

Mr. Hunter was called upon to take the chair in the absence of president. The following board of directors were elected for the coming year: Mr. Harvey McMurchy, Mr. T. H. Keller, Mr. A. W. DuBray, Mr. Milt. F. Lindsley and Mr. A. G. Courtney, these, with the four officers making nine men on the board of direction and management. On a vote the committee on by-laws were instructed to make a by-law to read that three should constitute a quorum of the board of directors.

To the number already pledged Parker Bros., the *Sporting Goods Gazette* and the *Sporting Goods Dealer* were added to the membership. Most encouraging letters have been received from the Baker Gun and Forging Co., Colt Patent Firearms Co., American "E. C." Powder Co., the Wilkesbarre Gun Co., Cruttenden & Card, the American Arms Co. and others, and we sincerely hope that the progress made thus far and the obvious interest in the association shown by all concerned will induce every manufacturer of sporting goods to join us without further delay, and share the benefits the association proposes to give.

Another meeting will be held at the call of the board, and you are earnestly requested to be present or to write your views to the secretary. G. HARRY SQUIRES, Secretary.

### Vernon Rod and Gun Club.

THE Vernon Rod and Gun Club members held their second shoot since being organized at Dexter Park, L. I., on Tuesday, Nov. 29, in a driving snow storm which beat down the birds and made them easy targets. Only six competed for the best club averages at 7 birds each, modified Hurlingham rules. The Vernons propose to shoot at Dexter Park on the last Tuesday of each month, and as their membership roll has thirty names subscribed, they think that a team can be made up to compete in any of the forthcoming tournaments of next year. The veteran rifle shot, R. Rathbone, is one of the members and is making some good scores, but the weather of Tuesday was too inclement for him and several others although a good many of the members belong to the medical profession. The scores:

Club medal, 7 birds, modified Hurlingham rules, 28yds.:

| | | | |
|---|---|---|---|
| O B Osterhout | 2111111—7 | J G Merrihew | 1121111—7 |
| Dr Little | 2122221—7 | W H Thompson | 0111121—6 |
| F A Thompson | 2121100—5 | A B Merrihew | 2102111—6 |

Sweepstake, 3 birds, then miss and out, 28yds., 2 moneys:

| | | | | | |
|---|---|---|---|---|---|
| O B Osterhout | 111—2 | 1 | J G Merrihew | 021—2 | 22221111 |
| Dr Little | 010—1 | 1 | W H Thompson | 221—3 | 0 |
| F A Thompson | 021—2 | 12212222 | A B Merrihew | 111—3 | 1 |

### Interstate Association.

A MEETING of the Interstate Manufacturers' and Dealers' Association was held at the Astor House, Dec. 1, to consider the plan of organization proposed by the committee appointed for that purpose, and also to adopt by-laws. J. A. H. Dressel, of the U. M. C. Co. was in the chair. The plan as announced by G. H. Sampson, chairman of the committee, is, briefly, to form a stock company under the laws of New Jersey with a capital of $2,500, fifty shares of $50 each. The incorporators are G. H. Sampson of the S. S. Powder Co., Chas. Tatham of Tatham & Bro. and J. A. H. Dressel of the U. M. C. Co. It is provided that stock in the corporation cannot be transferred except with the sanction of the executive committee. Four assessments of $50 each during the year have been decided upon. The board of directors, consisting of five, will be elected by the stockholders, and the officers and executive committee by the board of directors from its number. It was decided that the manager should not be a member of the executive committee.

Only such ammunition and targets as are manufactured or dealt in by members of the company will be sold in their tents on the shooting grounds, but the clubs holding the shoot are at liberty to have any targets or ammunition whatever for sale.

The certificate of charter and by-laws were both accepted substantially as drafted by the committee.

### Sweepstakes at Dexter Park.

FOR the second time Alec Blinn failed in his attempt to kill 40 out of 50 live birds at Dexter Park on a wager of $50 with Martin Euler. He gave up on the 35th bird, killing 24 and missing 11. The bright light on the snow considerably bothered him, and he likewise got slightly rattled on missing such good birds. He also lost a match of 10 birds with Tom Short of the Parkway Rod and Gun Club. The scores:

Sweepstakes Nos. 1, 2 and 3, 3 live birds, $1 entry, two moneys, 28yds.; No. 4, 10 birds, $10 a side; No. 5, miss and out.

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. |
|---|---|---|---|---|---|
| M Euler | 011—2 | 101—2 | 100—1 | 1111111111—10 | 11—2 |
| A Blinn | 011—2 | 102—2 | 200—1 | 1210100011—7 | 11—2 |
| T Short | 211—3 | 122—3 | 021—2 | 1212102101—8 | ..... |
| H Victor | 101—2 | ..... | ..... | ..... | 10—1 |

Referee and scorer: C. A. Dellar.

### Hurlingham Rules.

WE have the Hurlingham Rules, bound in blue and gold and in vest pocket size. Price 25 cents. FOREST AND STREAM.

### A Christmas Present.

FOR fastidious smokers a more acceptable present could hardly be secured than one of Smith's Patent Hermetical Cigar Boxes, adverts of elsewhere in our columns. The case is handsomely constructed from mahogany or quartered oak, with silver or gold mountings, and in addition to being absolutely air tight, is also provided with a "moistener." The original flavor of the tobacco is thus preserved under all conditions of dryness and dampness. These boxes, while an addition to any gentleman's study, are especially recommended for use by yachtsmen on the one hand, and on the other those living in a high dry atmosphere, such as Colorado or New Mexico. They are guaranteed to preserve the virtue of tobacco under the most trying conditions.—*Adv.*

## CHICAGO TRAPS.

CHICAGO, Ill., Nov. 26.—Chicago is fuller of good shooters to-night than at any time for months, the reflex work of Milwaukee shoot having paused here a while, possibly for a few days. There are present now Messrs. Budd, Elliott, Parmalee, Lindsley, McMurchy, Tucker, Sanford, Rexroat, Bennett, Ackerman and Read, all from out of town. Dick Merrill may be over from Milwaukee early in the week. There is a general shaking up of the local talent, and before many hours pass there may be razors flying in the air, though the probability is that nothing more serious than sweepstakes will result.

Winston did not come on from St. Louis, and both Brewer and Fulford left town last Wednesday. Fulford does not want to shoot Winston. He says it "wouldn't be worth while." A good many here think it wouldn't be worth while, either—not for Fulford. Brewer, of course, is challenging a plenty, and just now is begging Dr. Carver to step in his Prince Albert for a thousand. Dr. Carver probably will not—not in a thousand. All of which will leave a corner free for the wind to sigh through.

The Atwater-Mussey race has been postponed, Mr. Atwater having a sick child at his home.

The sweeps of the experts next week will probably take the form of "star sweeps" or miss and outs, privilege of re-entry for second or third time.

### AMERICAN MANUFACTURERS' ASSOCIATION.

Mr. Harvey McMurchy, of the Hunter Arms Co., one of the members of the new shooting body, the American Manufacturers' Association, hands me here the recently issued prospectus which was referred to in the FOREST AND STREAM'S report of the inaugural meeting two weeks ago. The prospectus offers interesting reading to the shooter, for instance, when it says that the object of the Association is "not to see how many targets we can throw in a day, but how many shooters we can get together, and how pleasant a time we can give them. We show the shooters a full line of American makers' goods in guns, ammunition, targets and sporting goods, and then give the shooters $100 a day to come and look at them."

The American Association will give, it is announced, ten expositions and tournaments, each of two days, beginning next February and ending next December, at points not yet decided. It will add $200 cash to the purses of each tournament. It will charge three cents on all targets thrown, leaving the choice of targets to the local club and pay one cent each for all targets thrown, the fund so created to go toward improving the local grounds.

Fuller details will doubtless be found elsewhere in these columns, even comment here must be brief. The project seems to be well received here. Certainly the American is a fortunate and highly pampered individual. This is the third organization within five years whose purposes have been similar, and which have all sought to foster and build up the sport of trap-shooting. The American Shooting Association failed. Will the later association fail, will this one fail? It is to be hoped not. I believe that that association will succeed which can evolve some sure and equitable way of separating the men who shoot for sport from those who shoot for money. Under the best handicapping system yet found it is questionable whether this has successfully been done. Further remedies may be offered in abundance, but which of them is the one for this new association to take up for serious consideration? In these troublous and uncertain times, I cannot help turning back to the advice of Mr. Tucker at the Milwaukee shoot: "Bar any man caught dropping for place, and do it fearlessly."

Just how such a course would work is a question. It would probably at an early day cut off the attendance of many valuable target smashers, and target smashers are practically the heavy buyers of targets and of ammunition. If it did not bar them, it might gradually crowd them together into the one or two upper moneys, and so leave one or two lower moneys for the men who shoot for sport. In a ten-bird sweep there is not two birds difference in gait between a dozen of the men who shot at Milwaukee, but you cannot tell their gait from their score card, for they drop in to cover the fattest money in sight. A sharp and nervy committee could have nailed much of the place-shooting, and it could always, anywhere.

It would be a novel thing to see a shoot conducted not in a rushing, hullabulloo, money-making, business way, but in a quiet, careful, experimenting way, so that some sport might be possible in it. Suppose the American Manufacturers' Association gave a shoot of this kind, and just tried a few experiments, and didn't try to make the last dollar in sight, and didn't allow the shooters to do just what they pleased to get hold of this same last dollar. I wonder what the result would be? They will make their own plans, very possibly clinging to much of the old doctrine which I confess to me seems very well worth discarding, especially in the light of the past. Certainly they have a complicated problem before them. Every one knows that tournament shooting is what calls heavily for guns, ammunition and targets, and every one knows also that tournament shooting is not in a healthy condition to-day, because it does not appeal to the sport-loving public, a far larger and more desirable class than which is usually most strongly represented at tournaments to-day. Be all these things as they may, shooters should be glad to see the new association formed, as being a body of men who can wisely settle these questions if any one can, and men who will be just and fair to all so far as lies within their power. Already an interesting feature of next year's circuit is assured.

### THE WORLD'S FAIR SHOOT.

It occurs to me that the open tournament of next summer's Illinois State Association shoot, which will really be the World's Fair shoot, might be turned over, on some equitable basis to be determined, to the American Manufacturers' Association. We are looking for a stock company to take hold of that shoot and run it in a wide and representative American fashion. Why cannot this association broaden its purposes enough for this? It could make money. It could reach the shooters. It could teach its principles. It could show its goods. It could pay the Illinois Association a per cent. for its support. It could do a good stroke of business for itself and for the Illinois body at the same time, and solve a question which, already far too long delayed here, is growing more urgent and more knotty every day.

*Nov. 30.*—Yesterday and the day before have been high times at Watson's Park. Not content with the pigeon game of last week at Milwaukee, a crowd of the hardest shooters who met there—indeed, numbering among them many of the very best shots of the Western country—drifted into Chicago for a little further mutual entertainment. The result was a very nice little two days' tournament, and several very narrow escapes from matches involving great deeds upon the feathery field. It was noped that some of the foreigners would get tangled up to the extent of a few pool races, but they fought shy of each other; only two Chicago men appeared to do battle for their country. Much disappointment was felt by the local talent, who all wished the visitors to see some of the much-talked-of good birds, and to give them a taste of real shooting. The birds were called a "good lot" by the trap reporter of an esteemed contemporary published here (who was not on the grounds) but they were really very far indeed from being a good lot, and were only about a tournament average lot. This was not the fault of the birds, but of the weather, which was dull, muggy, foggy and dark, with no wind at all, both yesterday and Monday. The birds flew very dully, whereat John Watson said bad words in his whiskers. The sport of the two days was about the poorest ever seen on the grounds so far as the birds were concerned, and it would be hard to pick nastier days.

Failing of some pool matches, Mr. Fulford, Mr. Elliott and Mr. Winston all being somewhere else at the critical juncture, getting into form for more jamborees just like this one, it was hoped that some of the cracks would shoot to finish and show us a little sport in the star sweeps. Did they do it? Not in a thousand years. They shot down to where a few had a little money in sight, and then the wink and secret talk took place as usual, and so did the divide. They are all afraid to go against the combine. Talk about the Standard Oil Company, it isn't a marker for a monopoly alongside of the great American trap-shooting cinch contingent. So on Monday we had to report another section of tournament instead of a slice of spirited and interesting shooting. Trap shooting of to-day has grown to be very tiresome work, except for those who have their money in the pot. I like that word "pot." It is just right. Trap shooters are the worst pot hunters on earth. They are pot boilers, for sure, these sweeps. Our friend the trap shooter has one eye on the trap and the other on the pot, every day. Trap shooting is going to pot, mostly, if the present system holds.

### MONDAY'S STAR SWEEPS.

The experiment of the star sweeps was tried for novelty and for the purpose of seeing what the result would be as to finish shooting and value of purses won. The first sweep closed in the 15 hole, with the four experts, Budd, Heikes, Parmalee and Sanford, in at the divide. Naturally at the entrance charged no very big winning could be expected, especially when the birds were so easy. The four men left in would probably have shot the money all out before any finish could have been made. Score:

Star sweep No. 1, five birds, miss and out, $3, $2 re-entry:

| | | | |
|---|---|---|---|
| C W Budd | 1122122221211222 | J C Read | 2222212021202120 |
| R O Heikes | 1222121111212011 | M C Sanford | 2122221121212222 |
| Chas Grim | 1120211211220 | F Parmalee | 1211121222221211 |
| H McMurchy | 1220120 | Ted Ackerman | 01110 |
| G Kleinman | 2112212200 | A L Bennett | 0110 |
| R B Wadsworth | 2012222221120 | R Merrill | 1021222020 |
| L M Hamline | 00 | M F Lindsley | 2222022222020 |
| W P Mussey | 0222222221120 | | |

Messrs. Budd, Heikes, Parmalee and Sanford divided $26.50.

Star sweep No. 2, same conditions:

| | | | |
|---|---|---|---|
| C B Dicks | 022120 | R B Wadsworth | 2221212 |
| R Merrill | 1121122 | F Parmalee | 2112111 |
| Cap Anson | 2211122 | L M Hamline | 2022120 |
| A L Bennett | 20120 | C Grim | 2121111 |
| A Torkington | 0112112 | Gus Kleinman | 1122221 |
| M F Lindsley | 2022212 | C W Budd | 1112112 |
| J C Read | 2112100 | M C Sanford | 2201121 |
| Ted Ackerman | 01210 | R O Heikes | 2221221 |
| H McMurchy | 1122112 | W P Mussey | 2212222 |

It was dark when the score stood as above, and the money was divided among those remaining in.

### TUESDAY'S ATTRACTIONS.

Yesterday's weather was enough to make a plain citizen think of all his misdeeds and resolve to make his will. Neither men nor birds had any ambition, and the impression seemed general that the world had gone to the demnition bow-wows. However, the events of the day were more exciting in their nature, and under better skies it would have been a great day. The Atwater-Mussey medal was to have been shot to-day, but was postponed, as announced last week. Instead there was shot the match between Capt. Anson and J. C. Read, which was agreed upon at Milwaukee. It may be borne in mind that in the report of the Milwaukee tournament Mr. Read was mentioned as having won $81 alone in one purse of a live bird shoot. At least he stood to take down that much in the 14 hole, though perhaps Mr. G. W. Rexroat, who only got 13, can best say whether Mr. Read got $81 or $40 50. Mr. Read is an Omaha plumber, and after his winning in the above shoot he was called by no other name than that of "the Plumber." It may have been his supposed great wealth that made Cap. Anse tread on his coat, or Cap. Anse may have just objected to Mr. Read's owning $81, or a moiety thereof. At any rate they negotiated some and we saw the result Tuesday.

### ANSON—READ.

Match at 50 live birds, $50, American Association rules to govern, except new Illinois boundary. (The esteemed contemporary above mentioned reports this match as shot under new Illinois rules; but let that pass.) No odds were offered, but the Chicago man was favorite, not a great deal of Omaha money being in sight, though Frank Parmalee confidently assured everybody that "the Plumber would win in a jog." Both men were scared a whole lot for 15 birds, but after that, settled down. Read shooting a very steady and cool gait, at times with much judgment. The birds ranged from dark Blue Points to New York counts, with a few Chicago selects thrown in to lend variety to the occasion. They were a mixed lot of flyers, and therefore hard to gauge. Three birds in the 100 were flagged. Once in a while a screamer would go out. Anson had the worst of these by far for 30 birds, and as he is not especially quick with his first some of them got very high and hard before he stopped them. At these difficult shots he seemed perfectly at home, and made some cracking kills. His load was a Roman candle containing 3½drs. of Schultze powder, a handful of wads and a tin cupful of shot, yet his gun (the old heavy-muzzled Greener once owned by Jim Elliott, held the load together admirably and did fine work. Anson lost his twenty-ninth bird in a singular way. It was a high left-quarterer, shot through the head, and Anson's handler called to Billy, the trapper boy who does the retrieving skilfully, to go after the bird fast. The boy, doubtless against his judgment, obeyed, and the bird got up and flew out. It was not needed, however.

At the 20 turn the men were tied, and Chicago men looked dubious, because the Plumber was proving pretty handy and looked dangerously sophisticated for a man shooting his first match. At 23 Read missed, but Anse came back to him at 27, and the plot thickened. Anse missed his twenty-ninth, and the Plumber allowed he would mark down the price of plumbing in Omaha. At the thirty-third bird, however, the luck of the birds turned, as it usually does in a race of any length, and Read began to draw some hard twisters, which made for the deep field. Of these he missed 3 straight, and 4 out of 4, and 5 out of 10, and 7 out of 20, the doughty baseball general continuing to go after the birds about the same as before, or more so, and going out with a string of 44 at his belt and a smile which would have served very well for a sunset on a dark day. Your Uncle Adrian is this kind of a pigeon shooter: he will shoot up to his gait all the time, and will not have any waves of trouble in his chest during the match, though he doesn't claim to be a champion nor nothin'. It is now very likely that your Uncle Adrian will be pestering some of the Chicago boys for matches before long. It is also probable that the price of plumbing will have to go up now in Omaha. Mr. Read has changed his mind about that. Mr. Read has now shot one pigeon match, but I would not advise any stranger to pick him up for an easy one, by any means. John Watson refereed this and the other shooting, of course. Score:

*Trap score type—Copyright, 1892, by Forest and Stream Publishing Co.*

J C Read..... 1 2 0 1 1 1 2 2 0 1 2 2 2 1 o 2 1 1 1 1 2 1 0 1 2 2
2 1 1 2 1 2 2 2 0 0 0 2 0 2 2 0 2 1 1 1 2 2 1 0 0 2—39

Ties div. money as follows: First, 5 men, $63; second, 6 men, $47.25; third, 6 men, $21.25; fourth, 3 men, $15.75.

### A RED HOT TARGET RACE.

On Monday evening there was some talk of getting up a big target sweep at 100 targets, $25 or $10 entry, all the cracks to go in. "I hope they'll get that race up," said Rolla Heikes. "My wife don't like the piano we've got and I want to get a new one." "If they get that race up," said Eddie Bingham," my good girl has a cinch on a diamond ring." "This means another Des Moines lot on my farm," said Charlie Budd. And they all wanted it to go, because they all thought they could get about 99 or 100 targets out of 10 unknown traps, P. North electric piano, only three (visible) moneys in the purse. This target race was shot to-day, and you never saw such a disgusted lot of shooters. The old mechanical, ridiculous, rapid-fire, known-angle system was never more fully brought in evidence. It became evident that a lot of great shots can't shoot unless you hold a target up for them on a stick. At wing shooting, real shooting, such as they had to-day, they were not in it. Eddie Bingham's best girl will have to wear a tin ring for a while yet, and Rolla Heike's wife will have to struggle along with the old piano. Frank Parmalee, of Omaha, won first with a score of 72 out of 100, carrying $42. Charlie Budd let down in the darkish finishing time of evening and won second with only 69, $25. Dickie Merrill, a slim young man in brown clothes and a delicate mustache, from Milwaukee, won third, $16.80, with a total of 68. Now, there was another shooting event, and cold as it was, the target score had a constant line of spectators, watching the experts trying to shoot a red-hot shooting game. This was not tournament shooting, but it was a whole lot better. Mr. Watson sends in the scores later.

### BENNETT—MUSSEY.

Mr. A. L. Bennett is one of the firm who bought out Jim Elliott's Kansas City shooting park. Mr. Bennett was bei Milvowkee with the boys, and at that time he wore the dirtiest and raggedest sweater ever was, and had, moreover, a shirt with 150 shot holes in it, where an enterprising Kansan had patterned a 10-gauge on him. At present Mr. Bennett wears a brand-new sweater, and the price of birds at his park will remain the same. Billy Mussey says, "I was glad to see all the boys that came here this week except Bennett. I think I'll have to mark up the price of standing room in the hall a shade." You see, Billy Mussey figured that nobody with a back full of shot and a fall-down sweater like that could shoot a little bit, anyhow, especially if he came from Kansas City. So he looked sassy around the meek Kansas City man, who looked some sassy in reply, and the result was they had to ask John Watson for 25 birds apiece just to show there was no coldness. It is now thought that the ragged sweater was only a blind, and that Mr. Bennett could shoot better than he looked like, all along. "I couldn't very well beat him if he wouldn't miss one," said Billy, ruefully, "or if so, how could I?" Because Mr. Bennett not only killed his first and last bird, but he killed them all between, and did it as if it was easy and as if he liked it and was used to doing it.

This race was shot the last thing in the evening, and it was nearly dark when the last gun was fired. The air was murky and heavy, and the birds would hardly fly at all. The esteemed contemporary, who wasn't there, says, "The birds, like those of the Anson—Read race, were good, some of them taxing the skill of the shooters to the utmost to stop them within bounds." That is a good sentence to pad with, but it isn't so. The birds could hardly be scared out of bounds, so late was it, and so dully and heavy the weather. Mr. Mussey's style, both barrels about at once, most of his birds killed practically at the trap, is better at fast birds than at the slow sort, and had the birds been really good, it is hardly likely that a straight 25 would have been made by either man, or would be by any man. On the birds as they actually flew, with a majority of slow starters, incomers and hoverers, Mr. Bennett shot a perfect race, and was full of judgment and generalship till it struck out behind his ears. Mr. Mussey shot about his gait, or at a gait of 88 to the 100. He has usually averaged about 86 on good fast birds here, but as he feelingly remarks, it's discouraging to shoot with a fellow who won't ever miss a bird at all. Mr. Bennett was so disgustingly confident that he was going to win this race that he went and got his new sweater before the race was shot, and wore it all the time he was shooting. The conditions were not good for a pretty match, the background being such that a bird showed only dimly in the failing light. The men did not dawdle, but slashed through the shooting in rapid style, as they needed to do to finish before dark. Score, 25 birds, $25, new Illinois rules.

W P Mussey.....2 2 2 2 2 2 2 2 2 2 o 2 2 2 2 2 2 2 0 2 2 2 2 2 2 2 2 0—21

A L Bennett.....2 2 2 2 2 1 1 2 1 1 2 1 1 1 1 1 1 1 2 1 1 2 2 2 2 1—25

We had with us in this little extempore shooting festival Messrs. Budd, Lindsley, Parmalee, Grim, McMurchy, Tucker, Sanford, Merrill, Read, Ackerman, etc., all well known enough in the West. Mr. G. W. La Rue, of New York, was also among the visiting shooters. These were met by such local men as Geo. Kleiuman, Rolla Heikes, Eddie Bingham, W. P. Mussey, Andy Thomas, A. C. Anson, R. B. Organ, etc. The result was a very hot class of shooters and a very enjoyable affair.

John Watson will give a four days' tournament of this same sort, at live birds and targets, Christmas week, and a great many of these same men will be here. They will see a harder pigeon game then, and let us hope that we will see more finish events, more matches, and above all, more shooting at unknown angles on targets.

To-night the boys scatter after another week of pleasure together. This is really the end of the Milwaukee tournament. Mr. Tucker goes down the line of his Mississippi towns from here, Mr. Lindsley goes to St. Louis to-day, and so does Mr. McMurchy. Messrs. Budd, Parmalee, Read and Ackerman left last night. Mr. Bennett could not stay to-day and that 100-bird race with his yesterday's opponent, as he was invited to do, and also left last night. Mr. Read says he will be back at John Watson's Christmas shoot, and will then shoot Cap. Anson a 100-bird race, if the latter is willing. To which the captain responded with a radiant, cheerful smile.

Our friend Jack Winston missed some fun, but asks to be remembered in the following postal card:

"St. Louis, Nov. 26.—Was in training, but have gone out. Now here is what I will do (in St. Louis) on ten days' notice. Will shoot Roll Heikes 100 blue rocks National rules, electric pulls, for $100. Will match Crosby against Heikes, same race and amount. Will shoot Geo. Kleinman 100 pigeons, Hurlingham, London Gun Club or Monaco boundary, for $100, or will match Crosby on same terms. Will you allow us our expenses to come to your village?"

Roll Heikes will hardly go to St. Louis. Of course, a home-and-home match might be shot at some half-way point, such as Amboy, but as nobody here knows where St. Louis is, all that is doubtful. Naturally Chicago shooters are mainly interested in matches that are to be shot in Chicago. We don't know anything about St. Louis. But if a St. Louis man should come up here about next Christmas, he might have a good time and maybe a match, though those latter are mighty uncertain things, it seems like.

Mr. Cooney Caboon, of Freeport, Ill., will receive his trap shooting friends at the tournament of the Freeport Gun Club, Dec. 8 and 9, the same being the diamond badge tournament, participated in by Freeport, Rockford and Amboy gun clubs, Mr. Caboon being resident manager. The badge is worth $150, the race at 50 targets, $3 entrance. Live bird and target events will fill up the remainder of the days, rapid fire, four moneys, winners of first money in one match to be handicapped in the match following. A pleasant little shoot will be had if the weather prove favorable.

E. HOUGH.

175 MONROE STREET, Chicago.

## Targets at Walnut Hill.

WALNUT HILL, Mass., Nov. 30.—Below are results of to-day's trap contests shot here:

Gold coin match, 20 targets. 5 traps, Keystone system, and 10 targets from 5 traps, unknown angles: Barrett 27, Hosmer 25, Gale 24, Climax 23, Smith 22, Block 21, Snow 18, Nichols 15, Tyler 10.

Five targets, Keystone system: Barrett 5, first; Rule 3, second; Climax, Gale and Snow 2, third.

Five bluerocks, unknown angles: Barrett 4, first, Gale and Climax 3, second; Rule 2, third.

Ten targets, Keystone system: Gale 9, first; Barrett, Climax and Hosmer 8, second; Black and Smith 7, third.

Ten bluerocks, 5 traps, unknown angles: Barrett and Hosmer 10, first; Smith 8, second; Gale and Climax 7, third.

Ten targets, Keystone system: Barrett 9, first; Climax and Gale 8, second; Hosmer and Smith 7, third.

Five bluerocks, Keystone system: Barrett and Gale 5, first; Climax, Rule and Snow 4, second.

Five targets, Keystone system: Snow 5, first, Barrett, Climax, Smith and Snow 4, second.

Five targets, Keystone system: Barrett and Climax 5, first; Gale 4, second; Snow 3, third.

Five targets, unknown angles: Barrett, Climax and Snow 4, first; Gale and Smith 3, second.

Three pair targets: Rule 5, first; Climax 4, second; Gale 3, third.

Ten targets, Keystone system: Hosmer 9, first, Smith 8, second; Climax and Barrett 7, third.

Five targets, Keystone system: Barrett 5, first, Gale and Nichols 4, second; Hosmer 3, third.

## Crescent Gun Club.

THE members of the Crescent Gun Club held their last competition for the annual prize, a Parker hammerless gun valued at $100, at Dexter Park, L. I., on Thursday, Dec. 1. C. Simmonds was the only straight scorer with seven, and took the first extra money. Walter Gilman won the gun with a total of 47 for his best seven scores of the year. J. Vagts was a good second with 45 for the same number of scores. The Crescents are rapidly increasing their membership and will be able to have a strong team for next year's shoots. The scores:

Last monthly shoot of the season for the hammerless Parker gun:

| | | | |
|---|---|---|---|
| C Simmonds | 1111121—7 | L Hopkins | 1100002—3 |
| P Jones | 1021112—6 | J Siegman | 1011122—6 |
| G Elberhorst | 1221002—5 | W Gilman | 2201021—5 |
| J Vagts | 1212101—6 | J Collier | 1010222—5 |

Sweepstakes:

The Breech-Loader
AND HOW TO USE IT. By W. W. Greener. Illustrated.
1892. Boards, 288 pages. Price, $1.00.
THE AUTHOR'S INTRODUCTION EXPLAINS
This treatise is written for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study. Published at a popular price, it will, it is hoped, reach many who have hitherto been deterred from shooting, believing it to be an expensive recreation. The author's aim is to induce all who can to participate in a manly sport, and to advance the interests of those who can look to the gun for pleasure, health or occupation. The book is not written for experts, nor for those who have special opportunities for the acquisition of the art of shooting; and in order to make it as attractive as possible to the general reader, many matters which would interest the enthusiastic shot only have been omitted.

CANOE HANDLING.
By C. B. VAUX ("DOT.")
A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

### *THE AMATEUR PHOTOGRAPHS.*

THIS is the last month for receiving work submitted in the FOREST AND STREAM Amateur Photography Competition. All photographs must be mailed to us not later than Dec. 31. Nothing bearing a later post mark will be received.

Full details respecting the terms of the competition are given in another column (page 533), and these instructions in circular form will be sent on request to any address.

The collection of views already received is most interesting; and we shall give the readers of this journal the privilege of seeing many of the views reproduced in its columns.

### *HUGH MONROE.*

LAST week we received from Montana a telegram which announced the death of Hugh Monroe, one of the very last of the old-time race of trappers. He was about one hundred years of age, and of these more than seventy-nine had been spent on the plains and in the mountains.

Hugh Monroe was a remarkable man. His life was full of startling changes and sharp contrasts, of keen delights, and of deadly perils. Its story, if written, would be the history of a great region, utterly wild and savage when he first knew it, but gradually settled and civilized, until now it has cities and towns, and hamlets and farms, and railroads, and is no longer wild, uncultivated or distant. To write his life, too, would be to give at the same time the story of a people, who were once as free and savage and untamed as the wild beasts on which they fed, a scourge to their enemies and a terror to the white invaders of their land; but who are now quiet, industrious, occupied in peaceful pursuits, tilling the soil, tending their herds.

Monroe was almost the last survivor of a type wholly unknown to the generation of to-day, but who fifty years ago were the masters of the mountains and the plains. It was of such men that Irving wrote—and a little later Parkman—when they told, the one of the prairies and Astoria and of Bonneville, and the other of California and the Oregon trail. Of these men scarcely one survives to-day. Such names as the Sublettes, Bent, St. Vrain, Jack Robinson, Bridger, Peter Ogden, Meek, Carson and others come to the mind. Most of them died long ago, but some we have known and known well. They were men; they were the real pioneers. Beside them, how absurd to-day sounds the title "explorer," applied to the man who rides in a railway car to within a hundred miles of the country he wishes to penetrate.

Eighty years ago Monroe took service with the Hudson's Bay Co., and set out for the distant West. On foot, by packet, by brigade and by canoe he journeyed over the weary miles that lay between bustling Montreal and lonely Fort Edmonton, then the westernmost of the posts of the great company. Soon after reaching there he was sent out alone to live with the Blackfeet, for another interpreter was needed and he must learn the language. It was at this time that, wholly without intention, he marvelously impressed the simple Indians by lighting a medicine pipe with his burning glass, so that they believed that he had brought down the sun—which they worshipped—and they called him its child. From that time on he was a person of importance in the tribe, a welcome guest in every lodge. Soon he married a woman of the Piegans and reared a family of children, some of whom, and their children and grandchildren, were about him to the last.

At first a Hudson's Bay man, Monroe was by turns a free trapper, American Fur Co. employee and scout for the United States Government. During the explorations for a Pacific Railway route he served as guide and interpreter with Gov. Stevens and Mr. Doty, and on one occasion by his influence with the Indians saved the whole party of whites from being killed by the enraged Blackfeet and Gros Ventres of the prairie. Long before this, while on a war expedition with the Blackfeet and Gros Ventres, he had saved from death a party of 112 white men and Indians, under Peter Ogden, who were trapping beaver for one of the Sublettes.

Hugh Monroe was a man of most simple, gentle and kindly disposition, yet he was a brave man and the sire of brave children. He has told us many a tale of daring adventure, relating them as simply as a child, giving only the bare facts and leaving his hearers to draw their own conclusions. His sons John and Francois have good war records and the former, in one fight, alone against a party of Assinaboines, had thirteen balls put through his robe, three in his gun stock and two through the handkerchief bound about his head, and finally drove off the enemy. His grandsons, Robert and William Jackson, were good scouts and good fighters under Generals Custer and Miles, and one of them killed Lame Deer when, during a talk, he shot at Gen. Miles, who was sitting on his horse close to him. The General, we believe, still preserves the war bonnet worn by the chief, which shows in its forehead piece the round hole where Jackson's fatal bullet cut it.

Unwept save in his own immediate circle, unhonored save in these brief lines, Hugh Monroe has gone down to a lonely grave in the land he loved. Yet how great a service have he and his performed for this country and for all of us. Worthily he lived his simple life, never realizing, perhaps, any great part of all that he was accomplishing, with no purpose save to perform, as nearly as he knew it, his duty toward his fellow men, red or white. But it was through his life, and through the lives of such as he, that the broad empire, which was at first an unknown wilderness, then the far West, and is now flourishing States, was subdued and made habitable. Such men, the pioneers, nameless and unknown though they were, made this Nation possible. Their hardships, their toils, their sufferings, their dangers and their deaths were endured for all of us.

Away out in far Montana a link which bound together the past and the present was broken when, on the border of the vast plains he had roamed over for eighty years, under the shadow of the changeless mountains whose defiles he had so often threaded, Hugh Monroe paid the last great debt to nature.

### *THE LARGEST BROOK TROUT.*

HOW much will the skin of a grizzly have shrunk three years after the shot was fired that laid him low? Look at the trophy on your study floor and answer fairly. Measured in the excitement of the chase, it seemed to be ten feet long, but now you can almost compass the distance from head to tail at a single step.

Perhaps the same experience may be realized upon critical examination of the giant brook trout of the records. We mean the red-spotted *fontinalis*, and not one of its black-spotted western cousins. C. T. Richardson has recently mentioned the male weighing 12¼lbs. which was caught in 1867 by Fish Commissioner Henry O. Stanley, Joseph Lamb and others while collecting eggs in one of the Rangeley lakes. He referred also to a brook trout taken in a pond at Mt. Vernon, Me., nearly a half century ago, which weighed upward of 20lbs. The first one was the same fish recorded by the late Mr. Page and was said to weigh 10lbs. three days after its capture.

It is possible, but hardly probable, that any authenic brook trout larger than the 12lbs. specimen caught by Seth Green and weighed by the late Dr. P. R. Hoy has ever been brought to the scales. The trout captured by Mr. Stanley was 30 inches long and 18 inches in circumference. Dr. Hoy told us the weight of the Seth Green trout, but could not recall its measurements. We recall the fact that Charles Hallock has mentioned a brook trout of 17lbs., but it is not sure that he really identified the fish as a veritable *fontinalis*. It may be that some of the supposed brook trout of unusual size are really lake trout, which is the largest species of its genus, and is reputed to reach 6 feet in length with the weight of 90lbs.

### *AN INDIVIDUAL APPEAL.*

ATTENTION is invited to the strong letters of indorsement, which we publish on another page, relative to our presentation of the case of "Cooke City vs. the National Park." These indorsements are from men who have studied the question intelligently, thoroughly and honestly; and their investigations have led them to the conclusion, which we believe must be reached by every candid and public-spirited investigator, that the National interest demands the preservation of the Yellowstone Park in its integrity.

Our statement of the case, in the last issue, has been reprinted in pamphlet form, that it may have currency outside of the wide publication given by FOREST AND STREAM. Every reader who appreciates the gravity of the situation, who would see the Park preserved for his children and his children's children, and who may be willing to make an individual effort toward accomplishing the defeat of the iniquitous bills now menacing the Yellowstone—every such an one is invited to assist in the Park defense movement by putting these circulars where they will best create public sentiment. The reprints will be sent in any desired numbers, post paid, to any address.

### *DEATH OF DR. P. R. HOY.*

Dr. P. R. Hoy, who died suddenly at Racine last Monday aged seventy-six, will be remembered by readers of FOREST AND STREAM as the discoverer of the food of the whitefish. Previous to 1870 he had preserved the partially digested stomach contents of these fish, and when the Chicago Academy of Sciences initiated the exploration of the deeper waters of Lake Michigan, he became associated with Doctors Stimpson, Lapham and Andrews and Mr. E. W. Blatchford, in the dredging operations. It was found that the species secured by Dr. Hoy were abundant on the lake bottom and constituted the chief food of the whitefish. They were two small crustaceans, a planarian and a little mollusk. The existence of crustaceans in Lake Michigan was not suspected until Dr. Hoy's studies brought them to light.

As a testimonial to Dr. Hoy's services to science Dr. Gill named a species of whitefish in his honor, and this stands among the recognized forms at present. Dr. Hoy contributed zoological papers to the transactions of the Wisconsin Academy. His interest in angling brought him into association with the lovers of the gentle art, and, we have it from his own lips, brought him health and a long life. One of his happiest experiences was his presence at the capture by Seth Green of a 12-pound brook trout in the "Soo."

---

The International Fish Conference, which was adjourned from Hamilton, Ont., Dec. 8, 1892, will meet in Detroit, Mich., next Tuesday, Dec. 20. Dr. Herschel Whitaker, of Detroit, is chairman of the committee of arrangements, and invites the attendance and coöperation of all persons interested in securing uniformity of fish laws in the several States and Provinces.

---

Mr. Nathaniel Wentworth, of Hudson, N. H., has been appointed Fish Commissioner, to succeed Col. George W. Riddle, of Manchester, whose term expired Nov. 15. Mr. Wentworth's appointment has been most favorably received by the press, and it is said for him that he will bring to the duties of his new office a warm interest in the work, and a fund of information gained from a life-long participation in outdoor life with rod and gun.

---

"We were just cranks enough," writes a contributor in another column, "to insist on loading our own shells." The cartridge companies turn out millions of machine loaded shells, most excellent ammunition it is too, but there are yet left uncounted hosts of shooters who load their own shells, and they are not all cranks either.

# The Sportsman Tourist.

## ALLEGHANY HUNTING GROUNDS.

Clearfield, Pa., Dec. 5.—From the dearth of news from our neck of woods one would scarcely know by reading Forest and Stream that some of the finest hunting territory that lies out of doors east of the Mississippi is to be found in central Pennsylvania. The Alleghany Mountains, with their spurs, foothills and adjacent ridges, make up a vast and almost unbroken wilderness, covering large portions of the counties of Blair, Cameron, Centre, Clearfield, Clinton, Elk and Huntingdon, which is the natural home of the Virginia deer, the black bear, the wildcat, the fox, the raccoon, the white and the gray rabbit, the gray, the black and the red squirrel, the wild turkey and the ruffed grouse. I do not wish to be understood that all these animals may be found in any one section, but they are here and fair hunting of any of them may be reached in a day's travel from any of the localities named. It is not only true that these animals are here in quantities and numbers to make fair sport, but if properly protected by wise legislation, and the Herbivora and the Rhodentia do not become carnivorous, as a certain dealer in ferrets would have us believe they will, and eat each other, they are here to stay.

The day for lumbering, a business that once employed so many men in many of the counties named, has practically gone by. Thousands of square miles of forest that once covered the slopes and foothills of our mountains have been stripped of their pine, hemlock and oak, the "forest primeval," once the home of the bear, the panther and the deer of our fathers, and for central Pennsylvania the log camp and the log driver are things of the past. The camps of the hardy log men, built on the headwaters of every stream in the mountains, have rotted down, the log slides have fallen to pieces, the quaking asp, the fire cherry, the birch and the blackberry have bidden them from view, and the busy scenes of twenty years ago are now visited by the bear, the deer, the fox and the rabbit, and the owl and the porcupine have made their home amid the ruins.

While many of our best hunting grounds have been destroyed by the lumbermen, and farms have been cleared and railroads and towns have been built where we once hunted deer and other game, and while many of our trout streams are dried up and are forever destroyed as the home of the brook trout because the adjacent forest that furnished a shade for the streams and a reservoir to supply them with water is gone, yet there is a brighter side to the picture, and lots of encouragement for the true sportsman.

There are thousands upon thousands of acres of land in this section that forms the great mountain region above named that will forever remain a wilderness. Some of this land has been stripped of virgin forest, but the rough, barren and rocky character of the soil offers no inducements to any one to clear it, and over these vast stretches nature is asserting her claims, and a second-growth forest is fast taking the place of the timber that once covered it. Indeed some of our very best hunting grounds are now to be found in the log jobs abandoned years ago and allowed to go back to a state of nature, and some of our very best trout fishing may now be found along our mountain streams that for twenty years have known no log drives or sawmills and will never know them again. Then, again, there is a vast territory, generally mountain land, that never produced any timber save scrub oak, jack pine, red brush, laurel and rhododendron, that, owing to the character of its soil and the absence of any minerals in paying quantities, will never be cleared.

As a result of the above conditions our game and fish supply is growing more abundant. For many years deer, bear, rabbits, squirrels and grouse have not been so plentiful as during the fall and winter of 1892, and it can only be accounted for by the fact that the natural home of these animals has been enlarged, their range extended, and that they now find a refuge in the lands from which they were once driven.

While nature has thus done much to protect and perpetuate our game and fish supply, and our game animals have shown a disposition to take care of themselves, we believe in encouraging them and giving them a chance. To this end the sportsmen of Pennsylvania owe it to themselves that a more adequate protection is afforded our game animals.

The deer season, now extending from Oct. 1 to Dec. 15, should, we think, be limited to one month, and let that month be November, so that some snow may be had for still-hunting, and the law against hounding deer should be rigidly enforced. We suggest the shortening of the open season in order that the nefarious practice of market-hunting may be broken up. There are hundreds of men to-day scattered over our mountains who have not one drop of a true sportsman's blood in their veins, who hunt deer during the whole of the open season for the money there is in it. Many of these men are without any occupation whatever, and, too lazy to work, they hunt for a living. Many of them are too mean to eat any of their game because they can buy other meat cheaper at the butcher's, and are satisfied with a taste of liver and heart as their share of the deer they kill. If the open season were limited to one month, hundreds of deer now killed by these pot-hunters and shipped to Eastern markets would be saved and the supply thus increased. Again, our open seasons for different kinds of game should be made more uniform. As the law now stands the open season for woodcock begins in July, for squirrels Sept. 1, for grouse and deer Oct. 1, for wild turkeys Oct. 15, and for quail and rabbits Nov. 1. This gives the pot-hunter an excuse for going into the woods to hunt one kind of game that may be in season and at the same time to kill a dozen other kinds out of season.

But Pennsylvania fish and game laws will never be enforced until it is made the duty of some one to see that they are enforced. In other words there should be a law authorizing the appointment of wardens who will do their duty and be paid for their services. Like violators of our liquor laws, violators of our game laws are seldom punished unless somebody wants to get square with some other fellow, and courts and juries seldom look with favor upon prosecutions inspired by a spirit of wrangle. The game supply of Pennsylvania is part of the great commonwealth, the property of a great State, amply able to take care of it and protect it for the benefit of the people. We have seen the buffalo forever disappear from the plains of the great West, and many other large game animals are fast following in their footsteps. Let the people of Pennsylvania take warning by the fate of these animals. Let her game protection associations move in the matter, and let her Legislature pass laws that will preserve to us and our successors this rich inheritance so fast passing away in other States. F. Y. H.

## CHAT AND COMMENT BY "PODGERS."

San Francisco, Nov. 23.—I have just finished reading my last Forest and Stream and have been, as usual, much interested in it contents, and no little amused at the views on the question of panthers that have run through the last several numbers. If the panthers don't scream it is a wonder, for they have had such an overhauling as to cause them to yell to be let alone.

Snakes have had their day and the subject exhausted. Now come the panthers, with minks in the succession; and "that reminds me" to get in a little story myself on minks early in the day.

Down at the Jekyl Island Club, Georgia, we were greatly bothered with them and our chicken department suffered from their incursions. One day a little rascal ran into the woodpile, but being driven out ran for the chicken yard, with Peter our cook in full pursuit. On the way the little marauder encountered a hen, which he stopped long enough to kill by one dash at her throat. It was the work of an instant. Dropping her he ran on, and just outside the gate he met another hen, which he also killed in the same manner—and escaped.

Whether he wanted to show his contempt for us or could not resist the temptation to do a little business in his line, as he ran, I couldn't say, but we were out two hens and not in a mink.

The shooting hereaway has been very good since the season opened, Sept. 1. Large bags have been made of mallards, sprigs and teal. The clubs owning preserves have had exceptionally good sport, averaging as high as 75 birds to the gun per day. The ducks came early and have continued to be plentiful to date.

Quail shooting has also been very fair and so continues. Canvasbacks do not get along until February, when the flight will commence and the market will be plentifully supplied at from $1 to $1.50 per brace. In old times we seldom paid over 75 cents a pair and oftener 50.

So much of the shooting grounds and marshes has been leased to clubs that the market-shooters and pot-hunters have a poorer show for the previous slaughter indulged in. In consequence of the preserves for club shooting the game has become more plentiful; but it is a little rough on the Sunday Frenchman and hoodlum with a gun, who now must go to a greater distance or be content with mud hens—which, by the way, are not such bad eating; the market-hunters prefer them to ducks, using however only the breast and discarding the balance.

Fishing in the bay has not been worth mention, there having been no run of grilse, or as people persist in calling them, "salmon trout"—a fish that in all my experience I have never seen, and in my opinion does not exist. A salmon is a salmon and a trout a trout. A grilse is simply a young salmon, and there you have the category.

The name "trout" is given to more varieties of fish than one has fingers and toes. In many places black bass are so called, weakfish also, and in Kern River, in one of our back counties, there is a great lubberly, coarse, gar-like fish that they call trout, and by which term and a big yarn in a local paper about the big trout in that river, I was induced to spend ten hours by rail and $10 to reach the stream, and the same to return—on the strength of the editorial lie about "our big trout." Imagine my disgust on being shown one of the fish on my arrival that a seedy individual was trying to exchange at a saloon for a cup of what both cheers and inebriates—very bad whiskey.

As I wrote you, I found my favorite salmon fishing invaded by the seining for canneries and ruined, but some friends who journeyed to Eel River, too rapid a stream for seining, had good sport, and I had a notion to write to several expectant friends to come out, as contemplated, but never having taken in Eel River in my ramblings I did not like to risk it, for as everybody knows, when you send word to a friend to come to your ground, if the fish don't bite you are held personally accountable and duly blamed for the failure. Hence I am ever chary about saying come, for it is a well established experience that if you do the fish and birds take that especial occasion to be scarcer than men who have lost anything on election bets. Speaking of which, it is one of the current things in nature that you hear of great winnings by Brown, Jones and Robinson on the election, and not a word of any one who has lost anything.

There are two varieties of fish now abundant on this coast, for which we are greatly indebted to the Fish Commissioners—shad and striped bass, neither of which fishes existed here until planted; and now we have the largest, finest and most toothsome shad; and striped bass are on the slabs of every dealer. It is a treat to see the great big fellows awaiting sale. It carries one back to the rocks off Newport, West Islands, Pasque Islands and Chituate; and we involuntarily remark, "Welcome little stranger," although they are generally big ones. Striped bass fishing has now become one of our institutions, and we all say God bless the Fish Commissioners for our shad and striped bass. As said the old writer quoted by Walton, of the strawberry, "Doubtless God could have made a better berry, but doubtless God never did;" so as to shad and bass; He might, but he hasn't made better fish yet.

I see that in a paragraph in a New York paper, giving a description of an electric launch built for Mr. Astor, it is described as the first electric launch built in the United States, which is simply untrue, as electric launches have been in use here for more than a year past. I was on board and had a sail in one not a month since, and she had been in use more than a year. The average range of a New York reporter's vision and knowledge does not seem to get beyond New York. He knows very little of the world beyond.

I see in a communication by your lady correspondent "Marion" an inquiry as to what has become of "Podgers." She will be surprised perhaps to learn that that very humble individual is within two hours' ride by rail of her fair self, and should she ever visit San Francisco and intimate her desire to see him he will be happy to pay his respects.

I see that your amateur photograph contributors are "doing noble" in their responses to your invitation to compete for prizes, although I am not certain whether your cuts of the shooting club men enter into competition or not. There is always something amusing to me in a cut of a shooting team and their dogs. The men look so conscious of being taken, throwing out their chests and wearing an expression of unutterable possibilities in the individual when his turn comes to shoot, while their dogs, poor things, are not posted and told to look pleasant, but wear tired and mournful expressions, taking little stock in the proceedings. It is not fair to the dog thus to run away with all the honors and not give them a chance to look pretty and intelligent. I am a friend of the dog; take his side always, and hence object to his being made a secondary figure in the procession. Podgers.

## THAT SHEET-IRON STOVE.

*Editor Forest and Stream:*

Mr. Dulog's mention of a sheetiron stove, in his interesting letter which appeared in your issue of Nov. 10, brings to my mind a little bit of experience I had with just such a stove—bottomless, telescope pipe and all.

Several years ago I received an invitation to accompany a party of sportsmen on a trip into the mountains of British Columbia, and, as I was off duty at the time, I accepted it with pleasure. But when I met the party at the steamboat landing and inspected their outfit, I confess that my courage went down in my boots. There were few things outside the requirements of a modern hotel that were not in the lot, which included this particular kind of sheet-iron stove so accurately described by Mr. Dulog. As I was a stranger to the party, I felt a little reluctant in having anything to say as to what should or should not go. Besides, they had brought the stuff with them across the continent, and from the way they gave their orders to the packers I felt satisfied they were going to pack it into the mountains if it took all the horses east of the Cascades to do it. So I lit my pipe and silently watched the work of arranging the packs.

We had a hundred and thirty miles of mountain trail to cover, and the train consisted of twenty odd packs—a pretty big outfit for a party of four men. When the last cinch was tightened I moved across and inspected the animal that carried the stove. He was a sleepy-looking pinto, worn out and poor in flesh, with nothing else peculiar about him except that he had a Roman nose, and in my experience a horse with a Roman nose will stand watching.

However, things went along quite smoothly for the first few days, and I had just about made up my mind that probably I didn't know much about mountain travel after all, when on the morning of the third day the thing happened that I was looking for. As luck willed, it was in a level part of the country where the trail led through a grassy park of scattered pines. As was usually the case the pinto with the stove was lagging away behind, and looking as if he was trying to find some convenient hole in which to bury himself and end his misery, when suddenly something went wrong in the bowels of the sheet-iron stove. Whether it was a lid that had got loose or the pipe had got out of focus will never be known, but in an instant the whole appearance of that sleepy-looking bag of bones was changed. He threw up his head and listened just long enough to satisfy himself that the infernal racket came from something in his pack, then he stretched himself out about 2ft. beyond his usual length, and started for the front at a rate of speed that seemed to burn the wind. When he struck the train with this noise of a dozen kettledrums coming from his back, every animal in the band started, and for four miles the trail was strewn with the scattered wreck of the 20 odd packs. Flour, sugar, bacon, beans and other camp equipment marked plainly the route taken by that fleeing band, and the day was spent in retrieving what was worth of our belongings. The stove was picked up in a somewhat battered condition, but not so badly damaged, I was sorry to see, as to compel us to abandon it. A photographic outfit was rendered useless for the trip, and a bear trap was found up in the limbs of a pine where it had evidently landed from a parting kick from the brute that packed it.

But aside from this accident, my experience with this stove is that I found it about as *cultus** a piece of furniture as ever a man packed into the mountains, and when the pipe once gets a jam or two, which will certainly be the case on a long trip, an ordinary camper can make his fire and cook his grub in about the time that it takes to get the pipe in shape. With all due respect for Mr. Dulog, whom I know to be an old campaigner and a thoroughly experienced hand in everything pertaining to camp life in the mountains, I prefer to stick to the old-fashioned camp-fire. John Fannin.

* Chinook jargon for worthless or bad.

### Lumbermen Lost in the Woods.

Fish River Falls, Aroostook County, Me., Nov. 30.—We occasionally read of "tenderfeet," and even experienced hunters getting lost in the woods, but here is an account of a party of five lumbermen who were lost recently at the head of Fish River, Arrostook county, Me., Friday, Nov. 25. Henry Day, boss of the crew, started for camp after sunset from the end of a line he had spotted for a road. He thought to take a short cut, but at midnight pulled up and realized he was lost. Having no matches he worked till daylight chopping dry cedars to keep warm. He started as soon as he could see on his back track, easy to follow on the light snow. The crew at the camp were alarmed at the boss's not returning, and next morning a search party of four started on the trail and met up with the lost one running like a deer and almost as wild. After eating the lunch sent out by the cook, they decided to lay their course to camp by a short cut, but night overtook them still a lost tribe in the wilderness; but the relief party brought matches, so that a good fire made their lot endurable. Sunday morning all agreed that the longest way around was the nearest road to camp, so they retraced their steps and reached camp late in the afternoon. Pine Tree.

## A NOVEMBER OUTING.

PITTSBURGH, Pa., Dec. 6.—We were plain, professional men. We had grown tired of our desks. We loved the fields and the woods. So we concluded to go hunting. Our wives consented on one condition, that they should be taken along. That was satisfactory and we began to look for the happy hunting grounds. We were all patriotic, so Pennsylvania, and western Pennsylvania in particular, polled a unanimous vote. We would go first to Butler county, then to Mercer and Crawford, meanwhile trying to keep ourselves posted on the flight of ducks at Lake Conneaut.

Our party as it left the city of iron, natural gas and smoke, consisted of four persons, namely, ourselves and our wives and three dogs. The dogs were all setters, for the confessedly primary object of the trip was to hunt quail. Pheasants came second in our estimation, rabbits next and squirrels next, while we were always ready to jump should a telegram as to ducks reach us.

As I said before, we were plain professional men. We knew what trap shooting was only from the rôle of spectator. We made no pretensions to being fine wing shots, though we confidently believed we could bring down a Bob White once in a while. Our guns were medium grade, good but not fancy; and we were just cranks enough to insist on loading our own shells. Our dogs were not particularly interesting from the bench show standpoint, but they were near and dear to us. Our main reliance was a fine old English setter, who in the long ago had had all the skill of a competent trainer. But his lot had been cast with a busy man, whose heart was too big to refuse the loan of him. The result has been that fine old Ranger, for that is his name, has two very bad habits. One is that he positively refuses to lie down. He will compromise on a sitting posture, but not another inch will he go. The other habit is that when Br'er Rabbit gets up he cannot resist the temptation to make tracks after him with all speed. Otherwise he is perfect. He is a fine ranger, a careful worker, as steady as a clock and a good retriever. Then we had an Irish setter, two years old, broken to everything except retrieving. His fault was that he was jealous of the other dogs, and insisted on getting as close to the birds as possible, occasionally flushing the game and always making us nervous. Our third animal was a handsome little English setter bitch of good breeding, only eighteen months old. She was so gun-shy that we did not consider it worth while to put her into the hands of a trainer. We simply took her along as a forlorn hope, and because two or three Pittsburgh nimrods of more pretensions than we had asked to be remembered in case we "were going to give her away."

We stopped first in Butler county. The village hotel proved a delight to the ladies, and we lost no time in getting the dogs out into the buckwheat fields with which we found ourselves surrounded.

We speedily made two discoveries. The first was that we were not in the same class with Elmer Shaner and "Jim Crow" of our town. We made too many misses, but we hoped for improvement. The other discovery was that farmers have to be cultivated. We found that they had partially organized against hunters of all kinds; and we were frequently ordered out with all the vehemence of a just cause. But as the farmers learned that we were gentlemen and law-abiding they grew kindlier and we had free range. The tales of wounded sheep, frightened cattle, ruined fences and frightful vandalism we heard from the farmers convinced us that they were right and that the great majority of hunters in our State are themselves responsible for the determined stand the farmers have taken. In a few more years, unless there be a reform, the game preserve will be all that is left to the respectable law-abiding sportsmen of Pennsylvania.

We spent a very enjoyable week in Butler county, and as our shooting improved our bags became, according to our modest standard, quite respectable. The English setter bitch spent the entire time at her owner's heels, save when a gun cracked, at which she dropped down and refused to move for some minutes. But we thought we detected some improvement, and concluded to keep her. The other dogs worked splendidly on quail, but not quite so successfully on pheasants. We bagged nine pheasants the first five days.

One day, as we were kicking around a bit of woodland for rabbits, we missed the old setter. He had last been seen leaping into an adjoining stubble field, which did not seem very promising. He had been gone for perhaps fifteen minutes when we concluded we had better look him up. He was nowhere to be seen, and we climbed over into the stubble. At last we saw something white ahead. On nearer approach we saw old Ranger quietly sitting down. As he caught the sound of approaching footsteps he got up and came to a stand. The same thought struck us both at once.

"Ranger got tired of waiting for us and sat down awhile," said Mr. K.

"Let's walk on past and see what he will do," I responded.

As the white gradually grew fainter we saw Ranger quietly squat down again. When we returned he resumed the stand, the Irish setter who had come up, backed him beautifully, and when we flushed the birds Ranger had the pleasure of retrieving three of the handsome brown beauties for us, while the little English setter bitch dropped down at our feet and trembled lest we shoot again.

---

Then came a telegram that the ducks were in. Our wives soon had our trunks packed, we bade farewell to the kindly hotel keeper at the village and his good wife, and sped away northward. It had been spitting snow for a day or two, and as we went northward the beautiful grew deeper. At the depot on the lake we hired a two-seated sleigh, and to the merry jingle of bells bounded away over the hills to a little cottage hotel that nestled in the mouth of a ravine at the water's edge. It was jolly Jim Reaney's place. We had been told about Jim Reaney. Mr. W. G. Sargeant, General Passenger Agent of the Shenango Railroad, all-round good fellow and the only man in the western part of the State who can tell on sight every variety of fur, fin and feather this section produces, had written us: "If you go to Lake Conneaut, hunt up Jim Reaney. He's a dead game sport and his wife can cook for Victoria's table." And we found the half had not been told. Jim made us all at home at once. He told yarns of duck hunting until we were wild. Then he would tell of quail hunting twenty years ago in Ohio, of turkey shooting, and of big fishing. Mrs. Reaney cooked our game as we had never eaten it before, and our stay as far as hospitality was concerned was most delightful.

As our sleigh rounded the last curve and the little cottage hotel came into view two young Pittsburgh nimrods came staggering out loaded down with ducks. They hailed us with the airs of Roman conquerors.

"Is all the fun over?" we asked.

"Oh, no; just begun," was the reply that set our blood going faster.

It was growing night and we abandoned ourselves to Mr. and Mrs. Reaney, who soon had us all comfortable, save one of the ladies who had an attack of sick headache. Of course we did not sleep much that night. The lake had been almost covered with ducks that day and the day before. The waterfowl make this the first stopping place on their journey southward from Lake Erie, and if the sportsman is lucky he drops in when a big fly is on and can hardly see the water, so thick are the ducks. And there are all kinds, from the fine mallards, canvasbacks and redheads down to the palatable little butterballs.

We were out of bed at 3 o'clock. Mrs. Reaney had had prepared for us a delicious breakfast of buckwheat cakes with trimmings, but we forgot the trimmings; and long before daylight Jim Reaney had one of his boats ready and we sat down impatiently to wait. We kept our ears open for the rustle of wings, but they didn't rustle. At last streaks of gray began to thread the sky and we piled into the boat with as much grace as three sets of undershirts, two vests, a hunting coat and a heavy mackintosh would permit. Our fingers trembled on the triggers as Jim pulled us out across the lake, but we went clean across without hearing the whistle of a wing. Jim began to be nervous. He didn't say much but he kept looking around into the fast receding darkness. Then he pulled into the bay, and as the day broke the blue waves reflected back the image of nary a duck.

"Gone, by gum."

That was enough. We knew we had missed it just forty-eight hours. But we went on and managed to find a few flocks of butterballs. They had been through the battle of the previous days, and as the boat approached got up beyond our reach. It was only by the most careful work that we are able to carry back enough ducks to escape the merciless taunts of the merry jokers we owned as our better halves.

"Well, there are rabbits here if there aren't ducks," said Jim, disconsolately, and we readily assenting, he rowed us across the lake, where with aid of the snow and a hound we soon had fourteen "bunnies." This programme—ducks first, rabbits next—was repeated several days with always the same result—few ducks and all the rabbits we could carry.

The snow began to go, and as no more ducks came in we concluded that the last fly of the season was over and turned our faces southward. We found a nice little hotel in one of the small towns of Mercer county, and turned our dogs out again. They found a good many quail, and, suddenly, to our amazement, the little English bitch took to pointing. And she was over being afraid of the gun. She developed rapidly, and when we started home she had many a fine feat to her credit. "What's bred in the bone will out in the flesh" sooner or later, and it came out in this splendid little animal all at once. The boast of her father's owner was that he had never flushed a bird. We claim the same now for the young setter we so often threatened to give away. She proved the most careful of the three and would hold a point indefinitely. One day we had downed a pheasant over the back of the Irish setter. It was in a low, swampy thicket and we could not find the bird. A stream perhaps 15ft. wide, swollen by the melting snow and ice, ran through it. We could not find the fallen pheasant and called the little dog to help. She did not come. Looking down the stream for the cause we saw her at a point, standing belly deep in the middle of the swiftly flowing stream. And when we came to her a fine pheasant rose, and it went on, too. Pheasants are easier than quail to us if they give us the same chance, but pheasant shooting in a spot like this is not the easiest thing in the world. At least that is our modest unprofessional verdict.

The working of the three dogs was a delight. They backed each other up splendidly, and during the last three days of our stay, the three dogs in a row, all pointing at the same bird, was a frequent sight. I need not tell your sportsmen readers of the thrill of pleasure such a feat brings.

We did not make any such strings as we see reported in the FOREST AND STREAM. If we brought in a dozen quail, a pheasant or two, and a few rabbits, we congratulated ourselves. Often we didn't do so well. But we had a splendid time, and there was more genuine pleasure in watching the dogs work and back each other up than there was in the actual shooting. Twenty-two quail and four rabbits was our best day's bag. That day we got up five flocks of quail and our two guns were banging away from 9 to 3, with an hour out for a good dinner at the home of a farmer we had "cultivated."

Wherever we stopped we found the farmers ready to meet us half way. If they found us gentlemanly the best they had was ours. In only two cases were we rebuffed. A farm of 400 acres, said to abound with game, belonged to three brothers and a sister. None ever married and now they are getting old. We went direct to their house and stated our case. It was no go. Nobody could shoot their pets. They fed the squirrels and birds all winter and did not propose to have them killed. So we passed on, refraining from drawing beads on two handsome gray squirrels that scampered away from us as we passed off the farm through a bit of woodland. The other case in which we failed to make any impression was that of an old farmer of crabbed disposition, on to whose farm we strayed by mistake. He caught us red-handed, and he wouldn't be persuaded. But he intimated if we had asked permission before shooting we could have had all the sport his land would afford.

The time for starting home came all too soon, and we will long remember two November weeks in western Pennsylvania. We have no remarkable tale to tell, but as said in the first line, we are plain professional men, too busy to attain the skill of which most of your contributors boast. The great majority of the lovers of the field, we believe, are situated about as we are, and if they shall be interested in our story our object in writing this shall have been attained.

And about that little English setter bitch. The lesson is one of patience. Many a time we were so exasperated that the poor beast got no consideration at all. Many a time we threatened to leave her out in the country as not worth her railroad fare home. Now she is in the hands of a trainer, and though we are not rich it would take lots of money to make us part with her.

The idea of taking ladies along on an outing is a novelty, I judge, from reading the FOREST AND STREAM. Let these ladies testify that it was a most pleasurable change and one they wish to repeat next season. And the social phase of such an outing is not the least consideration by any means.

### The Ways of Wild Rabbits.

HUNTINGTON, L. I., Dec. 8.—*Editor Forest and Stream:* From experience and observation of tame rabbits, I am led to believe that the male will seek to destroy young of his sex only, and this is rather a benefit than injury; I am also inclined to think that it is more likely that the female wild rabbit (with young) will hole more readily than the male. I have found that tame bunnies when liberated burrow, the young being brought forth under the soil, with but few exceptions. From the habits of tame rabbits I conclude that the burrows frequently resorted to by wild rabbits when chased are likely to be of their own digging than woodchuck holes.

CLARENCE B. WARD.

[We should not be disposed to attach much weight to deductions as to the habits of wild rabbits (hares) drawn from the ways of life of the tame rabbit. It is well understood that domestication greatly modifies the natural habits of animals and it is also known that the ancestors of the tame rabbit differ widely from the hares in their mode of life. The European rabbit (*Lepus cuniculus*) digs a burrow in which to bring forth its young; our gray rabbit never does so, but brings forth its young above ground in a "form" or little hollow, covering them from sight by leaves, moss and fur from her own body. The wild rabbit (*Lepus sylvaticus*) often takes refuge in a hole in the ground, or in a stone fence, but it is not thought that it ever digs such holes for its own use.

## PHEASANTS IN CONFINEMENT.—II.

### Breeding and Rearing.

HAVING properly mated your birds about the middle of March, you may expect, if the surroundings are right, to find that the eggs begin about the first or second week in April; and as I said before, it is necessary to collect them as soon as they are dropped. The next important question is the incubating, and for this it is necessary to have a stock of small sized hens. Silkies are very much recommended, but as they are rather scarce, I have had no experience with them. My best brooder has been a cross between the brown red game and the Pekin bantam. The next essential point about the sitter is that she is very quiet. I have lost more chickens through the wildness of the mother than from any other reason. Therefore I consider as a *sine qua non* that any one expecting to raise pheasants is to have a very quiet docile mother.

Pheasants' eggs take a longer time to incubate than chickens'. Gold and silvers take 23 days, and English, Mongolian and many of the other varieties take from 25 to 27 days. I advise placing the incubator in a box at least 6in. deep so that it is impossible for the little birds when they appear to get out of it and away from the mother. This is most important, for the young pheasant as soon as it is hatched wants to run and hide, and if the box is not such that it cannot get out, there will be a great loss, as the young birds will get away from the necessary heat and perish.

For 24 hours after coming from the shell they need no feed, but only heat and quiet. The best feed at first is thick custard, which is made as follows: Take an egg, beat it up well and add it to two tablespoonfuls of milk at boiling point, which if well stirred will make a dry, crumbling mass. This is the best food for three or four days. Then add gradually a little bread crumbs or some of Spratts game meal.

After the first week I have always found that the birds do better if they have a very moderate supply of maggots or gentles. These are obtained by hanging up a beef head where the blow fly may get at it. Put an old flour barrel with some bran in the bottom, as the maggots when matured drop into the bran and are thus cleaned, as the fresh maggot is not good for the young bird and produces diarrhœa; but if allowed to remain in the bran or meal for twenty-four hours they appear to be the best possible food for them. About this time, four or five days old, chopped lettuce seems to be most eagerly devoured by the small birds, and I think it most useful. About the third day I remove the hen with her lively brood into a small box, with a run inclosed with one-inch wire netting. My boxes are rainproof, about 15in. by 18in., with a run 3ft. by 15in. These I place on a smooth lawn, and there is no chance of them getting out into any harm, nor that cats or rats may destroy them.

For the first two weeks I feed every two or three hours, as I find that if I leave the food for them they do not readily pick it up, and it is quite ten days before they understand their mother's call for food. I have tried feeding three times a day, but the little birds did not do so well. I mix up sufficient food to do from early morning till noon, and then as much as does till night. I find the greatest mortality among them during the first week, so that it is quite worth the trouble to get them over that period. After two weeks they will pick up small grain, and I think canary seed and a very little hempseed is good; as they grow stronger wheat is my staple food.

On fine, warm, sunny days I allow them out of their runs so that they may have a chance to dust themselves, which they seem to enjoy very much, and as they get tamer every day it is very little trouble to inclose them again.

As soon as they get their wing feathers they begin to fly a little, especially if at all frightened, so that it is necessary to have them, in an inclosed lawn or garden.

When they are about four weeks old, I think it a good plan to pinion any birds that are to be kept in an aviary, as it prevents them flying up and injurying themselves, and also saves the trouble of catching to cut their wings, which has to be done every four or five weeks if not pinioned. Here I may direct that in catching pheasants of any age, always hold them by the body, not the legs, as one does an ordinary fowl, as if you catch and hold them by the legs you will surely injure them, as they seem to be very weak about their leg joints. I have permanently lamed several birds by not catching by the body. I use a net about 18 inches in diameter with a short handle to catch my birds, and I find it very useful, as by that means you get the bird in such a position that you can grasp it by the body.

The pinioning is a simple operation, arm a needle with a strong thread, stretch out the wings, run the needle through between the bones of the second joint close to the smaller bone, then tie the ends of the thread round the larger bone or to the upper side, then with a pair of scissors cut off the first joint of the wing or above the first joint. In that way the principal flight feathers are removed. There is very little bleeding, but this may be stopped by applying tinct. iron or iron alum to the cut surface. In four days remove the thread, and in a very short time it is all healed up. This does not prevent the bird being able to fly on the perch, but it cannot fly straight any distance. The deformity cannot be seen.

When the birds are about six weeks old they can take care of themselves, and are fed twice a day, just as any growing chicken.

Thus far I have just given my own experience of rearing pheasants. It may not be all that can be desired, but I think, if my directions are followed out, that any one with a love for birds will be fairly successful, and I will be very glad to give any further information in my power to those wishing to keep these pretty birds.

M. B.

### What is Bred in the Bone.

AS TO the fierceness of the bob-tail cat or bay lynx, noticed in the last issue of FOREST AND STREAM, a friend of mine in Newbern had one which was born in captivity and grew to full maturity. It never saw a forest and was accustomed to the daily sight of man from birth: yet it was always vicious and untamable. Its natural traits being in no wise modified or expunged by fonding and feeding. C. HALLOCK.

### Eagles and Porcupines.

NORTHWOOD, N. Y., Dec. 3.—Mr. E. Hough tells in the FOREST AND STREAM of Dec. 1 of an eagle that was shot near Chicago that had porcupine quills in various parts of its body, and also says he never heard the like before.

When my father returned from Wyoming a year ago last September he brought with him two eagle feathers he had found on a branch of the Snake River.

The eagle, which was badly decayed, had a number of porcupine quills in its head and claws. One of them had penetrated between the bones of the neck and one appeared to have pierced the brain though the head was not cut open.

A few feet from the bones of the eagle was the body of a porcupine. In its side was a large gash made by the beak of the bird. Perhaps the eagle mistook the porcupine for a rabbit or some equally harmless animal, but may have been like some fool hunting dogs that attack the armored porcupine time and again, notwithstanding the barbed quills which get into its mouth and paws at each onslaught.

Some of the woodsmen here eat the porcupine and call it equal to a young roast pig. RAYMOND S. SPEARS.

### Barred Owl in Niagara County, N. Y.

LOCKPORT, N. Y., Dec. 5.—*Editor Forest and Stream:* While out after rabbits on Thanksgiving Day, Mr. Arthur Leach secured a barred owl (*Syrnium nebulosum*), which was the first specimen of this species taken in Niagara county to my knowledge. I have collected here for the past fifteen years and have never secured it. The wing was broken at the elbow, and he kept it alive for nearly a week, thinking it might regain the use of it. Finding it would not do so, he kindly presented the bird to me. I very soon put it out of its misery by killing it with ether, and have sent it to the taxidermist to be mounted for my collection. I noticed that the eyes of this bird were brown, with dark blue pupil, the superciliary shield was also bluish. This is the first instance of a blue-eyed bird that has come under my observation. But there are many things yet for me to learn about birds.

J. L. DAVISON.

### The Mink as a Dodger.

INDIAN RIVER, Me.—It seems hardly safe for any one to make a positive statement in regard to the actions or cry of animals or birds. I notice, in your issue of Nov. 17, what Mr. "C. F." says about the mink's dodging. My experience has been different. I have shot several, and do not recollect ever knowing one to dodge, yet I do not consider that my experience proves anything against his conclusion. I can only say a mink can dodge as quick as any duck I ever saw. I know of but one animal which can equal a mink for dodging; that is a weasel. I never heard a panther scream, yet I can see no reason why they should not, if they want to exercise their vocal powers. I have heard and seen strange noises and sights while in the woods. The worst and most unearthly sound was made by an owl. C. J. RICHARDSON.

# Game Bag and Gun.

*"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.*

## THERE APPEARS TO BE GAME HERE.

VELASCO, Tex., Nov. 30.—To my brethren of the gentle craft, who complain of the lack of good sporting country, I extend a cordial invitation to come to Velasco. Besides having the only deep water harbor on the Texas coast Velasco boasts many other natural advantages which not only aid in building a city, but make it a pleasant place to live in for those who are at the building.

We have ducks and geese galore, and the graceful deer still range the forest a few miles from town. Besides the ducks, geese and deer we have prairie chickens, quail, jacksnipe, curlew, bear, wildcats, alligators and turkeys.

To reach Velasco from the North take the M., K. & T. Railway to Houston, Tex., and the Velasco Terminal to Velasco. When you get here stop at the hotel of the same name as the town, ask for "*Gast Meister*" Gueringer, explain to him that you came for sport. He will not only feed you with all manner of game and fish from our own preserves, but will take you out on a deer drive, a duck shoot or an oyster roast, as you please. He will wax eloquent over the glories of the chase, for mine host Gueringer is first of all a genial landlord and next a jolly sportsman. That is all he lives for, and the only reason he has never married is a fear that his wife would interfere with his proper exercise and enjoyment of the same.

There was a notable rout a few days ago in which some of the leading members of the Velasco Rod and Gun Club covered themselves with glory. The party was composed of J. M. Moore, president of the Velasco National Bank; M. P. Morrissey, manager Velasco Terminal; C. Chambers, of the Velasco Elevator; that genial knight of the scalpel, Dr. J. G. Boyd, late of The Dalles, Ore., and mine host Gueringer. The party were accompanied by the master of an English steamer loading in port with cotton, but he didn't count. The hunt lasted all day on the high rolling prairie near town, and the following is the bag: Chambers, 31 chickens, 6 quail, 4 ducks; Moore, 19 chickens, 14 quail, 7 ducks, Boyd, 7 chickens, 22 quail, 8 ducks; Morrissey, 17 chickens, 8 ducks; Gueringer, 4 chickens, 10 quail, 6 ducks.

The Englishman only killed a jack rabbit, but had more fun than any one else. He had traveled the world all over, and shot in every port, but he had never witnessed such shooting as could be had at Velasco, and the boys all agreed with him. From the moment the chickens commenced flying he began working his gun, and "turned it loose" in all directions and at the most unexpected moments, a dozen times endangering his companions' lives; but he was so ridiculously and supremely happy that they could not find it in their hearts to swear at him, but by keeping a wary eye on his actions managed to return skin whole.

They found the ducks on the lakes on the road home, and had their belts been supplied with heavier shot they could have had "a car load of the lovely burrids," as Morrisey put it.

There is a club organized for the protection of the fish and game. A few Sundays ago I witnessed a scene that would disgust and enrage any sportsman. Two pot-stuffers were exhibiting a couple of embryo fawns, about the size of rats, which they had cut from the dead doe after shooting her as she came to the river early in the morning. There are other parties who fish for the market with seines, taking the black bass from the lakes by the hundreds of pounds; it is proposed to make it warm for them.

Wild turkey are plentiful in Matagorda county, about 25 miles distant. This section of the State has been isolated, owing to lack of railroads, until the work of improving the harbor at the mouth of the Brazos River brought in the people, but it will be a long time ere the game is driven back into the canebrakes.

John Weems, the champion bear hunter of this country, had a lively adventure a short time ago out on the Bernard River. He wounded a half-grown cub ahead of the dogs, and as John was the biggest he concluded that he could lick it in a fair fight, and acting on that theory sailed in. The cub was not anxious for a fight, but like Bill Nye's *Boomerang*, when the fun commenced he was there. In about thirteen seconds John would have signed a warranty deed to his homestead for the pleasure of turning the cub loose, but he couldn't. The air was full of man, bear, dirt and profanity, and to add to John's discomfiture the "old she," which had been running about a hundred yards behind the cub, hove in sight and bore down on the combatants. Luckily, however, the dogs were close at hand, and the old lady only paused to give her offspring an encouraging growl, and lit out again.

When the dogs came up they separated the combatants, to John's relief, and the cub's disgust; and after some fine dodging the hunter got in a fatal shot.

It required a shirt, breeches and two yards of court plaster to fix John for the inspection of his wife, and he does not say much about that bear hunt when swapping stories with the boys.

A party from Illinois has been here some time hunting and looking up land investments. They are having very good sport. The weather is too warm for the duck shooting to be at its best, however. O'BRIAN.

## THE MASSACHUSETTS ASSOCIATION DINNER.

The annual dinner of the Massachusetts Fish and Game Protective Association was held at Young's Hotel, Boston, last Thursday. The night was stormy and disagreeable enough out-of-doors, but all was warmth and cheer in the brilliantly lighted banqueting hall, where had gathered a goodly number of members and guests. There was an all-pervading and irresistible atmosphere of good cheer and camp comradeship. The band played catchy airs, in which every one joined now and again with a boom-de-ay. The menu cards bore charmingly suggestive vignettes of woodland scenes, with deer and grouse and quail. The talk was of camp and field and stream, and of fortune good and ill with rod and gun. President George W. Wiggin presided with much grace and dignity. When the meeting broke up there were congratulations for the dinner committee on what all pronounced to have been one of the most enjoyable annual banquets in the history of the Association.

The guests present were: Hon. E. H. Lathrop and E. A. Brackett, of the Massachusetts Fish Commission; Col. Daniel Needham, president New England Agricultural Society; Hon. H. P. Cooney, ex-District Attorney of the Middlesex District; Rev. Charles Follen Lee, Robert Grant, chairman Boston Water Board; Nathaniel C. Nash, president Massachusetts Rifle Association; Dr. Heber Bishop, president Megantic Fish and Game Club; and Charles B. Reynolds, editor FOREST AND STREAM. The members present were: Messrs. Walter M. Brackett, Edward E. Hardy, Chairman Edward A. Samuels, of the Dinner Committee; Ivers W. Adams, John Fottler, Jr., Arthur F. Barney, Secretary Richard O. Harding, E. E. Small, Walter C. Prescott, Jacob W. Hoffman, Sidney Gleason, E. Baker, Frank Moseley, Charles H. Tilton, George I. Briggs, of Bourne; John G. Benedict, Charles F. Chamberlayne, Elihu G. Loomis, Henry B. Weston, E. C. Moseley, C. A. Hawes, W. G. Hanson, Wendell P. Stevens, Harry E. Haynes, Thomas Dickson, G. F. Frost, Wm. Frank Keith, Zenas Loring, George Loring, J. N. Roberts, Chas. E. Butterman, Chas. G. Gibson, Belville L. Randall, John Woodbury, H. R. Beal, Wm. K. Churchill, John F. Tyler, J. T. Stetson, Wm. B. Smart, Chas. A. Bramble, Judge J. S. G. Cobb, of Providrnce, R. I.; Dr. Robert M. Read, Thos. J. Holmes, Robert Woodman, Thomas W. Wardley, Chas. H. Frye, W. W. Lockwood, Waldron Bates, Robert Holden, Jr., F. T. Parks, Harry J. McGlenen, S. W. Card, Charles Vose, Dr. W. D. Bull, W. B. Hastings, James H. Lake, Dr. A. R. Brown, L. Dana Chapman, Dr. Heber Bishop, Dr. E. W. Branigan, Dr. H. M. Perkins, Dr. W. G. Kendall, T. H. Hall, H. P. Plimpton, Wm. H. Gray, H. F. Colburn, Robert S. Gray, A. H. Wright, E. A. Slack, W. A. Plummer, J. R. Glover, S. W. Rich, Lee Hammond, C. A. Bacheller, Geo. H. Perry, R. Luizee Hall, E. W. Randall, Rollin Jones, Geo. H. Allen of New York, Loring Crocker, Luther Little, W. I. Almy, George O. Sears, P. W. Scudder, Mark Hollingsworth, C. F. Monroe, M. A. Pocock, N. D. Hurd, Charles Stewart, I. C. Young, Kendall H. Damon, Wm. Abbott, G. W. M. Guild, F. D. Willard, Humphrey Dyer, Andrew J. Davis, Robert A. Murray, Walter C. Brooks, James F. Dwinnell, Samuel Shaw, L. W. Ross, Nat R. Jones, N. P. Jones, Benjamin C. Clark, W. Hapgood, J. C. F. Cox, Henry Bacon, John P. Woodbury and A. C. Gould, editor *Shooting and Fishing*.

Letters of regret, to Secretary Richard O. Harding, were read from President Harrison and President-elect Cleveland. Gov. Wm. E. Russell, having another engagement for the evening, wrote:

I beg to send in my place my earnest thanks for the courtesy of your Association, and my best wishes for its continued prosperity in the very useful work it has done.

Other expressions of regret at enforced absence and of interest in the Association came from Hon. Henry Cabot Lodge, Lieut.-Gov. M. H. Haile, Secretary of State W. M. Olin, Lieut. Gov.-elect Roger Wolcott, ex-Gov. John D. Long, Gen. Charles J. Paine, Hon. R. B. Roosevelt, Attorney-General A. E. Pillsbury, Alex. Taylor, Jr., of New York, vice-president Megantic Club; Stephe

O'Meara, editor Boston *Journal*, H. O. Stanley, of the Maine Fish Commission; John W. Titcomb, of Vermont Fish Commission, and W. Sidney Downe, of Connecticut Fish Commission. Fish Commissioner E. W. Gould, of Searsport, Me., wrote:

SEARSPORT, Me., Dec. 6.—*Richard O. Harding:* DEAR SIR—Your esteemed favor extending an invitation to attend the annual dinner of the Massachusetts Fish and Game Protective Association received. It is with profound regret that, owing to adverse circumstances, I am obliged to forego the pleasure of being present, and desire to express my sincere appreciation of the honor shown.

In this connection permit me to say that the Commission of Sea and Shore Fisheries of Maine is under great obligations for valuable assistance rendered by the different fish and game associations, which fact in itself demonstrates the general good that would be accomplished by a harmonious working of the different associations with the Fish and Game Commissioners of the several States. It is earnestly to be hoped that a unity of purpose may be established and a working formula promulgated that will ultimately bring about the desired result.

The people of New England are gradually becoming awakened to the fact that the money expended by the different commissions in the enforcement of the laws relating to the protection of fish and game is an investment for general public good; and that the sportsman eventually pays dearly for the game that he shoots and is a direct pecuniary benefit to the immediate vicinity he may select as the scene of his exploits.

This change in public sentiment is largely due to the dissemination of these facts through the medium of the fish and game associations. That they should be fostered by the States goes without saying.

These associations as a rule are formed ostensibly for the sporting element, while in reality the prime object is to enhance the general public prosperity, as is evidenced by the stand taken by the Old Colony Club on the so-called "Lapham Bill" and the valuable and effective assistance rendered the States by their secretary, Chas. F. Chamberlayne, Esq.

Again regretting my inability to be with you, and hoping you will continue to use education as the weapon with which to eradicate the remaining prejudice against the protection of fish and game as being done wholly in the interest of sport,

I remain very truly yours, C. A. GOULD.

After the menu had been discussed and Mr. Tom Hall had sung a macaronic song, President Wiggin gave this interesting

## REPORT OF THE YEAR'S WORK.

### The Past.

Our organization began its existence in 1874 under the name of the Massachusetts Anglers' Association.

MR. EDWARD E. HARDY,
Chairman Committee on Enforcement of the Game Laws.

It was incorporated, as set forth in its charter, "for the purpose of securing and enforcing proper restrictions upon the taking and killing of fish, shellfish and bivalves, the promotion of fishculture and the introduction of new species and varieties of fish, and to disseminate information relating thereto."

Three years later the name was changed to the Massachusetts Fish and Game Protective Association, and its purposes were enlarged so as to include the protection and propagation of game as well as of fish, shellfish and bivalves.

From its beginning the Association became actively engaged in carrying out the objects for which it had been chartered.

The records show that the attention of its members was early directed to such subjects as the preservation of fish in our inland lakes and streams, the decrease of fish in Massachusetts Bay, the destruction of lobsters on our coast, the preservation of trout in our streams, the seining of smelts in our bays.

That there was abundant need of action on the part of some one is shown by the following lines which I have copied from those records:

"But the most important phase of the subject relates to the future supply of fish. Last year (1874) we were nearly deprived of smelt; full-grown lobsters are now almost unknown; while trout and salmon have hardly yet, under the influence of stringent protective laws for several years, recovered from the effects of their almost total annihilation by being caught while in spawn before the laws were enforced."

From the beginning our records show an earnest, persistent and disinterested endeavor on the part of the Association to secure such laws as would tend to the preservation and increase of our useful food fishes for all the people of the Commonwealth.

Year after year committees from our Association have gone to the Legislature and asked for wholesome legislation for the preservation of our fish and game.

Year after year those committees have succeeded little by little until at last our laws are beginning to assume an effective condition.

These laws to-day are by no means what they should be, but they are infinitely better than they were when the work of this Association began.

But our efforts have not ended with securing better laws and attending to their enforcement.

Three years ago the Association decided to enlarge its sphere of action, and entered upon the work of introducing into the Commonwealth new species and varieties of game birds; and thus far we have imported and set free in various localities throughout the State 2,200 birds, and 87 Northern hares, and for that purpose have expended in round numbers $1,500.

The birds let loose have been of the following varieties: Pinnated grouse, 349; sharp tail grouse, 146; Southern quail, 1,020; Arizona quail, 658; Oregon quail, 26.

This work was started as an experiment, but reports

PRESIDENT GEORGE W. WIGGIN.

received from the localities where these birds were let loose indicate that it has been a decided success.

I am informed that, following our example, similar organizations to ours, in several of our sister States, have taken up and are carrying on a similar work to ours.

### The Present.

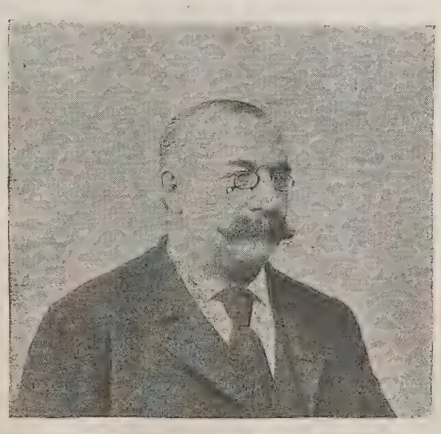
During the year just drawing to a close our Association has been blessed with a continuance of that prosperity which of late has marked our career.

At no period in our history has our organization been numerically stronger or more united than at the present time.

We began the year with a membership of 507, and we now carry upon our rolls 565 names.

Our financial prosperity has also kept pace with our numerical increase.

At the beginning of the year our available funds amounted to about $2,000. They now amount to over $3,000.



There seems to be no reasonable doubt that the effect of our stringent game laws has been to increase both the fish and game of our State, but the experience of our officers, gathered in the discharge of their duty, shows us very plainly that those laws still need amendments and additions.

The reappearance of deer in the western part of our State, the present season, has brought to our attention the fact that we have at present no law protecting deer in this State, except in Barnstable and Plymouth counties.

Attempts to enforce the law against the destruction of quail has revealed defects in that law also, while the snaring of partridge still goes on unabated, and that, too, legally, I am sorry to say.

These matters will need, and will undoubtedly receive, the attention of the Association during the coming year.

Our success in the introduction of new varieties of

EX-PRESIDENT EDWARD A. SAMUELS.

game birds into the State, brings forcibly to our minds the question whether the Association ought not to attempt something further in the matter of restocking our streams with trout and other useful food fishes.

In our efforts for the protection, preservation and propagation of fish and game, I feel that the field is broad enough for the employment of all our means and energies, without trenching upon the province of our State authorities.

They have their work to do, and we have ours, but all should labor for the accomplishment of the greatest good to all the people of the commonwealth.

One of the cardinal principles of our Association is the dissemination of information upon fish and game culture, and fish and game protection; and the degree of unfamiliarity with those subjects which we encounter whenever we attempt to secure some wholesome legislation, leads to the conclusion that we have still another broad field for useful work.

Ignorance and selfishness are two of the worst obstacles which we have to encounter in the prosecution of our labors.

If we can only succeed in convincing the people at large that we are laboring not for the gratification of our own selfish desires, but for the broader and higher purpose of benefitting the whole community, we shall make those people our allies in the enforcement of our laws, instead of enemies arrayed in hostile ranks against us at every step in our progress.

The putting out of birds upon the hills and in the valleys of our State by our Association, and the re-stocking of our rural streams with trout by our State authorities, has done, and is still doing, more to disarm that opposition which we have always had to encounter, than any other agency that has ever been set on foot.

The splash of the trout in our brooks, the whirr of the partridge upon our hillsides, and the whistle of Bob White in our meadows, are far more powerful and convincing arguments in our behalf than all the learned reports and essays which can be produced.

These are things which the farmer and the artisan can understand and appreciate.

Another powerful agency in our behalf is the local fish and game associations which are springing up all around us. I do not mean those associations whose members on a given day array themselves in opposing forces, and start out to see which side can outdo the other in the indiscriminate slaughter of birds and animals, a most barbarous and unhallowed sport, but those associations whose aims and purposes lie in the same direction as our own.

These organizations deserve, and ought to receive, our heartiest coöperation.

Put half a dozen of these local associations in every county throughout the State and interest them in our work, and we can bid defiance to all the hostile, selfish opposition that can be arrayed against us.

There is another class of men who ought to be with us, and in the future I believe will be with us. They are the market men.

They ought to understand, and I believe they are beginning to understand, that the indiscriminate destruction of

MR. HENRY J. THAYER,
Secretary Committee on Acclimatization.

our fish and game means, in the end, the destruction of a portion of their profits.

When once this fact comes to be fully realized by them, they, too, will be found on our side, instead of in the opposing ranks.

To gather up all these forces, to marshal them on the side of right, and to lead them on to victory is the work of this Association.

---

Col. Needham congratulated the Association upon its large membership, full treasury and growing influence and weight as one of the factors making for public good in the Commonwealth. The Colonel's story of a 6½-pound prairie chicken he had shot in Illinois years and years ago, prompted the Rev. Chas. Follen Lee to declare his unquestioning acceptance of fish stories and sportsmen's tales, though he occasionally did feel called upon to 'make allowances." "I am reminded," said Mr. Lee, "of the incident of the old man who was reading to his wife the Bible narrative of how Samson caught the three hundred foxes and fastened to their tails firebrands and set on fire the corn of the Philistines. 'Five hundred, does it say, father?' 'Yes, five hundred.' 'That's a powerful number,' said the old lady. 'Our Zeke is a pretty good fox-hunter, and foxes are pretty plenty about here; but I don't believe Zeke has killed 50 in all his born days. Don't appear as if it could have been five hundred.' 'Well, mother, it says he caught five hundred foxes, but I suspicion that if the truth were really known, more'n three-fifths on 'em was skunks and woodchucks!'

"I always accept a fish story," went on Mr. Lee, "but if some of you were to tax my credulity as to your score of trout or salmon, I should suspect that some of the fish might have been mud eels or suckers."

Hon. E. H. Lathrop, whose experience as a member of the Assembly has given him excellent opportunities of observation, made a strong plea for effort on the part of the association in the direction of educating the legislative committees who have to do with fish and game. Mr. Lathrop spoke truly, not only for Massachusetts, but for the entire Union, when he said that the efficiency of our game legislation is largely due to the ignorant and harmful—if well meaning—meddling of legislative ignoramuses. Mr. Robert Grant read an impromptu poem, and related that the Boston Water Commissioners had granted permits for bass fishing in Chestnut Hill Reservoir, and although the hours were 4 to 7 A. M., there were always more applicants than could be given permission. Other speakers were ex-District Attorney Cooney and Mr. Chas. B. Reynolds, of FOREST AND STREAM.

## SPANIELS AND PARTRIDGES.

Cookstown, Ontario.—While all reports coming from south of the line speak of exceedingly dry weather, and on that account of poor sport, from the scent not lying, we here in Ontario have the exact opposite, rain, rain, and nothing but rain. The covers are still, and have been all fall, from six inches to a foot under water, and in consequence no woodcock are to be found. I have not killed a single bird this fall. Such a thing as not accounting for several bags of woodcock each season has not happened to me before. Half a dozen times I put on rubber boots (a thing I never remember to have had occasion other falls to do, but have always hunted in leather shoes) and searched every covert for woodcock within a radius of ten miles only to draw them blank.

Despairing of getting any woodcock, and as the season was becoming late for these birds, I thought I would try the high land and hillsides east of here near the lake for partridge (ruffed grouse). So on Tuesday morning, Nov. 1, I drove over in that direction some six miles, and coming to a likely looking place for partridge I tied the horse in shelter of some cedars, covered her with a warm blanket and left her as comfortable as possible, knowing that if game proved plentiful it would be hours before I might return. Walking over to a small bush composed of cedars, with a few small beech scattered through it, and situated on a hillside with a spring creek running at its foot, I found an old man chopping cordwood. On inquiring of him if he knew where I would be likely to find any partridge, he gave me the agreeable information that when he came in a little after daylight he had flushed six birds, and that they were still in the little bush on the hillside, about 100yds. from where we were standing. Ordering the spaniels (of which I had a brace with me) into the bush I stood ready for a shot. I had not long to wait, for no sooner had the dogs entered the bush than with a roar out came a bird. He got away to the swamp, minus a handful of feathers. The next one that came my way did not fare so well, dropping to the left barrel at nearly 70yds. I was using a No. 12 J. P. Clabrough gun, a great gun for a long shot, but rather too close and hard-shooting for the bush and covert. I now heard a third bird go out on the other side of the bush, a fourth, and the last I saw or heard, lit down close to the road. I went over to where I saw the bird light and ordered the spaniels to find, but the bird was not there. The old bitch made several attempts to go to a cluster of cedars right on the road, and I had called her back, feeling sure the partridge was where I had seen it light. The bitch was right, for when my back was turned she had made for the cedars. The partridge came over my head, just giving me a snap shot. I was not sure whether I had killed or not until the dog brought the bird to me.

This made four of the six partridges seen by the old man; the other two that the dogs failed to find must have been in the trees. Calling the dogs to heel I followed the creek east to another small bush some half mile distant, on reaching which the dogs flushed a partridge from among a number of small beeches, in rather an open place. The bird flew into the thickest part of the bush, and must have gone into a tree, as the dogs failed to raise it again. I was about leaving this bush for another to the south, when the bitch started a hare. I saw the hare out of gun shot, pass just about where the partridge flushed, so went and stood where it had passed, expecting a shot on its return trip. I had not been there half a minute, when from over my head off a beech tree a partridge flew. I looked up into the tree and wondered to myself how a partridge could ever sit in so bare a tree and not be seen by me. As if in answer to my wondering, another flew off the same tree, within 10yds. of where I was standing. I may be wrong, but I cannot but think, the men that talk about not shooting a partridge on a tree, either live where these birds are plentiful and tame, or else are satisfied with very few. For my part, I bag a partridge any way I can, on tree, ground or wing, although I kill as many of these cunning birds on the wing as in any other position. I left this bush feeling rather disgusted with myself, and made for a large bush covering hundreds of acres lying to the south, intending to hunt as much of it as I could before dark.

Upon my reaching this bush rain began to fall, so finding a dry spot under some hemlocks I had lunch and fed the dogs. After eating and enjoying my lunch, as only a hunter can, I started off again, rain still continuing to fall. Walking about half a mile I flushed a brace of partridges myself from under a small scrub pine, where they had taken shelter from the rain, one flew south, and the other made for a thicket to the north. I made a nice clean shot at the one going north. When ready for the other the bird was nowhere to be seen. The bitch, after hunting about for some time, took up a scent close to a snake fence among some cedars and spruce, and followed it a couple of hundred yards, when she flushed a partridge, which lit into a small spruce tree; the bitch made the bush ring with her barking at the bird. I walked over to where she was, and saw the partridge sitting on a limb about fifteen feet from the ground, and some twenty-five yards from where I was standing. I fired and the bird fell apparently stone dead (there was no underbrush here, a dead withered spruce lay at the foot of the tree). I went over to where the bird had fallen immediately to pick it up (my dogs are rather hard in the mouth), but there was no bird. The limb of the tree where the partridge had stood was nearly cut in two, with some of the feathers of the bird remaining on it. Quite a track of feathers marked where the bird had fallen through the dead spruce. A handful of feathers also showed where the partridge had struck the ground. I called the dogs, and to my astonishment they did not act or make the slightest demonstration as if a bird had been there. Had the bird been only wounded, and run away, the dogs would have trailed it, without doubt, I am certain the bird had not a spark of life in it when it fell from the tree, but what became of that partridge will always remain a mystery to me. It is the strangest thing that has ever happened to me in my long experience of hunting and shooting. I may add that I am a strict temperance man, and drank nothing stronger than spring water with my lunch.

The afternoon was advanced, the time being near 3 o'clock, so I turned my steps toward where I had left the horse and buggy. On my way out of this bush the dogs flushed three more partridge. The first bird went into a large hemlock, but flew before I got in range. The second one rose off a dead log; he got away without the loss of a feather. The third bird got out of some berry bushes; I winged him. Both the spaniels fought to see which would bring the game to their master. As I was getting over a brush fence at the edge of the bush, I started a hare. I shot at him, wounding him in the hindquarters. He made for the swamp across a twenty-acre field, the dogs following. After an exciting chase they captured him about the middle of the field. I must say, in watching the race I was with the hare, as the odds were all on the dogs, poor bunny being wounded.

When I got to where I had left the mare it was just getting dark. Putting her to, I started for home, leaving the dogs to follow; it seems hard on them after a day's work, but I never find that they are any the worse for it the next day. I always see that they are fed and have a nice warm, dry bed upon our return. I see to this myself.

I made a second trip to the same place on Monday, the 7th, getting there at 1 o'clock P. M. At the first bush on the hillside the dogs did not succeed in getting up anything. In the second bush I bagged a partridge that the dogs put into a tree. Instead of proceeding south, as before, I went north across the town line into the next township. I here hunted out a bush of some ten acres, getting three partridge, all on trees over the bitch, two of which I killed with one shot. The dogs flushed four more birds, but I did not succeed in getting a shot at any of them. Crossing a field, I was hailed by a young man ploughing to know if I had any squirrels, as he informed me that he had a few days previous trapped a gray eagle that measured seven feet across its wings, and that the bird was very fond of red squirrels. Soon after the dogs put a fine fat coon up into a beech tree. I shot him in the head. Upon his striking the ground the spaniels were on to him like two bulldogs. I thought if Mr. Coon was not next thing to dead, those little dogs would have got a surprise that they would have remembered for some time. I slung the coon over my shoulder and started for the buggy. I had not gone very far before I discovered that the animal was invested with smaller ones, so had to carry him the rest of the way by his legs. When I started with the coon he weighed about twenty pounds, when I got to my destination he weighed fifty pounds; I thought he did anyway.

I have not been out with the spaniels since, as we have had a heavy fall of snow and all appearance of an early winter. I intend the first day I can get away to give the beagles a run. I have not had the little fellows out this season. Their turn generally comes with the snow.

H. B. N.

## CHICAGO AND THE WEST.

*[By a Staff Correspondent.]*

### Indiana Quail.

Argos, Ind., Dec. 4.—Among the shooters present at the late little impromptu trap tournament at Chicago was Mr. G. W. La Rue, of New York, and in the course of a little talk he allowed he would rather shoot quail than pigeons. Mr. R. B. Organ, of this city, allowed he felt a good deal that way just then himself, and the result was a party was made up, consisting of these two gentlemen and myself, for the purpose of a flying trip down into Indiana after quail at the close of the week.

"I will telegraph over to Stony Point, in Ontario, to Tommy Davey and have him express Dame Bang over," said Mr. La Rue.

"He'll be apt to send her," said I, knowing well the value Mr. Davey put on this great young bitch, which within the 30 days last past had won first in the all-aged stakes of the International trials at Chatham, Ont., and also won second in the puppy stakes at the same trials.

"I think he'll send her if I ask him," said Mr. La Rue.

"Why?" said I.

"Why, I own her."

This was news to me, but nevertheless true. Mr. La Rue really bought her before the trials, and naturally does not now think the less of his purchase. Though he had never shot over Dame Bang but one day, he expressed himself as altogether satisfied with her and desirous of having more of the same sort of sport. Changing his plans, therefore, from a hunt in Canada to one in Indiana, he wired for the dog, and in due time, after the incidental transfer of $9 of his funds to the express company, she was handed over to him at Chicago, safe and sound, with the exception of a very bad toe which made her carry one foot up. In making some mention of the International Trials, I expressed the hope that Mr. Davey would feed Dame Bang one square meal. This he has failed to do, and the little one arrived looking like a hoop-skirt, with every bone in her frame showing, and with a mournful look on her wrinkled and preternaturally old-looking face. Dame Bang is old beyond her years, or rather her months. Only 20 months old, she looks 7 years, and acts it—the oldest-fashioned one-season probably ever was.

Mr. Organ borrowed a dog. He borrowed it of a shooting friend who seemed glad to have him borrow it. Perhaps the dog's owner thought Mr. Organ would train the dog some, and so be of use to the dog. At any rate, Mr. Organ had accumulated this dog when we came to get on the train—a white, black and tan bitch of small frame but good collection of fat, and a cheerful, benign expression of countenance. This dog's name, he so informed us, was Mollie O'Brien; a rather Irish name for an English setter, but it had to go. Personally I wish that Mr. Organ had not borrowed any dog at all, or, if any, one with a more phlegmatic disposition. It transpired, when we got into the village hotel late at night, that Mr. Organ and I and Mollie O'Brien all had to sleep in the same room. Mollie was used to sleeping on the sofa, and did not take kindly to the floor. Mr. Organ is troubled with insomnia, and only sleeps once in a while, so it didn't make any difference to him. I sleep whenever I get a chance, and, not having had very many chances lately, I was enjoying this one in advance. Every time I shut my eyes I would hear Roll Organ talking to Mollie.

"Lie down, you owl-eyed daughter of misery!" he would say, "lie down, blame you! Your father was a shepherd, for a hundred, but it's too late to help that now, and here you are, you wedge-faced sheep driver—keep that tail still, I say! You'll wake up the folks in the next room." (Groans from the next room, and expostulations from myself. Temporary silence, to be broken a moment later by much the same formula). "Keep still there, you Robert Burns collie, confound you, or I'll come after you and knock the everlasting oatmeal porridge out of your inmost thoughts! Keep that tail still, can't you? Dash bing a dog that'll wag its tail all night and keep folks awake! Lie down you son of a gun!" And so forth and so forth. On the whole, I can not say I am fond of sleeping in a room with a man and dog who are both troubled with insomnia, for I believe it is catching. However, as we didn't get in town till 1 o'clock in the morning and didn't get to bed till some time later, we hadn't so long to wait till breakfast time.

In the morning we made a latish start, the weather being very foggy. No one could tell us anything about the quail supply. The average opinion was to the effect that there were not many birds but plenty of posted land. We were encouraged to learn, however, that no one had been out lately after quail, and that there was not a broken quail dog in the town. This being the case, we thought we would be our own judges and our own guides, and so struck off east over country we had never seen before. Soon we came to a lake, which we discovered to be called Mud Lake, and out of this ran an outlet lined with a wide swamp which fringed out in thickets and brier patches in the edges of the corn and wheat stubbles. This impressed us as being about what we wanted, and on a couple of miles of this we made our dogs hunt.

On the first stubble we struck we walked up a fine little bevy at which Mr. La Rue and Mr. Organ both fired at long range. We marked them down and going on over, Dame Bang pointed at a fence, and much to her owner's surprise, materialized a dead bird. This bird had been hit without showing any signs of it, and had flown 300yds. Passing into the thickets, Dame soon worked out another point, and the birds going out near me, I got down a couple. Mr. La Rue, to my left, also got one with each barrel, and a moment later knocked down a third. On these birds Dame did very handsome work at finding dead birds. Mollie found one of my birds, doubtless the first quail she had ever seen, as she was broken and has been worked altogether on chickens. Our birds now jumped up in the thicket, and after some hard work here we emerged with only five birds, losing a wide cripple and missing one bird which Dame pointed handsomely. It was now easily apparent that while Mollie was too new at quail work to be of great value, Dame was as steady as a clock and not to be rattled at all.

We now went up on a high stubble, and drawing one field blank we entered another, a wide one, and one just fit for quail. Mr. La Rue cast Dame off to the edge next the wood, and in a few moments we saw his upraised hand, and coming up saw Dame on a staunch point. We got right among this bevy, and as they went up scattered we got a lot of fun out of them, including a number of handsome points to Dame Bang's credit. I had no idea a one-season puppy could be so wise, so methodical and so knowing of the ways of birds. Out of this bevy we cleaned up eight birds, Mr. La Rue doing some very nice work with a cylinder Greener, 28in. barrels. Mr. Organ was shooting a close-choked Parker and had to wait till the birds got off 30yds. or so before he dared shoot, though he killed two or three birds at astonishingly long distances. More clearly than ever before I could see the mistake of using too closely-choked a gun for field work. My own gun is rather open, but if I were to purchase another for quail shooting, or other cover work, it should have no choke at all, or, the very least, in either barrel. The dealer who descants on the elegant pattern of his gun and points out the number of shot it will put in a given circle often utters words of condemnation for the arm, so far as this particular sort of shooting is concerned.

After lunch we left Mollie at the wagon, as she was too fast to stand the work, and trusted our fate to Dame Bang. That plucky creature was cut by the briers, her tail whipped raw, her hurt toe so swollen that the nail was out of line. Moreover, she had in the morning met the singular accident of sticking a stiff stalk of coarse grass into her nostril. When we found out what caused her sneezing, we removed the stiff stem. It was thrust three inches deep into the nostril, and two inches of it was covered with clotted blood. Yet in this condition, with the straw still in her nostril, she found and pointed a bird I had killed, and even after the wound had had time to become sore and certainly acutely painful, she continued to hunt at a slashing gait, and never flushed a bird, but pointed a great deal better with three legs and only half a nose than most dogs do with a full equipment. "I don't know what we couldn't do if we had a whole dog along," said Roll Organ. No one could help admiring the courage of the gritty creature, or loving her for the quality of her work.

We got ordered off from a nice lot of stubble, where we were just about to find about 500 quail, and after that we had a long walk for nothing, and a wet one, too, for it began to rain. Then we struck a brier patch that showed a lot of signs of roosts, and knew the birds were using on a stubble near by. It was easy enough for Dame to make a cast around over the top of the hill—and there she was, stiff as a poker! We walked up and admired her for some moments before we put up the birds. A Kodak picture of her peculiar strained, intense, stretched-out point, would have been a beautiful thing to have. Not having the Kodak, we stood and took the picture mentally. When we put up the birds, Mr. LaRue and I fired together, and it seemed to me we had killed the whole flock, for I never saw so many feathers come out. We only found two birds, though, and Mr. Organ's long two-barrel shot netted a third. Then we followed the birds into the swamp, and there it was point after point, the bitch grabbing off singles as easy as husking corn. Mr. Organ made another 45yds. kill, and Mr. LaRue got one alone and assisted me on another, of whose immediate dissolution there existed no doubt. Then Mr. Organ and I both shot into the same bird as it topped the thicket, and a moment later Mr. La Rue and I nearly destroyed one which flew high directly over my head. After our hot corner we counted up and found we had eight quail more. Mr. Organ insisted that we must have just an even two dozen, as he wanted to send a dozen each to some railroad officials of the Nickel Plate road—of which corporation, by the way, Mr. Organ is general live stock agent at Chicago, a fact which helped us in locating our grounds and in getting accommodations on the trip.

It was now nearly dark, and a nasty rain was falling, but we took pity on the two railroad dignitaries who needed a dozen each, and tackled another stubble field. Of course, Dame got on the trail of a bevy before we had

gone far, and soon she nailed them. We each fired one barrel, and each killed a quail, and then, going on over the brow of the hill, Dame pointed dead, and we found a cripple which had gone down, hit by no one knew whom.

### In the Swamp Again.

Again we had to go into the wet and boggy swamp after the marked birds. Dame found them on the leaves, and they went off wild, Mr. La Rue and Mr. Organ failing to stop any as they rocketed over their way. Then in a boggy grass patch the bitch pointed again, and Mr. La Rue dropped the bird in great style. As I went toward him, I nearly stepped on a bird in the thicket, and took a snap at it as it sprang. Mr. La Rue did the same thing, and the result was that we disfigured the bird very badly. This was the last shot of the day, and we now had twenty-eight birds. They were all full-grown, strong birds, and handsome as only Bob White can grow to be.

As we went toward our wagon, we met two farmers, who ordered us off the land. As usual, we treated them politely, and agreed at once with a request which struck us as being now a little late in the day, though none the less stereotyped, and indeed, none the less distasteful. We intend shooting a little bit further in this locality, should there not prove to be too much posted land—a contingency which seems not in the least unlikely.

It may be that this portion of Indiana has not so good a quail crop this year as was earlier in the year thought to be the case, but it seems almost certain that there is abundance to afford good shooting at almost any place in a circle of a dozen miles or so radius about this point. Rochester is only 12 miles from here, and there is good shooting near there. Over Warsaw way, 28 miles from Argos, there are a good many birds, but also a good many farmers. Around Winamac, 30 miles distant, the birds have already been mentioned as plentiful, and that is good quail country. Tippecanoe, Knox, Ora, and any of a dozen other small country places in this part of the State will afford a fair shooting for what little is left of the season. Lake Maxinkuckee, the great Indiana summer resort, is only 9 miles from Argos. Make that the center, say, of the quail belt, and go over a circle of 25 or 30 miles, and one certainly would meet Bob White in royal form and democratic numbers. At Sidney, 32 miles east of here on the Nickel Plate, I am told the birds are unusually abundant, and the farmers unusually lenient. You have to take your chances, both as to the birds and the farmers, but it seems sure that the two above factors exist in ratio good enough to afford sport of a highly satisfactory nature. Of course, the usual trouble exists that we cannot stay long enough to find out a great deal of the country.

Along Mud Creek, the outlet of the Mud Lake, we discovered to-day, there runs a black loam swamp, covered with bogs, alders and thickets, which seems to me to be the finest looking woodcock country I ever saw. I can not learn much of any local shooters, but the landlord of our hotel tells us that in the summer time he has killed "a good many" woodcock there. There is quite a body of this swamp land, and I should think it a very good point to keep in mind for woodcock next season.

---

CHICAGO, Ill., Dec. 5.—Our little quail hunt at Argos, which bid so fair to be a pleasant and successful affair, came to an untimely and unfortunate end. Dame Bang, Mr. La Rue's gritty young pointer, sprung a limp in a forefoot in the morning of our second day, and as this left her but two feet to go on, we had not the heart to ask more of her. During the morning we found only one bevy, out of which we got nine birds. In all we found five bevies on the trip and bagged thirty-seven birds. As we lost a few birds knocked down, of course, it may be seen that the work of the dog on the scattered singles was of high order. It was indeed a pleasure to shoot under such circumstances, for the sport was not a scramble for a shot, but an illustrated edition of quail shooting as it can be, the pictures by Dame Bang. On the bevy of the last morning the dog pointed in a long-drawn, telescopic attitude which made us all long for a camera. We marked the bird down in a swamp, and as we entered this cover Dame sprang up on a log to cross it. Instantly, as she stood with all four feet gathered together in the act of springing down, she whirled her head and pointed straight down under her feet, almost having to balance herself to keep from falling forward. I do not recall ever having seen a more singular or more brilliant point. Needless to say, the birds were there, under the log.

It was disheartening to have to stop in the middle of such fun, though no one could have wished to see the game little one go on under such punishment. But this was not all. We had left Mollie O'Brien, Mr. Organ's borrowed dog, tied up in a comfortable stall in the livery stable in town. When we got in we found that Mollie O'Brien, whatever may have been her faults, was exempt from all further criticism, by virtue of the old saying, *de mortuis*, etc. In short, Mollie was dead! We thought she might have strangled herself in her collar, but soon found that was not the case. Then we concluded she had been poisoned, but could see no indications of that, and were told that no one had been in that part of the stable since we left. The body was still limp, and we did not think the dog had been dead more than half an hour. Mollie was of very corpulent habit of body, and had been eating very heavily. She may very likely have died of apoplexy, induced by the excitement of wishing to join the hunt. Or her heart may have broken at being left behind. The plainest theory is that of poison, and it may be very well to warn any other shooters going to Argos to be very careful of their dogs. The natives there are none too friendly to city shooters. Mollie may have been the innocent victim of an unreasoning and unreasonable spite. At any rate, she was dead, and we could find no trace of the cause of her death. This of course brought all thought of further shooting to an end. It was rather an unpleasant duty that devolved upon Mr. Organ, that of telling Mr. O'Brien that his dog was not coming back home any more. Mr. Organ showed some sense of this when he sadly remarked, as he looked upon poor Mollie's body: "I'm afraid your father was a shepherd, Mollie, but it's too late to help that now, and I'm sure I'm not going to lay it up against you now you're gone."

CHICAGO, Ill., Dec. 10.—Mr. W. C. Jacus, long known in Buffalo, N. Y., as a prominent shooter, is in this city, guest of his friend, Col. Chas. E. Felton. These two are just back from a very pleasant and successful quail shoot at Little Rock, Ark., and can not speak too highly of that spot for a shooting trip. They ran out on the railway trains 8 or 10 miles into the country each day, and bagged two or three dozen to the gun daily without any special exertion. They speak also in terms of the greatest enthusiasm of the Richelieu Hotel, of Little Rock, and its proprietor, Mr. Jos. W. Irwin, who made them so thoroughly comfortable during their stay. A large Philadelphia shooting party was in during their stay, also a party en route for Texas. Deer are described as abundant within 25 to 40 miles of Little Rock, and quails in any numbers.

Eagle River Club, of Chicago, sent up a party of nearly twenty deer hunters in all this fall to its large preserves in Wisconsin. They sent out seventeen deer in one lot, and this does not represent the season's total.

At Pembine, Wis., this fall, the hotel took fire. Mr. Ackerman, of Lima, O., and a friend lost about all they had, including seven dead deer, the rifle of one of them, and a dog.

Mr. Walter Wilmot, late of base ball fame, now of Minneapolis, was in town this week. He says that in a deer hunt he and some friends had this fall in Minnesota, they killed an adult and full developed deer, a doe which weighed dressed only 31lbs. This freak is now in the taxidermist's hands.

Mr. W. H. Parker, of Grand Piles, Quebec, Canada, spent some time in Chicago this week, visiting with his friend, Mr. A. L. Rose, one of Chicago's '49-ers. Mr. Parker has long been interested in the formation of sporting clubs in Canada, was the promoter of the Laurentian and Shawinagan clubs, and is now forming the St. Maurice Club, with almost boundless preserves and endless trout privileges.

### The Calumet Heights Club.

Calumet Heights Club held business session on the evening of Dec. 7: present, Messrs. E. T. Ellicott, A. W. Carlisle, W. E. Wilde, J. Gillespie, K. Marks, E. W. Carson, W. Isbell, G. C. Lanphere, J. P. Fisher, R. W. Fleming, J. E. Hinkins, C. S. Case, S. Booth, C. A. W. Platt, Dr. J. G. Reid, Dr. F. A. Hodson, Dr. L. L. Davis, Dr. A. W. Harlan. Dr. Harlan was in the chair, Dr. Davis, secretary. The following new members were elected: Messrs. L. B. Wilson, H. D. Dale, G. W. Selby and J. D. Bisbee. Resolutions of respect were passed in memory of Mr. Geo. Suffern, a member lately deceased. It was decided to hold monthly pigeon shoots from next April to September, and to choose on the records a team for competitions with other club teams. The members were cordially urged to be present at the social quilting bee at Dr. Harlan's residence on the evening of Dec. 15, held by the ladies for the purpose of of raising club funds. Calumet Heights Club is now in better shape than it ever has been. Its tenure on its grounds is thought safe for fifteen years to come, and the present keeper is doing well. During the past year it has spent over $1,000 on the grounds. There are about 75 quail now on or near the club grounds, and more will be put down. Some of the members have been shooting these quail, one member killing nine in one day. This should be stopped with a round turn, until the birds have established themselves. Those now found are thought to be strays from the lots put down by Tolleston Club.

### The Chicago Fly-Casting Club.

The Chicago Fly-Casting Club held a business meeting on the evening of Dec. 9. This club also is in flourishing condition, and that it should keep up interest during the winter months shows that it is of the right timber.

### The Possum Club.

The Possum Club met at Werner's, 93 Thirty-fifth street, Tuesday evening, Dec. 6, present, Messrs. W. S. Haynes, F. A. Place, W. P. Mussey, Geo. Mailett, C. Hetherington, L. M. Hamline, C. B. Dicks, W. N. Low, R. A. Turtle and O. F. Malcolm. Adjourned late for a date after Christmas. Many weighty matters were discussed, spring shooting among others. There were not absent those who supported the old chestnut that to kill one old duck and eight young ducks left just as many ducks as though no duck had been killed; and who also stuck in the mud of the old proposition that if all the States in the Union couldn't set a day and hour for beginning at the same time to be good and rational in shooting matters, it was of no use for any one State, say Illinois, to be good and rational. Mr. Werner was strongly and openly opposed to spring shooting.

175 MONROE STREET, Chicago. E. HOUGH.

---

### NEW YORK ASSOCIATION.

THE New York State Association for the Protection of Fish and Game is now thoroughly organized with a membership of clubs in all parts of the State.

We are in perfect accord with the State Fish Commission and the Game Protectors, and the future gives promise of great usefulness.

The present game laws are a great improvement on those of the past, and are in the main satisfactory, though there are some slight imperfections which it is hoped soon to remedy.

The ordinary expenses of the Association will be kept at a low figure, in order that the assessments on the various clubs may be so small as to induce a large, harmonious and zealous membership.

It is a fact, however, that if this Association is to fill with credit the available sphere of its usefulness, funds will be needed in order that legislation may be legitimately watched, to the end that bad enactments may be prevented and desirable laws promoted and encouraged. It has been the experience of those engaged in the work, that bad laws usually come from a lack of information on the part of law-makers, rather than from ulterior motives and perverse disposition. It is a legitimate and worthy object of this Association to spread abroad the enlightenment, and create a public sentiment which shall result in real Game, Fish and Forest Protection, thus bringing to the people of the whole State tangible, palpable benefit.

A special fund for this purpose has been instituted, and your subscription is respectfully solicited. Contributions may be sent to any member of the Ways and Means Committee and they will be duly acknowledged in the columns of the FOREST AND STREAM.

May we not confidently rely upon your cordial co-operation in the work?

C. B. REYNOLDS, President. GEN. D. H. BRUCE, Syracuse.
W. S. KIMBALL, Vice-President. F. J. AMSDEN, Rochester.
J. B. SAGE, Secretary-Treasurer W. H. THOMPSON, Alexandria Bay
W. S. GAVITT, Lyons.
Ways and Means Committee.

## AUTUMN DAYS WITH THE WOODCOCK

WORCESTER, Mass., Nov. 30.—Did it ever occur to you that it was a very long time to look forward, from now to the middle of next October? The fact has been forcibly impressed upon my mind during the past few weeks, since I got back to my desk again, after an altogether too short session with the birds. In looking over some old numbers of FOREST AND STREAM, and thinking over the incidents of my last vacation (which will have to console me for the next 11 months) I could not help but notice, what I have frequently noted before, how the opinions of different lovers of the fields and woods were often opposed to each other. Take the old grind of the woodcock's whistle. Of course I have my opinion as to how it is produced, and no doubt the advocates of the opposite theory have equally as strong reasons for their belief, and there is little probability that either of us could convince the other against what seems to both "proof positive." Then there was the question as to whether partridges roosted on the ground, or on trees. Those who declare that they roost on the ground may have seen them making use of the ground for such a purpose, and if so what effect can we expect to have upon them with the argument that we have as surely seen them roosting in trees, or at least have started them for their roosts in trees, as could be clearly proven by the droppings directly under the limb from which they started. And who shall say that they are not as close observers, as good sportsmen as we, even though our views seem to us correct beyond contradiction. Just a few weeks ago I read a very interesting article in this paper on the wind, and that is what brings me to my last vacation. The writer of that article no doubt finds the woodcock moving on a south wind, if he did'nt he would not look for them at such times. But to us it looks ridiculous. Why? Because we do not find them coming to us on a south wind, but on the contrary on a cold norther. Our observation and experience teach us that the woodcock come to us as early in the spring as they can get here, and stay just as late in the fall as the frosts will let them. Of course natives are moving about all the fall, but the flight has to be driven down from the north by cold weather, at least that is the way we figure it.

Columbus day was the date of the "Nessmuks'" annual "Big Hunt" this year. Daylight found us behind the bobtails, putting Worcester behind us as fast as they cared to travel. There is no earthly use in attempting to describe that morning, for probably every shooter in the country was out just as early as we were, and enjoyed it as thoroughly. Still I can't help remarking that it was a "powerful" fine hunting morning. It was high sun up when we reached the grounds, and not much later when we were "at 'em." We found a fair number of birds and had a good forenoon's sport. About 11 o'clock every one was hungry and the "Indian" was started for a farm house for a pail of milk, while the rest of us "took the horses' heads off" and fed them, started a fire and soon had the old coffee pot humming. There is something about an oyster stew on a cool day that is most acceptable, at least we found it that way, and after a liberal bowl of this, together with several sandwiches and a cup of coffee it would seem that the most voracious appetite might be satisfied, but not so, for the "Old Man" no sooner finished his second cup than he began dressing a woodcock. The rest followed suit, and the results of the morning's hunt were soon broiling over the coals.

After this no one was in a mood to continue the hunt, so we picked up and started across country to see "Charlie Puss," and from there drove home. It wasn't much of a hunt as hunts go, but the "Nessmuks" don't get an annual very often, and the day's pleasure is not measured by the heft of the hunting coats at night.

A stretch of fine weather followed, and we had good shooting, getting from 5 to 10 birds a day (two men), but toward the latter part of the following week there came a spell of weather. One night at the gathering at 'Lisha's it was remarked that if there were not any woodcock the next day there never would be any. The night was a ripper, according to our theory, a cold north wind blowing, with strong suggestions of winter. The next morning as I went through Lincoln Square the depot platform was pretty frosty, as I noticed with much satisfaction. Oliver and Ned were out on the front steps waiting, just as if a cold norther had put ideas of long-bills into their heads, too. We hunted the same ground as on the first day, and—well, we got as many as 5 or 10 that day. Yes, I remember of man's getting more than that straight, and he did not have them all either.

Don't talk to me about your Italian sunsets; give me a day with such dog flesh as we had that day, and with the woodcock away out in the thin birches and scattered scrub pines, not a breath of wind, the sun bright as it is only in October, and that is as near the height of physical enjoyment as I ever expect to get. Then come back to work and know that it must be nearly a long year before you can take the pup out again, it's "dead wrong, dead wrong." As I look ahead to that next outing so far off, there come before the eye pictures of ranging dogs, points and backs, birds bursting from the cover, some to be neatly stopped in mid air, others to keep right on until out of reach, the fire by the spring and the whole two weeks come back to me with a delightful reality, and I am satisfied that I have had my share of the fun this season. "It's an ill wind," etc. HAL.

---

### Vermont Quail.

RUTLAND, Vt., Dec. 12.—On Dec. 9 a woodchopper near the village of Bristol discovered a lot of birds, and as he thought, about 100 in the flock. He reported this at the village, and the next day he saw the same birds again to the number of fifty. He succeeded in capturing one of them which had lost a leg and was about half starved. They turned out to be the regular Western quail. It is not known where these birds came from, and there are two theories in regard to them. Some two years ago the Rutland Fish and Game Club put out quite a lot of quail which they had received from the West, but have never heard from them since they were distributed. Possibly they have endured the mild winters of the last two years and these are a part of them. Another theory is, that they may have come from Shelburne Farms from a distribution made by Dr. Webb, although it is not positively known that the Doctor has distributed any at that point.

JOHN W. TITCOMB.

## "A STANDING MENACE."

### Cooke City vs. the National Park.

WASHINGTON, D. C., Nov. 28, 1892.

*Editor Forest and Stream:*

I have read with interest the statement regarding railroads in the Yellowstone Park. The views there expressed meet with my concurrence, and I am pleased to see such a thorough exposition of the subject. I have always believed that if Congress gave to one railroad company the permission admitting it within the Park, the step would entail the granting of similar privileges to other corporations and thus amount practically to the abandonment of the original act, by which the Park was dedicated for the benefit of the whole people and set apart to be free from private appropriation. This opinion is shared by all those who have had official relations with the reservation, and by every one who has investigated the subject from a disinterested standpoint.

It seems to me that when Congress fully understands the nature of the case, they will realize the importance of preserving the Park free from corporate intrusion, and I think the paper you publish especially valuable as showing there is no necessity for making a sacrifice.

Yours truly, W. HALLETT PHILLIPS.

---

U.S. ENGINEER OFFICE, ST. PAUL, Minn., Nov. 29, 1892.

*Editor Forest and Stream:*

I have read your paper, "A Standing Menace," enclosed with your letter of the 26th. From a two years' residence in the National Park, and a careful study of the question discussed in this paper, I have no hesitation in saying that its presentation of the case is substantially correct. There can be no doubt that the success of either of the pending bills, or of any similar measure, will work the ruin of the tourist routes in that section of the Park, and the destruction of the finest game preserve in the world. Very truly yours,

HIRAM M. CHITTENDEN,
1st Lieut. Engineers, U. S. A.

---

UNITED STATES CIVIL SERVICE COMMISSION,
WASHINGTON, Dec. 5, 1892.

*Editor Forest and Stream:*

I have just read the article "A Standing Menace," printed in the FOREST AND STREAM, in reference to the attempts made to destroy the National Park in the interests of Cooke City. I heartily agree with this article. It is of the utmost importance that the Park shall be kept in its present form as a great forestry preserve and a National pleasure ground, the like of which is not to be found on any other continent than ours: and all public-spirited Americans should join with FOREST AND STREAM in the effort to prevent the greed of a little group of speculators, careless of everything save their own selfish interests, from doing the damage they threaten to the whole people of the United States, by wrecking the Yellowstone National Park. So far from having this Park cut down it should be extended, and legislation adopted which would enable the military authorities who now have charge of it to administer it solely in the interests of the whole public, and to punish in the most rigorous way people who trespass upon it. The Yellowstone Park is a park for the people, and the representatives of the people should see that it is molested in no way. Very truly yours, THEODORE ROOSEVELT.

---

DEPARTMENT OF THE INTERIOR,
OFFICE OF
SUPERINTENDENT YELLOWSTONE NATIONAL PARK,
MAMMOTH HOT SPRINDS, Wyo., Dec. 4, 1892.

*Editor Forest and Stream:*

I have seen your article "Cooke City vs. The National Park," and I heartily indorse every word of it. You have clearly and unmistakably stated the facts in the case, and nothing but the facts. It is very refreshing to think that there are still left some friends of the Park to fight its battles.

It is right to emphasize the fact that it is Livingston that wants the railroad to Cooke City. Cooke City would be satisfied with a railroad connection in any direction, but only the route through the Park suits Livingston. A branch to Stillwater, to Red Lodge, or to some point on the Burlington would give Cooke City better facilities; but in that case Livingston would never handle a cent of Cooke City trade, hence the lobby.

Thanking you for the interest you have taken in the matter, I am, very truly yours,

GEO. S. ANDERSON,
Capt. 6th Cav., Acting Supt. Y. N. P.

---

U. S. ENGINEER OFFICE, OSWEGO, N. Y., Dec. 2, 1892.

*Editor Forest and Stream:*

I have read with great interest the article you sent me entitled "A Standing Menace," and I heartily endorse all that it contains.

As you know, I was for four years in charge of the construction of roads and bridges in the Yellowstone Park, and was the first engineer engaged upon this work. As such I prepared plans for the improvement of the Park which were approved by the proper authorities, and are now being carried into execution by my successors.

While engaged upon this work I carefully considered all possible means of transportation in the Park and came to the conclusion that the construction and operation of railroads there, upon any pretext or for any purpose, could not fail to be a detriment and an injury to it.

The alternative plan proposed of cutting off that portion of the Park north of the Yellowstone River, is even more objectionable than the railroad. The present boundaries of the Park have been fixed and established by law for more than twenty years. This alone ought to make them forever permanent, and to change them now, because they happen to interfere with somebody's selfish plans would be a woefully bad precedent, and might almost be said to interfere with the vested rights of the people.

The hundred and fifty thousand acres of land, in round numbers, which it is proposed to take from the Park for the benefit of a few individuals, is almost valueless for the purpose of grazing or agriculture. But it lies upon mountain sides, and forms a valuable and necessary part of the watershed of the Yellowstone River. Being high and well timbered, it is admirably adapted to catch and hold snow, and by allowing it to melt gradually it tends to prevent freshets and subsequent periods of very low water. Thus it is a direct benefit to agriculture and navigation in the lower valley. If this region is de-forested, as it undoubtedly will be in time if it is removed from the Park and delivered to the railroad, the violence of the freshets will certainly increase, and the whole valley will suffer accordingly.

No one who has ever visited Yellowstone Park can fail to appreciate the wisdom that dedicated it to its present uses, or can doubt that it is destined to a great and valuable future.

It is not too much to say that if the Park can be preserved as it now is, subject only to such slight changes as are necessary to secure good roads and trails through it, and proper hotels to insure the comfort of its visitors, it will in time become a health and pleasure resort unequaled in the whole world. Its maintenance is of more than national importance; it is an object of direct personal interest, now and in time to come, to travelers and scientists the world over.

It is to be sincerely hoped that the disinterested care, wisdom and patriotism, which has established and maintained thus far this truly national Park, will be adequate to protect it in the future. Very truly yours,

DAN C. KINGMAN,
Capt. of Engineers, U. S. A.

---

## RABBIT SHOOTING IN MORRIS COUNTY.

HAVING passed the milestone of more than three-score years, many of them in the woods and fields of different States, I thought I had put away my breechloader for a younger "Jacobstaff" to handle, or to be taken out personally only for a place behind the blinds for the webfeet or bay birds. My last trip for grouse over the mountains of Pocono only a season ago had settled the matter. My grouse days were done. But when I was advised of a pressing invitation from jolly George A. Sopher, a former popular resident of Jersey City (now of Madison, N. J.), to Mr. E. E. Fackert, the rotund and rollicking commodore of the Dolphin Fishing Club, of Jersey City, to come and bring "Jacobstaff" for a day among the Mollie Cottontails, how could I resist?

We were promptly met at the station by George with his carryall. A drive of three miles brought us to the residence of E. A. Tucker, a local shooter of the neighborhood, who added not a little to the pleasure of the trips. His mother—one of those good old mothers we read of, and all know—was ready for us and soon set before us an appreciated breakfast. Then a drive of a few hours through a diversified country brought us to our destination, the domicile of Mr. Silas Howell, a well-to-do farmer of Morris county, an ardent sportman and a good shot. We were welcomed heartily by Mrs. H., his wife, not to fail to mention the coming shooter, Johnny H., a chip of the old tree, a bright little fellow, and destined to wipe his father's eye some of these days. Mrs. H., the good housewife, had matters ready for us in shape of a hearty country dinner, but the boys were impatient for sport. A hasty bite or two of bread and butter with cold spare rib, a quaff of sweet cider fresh from the mill, and then the hounds were let loose and we were off for the swale and hillside but a stone's throw from the house. We crossed the cow lot back of the barn, and the dogs had but just entered the outlying copse, when with a whirr! whirr! whirr! three of the gamest birds in the world disappeared towards the hillside.

Of course we were not looking for anything of that kind there and then (often the case, you know), and were too far behind for a shot anyway. Soon one of the dogs gave tongue, joined in almost immediately by the other, a pup that will show his stock and breeding one of these days, and the woods were full of music. We separated, scattering along near the outskirts of the thicket. Soon a shot was heard, then another. "Ah, ha! Sopher, I wiped your eye that time." A clean kill for Tucker after George's hurried shot. Hold hard, here comes another, to be neatly bowled over by Fackert. There goes another. The woods are full of them. There is one for Sile, another for Sopher. In the meantime, having proposed to take things easy, I was up a stump, or rather on it. Casting my eye down a wood road through the bushes, I espied an old settler, a patriarch, we reckoned (as he turned out by far the biggest killed in all the time), leisurely hopping toward me, now and then stopping and changing the position of his ears to catch the fainter echoes of the hounds, then a quarter of a mile up the hillside. To knock him over, light my pipe and get back to my said stump was the work of but a moment. Not very scientific nor sportsmanlike, some of our ardent young shooters may say. Though we have not outspanned in Southern Africa and potted elephants, nor followed the spoor of the giraffe and others of the big ones in that region, we have had our share among the deer and with the bear of Wisconsin, the grouse of the prairie and the thicket, the quail in the copses and the snipe in the marshes. But those days are passed. And as next best, we now in our sere and yellow leaf enjoy the distant bay of the hound in the covert, and as he turns our way the delicate patter of *Lepus sylvaticus* or *arcticus* strikes our ear, and at the crack of our gun he turns a somerset in the air, a little of the same old thrill comes over us. Why not?

A few more shots and more of the heavy fellows added to the shooters' pockets, then the horn was sounded, and as the sun was slowly sinking behind the stone barn we wended our way to the house, all somewhat tired except the writer; he could have maintained his position on that stump another day if they would drive the game to him.

After our ample supper, stories were told, pipes and cider mugs emptied and we were off for bed.

We were up betimes in the morning, and having been informed by our worthy host that yesterday's page was only a preface as it were to the main work, we built big hopes for the coming bags. But, alas for human hopes. Upon glancing out of the window eastward we saw that old Sol was just trying to show his face, but it was in clouds of red and gold. "Jacobstaff" is too old a traveler not to know what that means. "You can shoot until about noon, boys, but look out for rain or snow thereafter. Had those crimson and yellow streaks been a legacy to us as the sun went down all would be bright for the following day, but always remember that 'a gray sky proclaims a hunting morning.'" "Pooh!" they all said, "no rain to-day."

Breakfast was soon disposed of and we were soon in Sile's big three-seated wagon, he proposing to drive over to the old Homestead, his father's place, some three miles back, where "rabbits were thicker than hairs on a dog." We found Lot Howell ready for us. He is an old grouse and rabbit shot of that neighborhood. Having been brought up there of course he and Sile knew just where every hare lived—that is, they would if there hadn't been so many of them. I don't know how old Lot H. and his wife are, but they are mighty spry and young looking to have the six-footer, Silas, as a son, and more, I am told, of like kinds. Lot having let loose his black and tan we were off up the sidehill. We struck nothing until we reached the top, which had been cleared of the larger timber, and a growth of younger scions had started. Here the music commenced. Whew! all the dogs sounding, and five or six rabbits were on the jump in as many different directions. First blood for Tucker, to be soon followed by Lot; then one for Sopher; then Jacobstaff, though somewhat blown coming up the steep hillside, had a shot at a little fellow scudding off by himself on his side.

The hounds up that way are what we used to call fox-hounds when we were boys. They ran the little hares too fast, and are apt to hole them a short distance from where they are started. But there are so many of the little fellows that though often more than one is started, only one perhaps is followed; and when it is holed in a stump or stone heap the dogs train it and take a fresh track. With an old beagle hound properly broken, we believe that an old man, though rheumatic and somewhat broken down, if he had the fever on, could renew his age. Because it is a fact well known of these little fellows that if pursued slowly by the hound they will do considerable play as long as they are sure of keeping ahead, and are certain to get around in time to the very place they were started from. We have known the larger *Lepus arcticus*—that changes his coat when the snow flies—to keep on his circle many times around until killed.

There were some comical episodes. Many misses and some good shots, notably one by Fackert at a cock grouse sailing through the tops of the swamp trees. We think he was as much astonished as the grouse when it tumbled. The day had been growing darker. The wind grew damp and cutting. We started for the house, but the rain and sleet got us before we reached it. "Jacobstaff" knew what he was talking about. We tarried not at the Homestead when we were urged to stay to dinner, and only were let off by the promise to come again and give the old family farm a shake up.

It takes all kinds of people, they say, to make up this world's inhabitants. That follows good in Morris county. We were crossing an orchard, when a hare jumped up "forninst us:" we fired just as he reached a rail fence built over a row of stones separating the orchard from another orchard similar in size. We jumped over the fence and were looking for blood or sign of a hit, when we were aroused by what at first resembled the bellowing of a wild bull. Upon looking up we discovered a big red-faced and red-haired specimen of the male gender with flashing eyes and huge fists doubled. "Get out of this lot. Get over that fence. You have no right to shoot here. I'll have the law on you. Get out." We tried to reason with the blonde maniac, saying we had not shot on his grounds, that we did not mean to intrude, etc., and much more in a pleasant manner; but the boor wouldn't have it. "You are trespassing anyhow, an' I'll sue you for that. Get over that fence this minute. We don't like to be talked to that way, though we may have been in the wrong, and we informed the infuriated land owner that in order to arrest us for trespass he would have to get a warrant from some judge or justice of the peace, and by the time that was accomplished we proposed to be in another county, perhaps another State; and as for jumping right back over that fence at once, we could not think of it. We thought at first that he was going to try it on us *vi et armis*, but he seemed to think better of it; but followed us along the whole length of his ground, filling the air with threats of what he would do. Bah! How different the treatment we received from the genial, big-hearted Howells, at whose house we finally arrived in a drenching rain, and where a big dinner of roast chicken and other viands made us all right again.

As it was necessary for Fackert to be home that evening, and I had had enough, we asked Sile to drive us over to Stanhope, while Sopher and Tucker stayed for another day's sport. We had forgotten to say that we had been joined that day by a Mr. John Spencer with his older dog. John lives close by Howells and is a good shot, but will be a better one when he gets a breechloader.

When we were ready to start we proposed to settle with Mr. Silas for his trouble. He was indignant. We talked to Mrs. H., and she wouldn't have it. What kind of people were these? Received us strangers with open hearts and hands, gave us the very best they had and that good and in abundance, drove us over the country and then to our station out of the way. No use talking. They said they were glad to see folks once in a while—that they didn't keep a hotel, and it was not the time for them to commence.

We finally invited Sopher and Tucker and Spencer to ride with us to Stanhope and see us off. We found on arriving at the station that we had an hour to wait for a train to Jersey City. Mr. George G. Boothney, proprietor of the Mansion House, had a very promising beagle hound that they were anxious we should see. We saw it. Mr. B. is a shooter, also a good fellow. They were all good fellows around Stanhope. We shook hands all around several times. We got our train, but promised, at least Fackert did, to Mrs. Howell's invitation to come again. I think she was astonished as well as pleased to see him appreciate those cakes.

Hare shooting in Morris county is not so bad.

JACOBSTAFF.

### A New-Subscriber Offer.

A *bona fide* **new** subscriber sending us $5 will receive for that sum the FOREST AND STREAM one year (price $4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price $5)—a $9 value for $5.

This offer is to *new* subscribers only. *It does not apply to renewals.*

For $3 a *bona fide* new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Ieet's handsome work, "Bird Portraits for the Young" (the price of which is $3).

## THREE MAINE DEER.

GLOUCESTER, Dec. 6.—*Editor Forest and Stream:* Dr. Irving H. Pomeroy, of this city, has had an exhibition at Shepard's meat market; a large buck with a magnificient pair of horns. This deer was one of three which the Doctor shot while on a two weeks' hunting trip down in Maine. The locality where the deer were found was on Pleasant River, near the "Gulf," or Gorge, about ten miles above Mt. Katahdin Iron Works.

The first deer or rather fawn, was killed before Thanksgiving. The Doctor was out with a companion from whom he separated, after which he saw the fawn lying down. The fawn jumped up and started to run away when the Doctor put a bullet through its head just back of the ear.

The second deer, the buck, the Doctor trailed a long distance over a ridge, keeping him in sight most of the time. There was but little snow and walking through the leaves made so much noise that the hunter pulled off his boots and "hoofed" it in his stocking feet. The buck at last scented danger and stopped, snorting wildly. He turned side on and the Doctor put a bullet through his heart.

The third deer was killed after a running fire from several parties. The Doctor held the deer, for the wound proved that it was his small rifle bullet alone that had caused death.

Dr. Pomeroy's rifle is a .38-40 Marlin safety. The crowd at the camp at first made lots of fun over "that popgun," but after the Doctor had killed three deer with three shots, and had shot the heads off of a number of grouse, everybody thought that the gun or the Doctor was a "dandy."

At the some camp a Mr. Swift, of Dover, N. H., killed a large black cat. The guide said it was the largest one he had ever seen. I wish Mr. Swift would kindly send a description of that cat to FOREST AND STREA. It would prove interesting reading. HERMIT.

## COLORADO GAME INTERESTS.

DENVER, COLO., Dec. 7.—The sportsmen who are interested in having a proper game law enacted are working, and a bill will be presented to the next Legislature which will be a vast improvement on the present law. Judge France and other eminent jurists have the matter in hand, and will undoubtedly frame a bill that will be explicit, and will protect game.

The buffalo killers have been at it again, and this time it is certain that at least one has been killed. The following is a copy of a letter received from Mr. D. N. Cassell in reply to one asking him to verify a short special in the *Republican:*

CASSELL'S, COLO., Nov. 28, '92—Dear Sir: Yours inquiring about the buffalo is at hand. Statement is correct. I am personally acquainted with James Gregg, and saw him a day or so after the buffalo was fouud by him. It was found about five miles from my house. In regard to the advisability of having a game warden stationed in this locality, we are in need of one very much. About a year ago one hunter killed six mountain sheep out of one bunch within a half a mile of my place. Every now and then one is killed, and there will be none left to breed unless something is done soon. Yours truly, D. N. CASSELL.

It seems as if the State officials could certainly devise some plan whereby these few remaining animals would be protected. All of our most influential citizens are heartily in favor of amply protecting the few buffalo and sheep that are left, and an appointment of extra wardens by the Governor would meet with their hearty approval. Mr. Land does good work, but he cannot be everywhere. He is willing to prosecute, but he has not the time to hunt up proof in each case. The committee who are revising the game laws should consider this question and arrange for deputy wardens, with full authority, to be stationed in the game country. If the right men are selected the illegal killing would soon cease, as it did in Maine. This is a question that interests the whole nation, and such a pressure should be brought to bear on the coming Colorado Legislature that it will be compelled to fully protect the little remnant that is left.

Deputy Game Warden Kemble called upon me last week. He says he is willing to do anything in his power to stop the illegal killing of game, but he cannot do much on $500 a year and pay all expenses himself.

The sportsmen claim that one of two bad features of the present law is that clause which allows ranchmen to kill game in the close season for their personal use. The following was published in the *Rocky Mountain News* of Dec. 6, and gives a ranchman's view of it:

AUSTIN, Col., Dec. 1.—A few hundred years ago in England, the life of a deer was more than the life of a man; the pleasure of the wealthy few more than outweighed the misery of the many, in the eyes of the law. There is now a danger that these injustices may be engrafted upon the laws of Colorado, if the ninth general assembly enacts a game law in accordance with the recommendations of the annual address of the president of the Rocky Mountain Sportsmen's Association.

No person at all acquainted with the situation can fail to recognize that next to the rich mines and fertile farms, Colorado's future lies in her unsurpassed scenery, her teeming trout streams, her game preserves and camping grounds. But there are already scattered through the game regions farms on which brave, honest, industrious pioneers are seeking to wrest from nature the subsistence which has been denied them in the more thickly settled centers of population. These men, their wives and children, have to eat only what staples they produce and what game the surrounding hills give to them. Their beef and pork, if they have any, is practically the only thing which they can turn into ready money, and they must have clothes and groceries—which only ready money can get. Their only meat, then, is venison, trout and grouse.

Is it better for Colorado to have a yearly visit of a few weeks from a Boston or Chicago sportsman, who spends perhaps $100, kills five bucks when he cannot eat the meat of one; or to have a family of hard working people, living and working the year round for the upbuilding of the State?

Elk are now almost out of the question as a meat supply for the settlers. It takes from five to twelve deer to last through the winter. The present law provides that deer may be killed only one at a time for immediate consumption. The black-tailed deer of Colorado is essentially migratory in its habits and in any locality save clear back on the Continental Divide, the mid-summer range, or down in the Cedar Hills, the midwinter range, the deer are constantly on the move. Moreover, from Nov. 10 to about Jan. 1, the buck meat is too strong flavored to be eatable. The ranchmen, therefore, must lay in their winter's meat all at once or eat bacon. The new game law should provide for this.

The people who kill the deer, kill them ruthlessly, remorselessly, "just to see 'em kick," are the visiting "sportsmen." I have visited many abandoned camps, one of them that of a prominent member of the Rocky Mountain Sportsmen's Association, and found whole deer and pieces of meat hanging in the trees, rotting or rotten. At the junction of the two main branches of Miller Creek there are now five does hanging to a rail hung between two trees rotten. And it is not reasonable to suppose that a man will come two or three thousand miles to kill one deer when the woods are full of them; when there is not an active game warden in 50 miles, and when on arrest and conviction there is only $50 to pay.

Deer are naturally prolific, but the present game law has destroyed all the balance of the sexes, and barren does are now more common than bucks. Allow the killing of barren does until the balance is restored, stop the butchering in the name of sport, enforce a reasonable diligence in the pursuit of wounded deer, and, chief of all, stop hide hunting, and the natural increase will keep as many deer in the woods as are killed.

The life of a man is more than the life of a deer, but it is doubtful if the life of a hide hunter is more than that of his hundreds of victims. It might not be politic to hang these gentry, but the statute books should contain a law that would provide a residence in the penitentiary—nothing less—so that the first offense should be the last. A GARFIELD COUNTY RANCHMAN.

## MAINE BIG GAME.

THE accounts of successful deer hunting in Maine continue to come in. One of the most happy parties yet mentioned came out of the woods last week. It was composed of J. M. Taylor, night editor of the Boston *Globe*; L. T. Carlton, county attorney of Kennebec county, Me.; S. B. Glazier, of High Springs, Alachua county, Fla.; and John B. Lord, of Hallowell, Me. The party went to Schoodic Lake, in Piscataquis county, and had most remarkable success. The trio was favored specially by "a good tracking snow," the very ideal for still-hunting. Nine deer were the result of the trip. Mr. Taylor, of the *Globe*, was the happy shooter of two. All agree that deer hunting in that part of Maine is something wonderful this year. The camp they visited has been the resort of several other successful hunters this fall. P. O. Vickery, of Augusta, Me., is credited with three deer. W. H. Barnes, of Worcester, Mass., has also taken his three, according to reports. Station Agent Haggerty, of Oldtown, Me., is also credited with two.

But other sections in Maine have also been just as good, as already mentioned in the FOREST AND STREAM. Andover, Me., must be added to the list, a town where only a few deer have generally been taken in a season, since they were plenty 40 and 50 years ago. Mr. L. Dana Chapman, with Dame, Stoddard & Kendall, of Boston, has a letter from G. P. Thomas, a successful Andover guide, which says: "Friend Chapman—It is the best snow to hunt on I ever saw. I have been out twice and fetched in a large buck both days. I have shot three bucks the last month. The last one had the largest antlers I ever saw on a deer. He weighed 225 lbs. before dressing. So, if any one wants to come down and get a deer, now is the time. Truly yours, F. P. THOMAS."

The latest yarn of Maine or Massachusetts manufacture is told by Mr. N. G. Manson, Jr., of Bellows & Manson, a Boston iron firm: and it relates how a Brookline, Mass., hunter in Maine this year killed a big bull moose, and then captured alive a cow moose and made it haul the bull out of the woods for him. As Mr. Manson tells the tale with a perfectly grave face and great particularity it must be true.

As to the great abundance of deer in Maine there may be added an excellent report from Kingfield, where Mr. Isaac N. Stanley, a cousin of Fish and Game Commissioner Henry O. Stanley, has a fern some three miles from the village. There, and without gunning for them at all, he has shot his three deer, with an old United States muzzleloading rifle. One he shot from the window of his barn. The deer came down; the rifle did not happen to be loaded, but the animal very accommodatingly fed about in the field till Mr. Stanley had gone into the house and loaded the gun. He went into the barn and from an easy distance he put a ball through the head of a beautiful piece of venison. Mr. Stanley writes his brother in Newton, Mass., that a Farmington gentleman has even beaten his record. He started from Farmington in the morning, drove twenty miles to Kingfield. Here he found Layl Tarr, a noted hunter and guide, and together they drove up to Mr. Stanley's farm, and from thence up to the Taylor place, near Mount Abram. They hitched their team beside the road, and before night they had two handsome deer and saw tracks of many more. By nightfall the Farmington gentleman was on his way home. The wonderful tameness and boldness of the deer is what surprises Mr. Stanley, and in fact almost every sportsman who has been into the Maine woods this season. They are not run with dogs, and almost every deer will stand near enough for a fair shot. Mr. Stanley says that they are "about as tame as sheep."

Mr. S. C. Dizar, of the Boston shoe manufacturing firm of Prouty & Dizar, has been down to Rangeley on a deer hunt. Whether he secured his venison I have not yet learned, but feel certain that he must have done so, unless some cause was against him. SPECIAL.

## THE HUNTING RIFLE.

BERGERVILLE, P. Q., Oct. 22.—*Editor Forest and Stream:* I see "Aztec" has again entered the lists, and am very glad of it, for I think this rifle question should be sifted to the bottom.

It is quite plain that for the following reasons a large caliber rifle should be used when hunting large game:

First—We have the testimony of many sportsmen that they have very often lost wounded game when using small caliber rifles; and on the other hand nearly all those who use large caliber and proper cartridges seldom lose game from insufficient killing.

Second—The extra weight of the larger calibers is fully compensated for by their increased power.

Third—Game shot by an expansive or split ball with a good charge of powder behind it (in a rifle of large caliber) very seldom has its meat bloodshot.

Fourth—Small calibers destroy more game than large ones, and send much of it away to die a cruel, lingering death.

Fifth—The shock which the nervous system of an animal receives from the impact of a ball is a very important element in causing instant death. This is of course much greater with a large caliber than with a small one.

If we are going to use a large caliber rifle simply to drive a bullet through the game we shoot at, the small caliber is only slightly less effective; but if we use the large bores as they should be used we find a great difference. I have seen and heard of many instances in which even .45cal. solid bullets have traversed deer and caribou from end to end, and yet some of those animals ran from one to ten miles from where they were shot.

Again, what is the use of the large bore rifle, if we use small bores for large game? We might as well do away with it altogether. Common sense, however, points the other way. I know that Mr. H., a friend of mine, and a very successful sportsman, dropped a large bull moose, dead, with a .58cal. expansive bullet. Again, he shot a fine buck with same gun and cartridge, which fell dead 20ft. from where it stood when hit. He told me that on the other hand, he had lost three deer, and one fine moose, when using a .44 Winchester, though all were badly hit (the moose by three or four bullets).

An animal must die more quickly when it bleeds from a large wound, whether vital or not, than from a small one in a similar spot. I have had occasion to shoot several large dogs, and in every case but one I used .45-90 Winchester with expansive balls. All the dogs I shot with this rifle died at once; the other shot with a 32cal. did not die till I had fired five shots into his heart. I also shot a wildcat the other day, and killed it with one shot. The bullet (split) made a terrible hole where it came out. I think it is a mistake to split the bullets too far down as they are apt to break off from the base, and I prefer a bullet which "mushrooms" well, rather than one which flies to pieces. L. D. VON IFFLAND.

THE OLD TRAPPER'S HOME.

HUGH MONROE WITH MORNING PLUME AND WM. JACKSON.

## IN THE GUADALUPE MOUNTAINS.

EDDY, NEW MEXICO, Dec. 1, 1892.—Messrs. W. J. Bonbright and W. J. Fisher, of Colorado Springs, Colorado, M. Gillen of Philadelphia, and Judge Hawkins, of this place, returned yesterday from a week's hunting trip in the Guadalupe Mountains, 100 miles northwest of here, with three deer and four wild turkeys. A herd of about 30 antelope were seen, within eight miles of Eddy, one day last week, and smaller bunches have been seen in the vicinity frequently during the past summer. It is expected that when the first cold weather comes, which will probably not be until January, the antelope will come in from the Staked Plains, and be plentiful along the Pecos River during the remainder of the winter.

A mountain man came in last week with three deer and three wild turkeys on his wagon, and John Donoway, who lives in the Guadalupes, sixty miles west of Eddy, brought in a brown bear that weighed 400 pounds. His loin was served to the guests of the Hotel Hagerman on Thanksgiving day. His skin is now being mounted for a collection that is to be shown at the World's Fair.

Coyotes are becoming more and more numerous here every month. The cattlemen are reducing their herds and are not paying as much attention to poisoning vermin as formerly, which is probably the cause of this increase in the coyote crop. Several have been killed near town lately and four were caught in traps, in one night, at the U. S. ranch, a few miles west of here. I

found one feasting on a dead horse just north of town a few mornings ago, and drove within 50 feet of him before he saw me. He then trotted off a few yards, stopped and looked at me until I drove by. Of course, I had no gun with me at the time.

Ducks are numerous along the river and several good bags have been made of late. W. S. Eustis, of the Engineer Corps, killed 24 mallards on Thanksgiving day.

G. O. SHIELDS.

### A Missouri Opossum Record.

SEDALIA, Mo., Dec. 2.—Prairie chickens, quail and rabbits are very scarce here this year. Generally we have good quail and chicken shooting, but a great many nests and young birds were destroyed by the June rains and thunder. G. W. Nilcoln, the Sedalia pork packer, killed a male opossum that weighed 13½ pounds. Can any of your readers beat it? It is the largest ever heard of.

NIMROD.

### Adirondack Deer.

ELIZABETHTOWN, N. Y., Dec. 4.—My brother John and some friends went down to North Hudson, Mud and Clear ponds. They killed some 9 or 10 deer, and report deer very plenty. They got one of those "swamp bucks"—very short legs and large body. There are some 4 or 5 deer wintering on Green Hill, near our village, if they are let alone.

GEO. H. JAMES.

### The Hunter and the Farmer.

MUCH of the friction between hunters and farmers might be avoided by a reasonable respect for the property of the latter by the hunters. When the hunting season opens the country is invaded by an army of sportsmen and their dogs from the neighboring city. This array is ridiculously out of proportion to the amount of game to be captured, but there is amusement in the hunt even when there is no game in the bag. A man will rove all day without a good shot, just as a meditative fisherman will sit all day without inveigling a single fish into his basket. As in the serious business of life the anticipation of things is often more enjoyable than their possession, the hunter's chief amusement lies in this preparation for the day, and the hopeful search among the possibilities of upland and moor.

While the hunter is thus having a good time "possessory or anticipatory," the farmer greets him with anything but hospitality. He peppers local papers with curt trespass notices signed by long lists of names, so that the nomadic gunner may know specifically where he will not be welcomed.

The hunters are to blame for this apparent lack of "old fashioned" country hospitality. They rarely take the trouble to ask the owner's permission to invade his territory. They storm it like a hostile band of guerillas, laying waste fences and stone walls, and in other ways outraging the rights of property. A careless shot in a neighboring county, it is reported, fired a barn, which was totally destroyed. Should a band of farmers raid the yard of a city dweller in search of something which it would be lawful to catch on wild land, the band would be hauled at once before a magistrate and fined.

A single hunter occasionally making his appearance at the farmer's door and asking, in a proper manner, the privilege of gunning on the premises, would in many instances secure the desired license. The chances are he would be invited to dinner, and the farmer's boy would tell him where game abounded. When the Nimrods come not singly, but in battalions, and blaze away with reckless, sometimes with drunken indiscrimination, it is not surprising that the farmer declares war. The relations between the hunter and the farmer will not be settled on the proper basis until the hunters organize and purchase from farmers who are willing to sell, the right to shoot on their premises, under pledges to repair all damages. Game in season is free, but the right to shoot, or even to enter, upon the premises of another does not exist. There are laws in abundance imposing penalties for shooting on the property of another. They are not always enforced because the country constabulary is not well organized. To hunt up a magistrate and a constable is troublesome, and the chances are the invader will have made good his escape before the legal machinery is in effective running order.—*Germantown Telegraph.*

## WITH A FLY-ROD.

### A Sentiment to Go with a Gift.

FROM A FATHER TO A SON.

ACCEPT this rod my boy,
At this time of Christmas joy,
For your love of sport and gentle temper mild.
For old Solomon hath said,
And he's very wise though dead,
That if you spare the rod you spoil the child.

DANSVILLE, N. Y., Dec. 12. H. W. D. L.

## A BIG SEA DEVIL.

MR. S. G. WORTH, of the U. S. Fish Commission, has related to us the following incident which he had from a gentleman residing in Brooklyn, N. Y. His informant had followed the sea as captain of a vessel for forty-four years and had observed many curious things during his long sea life:

"Some years ago off the coast of Brazil," said the Captain, "I saw a fish which was so remarkable that it attracted the attention of the whole ship's company. The carpenter had been at the wheel, and when I came on deck he reported that a strange fish had been following the ship all the morning. I looked at the animal and found that it was shaped like a sting ray, 30ft. across the middle and with a tapering tail about 40ft. long.

"The fish swam just under the water and occasionally stuck out two horns, a fathom each in length, and situated on the fore part of the head. I was sure that the eyes were in the ends of these horns. Two young ones accompanied the large fish, one swimming just on top of either fin, right and left.

"I directed the first officer to get out a harpoon which some whaler had given him and a coil of rope. Just then the fish swam alongside and up to the bow, when the officer harpooned it, and the crew of about sixteen men commenced hauling it in. They hauled too fast, however, and I could not stop them until they had brought the fish half way over the rail, when the weight tore the harpoon out and the monster escaped.

"I saw both of the young disappear when the hauling was begun. I think the weight of the fish must have been 800lbs."

Readers of FOREST AND STREAM will doubtless recognize in the above description the sea devil, devilfish, vampire or manta of tropical waters of America, although the tail in this species is not so long as the captain's observations would imply, but is only about equal to the length of the body. The maximum width of this great ray is usually stated to be about 20ft., which could readily be magnified to 30ft. under the excitement of such an experience as befell the narrator of the above story. The eyes of the sea devil are not situated at the ends of the hornlike projections of the head, but are located on eminences at the base of these frontal appendices.

The first popular notice of the occurrence of this great ray on our shores was published by Catesby and was based upon explorations in the Carolinas. Dr. Mitchill also described a specimen which was captured at the mouth of the Delaware Bay.

A graphic account of fishing for the sea devil is given in "Carolina Sports," by the Hon. William Elliott. Mr. Elliott devotes nearly one hundred pages to his description of devil fishing, and has embodied it in much that is novel and exciting. He relates the following circumstance, which shows the enormous strength of this great ray: "In one of the inlets of the coast of Georgia a trading vessel lay at anchor, and while her crew was on shore one of these fish seized the cable and dragged her off, anchor and all, to the consternation of the sailors, who pursued their retreating bark for some miles in their boat, and regained her when the devil fish had contrived, or seen fit, to disengage himself from his prize."

The same author relates another story of a negro servant in his own family. "The negro was fishing near the Hilton Head Beach for sharks, and accompanied by another hand was anchored about 50yds. from shore in a four-oared boat, when a devilfish seized hold of the shark line. Whether he grasped the line between his feelers or accidentally struck the hook into his body, cannot readily be known; but he darted off with the line, dragging the boat from her anchorage, and moved seaward with such fearful velocity that the fishermen threw themselves flat on their faces and gave themselves up for lost. 'After lying a long time in this posture,' said the old man, 'in expectation of death, I gained a little heart, and stealing a look over the gunwale saw iron swim—there was the anchor playing duck and drake on the top of the water, while the boat was going stern foremost for the sea! At last,' said he, 'we cut loose when he had almost got us out to sea.' The earnestness of the old man and the look of indescribable terror which he wore when telling the story, convinced me that he spoke the truth."

## MUCH FUN FOR LITTLE MONEY.

AMONG your many readers in this vicinity there are doubtless some who, like myself, are lovers of sport and yet feel that they cannot afford to give their families and themselves an expensive vacation. For the benefit of such I will give my experience of giving my family a ten weeks' outing, besides having a royal time myself without any loss of time from my business and at less expense than staying at home.

I reside at Evanston, twelve miles north of Chicago and about thirty miles across country from the fifty odd small lakes in Lake County, Ill.

Out of five pine boards, to be had at any lumber yard at an expense of $2.50, I built my own skiff (flat bottom) during my spare hours in winter, utilizing my hay-mow for a workshop. You can do the same, reader, if you only have the courage to try. As soon as the roads are thoroughly settled in the spring I engage a team for $7 to take our load to camp across the country, in order to save shipping over two roads and transporting. Our load consists of four spring beds and bedding, crockery, a few chairs, tents, etc.; on top of this we tie our boat and then pile our three boys into the boat. We start the load early so as to enable the boys to put up at least one tent before the arrival of their mother and little sister Ella, who go to Chicago and take the afternoon Wisconsin Central train, which lands them within one mile of camp.

We have four tents, which, with good floors in three of them, cost us about $60, and will last from 6 to 8 years, with ordinary care. We make our camp on the bank of a beautiful lake about 40 rods from the home of as "white" a farmer as the glorious State of Illinois can produce. Mr. Farmer supplies us with butter fresh from the churn at 15 cents per pound, milk at 4 cents per quart, eggs at 10 cents per dozen, provided my boys will go to the barn and hunt them, and 50 cents per week for the use of the ground and the wood we burn. He considers it an insult to offer him pay for buttermilk, skimmilk, ice, vegetables and "such little things," as he calls them.

I leave my business at 9:15 P. M. Saturdays and take the Wisconsin Central train at 10:45, which brings me to camp at about 12:30. I lose no time getting to sleep, for I am sportsman enough not even to let the sun get up ahead of me when on fishing ground. I have read FOREST AND STREAM and several other sporting papers for years, and have often had the blood tingle in my veins when reading of the large catches made in northern Wisconsin and Michigan, but I doubt if any of the gentlemen had any more real unadulterated pleasure than I have on my short and inexpensive Sunday trips not 40 miles away from home.

My catch in 11 Sundays and 3-week days the past season, after throwing back everything that weighed less than 1½lbs., was 123 bass, all large-mouths. My largest catch was 12 bass and 1 pickerel before breakfast on July 3. My next largest was on Aug. 14, when Mr. H. S. Farwell, of Chicago, who, by the way, is the most graceful bait caster I ever had the pleasure of meeting, did me the honor of spending a day at our camp. We took 15 bass, all above 2lbs, before 10 A. M.

Two incidents that transpired that day are too good to keep. Two friends, who are well known in Chicago business circles, and whom we will call S. and C., asked at the eleventh hour to spend Sunday at camp with me, but Mr. Farwell having already accepted my invitation, I could not accommodate them, so I found quarters for them at the farmhouse, and one of my sons kindly volunteered to row their boat, but luck was against them and 7 P.M. found them without a fin. To say that the boys were disgusted and looked blue around the gills is putting it mildly. Every little while they would uncover the ice-box and look at the 18 beauties therein, and again lament their luck; even my root beer lost its charm for them. After Mr. F. and myself had chuckled to our heart's content we divided with them, giving them the lion's share, which pleased them immensely. The next morning the farmer's good wife informed my family of the good luck my friends had had "late last night," and said she had advised her husband to go fishing after dark in the future. When S. and C. arrived home they presented the editor of our leading paper with their largest bass, which brought out in glowing lines the success they had had on their fishing trip and vouchsafed the information that they excelled everything in town in the piscatorial art. All any one has to do now to make their "necks swell" is to ask them how many cigars it takes to keep me from talking.

The other incident, which is somewhat harder to swallow, but equally true, is as follows: Mr. F. and myself had a strike at the same time. Mr. F. brought his fish to net, but just as my son was about to put the net under mine, the line, which was a size H silk, parted about 30 inches above the snell. I may have thought a great deal in a short time, but never a word did I say. The second day after my seven-year-old daughter Ella and myself were casting within one hundred yards of where I had lost my bass. Ella got a strike and began playing her catch in true sportsmanlike manner; suddenly she lowered he rod and exclaimed, "Oh, papa! he is gone." I told her to reel in her line and see if her frog was all right. On raising her rod she shouted, "He is on again, he is on again," and so he was. She brought him to net and was happy. My son Morris took him from the net to extricate the hook, looked disgusted and said: "Look here, papa; just see how she has got her line fixed. Well, if that is not just like a girl, anyway. Here is one hook and frog up here, and down there she has another hook with her fish on and no bait." On examination I found she had my lost fish. The only way I can explain the strange affair is that the bass took her frog, and that in the fight that ensued my lost line became entangled on her hook in such a manner that when he tore loose from her hook my line held him until he was brought to net. There is no doubt about it being my fish, for there was my 5-0 Kendall-sneck hook, my line and my knot. I brought him home and showed him to Mr. Farwell, and he too felt positive that it was my fish.

I retire early Sunday evenings and leave camp at 5 A. M. Monday, and arrive at my place of business at eight, sufficiently early for Monday mornings, feeling that I have put in a very big and a very happy day at an expense any poor man can afford, for by buying a 25-ride commutation ticket, the round trip from Chicago costs less than one dollar to the center of the lake region.

When I get ready to break camp in the fall I sell my skiff to the farmer for $10, and the storing of what stuff I want to leave until the next summer. The $10 pays for the teamster one way and the cost of material, besides having the use of it for ten weeks without cost.

Now reader, figure the difference between the cost of living at prices quoted above and, say, $12 for car fare, and what we pay in the city, to say nothing of the benefits in health and comfort your family derive from living in the pure air of the country during the hot summer months, and I think you will go and do likewise, or as much better as your means will permit. UNCLE JOHN.

## ANGLING NOTES.

### Broiled Scrod.

I READ in the newspapers that broiled scrod has just been introduced into New York city from Boston, and has found such favor that there is an increasing demand for this excellent dish, but the fish dealers in New York are unable to furnish this fish and that the supply comes from Boston. My fondness for broiled scrod has caused some of my friends to poke quite a bit of fun at me. I have eaten it in all sorts of places in Boston and at all hours, but I did not first eat it there. Something over twenty years ago I was much in New York city, and in the fall and winter months, if it was possible I made it a point to go to Dorlon's in Fulton Market for lunch, if I was in the lower part of the city at the lunch hour. I was extremely fond of oysters, and believed I could get them better at Dorlon & Shaffer's than at any other place. One day I went as usual to Fulton Market and met Mr. Dorlon before I reached his store, and remarked that I was tired of oysters. He thought a moment and said "You go in and order two bottles of white label Bass, and I will furnish the rest." In a few moments he came in and sat down and the waiter put a covered dish between us on the table. When the cover was removed I found that the dish contained a broiled fish, and somewhat to my disgust it appeared to be a codfish. Dorlon thought I was finding fault too early in the game, and so I was, for when I had finished I thought I never had eaten anything of the fish kind that was more delicious. Mr. Dorlon said that when I came into the market the fish was alive. He called it broiled young codfish, and so I called it until I found in New England that it was called scrod or rather escrod; but call it broiled young codfish, broiled scrod or escrod, schrode or scrode, as it is also termed, and cook it in Boston or New York, it is good, fit for the gods and fishermen. One thing, however, is important, if the fish is not fresh out of the water, order something else.

### Hudson River Salmon.

This is a subject that I return to as a duty, and with a certain regularity as the seasons come and go, because it is a subject that I am deeply interested in, and wish to interest others in it. Last year the salmon made their way up the Hudson as far as Baker's Falls at Sandy Hill, and this because the dam was taken out at Fort Edward to be rebuilt. This year the new Fort Edward dam was sufficient to stop the salmon going above that place, but I thought surely they would be seen below the dam, which they were not. Then I heard that the fishway at Thomson's Mills (Fort Miller) was filled with drift and that it was closed and, so far as I can learn, nothing has been done by the New York Fish Commissioners to have it opened or cleaned. This fall I heard that a salmon had wandered way off up into Schoharie Creek from the Mohawk, and this made me think that something was wrong with the other fishway at Mechanicville, or the salmon would not try the Mohawk and its tributaries, for none have been planted there. Next I heard that the Mechanicville fishway was also filled with driftwood, and for this reason useless for the purpose for which it was built. This, indeed, was a state of things! After the State had spent $7,500 to build the fishways, the Commissioners did not evince sufficient interest to keep the fishways in working order. If the fishways had been in-

spected this year I would be glad to record it. Finally, I heard that a man had appeared at Mechanicville, one day last summer, claiming that he was one of the State Fish Commissioners, and spent a day watching the big salmon resting in the tail race coming from the mill wheels. The next morning this man who claimed to be a State Fish Commissioner appeared at 4 o'clock to the watchman at the Plaster Mill, which is near by, and asked for a gun or spear that he might kill some of the salmon, which species of murder he said he was authorized by the Fish Commission to commit. Admitting that the man was a Fish Commissioner, he had no more right to spear or shoot a salmon than any other man in the State, and the Fish Commission could not authorize such an act any more than a district attorney could authorize a burglar to rob a bank, or burgle a private house. If the Fish Commissioners wish to run this man down I presume they can obtain a description of him that may lead to his identity.

### Black Bass Season in New York.

Repeatedly I have pointed out in FOREST AND STREAM the evil resulting from opening the black bass season in New York State on May 30th. After all the testimony regarding the open season for fish and game had been taken by the Codifying Commission, Gen. Sherman, president of the Commission, did me the honor of consulting me in regard to the proper open season for some of our fishes. I contended then, as I had for years before in this journal, that as black bass spawn all through the month of June the season should not open before July 1st. Gen. Sherman was satisfied from his personal experience, and the evidence taken by the Commission, that July 1st was as early as the season should open anywhere in the State. But because of the strong opposition to a late opening the code was reported to the Legislature with the compromise date of June 15th for opening the black bass season. The Legislature very promptly amended the date making it May 30th, as before. The passage of the code wiped out many special laws applying to a dozen or more lakes and streams in which black bass fishing began on dates varying from July 1st to July 10th, and all the waters of the State with one exception were opened to June fishing, which means killing by statute law spawning bass and bass with young, unless moral law steps in; but we all know that statute law can give moral law cards and spades and a beating every time. The new code was scarcely printed and distributed before a howl went up from the very lake for which the May 30th law was passed, that the bass were growing scarce, and the state would have to restock it, or the season must be shortened, or something else must be done to save the fishing. As far as this particular lake is concerned, the people have made their own bed to fit the bass beds, and if the spring is stiff and lumpy, and the clothes short top and bottom, and the cool vernal winds get under the coverlet, let her blow; but there are other waters that never wished such a law. There is an opposition to special laws, but the people who earnestly desire to preserve the black bass from destruction have a remedy. Last summer in one of these waters, I urged that anglers throughout the State should see to it that the boards of supervisors in the different counties where black bass have suffered because of June fishing, should pass a law, as they are authorized to do, which would shorten the bass season.

The Board of Supervisors of Warren county, upon motion of Mr. Ross, have resolved: "That fishing for, catching or killing black bass or Oswego bass in Schroon River, the lakes, ponds and streams tributary thereto in Warren county, shall be prohibited by law except between the first day of July and the thirtieth of September in each year. For violating the provisions of this law a penalty of ten dollars will be imposed for each fish killed, caught or had in possession." This closes Schroon Lake, Brant Lake, Friend's Lake, Loon Lake—all places of summer resorts with hotels large and small: Smith's Lake in Chester; Round Pond, Burnt Pond and Long Pond in Horicon, and Sherman Pond, which is so close to the line between Bolton and Horicon I do not know which town it is in. Most of the waters I have named are well known to a large number of summer visitors for the black bass fishing they afford, and it will be well to bear in mind that a local law now forbids fishing in them for black bass before July 1. Why the supervisors cling to the name Oswego bass for the large-mouth bass they alone can answer. I never have heard of any large-mouth black bass in any of the waters covered by this law, and if there are it would be far better to stamp out the name Oswego, as applied to the fish. Closing the season Oct. 1 will do neither harm nor good, for very few bass are ever caught after that date, for they will not, as a rule, bite freely, but if they do they are in good condition to be eaten, for they do not spawn until the following spring. I am not inclined, for one, to find fault with the October closing since the supervisors have cut off the June fishing.

A. N. CHENEY.

## PENNSYLVANIA FISH WARDENS.

WE are indebted to Commissioner W. L. Powell for the following notes relative to fish protection in Pennsylvania. Warden James Kelly, of Huntingdon, has torn out nine fish dams and dismantled three baskets in the Raystown branch of the Juniata. He has destroyed three dams and two nets in the Juniata, one dam in Standing Stone Creek, and one in Vineyard or Crooked Creek.

The warden has brought suit against four persons who rebuilt dams and had two Italians fined for dynamiting fish.

The sheriff issued his proclamation against illegal fishing, and as a consequence, two dams and baskets were removed by their owners in Angwhick Creek, three in the Juniata and two in Stone Creek.

Warden Kelly has notified all parties who gig or spear fish at night, and those who use dip-nets and other unlawful implements that unless they stop the use of such apparatus he will prosecute them to the full extent of the law.

Warden Jonas De Turck reported from Exeter, Berks county, that illegal fishing is on the decline in his district. There is some unlawful fishing in the small creeks, but the last three suits have greatly improved the situation. There is no violation of the law in the river and none below Reading in the creeks, for these contain many fish, especially the Antietam and Monocacy. Although the Dauberville parties were not convicted, the suit cost them a pile of money and they will not break the laws again.

Warden De Turck complains that the Schuylkill swarms with monster carp, many of these fish 30in. long, are being caught. His largest one weighed 11lbs. At Linfield and the catfish dam many bass were caught, some of them very large. The Neversink dam is full of fish, but they have the flavor of coal oil caused by refuse from the gas factory.

## Fishculture.

### OHIO FISH COMMISSION.

THE eleventh annual report of the Ohio State Fish and Game Commission for the year 1891 has been received from the former president of the Commission, Dr. James A. Henshall.

The report is a general one containing chiefly a record of the number of fish distributed, the reports of wardens and of the hatchery superintendent. The appendix is devoted mainly to statistics of the fisheries of Lake Erie, obtained from U. S. Fish Commissioner MacDonald.

In March, 1891, the hatchery at Sandusky contained 39,000,000 of whitefish, which were planted about the Bass Islands and in Sandusky Bay. After the whitefish were deposited 15,000,000 of pike-perch eggs were collected, most of them were hatched, and the fry were planted in Muskingdom River, Cottage Grove Lake and Sandusky Bay.

From 16,000,000 sturgeon eggs the commissioner reports that they obtained 5,000,000 of young sturgeon.

With a special appropiation of $3,500, granted by the Legislature in 1891, a fish car was built. The car was finished in August, and in September began the work of transferring black bass, pike-perch, rock bass, crappies, catfish, suckers and other fishes. About 200,000 adult fishes were thus replanted. With characteristic generosity the railroads of the State, except two or three, hauled the car free of expense.

The sturgeon eggs were hatched in boxes in open water about the islands at the mouth of Detroit River. Some of the fry were planted at the mouth of the river and the remainder around the islands of Put-in-Bay. The eggs placed in the Sandusky hatchery did not develop.

### FISHCULTURE IN RUSSIA.

DR. NICOLAS BORODINE, Fish Commissioner of the Ural district in Russia, is now in Washington studying the history and methods of American fishculture and fisheries. He has visited most of the important fishing centers of the world and now begins the comparison of Old World systems with those pursued in the United States.

The Ural district contains no salmon or whitefish, its principal fisheries having as their object the sturgeon, herring, catfish and species of the carp family. The sturgeon is a very valuable fish, and the society whose representative is now among us is desirous of accomplishing its increase by artificial propagation. Singularly enough there is considerable activity in sturgeon fishing through the ice in certain deep parts of the Ural River. Judging from Dr. Borodine's description, the capture of those large and valuable fish is attended with great excitement.

Russia has only one kind of catfish, but America must yield the palm for giant size, since the Russian species, called *Glanis*, attains to the weight of 400lbs., and is esteemed for food.

### Colorado Trout Waters.

DENVER, Col., Dec. 7.—The United States Fish Commission took 100,000 trout eggs from Lake Wellington on Nov. 24 and placed them in the fish hatchery near Denver. From Lake Geneva the superintendent took 100 fish averaging 3lbs. each. This lake was stocked two years and five months ago. Game Warden Land says there are a large number of lakes in Colorado that are perfectly adapted for trout raising. It is reasonable to assume that trout placed in other lakes would grow as rapidly as those in Lake Geneva and the stocking of them is well worth the attention of the Fish Commission.

TESEEBY.

### The Great New York Central System

STANDS as a magnificent contradiction to the argument against concentrated railroad interests. Coming into existance in 1869, by the consolidation of short lines between New York and Buffalo, the system has vastly extended its control, and to-day operates the principal passenger service out of New York to Chicago, Cincinnati and St. Louis. All through the history of its evolution from small things to the first of American railways, the management of this road have recognized that the people's interest was their interest; and that a policy that would best serve the public would be of greatest benefit to the road. This road to-day is giving the best passenger service in the world.—*Dixie.*

### Holiday Tour to Old Point Comfort via Pennsylvania Railroad.

CHRISTMAS week is a most fitting period for a short trip of recreation, and in order to provide a congenial outing for this purpose the Pennsylvania Railroad Company has arranged a holiday tour to Old Point Comfort. The party, under personal escort, will leave New York and Philadelphia on Tuesday, Dec. 27. The entire period of the tour covers four days, and the rate for the round trip, including all necessary expenses, is $18 from New York and $15 from Philadelphia. If one desires to vary the journey by returning via Richmond and Washington he may spend one day at the Hygeia Hotel, and return via the above cities, at the same rate. This is a most delightful tour.—*Adv.*

### Winter Shooting.

SPORTSMEN who are laying their plans for a southern shooting trip should make a note of the Princess Anne at Virginia Beach, Va. This hotel is happily known by those to whom comfort is essential, as combining an excellent service and appointment, with some of the very best shooting to be found on the Atlantic sea coast. In the immediate neighborhood of the hotel are favorite feeding grounds for ducks and snipe, while in the open country inland good quail shooting is to be had. To the north is the Virginia desert, where bear, deer and wild cattle abound. The advertisement of this hotel will be found in another column.—*Adv.*

### FIXTURES.

DOG SHOWS.

1893.

Jan. 3 to 6.—Mohawk Valley Poultry and Kennel Club. F. B. Zimmer, Sec'y, Gloversville, N. Y.
Feb. 21 to 24.—Westminster Kennel Club, New York city. Jas. Mortimer, Supt.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
May 3 to 6—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago.
Sept. 7 to 10.—Hamilton, Ontario. A. D. Stewart, Sec'y.

FIELD TRIALS.

Dec. 19.—Irish Setter Field Trials, at Lexington, N. C. Dr. G. G. Davis, Philadelphia, Pa., Sec'y.

1893.

January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgarif, Sec'y.
Feb. 8.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y.
Feb. 13.—United States F. T. Club Trials, New Albany, Ind. P. T. Madison, Sec'y-Treas., Indianapolis, Ind.

The Greatest Dog Selling Agency in all America is the "Forest and Stream's" Kennel Special Advertising Columns. - See page viii.

### CENTRAL FIELD TRIAL CLUB'S TRIALS.

THEY began on Monday, Dec. 5, and the stakes were run in the order of the advertised programme.

A great improvement in the rules was the abolishing of the time limit. As a consequence there were no repetitions of the wearisome experience of past years in following a brace of dogs around and around with no other purpose than to comply with an arbitrary and senseless rule.

The judges were Messrs. J. M. Tracy, N. Wallace and W. S. Bell, the latter of Pittsburgh, Pa. This trial was the first one at which Mr. Bell judged. He fell into line like an old-timer. In respect to them, they were the most alert and painstaking three judges of the season. They kept up with the handlers and watched the work constantly. I did not notice one get into a trance or dreamy contemplation of pleasant reminiscences, nor did I notice any overwhelming *ennui*. They worked earnestly and conscientiously. Of course there were a few who were kicking, but that showed a good normal field trial condition. Were a field trial to be run without a kick, it would be just cause for alarm in that it would be a departure without a precedent. One young man, a right good fellow on whose hair rests some of the hard frosts of forty-five winters, kicked through three different stages, lasting about three days. The first stage was funny, the second was silly, and the third was wearisome.

The grounds were most difficult to work, owing to the large area of open ground sown in wheat. This forced the competition into ground of which the larger part was difficult to work. As to the birds, they were most difficult to find on parts of the ground, while on other parts they were plentiful. It was an open secret that the local shooters had killed a large number of the birds on the grounds before the trials began, and that, most destrutive of all, the netter had been active too.

The trials were a success. They were well managed. Spectators, however, were accorded too many privileges, they being allowed to ride too close to the judges. They, however, were well behaved and not over eager as spectators sometimes are.

In addition to those mentioned last week in attendance, were Messrs. T. H. Gibbes, Columbia, S. C., P. Henry O'Bannon, H. B. Duryea, N. S. Simpkins, Bayard Thayer, John Simpkins, D. B. Thompson and H. W. Lacy, of FOREST AND STREAM.

### The Pointer Derby.

There were thirteen starters. The grade of work was most decidedly inferior, considering it as a whole. The ranging was poor, the point work faulty when it was not common.

Jingo was easily the best dog in the stake, on the work done and the manner of doing it, although he failed to sustain the grade of it in the absolute neat.

Lad of Rush made a good showing.

Graceful II. won third, but it was not so much on her high grade of work as on the inferiority of her competitors.

The order of drawing is as follows:

Hempstead Farm Kennel's liver and white bitch Hempstead Game (Duke of Hessen—Woolton Game), A. Cameron, handler,
*with*
J. L. Adams' liver and white dog Lad of Rush (Rush of Lad—Topsy L.), L. W. Blankenbaker, handler.

R. L. Shannon's liver and white bitch Croxie O'Bannon (King of Kent—Croxie Wise), Ed. Garr, handler,
*with*
Charlottesville Field Trial Kennel's black and white dog Jingo (Mainspring—Qeenie), Capt. C. E. McMurdo, handler.

R. L. Shannon's black and white bitch Ginger Ale (Osborne Ale—Pearl's Dot), Ed. Garr, handler,
*with*
Hempstead Farm Kennels' liver and white bitch Hempstead Blossom (Duke of Hessen—Woolton Game), A Cameron, handler.

Luke W. White's liver and white bitch Graceful II. (Duke of Hessen—Concave), owner, handler,
*with*
Elliott Smith's liver and white bitch Duchess of Highlands (Beppo III.—Belle), A. Cameron, handler.

H. L. Regenold's liver and white bitch Kent's Maid (King of Kent—Galena),
*with*
Randolph Kennels' liver and white bitch Early Dawn (Duke of Beaufort—Ma'mselle), F. S. Bevan, handler.

Charlottesville Field Trial Kennels' black and white dog Conscript (King of Kent—Hops), C. E. Buckle, handler,
*with*
W. N. Lipscomb's liver and white bitch Croxie Kent (King of Kent—Croxie Wise), John N. Lewis, handler.

W. T Hunter's liver and white bitch Lady Peg (King of Kent—Lass of Bloom), a bye, Geo. E. Gray, handler.

MONDAY.

The weather was more like that of late summer, so clear and warm was it—uncomfortably warm some hours of the day. Birds were found plentifully at times, at other times they appeared to be scarce. They however, far outnumbered the good performances of the dogs.

*First Series.*

HEMPSETAD GAME AND LAD OF RUSH began at 8:43. Both started at good speed, Game following Lad much of the time. Toward the latter part of the heat, she let down to a range of a few yards and pottered a great deal. Soon after starting, Lad was lost for a few minutes. When

found, he appeared to be roading, but found nothing. About 200yds. away, at the same time, Game false pointed. Sent on, Lad roaded as if on a bevy, but found nothing. Lad next found and pointed a bevy in the open and Game backed well. Both steady to wing and shot. Lad false pointed in woods. Next he pointed two birds. Game at this juncture was pottering a great deal. Up at 9:33. Lad also pottered betimes. He was much the more industrious and ranged the wider.

CROXIE O'BANNON AND JINGO were started at 9:41, and ran 36 minutes. Jingo pointed a bevy in the open and Croxie refused to back. On the scattered birds Jingo pointed, and again Croxie refused to back. Croxie loafed a great deal and picked out the easy going. She did not appear to be interested in hunting. Jingo was industrious, ranged fairly well and his work on birds was good.

GINGER ALE AND HEMPSTEAD BLOSSOM started 10:24; down 34 minutes. Blossom dropped to a point on a bevy in sorghum. Steday to shot. At the same time Ginger refused to back, went in ahead, caught scent but failed to locate, although the birds were close by her. She acted in a puppyish manner. Blossom required a great deal of help from her handler. She worked out the same casts repeatedly, and ranged poorly. One of the judges flushed a bevy which the dogs had passed. The birds were marked down in open weeds, yet the dogs could not find any of them. Thereupon they were ordered up.

GRACEFUL II. AND DUCHESS OF HIGALANDS were started at 11:04, and were worked 50 minutes. They raced about, watching each other and frittered away a good deal of time nosing up larks and pottering on false scents. Graceful pointed a bevy well in the open, although she was not ranging wide at the time. Duchess dropped to a back. Both steady to shot. On the scattered birds Grace roaded, and a single bird flushed wild. Both saw it and chased. Both dogs had gone through the birds which were most favorably scattered for good work, and which the horsemen flushed as they rode up. Graceful pointed a single bird, which flushed at the same moment. Duchess roaded to a flush. Next she pointed to caution when roading, pottered on, and the bird was flushed afterward. The work was poor and faulty. Both came in frequently to handlers for orders, and appeared to have little thought of birds.

The party went to lunch.

KENT'S MAID AND EARLY DAWN—Commenced at 1:05 and ran 23 minutes. Both pottered and loafed a great deal. Their range was close. Maid pointed a bevy in pines, then flushed it.

CONSCRIPT AND CROXIE KENT—Were started at 1:33, and ran 1h. 14m. The temperature was quite warm and not a breath of air was stirring. Conscript scented a bevy, and it flushed wild. On the scattered birds Croxie pointed a single. Conscript was out of sight a great deal and had an inordinate love for rabbit chasing. He was hard to manage. He showed good qualities for future improvement.

LADY PEG was cast off at 2:51 to run a bye. She had a number of good opportunities on birds, but she blundered badly, some of her errors being apparently willful. She had a moderately fair range.

*Second Series.*

LAD OF RUSH AND JINGO—Were started at 3:39 and ran 39m. There were sufficient birds in this heat to give abundant opportunities for good work, but only a small part was taken advantage of. Jingo was near a bevy which flushed in corn, but whether he pointed or flushed, I could not see. Lad went down into a hollow close by and pointed a bevy; it at the same time flushed wild. Sent on, Lad in heavy weeds roaded to a flush on a bevy. In woods on scattering birds both dogs made game. One of the handlers walked the birds up. Jingo made two points on a railroad embankment. Lad was fatigued and pottered betimes. Jingo was the better ranger.

HEMPSTEAD BLOSSOM AND GRACEFUL II.—Began at 4:25 and ran 35m. Blossom false pointed, and was backed. Both had their noses to the ground a great deal and pottered. Graceful dropped to a point on a bevy, Blossom dropping to a back. Both were steady to shot. Graceful found and pointed another bevy, got two points on single birds and was steady to wing and shot. Blossom backed.

DUCHESS OF HIGHLANDS—Started alone at 5:04 and was ordered up at 5:36. Nothing found.

## TUESDAY.

The coolness of the morning gradually changed to a warmer temperature. Heavy clouds on the horizon for a short time threatened a storm, but they soon disappeared. The sun then shone clear and the afternoon was warm. Birds were found in plenty. The work done, save a few heats, was exceedingly poor.

JINGO AND GRACEFUL II were started at 8:40. They were soon separated, Graceful going up a hollow, pottering here and there. She was given ample time each time to attempt to locate. While being brought back to join Jingo, Graceful made game, but so uncertainly that it was difficult to believe she was working on quails. She went into a brook and was soon out of sight. Soon a bevy flushed close by the brook where she disappeared, but whether she pointed or flushed is not known. On the way to join Jingo she false-pointed. Jingo in the meantime had roaded nicely to a point on a bevy and was steady to shot. Jingo ranged with judgment and industry. Up at 8:59.

LAD OF RUSH AND GRACEFUL II. were started at 9:00 and ran ten minutes. Both pottered wearisomely in good, open fields. They worked close to their handlers and constant urging did not keep them from putting their noses to the ground. Lad held his speed and industry comparatively the better, but neither made any showing worthy of commendation.

This finished the running of a stake which was most weakly contested.

The judges announced that Jingo won first, Lad of Rush second, and Graceful II. third. Four hundred to first, $250 to second, $150 to third. Winner of Derby, $100 additional.

### The Setter Derby.

This stake had twenty-three starters. There were a few heats in the first series in which some excellent work was done, otherwise the running on Tuesday was very inferior, the point work being particularly bungling and full of errors.

The dogs were drawn to run as follows, but did not so run on account of the non-appearance of Nahmke Alice:

Avent & Thayer Kennels' black and white dog Kingston Chance—Bessie Avent), J. M. Avent, handler,

*with*

T. G. Davey's black, white and tan bitch Brighton Clip (Canadian Jester—Lassie), T. Hallam, handler.

---

Blue Ridge Kennels' lemon and white dog Hope's Mint (Gath's Hope—Dashing Lady), D. E. Rose, handler,

*with*

Avent & Thayer Kennels' black, white and tan dog Hamlet (Chance—Bessie Avent), J. M. Avent, handler.

---

E. W. Durkee's bitch Nahmke Alice (Nahmke Philip—Mercy), Tom Aldrich, handler.

*with*

Avent & Thayer Kennels' black, white and tan dog Chevalier (Jean Val Jean—Lucy Avent), J. M. Avent, handler,

---

W. T. Hunter's black, white and tan bitch Gladstone's Pet (Roderigo—Gladstone's Girl), Geo. E. Gray, handler,

*with*

H. Merriam's black, white and tan bitch Tan (Nat Goodwin—Royal Myrtle), S. C. Bradley, handler.

---

J. L. Sneed's black, white and tan dog Clem Gladstone (Paul Gladstone—Latonia), G. E. Gray, handler,

*with*

J. L. Adams's black, white and tan dog Cecil H. (Dr. Maclin—Cossette), L. W. Blankenbaker, handler.

---

P. Lorillard, Jr.'s black, white and tan bitch Dot Rogers (Roderigo—Gladstone's Girl), C. Tucker, handler,

*with*

Blue Ridge Kennels' black, white and tan dog Dick Fox (Chance—Countess Rush), D. E. Rose, handler.

---

Avent & Thayer Kennels' black and white dog Bonair (Roderigo—Juno A.), J. M. Avent, handler,

*with*

Thos. Johnson's black dog Winnipeg (Manitoba Toss—Pitti Sing), W. J. Giles, handler.

---

P. Lorillard, Jr.'s, orange and white bitch Maiden Mine (Vanguard—Georgia Belle), C. Tucker, handler,

*with*

Avent & Thayer's black, white and tan dog Lochinvar (Chance—Bessie Avent), J. M. Avent, handler.

---

E. W. Durkee's lemon and white dog (Nahmke Philip II. (Nahmke Philip—Mercy), T. Aldrich, handler,

*with*

W. T. Hunter's black bitch Duff (Monitoba Toss—Pitti Sing), Geo. E. Gray, handler.

---

Royal Robinson's black, white and tan bitch Gaiety (Lone Jack—Gay Pœbe), Geo. E. Gray, handler,

*with*

J. L. Adam's blue belton dog Sir Kent (Kent II.—Nicoletta), L. W. Blankenbaker, handler.

---

P. Lorillard, Jr.'s, black, white and tan bitch Rod's Sue (Rodeoigo—Gladstone Girl), C. Tucker, handler,

*with*

L. Gardner's black, white and tan dog Roger's Spark (Roger—Dora Deane), T. Aldrich, handler.

---

C. F. Joyce's black, white and tan dog Ky-Ko (Tan—Ightfield Sophie), F. S. Bevan, handler.

---

The winner of first, Maiden Mine, ran well, but did work, by force of circumstances, which was out of her class. She goes to her birds sometimes with quickness and accuracy, at other times she false points with equal earnestness. Cecil H. ran a good race, doing some excellent, sharp point work on birds, and making a superior showing in range, speed and judgment.

Dot Rogers was a better ranger than Roger's Spark, the latter excelling in point work.

*First Series.*

KINGSTON AND BRIGHTON CLIP—Were started at 9:15 and ran 25 minutes. Each got a point on the same bevy. Both steady to shot. Clip pointed and roaded; nothing found. Kingston backed. Clip pointed a bevy in a listless manner, and it flushed, one or two birds at a time. A little ordinary work was done on scattered birds. Clip ranged close and was slow. Kingston was the better, though his range was inferior. A poor heat in every way.

HOPE'S MINT AND HAMLET—Began at 8:43; down 38m. Hamlet, going up wind, flushed a bevy. On the scattered birds each flushed. Hamlet pointed a single. The rest flushed wild. in the open, a bevy flushed and Mint was in suspicious proximity. Mint flushed twice on scattered birds. Hamlet was the better and wider ranger. The work on birds was faulty and little compared to the opportunities.

Nahmke Alice, being absent, the next brace was called and started, the twenty minutes' grace being timed by the judges. Alice not appearing in that time, she was out of the stake.

CHEVALIER AND KY-KO began at 10:34 and run 59 minutes. The heat was a poor one. Ky-Ko was a close ranger, slow and weak in speed. Chevalier in woods flushed a bevy. In open weeds, Ky-Ko pointed a bevy and was steady to shot. Ky-Ko flushed a bird and Chevalier pointed one. Chevalier was the better ranger, though only fair.

GLADSTONE PET AND TAN were started at 11:37; down 25 minutes. Pet in the open flushed a bevy. In woods. Pet pointed; nothing found. Tan backed in a listless manner. Tan pointed scattered birds. Pet flushed scattered birds. The point work was inferior.

CLEM GLADSTONE AND CECIL H.—After lunch, at 1:20, they were started in the open. They were soon worked on birds flushed by horsemen. Cecil flushed one. Clem pointed a single in pines. He next flushed a single. Cecil pointed scattered birds in corn. Next she made two points on single birds in corn. Up at 2:06. Both ranged well. Cecil was sharper and quicker on birds. They were the first brace in the stake which, so far, had done any good ranging.

DOT ROGERS AND DICK FOX were started at 2:11. Up at 3:02. Dot pointed a bevy in a small patch of brush in the open field. She held her point nicely for a few moments. So far, it was nicely done; but she jumped in and flushed, then chased the birds to woods. A whipping improved her work. She next pointed a bevy nicely and was steady. Dick backed. The birds went off the Club's preserve, and could therefore not be followed. Dot was the better ranger and showed excellent qualities on birds, barring the unsteadiness. Both had narrowed their range at the end of the heat.

BONAIR AND WINNIPEG—Commenced at 3:05. Bon false pointed in open. Winnipeg flushed a bird and chased it vigorously. Bonair roaded to a flush on a bird down wind. Winnipeg flushed a bevy and chased it. He was ordered up at 3:50. Bonair was worked on the scattered birds. He showed fatigue and made a poor showing considering his opportunities. He roaded, but he needed a deal of coaching to get him to locate and point accurately on the single bird. Up at 4:03. Winnipeg had speed and range, but he was not well broken.

MAIDEN MINE AND LOCHINVAR—Began at 4:11. Maiden had a dashing way about her and went up to her birds with so much boldness and spirit that it looked as if she were not quite staunch, but she behaved well. First she pointed a bevy and held her point while her handler was walking up to her. The bevy flushed wild, and she behaved nicely. She next pointed a bird well. Both at the same time pointed some scattered birds in woods. Maiden flushed a bird. She next pointed; nothing found. She next pointed a single well. Next she pointed a bevy in pines. Up at 4:35. Both ranged well. Maiden was remarkably quick in her work on birds, going to them with a high nose and swiftly, but her work was marred by numerous false points. She would take all the work away from an average dog owing to her quickness. Her performance was good, yet she needs some finishing and more decision. She would point and go on of her own accord, but the constant stopping marred the good work that she could do.

NAHMKE PHILIP AND DUFF—Were started at 4:37. Duff pointed a single bird nicely. Duff pointed a bevy in woods, Philip at the time not being near. On the scattered birds Philip pointed one; Duff backed. They were run till about 5:10 without finding.

## WEDNESDAY.

The weather was cloudy and damp in the forenoon, and a rainstorm seemed to be a certainty. Later, the clouds disappeared for a time. The afternoon was close and sultry, there being a most uncomfortable oppressiveness in the atmosphere. Either the dogs were all out of form, or the weather conditions were unfavorable for good work, for a lower grade of work performed by good dogs was seldom seen. It was a most tiresome day from a field trial point of view. Birds, too, were hard to find and the grounds were difficult to work.

GAIETY AND SIR KENT—Began at 8:15 and ran 42m. Gaiety pointed a bevy in sedge. She next false pointed. Kent was tiring and at best ranged poorly. Gaiety was speedier and much the wider ranger. Kent was slow and ranged close to his handler.

ROD'S SUE AND ROGER'S SPARK—Began at 9. Spark became separated from her competitor and pointed a bevy indifferently. In a hollow, working on the scattered birds, Spark pointed one. Spark again pointed; Sue backed; nothing was found. Sue false pointed in woods. Spark backed. Spark pointed, then made game in woods; nothing found. Sue next made two points to which there was nothing. In open weeds, Spark pointed and Sue, forty yards away, jumped into a pretty back. Spark roaded up to a point on the bevy and was steady to shot. In pines, on the scattered birds, Sue made two points on singles, starting once on a chase, but stopped to order. Up at 10:06. Sue was the wider and better ranger, but her point work was inferior.

Nahmke Alice was started at 10:12 and was ordered up at 10:40. She pottered incessantly and pointed when she saw fit to do so, which was frequently. No birds found. She had been disqualified yesterday for not appearing when called. To-day Mr. Tracy informed the reporters that he had evidence that Alice was on the grounds before the twenty minutes grace had expired. The clause relating to the matter is as follows: "A dog absent more than twenty minutes when called, provided such delay was not caused by following the instructions of the judges, shall be declared out of the race," etc. Nahmke Alice was absent more than twenty minutes after being called, therefore, according to the rules, it was mandatory that she be declared out of the race. That she was on the grounds as a matter of hearsay was entirely irrelevant. The judges are supposed to act on personal knowledge and not on evidence. A dog could easily be on the club's grounds and still be absent from the trials. It is always better to live up to the rules.

*Second Series.*

Ten were left in for the second series. The work was extremely inferior. None of the dogs appeared to be able to do high-class work. The grounds were largely bare fields, corn fields or heavy ridge intermixed with briers. Birds were scarce, and such ones as were found went to thick cover, when flushed.

DICK FOX AND BONAIR ran a poor heat, the work on birds being extremely inferior. Dick pointed a bevy, getting quite close to it, and it flushed wild. He had the wind, and ought to have pointed it at a greater distance. Bonair roaded to a flush on a single bird and the rest flushed wild. Dick false-pointed and was backed well. Bonair pointed about ten points up wind of a single. Dick, at the same time, pointed; nothing found. He made two more similar points and flushed a single bird across wind. Started at 11:16 and ran twelve minutes. Bonair was the better ranger. Dick's range was ordinary. The heat was faulty and inferior.

DOT ROGERS AND HAMLET commenced at 11:33, and were ordered up at 11:57. Dot pointed a bevy nicely in woods and Hamlet backed. Both were steady to shot. It was a good piece of work. On the scattered birds, Dot ran quickly into a good point on a single. Hamlet flushed one. Dot stopped quickly on a good point on two birds in pines. She next pointed a bird. At the same time Hamlet pointed one. Dot was the faster, and her work on birds was remarkably speedy and positive. She went up to her birds in a gallop, with head well up.

MAIDEN MINE AND ROGER'S SPARK began at 1:16, after lunch. Spark pointed a bevy in woods. Each made two points on birds in woods. Maiden next pointed; nothing found. Sport backed. Up at 1:47.

HOPE'S MINT AND GAIETY began at 2:10, and ran 24 minutes. Mint flushed a bevy. Both ranged well. No more work on birds was done in the heat.

CECIL H. AND ROD'S SUE ran a long, discouraging heat. Both were industrious. Sue was the wider and better ranger. Both made a number of false points. The grounds were most unfavorable, the course being repeatedly changed on account of bare wheat fields, thickets and corn fields. The heat began at 2:42 and ended at 4:04. Sue pointed in ridge, Cecil backed; nothing found. Cecil pointed a single and Sue backed. Cecil nearly caught the bird, then it flushed. Cecil flushed a bevy down wind in woods. The dogs then became separated. Sue false pointed. Cecil pointed an owl or hawk in corn. Cecil pointed twice and nothing was found. In the meantime Sue had made a false point. The dogs were then brought together and sent on. Sue pointed a sparrow. This ended a poor heat.

CHEVALIER AND DOT ROGERS were cast off at 4:17 and ran till 4:35, both making a poor showing on birds. The judges flushed a bevy in heavy sedge, and the dogs were worked on the scattered birds marked down in open. Chevalier flushed one and tried to catch it as it flushed. Dot showed a disposition to chase, but stopped to order. Chevalier flushed one. He ranged close, and sometimes followed Dot, the latter being faster and wider in range.

After this heat ended, the judges declared the work for the day ended, the conditions apparently being against any good work.

A heavy rainstorm fell in the evening.

## THURSDAY.

The heavy rain of last night improved the conditions a great deal, and the character of the work improved accordingly. The weather cleared up in the middle of the forenoon. In the afternoon, it again became cloudy and a moderate stiff wind set in.

MAIDEN MINE AND CECIL H. were started at 8:38. Cecil roaded up wind to a flush on a bevy, a very poor piece of work. Maiden at the same time was making game. Each pointed one of the scattered birds in woods. Each backed. Both were steady to shot. Maiden made two more good points on single birds. In open sedge, Maiden pointed about 30yds. up wind of a bevy, doing a good piece of work. Cecil backed. The bevy flushed wild. Cecil pointed the scattered birds, Maiden a few feet away pointing or backing. In the open, Cecil made two false points. Maiden pointed larks. Up at 9:12. Both ranged well. Maiden was the quicker in point work, but showed a lack of confidence sometimes in working on birds, and many times she pointed when she ought not to. Both were industrious. Cecil was bolder on birds, but less skilful.

DOT ROGERS AND ROGER'S SPARK—Began at 9:17. Spark soon dropped to a point on a bevy. Dot was not near to back. Spark flushed a bevy, she having the wind of it. On the scattered birds, Spark pointed one in sedge and was steady to shot. Dot showed an inclination toward unsteadiness when a single flushed, but stopped to order. Dot pointed a bevy in pines. At the same time Spark pointed in the open; nothing found. Up at 9:32. Spark was a narrow ranger, but showed fairly good work on birds. Dot was much faster and sharper in bird work, and ranged far wider and better.

Rod's Sue was given another run, beginning at 9:39, and up at 10. She beat out her ground in beautiful style, found and pointed a bevy well and showed excellent judgment,

She was faulty in work on single birds, and showed a disposition to false point once in a while.

The judges soon announced Maiden Mine first, Cecil H. second, and Dot Rogers and Roger's Spark third.

The prizes were the same as in the Pointer Derby.

### The All-Age Pointer Stake.

This stake had thirteen entries. The work was inferior so far as it relates to good performance in finding and pointing. Many of the dogs ranged wide and fast, yet most of them were, in the manner of beating out the ground, lacking in judgment.

Lad of Rush was easily the best dog in the stake. He ran excellently well in his first heat, but fell off in his work afterward. At his best, he goes with speed and judgment, beats out a large area of ground and is a good performer on birds.

Wild Damon made a good, well-sustained showing. His range is good, and he is an industrious worker. He performs well in point work.

Sandford's Druid had little other than a racing gait to commend him. He took wide casts at great speed, but he did not beat out his ground and was ordinary in work on birds. Wide casts, with no reference to working likely places, and with large stretches of promising ground left unworked, is not good ranging. He is a young dog, and, if he only trains on properly, he will be an excellent field performer.

The order of running was as follows:

T. G. Davey's liver and white dog Westminster Drake (Lad of Bow—Kate VIII.), T. Hallam, handler,

*with*

J. L. Adams's liver and white dog Lad of Rush (Rush of Lad—Topsy L.), L. W. Blankenbaker, handler.

---

C. C. M. Hunt's lemon and white dog Grouse (Mainspring—Swan's Fly), S. C. Bradley, handler,

*with*

Hempstead Farm Kennels' liver and white dog Prawn (Crab—Polly Peacham), A. Cameron, handler.

---

Charlottesville Field Trial Kennels' liver and white dog Wild Damon (Damon—Flora), C. E. Buckle, handler,

*with*

Hempstead Farm Kennels' liver and white dog Hempstead Duke (Duke of Hessen—Lass of Bow), A. Cameron, handler.

---

John Simpkin's liver and white dog Bob (Beppo III.—Belle Brandon), H. Height, handler,

*with*

Hempstead Farm Kennels' liver and white dog Sandford Druid (Exon Don—Sandford Quince), A. Cameron, handler.

---

Charlottesville Field Trial Kennels' liver and white dog dog Exile (King of Kent—Hops), Capt. C. E. McMurdo, handler,

*with*

J. L. Adams's liver and white dog Franklin (Robin Adair—Blossom), L. W. Blankenbaker, handler.

---

C. C. Cushing's liver and white dog Jupiter (Tom Boline Belle C.), Major J. R. Purcell, handler,

*with*

Dr. D. W. Yandell's black and white dog Ben A. (Stoddard—Jett II ), Ed. Garr, handler.

---

T. Hitchcock, Jr.'s, liver and white dog Tory Baron (Duke of Hessen—Westminster Ina), a bye; John White, handler.

*First Series.*

WESTMINSTER DRAKE AND LAD OF RUSH—Began at 10:16 and ran 40m. Lad pointed a bevy. At the same time Drake in the open pointed a single, Drake moved on before it was flushed, and his handler flushed it afterward. Lad pointed a lark and was backed by Drake. Lad in the open near the edge of pine woods pointed a bevy and Drake backed. Drake was slow and a narrow ranger. Lad ranged wide and fast, beating out his ground fairly well, the fault being that in his wide casts he left too much intervening ground unworked.

GROUSE AND PRAWN ran 43m., beginning at 11:02. They were given a spin in the open, then worked on scattered birds. Prawn pointed a single, then roaded up and flushed it. Prawn soon again pointed and Grouse backed uncertainly; nothing found. Both dogs were making game in the open field when one of the handlers walked up the bevy accidentally. Each made a point on singles in pine woods and each backed, Grouse unsteadily. Both were industrious and ranged fairly well. The work on birds was poor.

WILD DAMON AND HEMPSTEAD DUKE began after lunch, at 12:52. Damon pointed a bevy in corn, Duke backing. Sent on after scattered birds, Damon made a point on two of them. Duke false pointed. Damon pointed, on the trail probably, the bevy flushing about 30yds. away. Damon next pointed a bird. Duke false pointed repeatedly and did not work independently. The work on birds was faulty.

BOB AND SANFORD'S DRUID commenced at 1:27. Both made game, roading and pointing alternately. Bob roaded to and secured a good point on birds. Druid pointed a single. Druid raced wide and fast, yet he did not seem to be searching for birds. He took long casts, but made no pretense of beating out his ground. Bob ranged wide at a less speed, but he was hunting for birds apparently. Up at 1:50.

EXILE AND FRANKLIN were started at 2:03. Exile pointed a sparrow. Franklin flushed a bird. Franklin made one point and Exile two, to which nothing was found. Both showed good speed and wide range. Franklin was disposed to false point. The work on birds was inferior. Up at 3.

JUPITER AND BEN A. were started at 3:08 and ran 21m. Ben had fairly good range and speed and performed creditably on birds. Jupiter ranged close and lacked speed, and did not make much showing on birds.

TORY BARON ran a bye, commencing at 3:36 and running 20m. He made a poor showing in every respect and had no chance whatever to win.

*Second Series.*

The judges announced four dogs in this series, with Exile and Hempstead Duke held in readiness in case they were needed.

LAD OF RUSH AND BOB were started at 4:13. Bob flushed a single and attempted to chase. Lad made a good find and point on four birds. Bob roaded well to a point on a single. Steady to shot. Bob pointed another single and Lad backed. Bob flushed and chased a short distance. Lad was the better ranger and the better performer on birds. Up at 4:56.

WILD DAMON AND SANDFORD DRUID began at 5:01. Both pointed a bevy in the open field and were steady to shot. In woods, Damon pointed a single nicely. Druid backed.

### FRIDAY.

The weather in the morning was cool and clear. Toward midday the sky was overcast with heavy clouds. There was every indication of a heavy storm, but the day ended without any interruption of the work by bad weather. Birds were extremely difficult to find. There were rumors that the grounds were constantly hunted over by bird and rabbit hunters. Dogs which were worked constantly in the open fields failed to find many birds. The dogs which were worked mostly in timber had better success in finding, but there was little opportunity then to test their speed and range.

WILD DAMON AND LAD OF RUSH were started at 8:24. Lad pointed a bevy in open sedge, and was steady to shot. Lad next, going down wind, flushed a bevy. Next he pointed a single bird in woods, and Damon flushed one. Up at 9:16. Both ranged well, though both were working in poorer form than that of yesterday. They, however, were industrious.

The judges then announced the winners: Lad of Rush, first; Wild Damon, second; Sandford Druid, third. Two hundred and fifty dollars to first, $175 to second and $125 to third.

*Final Heat.*

This was to determine the absolute winner of the Derby, the two first prize winners competing for it, the winner to get $100 additional to the $400 already won. The total value of the Setter and Pointer Derby was $1,700.

MAIDEN MINE AND JINGO began at 9:28 in a corn field, and no one would have suspected for a moment on the work done that the winners were running. Maiden seemed disinclined to work from the start. She was frivolous and out of form, false pointing repeatedly and making game where there was none. In the open field, she pointed a bevy. Jingo, at the same time about 40 yards across wind was making game. Jingo came in ahead and pointed the same bevy. Both steady to wing. On the scattered birds, Jingo flushed one, then pointed the scattered birds. Maiden made two good points on a single, and Jingo also pointed twice well. Then Maiden made a number of false points, a few more than Jingo, the latter, however, being well up in this respect in this heat. Both in the latter part of the heat loafed and trifled away their time, although Jingo was going far the better. Maiden followed him about or loafed impartially, and she was constantly trifling with false scents, or pointing at nothing. As the matter stood, Jingo was the better; for the same fault of pointing inaccurately, though in a modified form, was present in all Maiden Mine's work in the stake. Better yet, the judges should have withheld any decision, thus practically withholding the prize. The heat ended at 10:48, the dogs showing a constant inclination to do worse.

### The All-Age Setter Stake.

There were fifteen starters, drawn in the following order:

Whyte Bedford's orange and white bitch Zulu M (Toledo Blade—Rhet), A. P. Gilliam, handler,

*with*

Avent and Thayer Kennels' black, white and tan bitch Bettye S. (Roderigo—Bo Peep), J. M. Avent, handler.

JUDGE W. S. BELLE.
Central Field Trials.

A. Dill's black, white and tan dog Count Gladstone (Count Noble), John White, handler.

*with*

Blue Ridge Kennel's black and white dog Bob Cooper (Roi d'Or—Miss Nellie G), D. E. Rose, handler.

---

Pierre Lorillard, Jr.'s, lemon and white dog Count Anteo (Count Noble—Gladstone's Girl), C. Tucker, handler,

*with*

Avent and Thayer Kennels' black, white and tan bitch Novelist (Woodhill Bene—Llewellin Novelty), J. M. Avent, handler.

---

Pierre Lorillard, Jr.'s, black, white and tan bitch Lora (Gladstone's Boy—Ruby D.), C. Tucker, handler,

*with*

Ad. J. Klofanda's black, white and tan dog Dan Noble (Gladstone's Boy—Flora M.), Geo. E. Gray, handler.

---

Pierre Lorillard, Jr.'s, liver and white bitch Antevolo (Count Noble—Trickett II.), C. Tucker, handler,

*with*

Greenfield Hill Kennels' black, white and tan dog Harry C. (Roderigo—Countess House), S. C. Bradley, handler.

---

Pierre Lorillard, Jr.'s, lemon and white bitch Miss Ruby (Gladstone's Boy—Ruby R.) C. Tucker, handler,

*with*

Blue Ridge Kennels' black, white and tan bitch Gossip (Roderigo—Belle of Piedmont), D. E. Rose, handler.

---

E. W. Durkee's lemon and white dog Nahmke Philip (Ray Monarch—Saddlebags), T. Aldrich, handler,

*with*

T. G. Davey's black, white and tan dog Brighton Tobe (Locksley—Leddesdale VI.), T. Hallam, handler.

---

E. W. Durkee's cream and white bitch Nahmke Cheetah (Count Howard—Calico), T. Aldrich, handler.

---

Lora, winner of first, is now so well known to the field-trial public that any lengthy mention is unnecessary. She sustained her reputation as a reliable bitch, sound in all the particulars of good field work.

Bettye S. ran excellently well and proved a good second. She ranged well and her point work was superior.

Miss Ruby made a good competition in work on bevies and single birds, her judgment and skill in that respect being excellent, but she is deficient in width of range, though she is industrious. In respect to range and speed she was excelled by several in the stake.

*First Series.*

The work done in this series was inferior in quality and scant in quantity. The grounds were most difficult to work owing to the large areas sown in wheat and the roughness and irregularity of the available grounds.

ZULU M. AND BETTYE S.—Began at 10:59 and ran 46m. Zulu false pointed in woods. Bettye pointed a bevy in open sedge. Zulu came in shortly afterward and pointed the same bevy. Both were steady to shot. Each pointed a single in woods. Bettye finished the work on birds by pointing a single. She was much the wider and better ranger. Zulu was a fairly good ranger. Both were industrious.

Lunch was next in order.

COUNT GLADSTONE AND BOB COOPER—Began at 1:14 and ran till 2:21. Count started out immediately and was lost for some minutes. He gave little heed to the game. He was fast and took wide casts but had no range in the sense of beating out his ground in the interest of the gun. Count, after being captured, false pointed, Bob backed. Bob made an indifferent point on a bevy in a plum thicket. He was steady to shot. Count was not near to back. Count, about a quarter of a mile away, pointed two birds, and as his handler walked up he sprang in and flushed. In sedge on scattered birds Count pointed a single. He next flushed excusably in heavy sedge and next flushed a single. The work was poor. Count was most difficult to manage at any time, and some of the time he was unmanageable. Bob beat out his ground better but was lacking in dash, range and skill on birds.

COUNT ANTEO AND NOVELIST—Started at 2:30. Down 47m. Both ranged well at good speed. In a run heavily grown up to thick cover, Count was working when a bevy flushed in close proximity to him. On the scattered birds each made a good point on a single. Count flushed some scattered birds. He was a bit unsteady to shot. He false pointed in open sedge. Novelist went into woods and flushed a bevy. Count, close up, stopped to wing. Count was difficult to control.

LORA AND DAN NOBLE—Were started at 3:21 and ran till 3:50. Lora was far the better ranger and had the better judgment. Lora pointed a bevy in the open near the edge of pine woods. She was steady to shot. Dan made two good points on single birds, and flushed some scattered birds which he should have pointed. He was steady to shot. He showed overcaution among scattered birds, and a disposition to false point. He was a close ranger.

ANTEVOLO AND HARRY C.—Were started at 3:52. Both ranged well and at good speed. Harry pointed a bevy in sedge. He was steady to wing. Antevolo was not near. On the scattered birds, each made a good point. Each made a point in heavy grass, nothing found. They made game as if birds were about. Sent into a large field, both took a long cast and were found at the other end of the stubble pointing a bevy nicely. On the scattered birds, Harry flushed one. Down 29m. Antevolo remained out of sight too much.

MISS RUBY AND GOSSIP—Were cast off at 4:26 and ran till 4:48 Gossip had not gone more than 60yds. when she pointed a rabbit. Ruby backed. Ruby pointed a bevy in pines. Each pointed single birds. Gossip flushed twice. Ruby flushed a single and pointed on the foot scent. Ruby pointed; nothing found. Gossip pointed at the same moment the bird flushed. Each pointed single birds. Gossip caught scent of a bird and flushed willfully. Miss Ruby was the better worker.

### SATURDAY.

A cloudy morning soon brightened as the sun rose higher and dissipated the mists. The temperature was mild. Birds were found in abundance at times. The work on the whole was good.

NAHMKE PHILIP AND BRIGHTON TOBE were started at 8:45. They were middling good rangers. Tobe was not stanch on point, he showing a disposition to flush wilfully when he could safely do so. He first made a point, nothing found. Philip roaded slowly to a point on a bevy in sedge, and he was steady to shot. Tobe roaded a single bird to a flush. Philip roaded and pointed, finally getting too close on the bevy which flushed. Tobe pointed a single at the edge of woods. Philip took a cast about 200yds. away in the open and pointed a single bird stanchly and well. Tobe drew in and wilfully flushed a single. The speed of both was moderately fast, but they were industrious. Both pointed in a dispirited manner. Up at 9:37.

NAHMKE CHEETAH had the bye. She ran from 9:39 to 10:20. No birds found. She was slow in her speed when ranging, although she made a phantom burst of speed in a chase after a rabbit, catching up with it and bounding over it at full speed within a few yards.

*Second Series.*

Seven dogs were left in. The dogs selected were the best.

BETTYE S. AND ANTEVOLO were started at 10:44. Bettye was lost. When found, she was on a point. Nothing found. In pines, Bettye pointed a bevy and it flushed wild. Bettye next pointed a bevy in sedge and was steady to shot. Followed the scattered birds. Antevolo pointed footscent. Bettye pointed, moved on and flushed a single in dense heavy grass. Bettye next flushed a bird. Bettye ranged well and showed good finding and pointing qualities. Antevolo was hard to manage and lost to sight too much.

LORA AND ZULU M. began at 12:46, after lunch. Lora pointed in sedge on a side hill, then roaded about 20yds. down wind to a point on a bevy. Good work. She next pointed a single bird well on dry leaves. Zulu pointed a single and Lora backed. Lora was the superior in every respect, although Zulu showed good qualities.

BOB COOPER AND HARRY C.—Began at 1:22. Both dogs were found on a point in pines after one of the handlers had accidentally flushed the bevy close by them. Harry did a very poor piece of work on a bevy, pointing and circling it twice, making a flush. He next roaded across wind to a flush on a bevy. He appeared to be out of his habitual good performance. Bob flushed a single. There were many scattered birds nicely distributed for good work, yet the dogs passed close by and failed to notice any of the birds, thus losing good opportunities. Bob appeared careless and unconcerned as to whether he pointed or flushed.

Miss Ruby ran alone from 2:20 to 2:54. She pointed two bevies, one of which she roaded nicely. Her pace was a bit slow and she ranged narrow at times.

LORA AND BETTYE S.—Commenced their heat at 3:21. A bevy flushed near Bettye in a thicket in a hollow. Each pointed a bevy in woods. Steady to shot. Lora pointed there, birds had flushed. Bettye pointed, a single bird, probably. Steady to shot. Lora pointed a bevy in weeds. Bettye, 50yds. away, backed nicely. She next flushed in brush in hollow. Lora came in and pointed foot scent. There was so much rushing that the birds were all flushed, and it was difficult to determine whether it was the fault of dogs or handlers. Bettye flushed. Lora pointed a bevy. Up at 4:02.

The judges held quite a lengthy consultation.

BOB COOPER AND ANTEVOLO began at 4:22. Bob pointed a rabbit. Antevolo pointed a rabbit, and Bob backed prettily. Antevolo flushed a bevy, which ended his career in the stake. He was difficult to keep track of, being heady and disobedient. Both were going well.

BOB COOPER AND MISS RUBY began at 4:50. Bob in woods pointed a bevy. Ruby at the same time in the open pointed a bevy. On the scattered birds Bob pointed, Ruby backed. Ruby pointed in woods, and a bird overhead flew out of a small sapling. Bob pointed a bird at the edge of woods. Ruby soon afterwards pointed a bevy, and the heat ended. Time, 5:02. Bob was headstrong and hard to handle. He ran, however, better than in the first series.

The judges soon announced Lora, first; Bettye S. second, and Miss Ruby, third.

The prizes were the same as in the corresponding pointer stake.

*Absolute Winner.*

LORA—LAD OF RUSH began at 9:09, on Monday, to determine the absolute winner of the All-Age Stake. Both pointed in sedge in pines. Nothing found. Lora pointed a bevy in open sedge, and was steady to shot. Lad was out on a cast at the time. Each made a point on single birds. Lad

pointed a single in sedge and was well backed by Lora. Lad, going down wind, flushed a small bevy in thick cover in a run. In open weeds, Lora pointed very nicely as the result of an intelligent cast. The beat ended at 9:58. The heat was an excellent one. Though Lad of Rush was defeated, it was done by one of the grandest field performers of the season, if not the grandest. Lora had better judgment, beat out her ground with skill, and was strong in every detail of field work.

### Free-for-All Stake.

LEXINGTON, N. C., Dec. 11.—The drawing of the Free-for-All Stake took place to-night. There are eleven starters, drawn to run in the following order: Black Wonder with Bettye S, Rowdy Rod with Lora, Pitti Sing with Maid of Kent, Prawn with Orlando, Harry C. with Rip Rap. Tremont a bye. This stake has three prizes this year, $500 to first, $300 to second, and $200 to third, which is much better than giving $1,000 to one, as heretofore prevailed. The forfeit was $25, $25 additional to start. It will be Friday at the earliest before this stake is decided. Each heat lasts four hours in the first series, after which the judges exercise their discretion as to the rest of the competition.

This stake began Monday afternoon at 12:54, Black Wonder and Bettye S. starting the competition. The heat was remarkably well run, both dogs sustaining their pace and range well to the finish. In fact, they were going almost as fresh and strong as at the beginning. Bettye was the better, she ranging more systematically and with better judgment. Black Wonder was not staunch on his points, nor did he point with any firmness and style, and he required cautioning to keep him in line. He, notwithstanding, made some willful flushes, and was at different times annoyingly disobedient. Still it was an excellent heat, full of diligent work and successful finding. The handlers were mounted, which is a desirable innovation, since is it distressingly fatiguing to the handlers who are not physically strong, or who have two heats to run in succession. The handlers were separated a large part of the time during the heat.

B. WATERS.

## NASHVILLE DOG SHOW.

ONE of the most enjoyable little shows it has been our lot to attend was concluded last Friday evening at Nashville, Tenn. With the organization of the Cumberland Kennel Co. recently, an account of which was published in FOREST AND STREAM at the time, it was only natural that the members and others should feel like having a dog show. Fired with enthusiasm in favor of man's best friend, such men as a rule can only find vent for their feelings in holding a show as the best and only means of doing mission work, as it were, in the advancement of canine interests around them. Too often, we are sorry to say, such efforts meet with poor encouragement, and the going down into the pocket to make good in cold dollars the losses they have incurred is apt to strike a chill to their enthusiasm that cannot be sufficiently deplored. We sincerely trust that this will not be the case with the good fellows of the Hermitage and Cumberland Kennel Clubs. The latter is a company rather than a club, and organized for the purpose of breeding and selling Great Danes, pugs and Italian greyhounds, the first named more especially. Its members, in a great degree, also compose the Hermitage K. C., which is a club formed for giving shows, and is a member of the A. K. C.

The officers of the club are: President, John W. Fulghum; Vice-Presidents, Gen. W. H. Jackson and Capt. W. C. Smith; Secretary-Treasurer, Robert C. Stockton. The show committee consisted of Mr. Fulghum, Frank Searight, B. B. Allen, J. D. Frizzell and Mr. Stockton. W. C. Rayen is the veterinarian and Harry L. Goodman, manager of the Cumberland Kennel Co., superintended the show, everything in this respect being left in his entire charge, so that with the aid of Mr. Stockton he was able to give us a show excellently arranged, well managed and orderly. In fact, we were surprised on entering the building on Tuesday morning to find everything so neatly laid out. Of course, with Spratts Co. doing the benching and feeding this was to be expected, but still there are other and important items that must be attended before the wheels of a show can run smoothly, and we might say artistically. Catalogues, so well arranged and printed on such good paper, as to call for comment on the part of the old-timers, were on hand at the opening of the show, and the judges' books, with the judge's name in gold on the back, were the best that we have yet seen. The catalogue was singularly free from errors and one's only regret was that so many of the classes provided had to be drawn blank, both the liberal prize list and the well-known judges being entitled to a better entry than 165. Many of these were absent. The uncertainty and changing of judges may have had something to do with this. Mr. Roger Williams, prevented from being present owing to the sickness of his wife, his classes were taken by Mr. Davidson, which did not entail much extra work on the latter. Mr. Frizzell was the ring steward, the judging being done on the stage of Amusement Hall, in which the show was held, and as a ring steward he leaves little to be desired, getting the dogs in quickly and attending to details in a businesslike manner.

The attendance was fair to middling, the evenings seeing the largest crowds. The fair sex, for whose beauty Nashville is so justly celebrated, turned out in force, and occupying seats in front of the stage, enjoyed the novel spectacle which the judging afforded. The members of the club, after the first day, relied on their secretary to attend to the executive duties, and Mr. Stockton worked like a beaver, having a thoroughly just conception of his duties. Prize money was paid by check Friday A. M., and really we feel that to say any more would seem as if we were determined not to find fault. Nevertheless we must remark that the neatness of the show was marred somewhat by the rough backs to the benching along one aisle that had to do duty in the absence of part of Spratts' fixtures. This was a contretemps due to the carelessness of the Western Union Company, who, when Mr. Stockton wired Spratts for extra benching for forty dogs that Ben Lewis was bringing, made the wire read four instead of forty, which made a wide difference and a slight eyesore to the public, but the club had the courtesy to put the boards behind their own dogs rather than the visitors'. With these remarks I may as well give an account of the dogs that were there. The list of awards sent by wire were published exclusively in FOREST AND STREAM last week with the one mistake that Mr. R. G. H. Huntington's Jack Shepard won in bloodhounds instead of Bellhus, Jr., who was absent.

Mr. John Davidson was the first to enter the judging ring and we give his classes in rotation instead of in the ordinary way.

*Mr. John Davidson, Judge.*

RUSSIAN WOLFHOUNDS.—The only entry in dogs was the one Mr. Purbeck used to own, Philos IX.; he showed rather weak in pasterns, dirty in coat and his hocks turn in too much for a good one. He is well coated and a dog more of the Leekhol type. The bitch Kaluga is a poor sort, very much out in front, knuckles over, open feet, and forelegs not straight and is too full in brow, not having the lovely profile of a Modjeska or a Princess Irma. Deerhounds proved blank classes.

GREYHOUNDS.—The entries were few in number, but there were two or three present that would "stand some beating" anywhere. Champion Master Rich, looking as fit as a fiddle, was one of them; he moves a bit dicky behind now and did not look so good in spread of quarters as I have seen him in times past. The former partners in the Rockwood-Landseer Kennels, Roger Williams and Dr. Van Hummel, each had a dog in the open class, Van's Orell, the latter's dog, beating Salvator. The winner was formerly Faugh-a-Ballah, shown at Lexington, Ky., last fall. Van's feet are thick through the pads, but toes not close enough; he needs more rib and is plain in quarters, still he beats the slim-waisted Salvator, whose feet are open and is too high in skull, otherwise he is nicely formed. The bitch class introduced to us a good one, Viola, a bitch out of Verdure Clad, by Brabazoun, bred and owned by Dr. Van Hummel. She is a trifle small-sized, but behind the head one finds little to quarrel with, but much to praise, very good in ribs, loin and quarters, and especially broad in second thighs; she is weak in muzzle and short in head. Idle Wild, second, is not in it with her, flat-sided, open in feet and not good in head.

FOXHOUNDS.—Roger Williams's Ranger II., strange to say in such a fox hunting country as Tennessee, was the only one present, and he is not what one might say is a flyer on the bench, whatever he may be in the blue grass

SEC'Y ROBERT C STOCKTON.
Nashville Dog Show.

ranges of his native Kentucky; too long in body, back on his pasterns, bad feet and is not ribbed up enough, rather good head, neck and shoulders. This was the dog that arrived too late for Brooklyn judging.

POINTERS.—One entry in each class was the order here, and all but two are dogs whose names are household words in the fancy. Inspiration for challenge dogs. Looking better than at Brooklyn, but would still do with five pounds more flesh on him; Fan N, in challenge bitches; Rock II., from Philadelphia, in open dogs, these were all in Ben Lewis's string. The bitch entry was absent, and the dog puppy Oscar is quite a nice one by Ossian, good bone, well formed body, good legs and fair head, but ears not well carried.

ENGLISH SETTERS.—These classes turned out a little better. Edgemark in challenge dogs was entered, but absent,

BLOODHOUND JACK SHEPARD,
Owned by Mr. G. H. R. Huntington, Chicago, Ill.

Benzine being the only well known dog present, and in that dog class he met a worthy competitor in Max Noble, a little long cast but nice head, good legs and bone, a trifle light behind; Benzine lost to him in neck and shoulders, forelegs and hind action. Direct was in poor shape, is back on pasterns and flat-sided. Mr. Shriver showed something better, however, in bitches, his Nettie G., rather narrow chested, is very good in body, and especially so in quarters. Cleo S., second, turns her feet out and her head is only plain. Cosette, vhc., stands on poor feet, has not enough stop, and is plain in muzzle. A Gath's Mark pup out of Cosette, also Mr. Shriver's, easily beat the coarse-headed Echo, from whom a prize was withheld. Then two bitch pups by Gath's Mark, also from the Shriver kennel, completed the list. Rosa Bonheur is not much better than Glass; both have good bone, but are deficient in squareness of muzzle. The kennel prize went to Mr. Shriver.

IRISH SETTERS.—The Irish cause was well backed up by entries from the Oak Grove Kennel, in fact their seven entries comprised the lot shown and were really put down in full bloom. It reminded me of the old "Berkely" days in 1881, to see Ben at work on the reds with chamois and elbow grease. In a challenge class of dogs with Kildare, Dick Swiveler and Seminole entered the latter was the only one out for the dollars, his color is hardly as rich as the others and he stands a bit wide in front. Kildare and Dick Swiveler were out for specials only. In bitches with Norna and Edna H. entered, the latter was the only one to appear and shining like a new dollar walked out with the ribbon, though she has a rather plain head. Open dogs had no entries, but the bitch class contained Rose Sarsfield and Alice Kent, both well known and at Brooklyn a fortnight since. Rose Sarsfield wins easily in color and body, Alice has the better head but both lose to a good one in feet. Oak Grove of course took the kennel prize.

GORDON SETTERS.—The same old crowd. Of course Dr. Dixon is not to be blamed that he shows the same dogs so often, but it would add a little to the interest in this breed if there was a little diversion made. This eternal repetition of Ivanhoe, Duchess of Waverly, Duke of Wellington, Princess Louise, etc., is getting tiresome, but there seem to be no new ones coming on fit to take their places. There is a wide margin for improvement in this breed, especially in coloring, for most of the tan seen lacks richness, is either too dark, smutty or washy. Duke, who ran second to Duke of Wellington in open dogs, has a better head, but has a light eye and narrow front, the other is well known, and though he loses in neck and shoulders to Duke, is better in loin and quarters, there is little between them. In bitches the well known Princess Louise scores over Dago, from the same kennel, in body, head and tan.

SPANIELS were poor—a nondescript lot. Many of the classes were marked no entry. The one so-called Irish water spaniel class was represented by a cropped-tailed dog with a wavy coat, no pretensions to the breed at all; prize rightly withheld and explanation offered to the owner. Clumbers of course had no entry, but a liberal classification. Field spaniels also were *non est*, and the cocker challenge classes had no aspirants for honors. Open dogs, any color, had three entries, one absent. There was little type here, and first went to Jacko, a dog whose legs would command appreciative attention at Hornellsville, long in body also and just a fair head, but a rank bad cocker all round; second, Bowman's Romeo, is curly-coated, long-faced—in fact, n. g. Bitches had five entries, four present, Swiss Mountain Kennels' Miss Waggles marked absent. The winner, Tess De Urbeville, is not so aristocratic in form as in name, in fact, the latter part is the only noticeable one from a fancier's standpoint. She is a smart looking little thing enough, but wavy-coated, what there was of it, and too long in body Mate, second, is fat, but had pretensions to type, an all-black with fair coat. Juliet, vhc., is very poor, in fact, none of them are worth criticising.

BEAGLES—Quite a fine collection for a new country, with two well-known dogs present, Ch. June M. was alone in challenge class, and she looked very nice. The open dogs brought out a really good, workmanlike dog in Cockrill's Doctor, one of the best bodies going, splendid bone, well shaped and on fairly good feet, nice carriage of stern, skull good, muzzle too long but fairly deep, ears too broad and not very nicely hung, fair coat, a dog that if well bred should do nicely with weedy stock; he is quite large enough. Drane, second, is too large and coarse, especially in head, but was fairly well put together and looked like pushing a hare to extremities. In bitches, the well-known Parthenia, picking up a bit, was easily winner; second going to Susie, whose light body, lack of rib and soft coat were in strong contrast; Maggie is weedy all through. Middleton Kennels' Snow was absent. Mr. J. R. Cockrill took the kennel prize. This concluded Mr. Davidson's labors.

*Mr. James Mortimer, Judge.*

MASTIFFS.—I have seen many a worse lot at more pretentious shows. There were only four present, with no challengers. In dogs the winner, a son of Beaufort and Vistula II., Beauregarde by name, is far too small in ear and not carried right, a short, fairly well-formed head, muzzle not deep enough, hind action owing to faulty hocks left something to be desired; Robert E. Lee, second, is a bigger dog, head not so typical as the other, flat feet but has better bone and is much better behind than the other, and therefore superior in action. Taking character into consideration the decision was right. In bitches our old Danbury friend scored over Winnie B., a bitch by Ormonde out of Lady Cobrey, a poor-headed slack-backed one, with poor hind action, nice ear; neither are good in feet. No puppies.

GREAT DANES.—An imposing collection, the Cumberland Kennel Co. and the Shoquoquon Kennels being the main exhibitors. With Imperator absent, Melac and Pedro were the aspirants for challenge honors. Melac had just as much as he could do to pull in a winner. Of course Pedro's turned in feet are against him, but he is much better in head and arch of loin than the winner, but there is no denying the latter's good legs, bone, ribs and size; his head does not improve with age, expression heavy and head coarse. Pedro was shown well, while Melac was off color. In open dogs there was room for difference of opinion, a lot of undeveloped dogs being brought forward. The winner, Theseus, is light yet in loin and body, but stands on capital legs, is of good style and type throughout, though head will be probably on his daddy Melac's order, and tail is too curled. Norman, second, is an imported red fawn, and not a dog that impresses one very favorably. His head is short; throaty, is rather flat in loin, quarters and thighs good, also legs and feet. Prince Leo, third, is rather straight-faced, is heavy in shoulders, feet a little open, nice body and bone. Anderson's Sandor, I thought, hardly got his deserts. He has the best and cleanest head in the class, nice long neck, fairly clean; his ribs need more spring, and loin might be broader, but it is well shaped. Bitches had six entries, one absentee. First went to Minerva, a nicely turned bitch, hardly furnished yet, legs fairly good and a head like the dog winner. She stands bad on pasterns. Phœbe, second, dips a bit in back. I liked her, barring this, as well as the winner. She is better on feet, but her carriage of stern is not so good. Charmion, third, is heavy in front, has open, flat feet, good body, quarters and loin. Zellar, vhc., a very light-colored bitch, loses in muzzle, and is throaty, excellent forelegs and shoulders, has, however, a rather plain, heavy look all through, and did not show well, being in season. Jackson's Juno is small, only a six months' puppy. In bitch puppies she won over Halka, who is larger, of same litter, and, I thought, better in head, legs and feet. Cumberland Kennels of course took the kennel prize.

ST. BERNARDS.—One could not expect much so far from St. Bernard centers, nor was one disappointed, for there were only two really good dogs, Casper and Lord Milton. Casper, the winner, did not look so well as when I saw him at Toledo years ago, and though he has a long head with not enough stop, still he shows quality and is well colored, of good size, good bone, and nicely put together: in fact, I remember that at Toledo he ran Plinlimmon, Jr., very close. Fernwood Bruce, Jr., is light in body and color, and coat inclined to curl, he is 9mos. old only, faulty in pasterns and feet, a little too much stop and inclined to dish-face, a nice youngster of good size that is bound to improve, for he shows quality. Count Bruno, third, has a plain head, hocks too close and body not depth enough. Sir Barry Bedivere, vhc., has not a bad head, fair front, coat curly, but has a good deal of white. Bitches had three entries, and Silvern returned the winner. They were a bad lot, the winner lacks quality, and only one side of head is marked at all, body nearly all white and long, feet open, but good bone, legs and action, gooseberry eyes, head fairly well shaped, but common. Lady Watch, though lacking shadings, has a fair head, but loses in depth, rather short body, but well ribbed. I thought she would have won on account of the other's bad markings, a dog with only one side of head marked lacks type and character. Lady Herbert, third, has a flat, snipy head, faulty quarters and stifle. Fernwood Bruce, Jr., won easy in puppies. The bitch pup Princess Josphine II. is plain in type, good bone and coat. Novice wins repeated.

In smooth open dogs (2), Lord Milton was strictly ahead of anything in the show as regards head properties and qualities. He resembles his brother Melrose to a T, but is a size or two smaller. Prince Ivo is better in pasterns than the winner, is rather roached-backed and has a long, narrow head, good bone. Prince Beno, given second in puppies, has a weak head with no shadings, good legs and body. Novice followed the open awards.

NEWFOUNDLANDS.—A poor lot. In dogs the winner, Surpass, has the shorter head, but Jumbo has a smaller, smoother ear, deeper body, bigger and more bone. Sport,

hc., is small and weedy. Nellie Bly, third in bitches, is a snipy-faced, fat animal, with a fair coat and very short legs; no other prizes given.

COLLIES.—The Chestnut Hill Kennels entered a number of dogs, but failed to answer the call. This left challenge classes bare. The Argyle Kennels, however, made a brave showing, and Mr. George S. Siddons was welcomed to the fancier ranks. He cleaned the boards of all the prizes, having the only collies in the show. In open dogs the winner, Roslyn Tory, beat his kennel mate, Argyle Mac, in feet—the latter being very open—loin and quarters, the latter also knuckles a bit and is not straight in front. I thought him, however, better in coat and head than the other, better chest and shoulders and not so broad in skull as the winner. In bitches, Maud Marian, who has a plain, short head, had the class to herself. Argyle Andy, the dog puppy, has a nice head and expression, good bone and legs. In novices, Argyle Mac won, followed by same owner's Madcap Bess, whose feet turn out a bit and are open, ears big and carried low, a plain-faced bitch, with not much character. The Kennel prize, of course, went to Argyle Kennels.

POODLES.—The well known "rounders" Biglow and Paris had each a class, and consequently each went out with a ribbon. Neither had received Ben Lewis's finishing touches and straws in their coats were plentiful. In justice to Mr. Lewis, he had not returned from lunch when they were brought in.

BULLDOGS.—Quite a gallant show of these fellows, the Illwiss Kennels having a field day. Their exhibit commanded as much attention as anything in the show, as probably nine-tenths of the Nashville people had never seen a good one before. King Lud was marked for exhibition only, but he competed with the other nevertheless, and was beaten by his kennel mate champion Bo'swain in muzzle, bone, body and chest; neither are well out at shoulder. Duchess of Parma, in nice shape, represented the challenge bitches. Rustic Sovereign, the only entry in open dogs, was absent, as were all the Iolanthe entries. In bitches, that smart one, Peckham Lass, beats Lady Nan in volume of skull and shoulders. Lady Nan, second, is positively in at elbow, but is better broken up in face, deeper and broader in muzzle, better ribs, loin and quarters than Lass, but feet are open and is not as typical. The Illwiss Kennels of course took the kennel prize.

BULL-TERRIERS.—Frank Dole's Bonnie Princess, well known, hardly a flyer, but keeping well, was the only one present and took the ribbon in challenge bitches. Boston terriers were naturally drawn blank.

DACHSHUNDS.—All the three entries are well known. The challenge winner was Zula II., shown thin. Open dogs, Fritz K., that has been around all the shows this fall was the only entry, and this applies also to Jessie Victoria, first in bitches.

FOX-TERRIERS.—These little chaps turned up in force, comparatively speaking, though no challenge entries were seen. The open dog class called for six, but Ripon Stormer was an absentee. First went to Dixie Tartar, a son of Raby Mixer; he is a smart terrier, feet open a bit, little full in brow and body hardly well turned, a bit cloddy. Rustic Risk, second, is a bit wide in front and light in loin and quarters, head of good length, but plain. Risk of Sharon, also from the Rustic Kennels, is open in toes and big in ear, fair head and body. Gamester is a trifle straight behind, broad in skull and short-headed, an all white dog by Moonstone. First was withheld in bitches and second given to Julip, wide chested, plain head, too full in brow, a big bitch and coarse. Rustic Kennels, by dint of numbers, took the kennel prize. Wire-hairs had one entry present in the absence of Dandy Jack. Pincher, a little fuzzy customer from whom first was withheld, too short in head, etc.

IRISH TERRIERS.—Jackanapes was absent, but Lewis showed Galtees, well known on the late fall circuit: the judge thought it good enough for second only and graded the ribbon accordingly.

SCOTCH TERRIERS.—The Colored Preacher beat Ashley Plug in shoulders and body in the dog class, but loses to the other in coat, head and front. Feather Brain is too weedy to expect recognition and was lucky to get second competing with herself.

Welsh terriers, Bedlingtons and Dandie Dinmonts were drawn blank and the $5 prize in these classes could not hope to draw the dogs so far from home.

SKYE TERRIERS.—Of course distance is no object to Sir Stafford, he goes with the crowd and Ben Lewis. Then Ben showed Sir Thomas a worthy son of the old dog in the open dog class; very like Stafford in head and ears, nice long coat and body length, a little light in middle piece, nice bone and typical action. In the bitch class the prize was withheld from a nondescript. Clydesdales were *non est* as usual.

YORKSHIRE TERRIERS.—Two pretty fair specimens were put down one in each class, both owned by Dr. Oliver, of Chicago. Dick York is light in tan, nice body color, bit mixed perhaps, and coat of good length. The well known Minnie York won in bitches, she is a silvery blue and shown in good coat.

BLACK AND TAN TERRIERS.—The Rochelle Kennels cannot be stalled off by distance, and though it is risky work sending black and tans so far with the dangers of sudden change in temperature in view, they seemed to be quite happy. Broomfield Sultan won in challenge dogs and English Lady the corresponding class. In open dogs a plain one, very light in tan and with too much stop, was deemed just about good enough to save entry fee with a red ribbon. In bitches Majestic and Carmencita fought their Brooklyn battle over again; both are small and whippety, Carmencita has the best tan and thumb marks. Rochelle got the kennel prize. Toy terriers and whippets had no entries.

PUGS.—Nine of them altogether with Sprake in the challenge class. In open dogs a new one came out and is quite a smart little chap, who succeeded in downing the redoubtable Duke Howard of controversial fame; but Mr. Howard can take his medicine, for has he not told us so? Simple Ben, the winner, is small, very, has a better skull and wrinkle than Duke; Duke is a bit deeper in body and better in quarters and hindlegs, and if anything sports a closer curl. Ben, with the help of his namesake, carried his ear better than his opponent. Third went to Count, large, long muzzle, open in toes, excellent curl. Link, hc., is too fat and long in muzzle. Snipe, c., has big ears, carried high, head too big and "mastiffy." Then came the bitches, both having fair owners. Vega is now well known; she is a cobby little thing, nice body and curl, smothering the other in condition; perhaps I should reverse the order as Toadie was altogether too fat, though of good type of head and very wide in front naturally, and heavy in shoulders; she loses in muzzle to the winner but has a better eye—more prominent. Mrs. Davis then showed a smart little puppy by Sprake, whose blue ribbon somewhat consoled her for her disappointment in the other class.

KING CHARLES SPANIELS.—Only one shown, Royal Roy, well known, and he created a good deal of interest among the good people of Nashville, and I should not wonder at future shows if some local dogs are not shown, as he seemed to take. Blenheims were liberally provided for; in fact most of this classification was too liberal and not at all warranted by expectation. Two fair Italian greyhounds in Prince and Lotta, each scored without opposition in their respective classes for the Cumberland Kennel Co., and the judging closed. H. W. LACY.

Mr. Joe Lewis called at FOREST AND STREAM office in our absence, last Monday. He was on his way South with Mr. F. C. Fowler, proprietor of the Oak Grove Kennels. They intend picking up a few dogs at the trials.

## AMERICAN KENNEL CLUB MEETING.

THE quarterly meeting of the American Kennel Club was held at 44 Broadway, New York, on Thursday, Dec. 8. Present: August Belmont, president; E. M. Oldham, delegate American Spaniel Club; Dr. W. T. Foote and Chas. D. Bernheimer, for associate members; J. D. Shotwell, delegate Collie Club of America; H. E. Twyford, Continental Kennel Club Company; Wilson Fiske, delegate English Setter Club; A. H. Heppner, delegate German Mastiff or Great Dane Club of America; Jas. B. Blossom, delegate Gordon Setter Club of America; Dr. M. H. Cryer, delegate Keystone Kennel Club; Wm. Littaner, delegate Mohawk Valley Poultry and Kennel Club; Edward Brooks, delegate New England Field Trial Club; G. Muss-Arnolt, delegate Pointer Club of America; F. S. Webster, delegate Washington City Kennel Club; H. B. Cromwell, delegate Westminster Kennel Club.

The minutes of the previous meeting were read and confirmed. The Burlington County Agricultural Society and the New Jersey Kennel League were admitted as members of the American Kennel Club. Mr. Longstreet's credentials from the former society and Edwin H. Morris's for the latter were received. J. Flynn, Jr., was recognized as delegate from the Rhode Island Club. The resignation of the Chesapeake Bay Dog Club was accepted, the reasons for withdrawal being given as the allotment of show dates and non-acceptance of their delegate. The treasurer's statement of account was duly accepted, showing

| | |
|---|---|
| Receipts from all sources | $11,657.11 |
| Expenditures | 7,332.42 |
| Balance in treasury | $4,324.69 |

The report of the committee on rules was accepted and ordered to be printed in the next issue of the *Kennel Gazette*. The committee on dates for shows was continued.

W. A. Power attended the meeting as a representative of the Boston Terrier Club, and asked for an immediate decision regarding the recoguition of the breed by the American Kennel Club and the admission of the club. After some discussion the request was withdrawn in favor of a motion to request the committee on this subject to report at the next meeting of the club. It was further decided that in the mean time bench show committees may continue to make classes for the breed.

The Higginson appeal from the decision of the Rochester Kennel Club in the matter of the removal of Streatham Monarch, the bull-terrier, from their late show, was disallowed. The bill of L. F. Whitman, of Chicago, for expenses in attending as delegate for associate members was ordered to be paid.

The application by George Jarvis for the prefix Kent being objected to by the Westminster Kennel Club and two breeders it was referred to the advisory committee.

The application of the prefix Mont by Jas. Blossom was objected to by Edwin H. Morris, who gave as his reason the importation by him of champion Beaumont in 1888 and the subsequent use of Mont as kennel name, as a suffix, the present owning of dogs with such names, and the use of Mont by others to distinguish them as coming from the strain he introduced. This was also referred to the advisory committee.

The complaint of E. Bardoe Elliott against H. E. Twyford was partially read, and then referred to the advisory committee with power to act.

The complaint brought by Dr. J. Frank Perry against A. Eberhart for the attempt to substitute a picture of an English pug for one of his, was also referred to the advisory committee with power.

Jas. L. Anthony moved that the secretary arrange with the lawyers in charge of the club interests in connection with the Albany Kennel Club disqualification, and submit their accounts at the next meeting. He called attention to the importance of the decision.

A resolution was made disqualifying Mr. Paterson for nonpayment of the Shillcock claim for the amount due for a St. Bernard.

The secretary asked for the appointment of an auditing committee.

On application from the secretary for instructions he was authorized to return the contributions for the social club which was in contemplation.

The meeting then adjourned.

## A DAY AT NASHVILLE.

THE Nashville show, though quiet as far as attendance went in the daytime, was still an enjoyable one, and was interspersed with kindly attentions on the part of the club members. On Wednesday morning three teams were placed at the visitors' disposal, and under the guidance of Harry Goodman the following drove out to see the Cumberland Kennels: Messrs. John Davidson, James Mortimer, George S. Siddons, Dr. Van Hummell, Judge Naylor, "Capt." Murphy and the FOREST AND STREAM representative. The kennels are situated about three miles from the city. Arriving at the farm the party first took a look at the kennels, which are situated in the midst of a park-like country of 85 acres, the farm proper being 185. Beautiful trees cast a shade over the buildings and yards, and this inclosure, so large and well shaded, would seem to be an ideal resort for dogs. There is plenty of water on the land, and in fact no place could be better adapted for the purpose of dog breeding. The kennel building is not very elaborate, but still sufficient for the mild weather encountered in this region. The building is about 100 feet long and 18 feet wide, on each side are five yards, 50 by 25 feet, and inclosed by wire and lath fencing; those communicate by a hole in the side of the building with the interior compartments, which are some 10 by 12 feet, and divided by wire and laths. The dogs seem to be kept on the perfect liberty system, several "bunking" together, and no chaining.

There were several great Dane pups and a sort of "disappointing" St. Bernard by Alton that had met with reverses in early life and has been more or less crippled ever since. The principal dogs were of course at the show. As soon as the FOREST AND STREAM man had commemorated the event by shooting off his camera at the group, the party partook of Mr. Goodman's hospitality in the room devoted to the use of the members. Mr. Goodman resides in a capital brick house, surrounded by numerous outbuildings, in which is every convenience for heating from a boiler. Jokes were passed, Naylor was scored on his judgeship, and Judge Mortimer, in fact, the judicial element of one sort and another was quite *en evidence*, got off a neat little story which commented on the facilities afforded by this country in the matter of "justiceships" as compared "wid de ould counthry," to the confusion of the latter. Then we took trap again and a three mile drive brought us to the gates of the world-renowned Belle Meade stock farm.

We were expected, or seemed to be, which gratified our complacency just as well, and were quickly discussing the points of the noted race horses Luke Blackburn, Iroquois, Inspector B., Tremont, Don Sylva and Great Tom. Iroquois and Luke Blackburn perhaps commanded the most attention, and John Davidson, who is as good a judge of a horse as he is of a setter, gave it as his opinion that though Iroquois was a fine horse and very clean limbed, he thought Luke Blackburn showed more quality in head and neck. They were all in grand condition, and while gazing at them one could almost imagine one heard the refrain of the shouts of triumph that had greeted these gallant horses whose victories have commanded the attention of the civilized world. May they live long in their Southern home and add still further to the prestige of their strain. Each horse has a separate, well-shaded paddock and small stable, and in fact everything that a thoroughbred horse could possibly desire. There are about 120 brood mares on the place, and several of them were seen to be in foal as they lazily whisked their long tails and strolled over the blue grass ranges of the parks and paddocks. Among them the dam of Tammany commanded attention.

We also made the acquaintance and picture of a famous Belle Meade character. "Uncle Bob," who was a slave to old General Harding, the original owner of Belle Meade. "You gemmen come from New York, huh! New York's great place—got to keep yoh hand in yoh pocket all the time. What wid de cars running overhead and cars running underneath, if one don't catch you the other will!" This is how Uncle Bob expressed himself in referring to his visit to the Empire City recently. It would take too much space to enumerate all the interesting things we saw, but probably the herds of deer in the main park, which extends over some 4,000 or 5,000 acres, commanded as much attention as anything after the horses. Personally, what struck me most forcibly was the keen scent they seemed to have for a camera and their modest and retiring dispositions. Two bucks were seen fighting, and inspired with visions of a special triumph in the photography competition and with professional instinct to get a scoop on the set-to, I essayed to immortalize the interesting scene, but alack! my stalking education seems to have been neglected, and, probably, getting between the wind and their dignity I can positively affirm that the result was negative.

Returning to the town in the evening, we were all invited by the Cumberland Kennel Co. to dine with the club at the Maxwell House, where we met a number of members. Mr. Frank Searight, the president, taking the head of the table a pleasant two hours were spent in discussing both the very excellent menu and dogly subjects in general. There were no speeches, but deep down in our hearts was a very kindly feeling, that needed no expression, for the jolly Tennesseans who had given us so much pleasure. H. W. L.

## POINTS AND FLUSHES.

LEXINGTON, N. C., Dec. 10.—I have had three or four inquiries in respect to the order in which the English Setter Derby of the United States Field Trials Club was drawn. Those who are interested in the matter will find the order of running in FOREST AND STREAM of Nov. 17, in the report of the trials of the club.

I regret to learn that the Glenmore Kennels will be unable to start any of their Derby dogs in the Irish Setter Club's Trials, sickness of the dogs being the cause. It is most unfortunate and discouraging to the enterprising and meritorious Glenmore Kennels, but I feel sure that this misfortune will not lessen the plucky efforts of the kennel in furthering Irish setter interests.

Mr. P. Lorillard, Jr., has made a most wonderful list of winnings this year, as will be seen in the reports of the recent trials. Persistent and plucky competition backed by skillful management are sure to succeed. There is no one who does not feel pleased at Mr. Lorillard's success.

A remarkable circumstance in the list of field trial winners of this season is the number of bitches which have won. In the United States Field Trials Club's Pointer Derby, Mame S. and Lady Peg, two bitches, won second and third, Lad of Rush being first. Rod's Sue won the Eastern Derby, Lora won the All-Age Stake. Rod's Sue won in the Derby of the Philadelphia Club's trials, Dot Rogers being third. Lora and Miss Ruby captured second and third in the All-Age Stake. Graceful II. won third in the Central Club's Pointer Derby. Maiden Mine won the Setter Derby and Dot Rogers divided third with the dog Roger's Spark. Maiden Mine won the absolute heat of the Derby. In the All-Age Setter Stake the bitches Lora, Bettye S. and Miss Ruby made a clean sweep, taking first, second and third.

The manner in which some field trial clubs submit to the meddling of kennel owners and handlers is contemptibly weak and harmful. An instance occurred recently in which a prominent field trial club invited a gentleman to judge, and to oblige the club he consented. He knew how exacting and wearisome, often thankless, is the position of a judge. After he had consented the club received a letter from some one or other objecting to the gentleman as a judge. Thereupon the club became alarmed at the bugaboo, or valued a few dollars' worth of entry fees more than it did its manliness, and intimated to the judge that his withdrawal would benefit the club, whereupon he withdrew. Such a discourteous act on the one hand in respect to the judge, and pitifully weak act on the other in cringing to the noise of some owner or owners, apart from its offensiveness, is a very poor policy to follow. One timorous deference to some hungry aspirant for the club's money only leaves down the bars for a dozen other similar impertinences or dictations. The club should have stood by their judge after he had been engaged if every owner refused to enter. It should have shown some spirit, some individuality, some force, something other at least different from putty. The alarm and timidity were needless in that there were no grounds for them outside the club's gentle meekness. Field trials are the very life of kennel interests. By far the larger part of the owners and field trial competitors engage in these matters for the almighty dollar. The element of sport is trifling. Owners and handlers must go to field trials. Their existence as owners and handlers depends upon field trials. When they say they will not attend field trials they make a windy bluff. They always reconsider it before the next season sets in. Field trial club members could get along well if there were no field trials. Not so with breeders and handlers. There is too much bread and butter at stake. Nothing herein is intended against owners and handlers in their proper places. When they assume to dictate to an association whom it shall not engage to judge they are meddlers. If they do not approve of a judge or judges it is their privilege to remain away. In the matter of the protection of judges, clubs have been too indifferent in many particulars. They have permitted all kinds of disgruntled competitors to make any kind of remarks on the judges or their decisions. The judges should be under the protection of the club for which they are acting in so far as being treated with proper respect and courtesy are concerned. No insolence should be tolerated for a moment. These matters are not so bad now as they were a few years ago, and a few good public admonitions, containing names and circumstances, will make them less so in future. It is only necessary now for the circumstance to occur to have the rest follow, that is, the publicity. In justice to the gentleman aforementioned, it is but proper to mention that he did not furnish the information which I have used.

I received a letter from the well-known breeder of pointers, Major J. R. Purcell, than whom no more enthusiastic sportsman exists. In his letter, dated Dec. 10, Major Purcell reviews the heat between Lora and Heineken, as published in FOREST AND STREAM'S report of the Philadelphia Club's trials. It is impossible in the present crowded state of FOREST AND STREAM'S columns to give the letter at length, but it may be summed up by saying that Major Purcell holds contrary to everything said of Heineken and holds further that many doings of Heineken were not mentioned at all, the latter of which we, too, say is true, for if every time some dogs pointed, stopped to listen, stuck their noses

in the ground and bored for worms, etc., were mentioned, there would be reports like commons.

Mr. Frank Richards, whose illness was mentioned last week, is still confined to his room, but, it is a pleasure to write it, he is now free of the typhoid symptoms with which he was threatened.

A high price for a reading notice is $26.66 per word for 89 words, which the contract stated would be paid by *Turf, Field and Farm*. The Lord loves a cheerful giver.

The winnings of several of the field trial handlers amount to quite a large sum. The following is a list of their winnings at the United States, Eastern, Philadelphia and Central trials, the four-hour race of the latter not included:

| | | | |
|---|---|---|---|
| C. Tucker | $2,850 | G. R. Howse | $200 |
| L. W. Blankenbaker | 1,000 | C. E. Buckle | 175 |
| J. M. Avent | 775 | E. Richards | 150 |
| S. C. Bradley | 550 | Luke White | 150 |
| Capt. C. E. McMurdo | 500 | J. N. Lewis | 75 |
| J White | 250 | A. Cameron | 125 |

A total of $4,800 up to date, not a small sum, and only a part of what will be won before March next.

B. WATERS.

# DOG CHAT.

### Nashville Show.

The management realized the importance of gaining the aid of the daily press, and the *Daily American*, Nashville's paper, devoted columns of space to descriptions of the show and dogs present. On Thursday evening Gov. Buchanan paid a visit to the Amusement Hall, and with Mr. Lasseter, who, with Mr. Geo. G. Schenck, owns the Shoquoquon Kennels, acting as cicerone, he became quite interested in the dogs, and expressed his gratification that Nashville could boast of having so good a show. When we left the building the prize winners in each breed were being paraded on the stage, while Mr. E. B. Elliot acted as master of ceremonies, announcing the names and standing of each dog in proper order before an interested audience. We did not envy the "Professor's" task, for the dogs entered fully into the fun of the thing and echoed in their own fashion all the nice things Mr. Elliott had to say about them.

This is the first show the Nashville people have had under A. K. C. rules, and in talking over the matter with Mr. Stockton he informed us that the club's affiliation with the A.K.C. and the consequent necessity of "listing" or registering the dogs, had affected the entry very decidedly. The local people could not be brought to consider in an A. K. C. light the benefits that would accrue to them by paying a quarter extra for the additional privilege of paying a two dollar entry fee, which latter they also looked upon as an imposition, the entries last year having been free. Thus it came about that the Nashville dog held aloof and left the spoils to the visitors. Ben Lewis had a string of about fifty, nearly a third of the show, and thus secured the handler's prize of $25. John H. Naylor had a collection of Chicago dogs, but their quality in some breeds was second rate. "Justice of the Peace" Naylor consoled himself, however, in reflecting that this might be his last show, as the duties of his justice's office would be materially increased before long. A canal is to be cut through his bailiwick, and as some thousands of navvies are to be employed, "Die-hard" Naylor with his knowledge of their nature fully expects the emoluments of the office will be so materially increased that he need have no care for the morrow. For his sake, not the navvies', we trust his anticipations will be realized.

### Mr. Reick Buys Sir Bedivere.

"I've bought Sir Bedivere to add to my string. I'm sorry I can't see you, but I'm off to Europe on Wednesday. Sincerely, W. C. REICK." In these few words are we given to understand that the finest St. Bernard yet seen on the bench is now an inmate of the New York St. Bernard Kennels and a companion of Princess Florence, his only rival; Marvel, Kingston Regent and Refuge II. In St. Bernards there is no denying that Mr. Reick now has a "full house." It is not necessary to go into any details about Sir Bedivere, the king of St. Bernards needs no padding.

His record and the sensational price Mr. Sears gave for him is in the knowledge of every one. Mr. Sears, by this sale, seems in earnest in his wish to leave the fancy, and we can only regret that he should see fit to take such a step. We draw attention to Mr. Reick's intention to dispose of his brood bitches with the exception of Princess Florence, and it is his intention to confine his kennel to stud dogs only. To a busy man like Mr. Reick this is perhaps a wise decision, as a breeding kennel in keeping with his array of stud dogs would entail much worry, trouble and disappointment. Princess Florence was bred again to Marvel, Dec. 12, and let us hope another Duke of Maplecroft may be the result. Mr. Harry L. Friend has been engaged to look after the kennel, and his experience with dogs should enable him to put this crack kennel down in good shape at next W.K.C. show.

### The Gallup vs. Belmont Case.

In the *Kennel Gazette* for November we find the decision in full of the Court of Appeals in the Gallup vs. Belmont *et al* case. Quoting the opinion of the judges as to the effect of disqualification on the plaintiff's character he says: "What those officers (Albany K. C.) are disqualified from doing is not told to the public in the alleged libel. The question here is not as to the actual vote of the committee, but relates to the *effect on the public of the publication as to the character of the plaintiff*. There is nothing disgraceful in being disqualified. Judges of the Court of Appeals and justices of the Supreme Court are disqualified from acting at the end of the year in which they become seventy years old. It would not be libelous to publish the fact that one of these officers had become disqualified to serve. * * * If it were a matter of public knowledge to exhibit or take prizes at such a show required the possession of high intellectual moral or social qualities than the publication of a statement that he was disqualified might be considered a statement that he did not possess these qualities, and therefore 'one calculated to injure his charater,' etc., and the interlocutory judgment overruling the demurrer was reversed and judgment entered for the defendants on the demurrer with costs as stated in FOREST AND STREAM at the time.

### A Dog Show at Seattle.

The exhibit of dogs and poultry given in Seattle last January was so successful that it is to be repeated. The Western Washington Poultry Association and the Seattle Kennel Club will join in their second annual exhibit during the week beginning Jan. 9, 1893. The members of the two organizations are bent on making the event the best show of the kind ever held on the coast, and are working hard with that end in view.

### A New Cocker.

Mr. W. B. Palmer, of Hamilton, Canada, has purchased of Mr. T. McK. Robertson the black cocker dog Obo III. Obo III. is by champion Obo (Farrow's) out of Gipping Floss. Obo III. was imported by Mr. Robertson direct from the kennels of James Farrow, England, and will no doubt prove a valuable acquisition to the cocker world on this side.

### Sale of Philos IX.

During the Nashville show Mr. Frank S. Anderson, through Mr. Naylor, sold the Russian wolfhound Philos IX., to a local gentleman, Mr. Drouillard, for $175, and when we left, this gentleman was also considering favorably the proposition to purchase Kaluga at $100, from Mr. Roger Williams. Mr. Drouillard wished to be original and get out of the beaten path. It only shows that these dogs only require extensive showing to become generally known and admired.

### A Kennel Club for Hoboken.

There is a movement on foot in the above town to organize a kennel club, and a meeting for the purpose was to be held last week at Mr. George C. Rnuton's residence. Messrs. W. W. Pollock, George Brandt and D. P. Foster are interested in the movement. It is expected that if a club is formed a show will be given in the Curling Rink at some future date.

### Elmira Dog Show.

The Elmira Kennel Club have decided on the following dates for their first annual bench show: March 15, 16, 17 and 18, 1893. We are members of the American Kennel Club and intend holding a first-class bench show.—C. A. BOWMAN, Secretary.

### Rough on All of Them.

Bill Lovick's bull-terrier got his head stuck in a pitcher, and Bill cut off the head to save the pitcher, and then broke the pitcher to get the head out! But could he have done any different? C. H.

After Mr. E. B. Bishop's plucky spirit in sending his dogs so far from home to run at the field trials, it is discouraging that several of his dogs are unable, through sickness, to keep their engagements. Elphin, the smart Irish setter bitch which is said to be pretty as a picture when in health, is down with distemper at Lexington, N. C., and ch. Ruby Glenmore is in season. Elphin probably caught distemper at Columbus, O., trials, as we hear of others who have been similarly affected. Mr. Stafford, of Trenton, Tenn., had word from home, while attending the Nashville show, that two of the youngsters he had at Elizabethtown and Columbus are coming down with the dread disease.

A live stock insurance company, limited, has been formed in England, among the officers of which are several well-known fanciers. Dogs are insured against loss through injury by fire or accident and through death by natural causes, from the ages of one to seven years, at the rate of 7½ per cent. of two-thirds of their market value. In such a country as Great Britain, where the number of valuable dogs is so extensive, we should think that such a company would meet with support. There has been something of the sort suggested for this country, but there are scarely sufficient dogs to make such a venture remunerative.

Mr. Fred Duckworth, who was over here in 1881, and is a well-known bull-terrier man, is giving a show at Fleetwood, Lancashire, England. Mr. Duckworth owned Victoria, the noted bull-terrier bitch, and from him the late Mr. Ed. Porter purchased her in 1884, afterward doing a lot of winning with her in this country.

Mr. Jos. S. Diggle shows his interest in collies not only as secretary of the Northern and Midland Sheep Dog Club, of England, but in a more practicable manner by repurchasing what is considered about the best collie bitch living—Lady Christopher—for $2,200, with two puppies thrown in. He followed this up by paying $300 for the new dog Anfield Glen.

This is Mr. Pierre Lorillard, Jr.'s year in field trialdom, and in the same sense is it Mr. C. M. Tucker's, his manager and handler. Winning nearly $3,000 is not a bad season's work and exceeds even Mr. D. E. Rose's phenomenal run of last year. Mr. Lorillard has met defeat year after year with sportsmanlike stoicism, so that his run of good fortune this year by the aid of Lora and Rod's Sue is particularly gratifying. Mr. Tucker seems to take his success as a matter of course, and whether chewing the "cud" of bitterness in defeat or "Solace" in triumph, his features carry the same old look of immobility.

On Saturday evening, after the All-Age Setter Stake was decided at Lexington, N. C., Mr. Avent cast off his foxhounds, about eight couple, on a drag that had been laid to the village about four miles distant. The crowd was left at the start, and Messrs. Bayard Thayer, H. B. Duryea, J. M. Avent, B. Waters and "Dog Chat" followed through a nasty piece of woodland, when the two first-named missed the line. After a capital run, in which the FOREST AND STREAM men had the hounds to themselves for a mile or two, they were joined again by Mr. Avent and the hounds carried us straight to the village at a clipping pace. The music was glorious and the speed of the hounds such that we can quite enter into Mr. Avent's enthusiasm for his well-known strain. This is a pleasant diversion in the monotony of the field trials, and Mr. Avent is to be congratulated on the happy thought.

We trust it is not a freak of fancy, though we hear from a reliable source, that Mr. Huber, of Huber's Museum, New York city, intends to give a series of special dog shows in his museum. Our informant tells us that Great Danes will have the first call, Mr. Huber being himself a German, and an admirer of the breed. About four or five hundred dollars will be given in prizes, and Spratts Co., we believe, will bench and feed. A show of St. Bernards will follow in due season. Thus are the kennel interests of this country advanced and brought to public notice in strange and divers places.

Many a man will fight if you kick his dog who lets his wife carry in all the wood.—*Indianapolis Ram's Horn.*

A mistake or two crept into the report of Brooklyn show. Mr. Codington informs me that it was his St. Bernard dog Roland and not Roland, Jr., that won at Danbury show. In speaking of the bulldog not being broken up enough it should have been in "face" not "foreface."

When the Cumberland Kennel Co. were advised that Mr. Nichols was willing to sell Melac and his dogs, they sent Mr. Goodwin at once to Chicago. The latter saw Mr. Nichols, wired price, which was sent by wire, and Harry Goodman came back richer in the possession of Melac and seven young dogs.

An important meeting of the executive committee of the Canadian Kennel Club will be held at the Queens Hotel, Toronto, Dec. 20, at 3 P. M. The business done at the last meeting, which the president declared illegal, will be reconsidered.

The appreciation of our kennel special columns is increasing every week. We find that in this issue J. L. Luhn has trained pointer for sale; J. Dinkel, pointer bitch; Box 735 bull pups; Corktown kennels, cocker spaniels; P. M. Carman, pointer pups; H. M. Altick, English setter pups; Dr. W. Jarvis' noted Irish setter bitch, Maid; Merry Mount kennels, Great Dane pup; Ed. Carrier, well bred English setter pups; H. V. Jamieson, trained beagles and bitches in whelp; Chas. E. Bunn, mastiff pups; E. H. Moore, three litters St. Bernards; W. H. Pierce, a Paul Gladstone dog; C. Perrin Lawshe, bull bitch pup; J. F. Stoddard, broken beagles; Maumee Kennels, Rip Rap puppies, also Duke of Hessen pups out of well bred bitches; Rockland Kennels' Sale catalogue No. 1. New York St. Bernard Kennels, all their brood bitches. In the stud, attention is drawn to the New York St. Bernard Kennels' advt. of grand stud dogs, including Sir Bedivere.

Another year, profiting by experience, it would be well for the Hermitage Club to eliminate their puppy and novice classes, and this would enable them to give a better premium list to the smaller breeds. It is the intention of the club to materially increase its prize list. After the show was over Mr. Stockton intended to set to work and organize a circuit for next fall, in which Louisville will take the initiative, followed by Nashville, then Memphis, with St. Louis to close the run. This would certainly afford an excellent opportunity to get a good class of dogs, and as the shows would be held in December the fall list of shows would equal, if not exceed, that of the spring.

The Hepburn Kennels sold their young great Dane Leader to a gentleman in Central America at a long figure after the Brooklyn show, and the dog arrived at its destination in good shape. The Hepburn Kennels are importing a number of new ones, which will arrive in time for the W. K. C. show.

The English papers are full of the Birmingham show, which was a pronounced success in everything but the judging, which seems to have given anything but satisfaction in some of the breeds. Strange to say, in many of these cases the judges were known as "breeders, exhibitors and owners" for years back, of the breeds they adjudicated upon. The entries numbered 1,300. Further discussion of the show must be left for another week.

Dockleaf, the new star in the bulldog firmament, cost Mr. Woodiwiss $1,250, and at his first appearance beat all the cracks, winning two firsts and seven specials.

Absence at the Nashville show and the field trials has resulted in several news notes and business communications, sent privately to us, being neglected. We would urge upon our friends the fact that all business communications should be sent to the business manager to insure timely attention.

Mr. Bowden, the hero, or otherwise, of the photograph, intends to bring out ten shepherds with their dogs from different parts of England and Wales, and hold sheepdog trials at the World's Fair show. None but the best will be brought over in men and dogs, so *Stock-Keeper* says. All expenses to the shepherds with their dogs will be guaranteed and railroad passes have been furnished in this country. This enterprise should give a great impetus to the sheepdog trials in this country.

The New England Field Trial Club will hold their annual meeting at the Hotel Thorndike, Boston, on Tuesday, Jan. 3, 1893, at 7 P. M. A change in the constitution is contemplated.

We have received a copy of the second edition of the Am. Spaniel Club's Book, but have not yet had time to look through it.

The noted greyhounds Henmore King and Chips, imported by the Manatang Kennels, arrived early this month and were sent to Mr. Huntington's kennels. With them also came the fox-terrier Huic Holloa (Daviden—Dusky Grace).

## FATEFUL PORTENT OF THE DOG'S HOWL.

NEW BERNE, N. C., Nov. 29.—Much valuable information is constantly elicited through the columns of FOREST AND STREAM by the intelligent discussion of abstruse psychological and biological questions. I have been much interested in past years with investigations of a varied character, and more recently with the "panther's scream." Now, let us have your readers' views upon the "dog's howl." Does it portend death? Last April a strange dog came up on the stoop of a very dear friend's house in Jersey City and howled until it was driven away, and that night his married daughter living in the same city died. Last night, again, the brother of the Mayor of New Berne died. That same morning the Mayor's dog, an Irish setter, sat up and howled. I heard him myself, for I live directly opposite. Both these instances are authentic, and have come under my personal notice. H.

## UNITED STATES FIELD TRIALS.

INDIANAPOLIS, Ind., Dec. 11.—*Editor Forest and Stream:* The U. S. F. T. Club's second annual field trials will be continued on the grounds of the Southern Field Trial Club, at New Albany, Miss., beginning with the Setter Derby, Monday, Feb. 13, 1893, which will be followed with the Pointer All-Age Stake and the Setter All-Age Stake in the order named. All dogs on which the second payment has been made in the Setter Derby and first payment in the all-age stakes will be eligible to start on payment of the starting fee. P. T. MADISON, Sec.-Treas.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

BRED.

☞ **Prepared Blanks sent free on application.**

*Molly Glendyne II.—Glen Jarvis.* Glendyne Kennels' (Bristol, R. I.) Irish setter bitch Molly Glendyne II. (Glen Jarvis—Molly Glendyne) to their Glen Jarvis (Elcho, Jr.—Maid), Oct. 3.

*Gem of Kippen—Duke of Hessen.* Hempstead Farm's (Hempstead, L. I.) pointer bitch Gem of Kippen to their champion Duke of Hessen, Nov. 15.

*Lady—Conrad II.* W. W. Tucker's collie bitch Lady to Hempstead Farm's Conrad II., Nov. 15.

——*—Robert le Diable.* J. Van Pelt's pointer bitch —— to Hempstead Farm's champion Robert le Diable, Nov. 8.

*Hempstead Meg—Woodmansterne Trefoil.* Hempstead Farm's (Hempstead, L. I.) collie bitch Hempstead Meg to their Woodmansterne Trefoil, Oct. 14.

*Hempstead Countess—Conrad II.* Hempstead Farm's (Hempstead, L. I.) collie bitch Hempstead Countess to their Conrad II., Oct. 14.

——*—Robert le Diable.* H. E. Rice's pointer bitch —— to Hempstead Farm's champion Robert le Diable, Oct. 14.

*Marguerite II.—Duke of Hessen.* J. H. Dey's pointer bitch Marguerite II. to Hempstead Farm's champion Duke of Hessen, Oct. 19.

*Hempstead Lorna—Woodmansterne Trefoil.* Hempstead Farm's (Hempstead, L. I.) collie bitch Hempstead Lorna to their Woodmansterne Trefoil, Oct. 6.

*Lass of Bow—Sandford Duid.* J. H. Smith's pointer bitch champion Lass of Bow to Hempstead Farm's Sandford Druid, Oct. 1.

*Meadow Brook Meg—Conrad II.* Hempstead Farm's (Hempstead, L. I.) collie bitch Meadow Brook Meg to their Conrad II., Oct. 1.

*Lady Ellis—Woodmansterne Trefoil.* Hempstead Farm's (Hempstead, L. I.) collie bitch Lady Ellis to their Woodmansterne Trefoil, Oct. 1.

*Boski—Duke of Hessen.* C. B. Pineo's pointer bitch Boski to Hempstead Farm's champion Duke of Hessen, Oct. 1.

——*—Woodmansterne Trefoil.* Col. L. G. Cannon's collie bitch —— to Hempstead Farm's Woodmansterne Trefoil, Sept. 21.

*Lucille Kirke—Duke of Hessen.* A. Borie's (Louisville, Ky.) pointer bitch Lucille Kirke to Hempstead Farm's champion Duke of Hessen, Aug. 30.

*Wild Lilly—Pontiac.* G. W. Lovell's (Middleboro, Mass.) pointer bitch Wild Lilly (champion King of Kent—Lass of Kent) to his champion Pontiac (Milton Bang II.—Climax), Nov. 15.

*Wanda—Pontiac.* G. W. Lovell's (Middleboro, Mass.) pointer bitch Wanda (champion Graphic—Lady Vinnie) to his champion Pontiac (Milton's Bang II.—Climax), Nov. 2.

WHELPS.

☞ **Prepared Blanks sent free on application.**

*Georgiana.* Glendyne Kennels' (Bristol, R. I.) Irish setter bitch Georgiana (Bixbye Ruby—Victoria), Oct. 3, seven (six dogs), by their Glen Jarvis (Elcho, Jr.—Maid).

*Sedan.* Glendyne Kennels' (Bristol, R. I.) Irish setter bitch Sedan (Chester D. Herald—Nancy), Oct. 25, one dog, by their Glen Jarvis (Elcho, Jr.—Maid).

*Dimples.* Albion Beagle Kennels' (Toronto, Ont.) beagle bitch Dimples (Duster—Ringlett), Nov. 16, five (two dogs), by Hornell-Harmony Kennels' champion Royal Krueger (champion Bannerman—Cora).

*Zmeika.* Hempstead Farm's (Hempstead, L. I.) Russian wolfhound bitch Zmeika, Oct. 15, fourteen (eight dogs), by Duchess of Newcastle's Kaissack.

*Woodmansterne Deborah.* Hempstead Farm's (Hempstead, L. I.) collie bitch Woodmansterne Deborah, Sept. 21, eight (four dogs), by Rev. Hans F. Hamilton's Woodmansterne Crack.

*Lucille Kirke.* A. Borie's (Louisville, Ky.) pointer bitch Lucille Kirke, Oct. 30, ten (seven dogs), by Hempstead Farm's champion Duke of Hessen.

*Lou.* E. A. Carrier's (Westchester, Conn.) English setter bitch Lou (Gen. Ely's Breeze—Bessie Dale), Nov. 5, eleven (four dogs), by V. L. Bossa's Bow Bondhu (Gus Bondhu—Bo Peep).

SALES.

☞ **Prepared Blanks sent free on application.**

*Cinch's Pride.* Black, white and tan ticked English setter dog, whelped Sept. 8, 1892, by Cinch out of Delaware Girl, by Liberty Kennels, Hyattsville, O., to Rosenfeld Bros., Delaware, O.

*Seacroft Romulus.* Fox-terrier dog, whelped Aug. 2, 1891, by D'Orsey out of Damson, by C. S. Hanks, Manchester, Mass., to Prince Galitzin, Russia.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.*

C. H. W., Baltimore.—I have a fine young thoroughbred Scotch collie. He is in first class trim and very intelligent, but he has one fault, and about this it is I ask you kindly to give me information. He runs to every one that comes to the house, and is friendly to a wild degree. Can anything be done to prevent this? He is five months old. Do you think he will learn better as he grows older? I have tried to keep him away by kindness and by whipping, but with the next comer it is the same thing over again. Would be greatly oblized to you for any advice. Ans. Mr. Hammond, in his "Training vs. Breaking," relates that he has cured such cases by having the persons to whom the dog makes up thrash him, or by other severe measures rebuke his advances. If your collie finds by bitter experience that strangers are to be distrusted he will give over his friendly advances.

## An Unrivalled Route.

There is no better route between the West and East than the Chesapeake & Ohio, a railroad which reaches more health and pleasure resorts, passes through more grand and beautiful scenery, near more great battlefields, and over more historic ground than any other line in America. The famous F. F. V. Limited, running between Louisville, Cincinnati and New York via Washington, Baltimore and Philadelphia, is worthy of the road. It is a solid vestibuled, electric lighted train, with through dining car ventilated with electric fans, and the handsomest sleepers ever turned out by the Pullman Company, affording every possible comfort and luxury, and is conceded to be without a rival, even in this day of railroad perfection. For time tables and full information call on your nearest ticket agent, or address H. W. Fuller, General Passenger Agent, Washington, D. C.—*Adv.*

## ROD AND GUN AND CAMERA.

As a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM.

All photographs will be submitted to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities; and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us.

From time to time we shall reproduce by the half-tone process samples of the work submitted, and should the interest in FOREST AND STREAM'S Amateur Photography Collection prove to be what is anticipated, we may ask for an expression of opinion by a vote of all our readers after the manner of the successful and famous "Camp-Fire Flickering Vote." Such popular vote will be quite distinct from the award by the committee.

## ANSWERS TO CORRESPONDENTS.

L. D. H., Hartford, Conn.—1. Is there a law protecting the hair seals found off the Maine coast? and if so, what is it? 2. When do they breed? 3. Do they remain there all of the year, or do they migrate? and if so, where? 4. Can the skin be used for anything, or is it too oily? Ans.—1. No. 2. On rocky points and outlying ledges along the shore. 3. They remain throughout the year. 4. Yes, for clothing and covering trunks. The flesh is considered very palatable in Greenland. These remarks apply to the common harbor seals (*Phoca vitulina*).

W. P. S., Philadelphia.—Can you give me any information as to rearing and keeping game birds in confinement? Are there any books on the subject, and what are they? Ans.—You will find something in our Natural History columns to-day, a continuation from last week. There are other papers on the subject in FOREST AND STREAM, Sept. 3 and Sept. 24, 1891.

## A Worthy Representative.

HARBOR GRACE, Newfoundland, Nov. 16.—I take this opportunity to congratulate you on the many improvments made during the past year and to say how thankful I am for such a clean and healthy paper—a worthy representative of all manly sports, and especially worthy in that you have "the courage of your convictions" and always uphold the right because it is right. I have been a subscriber from your first year, have watched your progress and can speak understandingly, T. R. B.

# Canoeing.

## The Cruise of the Elsa.

*(Concluded from page 502.)*

PASSING Prescott and Ogdensburg, the current becomes stronger and the river begins to break up into different channels, and choosing the one next the Canadian shore as being sure to bring us into the Galop's Canal, we shortened sail in view of possible shallow water and noused the centerboard completely—none too soon! for soon, clukety-clunk went the rudder on the stony bottom over which we were flying along 7 miles an hour. The skipper's heart came into his mouth and he reduced sail still more, but the boat swept clear in this and several more small rips, and as dusk came on we hugged the shore close looking out for the entrance to the canal.

Soon an isolated crib with a flagpole, and beacon appeared ahead, which we rightly conjectured to have some connection with it, and dropping cau tiously past, for it was now quite dark, we espied lights close by, and hailing found we were actually in the canal itself and that all was clear ahead to the first lock, two miles. Hoisting sail again we soon covered the distance and ran into a slip behind a neat steam yacht, mooring "head and tail" for the night opposite the village of Cardinal.

The place was full of canal navvies, for the enlargement was in progress, and for the first time on the cruise it seemed likely that we should pass an uncomfortable night, but we finally found a quiet little inn close to the water and were fed and sheltered.

At 8 A. M. Elsa was duly entered in the canal office books, and paid twenty-five cents for a pass to Montreal. Armed with this document she passed through every lock west of Lachine without delay, except where other vessels were actually in the chamber before us, and in no single case was there a murmur from the tenders at being obliged to open the heavy gates for so tiny a craft.

Speeding down the wide canal below the locks with a fair breeze behind us and no anxiety about tacks or shoals, now chasing a flock of geese and anon exchanging salutations with the farmers and teamsters upon the towpath, Elsa and I were glad to acknowledge that, contrary to our expectations the passage of the canals, while not exciting, was by no means the least pleasant of our experiences.

Five miles brought us to another lock at the lower end of the canal and we passed again out on to the great rolling river for a short distance, when we entered the Rapide Flat at Morrisburg Canal. Here steam shovels and dredges were at work at intervals all the way along, and we experienced some little delay in getting past them, especially at one point where we met the steamer Alexandria coming up just where a large dredge occupied half the channel.

Hanging in the wind for a minute, Elsa waited until the big fellow's stern was clear and then hailed the captain upon his lofty perch and asked if she could pass. The august officer not returning any answer and the gap widening, the helm was put up and we darted for the opening, when lo! to the skipper's disgust, a line was hove from the steamer to the dredge, across our bows. Fearful of carrying away a spar and perhaps being dragged foul of the steamer's wheel, Elsa's helm was promptly laid hard across her, and leaving no room to come up in, she crashed into the bank with a thud which made everything on board jump.

The skipper for the first time on the voyage stood upon his quarter-deck and roundly abused the exalted commander on the steamboat, the more so as a clumsy deckhand had on his touching the bank jumped aboard the little yacht in order the better to be able to grasp and carry ashore another line from the vessel's bows—and was chewing up the dainty varnished foredeck with his great hobnailed boots. The captain taking the abuse very meekly and disclaiming any intention of violating the rights of the pigmy half-tonner alongside, Elsa's crew overcame their inclination to run into and sink the 200-tonner, and contented themselves with carrying the deckhand half a mile down the canal before setting him ashore. This was the only occasion on which Elsa met with discourtesy on the whole voyage.

At Morrisburg we landed for a few minutes only, fearing after our late start and numerous delays that we had lost too much time to be able to afford a dinner ashore. So the steward purchased a large bunch of grapes and off these and some crackers and cheese the crew made a meal.

So we flew along with a fair breeze and a current which ran at times three or four knots. The channel was most puzzling, sometimes hugging one bank and sometimes swinging round an island and over to the other, so that we had to jibe repeatedly and at times haul close to the wind. The meal was consequently taken by fits and starts in the intervals of straight running.

Overestimating our speed, we ran into the Farran's Point canal in mistake for the Cornwall and lost a half hour in locking when we might just as well have run the rapid, but by 4 P. M. we were fairly in the Cornwall canal, and landed on the tow path for a view of the Long Sault rapids.

While the Lachine are the best known and most celebrated, and the Cedars and Cascades probably more beautiful and diversified, the Long Sault is, I think, the wildest and most turbulent of the St. Lawrence River. One gets some idea of the volume and power of the great river as he watches the mighty surges and reflects that steamers of over 8ft. draft can pass over without touching. I believe it is an established fact that the mail steamers run through them some nine miles in all at an average speed of thirty miles an hour. As their speed is something less than fifteen miles in still water the velocity of the current must be about the same, which in spite of the picturesque accounts of travelers who shoot the rapids of comparatively paltry streams in bark canoes at "express train" speed, is an enormous velocity for moving water.

I got some idea as I looked of the labor of the earlier settlers and boatmen who started from Lachine with their Dedham boats and patiently "poled" and "tracked" with a line up the whole series of "chutes." And what shall be said of the nerve of the voyageur who first undertook to pilot one of the huge, unwieldy, square timber rafts of former days through that appalling vortex of tumbling and seething billows.

One of the most exciting passages I have ever made was that of the rapid of the same name on the Ottawa. The surges seemed paltry compared to those I was looking upon, but I remember that at times but little was visible of the forward portion of the raft except the bodies above the waist of the rowers pulling like steam engines at the great sweeps which steered her. Apart from the size of its "bouillons," the long Sault is an easy rapid to run, and few accidents have occurred upon it.

Evening was approaching, and wishing to have a clear day for Lake St. Francis on the morrow we could not linger as long as we could have wished over the fascinating scene. Starting again, the wind fell light, and we drifted slowly down upon Mille Roches, stopping at the hotel upon the bank for supper. Just at dusk a tug came down with a huge scow, and paddling out to her she obligingly caught our painter and towed us some three miles further. Here in a lock we overtook a tow of great grain barges and went through the remaining locks and on to Cornwall in their company, airing our French a little in conversation with the crew, all French Canadians. It was midnight before the last lock was passed and we pulled out on to the moonlit river and nearly 1 A. M. before Elsa found a comfortable and safe berth; so after trying in vain to arouse the inmates at three several hotels, we accepted gratefully a cot and a blanket in the lock tender's barracks, and were soon fast asleep.

Waking at daylight, we found a light easterly breeze blowing up the river and our tow of barges already departed, and wishing to make Valleyfield, if possible, that night, we pushed out at once into the great gray river, and were soon aided by the powerful current, making good headway beating from shore to shore. Landing three or four miles down we had breakfast at a farmhouse, and brought aboard some delicious apples. Breeze still ahead and failing, and at noon Elsa had only got fairly out on the lake and abreast of Lancaster. With a light air from the south, just sufficient to give steerage way but not enough to ruffle the polished steel metal surface of the water, we drew slowly down the shallow expanse, past several lighthouses on tiny artificial islands, praying for a breeze which never came.

As the afternoon drew on the sky became overcast and threatened rain, and at 5 P. M. we were fain to work ashore near a lighthouse at Pte. à Beaudet, just within the Province of Quebec. Our customary good luck brought us to comfortable quarters again, Elsa swinging in a shallow, reed encircled lagoon, and her crew reposing in the best room of a comfortable farmhouse, whose owner obstinately refused to receive any remuneration for his entertainment.

It had been a long day, and the crew were thoroughly tired. The morning broke rainy and dull, and it was Sunday morning withal, so it was later than usual ere the skipper bestirred himself, and nearly 9 before he had things ready for a start. The weather had meantime cleared a little, and a light northwesterly breeze was blowing, so sail was made without delay, and Elsa was headed for Valleyfield, 12 miles away on the opposite side of the lake. The big bridge over the river at Coteau soon began to loom up in the distance, and in an hour the spires of Valleyfield were in sight.

The breeze almost died away at one time and we began to fear that we should not have enough to stem the nasty cross current which makes the Beauharnais Canal so awkward to enter, but it luckily freshened again as we neared the range lights, and threading our way through the crooked channel we entered the canal a little after 11 A.M. A big Detroit propeller was coming out and we exchanged compliments with her captain as she swept by.

At the guard lock we suffered a few minutes' detention while some barges which had come down ahead of us were locked through and were the center of an admiring group of Sunday idlers. Then the great gates opened and we slipped in alongside of another barge which was awaiting her turn. In a few minutes we were through, and the breeze having gained strength in the interval we bowled merrily along the canal, which being retained on the north or weatherside by an embankment for its entire length, offering no obstruction to the wind, afforded some fine sailing.

A mile or two down we overhauled a pedestrian and took him aboard, greatly to his delight. Occasionally we caught beautiful glimpses of the rapids, and our friend pointed out the spot where the Columbian got ashore and was with great difficulty got off again. About five miles' run brought us to the first lift lock, after which they came at very short intervals, 7 or 8 in all, and at 4 P.M. we paddled out on to the final reach of water, Lake St. Louis.

Montreal Mountain showed up boldly ahead and it seemed as though we should easily make Dorval, some thirteen miles off, before 7 o'clock; but it was not to be. Getting abreast of Beauharnais the wind backed to the north and then to the northeast and dead ahead. It began to blow hard, too, raising an ugly, short, choppy sea; it was very cold and getting rapidly dark, and working under the lee of Isle Perrot the skipper landed to inquire for a berth. Some sportsmen with guns directed him to a wharf about a mile further back, behind which Elsa found a comfortable berth, and on the bank above the crew found a house whose inmates agreed to shelter them for the night.

In good time next morning Elsa shoved off and started for her last 10 mile sail, and an interesting and exciting one it was, with the water broken by reefs and shoals, and the wind coming in angry gusts out of the northeast. Clearing the shoals at last we took a long stretch to the northwest, and getting under the lee of the Montreal Island with smoother water the crew sponged out the water and shook the reefs out of the mainsail, and away we went past Pte. Claire and Valois Bay, until at 10.30 a line of masts announced the quarters of the St. Lawrence Y. C. fleet. Coming in stays opposite them Elsa ran merrily in among them, and fifteen minutes later we were at anchor and shaking hands heartily with the caretaker, and receiving his congratulations on the successful termination of the voyage.

In spite of the persistent heavy weather which was experienced all through Lake Ontario and the Bay of Quinte, the run had been a thoroughly enjoyable one, which the writer hopes to repeat again next summer in a still better boat, taking in if possible the A. C. A. meet as he goes. The Thousand Islands and the Bay of Quinte are ideal cruising grounds for a singlehander, and he would have been glad to spend more time among them than the day and a half consumed between Kingston and Brockville.

One great drawback experienced was the want of sleeping accommodations aboard. Not that the crew were subjected to any hardship or discomfort, but because of the anxiety which a properly constituted single-hander always suffers from when away from his boat. To camp ashore is almost out of the question, so much time being necessary to rig up and break camp, and cook. Elsa, or her successor, will be so fitted next summer that the crew can sleep and cook aboard.

I am repeatedly asked whether it is not lonely cruising by one's self all day. A man who can not find sufficient companionship in his boat, books, charts and barometer, and, above all, in communion with nature and her works, is no stuff of which to make a single hander, and had better ship aboard a big yacht with a few dozen of beer and a case of champagne. For myself, while I enjoy an afternoon sail with a boon companion, and the excitement of an occasional race with another boat, I find continual association with the same individual in a small boat much more likely to become irksome than solitude. "Two hearts which beat as one" are quite impossible to find, at any rate if they both belong to persons of the same sex. I have never felt lonely on any of my solitary voyages. "Never less alone than when alone." Hence, I have no use for any boat too large or too unhandy to be sailed by myself.

Six years ago I was one of Mr. Kuhardt's few supporters in his advocacy of the yawl rig, and I am still of the same mind and can find nothing which for all-round work is at all comparable with it.

Elsa, as will be seen from her photograph, is a cat yawl, an enlarged canoe, in fact. She is decidedly fast under the rig and handier than most boats, but she has two decided faults—without a jib it is difficult to get enough sail and good balance without carrying it very high aloft, which means diminished stiffness and a very heavy mast right in the eyes, and again, in a regular snorter it is impossible to stow a mere corner of the mainsail to lie to under without giving her some of the mizzen as well, owing to the forward position of the center of effort of mainsail. I purpose, therefore, coming back to the regular yawl, with mast stepped some 3 or 4ft. from the stem, and stayed if necessary.

I can heartily indorse the sail plan of La Gloria as very nearly the right thing. As for the model it is fine, but why cut the handsome fantail square off and clap a transom on, when the lines carried out fair would have allowed the boomkin to be dispensed with; and what is the objection to more dead rise and ballast where it would increase the power and ability of the boat so greatly. The bow lines are a trifle too full for my fancy, and I should imagine them rather conducive to splashing and pounding, but everything depends on the use and the waters for which the boat is intended. It is very pleasant indeed to see that, after good-humored arguments over points of design, the editor and the undersigned have so nearly touched one another in their ideas of what constitutes a first-rate single-hander.

COBOURG, Can. H. K. WICKSTEED.

## Royal C. C.

THE autumn general meeting of the Royal Canoe Club was held, or partly held, on Wednesday last; that is to say, that, the business before the meeting not having been concluded at a late hour, the meeting stands adjourned to some day early in December, to be fixed by the committee. The business of the evening was of an important character in more ways than one; it resulted in a complete change of officers, the adoption of Y. R. A. rating instead of over-all length for canoe yawls, the non-acceptance of sliding seats in the first class, and the passing by a majority of the new general purpose class (subject, however, to further consideration as to the effect of the rule in relation to majorities of votes). The election of captain to fill the vacancy caused by the death of the late captain, John Macgregor, was the first business. The names of Mr. George Herbert and of Mr. W. Baden-Powell ("Nautilus") were proposed. The meeting by a small majority decided that the election should proceed without any discussion as to qualifications. Mr. Baden-Powell thereupon declined to stand for the captaincy, and subsequently declined to be nominated as a "mate." Mr. Herbert was elected captain, and Messrs. Nisbet and Webster as mates.

The motion for the admission of sliding deck seats produced a very lively and long discussion, and when voted upon, though a majority was obtained, the requisite majority of two-thirds of the members present was not obtained. We think in the interests of canoe sailing that the loss of the motion is most unfortunate. The meeting then, with only one dissentient vote, passed the alteration of the rule of classification of canoe yawls, which now reads as follows: "A canoe yawl shall not exceed 20ft. in length over all; she shall not be of less beam than 3ft.; the depth from upper side of deck to under side of keel (measured at any point) shall not exceed 3ft.; no ballast shall be carried outside or below the garboards, excepting centre plates or drop keels; no transom or counter-stern. For racing purposes a canoe yawl shall not exceed the Y.R.A. rating of 0.5, found by $\frac{\text{Length of L.W.L.} \times \text{Sail Area}}{6000}$ in accordance with the Y.R.A. rules.

The certificate of such rating granted by the Y.R.A. or the Thames Boat Sailing Association (same rule) shall be deemed the yawl's rating, subject to verification by the R.C.C. committee at any time if necessary. The L.W.L. length shall be marked at each end, and such marks shall be visible above water when the yawl is lying in smooth water in complete and usual racing trim."

The next business was the introduction of a new rule, viz.: "New class, general canoe." As this is not finally settled, we defer setting it out till after the decision as to the voting has been settled. The point is possibly peculiar, and though we hold no personal doubt thereon, the question being now under consideration we give no opinion, but merely state the rule, thus: "No *rule* of the club shall be *changed* unless at a general meeting after due notice given of the proposed change; such *alteration* shall be approved by two-thirds of the members present at the time of voting"—the italics are ours. The question to be decided is whether a new rule proposed which does not *change* any existing rule of the club is subject to the ordinary rule of a bare majority vote, or to the particular vote above stated. The business in relation to proposed new club quarters on the Thames, a question which probably includes that of the future locality of the club races was, for want of time, adjourned, as also a motion in the alternative of the "new class" is not passed. The business at the adjourned meeting is, therefore, as important as that which was taken on Wednesday.—*Field.*

We learn with regret that Mr. Ford Jones, for so long one of the leading sailors in the A. C. A., is out of canoeing for some years, in all probability, as he leaves this week for Calgary, at the foot of the Rocky Mountains, to enter a legal partnership there.

### Driftwood from the East.

What an elegant showing Commodore Winne and Treasurer Wackerhagen have made with the A. C. A. finances during the past year. Something unique isn't it, this financial management of the funds so as to show that an economical administration can run the A. C. A. to a profit of $500 a year? Heavens, what a prospect! Why we'll own Willsboro in a few years at that rate. A permanent camp has, by the way, always been a hobby of mine. I don't believe that the men would get wearied of a permanent camp. Put it where you please, so long as it is permanent. One could then bargain on his vacation expenses to a dollar, and in my opinion more men would frequent the meets. Say what you will, the percentage of attendance at the A. C. A. meets is rather small—less than a quarter, as a rule.

The Massasoit C. C. held a very successful ball recently at Bethesda Hall, South Boston. Several new boats of home construction will be added to the club fleet next season. It is rumored that a fast paddler or two are being developed from the membership of this club.

A local meet will be held in Boston Harbor next season under the auspices of the Puritan C. C. Date to be decided later. Hereafter this meet will be an annual fixture. Useful prizes only will be raced for, with the exception of sailing and paddling trophies, open to all clubs within twelve miles of Boston.

The club fleet of the Puritan C. C. is degenerating in character, from a canoe standpoint. As the members grow older and stouter the canoes are running to *embonpoint* also. That is to say the canoe, as far as the strict definition goes, is disappearing. There are three 16½ft.×36in., three 16ft.×42in., two 19ft.×42in., and one 17ft.×42in. canoe yawls. Secretary Cartwright is the latest aspirant for "pot-bellied" honors, with a 15ft.×48in. Gloriana bowed craft. She will be provided with bilge boards and be used as a cruiser along the shores of Massachusetts Bay. The P. C. C. will give their usual entertainment. Look out for something unique, so the committee says. Winter sailing has increased in proportion to the beam of the canoes in this club this season, and every pleasant Sunday finds some one on the water.

The new officers of the Eastern Division have taken the arduous duties of their respective offices upon their shoulders, and now let us all bear a hand to keep all our old members and gather in plenty of new material, in order that the Eastern Division, as usual, may do her duty. The Puritan C. C. now numbers forty members and we'll all be in it during the next year.

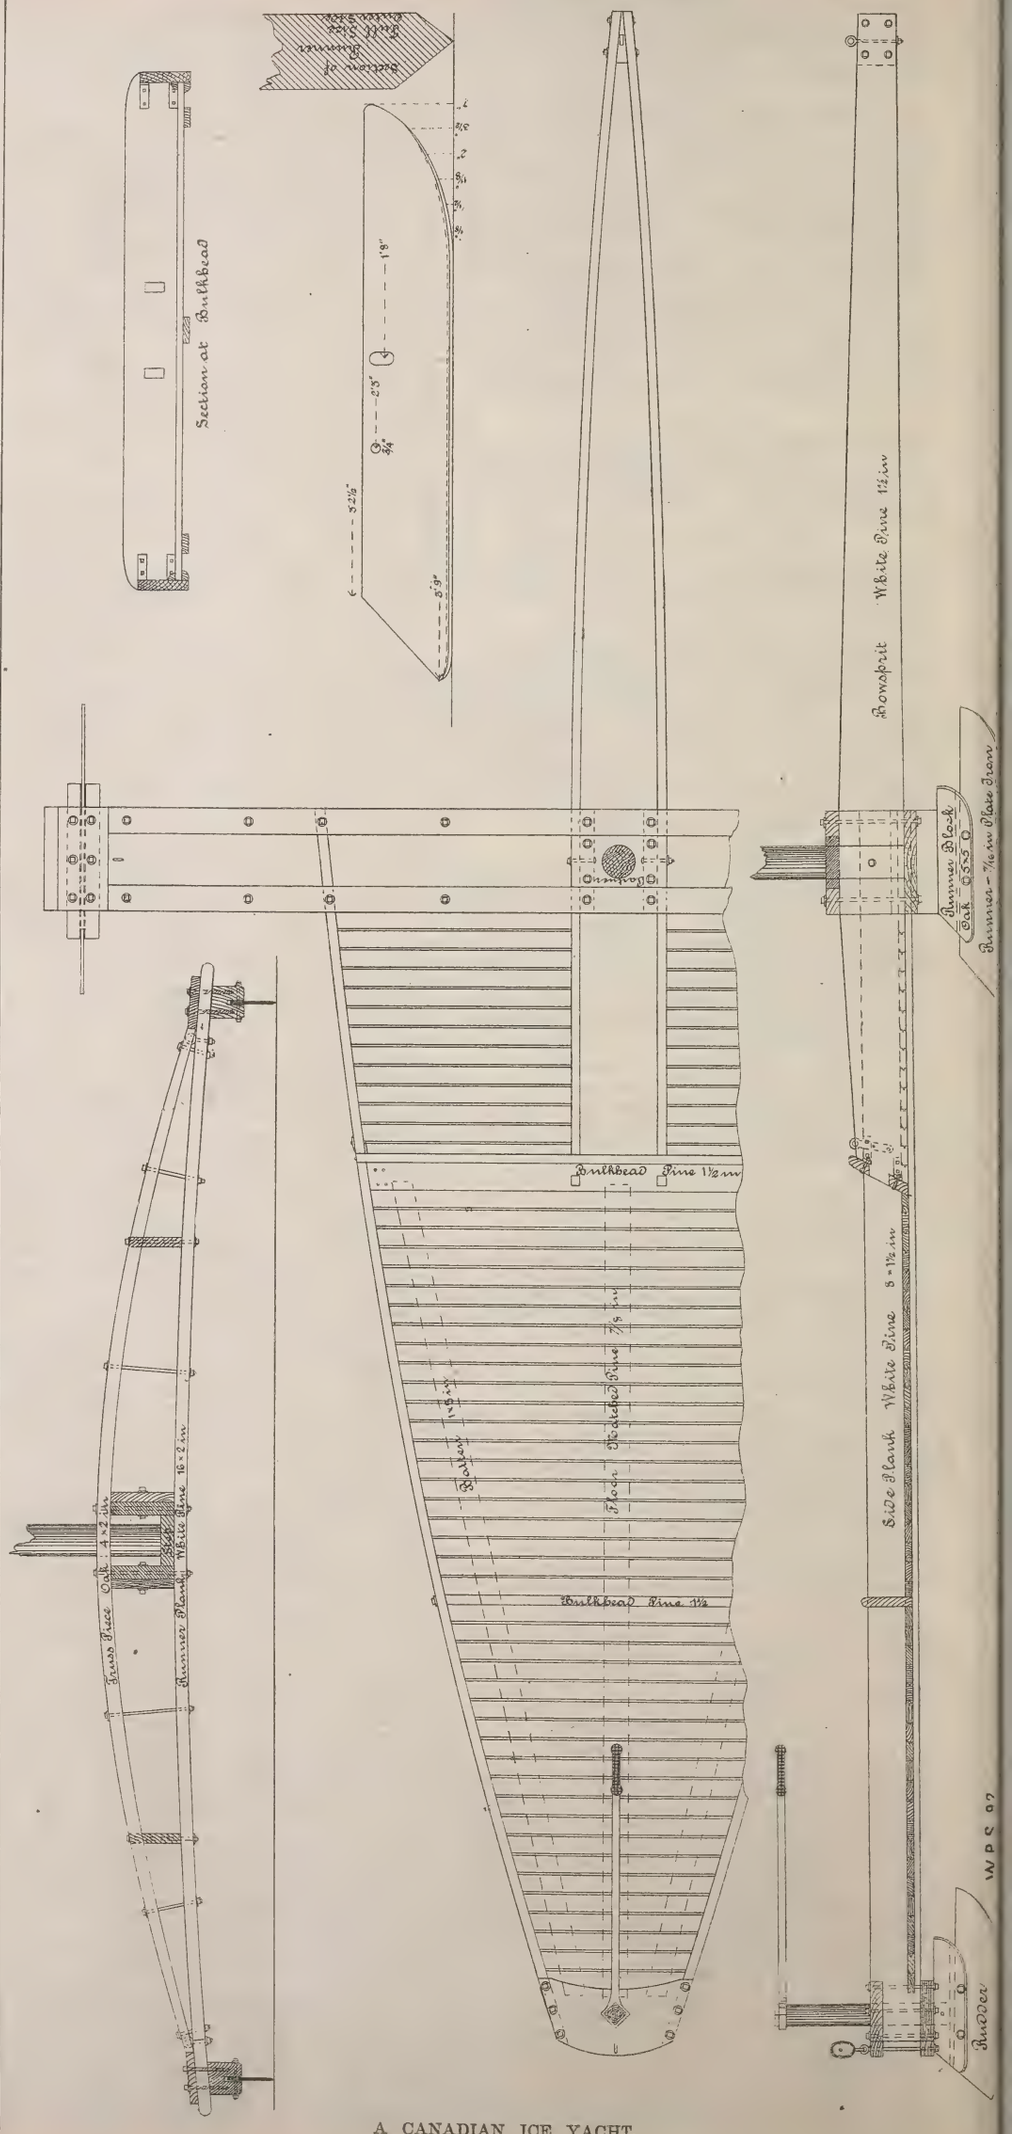
But three clubs having responded to the call for contributions for the Eastern Division sailing and paddling trophies, the idea has been given up and the money refunded. The Shuh-shuh-gah C. C., of Winchester; the Wamesit C. C., of Lowell; and the Puritan C. C., of Boston, were the three clubs responding. I am afraid "barnacles" were as fatal to this scheme as "Rum, Romanism and Rebellion" was to the Republican party in '84.

I went up to the Vesper Boat Club phonograph concert recently expressly to hear myself sing. I found myself seated in next to the front row of chairs and immediately in front of several fascinatingly beautiful young ladies of my acquaintance. At last it was my number. I pulled down my waistcoat and looked pleasant. The "juice" was turned on and the cylinder revolved slowly. At last a stentorian whisper emanated from the big tin trumpet, ending in a suppressed guggle from the instrument and giggle from the audience. I turned up my coat collar to keep people from noticing the rosy red color of my neck in back. The operator excused himself and said there wasn't power enough on the instrument, so he put more on. My neck and ears having resumed their usual peach-blossom tint I turned down my collar. The next verse sounded like one of those two-dollar-and-a-half dolls that say "mmama" and "papa" when squeezed. Some one squeezed me from the seats behind as if trying to get more sound. The operator got nervous, and getting desperate turned on all the power, when the last words came out of that trumpet, accumulator, I think they call it, in such a volume of sound that it made the windows rattle. I fainted, and it was not until several internal applications of "Vesper water" had been made that I recovered my equanimity. The diminuendos and crescendos of the phonograph are too marked, I think. But the Vesper men are a hospitable lot just the same. Ilex.

## Yachting.

Two facts appear on the face of the committee's report; in the first place the absurd offer of Lord Dunraven in his first letter to "sail a series of matches under the rules of the *new deed of gift*" has been put forward most emphatically as the basis of all subsequent negotiations and agreements. In the second place, the final acceptance of the challenge by the New York Y. C. is based on a series of brief and loosely-worded cable messages between the committee and Lord Dunraven, the Royal Yacht Squadron not being represented in any way in this vital part of the negotiations. The result is that Lord Dunraven has committed the Squadron to a race under the new deed of gift, a position as humiliating to British pride as it is gratifying to Com. Gerry and his able staff.

The past week brings the news of two more large cutters in addition to the Dunraven and Carroll yachts, and promises a certain revival of racing in the largest class. Mr. Watson has received an order from the Prince of Wales for a very large racing cutter, presumably 90ft. l.w.l., and another order from the Emperor of Germany for a large cutter. Undoubtedly the patronage of royalty will give a certain boom to the large class, however fictitious and ephemeral it may be, and even some good Americans may be persuaded that a 90ft. cutter is the proper thing now that H. R. H. will own one. At the same time if one yacht is much larger than the others, there will be little real sport, as she is likely to take all prizes by virtue of size.



The New York Y. C. having voted to accept Lord Dunraven's challenge, it is taken for granted on this side that the matter is finally settled, and that no further obstacles to the race can interpose. Unless we are greatly mistaken, however, some interesting explanations must follow between Lord Dunraven and the Royal Yacht Squadron in regard to the manner in which his lordship has committed the R. Y. S. to an indorsement of the deed of gift which it once condemned.

### A Canadian Ice Yacht.

Toronto Bay, a clear expanse of fresh water frozen for several months of the year, offers excellent facilities for ice yachting, and though the boats are much smaller than those of the Hudson and Shrewsbury, and racing is not such a feature, ice yachting is very popular and much sailing is done. Many of the yachts are kept on hire and also used regularly to carry passengers between the city and the island, a mile away. They are of simple construction and far less expensive than the Hudson River craft, costing only about $100.

The yacht here illustrated, through the kindness of Mr. J. Ackroyd, one of the principal builders, is a good representative of the class. The construction is so clearly shown in the drawing that but little explanation is needed. The runner plank is of white pine, 2in. thick and 16in. wide, the upper members of the truss being two oak strips, each 2×4in. These are sprung over two pieces of 2in. oak, one on each side of the center of the runner plank. The truss is fastened together with ½in. bolts, as shown, the ends of the oak strips butting against pieces of 1¼in. oak bolted to each end of the runner plank, the same bolts, or lag screws, running down into the runner block. This is of oak, 5×5in., with a groove cut in the lower side, ½in. wide and 2½in. deep to receive the runner.

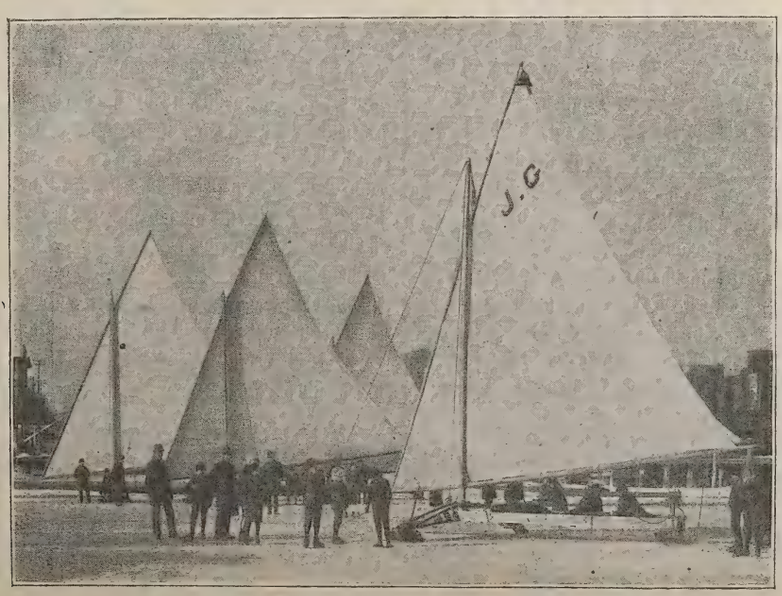
The mast rests on the runner plank, in a 2in. oak step bolted to plank, and the space at the top between the two oak strips is filled in with a similar partner piece through which the mast passes. The body of the yacht is made of two side planks, each 1½in. white pine 8in. wide, united at the after ends by two stern pieces of 2in. oak, through which the rudder stock works. The side planks are sprung to a curve and the forward ends are bolted into the truss of the runner plank. The floor extends the whole length of the body and is of ⅞in. white pine, battened in sections and removable. It rests on strips screwed to the inside of each side plank on lower edge. There are two transverse planks or bulkheads between the side planks, the forward one raking forward at an angle. These bulkheads are

A CANADIAN ICE YACHT.

SAIL PLAN OF CANADIAN ICE YACHT.

secured by lag screws through the side planks and also by iron knees, two to each end.

The bowsprit is of 1½in. white pine, the two planks being bolted together at the fore ends, while the after ends are tenoned into mortises in the forward bulkhead. The planks of the bowsprit pass outside the two oak uprights of the runner plank, and are secured by one bolt through each plank and upright.



The rudder stock is tenoned into the rudder block, the tiller being of oak or iron. The runners are of boiler plate, beveled as shown, the rudder, of course, having the same bevel on each side. They are hung on two ⅝in. bolts through runner block, the forward hole in runner being oblong, to admit of free play.

yachts are all lateen rigged, with sails of 6 oz. duck, double bighted. The boom and yard are each made of two spruce poles with their butts spliced at the center of the spar; the splice being wrapped with hoop iron for its full length.

Ice yachts are also much used on Burlington Bay, at Hamilton, 30 miles from Toronto, also lateen rigged, but with sheer legs in place of mast. The dimensions of the present boat may readily be reduced to one-half or one-third, making a still cheaper craft.

---

The King of Siam's new yacht Maha Chakrkri, when off the mouth of the Tagus, on the coast of Spain, ran down a large whale, her bow ram killing the great fish and supporting it partly above the water until the yacht was stopped, when the carcass slid off into the sea.

GROUP OF ICE YACHTS ON TORONTO BAY.

## The Dunraven Challenge.

About 200 members of the New York Yacht Club were present at the special meeting on Tuesday night, the following yachts being represented in the voting:

Schooners—Dauntless, Caldwell H. Colt; Curlew, W. L. Brooks; Alcaea, Messrs. Charles and L. Vaughan Clark; Atlantic, Messrs. Seely and Marshall; Brunhilde, David H. King; Fenella, Arnold Thayer; Fleetwing, J. R. De Lamar; Iroquois, Ralph N. Ellis; Palmer, Rutherford Stuyvesant; Volunteer, Gen. Charles J. Paine; Gavalia, H. W. Coates, and Lasca, John E. Brooks.

Sloops—Athlon, E. B. Haven; Bedouin, Archibald Rogers; Gloriana, Dr. W. Barton Hopkins; Gulnare, John E. Dwight; Harriet, Messrs. Stanley and Edward J. Greacen; Huron, Rear Commodore W. Butler Duncan, Jr.; Wizard, Ernest Staples; Peri, Gouverneur Kortright; Medusa, Robert Center; Pocahontas, James D. Smith; Saona, Alexander P. Ketchum; Vandal, Henry Stanton, and Ventura, H. D Tiffany.

Steamers—Aida, William P. Douglas; Corsair, J. Pierpont Morgan; Sultana, Trenor L. Park; Electra, Elbridge T. Gerry; Intrepid, Lloyd Phœnix; Vivienne, J. L. Hutchinson; Nooya, William S. Alley, and Stella, Messrs. Abbey, Walcott and Breslin.

The report of the Cup committee was read, giving the entire correspondence with Lord Dunraven and the Royal Yacht Squadron, including the challenge, as follows:

Royal Yacht Squadron Castle,
Cowes, Nov. 25, 1892.

Dear Sir—I am requested by the Earl of Dunraven to forward you a formal challenge for the America's Cup on the following conditions, which, I understand, have been agreed to between Lord Dunraven and the committee appointed by the New York Yacht Club to conduct negotiations and arrange all details, viz:

First—The length upon the load waterline of the challenging vessel to be the only dimensions required. This to be sent with the challenge and the Custom House register to follow as soon as possible.

Second—Any excess over the estimated length on the load waterline of the challenging vessel to count double in calculating time allowance, but the challenging vessel not to exceed in any case such estimated length by more than two per cent. The yacht that sails against the challenging vessel not to exceed the estimated length of the load water line of the challenging vessel by more then two per cent., and any excess of length beyond the estimated length of the challenging vessel on the load waterline to count double in calculating time allowance, provided that no yacht of the specified rig existing or under construction on Oct. 20, 1892, and available for the use of the New York Yacht Club in defending the cup, shall be barred or penalized beyond taking or giving the ordinary time allowance according to the New York Yacht Club rules.

Third—It is to be understood and agreed that should the Cup come into the possession of a British yacht club it shall be held subject to a challenge on precisely similar terms to those contained in this challenge, provided always that each club shall not refuse a challenge, according to the conditions laid down in the deed of 1887.

I therefore, on behalf of the Royal Yacht Squadron and in the name of the Earl of Dunraven, a member of the squadron, challenge to sail a series of matches with the yacht Valkyrie against any one yacht or vessel constructed in the United States of America for the America's Cup, and I would suggest that the matches should be sailed in August or September, 1893. Lord Dunraven would be glad if the precise date can be left open for a time, but if your committee so desire he will name an exact date on hearing from them.

The following are the particulars of the challenging vessel:

Owner—Earl of Dunraven.

Name of Yacht—Valkyrie.

Rig—Cutter,

Length on Load Water Line—85 feet.

The Custom House measurement will follow as soon as the vessel can be measured for registration.

I shall be much obliged if you will cable me the receipt of this challenge and let me have a reply by letter as soon as the matter has been laid before the committee. I have the honor to be, dear sir, your obedient servant,

RICHARD GRANT,
Secretary Royal Yacht Squadron.

To J. V. S. ODDIE, Esq., Secretary New York Yacht Club.

The report of the committee continues:

"In regard to this challenge your committee would report as follows:

"Your committee had agreed to recommend for acceptance a challenge based on Lord Dunraven letter of Nov. 7, in which he writes: 'I trust * * * that a challenge on the terms of my former letter, as herein modified, will be accepted.'

"In the former letter here alluded to, that of Sept. 16 to Mr. Oddie, Lord Dunraven writes: 'I will sail a series of matches under the rules of the new deed of gift, with the following exception and addition:'

"This clause your committee considers as the basis of the whole negotiation.

"The terms of this letter to Mr. Oddie had been declared by the New York Y. C. as acceptable with certain exceptions which do not affect the force of the clause above quoted. The challenge contains no reference or equivalent to this clause, but purporting to recapitulate the stipulations required and agreed to, fails to characterize them as exceptions or additions at all and so does not even imply the existence of other and very important conditions of the deed, such, for instance, as the covenants and agreements required on the part of the winner of the America's Cup under the rules of the new deed of gift. Further, the challenge in no way sanctions the use of the preceding correspondence for the purpose of its interpretation.

"Your committee feared that this omission from the challenge of the explicit statement contained in Lord Dunraven's letter might involve a risk of some future misunderstanding, and considered that the most expeditious method of preventing any possible misunderstanding would be to obtain authority from Lord Dunraven to use his letters on which the challenge was to be based as explanatory of the challenge itself.

"As the committee feared that the limited time would prevent the obtaining of an authorization by the squadron to so use Lord Dunraven's letters, the following cable was consequently sent:

'NEW YORK, Dec. 6, 1892.

'*Lord Dunraven, 27 Norfolk street, London:*

'Challenge, if explained by your letters, satisfactory. Do you agree? Club meeting Tuesday. PAINE.'

"To this the following reply was received:

'ADARE, Dec. 7, 1892.

'*Paine, New York Yacht Club, New York:*

'Copy following cablegram received: Challenge, if explained by your letters, satisfactory. Do you agree to club meeting Tuesday? Message ends I don't understand. Challenge is in accordance with our cablegram of 22d. DUNRAVEN.'

"As it appeared from this that the committee's cable had been rendered obscure by an error in transmission, the following cable was sent on Dec. 7:

'*Lord Dunraven, Norfolk street, London:*

'Will you authorize us to use your letters Sept. 16 and Nov. 7 as explaining challenge? PAINE.'

"On December 9 the following cable was received:

'LONDON, Dec. 9, 1892.

'*General Paine, New York Y. C. Club, New York:*

'Yes, certainly. Cable definitely London. 'DUNRAVEN.'

"As above requested to reply definitely, the committee sent the following cable:

'NEW YORK, Dec. 10, 1892.

'*To Lord Dunraven, Norfolk street, London:*

'Your September letter proposes match according rules new deed with modifications. Challenge states these, but not as exceptions or additions to new deed. Your cablegram "Yes, certainly" is satisfactory. 'PAINE.'

"On December 12 the following cable was received:

'LONDON, Dec. 12, 1892.

'*To Paine, Yacht Club, N. Y.:*

'Have no authority from squadron relying on yours November 22. Believing everything finally settled, challenge forwarded terms. Your requested alteration impossible. I cannot further delay. Please cable definite acceptance or refusal. 'DUNRAVEN.'

"At half past twelve A. M, December 13, the following cable was sent by the committee:

'NEW YORK, Dec. 13, 1892.

'*To Lord Dunraven, Norfolk street, London:*

Committee meeting and club meeting to-day. Will cable result immediately. 'PAINE.'"

The report, which was signed by Charles J. Paine, James D. Smith, Latham A. Fish, Archibald Rogers and A. Cass Canfield, ended as follows:

"In conclusion your committee would offer the following resolution:

'*Resolved*, That this club accept the challenge of the Royal Yacht Squadron, in the name of the Earl of Dunraven, for the America's Cup, the match to begin ten months from Dec. 5, 1892, the date of the receipt of the said challenge by the New York Y. C., but the date of the match to be subject to alterations for mutual convenience and by mutual consent.'"

The resolution was put to a vote and carried unanimously, after which the meeting adjourned, the result being immediately cabled to Lord Dunraven and Secretary Grant, of the R. Y. S.

# Rifle Range and Gallery.

## To Interested Riflemen.

SINCE the article of "How Rifle Shooting Can be Revived" was published in the FOREST AND STREAM there has been under consideration the advisability of holding a tournament throughout Hudson county, N. J., to ascertain who compose a team of two men which can be called the best in the county.

On Dec. 8 Mr. Bird, of the Hudson Rifle Club, issued a call to all the clubs in the county to see if such a scheme could be properly instituted and in issuing same had more than one object in view.

First—By having such a tournament in which all clubs could enter several teams or as many as they wish, it would bring the members of the several organizations in close proximity with one another and increase the interest of rifle shooting to such an extent that more team and individual matches would be heard of.

The conditions of the tournament, briefly stating them, would be that each man fire 50 shots at each match and at the expiration of the tournament the money derived from entrance fees would be divided between the three best teams of the county who will be composed of only resident members of the several clubs.

Secondly—After the tournament shall come to an end let the best 10 men who have made the highest scores then be banded together and be known as the Hudson county team, and be ready to receive challenges, etc., from surrounding counties who might institute the same order of things, and in this way all the riflemen would get warmed up to the highest pitch, and the sport would increase and be of some interest to lovers of the sport, instead of lying dormant as a snake does during the winter season.

Thirdly—If all rifle clubs will take this into consideration and discuss it at their meetings, and form these county tournaments and get the best 10 men together, they will at once see that they will have plenty to keep them busy and interested, but if they let it pass by it may be the means of putting a damper on the sport during the indoor seasons.

Look through the sporting papers and you will find nothing but the regular weekly scores of the rifle clubs, with an occasional challenge, which is never heard from again. Where are all the "pushers" of rifle shooting and why do they not respond and give their views?

Start the ball rolling and see if some one cannot offer some other suggestions not mentioned here. If the interest of the sport is taken to heart in the right spirit I cannot see but that "rifle shooting can be revived" to its fullest extent. THE EAGLE.

JERSEY CITY, N. J., Dec. 10.

## World's Fair Rifle Tournament.

CHICAGO, Ill., Dec. 9.—The Chicago Schuetzen-Verein is away ahead of i s brethren of the shot-gun in World's Fair matters. It has already out its programme for an international rifle contest to be held at the Chicago Schuetzen Park from May till October, 1893, under the event-name of the "Columbia Schuetzenfest." The King target, the Columbia target, the "Stich," or point target, the Man target, the Creedmoor target and others will be represented, with entrance moneys from $3 up to $150. Those men are going at this in the right way, and will make a success of it. Those interested should address C. Schotte, 20 North Canal street, Chicago. E. HOUGH.

## Jerseymen with Military Rifles.

THE weekly practice of the First Brigade (N. G. N. J.) Rifle Rifle Association drew an even quartette of shooters to the Newark Shooting Park on Dec. 10. There was no wind to worry the shooters, and as a result, the day being damp and close, the smoke settled in front of the firing point so thickly as to make sighting difficult. The light was poor enough without the additional handicap. Despite the drawbacks the enthusiasts managed, by waiting at times to let the smoke clear, to pull out some fair scores, which are here shown:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Capt Howard | 5 | 5 | 4 | 4 | 4 | 4 | 5 | 3 | 4 | 4—42 |
| | 3 | 3 | 4 | 3 | 4 | 4 | 4 | 3 | 4 | 3—35 |
| | 4 | 3 | 4 | 3 | 4 | 4 | 3 | 4 | 3 | 4—35 |
| Sergt Wilhelm | 4 | 4 | 4 | 4 | 4 | 4 | 5 | 4 | 5 | 5—43 |
| | 4 | 4 | 4 | 4 | 3 | 4 | 5 | 4 | 5 | 4—41 |

Fifty-shot Match.

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Major Wallace | 4 | 4 | 4 | 4 | 4 | 5 | 4 | 4 | 5 | 3—41 |
| | 4 | 4 | 4 | 5 | 5 | 4 | 3 | 4 | 4 | 4—41 |
| | 5 | 4 | 3 | 5 | 4 | 5 | 4 | 5 | 4 | 4—43 |
| | 4 | 4 | 4 | 4 | 4 | 4 | 5 | 4 | 5 | 4—42 |
| | 4 | 5 | 3 | 4 | 4 | 4 | 4 | 4 | 4 | 4—40—207 |
| Private Townsend | 5 | 4 | 5 | 4 | 4 | 5 | 4 | 4 | 4 | 5—44 |
| | 4 | 5 | 5 | 4 | 5 | 4 | 4 | 4 | 4 | 4—43 |
| | 5 | 4 | 4 | 4 | 4 | 4 | 4 | 5 | 4 | 5—43 |
| | 5 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4—41 |
| | 5 | 4 | 4 | 4 | 3 | 5 | 3 | 4 | 4 | 5—41—212 |

Y'RATILIM.

## Newark Rifle Matters.

MEMBERS of the Our Own, Excelsior and Puritan Rifle Clubs are endeavoring to arouse some enthusiasm among Newark gallery riflemen by a series of inter-club shoots to run through the winter. It is expected that the Essex Amateurs, Howards and Essex Indians will also join in the movement. Gallery shooting is in a state of coma just now, and some energetic work will have to be done to revive the old interest. A few years ago Newark could boast of twenty-two gallery rifle clubs, with an aggregate membership of close to 300, but this season politics seems to have put the pastime on the shelf. It is not likely to die, however, as a number of old-time enthusiasts are assisting in the effort to revive it.

The First Brigade (N. G. N. J.) Rifle Association will hold a shoot on the 200yds. ranges at the Newark Shooting Park on New Year's Day (Jan. 2), beginning at 11 o'clock. All the practice is done with Springfield rifles, the carbine 55gr. ammunition being used. Membership in this association is open to any officer or enlisted man in the First Brigade. The association will shoot every Saturday afternoon during the winter. Y'RATILIM.

## Peekskill Rifles.

PEEKSKILL, N. Y., Dec. 7.—We have a rifle club of about 35 members in this place. The following scores were made at our regular shoot to-day: 200yds. off-hand, Standard American target. The day was overcast and the shooting was nothing to brag of, there being but a few out:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Stephen Lines | 6 | 6 | 6 | 3 | 5 | 7 | 4 | 5 | 5 | 6—52 |
| | 6 | 5 | 6 | 8 | 8 | 6 | 6 | 6 | 4 | 5—60 |
| | 10 | 8 | 10 | 6 | 7 | 8 | 7 | 6 | 9 | 7—78 |
| Jas L Gregory | 7 | 8 | 6 | 6 | 4 | 7 | 7 | 6 | 8 | 7—87 |
| | 9 | 4 | 5 | 3 | 5 | 4 | 7 | 7 | 5 | 6—55 |
| | 8 | 7 | 7 | 4 | 2 | 7 | 6 | 9 | 10 | 6—66 |
| H P Dain | 3 | 9 | 6 | 4 | 4 | 3 | 6 | 6 | 5 | 4—50 |
| | 8 | 4 | 8 | 9 | 9 | 5 | 6 | 8 | 6 | 2—65 |
| Chas Hyatt | 8 | 3 | 7 | 5 | 7 | 8 | 6 | 9 | 7 | 3—56 |
| | 3 | 8 | 5 | 5 | 5 | 3 | 8 | 6 | 1 | 8—52 |
| S I Pugsley | 6 | 6 | 5 | 2 | 4 | 3 | 4 | 4 | 6 | 10—50 |
| | 4 | 7 | 6 | 4 | 3 | 5 | 10 | 2 | 7 | 3—52 |

## Hudson Rifle Club.

HUDSON RIFLE CLUB, shot on Hudson Rifle Club range, Monday, Dec. 12; distance 25yds., possible 250:

First Team.

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| J Rebhan | 25 | 25 | 25 | 25 | 25 | 24 | 24 | 24 | 23 | 23—243 |
| C E Bird | 25 | 25 | 25 | 25 | 24 | 24 | 24 | 24 | 23 | 23—242 |
| H Mahlenbrock | 25 | 25 | 25 | 25 | 24 | 24 | 24 | 24 | 23 | 23—242 |
| A Malz | 25 | 25 | 25 | 25 | 24 | 24 | 24 | 24 | 23 | 23—242 |

Second Team.

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| T A Reynolds | 25 | 25 | 25 | 25 | 25 | 23 | 23 | 23 | 22 | 22—238 |

Mr. Rudd used a 25-20 Maynard rifle.

R. MCNEIL, JR, Secretary.

## Denver Rifle Club's New Year.

THE Denver Rifle Club have appointed the following gentlemen a committee to arrange for the annual shoot on New Year's Day: Guy Chamberlain, chairman; J. H. Dean, G. C. Schoyen, H. B. Gilbert, O. E. Adamson, A. W. Peterson, John P. Lower, William Maguire, G. W. Biethmann and W. Y. Sedam. The shooting will be at the standard American target, 200 yards offhand. Rifles and cartridges will be furnished to shooters if desired.

TESEEBY.

## Empire Rifle Club.

THE second annual prize shoot of the Empire Rifle Club of New York, H. Zettler, president, will be held at their headquarters, 12 St. Marks place, between Second and Third avenues, Dec. 18, 19 and 20. Shooting to commence: Sunday, 2 P. M to 12 M.; Monday, 7 P. M to 12 M.; Tuesday, 7 P. M. to 10 P. M. Prizes, $25, $20, $15, $10, $8, $6, $5, $4, $3, $2, $1, $1; 25-ring target, open to all comers, any .22-cal. rifle. Tickets, three shots for fifty cents, two best tickets to count. Re-entries unlimited. All ties divided.

J. Polites. G. O. Nisja. J. Martin. W. J. Gibbs. A. Sorensen. C. A. Hinkle. T. Ford. E. A. Pierce. H. S. Burley.

GARDEN CITY RIFLE CLUB OF CHICAGO.

Well known shooting rules to govern. Shooting committee, Chas. Zettler, Jr., chairman; B. Zahn, secretary; Wm. Rosenbaum, shooting master; Wm. Miller, Arch. Rosenstrauss.

# Trap Shooting.

All ties divided unless otherwise reported

## FIXTURES.

**If you want your shoot to be announced here send in notice like the following:**

Dec. 17.—Elliott vs. Fulford, at Kansas City, Mo.; 19, at Indianapolis, Ind.; 22, at Pittsburgh, Pa.; 24, at Williamsport, Pa.; 26, at Harrisburg, Pa.

Dec. 19.—Live bird and target tournament, Hempstead, Texas.

Dec. 22-24.—Kansas City (Mo.) tournament, live birds and targets.

Dec. 24.—Williamsport (Pa.) Rifle and Gun Club, all day tournament at live birds.

Dec. 26.—Hartner's all-day target tournament, Orangeville, Baltimore county, Md.

Dec. 27-30.—Watson's live bird target tournament, Watson's Park, Burnside, Ill.

Dec. 28.—Tournament at live birds, on Erb's grounds, Newark, N. J.

Dec. 28-29.—Jacksonville (Fla.) Gun Club's fifth annual tournament; $500 guaranteed purses; $300 in money and merchandise prizes added. Professional experts barred. Bryan Taliaferro, Sec'y.

1893.

Jan. 2.—Hartner's all-day target tournament, Oradgeville, Baltimore county, Md.

Jan. 2.—Towanda (Pa.) Gun Club's all-day tournament.

Jan. 2.—South Side Gun Club's "annual," Newark, N. J.

Jan. 17-18.—Hamilton (Ont.) Gun Club tournament, live birds and targets.

Jan. 10-11.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.

May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.

May 23-25.—Knoxville Gun Club tournament, $1,000 added to purses. Also valuable merchandise prizes.

June 12-16.—New York State Sportsman's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry building, Rochester, N. Y.

Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh, N. Y.

## Fountain Gun Club.

ELEVEN members of the Fountain Gun Club were present at the last shoot of the year at Woodlawn Park, L. I., on Wednesday, Dec. 17. C. W. Wingert was the winner in Class A. R. Phister gave him a close race for the first prize and the result was a tie and they take the two prizes in their class. J. E. Lake won the Class B prize. The scores:

Class A.

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|

## DRIVERS AND TWISTERS.

A meeting of the Conneticut Shooting Association, of which, Joel Webb of Willimantic is president, H. A. Penrose of New London, vice-president, Allen Willey of Hartford, secretary, and F. C. Fowler of Moodus, treasurer, will be called at Hartford early in January. The association proposes to form an eight or ten club league of three man teams, each club to enter as many teams as possible, to contest for money and merchandise prizes during 1893. It is now proposed to have each club pay an entrance fee of $25 and if eight clubs enter the scheme, $200 will be "hung up." Twelve shoots will be given during the year and any club entering teams in six or more shoots will qualify for one half the money and every individual member of the teams who shoots in six or more contests will also qualify. This allows $100 to be contested for by the clubs and $100 for the individual shooters. It makes an object for the individual members who attend the shoots and does not throw the money entirely to the club which in many cases may contain 50 members and only four or five tournament "chosers." The plan is a fair one, because after men have spent their time and money attending team shoots, there is no sense in giving the winnings to the club to be enjoyed by members who never attend tournaments. If the clubs entered the teams and paid the team's expenses it would be different, but as they do not, it seems right to make it an object for the individual as well as for the club.

"Milwaukee, Wis., Dec. 7.—A fine home for the South Side Gun club will be built upon the club's property in the Town of Lake, near Lake station, one mile west of Cudahy on the St. Paul road. The Club has owned 16 acres there for several years. At a meeting last night plans were adopted for the erection of four buildings including the finest gun club house in the country. A hotel will be built with nine rooms, a reception room, dining room, kitchen and bar, for the accommodation of the marksmen and any others, and will be kept open all the year. The club house will be fitted as a home for the marksmen of Milwaukee, and its proximity to the city will make it a popular resort for those who like to spend part of the day at practice and the balance in the enjoyment of solid comfort. The total cost of the buildings is estimated at about $8,000. The South Side Gun Club is counted among the wealthiest organizations of its nature in the West. It owns property valued at $18,000 besides a handsome sum always in the treasury. The membership is limited to 100, and has been full some time. The club now has quarters at National Park, but its small club house there has long since been outgrown. The club's tournaments have always attracted scores of marksmen from all sections of the country."

The Jacksonville (Fla.) Gun Club publishes an attractive programme for its shoot to be held on Dec. 28-29. Bluerock targets, expert traps and North's electric pull will be used. The club has secured special rates on all railroads and also at the Everett Hotel. The programme shows ten events each day, with an aggregate of almost $1,000 in guaranteed cash and merchandise prizes. Professional experts are barred. Event No. 5 each day will be at 25 targets, $4 entry, with $100 cash and $75 in prizes guaranteed. The prizes comprise insurance policies, blankets, cigars, barrels of beer, loaded shells, hunting clothes, a rifle or shotgun, hats, etc. On the first day there will be an interstate match for 5-men teams, 20 targets per man, $7.50 entry. The party making the highest average in the two days will receive a round trip ticket to the World's Fair, in 1893, presented by the club. Second average prize will be a $50 imported bronze. In all there are ten prizes for averages. Here is a chance for amateurs to take a look at Florida and incidentally have some good shooting.

Canastota, N. Y., December.—Some Uncle Jake Graham, who keeps a hotel in this town and another at Lewis Point on Oneida Lake, advertised for live pigeons, intending to have a big shoot, and he received assurances of a large number of pigeons, but when they came to be delivered the sum total was about fifty instead of three or four hundred, as expected. A scarcity of salt was probably the cause of the shortage. Uncle Jake fed the pigeons until they had cost him a good silver half-dollar each and then concluded to arrange for a supper match between some of his friends. The match took place on the grounds of the Canastota Gun Club, the teams being Messrs. Mosher and Salisbury against Schemerhorn and Cruttenden. Each man shot at 12 birds, the losing team having to foot the price of the supper. The weather was fairly good for the season. The match was closely contested as the scores show:

| | | | |
|---|---|---|---|
| Mosher | 212220122100—8 | Schemerhorn | 101101012111—9 |
| Salisbury | 002120111011—8 | Cruttenden | 321212222000—9 |

The Rochester Rod and Gun Club and the Onondaga Sportsmen's Association shot a team match on the latter's grounds at Maple Bay on Dec 6, each team comprising 21 men and shooting at 20 kingbird targets. The Rochesters were short-handed so Harry Whitney, Ayers and Prettie shot with them. The scores were: Rochester—Whitney 19, Hicks 18, Tassell 18, Newton 19, Lewis 12, Gordon 15, Bost 17, Lane 19, C. Smith 19, Quirk 18, Babcock 19, Myers 19, St. John 16, Richmond 17, Norton 16, Prettie 14, Van Ostran 12, Putnam 17, Mann 17, Stewart 19, Ayers 12, total 382. Syracuse—Ginty 20, Geo. Mann 15, Lefevre 13, Hudson 19, Schemerhorn 18, Cruttenden 16, Mosher 16, Windell 14, Byron 16, Ayling 16, Hookway 15, Forsyth 10, Salsbury 12, Walters 19, Williams 13, Luther 16, Denison 7, Howell 14, Mowry 16, Holloway 15, Maurer 13, total 313. In the evening the visitors were given a banquet at the Vanderbilt House in Syracuse and everybody had a jolly time.

The O. K. Gun Club of Kansas City, Mo., held its final shoot of the season on Dec. 6 in a heavy rain. The birds flew well despite the weather. Each man shot at 10 live birds. The contest was for the club medal for which J. R. Porter, J. L. Bennett, J. L. Porter and F. C. Maegley tied on straight scores each. On the shoot off J. K. Porter killed 12 straight and won the medal. The scores of the main event follow:

| | | | |
|---|---|---|---|
| J. R. Porter | 1222222222—10 | J. L. Porter | 2122212211—10 |
| J. A. R. Elliott | 1111122010— 9 | W. V. Baker | 2100000010— 3 |
| Ed. Hickman | 2211102222— 9 | Dan Quin | 2120210021— 7 |
| A. L. Bennett | 2212121112—10 | J. Thompson | 0101201002— 5 |
| H. P. Preston | 2212222110— 9 | W. Everingham | 1120010121— 7 |
| Oscar Cogswell | 1000001121— 5 | F. C. Maegley | 1111212221—10 |
| R. D. Mize | 1112110120— 8 | J. H. Thompson | 0000111111— 6 |
| F. J. Smith | 2222102212— 9 | | |

The Independent Gun Club of Plainfield, N. J., held an interesting shoot at live birds on Dec. 6, on the Hyde's Woods grounds. The birds were a splendid lot of flyers. Two team races at 7 birds per man, four men to a team, were shot, the results being as shown:

| | No. 1. | No. 2. | | No. 1. | No. 2. |
|---|---|---|---|---|---|
| C. Smith | 1112121—7 | 2120211—6 | N. Ap.gar | 0220222—5 | 2121122—7 |
| W. Lair | 2002122—5 | 1100022—4 | M. Mulford | 2100102—4 | 1120002—4 |
| E. Shepard | 0101012—4 | 0202012—4 | T. H. Keller | 0111010—4 | 1101111—6 |
| W. L. Force | 2011010—4 | 0112010—4 | W. Pierson | 1011221—6 | 2122221—7 |
| | 20 | 18 | | 19 | 24 |

There will be a tournament at Kansas City, Mo., on Dec. 22, 23 and 24, under the combined auspices of the Kansas City gun clubs. There will be three events at live birds and five at targets each day. The big event on the first day will be at 15 live birds, $15 entry, $30 added; second day, same; third day, 20 live birds, $15 entry, $45 added, and 10 live birds, $10 entry, $75 guaranteed. Shoot No. 9, to be shot on the second day, is a novelty team race at 12 live birds for 2-men teams. Both members of a team will stand at the score, one on either side, and three birds will be sprung, each man having the use of both barrels.

The New Haven team of three men won the Keystone team race trophy at Bristol, Conn., Wednesday the 7th. The race was a wind up of the tie for the championship of Connecticut. New Haven has thus won five times, Hartford four, and Bristol four. The only peculiar feature of the race is the fact that Willey, Burbige and Whittlesey of Hartford won the trophy three times in succession, every time they shot for it—and lost the tie when their mascot, "McGinty," left the team. "McGinty" is now in southern California making straight scores on quail.

The New Haven Gun Club are now owners of the Keystone diamond trophy. The final contest took place at Bristol, Conn., on Dec. 9. Previously the Colt, Bristol and New Haven teams were tied on four wins each. The Colt and New Haven teams made a hot struggle, the New Havens finally winning by one break. The teams comprised three men each, and each man shot at 30 Keystone targets. The scores—New Haven, Potter 26, Sherman 25 Savage 23; total 74. Colt—Sterry 28, Wood 24, Vibberd 21; total 73.

Members of the Boston Shooting Association whose shooting grounds are at Wellington, Mass., are talking up a live bird shooting party. Mr. Frank Cowee says that the members are quite anxious to try their skill at live birds and propose some day this winter to visit New Jersey and have a day at feathers. Their plan is to order a number of birds, arraoge with Al. Heritage or John Erb for the use of their ground and hold a shoot for the members of their club only.

We received, too late for our last issue, the scores made at a live bird shoot of the Hinsdale Gun Club of Chicago, Ill. The club was organized last summer and this was the initial attempt at live pigeons. There were eleven members present and the scores were, out of 10 birds each, Dr. C. M. Roberts 9, Dr. J. B. Hench, 7, Wm. Duncan 6, H. C. Knisely 6, T. C. Morris 6, J. C. Ross 6, E. E. Shaw 4, B. E. Richie 3, H. A. Fulton 1.

The Riverside Gun Club of Red Bank, N. J., held its weekly shoot on Dec. 9. The opening event was a $25 match at 10 live birds each between W. T. Conover and Fred. C. Johnson, Conover killing 8 to Johnson's 6. L. B. Campbell vs. Albert Ivins, 15 birds each; Ivins 13, Campbell 9. Sweep at 15 bluerocks, J. Cooper 8, J. Bergen 8, O. Hesse 7, L. B. Campbell 4. At 9 bluerocks: E. M. Cooper 7, O. Hesse 6, L. B. Campbell 5, J. Cooper 4, O. Hesse, Jr., 3, Bergen 3.

A match took place at Colorado Springs, Colo., on Dec. 3, between teams of four men each from the Denver Athletic Club and Colorado Springs Country club. The men shot at 20 live birds each. The results: Denver, Fowler 16 Murphy 11, Bostwick 14, Voorhees 15; total 56. Country Club—Dr. Smith 20, Edsall 14, Tutt 12, Sanford 7; total 53. A number of miss-and-out events filled the rest of the day.

The Lafayette (Ind.) Gun Club held a shoot at bluerock targets on Dec. 7, with turkeys as prizes. There were four 10-targets events with a turkey for each "place." The scores: Smith 5, 7, 5, 6; Thompson 8, 8, 7, 6; Dorrbaker 5; Davis 7, 9, 6, 8; Krauss 7, 8, 10, 7; Slow 8, 7, 9, 8. Krauss got 3 turkeys; Slow, Thompson, Davis and Smith 2 each; Dorrbaker 1.

Some extra interest in live bird shooting has recently developed in Connecticut. The nutmeg shooters say that if John Erb will give a few 20 bird $20 entrance shoots that quite a party of Connecticut shooters will attend such an event. In New Haven there are several old live-bird shots, while other gentlemen in the State wish a "go" at the birds.

The contests of the Central Gun Club of Long Branch for a $100 Parker gun offered by E. M. Murphy to the one making the highest number of hills in eight monthly shoots at 10 birds each was won by E. M. Cooper of Red Bank with an aggregate of 75 kills. Cooper shot a 10-gauge, 7-lb. Parker at 31 yds. rise through the series.

The Williamsport (Pa.) Rifle and Gun Club will hold an all-day tournament at live pigeons on Dec. 24, the day of the Fulford-Elliott match. The fun will commence at 9 A. M. American Association rules will govern. The grounds are splendidly equipped for the sport, and every convenience will be offered visiting shooters.

The Big Four Gun Club of Burlington, Iowa, will hold a tournament on Dec. 27-28. The main contest will be for the Big Four medal emblematic of the championship of DesMoines, Lee, Louisa and Henry counties. There will also be a contest for the DesMoines county championship medal and another for the L. C. Smith cup.

Fair minded shooters, those who are out for sport instead of for "dust," are a roughly in favor of doing away with "pots" and shooting under some such system as that suggested by Will Cruttenden and "Fair Play." Why should not clubs try one of the system as an experiment?

A rara avis and he escaped untrapped, at the Bristol, Conn., tournament Dec. 7, was Pres. A. C. Collins of the Colt club of Hartford. Mr. Collins has been the president of the Colt club three years and never before attended a tournament except on his own club's grounds.

George Strong of New London, Conn., who won the Keystone trophy at the Keystone tournament at New London this year on 49 out of 50 will represent his town in the Legislature. He is a good Democrat and a good shot.

There will be an all-day shoot at pigeons on John Erb's Newark grounds on Thursday, Dec. 28, the events to be open to all. Shooting will begin at 10 A. M., and there will be an event at 15 birds, $15 entry, on the programme.

The Kansas City, Mo., *Star* is responsible for the statement that in the event of Elliott beating Fulford in a majority of their races he (Elliott) will be willing to make a return trip over the same grounds with Brewer as his opponent.

The proprietors of the Mount Arlington Hotel at Lake Hopatcong, N. J., announce a shoot for a 2,000-lb. bull to come off on Dec. 21. The event will be open to all, as will a number of sweeptake events.

At the shoot for the Sipe and Sigler cup at Cleveland, Ohio, on Dec. 5, at 30 targets per man, J. A. Flick won with 29, Paul North got 28, W. H. Tamblyn 27, "J. L. C." 26, and L. C. Carter 25.

Garden City, Mo., will have a live bird and target tournament on Dec. 28-29. There will be two live bird and six target events each day. A purse of $25 will be awarded for averages.

The Post Office Gun Club held its regular shoot at Kansas City Dec. 1, Deputy Postmaster F. B. Nofsinger winning the Cady and Olmstead medal by killing 12 out of 15 live birds

An open sweep at 25 live birds, $25 entry will take place at Hempstead, Tex., on Dec. 19. Ed. Brown and W. H. Wheeler will also shoot a match at 50 live birds for $100 a side.

Allen Willey of Hartford, Conn., says that if he ever gets his new ejector Lefever which has been building since last May, he will try Harry Smith again.

The West Side Gun Club of Newark, N. J., will hold its club shoot for a gold medal on its Grove streets ground on Christmas Day. Live birds will be used.

At the shoot of the West Shore Gun Club of Syracuse on Dec. 6, Ackerman broke 30, Martin 30, Herman 30 and R. Ackerman 28 out of 40 targets.

A. M. Miller and Leigh Bachman had a shoot at eleven live birds each at Bethlehem, Pa., on Dec. 5, Miller killing 10 to Bachman's 8.

The South Side Gun Club of Newark will run two sets of traps at its "annual" on Jan. 2, and will charge two cents each for targets.

Sportsmen will regret to learn of the sad bereavement of H. A. Penrose in the loss of his wife, who died at New London on Dec 9.

"Snapper" Garrison and C. E. Morris will shoot at 100 live birds, for $300 a side at West End, Coney Island, on Saturday Dec. 17.

A. G. Courtney is on his way to Nashville, Tenn. "Court" says the Lefever ejector gun is "sweeping everything" in the South.

E. M. Cooper of Red Bank, N. J., used Walsrode powder in all the contests for the Murphy prize, won by him.

A contingent of New York and New Jersey shooters will attend the tournament at Hamilton, Ont., on Jan. 17-18.

Frank Cooper and Hart Minkler shot a match at Port Morris, Ill. on Dec. 7, Minkler killing 25 to Cooper's 18.

Shooters should not forget that entries for the grand American handicap will close on Dec. 30.

The Windsor (Mich.) Keystone Gun Club will hold a shoot on Christmas Day.

A new gun club is being organized in Harlem.

C. H. TOWNSEND.

## CHICAGO TRAPS.

CHICAGO, Ill., Dec. 10—Mr. Cartwright, representing the American Arms Co., was in town during the week and is said to be looking about for grounds for the works of that company, which will probably come to Chicago in the near future.

Tatham's shot works will not be moved to Chicago, but will hereafter be represented by Messrs. Von Lengerke & Antoine.

A novel pigeon race is on for Chicago. Mr. L. M. Hamline backs Mr. A. J. Atwater, of this city, for $25, to kill 15 out of 50 selected birds, within the American Association boundary, with a bow and arrow, loser to pay for birds. Mr. E. D. Fulford takes the other end of this unique wager. When it is remembered that Mr. Atwater was once an expert archer, and that he is not limited as to the distance at which he is to stand from the traps, the chances appear to even up a little more. As the birds are to go from 5 automatic king traps, the archer will probably prefer to stand at least 5yds. behind the traps. It is likely that this strange match will be shot as soon as Mr. Atwater can get around, he having had sickness in his family. It is said that Mr. Atwater would back himself to kill 15 out of 25 on these terms. The match will attract attention.

In a practice shoot Thursday Mr. Fulford killed 24 out of 100 birds, of what he says were a good selected lot, inside of the American boundary. Under the Hurlingham boundary he would have scored his 100 straight inside of a string of 106. Mr. Fulford declares he goes to Kansas City the strongest man that ever faced Jimmy-Jim-J. A. R. Elliott.

E. HOUGH.

### Shooting Match at Coney Island.

C. E. MORRIS AND SNAPPER GARRISON had a friendly match for the price of the birds at the Atlantic Rod and Gun Club's grounds, West End, Coney Island, on Thursday, Dec. 8. Each shot at 50 birds and Morris won with the score of 47 to 46. The weather was wet and foggy, which affected the birds and made them easy targets. The score:

C E Morris (30) ..0112221111220212122121201212121211122112121111211—47
E H Garrison (28)2211111121102111211010211222121112122101112111111—46

A match for $300 a side will be shot off next Saturday, at West End grounds, Coney Island, at 100 birds each, both 30yds. rise.

Sweepstake shoots followed. The scores. No. 2:

| | | | |
|---|---|---|---|
| E H Garrison | 2120222100—7 | J S Voorhees | 0201112220—7 |
| C Morris | 0?2222222—9 | W Hughes | 1200021202—6 |

Garrison second on shoot off.

No. 3, $1 entry, two moneys, 5 birds:

| | | | |
|---|---|---|---|

| N Johnson | 20211—4 | 00121—3 | W Hughes 00210 |
| J Gavin | 20010—2 | 01101—3 | |

### Massachusetts State Shoot.

BOSTON, Mass., Dec. 4. *Editor Forest and Stream:* The Massachusetts State Shooting Association held the second of its series of monthly shoots for championship honors at the grounds of the Worcester Sportsman's Club, Nov. 22.

It was a brisk day for shooting and the birds flew in elegant form. They were, however, reinforced by a strong northern gale, and some scientific shooting was the result. It was a cold day, too, for outdoor sport, but this novel attraction called experts from all over the State to contest for the State individual and team badges.

Quite a good-sized squad of shooters assembled and the State events were well fought. Among the group could be seen such experts as W. L. Davis, M. D. Gilman and C. E. Forehand, of Worcester; Denny Eager, of Marlborough; Warren and Wardwell, of Boston; J. C. Martin, W. F. Brown, C. A. Hastings and Frederick Forbes, of Lynn; while quite a number of the home club were present also. Shooting began at 10 o'clock, but the Lynn delegation did not arrive till 1 P. M.

The principal event of the day was the individual contest for the State challenge gold badge, which was well fought from start to finish. Eager was the first man to the trap and lost his eleventh and fourteenth birds, but under the conditions he crawled out with a good score. Boston men looked upon him as the winner, but Forehand was his successor and broke 13, losing his second and third birds. Gilman lost his sixth and nineteenth, and here tied three men on first position. W. F. Brown was the next man to the trap, and while the conditions were against him, Lynn looked upon him as a winner. He shot 15 straight, lost his sixteenth, a dazzling left-quarterer, and shot the rest of his string in fine form, breaking 19 birds.

The team contests were closely contested, but the Worcester team had the advantage over the Lynn and Boston men, and easily won both the amateur and professional team badges.

Event No. 1, 6 bluerocks, known angles:

A. J. KELSEY.

### On the Old Stone House Grounds.

QUITE a number of sportsmen traveled up Bloomfield avenue, Newark, N. J., as far as John Erb's "Old Stone House" grounds on Dec. 6 with the expectation of seeing the much talked of match between the teams representing "Youth" and "Old Age." Neither one of the team of youths materialized and only one of the aged team was on hand, this being Samuel Castle. Upon inquiry it was learned that the match had been declared off, and that two of the principals, Harry E. Smith and Charles M. Hedden had gone to Sayville, L. I., to have a shoot on the ducking flats of Green Brothers. (Apropos, I have since learned that in three days they bagged 61 ducks, mostly broadbills.)

The falling through of the match was a disappointment to those who visited the grounds, although they saw some good shooting as a partial recompense. John Erb always has a supply of birds on hand and on this day there were some shooters and guns. Among the visitors were Frank Class, of Morristown; Mr. Morfey, a well-known shooter and boniface, from Paterson, and Jockey Goodale, of New York, who is rapidly coming to the front as an expert manipulator of the smooth-bore.

As soon as it was found that the team match was off the party began enjoying themselves by shooting sweepstakes. The first three events were at four birds each, $3 entry; No. 4 at 7 birds $5 entry; Nos. 5, 6 and 7 at 10 birds, $10 entry. The birds were a good lot of flyers. The scores follow:

| | No. 1 | No. 2 | No. 3 | No. 4 |
|---|---|---|---|---|
| Goodale | 1111—4 | 1111—4 | 1120—3 | 1110011—5 |
| Morfey | 2222—4 | 1121—4 | 2212—4 | 2011221—6 |
| Castles | 1111—4 | 1111—4 | 1101—3 | 2201110—5 |
| Class | 1111—4 | 2111—4 | 1121—4 | 2121122—6 |
| | No. 5 | No. 6 | No. 7 | |
| Goodale | 1101201011—7 | 0012111111—8 | 0001111102—6 | |
| Morfey | 1112101111—9 | 2121111210—9 | 2110111010—7 | |
| Castle | 1111220211—9 | 1102112121—9 | 2102011111—8 | |
| Class | 2112212010—8 | 2212021210—8 | 1112012221—9 | |

This closed the sweepstake shooting and the day was wound up with a match at 15 birds each between Chris. Reinhart and Frank Class, the result being as below:

Reinhart .....101122220111202—12 Class .....012201212211120—12

*The Newark Gun Club's Day.*

Dec. 8 was the date for the monthly shoot of the Newark Gun Club, but owing to absence from the city, pressure of holiday business and other causes the majority of the members were kept away, Messrs. Smith, Collins, Breintnall and Hollis being the only ones present. The day was a dark, dank and murky one, the mist lying low and heavy and the clouds threatening a heavy downpour, and not a breath of air stirring. It was just the day in fact when one would expect to see a first-class lot of pigeons transformed into "duffers." On this particular occasion, however, the birds were a revelation. Before the shooting it was remarked that on a good shooting day the birds in the crates would be a rattling lot, but no one expected to see them fly under the existing conditions of the weather.

From start to finish, however, the birds flew as though their only thought was to get away, and of the 140 trapped only one had to be flushed. Twisters and zigzaggers there were aplenty, and it required a quick eye and a straight hold to bring them to grass. Toward the close of the day there was brought to the score a crate of birds that for beauty and life would be hard to equal. Every one blue in color and every one an old bird, they were a lot fit to trap in any kind of a match. There were several carriers in the lot. Of this crate every one proved to be full of life and vitality and hard flyers.

The opening event of the day was the club shoot at 10 birds per man, which was also made a sweepstake, each man putting in $5;

event No. 2 was also at 10 birds, $5 entry. In the club shoot Smith and Collins tied for first money, and decided to shoot off for the same, when Smith won the cash. In No. 2, Smith and Hollis tied for first and shot off, miss-and-out. Smith being the victor. The scores follow:

| | No. 1. | Tie. | No. 2. | Tie. |
|---|---|---|---|---|
| Smith | 1121221202—9 | 11 | 2112121211—10 | 122112 |
| Breintnall | 1221100122—8 | | | |
| Collins | 2122120-11—9 | 10 | 0022121111— 8 | |
| Hollis | 2111120110—8 | | 1111211111—10 | 221110 |

The next events were miss-and-outs, $1 entry each. In the first Collins missed his bird then re-entered, finally tieing with Hollis and dividing the pot. The scores:

| No. 3. | No. 4 | No. 4. |
|---|---|---|
| Smith.....1110 | 2111211211211122 | Hollis.....1221 | 1221211121111210 |
| Collins....0 | 12111120..... .. | *Collins...1212 | ..... |

*Re-entry.

Hollis's face assumed a curiously disgusted look when he lost his seventeenth bird in the final event, the bird being an incomer and far easier than any other at which he had shot.

C. H. TOWNSEND.

### East Side Rod and Gun Club.

STAMFORD, Conn., Monday evening, Dec. 5.—The organization of the East Side Rod and Gun Club of Stamford was completed by the adoption of a constitution and election of the following officers: President, Walter M. Smith; vice-president, Col. W. H. Tallmadge; treasurer, Harry Bell; secretary, John R. Rimsey; directors (in addition to officers), A. W. Sibley, Nathan Olmstead, Chas. E. Thompson. The club is an outcome of the movement of the XIII. Club and of the old "Weed Club." It has leased a couple of acres of land at the head of Jagger's Creek, and has already a small house and horse sheds erected. Most of the members own boats of some sort, from the sloop yacht Pocahontas to a skiff, and all are devoted to the sport of shooting and fishing. It is expected that upon the broad stretches of Salt Meadow, lying between the creek and the new Shippan Boulevard there is to be a half-mile trotting track constructed, and thus bring the vast speeding ground for trotters into direct association with the hunting and fishing sports of the club. Jagger's Creek, where the club's field and shore headquarters are established, is a little lagoon that sets in from Long Island Sound at the angle made by the east line of Shippan Point and the general line of the coast. It is convenient to the vast fishing ground in our waters.

It is a curious fact, but there is good historical warrant for the statement that the obscure and little known geographical feature of the town known as Jagger's Creek is probably the only spot which has carried down from the earliest settlement of the town the name of one of the original proprietors, who came to Stamford from Wethersfield in 1641. The club has many "mighty Nimrods" upon its roll of members, as well as those "who go down to the sea in ships," and bring back the denizens of the deep. It is a fundamental principle of the club that each member must be an expert with a catboat, a rod and reel, an eel spear, a rake, clam fork and a gun, and further, as a condition precedent to continued membership in good standing, he must be equally expert in cooking and serving to his co-members the products of his skill with the various implements of warfare mentioned above. On the list of members may be found the names of ex-Com. Jas. D. Smith, N. Y. Y. C., Walter M. Smith, Col. W. H. Tallmadge, J. Woolsey Selleck, Edgar Johnson, Seth G. Fessenden, Capt. Lyman Morrell, Capt. Chas. E. Hobbie, Nathan Olmstead, and other gentlemen well known here and in New York. The membership limit is thirty-five and is already full, with one or two on "waiting list."

### The Garfield Diamond.

CHICAGO, Dec. 10.—The second contest for the diamond at 20 live birds each man in the Garfield Gun Club took place to-day. Our new king traps were used and are a pronounced aid in making birds fast and shooting good. "Cop" won the diamond for the second time, on a score of 19 out of 20. The day was cold with a strong northwest wind, and the birds fast and strong. "Am Field" and Antoine each shot at 40 birds, they not having been present at the first contest:

"Cop" wins the diamond for the second time.

### The Riverview Gun Club.

AMSTERDAM, N. Y., Dec. 6.—The Riverview Gun Club held a shoot here to-day at kingbird targets in a wind so strong as to make good holding difficult. Events No. 1, 2 and 3 were at 10 targets, $1 entry; Nos. 4, 5 and 6 at 5 targets, 50 cents entry. There were three moneys in each event. No. 1:

| | | | |

### The McWhorter—King Match.

PITTSBURGH, Pa., Dec. 4.—Following is the score of a live pigeon match shot Thanksgiving Day between Mr. E. H. McWhorter and Mr. W. S. King on the Herron Hill Gun Club grounds for $100 a side and the expenses, at 50 live pigeons each, American Shooting Association single live bird rules to govern, with Mr. C. M. Hostetter (Old Hoss) as the referee. Mr. A. H. King, Jr., was stakeholder and Mr. F. E. Davison scorer. The birds were the best that were ever seen trapped in a singlehanded match around Pittsburgh. It was a cold day, with a very strong wind that blew away from the traps, which may account for a few of the towering twisters that were shot at by both shooters and hit hard with both barrels, still you would hear the referee call out when the bird passed the flags "lost bird." Mr. King was first to the score, and he killed his first bird in great style with the first barrel; his sixth bird was a bluerock, sure. With the first barrel it dropped among the traps, killed to the eye, but when his gatherer started to gather it, it flew out of the boundary and was scored dead out of bounds. His twenty-sixth bird was challenged killed on the ground. The referee called "no bird," and he was ordered to shoot at another bird, which he hit hard with both barrels and it lived to just get outside of the flags, and was scored dead out of bounds. McWhorter's first bird was hard hit with both barrels, and it fell dead out of bounds; also his twentieth bird was hard hit with both barrels, and it dropped about 1ft. from one of the boundary flags. Very few pigeons got away without being hit. Mr. E. E. Shaner's setter dog was to do the retrieving of the birds in the match, but when he was tried before the match he wanted to play with the birds, so the shooters each appointed a gatherer. There is some talk of another match in the near future between the same gentlemen. The boundary flags are not in it with McWhorter's great and only second barrel:

*Trap score type—Copyright, 1892, by Forest and Stream Publishing Co.*

McWhorter...o 2 1 2 2 0 2 2 0 0 o 0 1 2 2 1 2 2 2 2 o 2 2 2 2 2—18

King .....1 1 1 1 o o 1 2 0 o 2 o 1 1 2 0 1 o 1 2 1 1 o 1 1—17

o 0 1 1 2 2 2 2 1 1 2 1 2 1 2 0 1 o o 2 1 2 1 0 1—19—36

### Live Bird Shoot at Pattenburg.

IT was announced that a live bird tournament would be held at Pattenburg, N. J., on Nov. 29 and 30, but for some reason or other the shoot did not draw a large list of entries. The birds were a good lot and those who were on hand had great sport. Among the contestants were mine host Billy Apgar, of Apgar's Hotel, Frenchtown; H. P. Millburn, of Newton, and Jacob Mason. The events on the first day were at 4 birds, $3 entry, two moneys, and the scores follow in detail:

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. |
|---|---|---|---|---|---|
| A S Care | 1111—4 | 1212—4 | 1002—2 | 1111—4 | 1112—4 |
| W C Apgar | 2111—4 | 1111—4 | 1111—4 | 1111—4 | 1012—3 |
| H P Millburn | 1121—4 | 2112—4 | 1011—3 | 0101—2 | 1221—4 |
| C Moore | 2110—3 | 2120—3 | 1111—4 | 1112—4 | 1210—3 |
| J Dilts | 2120—3 | 0120—2 | 1111—4 | 1011—3 | 2221—4 |

*The Second Day's Shoot.*

The attendance of the second day was somewhat better than on the first, several local men joining the ranks. There were seven events shot, the first six being at 4 birds, $3 entry, 2 moneys: No. 7, at 9 birds, $9 entry. In No. 1 Case and Holges won first money by shooting out Gano. Case and Holges also won first money in No. 3 by out-shooting Stryker. In No. 7 all tied and shot off, at 3 birds each Apgar getting first, Stryker and Millburn second. The scores:

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. | No. 6. | No. 7. | Ties. |
|---|---|---|---|---|---|---|---|---|
| J Mason | 1022—3 | 2111—4 | 0202—2 | ..... | 1111—4 | 1111—4 | ..... | ... |

### Unknown Gun Club.

THE attendance of the members of the Unknown Gun Club at Dexter Park on Thursday, Dec. 8, was a good one. Twenty-three competed at seven birds each, club handicap, for the annual prizes. Several tied with straight scores, but on account of darkness the shooting off was postponed until the next shoot. It is a close race between Ike Hyde, E. Vroome and H. Knebel, Sr., for the prizes:

| | | | |
|---|---|---|---|
| E Vroome | 1110211—6 | W Emken | 1210001—4 |
| J Simpson | 0011111—5 | A B Merrihew | 2121111—7 |
| J Hyde | 2122112—7 | C Detlefsen | 1011111—6 |

### Anent the Handicap System.

LYNCH, Dec. 10.—*Editor Forest and Stream:* I have been very much interested in the articles published in your journal concerning the best method to protect the amateur against the professional dropper for place, and can't see how any of the ideas suggested will meet the needs of the hour and yet draw a crowd, as the new one of so much for each target broken is about the least liable to draw of any yet suggested. Were we to give a shooter 20 cents for each target broken and charge him 10 cents for each target shot at, were he to break 15 straight he would get his $1.50 back and $1.50 additional. Now, from $1.50 take off 45 cents for shells, which would leave him just $1.05 on a straight, and 10 shoots a day would be only $10.50 for hotel, railroad, etc., and as no shooter can average over about 85 per cent., expert rules, upon which all handicaps will probably be based, it will soon break up target shooting to adopt such a system, and again, we know added money is what draws them. How can such a system be figured out on added money?

Now, it is well known that all shooters are more or less gamblers and willing to risk their cash with a reasonable show to win. I would suggest that there be a handicap based upon the respective abilities of each shooter participating, and that the moneys be divided into three purses—50, 30 and 20 per cent.—and when all have shot out their score, the referee toss up a dollar, and if it falls heads the three best scores take the three moneys and if the dollar falls tails the moneys be divided according to class shooting, as under this method no man could afford to take the chance of a drop, as the dollar might fail to respond to his wishes and leave him out in the cold. It is useless to try and devise a method that will make a winner of any one class and yet draw a good crowd, and no one will attend tournaments when he knows he has no chance to win, no matter how well he shoots; and what we need is a system that will enable the winner to make a few dollars when all will be striving for that end and take the chances of that uncertain element which attends all sport—luck.

As shoots are now conducted too many targets are used, and the manager gets all of the shooter's cash, and my opinion is that all shoots should be at 10 targets. Then flip the dollar and shoot off the ties, allowing of no division. My idea is the shorter the race the better chance the amateur has for a purse. I also think the sliding handicap a farce, and that the dealer should handicap every shooter according to his past scores, and make all unknown shots shoot at the extreme handicap until their abilities are known, when they should be rated, and don't think any men should be allowed to shoot known trap and angles, as such fledglings can cut no important figure anyway and should not be considered.

W. T. MITCHELL.

### Favors "Crutty's" System.

EVER since the organization of the State Association I have followed the State shoots, read the FOREST AND STREAM, watched with interest the different plans adopted and tried at the traps, both at live birds and inanimate targets, and I am frank to confess that I sincerely believe that my friend Cruttenden has struck the keynote of reform in that line in the good old days of wild live birds when I used to meet such men as Hudson, Hoage, Mayo, Uncle Ben Catchpole, and contest with them for an honest position. Even then the spirit of "You scratch my back and I'll scratch yours," would crop out. But alas, where is the poor amateur's chance to-day in a race with the big salaried professionals, who make trap shooting a business and are under no obligation to any one except themselves and the friends they represent? I am of the opinion that there must be something done and that speedily to restore the confidence of the weak and heretofore badly bled ordinary shooter, or the annual State meet will be lightly attended; let us try Cruttenden's plan at once. It is certainly worthy of a trial.

DAN.

### Sweepstake Shoot.

A three handed match shoot took place at Woodlawn Park, on Thursday, Dec. 8th. The entrance fee was $10 a side the lowest to pay for the birds. John Schlieman and R. Hyde killed 21 each out of 25. J. Siegman being the loser with 16. Another sweepstake was shot off at ten birds, and the stakes were divided. The scores:

| | |
|---|---|
| J Schlieman | 1111211021021102112202121—21 |
| R Hyde | 2020212022112212202221211—21 |
| J Siegman | 2120020111201120221107111—19 |

No. 2, $5 entry, 10 birds, 25 yards.

| | | | |
|---|---|---|---|
| J Schlieman | 1221202102—8 | L Behman | 2020122012—7 |
| R Hyde | 0102201222—7 | J Shevlin | 2110012111—8 |

### New Utrecht Rod and Gun Club.

THE dull heavy weather of Saturday, Dec. 10, prevented a large attendance of the members of the New Utrecht Rod and Gun Club at Woodlawn Park, L. I., for the monthly shoot for the live bird trophy. P. Hegeman was the winner with a straight score of ten. Sweepstake shoots followed until darkness stopped the sport. The scores;

The Breech-Loader
AND HOW TO USE IT. By W. W. Greener. Illustrated.
1892. Boards, 288 pages. Price, $1.00.
THE AUTHOR'S INTRODUCTION EXPLAINS
This treatise is written for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study. Published at a popular price, it will, it is hoped, reach many who have hitherto been deterred from shooting, believing it to be an expensive recreation. The author's aim is to induce all who can to participate in a manly sport, and to advance the interests of those who can look to the gun for pleasure, health or occupation. The book is not written for experts, nor for those who have special opportunities for the acquisition of the art of shooting; and in order to make it as attractive as possible to the general reader, many matters which would interest the enthusiastic shot only have been omitted.

IF YOU HAVE a friend, good and true, whom you would like to remind of *his* friend, fifty-two times in the year—once every week—why not ask us to see that a FOREST AND STREAM wrapper has his name on it, with your initials in the corner of the address label?

## *THE AMATEUR PHOTOGRAPHS.*

THIS is the last month for receiving work submitted in the FOREST AND STREAM Amateur Photography Competition. All photographs must be mailed to us not later than Dec. 31. Nothing bearing a later post mark will be received.

Full details respecting the terms of the competition are given in another column (page 533), and these instructions in circular form will be sent on request to any address.

The collection of views already received is most interesting; and we shall give the readers of this journal the privilege of seeing many of the views reproduced in its columns.

## *FAMILIAR ACQUAINTANCES.*

### THE VARYING HARE.

IT IS wonderful that with such a host of enemies to maintain himself against, the varying hare may still be counted as one of our familiar acquaintances. Except in the depths of the great wildernesses, he has no longer to fear the wolf, the wolverine, the panther and the lesser *Felidæ*, but where the younger woodlands have become his congenial home, they are also the home of a multitude of relentless enemies. The great hawk, whose keen eyes pierce the leafy roof of the woods, wheels above him as he crouches in his form. When he goes abroad under the moon and stars, the terrible shadow of the horned owl falls upon his path, and the fox lurks beside it to waylay him, and the clumsy raccoon, waddling home from a cornfield revel, may blunder upon the timid wayfarer.

But of all his enemies none is more inveterate than man, though he is not, as are the others, impelled by necessity, but only by that savagery, the survival of barbarism, which we dignify by the name of the sporting instinct.

Against them all how slight seem the defenses of such a weak and timid creature. Yet impartial nature, having compassed him about with foes, has shod his feet with swiftness and silence, and clad his body with an almost invisible garment. The vagrant zephyrs touch the fallen leaves more noisily than his soft pads press them. The first snow that whitens the fading gorgeousness of the forest carpet, falls scarcely more silently.

Among the tender greens of early summer and the darker verdure of mid-summer, the hare's brown form is inconspicuous as a tuft of last year's leaves, and set in the brilliancy of autumnal tints, or the russet hue of their decay, it still eludes the eye. Then winter clothes him in her own whiteness so that he may sit unseen upon her lap.

When he has donned his winter suit too early and his white coat is dangerously conspicuous on the brown leaves and among the misty gray of naked undergrowth, he permits your near approach as confidently as if he were of a color with his surroundings. Is he not aware that his spotless raiment betrays him or does he trust that he may be mistaken for a white stone or a scroll of bark sloughed from a white birch? That would hardly save him from the keener sensed birds and beasts of prey, but may fool your dull eyes.

In your summer wanderings in the woods you rarely catch sight of him though you come upon many faintly traced paths where he and his wife and their brown babies make their nightly way among the ferns.

Nor are you often favored with a sight of him in your more frequent autumnal tramps unless when he is fleeing before the hounds whose voices guide you to a point of observation. He has now no eyes for you nor ears for anything but the terrible clamor that pursues him wherever he turns, however he doubles. If a shot brings him down and does not kill him, you will hear a cry so piteous that it will spoil your pleasant dreams of sport for many a night.

After a snowfall a single hare will in one night make such a multitude of tracks as will persuade you that a dozen have been abroad. Perhaps the trail is so intricately tangled with a purpose of misleading pursuit, perhaps it is but the record of saunterings as idle as your own.

As thus you wander through the pearl-enameled arches, your roving glances are arrested by a rounded form that, though as white and motionless as everything around it, seems in some way not so lifeless. You note that the broad footprints end there, and then become aware of two wide, bright eyes, unblinkingly regarding you from the fluffy tuft of whiteness. How perfectly assured he is of his invisibility, and if he had but closed his bright eyes you might not guess that he was anything but a snow-covered clump of moss. How still and breathless he sits till you almost touch him and then the white clod suddenly flashes into life and impetuous motion, bounding away in a halo of feathery flakes as if he himself were dissolving into white vapor.

Happy he, if he might so elude all foes, but alas for him, if the swift-winged owl had been as close above him or the agile fox within leap. Then instead of this glimpse of beautiful wild life to treasure in your memory, you would only have read the story of a brief tragedy, briefly written, with a smirch of blood and a tuft of rumpled fur.

## *A NEW SERIES OF ANIMAL PORTRAITS.*

THERE have been published four supplements of drawings of American wild animal life by Mr. Ernest E. Thompson, as follows: Sept. 18—The Panther; Oct. 6—The Ocelot; Nov. 3—The Canada Lynx; Dec. 1—The Bay Lynx. They have been received with so much favor that we have provided a new series for 1893. The drawing of the new illustrations will be much more elaborate and even more effective than the first set; and the portraits will admirably sustain the reputation of Mr. Thompson's work as spirited and faithful delineations of our wild animals in their haunts. The new picture supplements will be: Jan. 5—The Wolf; Feb. 2—The White Goat; March 2—The Coyote; April 6—The Antelope; May 4—The Fox.

## *SNAP SHOTS.*

AMONG the vagaries floated in anticipation of the World's Fair is the ancient scheme of a National Sportsmen's Association, this one to meet and organize in Chicago some time next year. The circular letter received at this office announcing the project sets forth:

> Prominent among the benefits to be derived by organizing a National Sportsmen's Association are the following; the better protection of fish and game during the breeding season, greater uniformity in the game laws, the preservation of our now rapidly disappearing forests, and establishing in each State as far as possible a public park, where the destruction of trees and the killing of fish and game would be strictly prohibited, thus furnishing natural game preserves from which there will be a constant overflow, as from a fountain in the wilderness.

This catalogue of "benefits" is certainly enticing, and if all of them, or if any one of them, could be attained by a Chicago convention, by all means the convention should be held. But the cold fact is that no one of the interests named would be advanced a whit by such an association. So far as any practical game or fish or forest protection goes, the National Sportsmen's Association scheme is a delusion. It has been tried, and has failed, as in the very nature of things it must fail if tried again. The time may come when something practical ought to be accomplished by a national organization, but that time will not be in the year 1893.

"A Native" of Wisconsin, who writes of two classes of game killers, puts a pertinent question; but his case would be more effective if it were not so manifestly a bit of special pleading. In America, that many-sided being, full of contrarities, known as the "true sportsman," does not sell his game in the market; although we believe that some of the Southern Atlantic coast shooting clubs do send their ducks and geese to Baltimore game dealers. On the other hand, a "true sportsman" does not waste his game, as "A Native" intimates was done in the instance cited by him. Nor is the average individual styled "game hog," one who sells game to eke out the expenses of an outing. It is readily conceivable that a case might be made out—as this Wisconsin one—where the so-called market-hunter stands on a loftier plane than does the shooter dubbed a sportsman.

In Great Britain a different code obtains. There it is quite the correct thing to slaughter game by wholesale and send it to market. The cable reported last week that in a three days' battue at Witley Court the Prince of Wales and eight others killed 4,000 birds, and we may assume that, after the British custom, the Witley birds went to London game stalls.

British sentiment is opposed to American sentiment in this, and each may be explained as reasonable enough for the country where it is held. In Great Britain game is "preserved," *i. e.*, reared, in such supply that there is no necessity of restraint of destruction for reasons of economy. The shooters, who slaughtered their 4,000 birds, killed in effect so many domestic fowl, reared expressly to provide a battue, and the killing of which in nowise diminished the game supply, nor restricted the sport of any one else. The stock being artificially maintained—and maintained for a privileged class—no consideration of a diminished supply comes in to restrict killing. Unrestricted killing involves a larger bag than those engaged in the shooting can take care of, and the surplus is sent to market. In short, the marketing of reared game in Great Britain does not mean game diminution or extermination; and is not, on that score, to be reprobated.

In America, on the contrary, different conditions obtain; and these have bred the perfectly sound and reasonable prejudice which here prevails against killing game for market. Shooting is free to all classes. The game supply is limited. There is barely enough for the temperate and reasonable supply of those who pursue shooting for recreation, and who can themselves utilize what they secure without sending any surplus to market. There is not enough game to go around, among sportsmen, for sportsmen; and under these conditions it is quite reasonably argued, from the sportsman standpoint, that the individual should be content with supplying his own personal needs; and should not go beyond this, to supply the markets, and thus to deprive some other sportsman. This, we take it, is the ground of the prejudice against marketing game in America. It is a perfectly reasonable sentiment, and is rendered none the less so because certain sportsmen act the part of Greedy, and slaughter game in excessive quantities, to be left to rot.

The supervisors of Onondaga county have just appropriated $500 to be expended under direction of the District Attorney, for the enforcement of the fish protection laws and the stocking of public waters. This action is in recognition of the grand work done by the Onondaga Anglers' Association, whose members have spent thousands of dollars in public-spirited and highly successful fish protective efforts.

The Mexican Government has just made a fifteen-years concession to a Gen. Mario Martinez of exclusive fishing and hunting privilege for a coast line of from 250 to 300 miles. The dispatches say that the grant includes all kinds of shellfish, pearls, alligators and sea-birds. Which means perhaps that the millinery feather business is to boom.

# The Sportsman Tourist.

## MEIGGS'S CABIN.

How many favorite old camping grounds—quiet nooks in the deep woods or by the side of mountain streams—have been swept out of existence, even within the last decade, by what is known as the encroachment of civilization. I venture to say that there are few readers of FOREST AND STREAM who do not, with me, mourn the loss of just such places.

Fifteen years ago, after exhausting all my resources in a fruitless chase after a golden pile in the different mining camps in the mountains of British Columbia, and with impaired energies, I wandered down to the coast, fetching up in a quiet little hamlet on the shores of Burrard Inlet. To one who was eager to lay by for himself a share of this world's goods there was certainly nothing very inviting in the looks of the place. To me, however, sick and tired of the unequal struggle, the spot bore a most restful look, while the slumberous hush that brooded over the quiet waters, the tall, stately pine trees, their tops just moving in the gentle breeze, the deep, solemn forest that held unexplored mysteries, all combined to charm me to the sport and induced me at last to pitch my tent, and here I spent ten years of the happiest portion of my thirty years in the Province.

Game was plentiful then, and when the day's work was done, the evening generally found me with my rifle on my shoulder, not so much on slaughter bent as for quiet strolling through the labyrinth of the giant trees. Occasionally, however, the death of a deer or black bear would be the result of these wanderings. It was on one of these excursions that I came upon a trail leading straight into the woods, and wondering where it would take me, I followed it, and in the course of half an hour came to the edge of a little clearing about 50yds. in extent. Here I paused, struck with the scene before me.

In the center of the clearing stood a log cabin, the typical form of those found throughout the mining districts of the country, built of rough logs, roofed with split stakes and with a chimney on the outside constructed of sticks and mud. About 15ft. from the cabin was a low shed, roofed after the style of the cabin, but open on three sides, the fourth being protected with what seemed to be the cloth of an old tent. Outside of the shed, sitting lazily on the top of a small stump, to which it was chained, was a coon, while just in front of the cabin door a couple of Stellar's jays divided with a varied thrush the pickings of a handful of crumbs which had evidently just been thrown out.

In the open doorway of the cabin stood the tall form of its owner, a man probably well into the fifties, square-shouldered and straight as the tall firs which surrounded his home. With a frank good-natured smile he welcomed me to a seat on the rough bench outside the door, and in the course of an hour's conversation I found out all I ever knew respecting the old man's past life.

He had followed the fortunes of Grant through the Civil War, and when peace dissolved the armies of the great republic, he drifted off to the west, crossed the Rocky Mountains, and following the occupation of miner and trapper, reached the Pacific Coast, finally fetching up on Leach River, Vancouver's Island, where he spent two years with varied success washing the bed rock of that stream in search of the yellow dust. But rheumatism, that dreaded inheritance of those who buffet the storms of the mountains, compelled him to abandon his claim, and crossing the Gulf he wandered up the Inlet, settling in the spot where I found him.

He pointed to the shed which contained his stock in trade. A pile of shingle blocks with a dozen or so bunches of neatly shaved shingles. He was doing well enough he said—making grub, with a few extra dollars to meet emergencies. Yes, he still followed trapping, but more through force of habit than for any great profit that could be got out of the business. Mink, wildcats, coons and skunk were the chief products of the neighborhood. His ingenuity in the matter of constructing wooden traps was simply inexhaustible, and almost within sight of the cabin were a dozen traps, and no two of them alike. With my coming—for from the very first we became fast friends—this old passion of his younger years began to revive, and taking me with him he extended his line to a creek some three miles away. There we found beaver and otter, but on account of the tangled net-work of undergrowth along its borders it was next to impossible to examine its banks with any degree of satisfaction. So after a good deal of speculation, hard work and hard language, we managed to transport an old punt from the salt water overland to the creek, and then commenced the work of exploration, hauling the little punt over stretches of drift and fallen trees, or skulking along beneath overhanging branches, which in many places arched the narrow stream from side to side. Now and then we would come out on an open stretch of clear water, where, impressed with the very silence of death which prevailed, we would rest on our paddles and allow the sluggish current of the stream to take us on to the next obstruction.

Here and there, as a favorable spot was suggested, we would set a trap, and more than once did we surprise bruin feasting upon the sour fruit of the wild crab, when he generally paid the penalty of his life for his lack of wariness, and when everything else failed we would pick off a grouse or two from the limbs of the trees, for we were not particular about a pot shot so long as the old man's larder was replenished.

So things went on, and in course of time Meiggs's Cabin became the favorite rendezvous for the few kindred spirits residing in the neighborhood. The late Mr. J. C. Hughes, whose writings at that time on the natural history of the Province were familiar to readers of FOREST AND STREAM; Dick Griffin, well known among the loggers and trappers, and my companion on many a mountain goat hunt; Scammux, the old Indian guide, and last, but not least, Baptiste, a French Canadian who had a sort of mania for getting into trouble with wounded bears.

Now there was nothing in Baptiste's record to show that he was anything of an expert in the matter of woodcraft or hunting. His stock in trade in the way of shooting irons was a singlebarrel muzzleloading shotgun; nothing more. This he packed with him wherever he went, and through sheer good luck, or bad luck, as he called it himself, he was continually stumbling on to black bears, even in places where no one ever saw a bear before, and in this respect he was the envy of the camp. On sight of bruin Baptiste never hesitated to fire, whether he was loaded for bear or snipe. Past experience and hairbreadth escapes had no deterring effect on his actions when face to face with his old enemy. Twice he came out of these encounters with his clothes hanging in shreds and himself pretty well chawed up. Once while picking berries a short distance from the beach where he had landed with his canoe, a black bear suddenly rose up before him with its paws on a log about ten feet away. Quick as thought the old shotgun came to his shoulder, but just as he fired a vision of his last encounter evidently flashed before him, for dropping his gun he tore out for camp at a rate of speed that took him there in an incredibly short space of time, where he related to his partner his narrow escape from being torn to pieces, declaring that the bear was just at his heels for nearly half the way. Arming themselves with axes the two went back to the place, where they found the gun on one side of the log and on the other the bear lying dead with the top of his head nearly blown off. The Frenchman's shot had paralyzed him on the spot.

Griffin had rather a poor opinion of the fighting qualities of black bears—white-faced ones and all—and I may tell one story as a sample of the contempt he entertained for bruin.

TALKING IT OVER.

One morning I was startled from my sleep by some unusual noise, and raising myself on my elbow I listened. From across the water, a mile and a half away, came the sound of the 6 o'clock whistle of the Moodyville Mills, while close to the house could be heard the loud tapping of a pileated woodpecker, but these I was satisfied were not the sounds that awakened me, because they were both familiar ones. And while I was still studying as to the cause of the noise there came a low rap at the door. Wondering who could be the early caller, I was on the point of leaving my bed, when I heard Dick, who slept in the next room, start to answer the call, and on opening the door commence talking with the person without, whom I recognized as Old Angus, a good-natured Scotchman, who did the work about the slaughter house close by, part of which work was the carrying of meat to the mills, which he did in an open boat.

As he spoke very low I could not catch the old man's part of the conversation. At length Dick asked, "How long ago is it?" "About an hour." "About an hour!" repeated Dick. "Well if this inlet isn't getting to be the headquarters for all the stupid fools on the coast. Yesterday this frog-eating Frenchman who keeps the hotel next door spent two hours trying to frighten a panther away from his hog pen with a pepper-box revolver, and when the panther finally walked off into the woods unhurt he remembered that we had a couple of rifles here and that we might probably have shot it, and so he came and told us. And now you spend all morning throwing rocks at a bear, and after he walks off with one of your pigs you spend an hour loading your boat and then come and tell your story after the bear has got away probably two miles in the swamp. I hope you won't have a hog left by sundown to-day." And slamming the door in the old man's face Dick strode back to his room. I sprang out of bed and opening the door called the old man back, as he was walking off muttering something to himself. He came back slowly and when he reached me commenced speaking in the same low tone.

"It was you I came to see, Mister Jack, and not that rattle-brain ye have inside there." And then he told the following story. It appears that while he was loading his boat with beef he heard a racket among the pigs, and leaving his boat he hurried up to see what the trouble was, and there found a large black bear walking off with a pig in his arms. So Angus commenced pelting him with rocks, and finally succeeded in making him drop the pig, but either from fright or injury the pig seemed to be paralyzed and remained standing where the bear had dropped it, and although Angus spent quite a time trying to drive the bear off, bruin refused to leave his prey. And then, as the tide was going out, the old man had to return to the beach and move his boat into deep water: and when he went back to the scene of the conflict both the pig and the bear were gone. I assured the old fellow that we would go down at once and inspect the ground.

When we reached the spot we found it an easy matter to follow the trail; for although the bear appeared to be packing the pig clear of the ground most of the way, he left a pretty broad track through the underbrush and ferns. After going a hundred or more yards, we came upon the pig dead with a piece freshly eaten from its side. About thirty yards from where the pig lay was a convenient tree, with brushy limbs reaching down near to the ground. Into this I climbed up twenty feet, sending Dick home to await the sound of my rifle. For two hours I kept this perch, and at length was about to give it up for a bad job, when from about a hundred yards back in the deep woods there came a distinct snap, which had the effect of warming up the blood in my veins. Snap, snap, 50 yards, still closer, and, with eyes riveted on the fringe of undergrowth which skirted the little opening where the pig lay, I waited for the black mass to appear. But five minutes passed and not a sound was heard, and then a loud snort and a rush back through the thick brush told me bruin had got my wind, and that I might as well go home.

After breakfast I proposed to Dick to bring in Meiggs and try and trap the brute; but he did not seem to hear me, for walking across the room he picked up an old muzzleloading goose gun, the barrel of which was about 4ft. long, and which had stood unused in the corner for the last year, and turning round toward me he said, "Let's set her." And set her we did. It was a difficult matter to tell just which way the bear would come, and the unevenness of the ground made it also difficult to judge the right elevation that would catch the enemy in a vital spot. However, we made a rough guess, set the infernal machine, and went home to wait for the report. Supper time came and went and no sound had been heard, and we were just discussing the advisability of leaving the gun there all night when the old piece belched forth, wakening the echoes for a mile around. Snatching up my rifle, I started for the place, followed by Dick.

About 30ft. from where the gun was set was a log about 4ft. through, over which we had to climb. When we gained the top I saw that the pig had not been disturbed, and that just on the other side of it lay a black mass perfectly motionless, and concluding that the bear was dead, I slid down from the log and commenced making my way through the tangled mass of tall ferns, with Dick close at my heels. But just as we reached the little opening, up rose the bear on his hindlegs with his right foreleg shattered and dangling by his side. The gun had been set too low.

If ever there was a fighting mad bear, there was one now before us, and with its one front paw cleaving the air, and mouth wide open, flecked with the foam of pain and rage, it came straight toward us on its hindlegs.

There was no time for fear—there was scarcely time to think, for a dozen steps would bring the enraged brute upon us. But just here a good deal of the romance of the thing ends, for as I covered the brute with my rifle Dick said, "Let's pack the son of a gun out alive." I pressed the trigger, expecting to send the bullet square in the bear's open mouth, but I came near making as clean a miss as ever I did in my life. The shot, however, threw the brute to one side, when my second pierced his heart, dropping him within a few feet of us. "I was going to tell you," said Dick, as he took out his knife and commenced to skin the bear, "that you would miss that first shot if you didn't hold more to the right."

From the slaughter house already mentioned there had escaped a half-dozen sheep, which took to the woods and in a very short time became as wild and wary as their cousins, the bighorns, and old Angus requested me to shoot them wherever I came across them, and to let him know when I did so, and he would go and pack them out.

One evening as I was tramping through the woods, making my way toward Meiggs's, I got a glimpse of one of these sheep skulking along a trail which intersected Meiggs's shingle trail, about 300yds. above the cabin. Feeling confident the sheep had not seen me, I stole cautiously after it, trusting that it would turn down the shingle trail and that I would get a shot nearer home. But just as he reached the junction of the two trails and had turned down toward the cabin, a black bear sprang from an ambush on the upper side of the trail and landed at the very heels of the astonished sheep. Of course both were out of sight in a second, but a bound or two brought me to the junction just in time to see the bear disappear round the next bend.

The trail was made by Meiggs to haul his shingle timber down to his shed. It was down grade all the way, but as it wound in and out among the big trees a clear view of over twenty yards could not be had of any portion of it, and although I joined in the race at my best speed I knew that my chance for a shot was slim. As has been said, the sheep and bear had a pretty even start at the first, but when the sheep tore through Meiggs's shed, upsetting him and the bench at which he was working, it must have been fully fifty yards ahead of the bear, for Meiggs had time enough to pick himself up, look down after the retreating sheep, then up the trail just as the bear came in sight. The bear sprang off the trail and disappeared in the thick timber, and a few moments after I appeared on the scene and was greeted with the query from Meiggs, "Well, what in thunder is coming next?"

I afterward succeeded in shooting two of those sheep, but what became of the rest was never known.

The first snow was always a big day with Meiggs and me, and when we awoke in the morning and found the fresh white mantle covering the ground, business for that day was suspended, a circuit of the woods made and the tracks of the different animals found and noted. But perhaps the principal object of these excursions was to

locate "coon trees," and in fresh snow this is a very easy matter. During the winter months the low tides on this coast occur at night. The coon is a great lover of fish and clams, and when the tide is out his harvest is ripe, and the broad trails going and returning from the beach betrayed the poor little brutes.

Smoking coons out of a big hollow cedar and picking them off the top branches with a rifle may not be considered legitimate sport, but all the same there is a good deal of fun in it, and a mat made of a dozen skins got in this way in the neighborhood of Meiggs's cabin is now lying on the floor where I write, and cannot be bought for money.

One morning in early fall the long-drawn howls of a wolf woke the echoes of the little settlement, and although wolves were not uncommon in the district, the boldness of this particular one was the subject of a special meeting held at Meiggs's cabin, where after a good deal of discussion and some rather wild propositions from the Frenchman, the honor of destroying the intruder was assigned to me. But the brute was a wary one, and after failing to bring him down with my rifle, I set a trap, and half an hour afterward caught the Frenchman's dog. This lowered me considerably in the estimation of Meiggs, and caused a coolness between myself and Baptiste, which however wore off as the dog got well.

But I am getting a little ahead of my story. There is one circumstance connected with this business which I have kept to myself because I did not wish to bring an old companion—my rifle—into disgrace. I did have one chance to annihilate that wolf. It was at the end of a couple of hours' tramp through the wood that I sat down on a little mossy knoll, placed my rifle across my knees, and was just in the act of taking out my pipe, when, on looking back over the way I had just come I saw the wolf trotting along with his nose to the ground, evidently following my track. Slowly raising my rifle I covered him with the sights, and as he was coming straight for me it was an easy matter to keep him covered. But I was going to take no chances with a running shot, and so waited till he was within 30yds. of me, when I whistled. He stopped at the sound and threw up his head, giving me a splendid chance at his full breast. I pulled the trigger, but a dull click was all that followed. The cartridge had failed to explode, something that never occurred before with that rifle during all the years I had carried it. I was so surprised that before I could recover my senses the wolf was out of sight. After this I set the trap with the result above mentioned.

The wolf still held the fort, till one morning, as Meiggs lay awake, revolving the thing in his mind and thinking whether it would not be better for the credit of the community to step in with his cyclone of traps and take the job out of my hands, a blood-curdling howl started the echoes among the big trees which encircled the old man's cabin. Springing to the floor he grasped his old Spencer rifle from the pegs above his bed, and without waiting to dress, stole out into the foggy air and down in the direction from whence came the sounds, and presently located the wolf sitting on a log with its nose in the air ready for another howl. The old man raised his rifle and fired, but the rest of the story must be told by himself.

"You see I hadn't used the rifle for a long time, and the cartridges are some that I have been packing through the mountains for the last ten years, and I guess are no good anyhow, because when I fired I distinctly saw the ball leave the muzzle of the gun and watched it all the way till it struck the wolf on the side and fell down on the log. The wolf sprang off the log toward me and I made a break for the cabin, but my drawers fell down about my feet and tripped me up, and I pitched head foremost into a brush heap. I reached the cabin, part of the way on my hands and knees and part of the way by rolling over, but made as good time as I probably ever made in my life. I'm a good deal scratched with the brush, but I'm going to catch that wolf inside the next forty-eight hours or I will never set another trap in the country." But he failed to keep his word, for the wolf was never heard of after.

Another somewhat ludicrous circumstance connected with our trapping, and one which turned the laugh on me, may be mentioned here. I had made several attempts to procure a specimen of a great blue heron to make a skeleton of, but was always unfortunate in breaking some of the bones when shooting them, so our inventive genius was brought into play. After a great many experiments a trap was made of steel wire, coiled in the form of a cone, but so constructed that when pressed flat and set the coils at the apex opened out and formed the outside circle, and when sprung these coils came together and, of course, grasped firmly anything within their folds. The trap was kept in a set position by a number of wire levers, which connected in the center with an upright spindle on which the bait was fastened. So far so good. The trap was set on the beach, carefully concealed with sea weed and baited with a temptingly fresh fish. But an Indian instead of a heron was the first victim, and the stoical indifference to pleasure or pain which is said to characterize the noble red man of the forest did not count for much on this occasion. Walking along the beach the peculiar position of the fish attracted his attention, for stuck as it was on the wire spindle it looked as if it floated in space. He walked cautiously round it and viewed it from all sides. He approached closer, and bending forward and resting his hands on his knees, looked long and earnestly at the phenomenon. He muttered something in the guttural language of his tribe, which, if interpreted, would probably be "Well, I'm blowed if that don't get me," and was about to turn away when, suddenly, either from curiosity or a desire to obtain a cheap breakfast, he reached out and took hold of the fish.

For a few moments the men who were watching the performance saw nothing but flying mud and seaweed, and a confusion of legs and arms, but at length the Indian, thinking no doubt that he was being slowly encircled in the coils of a sea serpent, sprang to his feet, flew up the bank and tore away in the direction of Meiggs's cabin, where he was freed from the supposed monster, and the object of the trap explained. But if ever there was a disgusted Indian that was one. He strode out of the cabin and down the beach in the direction of his canoe, remarking in the most classic Chinook, that if ever he went in search of a *pilten* (fool), the first white man he met would suit him.

At the approach of September preparations were made for our annual hunt for mountain goats, when guided by the old Indian Scammux we pitched our tent on the summit of the mountains whose rugged peaks could be seen from the door of Meiggs's cabin. These were trips full of enjoyments—enjoyments which seldom come even to those who are capable of appreciating them.

The ascent of course was a struggle for the best of us, but then the summit brought with it more than a full measure of compensation. The cool breeze that came to us from the snowy peaks; the open stretches of grass and heather; the deep cañons, their sides densely clothed with low bushes, out of which we were always sure to start a goat or bear; the stalking of some solitary, shaggy-coated old male; the rifle's crack, which wakened such strange echoes among the gloomy peaks; the rest for lunch after a successful morning's work, and last but not least, the evening camp-fire with its pleasant stories of by-gone trips, and then the quiet smoke after the evening meal, in which we forgot that we had ever slipped or barked our shins on the way up.

So time wore on till one day I was offered and accepted an appointment in a distant part of the Province, and for three years amid the absorbing duties of my new position I lost sight of Meiggs and his cabin. But at last

ON WATCH.

a longing to revisit the old haunts came over me, and procuring a leave of absence I boarded a steamer which landed me on the evening of an October day at a place nine miles from my destination. These nine miles were covered by stage, which was to leave at 9 o'clock the following morning. But I was impatient, and at 9 o'clock the following morning I hoped to be taking a quiet smoke with Meiggs in his cabin. I rose at 5, went down to the kitchen of the hotel, where I procured a cup of coffee from the good-natured cook, and long before the city was astir I was out beyond its outskirts and on to the sandy road, which led through the grand old woods to the salt water.

It was a beautiful still morning; just a breath of air, bearing with it the scent of fern and cedar and balsam, seemed to meet me at every turn of the tortuous road. Among the branches of the stately firs the little pine squirrels were busy throwing down their winter store of seeds. Now and then a ruffed grouse would strut across the road in front of me, and with a flirt of its tail disappear in the thick bushes, or a hare would prance away out of sight at the next bend, a hundred yards ahead.

How often I footed it across that road, and how much I enjoyed the scenes it always afforded. There is not a turn in it, nor a tree that guards its sides, that I am not familiar with.

A tramp of a couple of hours brought me to the bridge which spans the little stream, the scene of our adventure with the old punt mentioned earlier in this letter. Here I took out my pipe for a smoke, and wondering whether Meiggs still continued his trapping in this direction I scrambled down in search of tracks leading beneath the bridge, our hiding place for the punt. Down by the edge of the stream a coon had made an early breakfast off a couple of clams, which he had fished from the shallow water, while on the opposite side, where the soft clay showed the fresh tracks, a great blue heron had stalked along on the lookout for a hapless sucker.

But nowhere on either side could be seen the tracks of human feet. I parted the bushes and passed beneath the bridge. The old punt was there just about as we left it three years ago, but its gaping seams and warped seats gave evidence that it had not been used for a long time. I looked up over the stringer and found the paddles in their usual hiding place, but they were covered deep with dust which had sifted down through the cracks of the bridge. I began to feel apprehensive of some disappointment in the result of my trip, and reaching the road hurried on, not stopping till I arrived at the spot where the big log crossed the ravine to Meiggs's trail. But the log was gone and in its place a massive railroad bridge, over which two iron tracks stretched away in the direction of Meiggs's cabin. No vestige of the trail was left, and so one of my anticipated pleasures was blighted.

I had forgotten that during my absence the Canadian Pacific Railway had wormed its way down from the Rocky Mountains along the cañons of the Fraser to the coast. I reached the spot where the little clearing should be, but what a change. The cabin was still there, but for a hundred yards back, the tall, stately firs which used to stand like grim sentinels keeping watch and ward over the charmed spot were cut down and now strewed the ground in blackened heaps. I picked my way over their charred trunks to the cabin, and reaching the door, which was slightly ajar, pushed it open. The empty frame of the old man's bunk was all the furniture the cabin contained. A few sprouts of grass and weeds had forced themselves up through the joints in the flat stones which formed the hearth. A bushrat scurried across the floor and disappeared beneath the bunk, and this was all of life within the old place. What a greeting to my coming back!

I turned away, and working my way down to the beach followed on to the old Frenchman's cabin, where, finding him at work, I plied him with questions.

"Meiggs, oh he lef' more two years ago. He no see you? Well he speak he go see you sure. What's matter he go? Oh he no like railway; make too much noise; cut down all big trees; by 'n' by plenty peoples come; Meiggs he no like it. Sell him hax, saw, every ting and lef'. Where he go? Oh I spec' down bee-low [California], may be Horigon, don't know. He no come back sure."

And so Meiggs's cabin, with all its pleasant memories, are now things of the past.

JOHN FANNIN.

VICTORIA, British Columbia.

## FROM THE FLORIDA COAST.

TROPIC, Fla., Dec. 1.—In a late issue of FOREST AND STREAM I noticed an article of the evidence of mind in animals. I did not suppose that it was any more a matter of doubt. It has always been a mystery to me how any one at all observant of our dumb friends and their ways could for one moment question that animals show almost all the faculties that are supposed to be the inheritance of man, only in a less degree. No one who has had for a companion a faithful and intelligent dog but must have felt that he had as a friend one who daily exhibited many of the highest virtues and an alert intelligence altogether remarkable, and showing in every way an intellect differing not in kind but in degree only from his own. The mentality of animals has always been a subject of great interest to me, but this is not the subject of this communication and so I forbear.

The wide, beautiful sheet of water known as the Banana, girding Merritt's Island and in reality only a part of Indian River, is now coming a good deal into notice. It has for many years been a favorite resort for those who love duck shooting, but the beauty and fertility of the strip of land lying between the river and the ocean, where frost never reaches, has only recently come to the knowledge of men. One can here sit in his cottage door and look out on the one side over the broad Atlantic and on the other one on the river.

For some reason the ducks are slow this season in making their appearance, and there are not so many as there were at the same time a year ago. A few English snipe have put in an appearance along the savannas.

A recent experience with a large rattlesnake only serves to confirm what I have written you before as to their character. A neighbor and myself were riding along a trail, when the horse stepped over the rattler who was leisurely crossing the road, and so slow was his movement the wheel of the wagon just missed the end of his tail. The horse showed no alarm, nor did the snake make any movement toward an attack, but crawled slowly toward a pile of palmetto logs. My companion leaped from the wagon to get something with which to kill it; and of course on his approach the snake sprung his rattle, but did not coil and was easily killed by a blow from a light stick. Indeed these people seem to regard a rattler as of no more consequence than a harmless snake, so sluggish is he, and so easily dispatched. The only quick movement he makes is when you are within say 3ft. of him and he is coiled, has given his warning rattle and is ready to strike. I have noted this common incident because multitudes of Florida's winter visitors come with such absurd ideas regarding snakes, and especially rattlers, that much of their pleasure, if they are in the country, is spoiled by needless fear of meeting venomous serpents, when the fact is that they may spend many winters without ever meeting with anything but the most harmless grass snake; and if by any chance a rattler should be met, the snake left to himself, will slowly move away.

Of the fishing on the Banana there is no need to speak. The whole river fairly wiggles with fish of every description, to be taken in any way the fisherman may desire. One way is this: We were coming up one evening, after landing from the yacht, through a narrow canal, opened for drainage purposes, when we alarmed a large number of mullet which had been spending the afternoon up the canal. Disturbed by our approach they started back for the river in great haste, and meeting the boat attempted to leap over the obstruction; thirty-nine of them landed in the boat and were secured. This, although a fish story, is not fishy.

After all, the great charm of this vicinity is the climate and surroundings, and this little section of the Indian River country lying below Canaveral and known as the peninsula is the most desirable of all. W.

## ON THE PAMPAS OF ENTRE RIOS.—II.

In a former letter on the above subject I mentioned the carpincho as one of the animals abundant in Entre Rios. This animal is known to scientists as the *Hydrochœrus capybara*, or water hog, and it is the largest of all the living rodent animals. In appearance it is repulsive and clumsy, being about 4ft. long, very squatty and bulky, its stomach not more than an inch or two from the ground. Its muzzle is heavy and blunt, and its eyes are small and set very high in the head. Its body is covered with quite long, coarse brown hair, and its incisor teeth are enormous. Its feet are partially webbed, and it is equally at home on the land or in the water. It swims and dives with ease, and when frightened it always takes to the water, diving at first, then rising to the surface, showing only its eyes and a small portion of its head. It is always found in small herds and makes its home on the banks of streams or lakes.

I shall never forget my first introduction to the carpincho. We had gone twenty-one miles from the ranch to a woods that grew on the banks on a stream called the Guallyguaychu to get a load of firewood, there being no trees nearer. While the men were taking their siesta after dinner I amused myself by strolling along the bank of the stream, taking in whatever there was of interest to be seen. Walking leisurely along I came to some large mud holes just like the hog wallows we see in this country. While debating in my mind the best way to avoid them, there arose from each of them huge, strange, horrible looking animals, each one of which gave an awful snort and grunt, running rapidly toward the stream, while I ran as fast the other way.

Finding the beasts were not following me I returned cautiously to the bank of the stream, first cocking my 7in. Colts revolver that I always carried with me. Looking carefully over where their muddy trail showed me they had gone in, I saw a pair of bright eyes, and the end of a broad snout showing above the water. Taking careful aim I fired and by good luck planted a bullet in one of the eyes. The animal immediately sank, and in a few moments there was a tremendous boiling up of mud and water where he had disappeared. I knew he was mortally wounded, and hurried back to the men, who told me it was a carpincho, and seemed delighted at the prospect of getting it. They said the body would rise after four or five hours and we could then secure it. We went to the spot about sundown, and sure enough there he was, and a very large one too. We hauled him ashore with a lasso, and the men soon had him skinned and his fat collected, which they tied up in the skin. The flesh is strong and coarse and is not eaten by the natives, but the skin is very highly prized by them, as it is peculiarly suitable for making lariats. They cut the skin into a long string about 2½in. wide, which strip they stretch while green by fastening one end to a post, and pulling on the other with a horse. This brings it down to about 1in. in width, and it is then fastened securely at the ends and left to dry. When thoroughly dry it is softened by being pulled through a cleft stick a number of times. When ready for use it is soft and pliable, and no amount of strain, or wetting or drying will cause it to get hard or stretch, and it is about as strong as a piece of telegraph wire. As the lariats are used almost exclusively for tethering out horses at night, these properties are very desirable.

The carpincho is rarely found away from permanent water or by itself, but one case came under my own observation where one of them had wandered twenty miles away from its habitat, and had apparently been living for some time in an almost dry arroyo. It was discovered by one of my men, who reported it. Taking my gun I went to the place indicated and found the beast wallowing in a partially dried up mud hole, and it seemed to be in a very bad humor, showing fight on our approach. The right and left barrels of my No. 12 Hollis caused it to roll over on its side apparently dead. I approached as near as possible and poked it with the butt of my gun, when it suddenly gave a snap and caught the butt in its terrible curved teeth, holding on and pulling tremendously. I called Benancio, the man who was with me, to grab me round the waist and help pull. For several seconds it was a tug of war between us. I was afraid the carpincho would get the gun or pull me into the mud, which was of unknown depth, and where he would have had me at a very great disadvantage. However, he soon weakened, as he was mortally wounded, and let go his hold.

One day while hunting caroinchos in the Arroyo Gualleguy, quite a large stream, I met with an adventure that might have resulted disastrously, but fortunately I got out all right. I was working my way up the channel through a swamp in a boat. The bushes were very thick and growing in water from six to ten feet deep. At the place where the accident occurred it was at least a quarter of a mile to either bank, and half a mile to where I entered the swamp. I was hauling the boat through the water by pulling on the branches of the bushes. A large and strong one that looked as if it ought to have stood a good pull broke with me, and I fell over backward into the water. On rising to the surface to my horror I found the boat had drifted away quite rapidly. Stopping a moment to think what it would be best to do, work through the bushes to the bank or keep in the open water and work toward the place where I entered the swamp, I noticed the boat had swung against the bushes and was fast. Quickly regaining her I was soon out of the swamp and had my clothes hanging up to dry, and it is needless to say that I did not hunt carpinchos any more that day.

The Gauchos had very few firearms, and the one who possessed an old musket was considered wealthy indeed. They were very poor shots and after wounding any kind of an animal they rarely fired at it again, but relied on their lasso, knife, or bolas to finish it. Some of them carried pistols that had large bell-shaped muzzles and were called trabucos. Their theory was that the wide muzzle caused the bullets to scatter, thereby doing more execution, and in this connection they had a saying which, freely translated, reads, "That which will kill the man will at the same time kill the horse." The most indispensable article that the Gaucho possesses is his knife. This is usually a large, long-bladed knife, frequently made from the end of a sword and having a silver-mounted handle. The knife is carried in a rawhide sheath stuck through the belt or sash well back on the right hip. They use the knife with wonderful dexterity, killing and skinning cattle with it or as easily cutting strips of rawhide so fine that they can be used as thread with a needle. They also eat with their knives, cut up their tobacco for their cigarrillos, and not infrequently commit murder with it. They are very quick to draw their knives, and I have seen a good many of them badly carved up.

Twice during my sojourn in Entre Rios I had knives drawn on me. The first time by a young Gaucho about nineteen years old, to whom I had administered some rather rough demonstrances on account of his scaring the sheep with a lasso at shearing time. Fortunately, there was a convenient strip of pine board lying near me, with which I knocked him down, captured his knife and broke it short off at the handle. The second time was quite an exciting episode in my life on the pampas. I had sent an Indian with a cart and two horses to a neighboring estancia to get some stores. As he did not return that night or the next morning, I sent another man to look for him. This man returned in a short time with the cart and one horse, and reported that Crespo, the Indian, was lying on the pampas drunk and that he had killed one of the horses by sticking him with his knife. That afternoon I saw Crespo making his way on foot toward the estancia. My room was quite a large one, with a pine table in the middle. I always sat at the side of the table furthest, and opposite the door, when giving orders or paying the men. Crespo came up to the door, and when I asked him why he killed the horse he answered very insolently that he killed him because he would not follow behind the cart. I told him his services were no longer needed and that I should deduct $5 from balance due him to pay for the horse he had killed. I had no sooner said this than he pulled out his knife and made a vicious lunge at me. As I jumped back from the table he came around toward my side, but seeing me grab my gun from the deer horns over my head he ran out and around the kitchen, a detached building near the door. In my excitement at the attempt on my life I let go both barrelsof the gun at him. I saw a large piece fly out of the kitchen, which was a thatched structure, and thought, of course, I had shot the man. A reaction then set in and I sat down on my bed, feeling horribly at the thought of having shot a human being. Finally, I nerved myself to go and look at him, but not seeing his gory corpse lying on the ground I looked up, and saw him at least a quarter of a mile away and his horse running for dear life. About three months after this he reappeared, and at a warning from me not to get off his horse he pulled up his shirt and showed me his back, which was seamed and scarred up terribly, which he told me was from extracting the shot I had put into him.

CARPINCHO, WATER CAVY, OR CAPYBARA (*Hydrochœrus capybara*).

The Gauchos are on the whole a pretty good-natured set of fellows when sober, but are quarrelsome when drunk. They get $5 to $6 a month and work very well until they have accumulated $10 to $20, when they consider themselves rich, and invariably knock off work, going to the nearest pulperia or store, where they stay and drink and gamble as long as their money lasts, which of course depends on their luck. I have known some to stay away three and four months and then come back looking for a job. They are inveterate gamblers, and when their money is gone they will stake their boots, hats, whip, lasso, bolas, saddle, and in fact everything they possess except their horses and bridles, which they never part with. I have seen them frequently leave the estancia to go on a spree, decked out in grand style with fine saddle, beautifully made whip, which they decorate themselves, many colored poncho and chiripa, in fact, with all the finery they had been able to accumulate since their last spree. In about two or three weeks they would return with nothing on except pantaloons and shirt, riding bareback.

Dogs are very numerous around estancias, being mostly mongrels, but they never molest sheep. There are also a good many wild dogs, called *perros cimmarones*. They are very destructive to sheep if they find them unattended at night away from the buildings. Sometimes a careless shepherd will leave a small point of sheep out on the pampas, and if they do not come home themselves, which they are not apt to do, there will probably be none of them left by morning, as the wild dogs will destroy them. They hunt in packs, but do not all run together. Selecting a heavy mare or old stallion for their prey, two or more of them will start after it on a full run, working in a large circle. When the first dogs become tired, fresh ones will take their places, keeping their prey on the run all the time. The horse soon becomes tired and will stop and try to keep off the dogs by kicking and jumping on

them, but in a short time they have their victim down, and by morning there will be nothing left but the bones.

There was quite a large dog den or burrow near the estancia, but I could never get a shot at them. They are very cunning, and always keep a sentinel outside the den, who gives the alarm on the approach of an enemy, and the dogs run out and scatter in the high grass. I had a pair of Spanish galgos, which were my constant companions. They were named Lion and Tigress, and were very intelligent animals. When in the house they were always apparently listening to the conversation, and if while talking with any one I should say without changing the tones of my voice or giving them any sign *Salir a fuera* (go outside) they would both get up without any instruction on my part; they seemed really to understand what we were talking about, and if we would bring into the conversation such sentences as "Hunt the cat" or "Strange dog" they would dart out all excitement.

Before I had full charge of this estancia, and while I was going through an apprenticeship, as it were, I was put in charge of a flock of twelve hundred sheep, and lived in a small straw questo or hut for three months. These dogs were my only companions as I saw no one for days except the man who brought me a fresh horse every morning, and once a week the manager. There was a small square hole in the side of the hut about four feet from the ground which served as a window. It was almost a nightly occurrence for my dogs to leap through this window excited by some noise or scent, and they would generally return in a few minutes with an opossum, which they would lay at my feet. Sometimes it would be a skunk, and they would return smelling vilely, but they never brought the skunk with them, although they invariably killed it. These odoriferous beasts abounded on the pampas, and animals and men were constantly scented up with them. Foxes were very plentiful, and one pair that I saw nearly every day puzzled me no little by disappearing when the dogs got after them. I watched them often to find out where their den was and finally discovered it neatly hidden just under the top of a very high bank of a deep arroyo. My dogs would tackle anything from a mad bull to an iguano, except a tarantula. When they came across one of these they would make a great fuss barking, circling around but keeping at a very respectful distance.

One evening on returning to the estancia after being away all day, I was met by Tigress who was very proud of a litter of cubs she had. She seemed much more pleased to see me than usual, jumping up on me and licking my hands. She ran behind one of the buildings, then looked to see if I was following; finding I was not, she tried in every way to attract my attention. Thinking that something was wrong I went with her, and she led me to a deep hole in the ground that had been made by pulling up a large post. In the bottom of the hole was one of her cubs which had fallen in. The strange part of this is that the dog should have waited for me to release the pup when there were several others about the place all day. They told me she had been restless all the afternoon, constantly going out of the inclosure, and looking in the direction she thought I was coming, but not once did she try to call their attention to her imprisoned pup. These Spanish galgos or hounds are very aristocratic, and will not associate with the common dogs. They stay in and about the main house and will not allow a common dog to come near it, but keep them on their own territory which is near the kitchen. EDWARD A. ROBINSON.

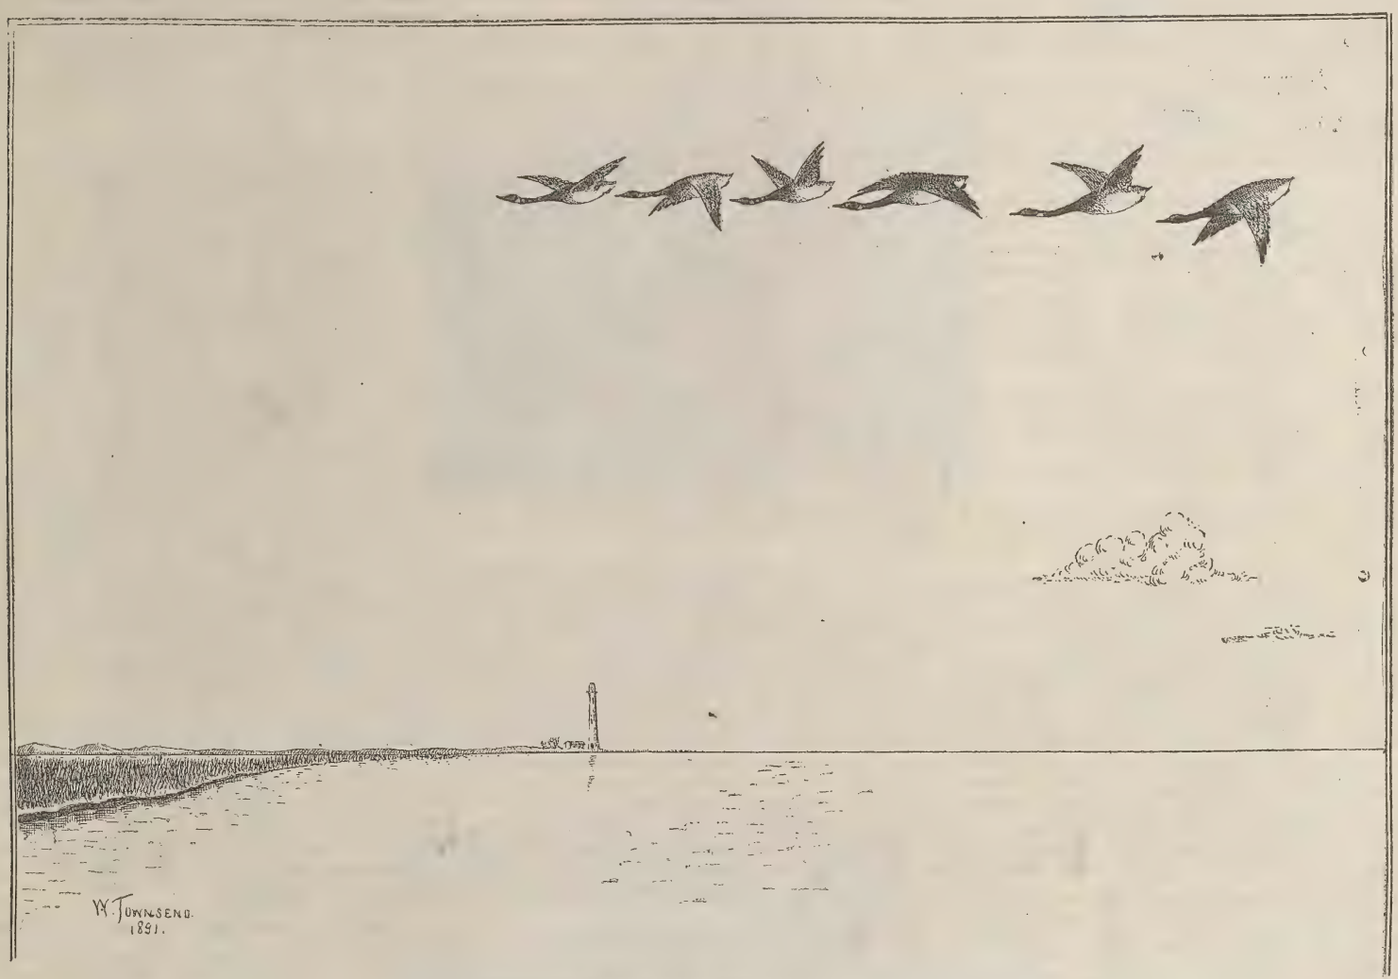
BALTIMORE, Md.

## ADIRONDACK DEER HUNTING.

*Editor Forest and Stream:*

Referring to an article under the head of "Adirondack Deer Hunting," and published in FOREST AND STREAM of Dec. 1, I beg leave to criticise the points taken by the author of that article.

First, I do not think deer have increased for the past few years about here. It is true, there are more deer in certain localities. But then, there are large tracts where there are but very few deer where they used to be plenty. This is partly due to the extensive lumber jobs now going on in the Adirondacks, and much more the result of hounding.



I travelled through the woods of Maine soon after hounding was prohibited in that State. Deer seemed to be in clusters or herds. In some secluded spot at the head of some stream they appeared to be plenty, while in other places on equally or more favorable grounds I would travel for miles and not see a deer's track. I was in the Maine woods again this fall and found that the deer were gradually spreading themselves all through the woods. I agree with the author that more stringent measures be taken to insure the deer supply. But whoever makes the assertion that by having the open season for hounding later in the fall would be advantageous both to the deer and the hunter, either has not the proper protection of deer at heart or is ignorant of the facts concerning late hounding. I admit it would be advantageous to the hunter, but not to the deer.

I believe also that it is the general opinion that venison will not be injured so much by the race in later and cooler weather, in October, as in warmer weather, in September. So far from this being the fact, venison will be injured more in a race of fifteen minutes the last of October than it would be in a whole hour in September. The reason is obvious. During the early stages of the winter's coat, which comes on the latter part of August and early September, the hair is short, small, firm or solid, admitting of the more free escape of animal heat. But as it gets later in October this hair not only becomes long, but expands laterally and becomes exceedingly light and porous, filling up all the interstices between the hair and becoming one of the best non-conductors of heat known, and thus enables the deer to stand the rigors of a northern clime. Now, the heat does not come from without, but from within. The fear and over-exertion causes the rapid circulation of the blood and consequently the rapid accumulation of animal heat, which cannot escape by reason of this non-conducting coat of hair. The deer is soon over-heated, suffocation takes place and it rushes to the nearest water. The worst hounded venison I ever saw was killed in the coldest weather in December.

Hordes from all around the woods would hail with delight a law that would admit of later hounding, for they know they could kill more deer. There is a certain class here, and I suppose this is the case all around the woods, that know nothing about the two deer clause, but make a business of hunting deer during the whole open season for hounding. It is reported on good authority that one man at Long Pond killed over twenty deer in one season by hounding. Last year on the 20th day of October there were eighteen deer killed in the two little lakes within one and a half miles of my house. This year there has been a falling off of fifty per cent. in the number of deer killed by hounding due to the closing of the season the 10th instead of the 20th as last year.

The assertion that there would not be as many does killed in October as in September is erroneous. It is, in fact, the reverse. During October the bucks travel the least of any deer. They seek some good feeding place and remain quiet preparatory to the rutting season in November. The hound will not be as likely to find as many buck's as doe's tracks in October. During September the bucks have recently shed the velvet covering from their horns and then they are the finest, and, too, the early winter coat, which comes on with the bucks the latter part of August, is by far the prettiest for mounting, and as there is no trouble for the sportsman to secure his allotted number in September, why should the season for hounding be extended into October only for the slaughter of the deer by meat hunters? I should be heartily in favor of abolishing both hounding and jacking. It is impossible to frame a law that would please every one. Hounding being by far the most destructive method should have the shortest time. The present law with an amendment closing the hounding season Oct. 1 would, I think, generally give as good satisfaction as any that could be devised consistent with the proper protection of deer. MUSSET.

NUMBER FOUR, Dec. 12.

AMONG THE WILDFOWL.—XIX.

From a drawing by W. Townsend

### A Long Shot.

CINCINNATI, O., Dec. 8—*Editor Forest and Stream:* A year ago last spring I was living on a shanty boat on the St Mary's Reservoir. My boat was anchored on an island east of the Twin Islands, and here it was that I made a shot that I shall remember the longest day I live. I had just finished cooking breakfast and opened the door to cool the boat somewhat when I noticed a bald eagle flying to the ice, about 500 yards from the boat. Some of the good old fishermen were raising nets from the ice around my boat, among whom were Sam and Charlie Marshall, Felix Sweigart, Tom Carter, Dave Dines and Swarts. I raised my rifle to my shoulder and pulled, expecting the bullet to fall short of the bird, but to the surprise of myself and the fishermen he gave a sudden flap of his wings and fell. He weighed 18 pounds, and measured 7 feet 1¼ inches from tip to tip. F. B. M.

## DUCK SHOOTING FROM A HOUSEBOAT.

Lake Champlain.

WHAT is a houseboat blind? Simply a flat-bottomed boat with a house thereon, covering three-quarters of its length, and hidden entirely in cedar boughs, top, sides and all around. And so artfully is the cedar arranged that the resemblance to a green islet (save for its somewhat regular outlines) is complete.

With tight roof and sides, the interior of this little house is a veritable snuggery furnished with bunks, table, camp stools, gun rack, shelves for provisions and cartridges, and last but not least, a kerosene stove, which, when kept properly cleaned and trimmed, will give you a smoking hot dinner at short notice.

And after a day spent in the open air, when the lungs are filled to cracking with the pure breeze that filters down through the groves of pine and hemlock covering the hills, and comes all pungent with balsamic odors, to dance about the clear waters of Champlain, "a smoking hot dinner," sauced with the ravenous appetite of a wolf, is not to be despised.

The house, occupying three-quarters of the boat's length, leaves the bow clear, and here you have ample room to stand and with a good field glass may sweep the lake in search of fowl.

A portion of this space is occupied by a roomy and comfortable coop for the live decoys, the cedar being carried up in front and at the sides to about shoulder high, so that the fowl when lured within the "dead line," which is the space covered by an ordinarily strong shooting gun, say about 40yds., are in plain sight when you stand erect.

A flock of ducks approach; their every movement may be watched through sundry little peepholes among the twigs as you crouch low with ready gun.

A moment, and they are within shot. You see the bright eyes, the hovering wings, and rising rouse the echoes with both barrels.

'Tis done! What is done? Why, you have either brought sundry ducks to bag or scared them "inside out," in which case you will form some idea of what a scared duck can do in the way of speed as he buzzes off, quacking in terror the while.

Ducking from a "houseboat" is the very acme of comfort in this oft times arduous pursuit. "Blow high!" blow low! you have your cosey cabin, and pleasant it is to sit within, puffing a quiet pipe and listening to the pouring rain while the storm rages.

At the first sign of clearing weather one is literally "on deck" for business.

Fifteen miles from Burlington, Vt., over a good road, winding amid everchanging scenery, you reach Sand Bar Bridges, a roadway connecting the mainland with Grand Island.

South and west extend the flats, it being possible to walk in some directions here quite a mile from shore without bringing the water above knee-deep.

On these flats the blind was moored, and therein it was my privilege to spend a few days in September.

To the north and west lay Grand Island, distant about three miles. Above its rounding hills and flanking the lake shore, far as the eye could reach to the south, loomed the silent Adirondacks, grand and sphinx-like in repose. The play of light and shadow gave a wondrous depth of tone to the scene. Even the wandering clouds seemed to linger with a soft caress about the mountain tops, reaching out with long, filmy streamers from summit to summit, leaving each slowly, regretfully, as though parting with an old friend.

The use of live decoys was a feature of duck shooting that was unfamiliar to the writer, and I had looked forward with impatience to the day when Elmer was to initiate me.

A word as to this same Elmer E. Bean, of Milton, Vt. I have knocked about with many an honest fellow, in rough weather and calm, but for all-round straightforwardness, good nature and "git thar," combined with downright shooting qualities, commend me to Elmer.

The decoys were sturdy specimens of blackduck nearly pure wild blood (as I am told) and certainly their markings were exactly similar to those of their wild brethren.

If it were not for a certain sluggishness of movement, due possibly to their having spent the summer in the barnyard among plebian ducks and chickens, it would be almost impossible to distinguish them from the wary thoroughbreds that frequent the lake.

The manner of working with them is as follows: A small platform, or log, is placed some 20yds. from the blind in front, its top just flush with the surface of the water.

A decoy is tethered by a string to a peg firmly thrust into the hard sand of the flats, about 6ft. distant, said string being just long enough to allow of the decoy reaching the platform, where it will stand and preen its feathers, quacking meanwhile with energy at every passing bird, or in more subdued tones holding converse with its companions in the coop on the blind.

The live decoy occupies the apex of a triangle, the sides being strung with the ordinary wooden decoy, in greater or less numbers as inclination may suggest, although the squawking of this feathered siren makes a large display unnecessary.

When a flock of ducks appear, her calls seldom fail to attract their attention, and as she stands upon the little platform, she shows up in such fine form, that they generally turn to investigate.

And now Elmer will take a decoy from the coop, crouching low as he grasps it firmly with both hands. A quick toss sends it high in air above the blind, where with noisy expostulation it presently sails down with outspread wings and joins its tethered mate.

This rarely fails to decide the action of the wild birds. They either set their wings and at once scale in to the decoys, or circling a few times alight, and after consulting together, swim up within range of the leaden death that is lurking within the cedars of the blind.

Should they act as though suspicious, the judicious tossing of a few more decoys will settle it, and it is curious to see the air of fearlessness which now pervades the flock as they swim rapidly up.

It often happens that several bunches of ducks will swim in from different directions at the same time, and then it is a pleasure to see the careful way in which the decoys are handled.

No tossing now! Instead a decoy is quietly pushed through between the cedars on the opposite side the blind, and quacking loudly with a sense of freedom, it hurries to its chums, who are already disporting themselves about the little platform with its tethered occupant.

With bated breath we peep through the boughs at the approaching fowl; not a sound is made by us as they come in; a look is all that is required; it says, "Are you ready!" a wink answers yes, and rising we cut loose.

Not waiting to see what execution has been done, each grasps a spare gun, and again we stop a couple as they cross in wild affright; "doin' stunts," as Elmer says.

With the clearing away of the fog of burned powder, we see eleven ducks scattered here and there waiting to be gathered, and wading out we attend to them.

But what of the live decoys? During all this excitement they have been huddled in a compact bunch near the little platform, and are now unconcernedly swimming about among the dead and dying.

I go to the blind, raise the sliding door of the coop, and Elmer walking behind them, our duck assistants swim to the gangway, and waddle up and into the coop in a matter of fact manner that is laughable.

Fully plumed for flight, not hampered in any way, the idea that they are free to go never seems to enter their silly heads. Once in a while they will leave for parts unknown, but this seldom occurs.

In the use of live decoys it is found of great advantage in accustoming them to their duties, to have a few well trained older birds, whose example is quickly followed by the younger members of the flock.

It is very necessary to take pains at the outset in the arrangement of the little board or gangway, which leads up from the water to the coop in the blind. The incline must be easy, so that at the first attempt on the part of the decoys to enter, they will find no difficulty in comfortably ascending. If too steep an incline, they are likely to slip and flutter clumsily in the effort to regain footing, and ever after will hesitate to make the attempt, swimming and dodging about the blind until finally driven in.

This of course is very annoying and seriously interferes with the results of a day's sport. With proper attention to these details, however, there appears to be little trouble afterward, and certainly to one who finds something of interest in the accessories of duck shooting, and whose entire enjoyment of a shooting trip is not confined to the mere killing of game, the working with live decoys is extremely interesting.

In selecting a decoy to tether out as caller, a female should always be taken, as she has the well known loquacity of her sex in general, and proves, as with human beings, a greater attraction than the male. The drakes are rarely tethered, being reserved for tossing into the air.

In calm weather when the fowl are not moving about, the door of the coop may be raised, and the whole flock will go out and disport themselves, romping and playing tag as it were, having a big time generally for an hour or so, returning of their own volition when ready. In giving them liberty as above, always see to it, that one of their number is tethered, as they are then less likely to stray. With regular feeding and plenty of exercise a decoy will keep in excellent condition the season through. There is amusement in watching their many antics. For instance, one habit they have is to pitch into the decoy that has just been released from its tether, the instant it is returned to the coop, and the scramble that regularly takes place on these occasions is ludicrous, each one trying to thump the luckless individual, and all squawking and tumbling about the coop in wild confusion.

Why they should wish to vent such spite is beyond my comprehension, but such is the case, and at each change of decoys the scene is repeated, with never-failing regularity. When fowl are moving the sport from such a blind is fine, as they come right up until one can see their eyes twinkle.

I hope to live over again those delightful hours in the "houseboat," and in the meantime I dwell in remembrance on what has been, until the scene in imagination is again a reality. I see the sun touch the mountain tops with gold, the stars glisten once more in the throbbing waters, and the plash of tiny wavelets lulls me to rest.

BAY RIDGE, Long Island. WILMOT TOWNSEND.

## ANOTHER PANTHER EXPERIENCE.

I NEVER caught a panther in the act of screaming, but I have camped out in the deep woods where they held forth, and was once followed by a big one nearly a mile. It was in Warren county, N. Y. I had been over the mountain some five miles from our house, to Uncle Joel Dayton's, our nearest neigbor in that direction, for a back load of buckwheat. I had secured the meal, which was well strapped on my back. There was considerable snow on the hemlock brush, and this brushing off fell on my shoulders and breast and was then melted by my breath only to freeze securely over the straps in front. It was about 7 o'clock of a January evening. I had reached the apex of the mountain and was on the bend downward. At the foot of the mountain, after passing a running brook, was our cabin. I was aroused by a scream, piercing, intense, resembling as near as I could describe it, to the cry of a woman in great fear or distress. I knew in a moment what it was, for I had heard it before in the wilds of Wisconsin, and the scream of a panther can never be forgotten nor mistaken for anything else. I tore down that mountain side, tugging at the frozen straps of my pack. The cry was repeated three times. I reached the brook, and not looking for the log, plunged in and fell headlong, almost unconscious, on the cabin floor. Mrs. "Jacobstaff" removed the pack with the help of warm water, and I told my story.

The next morning, with my gun and dog, I took my back track and found that an enormous animal of the cat kind had followed me nearly half way down the mountain side. I measured the point of one of its paws in the snow, and it took the width of both of my hands to fill it, and one of the jumps by measurement was thirty-three feet. It must have been a full grown dog panther. I followed that track all day, until toward night it began to get rather hot among the rocks twelve miles from home and I gave it up.

There is a small owl (I don't know its name; it is not the common screech owl) that is capable of making a piercing, hair-raising cry, entirely out of proportion to its size, but it is not a panther's scream by several octaves.

Old Ralph, a fellow trapper with me in northern Wisconsin, told me once that while watching for deer, near where a tree had been felled across the stream for a bridge, he saw a painter (he called it) come toward him on the log. It crouched down, waving its tail back and forth and gave several yells which, as Old Ralph said, "stopped his heart a beating," and he was no coward. Ralph said the critter was answered by a similar cry, though somewhat different in tone and intensity. Ralph didn't shoot then, for the creature turned back and sprang into the woods. JACOBSTAFF.

## VERMONT DEER AND SHEEP.

THE following letter received by a Vermont correspondent has been sent to us for publication: A client by the name of Charles A. Church, was in the office last Saturday afternoon, and made some casual comments regarding deer in his neighborhood. His remarks were of so curious a nature that we quizzed him considerably, and the condition of things in Moretown and vicinity with reference to the performances of deer seemed so unusual that we thought you might be interested in knowing about it. This Church is a blustering farmer of Moretown, whose post office address is Montpelier, and the statement that first attracted our attention was that over twenty sheep had been killed by deer in his neighborhood within a year.

He said that the first evidence he had of deer troubling sheep was one Sunday morning about a year ago. He was up early building a fire, when he heard a scampering and scurrying in the barn yard, and stepped to the door just in time to see his whole flock of sheep rush in from the pasture and huddle together in a corner made by the fence. Right behind them, not more than five rods from his verandah, was a fine buck which had evidently chased the sheep from the hills. He stole into the house and called his children to see the buck, and the animal stayed there for some few minutes, apparently without timidity, and then slowly bounded away. Church didn't once think of shooting the buck, though he had a loaded gun in the house and knew nothing at the time of the penalty; but the sight was such a pretty one, and he had so little thought of the buck harming his sheep that he only looked upon the affair as a pleasant incident and something very unusual. A few mornings after, while in his barn feeding the stock, he looked through a hole in the flooring down into his sheep pen and saw just outside a buck rising from the spot where, from the appearance of the snow, he had spent the night. Since then he and the members of his family have seen deer frequently—Church says almost every day. He has seen bucks playing with his sheep, and one day saw a buck run a sheep off over the hills. The sheep "never came back any more." He has had sheep come in bruised as if punched with a pointed instrument, so that they have died, and on skinning them the flesh would have many marks indicating that they had been tossed by a buck. Church has lost, in all, five sheep in this way, as he asserts, and he is going to sell his flock for the reason, as he says, that he can't afford to suffer such losses.

Barney Mayo, of Moretown, has had several sheep killed by bucks, and he feels particularly confident that deer killed them because he was behind a bush and saw one of them killed by a buck. The buck evidently was in heat and would toss the sheep about and punch it in a playful manner, evidently not realizing that he was harming it and not intending to do so. It is Church's theory that the bucks do not wish to harm the sheep, but desire to mate, and do what they do in playfulness.

John Carrigan, of Moretown, has also lost sheep in this manner, as has Matthias Cannon, of Northfield, and Andrew Sleeper, of Moretown.

A peculiar incident happened to Church the forenoon of the day he saw us. He was at the miller's, not far from his house, when a neighbor shouted to him that he would better look out for one of his lambs if he didn't want a buck to kill him. Church ran into his pasture toward the point indicated, and saw a young lamb trotting along beside a large buck, there being a perfect understanding between the two apparently. As he neared the two the buck bounded away, and to Church's surprise the lamb followed. He gave chase, and finding that he might have a difficult job of it threw off his coat and shouted to his boys to send up the dog. Meanwhile the buck and lamb were making good time across fields and through wood lots, so that but for a light fall of snow which enabled Church to follow them, he would have lost his lamb altogether. As it was he kept up the chase for over a mile till his dog came along, when the buck broke away and the lamb ran down into Andrew Sleeper's barnyard, near which they were when the dog separated them. In the chase the lamb showed the greatest persistence in following the buck, scrambling through holes in the fence and running around obstacles that the deer could clear in a jump.

Mrs. Sleeper came out and claimed the lamb, but Church persuaded her it was his own, when he found to his surprise that his girls had neglected to let the sheep out that morning, so, although on his farm, the lamb could not belong to him. The Sleepers afterward identified it as one of their own, which, together with its mother, had disappeared over three weeks before without having been once seen in the interval. The ewe did not appear on the scene at all.

Church has a respect that borders on veneration for the law—according to his own story—and even went so far as to try to persuade us that if a deer was found dead on any of his land it would cost him a hundred dollars; but he thinks "Uncle Sam," as he expresses it, ought to modify the game laws so that bucks found killing sheep can be sent to their long home. He says deer are very plenty all through his neighborhood, whereas a few years ago one was rarely seen at all. He claims to have been a resident of the Canadian border, and to know all about the habits of deer, and says that the bucks and does never yard together, nor does more than a single buck occupy a yard. He says that there is no trouble with the does, and that few of them, comparatively, are seen.

We assured Church that the Fish and Game Commissioners were interested in all such matters, and were glad to learn of the unfortunate operation of any fish or game law that they might take steps to remedy it at the next Legislature.

## CHICAGO AND THE WEST.

*[By a Staff Correspondent.]*

CHICAGO, Ill., Dec. 17.—Speaking of game parks and preserves, the following from the daily despatches may be found of interest: "DENVER, Colo., Dec. 10.—Col. W. F. Cody ('Buffalo Bill') has just brought back a party of Englishmen and Americans from a hunting trip through northern Arizona and southern Utah. The party included Col. McKinney, of the British Grenadier Guards, who started for New York to-day and will sail for England on the 14th; Major St. John, of London; Col. Prentiss Ingraham, a Southerner; Col. Frank Baldwin, of General Miles's staff, and Col. McKinley, Major J. Burk and Col. Ellison Naylor, of Washington. The hunters had an escort of thirty-five cowboys and scouts and plenty of arms and provisions. One object Cody had in making the trip was to find a place which he might use as a game preserve. His idea is to establish a large park, stock it with all kinds of game and use it as his private shooting grounds. He found several places both in Arizona and Utah which exactly suited him."

The millennium of uniform game laws is not yet put beyond hope in the West. Last week's convention of the wardens and others interested, at Minneapolis, Minn., was probably the most thoughtful and well considered effort in this direction yet made. So far as is possible through the efforts of those present, the States of the Northwest will work together for uniform laws, and will consider any offense against one State as an offense against all. Much lies between such plans and their fulfilment, of course, but I believe the day will come when we will see such plans in large fulfilled. That so important a meeting should be held for this purpose shows in the first place a realization of the fact that the game is passing away, and in the second place a clear understanding of the proper way of preventing its extermination. We do not get all we ask for, but we get nothing for which we do not ask. On the whole, the situation in the Northwest in game protective matters is very far from discouraging. We need, all of us, to be careful not to find content in saying, "Let the good work go on." The good work will not go on unless we push it on.

WAITING FOR TIDE TO RISE.

Last night our friend Dick Cox, a gilded young Chicago sportsman, was in a reminiscent mood, and told some stories of the time when he was in Seattle, Washington, diligently acquiring experience in his profession of the law, and also preparing to write a book on the habits of the game birds of the Northwest coast.

"That was in 1886," said he, "and I was out there on the urgent request of my father that I should grow up some with the country. I was willing to grow and did not mind practicing some law, when it didn't interfere with the shooting. My associate in crime was a French gentleman, name of Teddy Haller. We were the youthful members of the bar, and we drew our first cases about together. My first client was a Chinaman who had been selling whisky to the Indians, and I always thought I worked that case fine — for the State. You see, everybody knew my client had been selling the whisky right along, and there was no defense. The usual thing in a case of this kind was a plea of guilty and a sentence of two months. This didn't suit me, and I set in to clear my man. I made an able showing and summed up in a brilliant speech. I succeeded in getting my client into the penitentiary for nine months, which was more than the District Attorney could have done, if I had kept still, by about seven months.

"Teddy Haller's case was defense for burglary. His man had been caught and held up in a store one night *in flagrante*, et cetera, and he had no defense on earth. If Teddy had pleaded plain guilty his man would have got about a year, but Teddy wouldn't have it that way. 'Your Honor,' says he, 'we admit the criminal act, but would like to plead extenuating circumstances. We should like to put the accused on the stand, and have the Court examine him as to his innocence of other similar acts.' Well, the Court did examine him, and blamed if Teddy's man didn't plead guilty to a whole lot of other burglaries and things, right there. He must have kind of got mixed up in his mind as to what Teddy wanted him to say. Maybe Teddy was a little mixed, too. The Court sent Teddy's man up for five years. Then Teddy and I went out duck hunting again. We were helpin' the Commonwealth right along, and nobody could kick on our going hunting occasionally after such forensic struggles as that.

"But the best case we ever had—or maybe I'd better just call it our other case; anyhow it was our masterpiece —was our sheep case. You see, one old settler had a lot of hounds, and another old settler had a lot of sheep. Our client was the man with the sheep. Everybody knew the hounds were killing the sheep. One morning the owner of the sheep found fourteen dead sheep in the pasture. The hounds showed plenty of sign of a sheep barbecue, and the thing was a cinch for us to collect big damages. We allowed our sheep were worth easy $10 a head. Teddy and I brought out our witnesses to show above facts, and then we submitted our case without argument—allowin', of course, that we had a cinch. But what did the attorney for defense do but bring in a lot of other testimony, and make a speech an hour long. He showed the six peers of the jury that our man was a dirty, low-lived, mean sort of a fellow, and that it served him right to have his sheep killed. He also showed that that neighborhood was much infested by cougars, and declared that it certainly was cougars that had killed those fourteen sheep. 'Unquestionably, gentlemen,' says he, 'these cougars would have killed many more sheep had not my client's dogs appeared upon the scene and driven away these destroying animals. The claim that we should pay damages for these 14 sheep is preposterous. Upon the contrary, we shall urge a counter-claim of salvage for the whole remainder of the herd, thus saved from destruction by the courageous efforts of the noble dogs belonging to my esteemed and wrongfully accused client, whom to know is to respect in the most unqualified manner!' Of course, the jury couldn't stand that, and they promptly cleared the other fellow, and assessed damages on us. So we had to pay for the sheep we didn't get killed. That sheep salvage case was one of the jokes of the Seattle bar for a long while after that. I think you will agree that Teddy and I had a career at the bar which was brilliant though short. After a while I got tired of growing up, and concluded to transfer my talents back to Chicago again. It's pretty good shooting around here, too, and if you're trying a sheep case here they can't spring no cougars on you, see?"

MORNING ON HORICON MARSH.

At Warsaw I met Mr. C. E. Irvin and Mr. C. W. Douglas, to both of whom I had the letter of Mr. M. E. Moran, now of Chicago, but formerly of Warsaw. Mr. Moran and Mr. Douglas are partners in the Kosciusko Kennels at Warsaw. Mr. Irvin was home on a visit, which included some quail shooting and a good deal of mixing up in doggy matters, he being much of a lover of a fine dog. "We've only got 36 dogs now," said Mr. Moran, "but if you think that'll do, you might go out and have a little quail hunt." Naturally, therefore, we all drifted down to the kennels and had the usual pleasure in looking over a fine lot of dogs. Warsaw is one of the sportiest towns of its size I ever saw. Good bird dogs are common in the streets, and some of them are very good indeed. Mr. Lee Hayman had along with him on the street when we met him a bitch which would need fear little in a bench show, and his brother, Judge Hayman, of the Circuit Court, had another good one at his knee when we called at his home. "My business is shooting and fishing," said the Judge, "and, of course, this dog of mine is the best one on earth. Yes, shooting is my business. I just hold court as a sort of side show!"

Mr. Irvin had for his string this fall the stylish dog Twin Mark, and two puppies, Noble and Sinbad, of which he expects much when they are old enough to hunt. Certainly they are handsome specimens. It took only a short time to decide that we ought to have a quail hunt. So Mr. Irwin, Mr. Douglas and myself made up a party. We took along Twin Mark, a little bitch called Domino and a three year old dog, Ham's Vic, owned by Mr. L. M. Hamline, of Chicago, who hunts in this vicinity, and leaves Vic at the kennels.

We drove about 12 miles out from town, stopping at the farm house of Arthur Knoop, and here we had a quail hunt as was a quail hunt. The weather was execrable, with rain, slush and mud in plenty, yet in parts of two days we bagged 76 quail. The first half day out we put up nine bevies, and I presume we saw over two dozen birds in all. The birds were the wildest I ever saw, and it was next to impossible to get much work out of the singles, for often the bevy would go nearly half a mile before alighting, and it was hard to mark them with any certainty. The country was wheat stubble, marsh and timber, and would have made good grounds for field trial work.

We found most of our birds on the stubble, and after the rise would have to go to the woods for the scattered birds, which ran, hid under the leaves, took to the trees, and used all the other arts of old and wily quail, much to our displeasure. We took it rather easy, however, and certainly got as many quail as we need want. I had my pack-sack full of them when I got in, for my Warsaw friends would not keep a single bird, but asked that Mr. Moran, in Chicago, might be remembered with some of the quail killed over his dogs. Mr. Moran is in the gun department of Montgomery Ward & Co. I took him up fifty odd quail, and there was an immediate onslaught upon him by Horace Greeley Holt, Rolla Heikes, Eddie Bingham, Charlie Grubbs, etc., so that I doubt if Mr. Moran ever got many of his quail home with him. I saved three quail from the general ruin, and have so far eaten one of them, though I have designs on the other two.

When a man has two pleasant shooting companions of the right sort, and the dogs are of the right sort, too, and he has a nice new light scatter gun that will kill a quail if pointed over in its direction, and when the quail are obliging enough to be found every half hour or so, I don't see what more that man can want by way of happiness. I shall remember this brief quail trip very long and very pleasantly, I am sure, and next year I shall be on hand at Warsaw some more, maybe in the spring for snipe, or in the summer for woodcock. The dogs of Warsaw are explained. There is something there to hunt with dogs.

Two of our dogs, Mark and Domino, had been broken on woodcock, an unfortunate thing for a quail dog, though these two had not yet been long on quail. Both these were very careful and close workers and good pointers. I doubt if any dog ever had a better nose than the little Domino. We relied on her much for the singles. Dick was a high-headed, slashing, ripping goer, and he found the bevies for us, much helped by his earlier training on quail in Kansas and Texas. Mark is a very stylish dog, and take the three together they make a great field team, both for show and service. Sometimes we had them all pointing at once; one time, I remember, they were all bunched up, pointing stiff on a quail that was right under their feet. The dogs all backed well, except when one got an occasional notion that it was its turn on a bevy, and so got up too close, in that strange jealousy which dogs often so plainly show over the success of a rival in finding that strange, fascinating scent which it is the aim and object of their lives to discover and denote. Dogs are different as men. You can not find out all about a dog from seeing him alone; you must hunt him with other dogs to see all the phases of his character.

I mentioned my new scatter gun. It is really an old one, but I am in love with it. After shooting a choke bore for a term of years, the manual labor of hitting a quail with a cylinder bore is much less. Mr. Irvin traveled still lighter than myself, using a 6½lbs. Whitmore, in which he shot 2½drs. powder and 1oz. shot in a good sort of way. Charlie Douglas labored with a heavier chokebore, and him we persuaded he could not hit a barn the first day, though on the last he beat us both. I should call the best gun for late quail one with the left barrel drawn down a little, say a modified choke, though for the right barrel on upland shooting I can see no need of any choke at all. My new old gun makes a pattern which I will back against any gun, bored under any system whatever. It think it will throw shot further toward the edges, over the end of a barn, at 20yds., than any gun ever was. It is a very discouraging sort of a gun for a quail to try to get away from, though by patient effort I found I could occasionally miss one, even as it was.

The quail season in Indiana closes next Tuesday, Dec. 20. Then the potting and netting will begin, if the snow falls heavily enough. Given any decent show after the legal season closes, and the supply of quail next season in northeastern Indiana will be a great one. The birds are there now in abundance, strong and fully able to take

any fair odds in the struggle for self-preservation. The country is admirably adapted for them, and the occasional kicking farmer should be looked upon not as a nuisance, but a blessing. Every posted farm is a preserve. The shooting about Warsaw is the best of any I have struck in Indiana this fall, though I struck it much too late to see it at its best. In Thanksgiving week Messrs. Douglas and Moran killed on one bit of dry marsh, in three days of Thanksgiving week, 53, 72 and 64 quail, also half a dozen grouse. We passed across this same country, and it was covered with roosts and sign, a veritable paradise for quail apparently. Next year, if I have luck, I am going to try to own at least half the running gear of a good dog, and I think I will leave him at Warsaw. I don't see how a Chicago shooter can do much better than make Warsaw his base of operations, if he likes an occasional turn at the prettiest of upland shooting. As for that, no small part of the anticipated pleasure would be the prospect of again meeting Mr. Irvin and Mr. Douglas, and again bringing up the question of which of us really could get the most quail in a day, at unknown angles.

E. HOUGH.

175 MONROE STREET, Chicago.

## BOSTON MEN IN CANADA.

THERE are several stories of albino deer taken in Maine this fall, but none so well authenticated as the one that comes from Lowell, Mass. It is given me by a reliable gentleman, though he did not see the deer, nor the man who shot it. It seems that H. E. Shaw, a real estate agent in that city, with the cashier of the First National Bank there, W. M. Sawyer, have been down to Moluncus, Me., on a deer hunt, and have taken four of these beautiful game animals. But one of them was the most remarkable deer ever seen in Maine. It had a small brown spot on the head, but otherwise it was perfectly white. It was a buck, with a fine set of antlers. It is also reported that the skin is to be mounted. Mr. Shaw thought the deer was a ghost when he first saw him, but not to be intimidated by spirits in the woods he put a rifle ball through the animal's brain. The theory is that this deer must have been a very old one. Dr. Smith of Portland, Me., is also reported as having killed a deer this fall that was nearly white.

Mr. Henry B. Moore, of C. E. Soper & Co., of the Boston grain trade, is as fond of a good story and a good joke as he is fond of the fly rod and the shotgun or rifle, and that is saying a good deal. Some of his hunting stories have occasionally been read by the patrons of the FOREST AND STREAM. Now he has been up to a practical joke on his cousin, G. C. Moore, a manufacturer of North Chelmsford, Mass. The hunting trip this fall of the Harry Moore party was made to the Inglewood camps, in New Brunswick, quite early in the season, as has already been stated in this paper. The party was pioneered by Leroy S. Brown, of Blaney Brown & Co., and he took a great deal of pains to have the visit of the gentlemen of the party to the Inglewood region as pleasant as possible, since Mr. Brown himself is one of the house committee of that club. In the party were also Mr. Faulkner, a manufacturer of Lowell, Mass., and Mr Calvin Austin, superintendent of the International Steamship Co. here. This time it was the main object of Harry Moore to keep the rest of the party in the best of spirits, since both hunting and fishing were none of the best. Sometimes he had to resort to practical jokes in order to carry out his purpose, and his cousin, of whom Harry thinks the world, was oftenest the victim. Arriving at St. John, where the party made a halt, Harry procured a team, with the view of showing his cousin the city. He desired to show him the insane hospital, which is situated on a hill a little way from the center of the town, where the view is especially fine. They drove a short distance, when Harry was suddenly conscious that he did not know the way. He reined the horse up to the sidewalk, where a respectable looking gentleman was standing, with the request that he would direct him to the insane hospital, as he had a gentleman in the buggy whom he was anxious to get there with as soon as possible. The look on the gentleman's face was enough. Mr. Geo. C. Moore saw the point.

But the worst joke of all was reserved for the trip home. They stopped at McAdam junction to connect with the Maine Central train, and also for the customs official to have an opportunity to examine their possessions. Mr. Leroy S. Brown had kindly looked after this part of the programme, making the usual deposit on the way in for each gun and rod, and returning the money to his fellow sportsmen on the way out. Now, Mr. Geo. C. Moore is one of the most methodical of men. He carries his belongings in a strong box on his hunting and fishing trips. The cover is screwed down with many screws. But the owner always has the required screwdriver in his hand bag. Stopping at McAdam junction, Harry kindly called the attention of the Custom House officer to George's box, with the suggestion that he did not know what it contained. At the same time he tipped the officer a wink or something, and he "took on" in a moment. Harry had previously arranged with the conductor of the train to say, on being asked, that his train would start "in about two minutes." The Custom House officer passed all of the parties' baggage with scarcely a glance till he came to George's strong box.

"What's in this?" he demanded.

George protested that it contained nothing but his personal effects.

"But I must look into it!" said the officer.

Poor George went for his handbag and his screwdriver. He went at the dozen screws gloomily but with a will. The box was opened at last.

"Take things out!" demanded the officer. "I must see the whole of it."

Shirts, both soiled and clean, came out, with stockings and other things in the same condition. At last the bottom of the box was reached, with the things all in a heap on the platform. The officer good-naturedly remarked that he found nothing dutiable, All this time the boys had stood one side, ready to burst with merriment.

George began the rather hopeless task of righting his belongings, which had been inspected by everybody. Harry then stepped up.

"You will have to hurry. Do you know what time this train leaves?"

"In about two minutes," replied the conductor.

Then there was rushing and a general smashing of things into the box. The sweat stood in beads on George's face. The boys could stand it no longer. They roared with laughter. George saw it all then in a moment.

"Confound you, Harry Moore! If I don't get even with you for this, it will be because I don't live long enough."

Now Harry is generally expecting something when in George's company.

The gunning season is about ready to close. On Jan. 1 game in New England can generally breathe easier. The legal open season will then have closed. This season has been a fairly good one for Massachusetts gunners and a remarkably good one in Maine. The number of deer taken is the greatest on record, not even excepting the earlier times, for then there were no records.

Mr. F. R. Shattuck, of L. A. Shattuck & Co., metal brokers, and Mr. George Linder, of Linder & Meyer, were down to West Barnstable on a gunning expedition two days last week. They were on the lands of Capt. James H. Jenkins, Deputy Fish and Game Commissioner at that point. The captain had been saving the quail for these hunters, or at least he had not permitted hunting knowingly on his grounds. The weather proved to be stormy, in fact, it rained both days that the gentlemen were at the hunting grounds. They hunted early and late, putting in all the time they had, though wading in water on the meadows a good part of the time. The thickets of scrub oak and brier were almost impenetrable and loaded

A DEATH LOCK.

with water, but both gentlemen are plucky to the last, when on a hunting or fishing excursion. They were accompanied by Mr. Linder's excellent setter, Jim, and he proved to be one of the stanchest and best trained of his kind, though the rain made the scent of game weak and hard to follow. They shot several partridges, but no quail. The partridges proved to be very wild, not lying to the dogs scarcely at all, but were plump and heavy when really obtained. They were greatly surprised at not finding any quail, and were about ready to believe that the Captain's grounds had been hunted surreptitiously, since they found fresh shells that had evidently been loaded with smokeless powder, but the worthy Captain could scarcely believe that the boys had been "over him on the sly." On the way home they had to be at the train fairly early, and were somewhat chagrined to hear lots of quail whistling in the meadows, as they rode to the station. But the weather had cleared, and here was just the difference. They now believe that rainy weather, especially in December, is not favorable to quail hunting at Barnstable.

SPECIAL.

## THOSE VERMONT QUAIL.

PORT HENRY, N. Y., Dec. 15.—*Editor Forest and Stream:* In your issue of Dec. 15, under the article headed "Vermont Quail," Mr. John W. Titcomb, of Rutland, states that "on Dec. 9, a woodchopper near Bristol had discovered a lot of quail about 100 in the flock," and wonders where they came from.

I think that very possibly I may be able to give him the information desired, and that both the theories advanced by him may be wrong.

Early this year I procured from Mr. Woodward, of New York, some ten dozen quail. Some of these I turned down on the point on which the historic forts St. Frederick and Crown Point were built and some in Addison, Vermont, just across Lake Champlain, which at this point narrows up to about a third of a mile in width.

These quail were turned down as an experiment, and incidentally to break some pups on, and for the pleasure I expected to have with both after Nov. 1. The birds did remarkably well, mated and hatched out some large bevies. While looking after them early in the summer, numerous nests were found filled with eggs, and only one nest was afterward discovered that was deserted and did not hatch out birds. The whole country round about there at sunrise seemed filled with the unusual call of Bob White; and as the young birds thrived and grew I looked forward with great anticipation to the time of the opening of the season.

It was no unusual thing to find early in the season 8 or 10 bevies during a short afternoon. About October, however, many of the bevies began to travel, and at one time there were seen one lot of perhaps 40 or 50 birds traveling, and successfully to cross the lake into Vermont, and the last seen they were headed toward Bristol.

This lot seen in Bristol (if some of those turned down by me, and I think they must be, as none of Dr. Webb's have in previous years appeared in Addison) is the second lot of traveling birds heard of by me, some earlier than these having been seen near Lake Bomoseen in Vermont. If any more have been, or are, seen in Vermont or this section of New York I should be pleased to know of it and to find out how far and where they travel to.

The birds remaining here I shall have fed and looked after during the winter months.

It may interest some to know that the pheasants turned down on Shelburne Farms by Dr. Webb are scattering around the country. A cock and hen were seen late in September by Mr. M. Barnes on his farm in Addison, some 30 and more miles from Shelburne Farms.

W. C. WITHERBEE.

## COLORADO GAME INTERESTS.

Gordon Land, State game and fish warden, accompanied his biennial report to the Governor with the following letter:

*To His Excellency, John L. Routt, Governor of the State of Colorado:*

I have the honor to submit, herewith, my report for the years 1891-92. The work of the Fish Commission for the past two years has been very satisfactory in its results, since every effort has met with a marked measure of success; not only have the growth and introduction of trout into new waters shown the wisdom of such planting, but the people have realized in many instances, direct and substantial benefits much sooner than was expected. Each year the demand for trout to stock either new or depleted waters has grown beyond the ability of the present State hatcheries to supply. So urgent and interested have the people become in their desire to obtain a stock of fish for the available waters of the many sections they represent, that it is with pleasure I place before you the manifest needs of this growing and desirable branch of the public service.

Fishculture is no longer an uncertain field of labor, nor is it an occupation fit only for the award of some political favor, but replete with a broad and ever increasing opening for the exercise of intelligent skill and impartial judgment. I find so much to do in order to properly provide for the needs of the State in this desirable industry, that I deprecate the unwise action that prompted the last General Assembly to impose the added duties of a game warden upon the Department of Fish Culture, and ask that you recommend the immediate repeal of the entire act relating to game and fish wardens, as the experience of the past two years has shown that such a law is a complete failure in its present form. So imperfect and crude an act rarely finds a place upon the pages of even frontier legislation.

The experience has been costly, the damage to our game interests great. The utter inefficiency of local wardens, who are influenced by their surroundings and governed by their friendships, the unwillingness upon the part of those who live in remote sections of the State to inform upon their neighbors or in any way aid in the enforcement of laws for the protection of the game that they believe is solely to benefit the tourist and city sportsman, and, finally, when these people who are in every other regard honest, upright, intelligent and law-abiding citizens, witness, as they do every succeeding year, the wholesale killing of our four-footed game by skin-hunters and Indians, I am only surprised that they do not kill more than they find convenient for their winter's use. Whatever the game laws may be for the needs of the future, the rights of those who occupy a place on the confines of our Western wilds should not be forgotten.

I would also ask that no bounty laws be passed that embrace a premium on either bear or mountain lions. The claim made that these animals are particularly destructive to both stock and game is not well founded, since in the case of game, as is well known, the deer, antelope and elk existed in far greater abundance when there were no such laws, than they do now; and as for the killing of stock by mountain lions, I am of the opinion that the worthless beings, I will not call them men, who pursue and hunt these animals with dogs, solely for the reward, are far more destructive to the live stock interests than are these solitary beasts of prey.

As for the wolves and coyotes, I am led to advocate for the sake of the sheep and cattle interests, the passage of an act giving a greater bounty, and one in which the punching of a clear cut hole in each ear of the scalps presented, shall serve as a sufficient cancellation, and thereby allow of the skins and scalps being subsequently sold entire, thus enhancing their value to the hunter.

I do not desire to be understood as advocating the abandonment of any form of protection of our four-footed game, but rather favor the enactment of such restrictive laws as shall tend to make their enforcement less difficult and provide a State game and fish warden whose supervision shall extend over the entire State and who shall have power to arrest without warrant until such process can be had at the proper place, and also be authorized to seize all illegally killed game and confiscate and dispose of the same for the benefit of the game and fish interests, and above all things, provide him with funds to defray his necessary expenses and not expect him to use his meagre salary for such purpose, as is now the case with the stupid law that at present mars our statutes. I do not favor a law that will call for such a number of wardens as that now in force, it is not necessary; nor do I favor the enactment of a law that will create districts, for that calls for patronage and political preferment, and the past experience has shown that such local officials are of little use. The State has not the money to spare to support such an army of paid partisans, nor is it necessary. One well paid officer or State marshal, with two deputies, can, if the proper man is selected, enforce the game and fish laws over the entire State, he having no fixed section in which to reside and become too well known. Such an officer would command the respect of the people and render violations of the game laws extremely hazardous.

My report in detail, which is to follow this outline, will show many points of interest to the general public, the angler and the huntsman.

In concluding this brief mention of the work entailed, I beg to submit for your approval and recommendation the real need of as liberal an appropriation as the merits of this branch of the public service deserve. Very truly yours,

GORDON LAND, State Fish Commissioner.

Buffalo Bill and party have returned from their hunting trip. Col. Ingram, of dime novel fame, who was one of the party, amused himself while in Denver with try

ing his latest hairbreadth escapes on innocent newspaper reporters, and had the satisfaction of seeing them published with "scare heads." I do not think the party killed much game. It was more of a triumphal march through the hunting country than a hunt, there being nearly 50 men in the party. I'll not vouch for the number, as Col. Ingram is the authority.

One object of the trip was to find a location for a mammoth game preserve, and several places were noted. Whether this is merely an advertising dodge or is a fact I am unable to ascertain.

A number of geese have been killed down the river during the past week. The sudden cold snap seemed to start them moving. TESEEBY.

## "A STANDING MENACE."

### Cooke City vs. the National Park.

NEW HAVEN, Conn., Dec. 16.—*Editor Forest and Stream:* Allow me to thank you, on the part of one interested in the National Park, for the firm and able position your paper has taken on the bill granting a right of way for the proposed railroad to Cooke City. I spent the open season of 1889 and '90 in geological study of the northern portion of the Park, and of the country lying to the north and northwest of it, and am, consequently, well acquainted with Cooke City and its topographical surroundings, and have seen the evidences of its mineral wealth, and I believe your statement of the case to be an absolutely just and impartial one. There has been a steady attempt on the part of interested speculators to give the idea that Cooke City contains thousands of miners impatiently holding down claims until the access of a railroad allows them to pour their treasures out. As a matter of fact, and as you state, these ores are well known to be of very low grade and it is not even certain that they exist in "enormous" amounts. The Governor of Nevada stated the other day that there was not a single silver mine in that State that was paying a dividend; the present low price of silver, the enormous overstock of it in the market, with the certainty that this can be maintained, even if the bi-metallic conference takes a favorable issue, which is more than doubtful, having brought about this result. And the same conditions are affecting mines of low grade ore everywhere. Even if at the present moment a railroad was in active operation to Cooke City, it is almost an absolute certainty that its mines could not be profitably worked and it would be absolute folly to invest one cent in them. And as to the size of the place, I was informed on good authority that in the winter of 1888-'89 it consisted of seven persons.

Moreover, there is an economic side to this question which seems to have been much overlooked. A railroad as proposed would certainly result, as experience has shown a thousand times and as you remark, in the destruction of the Park timber and also that on the great block of mountains lying to the north of the Park and called in general the Snowies. If these areas are deforested it means disastrous floods in spring and absolute dryness in summer to those large districts lying along the Yellowstone at the feet of these mountain ranges. These areas already support a large population engaged in a profitable farming and wheat raising industry which is wholly dependent on irrigation. And a more improved system of irrigation means a great increase in this population and culture. Their combined wealth already tenfold exceeds that which Cooke City could furnish in the wildest dreams of a speculator. If these people understood the danger which threatens them, they would guard these forests as their holiest altars, tooth and nail and with arms if necessary, against the introduction of any railroad which might threaten their destruction.

No more important subject can engage the Government than means for the preservation of the timbered areas in the West whose waters can place districts under irrigation.

In all other respects you have stated the case so admirably that it leaves nothing to say. L. V. PIRSSON.

LOCKPORT, N. Y., Dec. 11, Sunday Evening.—*Editor Forest and Stream:* The old adage, "Better the day, better the deed," will apply to this. I have just read nearly three pages of the last issue of your valuable paper, and "thus far and no further" will I read before asking you to send me a package of at least fifty of the Yellowstone Park pamphlets, which I will distribute among my friends, many of whom do not read the FOREST AND STREAM, "more's the pity." J. L. DAVISON.

### Snakes Spit.

THE discussion as to whether the rattlesnake spits or not has been interesting. I do not know as much about rattlesnakes as I do of copperheads. I know that they spit.

A number of guests were present at our club preserve near Youngstown, Pa., when two snakes were found and one was killed with sticks and stones, the other obtained refuge in a short piece of rotten log. A friend and myself came up to the scene of action and recognized the dead snake as a copperhead.

We went to the log, one at each end, and 'soon saw that the reptile was a large copperhead. They were evidently mates. I saw his head and my friend caught his tail. Drawing him gently forth I kept my hand carefully around him until by touch I knew that I had him by the neck. Then Jim tied a string around the copperhead's neck and fastened the other end to a long stick. One of the boys got to teasing him, the snake made an effort to strike, but failing to reach his mark, discharged a quantity of greenish matter upon the man's shoe without striking it. Perhaps the rattler can do the same. DEACON.

### Kentucky is Behind the Times.

KENTUCKY fishing interests have not received from the Legislature the consideration which public sentiment demands, and persons concerned for the welfare of the State are greatly discouraged. Some citizens of Bryantsville who had made arrangements to secure fish for stocking Dix River have given up their intention because the stream cannot be protected from destructive fishing. Unless Kentucky wakes up thoroughly she will soon have a corner in fishless rivers.

## IS THIS CASE CORRECTLY STATED?

KOSHKONONG, Wis., Dec. 12.—*Editor Forest and Stream:* Please explain this: A common, every day man who owns nothing much besides good health and an equally good gun, which he knows how to use, by strict economy is enabled to take an outing each year. The game that he kills is shipped; and the proceeds go to supply the deficiency in his salary caused by said outing. During this trip by his perseverance and knowledge of the ways of game he makes a big bag; and it is all killed in an honorable sportsmanlike manner, but nevertheless he is styled by the writers of your paper a game hog, market and pot-hunter.

Another man, who is possessed of thousands of dollars, owns a first class outfit and controls large interests in some club preserve that excludes all other of its more humble brethren who have not the means to get in. This gentleman has a man, who has previously located the game, to put him in the right place, where all he has to do is to shoot it. He also makes a large bag, but does not market it. What he does with it is never told. He is the true sportsman of the FOREST AND STREAM.

Please tell us poor ignorant natives of Wisconsin why one is a game hog and a market hunter, and the other is a sportsman. The one controls just what game he kills, the rest is public property. The other controls all he kills and all the rest in the neighborhood. A NATIVE.

### A North Carolina Game Country.

MR. E. P. MCKISSICK, the popular manager of the Battery Park Hotel, Asheville, North Carolina, who has been visiting Hon. John S. Wise, in this city, gave us an entertaining account of the shooting attractions of Asheville the other day. "We have game right there," said he. "Thanksgiving Day I was out with a gun and brought back 7 woodcock, 2 mallard ducks, 28 quail, 8 rabbits and 2 squirrels—but you need not count those." Mr. McKissick has shooting privileges over thousands of acres for the Battery Park guests; and has had there Mr. Lorillard, the Thayer brothers and other well-known sportsmen who resort to North Carolina.

### The Sierra Nevada Sportsman's Club.

THIS club was organized in Truckee, Cal., recently with upward of thirty members. The president is Stewart McKay, the secretary Wm. O'Neill. The membership includes all the local anglers. The club has posted printed notices of the fish and game laws around the lakes and streams of the locality, and will look after the protection of the public interests. One of the first problems presented to their attention may be the management of the mill refuse which pollutes Truckee River.

### Moose on Spencer Stream.

WILTON, Maine.—Dr. C. F. Rowell and D. L. Hall of this place came home this morning bringing with them two large moose and one deer, which they captured 41 miles from Kingfield, on the lower Spencer Stream. They report plenty of large game there, and had lots of fun and amusement. Dr. Rowell takes great delight in such sport and is a crack shot. Mr. Hall, one of our business men, likes such sport as well as any one and is a crack shot. J. C. C.

### It Might Have Been a Scrimmage.

AUSTIN, Tex., Nov. 28.—Once here in Travis county, armed only with a shotgun and small shot charges, I sallied out of camp to ascertain the cause of some disturbance, and in the darkness followed an animal down to a water hole and across a creek, but without getting a shot. The next morning I congratulated myself, for I discovered that it was a panther that had killed a yearling a short distance away. J. V. B.

## OUR ILLUSTRATIONS.

### Talking It Over.

A group of shooters after a California morning in the field. The photograph comes from "Podgers," and he tells us that it faithfully represents the customary happy mood of Californians returned from the quail grounds.

### The Death Lock.

These locked horns, with the skeletons of the bucks, were found on the deer ridge of Long Point, Lake Erie, Ontario, Can., and now adorn the dining room of the Long Point Club. The plate is from an amateur photograph by Mr. John T. Lord, of London, Eng., sent us by Mr. W. Gayer Dominick of this city.

### "Main Sheet!"

The little cutter in the photograph, sent in for the amateur competition, has figured in the pages of the FOREST AND STREAM, her adventures on a duck hunting expedition having been told in the issues of Nov. 15-22, 1888, by Mr. J. C. Miller, the central figure in the picture. The yacht is the Kittoch, owned by Mr. Jas. Miller, who holds the stick, and the photo was taken when in the Bay de Vin, Miramichi River, N. B. Messrs. Miller are two of the leading yachtsmen of New Brunswick, both having held the office of commodore of the Miramichi Y. C., the only yacht club in the Province.

### Sharp Work at the New England Field Trials.

The incident is a point by Rod Belton, honored by Our Pet, in the New England Field Trials of 1892. Rod Belton is owned by Mr. Willard W. Lewis, of Rockland, Mass., and Our Pet, winner of second in All-Age Stake, is owned by the Oakland Kennels, of Taunton, Mass. The plate is from an amateur photography competition picture sent in by Mr. R. M. McLean, Cambridge, Mass.

### On Watch.

The scene is one of a deer stand on an Adirondack runway and the picture is from an amateur photo (FOREST AND STREAM competition) by Mr. A. Ames Howlett.

### Morning on the Marsh.

THE picture is of the start for a day with the ducks on the famous ground, and the plate is from an amateur photo (FOREST AND STREAM competition) by Mr. Percy F. Stone.

### Waiting for Tide to Rise.

This realistic illustration of goose shooting from a blind, is from an amateur photograph (FOREST AND STREAM competition) by Mr. J. C. Miller. The scene is Konchebonguac Beach, New Brunswick.

# Sea and River Fishing.

## WITH A FLY-ROD.

### A Sentiment to Go with a Gift.

I SEND you, by bearer, a mark of esteem,
Which I trust you will christen in some mountain stream,
And return, to inform me at some later day,
How you felt when the big one you struck got away.

PHILADELPHIA. L. H. T.

SAN FRANCISCO, Cal.—Rods I have galore which I seldom use and oft am puzzled which to choose. As one by one o'er the lot I glance I say shall it be split-bamboo or lance? This distraction gives me trouble sore, until I wish I had but one—no more. In your suggestion I now see the way to reduce the lot next Christmas Day. By your alluring hint I'm half beguiled to spare a rod if I spoil a child. Methinks I know a youth of summers ten, a born fisherman, surnamed Ben, with hempen string and hook of pin he fisheth, and oft he tumbleth in. It will fill his very soul with joy to once possess this dainty toy; I know 'twill give him serene delight, and with it an epistle I'll indite. And if you want to know what I'll say I'll show you; I'll put it somewhat this way:

Young man, behold this emblem of patience, truth,
A fit donation to such a fishing youth.
Do your duty, be in all your fishing square,
Treat it tenderly; throw not your fish in air;
And when you feel the thrilling strike,
Be it speckled, trout or voracious pike,
Play him gently and with skill,
For while you fish for sport you fish to kill.
Heed not the big ones you do not get,
And be handy with your landing net.
Above all things, be truthful as to weight,
Give correctly time, place and date.
A fisherman's reputation ever value high,
Be a little George Washington and never tell a lie;
Truth first, last and at every cast.
Tell no whoppers of the big one lost,
Emulate not those who write for F. & S.:
Let there be one "truthful Jeems" the less.
And those shooting tales you see, my son,
Should make you swear you'll never own a gun;
Then your horn you'll have no need to toot.
Be content to fish, my boy, but never, never shoot.

PODGERS.

FROM A HUSBAND TO HIS WIFE.

DURING all the years that you have so generously overlooked my foibles and forgiven my faults, there have been none of my wanderings that you have so freely condoned as those which carried me to the shaded banks of some clear stream where the wary trout waited for his prey. For there was no quest so successful as to awaken your envy; none so barren as not to command your sympathy; and each recounted pleasure of the wave and shore lived again in your responsive mind. To you who have always studied, but never practiced the piscatorial art; and yet have known and realized all the angler's joys, as seen through another's eyes, I present this emblem of our entrancing craft, trusting that the same proxy to whom you have hitherto committed all your labors with the fly-rod may long continue to serve you in like capacity. JAY BEEBE.

TOLEDO, O., Dec. 17.

## CRYSTAL LAKE FISHING CLUB.

ARTICLES of incorporation were filed Dec. 4, at Covington, Ky., by Jeptha L. Workum, Geo. F. Ahlers, C. G. Smedburg, Geo. C. Walker, Fred Kinsinger and Richard McGraw as the Crystal Lake Fishing Club, with a capital stock of $5,000, divided into shares of $100 each, and with the privilege of increasing the stock to $10,000.

The principal place of business of the club will be in Kenton county, but it may establish branches at other places in or out of the State.

The purposes of the company are to establish and maintain a fishing lake and game preserve; to raise fish and game, and hunt and sell the same; to encourage the sports of hunting and fishing by spreading information on the subjects of fish and game; to protect the fish and game in Kenton and the adjoining counties.

The officers will consist of a president, a vice-president, a secretary, a treasurer and such others as may be needed. The annual meeting of the stockholders will be held in April.

Crystal Lake has a water surface of 16 acres; its greatest depth is 33ft., average depth 22ft. It is fed by eight springs and drains about 500 acres, chiefly of blue grass lands. Its location is at Ryland, eleven miles by rail or pike from Covington.

At present the officers are Geo. C. Walker, president; Chas. G. Smedberg, secretary and treasurer; Richard McGraw, superintendent.

The club will soon stock its preserve with choice game fish, in which it will, doubtless, seek aid from the U. S. Fish Commission.

There are many fine fishing lakes in the vicinity of Covington, and probably none more successfully managed than those on the estate of Joseph Schlosser, several miles from the city. In these waters are multitudes of black bass, crappie, pike-perch, catfish, buffalo and carp, and a few years ago the proprietor introduced some trout and salmon which he obtained after the close of the Cincinnati Exposition from the Fish Commission exhibit.

From personal observation we know that the region is well adapted to black bass and pike-perch, which, doubtless, will be among the fishes selected for introduction by the Crystal Lake Club. Before leaving the subject we may state that Mr. Schlosser, in 1888, had a buffalo fish weighing upward of 60lbs. in one of his lakes.

### Minnows for Hogs and Hens.

NEVER before has there been so large a number of minnows in Oneida Creek, at Willow Grove, as at present. People living near there are engaged in catching them by the wagon loads and selling them to farmers, who feed the fish to their hogs and hens.—*Oneida (N. Y.) Union.*

## THE MAINE BLACK BASS LAW.

BOSTON, Nov. 28.—*Editor Forest and Stream:* Early this fall I visited an old friend of many Boston sportsmen, Nat. Hoxie, of Chiltonville, and while enjoying his tales of bass fishing I mentioned my trips to Maine in search of this superb fish. Our conversation drifted to the game laws, and he informed me that there was no close season for bass in Maine. I immediately stated that there was a close season covering April, May and June, and backed up my assertion with the bet of a good cigar to that effect. This led to an investigation. I wrote to Fish Commissioner Henry O. Stanley, and he informed me there had been no close season for two years. Then I turned to the game laws of the State, in print 1891, and as far as I could see there was a close season noted under Chapter 40, Sections 47, 48, 49, 50 and 55. Still doubting I turned to your *Book of the Game Laws* revised to October, 1892, and got the same results. *Shooting and Fishing* also distinctly states that the close season extends from April 1 to July 1.

I wrote to you for an explanation and received your reply, stating that after a thorough investigation you were convinced that the law as stated in your book was correct and that bass were protected during the three months noted above.

In your letter of Nov. 5 you state that "Sec. 55 (which prescribes a close season for these fish for April, May and June) has not, so far as I can learn, been repealed." The Fish Commissioners, however, take a different view of the matter. Mr. E. M. Stilwell, Fish Commissioner with Mr. Stanley, states in a letter to me Nov. 12: "It is true the Legislature did not repeal in terms so much of Sec. 55 as restricts the taking of bass in April, May and June, but the amendment of 1887, removing the restriction in Sections 47, 48, 49 and 50, has been understood and construed by the Commissioners to have repealed by implication so much as relates to April, May and June."

I cannot agree with the Commissioners.

Let us turn to the laws. Chapter 40 of the revised edition, Section 47, states that "there shall be a close season for black bass between the first days of April and July." Section 48 states that "No person shall take, catch, kill or fish for * * * black bass * * * between the first days of April and July under a penalty * * * provided that the provisions of this and the preceding and two succeeding sections shall not apply to the taking of black bass from any waters which have been stocked therewith for a period of five years."

Now, as no Maine waters have been stocked with bass during the last five years, this proviso very evidently annuls the close season laws noted in Sections 47, 48, 49 and 50. But passing on to Section 55, which stands boldly by itself with no annulment or proviso, we find that "whoever takes any black bass during April, May and June, or at any time from their spawning beds, shall forfeit for each offense, etc." This section clearly prohibits the taking of bass during these months, and prohibits taking them from their spawning beds not only during those months, but at all times.

If this matter needs the decision of the court, it is a shame upon the makers of the laws that so simple a rule could not be put in terms sufficiently plain to prevent misunderstandings. It is an imposition upon honest sportsmen who endeavor to follow and uphold the game laws. If the laws are correctly stated and the Commissioners construe it wrongly, and so neglect enforcement and protection, it is time that the matter was attended to and the wanton destruction of this favorite game fish stopped.

In the last number of a contemporary paper the subject is mentioned, with a quotation from Mr. Stilwell in exactly the same words which he wrote to me.

The law, as it is now construed by the Commissioners, gives "insiders" an advantage in the fishing over those who rely upon your publications for guidance. After the publication of this letter, I shall apply to higher authority for a definite construction of the law.

A. G. WEEKS, JR.

## BY SEA AND RIVER.

MR. JOHN MURDOCH happened in the other day and told us of the fine day's sport had with tautog or blackfish at Manomet one day last July. In company with Mr. Thaxter and Master John, thirty tautog were taken on one tide. The fish run well in size, the largest an eight-pounder, being caught by Mr. Thaxter. Lobster was the bait used. Mr. Murdoch made several subsequent trips to the point, but owing to the high surf could not venture off in a small boat.

During the summer Audubon Ridgway spent several weeks in Massachusetts. In ponds near Boston he caught very large white perch; they run as high as 2lbs. each and were found in good numbers.

Mr. W. B. Kendall tells us of the movements of a very large school of tunny or little horse horse mackerel off Barnegat. Last summer as the Fish Commission schooner Grampus was cruising along slowly, these fish made their appearance and surrounded the vessel. The school was a mile or more in diameter and consisted of fish about 3ft. in length. They schooled close up together, similar to the common mackerel. Ordinarily they would merely flirt their tails out of the water, but at other times they would leap clear out; then again they would swim alongside the schooner quietly, scarcely making a ripple. The boat was sailing very slowly. Lines were gotten out and an effort made to catch some of the tunnies, but without success. A white rag was the only lure offered them.

This recalls to my mind a conversation had with Mr. Edwin Yarnold upon the same subject last year. This gentleman observed the tunnies off the Cape of Good Hope while on board a British troopship. The attention of the ship's company was called one calm day to what appeared to be an approaching storm. The noise made by the fish was like that of a rushing wind. Just as soon as the cause of the commotion was made known by the man on the lookout, everybody hastened to get ready what tackle was aboard, and by the time the fish had reached the ship many were casting in their lines with baited hooks. Strips of salt pork or other meats were used, and quite a number of the fish caught. The school extended as far as the eye could see, and was a very noisy one, the fish leaping out of the water and sporting around all the time. They kept on their course, which was opposite to that of the ship's, and in several hours had entirely disappeared.

Mr. Kendall tells me that on Sept. 30, 1892, while the Grampus was off Cape May, near Macrie's Shoals, 15 miles off shore, they run into a school of very large weakfish or "trout." The fish were feeding on anchovies. About a dozen sharks were seen playing about the school and every now and then they would get right in among the fish, when the trout would settle and remain out of sight for a moment. It was evident that the sharks were destroying the fish. A dory was lowered, and nineteen large fish were gaffed from it, weighing 5 and 6lbs. each.

For the kingfish, barb, etc. (*Menticirrus*), Dr. Smith was given the additional name of "roundhead," here in market the other day.

Eight large tilefish were captured during the past summer by the U. S. Fish Commission. The rediscovery of this fish is one of great interest, its discovery, disappearance for a number of years, and now its rediscovery in 1892 furnishing one of the most remarkable chapters in the history of its kind.

What a pleasant surprise it was to find, when the Government fish ponds in this city were drawn off, a colony of large-mouthed black bass numbering thousands. From a parent stock of 15 fish obtained in Illinois, this large stock of fine young fish has come forth as if by magic. We feel a deep interest in the matter, as a good supply is promised for the Potomac, where they will thrive and add much to the river as a resort for anglers—such as cannot resist the temptation to go a-fishing when they know black bass are to be had. BART.

WASHINGTON, D. C., Dec. 10.

## GAME QUALITIES OF THE PIKE-PERCH.

*Editor Forest and Stream:*

An editorial paragraph in the issue of Dec. 8 seems to imply a doubt concerning "Bon Ami's" diagnosis of the fighting qualities of the pike-perch, and the authority advanced for burying him is the opinion of "many expert anglers" in Harrisburg and points below, who entertain adverse views and call the fish a salmon. Now, my dear Mr. Editor, that won't do. If you have an opinion of your own on the subject, fetch it right out and respect will be duly accorded, for your voice on matters piscatorial has ever an appreciative audience among anglers. But when you fire at us some other fellow's theories respecting a fish's valor, and cite as authority to support their views the testimony of persons so lost to piscatorial enlightenment as to call a pike-perch a salmon, then other precincts will be heard from. Great Izaak! If this thing be true then Canada will lose its revenue by the depreciation of her salmon stream leaseholds, and America will become flooded with the returning shekels.

But concerning the pike-perch as a fighter. Now, I am not an expert. Simply a plain, persistent, every-day-when-I-can-get-a-chance fisherman. In the course of a somewhat varied and unscientific career with rod and reel I have happily angled for the aristocratic warrior of the Restigouche, and his pugnacious namesake of the Columbia, which old hands call the salmon. I have also taken the pike-perch from the running waters of the Susquehanna and the sylvan lakes of Minnesota, while sandwiched between times occurred interviews with the knights of the trout stream and scraps with the doughty *micropterus* and predatory *Esox*. But rarely ever have I felt the thrill of real combat in landing the pike-perch. In my humble way I feel that I can appreciate the fight to a finish of a game fish, and the wall-eye does not fill the bill. Often have I caught him on the strong troll and light casting line from the youthful two-pounder to—well, to the limits of an angler's veracity, call it something less than a round dozen of pounds. And yet I have always loved him, but mainly for his symmetrical beauty and edible qualities.

The pike-perch has never seemed to me to possess any great amount of pluck. No startling rushes when hooked, such as marks the wild onset of the tough of the lily pad beds. No cleaving of water and air to send a succession of messages along the pliant lancewood to tingle through the nervous ganglea. Rather is it the sullen resistance of avoirdupois. His rushes, if such his resistance can be termed, more nearly approximates the gyrations of a heavy, short-winded body struggling clumsily against the will of superior force. It is true that both from a gastronomic and piscatorial standpoint he is a popular candidate for favor, but as a gamy fish, an out-and-outer, he can't swim or fight, when hooked, into fame, alongside of quite a score of other varieties, to say nothing of the warrior whose name has been caricatured in his personification by the experts below Harrisburg. Hence I range alongside of "Bon Ami" and back his opinion on the subject as expressed. Tell these experts that I've got a gun, and they had better not fool around trying to sandbag me because I've told the truth, and perhaps happened to throw a stone in their fishing ground. CAYUGA.

### Hot Water Trout.

EXPERIENCED ichthyologists have taught the credulous public to believe that low temperatures only are favorable to the propagation of mountain trout; but this opinion is exploded and scattered by the fact that cut-throat trout are found in great numbers in the warm waters of the Yellowstone Park, as has been ascertained by Prof. Jordan's recent reconnoissances. Large swarms were found at the mouth of the stream which drains the Mammoth Hot Springs in a temperature of 75°, young suckers (*Catostomus griseus*) in a temperature of 88°, chubs (*Leuciscus atrarius*) in a temperature of 85°. To cap the climax he mentions bullheads or millers's thumbs (*Cottus bairdi*) which delight in water so hot that they are sometimes boiled before they feel at all uncomfortable. Three boiled specimens were observed at the mouth of a hot tributary of the Gibbon River. Who need now despair of raising *Salmonidæ* in warm water? All the fishculturist needs is the stock and the stream. Faith and adaptation will do the rest.

CHARLES HALLOCK.

### Gogebic.

CHICAGO, Ill., Dec. 16.—One of the good records of the past season at Lake Gogebic, Mich., is that of Mr. S. D. Thompson, who spent nearly the entire summer there. In one day Mr. Thompson took twenty-three bass whose total weight was 85lbs. The largest of the catch weighed 6lbs. 1oz. E. H.

# Fishculture.

## CALIFORNIA FISHCULTURE AND PROTECTION

THE Fish Commissioners of California are: Joseph D. Redding, President; Raymond E. Wilson, Secretary, and Joseph Morizio, Treasurer, all of San Francisco. The office is located at 419 California street.

The biennial report of these Commissioners has recently been received. It covers the period from March 17, 1891, to Sept. 1, 1892. The board as at present organized was appointed by the Governor June 28, 1891. This board upon its organization discovered that all the funds allotted to the Commission for the business of the forty-second fiscal year had been exhausted and that a large number of bills of the old board remained unpaid, not a very encouraging state of affairs to encounter at the outset of official duties.

The work of the Commission is arranged under two chief divisions, the patrol and the hatchery departments. Under the former is included the maintenance of the fish and game laws, for which there is an annual appropriation of $5,000. "With this amount at hand we are supposed to engage competent deputies to patrol the various wharves and fish markets of San Francisco, and the other large cities of the State; to watch all the avenues of ingress, and prevent the importation of certain fish and game when out of season; to keep a vigilant eye on the 250 miles of the bay lines of San Francisco and confluent bays and rivers, and to make continuous trips from one end of the State to the other, and throughout the length and circumference of all its streams and waters for the same purpose." Finding it impossible to do all of the necessary protective work with this small amount of money the Commission devoted its attention almost entirely to the following objects:

(1) The prevention from sale in the markets of San Francisco of fish and game at the time when it is unlawful to sell the same.

(2) The prevention of illegal fishing in the bay of San Francisco, especially in the catching of the young of fish.

(3) The prevention of illegal fishing in the Sacramento River.

(4) The prevention of dumping sawdust and other deleterious substance into the various rivers and streams of the State.

(5) The requiring of the construction and maintenance of fish ladders.

The Commissioners assert, and with reason, that there should be an annual appropriation of at least twenty thousand dollars for the proper carrying on of their work.

An extraordinary increase in the salmon run is recorded for 1892 in the Sacramento River. Several canneries, which had been idle for some years opened up and did a thriving business. The run was so greatly in excess of that of any preceding year within the past decade, that the Commissioners are doubtful whether it is the natural increase from fishcultural operation or due to some phenomenon of migration.

The report notices the increase of shad, striped bass and black bass, which have been introduced from eastern waters. No reliable information has been received as to the success of transplanting lobsters from the Atlantic. Fresh water crayfish, which were excessively abundant in fresh water streams around San Francisco bay, have become almost exterminated through over-fishing, and require protection for a period of years.

California has now three hatcheries, one at Sisson, on the headwaters of the Sacramento, another at Lake Tahoe, and the third in Bear Valley, Marin county. The hatchery at Sisson was established in 1891, and received its principal start in life by a gift of nearly three millions of eggs of the quinnat salmon from the United States Fish Commission. Mr. J. A. Richardson is superintendent of the Sisson station. The Bear Valley hatchery has capacity for one million eggs, and is managed by Mr. Eugene W. Hunt. The Lake Tahoe hatchery is used only for hatching eggs of trout native to that lake.

The kinds of fish distributed by the California Commission are quinnat salmon, all of which are deposited in the headwaters of the Sacramento, Lake Tahoe trout, eastern brook trout and rainbow trout. In 1891 there were shipped from the Lake Tahoe hatchery 88,000 fish. In 1892 the Bear Valley hatchery furnished 317,000 brook trout and 331,000 rainbow trout.

The eggs of the eastern brook trout were taken jointly by the California and Nevada Fish Commissions from Marlette Lake, Nevada. The eggs of rainbow trout were obtained from Shovel Creek, Kiyou county, Cal.

The Sisson hatchery, besides distributing quinnat salmon, furnished 175,000 rainbow trout, hatched from eggs taken in Shovel Creek.

The hatchery department has an annual appropriation of $5,000, which the Commissioners find entirely inadequate to the needs of the State, and therefore ask that the appropriation be increased to $10,000 per annum. They recommend certain changes in the game and fish laws, with particular reference to the importation of unseasonable game and fish from other States, the cold storage of fish and game out of season, and the extension of the close season for salmon so as to include August as well as September. They also recommend that ditch owners be required to place screens at the entrance to the ditches, and call attention to the necessity of protecting through the game laws such birds as the pheasant and wild turkey for a period of years. They further recommend that a tax of 4 cents per case be placed and collected upon canned salmon, and the revenue applied to the hatchery department in consideration of its having planted about 3,000,000 of salmon in the waters of the State annually.

Superintendent E. W. Hunt made some inquiries during the summer of 1891 about the landlocked salmon planted in Donner and Independence Lakes. He was informed that two or three were caught in Independence Lake during the spring and summer of 1891, weighing from 1½ to 3lbs. each. They are said to be decreasing in numbers. He could not learn of any having been taken in Donner Lake. Rainbow trout had thriven in the Truckee, and the anglers reported them to be the best and gamest fish in the river.

Superintendent Richardson reported, under date of May 17, 1892, that 402,000 trout eggs had been taken up to that date. A new run of trout appeared on May 17, which were thickset, rather short and highly colored, especially with regard to fins. He noticed a few specimens that were so highly colored that it seemed unnatural. The pectoral, ventral and anal fins were bright scarlet, tipped with white. Mature males were very scarce. Fly-fishermen were taking from 10 to 20 trout a day at the time of Mr. Richardson's visit. The salmon fly was upon the stream in thousands.

Messrs. Stevens and McKinney hatched trout far the California Commission at Independence Lake. These were varieties of the black-spotted or Rocky Mountain trout. The eggs hatched in about forty days. The variatons of water temperatures were from 44deg. to 52deg., the average being 48deg. One of the varieties of trout was taken from White Rock Lake. The color of the eggs of the White Rock Lake trout is cherry-red, and their size is about three-quarters as large as those from Independence Lake trout. The color of the latter is lemon, and in size they are about the same as the Tahoe and Donner Lake eggs.

At the McCloud station of the U. S. Fish Commission the average yield of thirty-one female quinnat salmon was 5,516 eggs each; the largest number of eggs taken from a single female was 8,000. The smallest fish caught was a female

weighing 3¼lbs., and the largest a male weighing 40lbs. Mr. Richardson saw a leather carp at the McCloud station, which was one of two taken there in September, 1891.

Appended to the report of the Fish Commissioners are reprints of six bulletins relating to the salmon and trout of the Pacific Coast, which were prepared for the Commission by Dr. David Starr Jordan, president of the Leland Stanford, Jr., University. A review of the bulletin upon the salmon and trout was published in FOREST AND STREAM last spring.

Dr. Jordan's description of a new species of trout, *Salmo kamloops*, has also appeared in this journal. In the reprint before us a figure of the Kamloops trout is presented for the first time. One of the types upon which the description is based was deposited in the National Museum at Washington, and we have examined this specimen. After having studied the fish we find it difficult to understand why the describer of the species failed to recognize in it the Gairdner's trout of Richardson. The Kamloops trout can be seen any day of the week at Blackford's, in Fulton Market, but if you ask Mr. Blackford its name he will tell you that it is the steelhead. T. H. B.

### THE CALEDONIA HATCHERY.

THE season of egg collecting for the Caledonia, New York, hatchery has been a remarkably successful one. Superintendent Monroe Green reported the taking of eight and one-half millions of lake trout eggs from lakes Huron and Michigan, while the brook trout at Caledonia yielded 1,135,000 and the brown, or von Behr, trout 1,110,000 eggs.

To the Fulton Chain hatchery one-million lake trout eggs were sent, and to the Sacandaga station, 150,000 eggs of brown trout.

The European sälbling, or saibling, a red-spotted trout of large size and slender, but elegant, proportions, furnished ten thousand eggs. The sälbling was introduced from Germany by the U. S. Fish Commission in 1881 and subsequent years, and some of the eggs were allotted to the New York hatchery at Caledonia.

There is in lakes of Maine and New Hampshire a trout very much like the sälbling in appearance. Thus far it has been reported from Flood's Pond, Me., Dan Hole Pond and Sunapee Lake, N. H. It has been found difficult to collect the eggs from this fish when kept in captivity.

### Quinnat Salmon.

THE quinnat salmon at the Baird, Cal., station of the United States Fish Commission were not abundant about the middle of September last year, and there were six times as many females as males. The average number of eggs per female was 4,500. In size the eggs varied greatly, the average diameter having been three-tenths of an inch, while some scarcely exceeded one-fifth of an inch, or about the size of rainbow trout eggs. The station obtained nearly 3,000,000 salmon eggs from the fall run this year.

### Fisheries Apparatus.

CHICAGO, Ill., Dec. 14.—Notes from the World's Fair state that five carloads of fisheries apparatus have been forwarded from the U. S. Commission in Washington to be put in use in the fisheries exhibit at the Fair. A complete system of fishculture as practiced by the U. S. Commission will be shown, also models of different types of fishing vessels of the present and of early days, together with much interesting material by way of implemets, etc. E. H.

### The World's Fair.

DR. JAMES A. HENSHALL, who has been in charge of the Angling Exhibit at the World's Columbian Exposition, has recently been appointed chief special agent in charge of administration and fisheries in the place of E. C. Bryan, resigned. The resignation of Wm. P. Seal, who superintended the construction of the aquaria for the Exposition, is among the current rumors.

### A New-Subscriber Offer.

A *bona fide* **new** subscriber sending us $5 will receive for that sum the FOREST AND STREAM one year (price $4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price $5)—a $9 value for $5.

This offer is to *new* subscribers only. *It does not apply to renewals.*

For $3 a *bona fide* new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Ieet's handsome work, "Bird Portraits for the Young" (the price of which is $3).

### Old Point Comfort, Va., and the Pennsylvania Railroad Company's Tour.

During the holiday season there is always additional gayety in military circles, and nowhere is it felt more than at Fortress Monroe. With this in view the Pennsylvania Railroad Company has planned a charming Christmas holiday personally-conducted tour to Old Point Comfort, leaving New York at 8 A. M., Dec. 27, covering a period of four days, at a round-trip rate of $18.00. This rate includes railroad fare, accommodations at the famous "Hygeia" Hotel, and all necessary expenses. At the same rate tickets, including one day's board at the hotel, will be sold good for return via Richmond and Washington by regular trains within ten days. For further information apply to ticket agents, Pennsylvania Railroad, or Tourist Agent, 849 Broadway, New York.—*Adv.*

### An English Financial Opinion.

If the New York Central fails to attract the British tourist and induce him to travel over "America's Greatest Railroad," it cannot be laid at the door of the Passenger Department, which has issued one of the most voluminous illustrated guides we have seen dealing with the districts served by the system. It is like turning over a volume of *Harpers* or the *Century*, and we advise all those of our readers who are thinking of crossing the Atlantic to get a copy of the book at the European agents, 35 Milk street, Cheapside, and not to forget to ask for the other pamphlets, included in the "Four-Track Series." They are valuable as picture books alone, apart altogether from their business purpose.—*Financial Times, London, Eng.*

### DOG SHOWS.

1892.

Dec. 27 to 30.—Tonawanda, N. Y. H. M. Fales, Sec'y.
Dec. 27 to 30.—Pawtucket R. I. T. H. Adams, Sec'y.

1893.

Jan. 3 to 6.—Mohawk Valley Poultry and Kennel Club. F. B. Zimmer, Sec'y, Gloversville, N. Y.
Jan. 10 to 13.—South Carolina Poultry and Pet Stock Association, at Charleston, S. C. John B. Gadsden, Sec'y.
Feb. 21 to 24.—Westminster Kennel Club, New York city. Jas. Mortimer, Supt.
Feb. 28 to March 3.—Keystone Kennel Club, at Philadelphia, Pa. Jas. Watson, Sec'y.
March 7 to 10.—Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Sec'y.
March 14 to 17.—Washington, D. C. F. S. Webster, Sec'y.
March 15 to 18.—Elmira, N. Y. C. A. Bowman, Sec'y.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
May 3 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago.
Sept. 7 to 10.—Hamilton, Ontario. A. D. Stewart, Sec'y.

### FIELD TRIALS.

1893.

January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgarif, Sec'y.
Feb. 8.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y.
Feb. 13.—United States F. T. Club Trials, New Albany, Ind. P. T. Madison, Sec'y-Treas., Indianapolis, Ind.

## CENTRAL FIELD TRIAL CLUB'S TRIALS.

### Free-for-All Stake.

THIS stake began on Monday, Dec. 12. As will be seen by the list of starters, nearly every dog in the stake was a winner.

There were some changes in the details of the running as compared with that of last year. The heats were four hours long in the first series only. After that the judges ran the dogs as long and in what order they chose. The handlers rode on horseback or walked, as they pleased. They were pleased to ride most of the time, and some of the riding was entirely too fast for a field trial or field work. The time limit, as in the other stakes, was abolished, and the club is now in the front rank of progress.

Orlando, the winner of first, did some remarkably good work in the stake, although faults cropped up in his work, at times, in pointing where nothing was found. In pointing on foot scent, his handler assisting him often in getting an accurate point on single birds, by urging him skillfully on till he made a firm point.

Lora, second, excelled any dog in the stake in the class of her work. She missed first, considering her as a whole, by a very narrow margin. Before the last heat began she was considered almost a sure winner. She is a remarkably good bitch, sound in all the details of field work.

Rip Rap, third, was not running up to his best form. On the work done, either Harry C. or Bettye S., in my opinion, was better. Orlando first, Lora second and Bettye S. third would have been a better placing of the dogs.

But of course people see these things differently.

It was a great stake, well worth seeing. Heretofore the lump sum of $1,000 was given to the winner. This year a more sensible arrangement obtained. The $1,000 were divided into three parts—$500 to first, $300 to second and $200 to third.

The dogs were separated so much in their competition in the heats that it was impossible for one reporter to keep an account of the points, flushes, etc.; therefore, there may be a slight difference in the totals. The class of work, however, is correct.

Herewith is the order in which the thirteen competitors were run:

J. A. & J. H. Hunter's black pointer dog Black Wonder (Crowell's Ike—Bang Bang's Pride), J. A. Hunter, handler,
*with*
Avent & Thayer Kennels' black, white and tan setter bitch Bettye S, (Roderigo—Bo Peep), J. M. Avent, handler.

Greenfield Hill Kennels' black and white setter dog Rowdy Rod (Roderigo—June A.), S. C. Bradley, handler,
*with*
Pierre Lorillard, Jr.'s black, white and tan setter bitch Lora (Gladstone's Boy—Ruby D.), C. Tucker, handler.

Thos. Johnson's liver and white bitch Pitti Sing (Baron Doderidge—Nora), A. Cameron, handler,
*with*
Charlottesville Field Trial Kennels' liver and white bitch Maid of Kent (King of Kent—Hops), C. E. Buckle, handler.

A. P. Heywood-Lonsdale's liver and white pointer dog Prawn (Crab—Polly Peachem), A. Cameron, handler,
*with*
Avent & Thayer Kennels' black, white and tan setter dog Orlando (Roderigo—Bo Peep), J. M. Avent, handler.

Greenfield Hill Kennels' black, white and tan setter dog Harry C. (Roderigo—Countess House), S. C. Bradley, handler,
*with*
Charlottesville Field Trial Kennels' black and white pointer dog Rip Rap (King of Kent—Hops), Capt. C. E. McMurdo, handler.

Whyte Bedford's and P. H. Bryson's black, white and tan setter dog Tremont (Gladstone's Boy—Speckle Gown), a bye. A. P. Gilliam, handler.

*First Series.*

BLACK WONDER AND BETTYE S. began the competition in this stake at 12:54. The heat was most interesting. Both dogs worked diligently and finished the heat without any show of weariness. Black Wonder stopped a few times in this heat to potter on footscent, but he had no intention to shirk work. The pace of both was good and well sustained. Bettye maintained the more uniform gait and conducted her ranging with more judgment. She worked to the gun much better than Black Wonder, the latter requiring constant watching and cautioning to keep him within proper limits. Notwithstanding this he would betimes flush birds willfully, would often range beyond control and was not always working properly to the gun. On point he was not rigid. It was more a stand than a point. Bettye was faulty in point work, in that she would point rigidly to a flush and hold her point till ordered on. However, the work was excellent taken as a whole. There were thirteen bevies found during the race, but three of these were found by spectators. Each backed. Bettye was steady to the gun. Black Wonder was so voluntarily sometimes, and sometimes so by earnest caution. Black Wonder pointed three bevies, flushed one and pointed thirteen single or scattered birds and flushed three. Bettye pointed five bevies and one after the dogs were ordered up. She pointed eleven single or scattered bird points. She flushed one bevy and two singles She made two false points. This is not presented as an absolutely correct account of the point work, as the handlers were separated a large part of the time throughout the heat. It, however, approximates very closely.

TUESDAY.

The sky was entirely obscured by heavy dark clouds. The air was damp, and a light fog obstructed the view. A fine drizzle fell during part of the forenoon and afternoon. The grass and cover were saturated with dampness. The grounds were wet and heavy. Birds were found in abundance. There was no work done in the forenoon.

POWDY ROD AND LORA were started at 1:07. They ran an excellent heat. Both dogs ranged wide and fast in the first two hours. There was none of the annoying searches for lost dogs, notwithstanding that both ranged wide. Both worked skilfully to the gun. In the beginning of the third hour both showed some signs of fatigue. The ground was heavy, and the soil was so tenacious that it clogged the dogs' feet. Lora, at 2:40, showed signs of stopping work, but soon thereafter birds were found and she resumed her diligent search to the end of the heat. Both did excellent work on birds. Lora, in the first half of the heat, outranged Rowdy. In the last half Rowdy had the advantage in range some of the time. While Rowdy did skilful work on birds, Lora was a bit better in judgment and more skillful and quicker in locating. She more than once got to the bevy quicker than Rowdy on the find of the latter. When Rowdy, after pointing, moved on to locate, Lora would draw quickly ahead to the bevy, an act she could perform with great accuracy. Both backed stanchly and honestly, were steady to the gun and handled nicely. The dogs found about twelve bevies during the heat, Lora finding the greater number, and also pointed a greater number of single birds. Very few flushes were made. The birds were difficult to work on, as they ran a great deal from the points. Lora pointed six bevies, Rowdy pointed two. One or two of these Lora got by being quicker and building up on Rowdy's find. Rowdy got eight or nine points on singles and Lora got eleven or twelve. Lora flushed four times. Considering the amount of work done there were few flushes made, about seven or eight, there not being much difference in this respect. Lora had better judgment, proved the better in finding, and was a higher class worker in every detail of point work.

WEDNESDAY.

The sky was dark and heavy. A lively mist fell during the forenoon. Every pine leaf and twig held a drop of water. The ground was heavy and stuck to the feet of the dogs and the boots of the people who were afoot. Birds seemed to be on the move and were found plentiful.

PITTI SING AND MAID OF KENT started at 8:27. They ranged well at good speed in the first two hours, though both were deficient in judgment in beating out the ground. Pitti was disobedient and hard to handle. On back she was unreliable at times and needed a deal of cautioning. In the third hour, Pitti showed signs of tiring. In the fourth hour she practically had quit work. Although she did not come to heel, she trotted about close to her handler. Cameron should have then withdrawn her, as it was far from a kindness to run the bitch when she was so wearied, and had not the slightest show in the competition at that stage. Maid, too, in the third hour became weary, but she did not stop working diligently till near the end. In the latter part of the fourth hour, her back appeared to trouble her greatly, and at times it was extremely difficult for her to run, or even to walk. She, too, should have been withdrawn. The wet cover had probably chilled her. She had no chance in the competition after stopping work, and it was punishing a good bitch needlessly to make her work on. Maid had quite a good showing to her credit on birds. She pointed five bevies, and had a divided bevy point with Pitti, the latter getting three points on bevies besides the divided point. One of the bevies she flushed after pointing it. Maid pointed eight singles, and flushed four times. Pitti pointed four times and made one fluke. There was very little false pointing done. There were eleven bevies, all told, found in the heat by dogs and horsemen. It is but fair to mention that Pitti had been in season up to Sunday last, and had had no work in five weeks excepting two short runs on Saturday and Monday last.

PRAWN AND ORLANDO began at 1:05. Prawn was entered by mistake in the name of the Hempstead Farm Kennels. He is owned by Mr. A. P. Heywood-Lonsdale, Shavington Hall, England. Prawn was exceedingly lame from a sore forefoot, or shoulder, and ought not to have been started. Had he not been a game, plucky dog, he would have quit in a short time. His limp made more exertion necessary, and it was therefore much harder for him to run. Not being able to keep out at his work with quickness, gave Orlando a chance to do nearly all the bird work, and Prawn's greatest showing was, therefore, in backing. His lameness prevented him from any showing of his real form. Orlando was, therefore, practically working alone, so far as a competition was concerned. He made an excellent showing and ran up a fine string of single-bird points. He showed excellent merit but required careful coaching on birds, he not going up to them with sufficient promptness and accuracy. To be more explicit, he would sometimes point on footscent, and his handler would quietly send him forward till he refused to go further, when he was quite sure to have a bird to the point. He made a few false points and two flushes. He made about twenty-one points on single birds, and found and pointed five bevies. Prawn pointed one bevy and four singles. He made four flushes, one excusable one. Cameron rode part of the time in this heat, and in the last part of the heat he stopped urging the dog on, which was the next best thing to withdrawing him that he could do. He ran a game race, and it is regretable that he was not in proper form, as Cameron says he is one of the great pointers of the day. Orlando ran so fast at the start that it looked as though he would break down, but he later struck a steadier working gait and finished strong with good work.

THURSDAY.

The weather was delightful. A heavy frost covered the vegetation. As the sun rose higher the frost was melted and made cold, wet running for the dogs. A good half day was lost in following the bye dog. One judge could have taken charge of him, and the other two judges could have followed the other two dogs.

RIP RAP AND HARRY C. began work at 8:08. Both worked industriously to the end, Harry the better ranger, though he worked out of bounds betimes, and had an uncontrollable fondness for following the birds of a bevy, he marking their flight well. He also needed cautioning when locating, as he appeared a bit over-eager at times. Both were steady to shot and backed nicely. Rip often dropped to his points. He did not range with regularity nor did he work up to his best form, he showing hesitation and lack of confidence when locating birds. Rip pointed five bevies and had one divided point on a bevy. Harry had the same number of bevy points. Harry did one excellent piece of work in locating a bevy of which he struck the trail up wind. Rip made six points on singles and never flushed. He made one point at the edge of dense cane, too dense for the handlers to beat out to flush. Harry made six single bird points. He flushed two singles and a bevy. He made several points to which nothing was found. The heat was energetically worked throughout. It was a good one. Harry, all things considered, had the best of it. The dogs were separated so much that the reporters got a good bit of information from the judges.

TREMONT ran a bye. He was started at 1. His range was but moderately wide at the best, and often it was quite close. He beat out his ground well, but often wasted time by working the same ground over more than once. Betimes he returned to his handler to get orders. He was prettily broken, a bit overbroken in so far that he would return for instruction when he should remain out at work. He pointed in beautiful style, some of his poses being magnificent. If he got close to his birds, however, he dropped on point. He was over cautious and pointed on footscent among scattered birds sometimes. He made about eighteen single bird points. Many of these he made quickly and nicely, yet he missed many opportunities among scattered birds. Birds were out feeding on the stubbles nearly all the afternoon, so that the conditions favored easy finding. Nearly every bevy was pointed within 100yds. of the handler. He made three flushes, and stopped too much on scents, although then he moved on, generally without any assistance. He found ten bevies. Had he been down with some of the other dogs in the stake, he would have had very little showing, as they would have ranged outside of him and picked up the greater part of the points.

FRIDAY.

The weather was foggy and cloudy, the signs being favorable for either good or bad weather, accordingly as one was pleased to predict. Some said that the sun would dispel the fog and the weather would be good. All took their rain coats along, however, even those who thought that there would be no rain.

*Second Series.*

There were six dogs reserved to run in the second series. It was a good selection. Tremont, however, had run poorly as compared to the others, but having run alone it was no more than fair to run him in company.

LORA AND BETTYE S. were started at 8:52. Soon after starting the handlers were cautioned by the judges against using any unnecessary noise, Mr. Tucker having objected to Mr. Avent's whistling. Bettye in the open field pointed a bevy. Lora in coming up to back, caught scent quite a distance away and drew with great rapidity to a point. Both were steady. The birds were not followed. Lora pointed a bevy in sedge. Bettye made three points in succession, to which nothing was found. Lora pointed a sparrow. Sent on Lora pointed the bevy accurately, while Bettye 40yds. away pointed the footscent. The heat was now running at a lively rate, the handlers riding in a fox trot, and all bowling along merrily—too fast, however, for bird hunting, and not fast enough for fox hunting. Each pointed the scattered birds. Lora pointed a single in pines. Bettye at the same time pointed at the same place, but abandoned the point. Up at 9:56. The heat was a good one. Both ranged wide and fast. Lora was the better ranger, the more finished worker and had better judgment and finding abilities. She was also a more skillful performer on birds in every particular. Bettye worked far below her form of the first heat.

HARRY C. AND ORNANDO were started at 10:07. Orlando pointed a bevy in open sedge. On the scattered birds, both were found on a point on a single bird, or Harry backed. Sent on, Harry soon pointed a single nicely. In woods, Harry flushed a single and Orlando pointed one. Harry pointed a bird which flushed wild. Olando pointed a bird, after which he pointed twice and nothing was found. Working on scattered birds of a bevy flushed by the judges, Orlando made two points; nothing found. Harry pointed a single nicely in open sedge. Up at 11:04. The last part of the heat was run in the rain.

The judges decided to postpone further running for the time being. There was no good reason for so doing, as it had stopped raining. The weather was but little worse than it had been all the morning, and better than it was part of the time, inasmuch as it was not raining. An early lunch was eaten. There was then some speculation about the weather. The judges consulted with owners and handlers. There appeared to be a disposition to please everybody in so far as running or not running at once was concerned. The proper way was to either go on and run the trials or go to town. Dawdling about was not running a field trial. The judges were the ones to decide whether the running should or should not be suspended. Once open the question of weather to the pleasure of owners and handlers and no man is so wise as to forecast the time when a trial would be run or ended. Moreover, some of the running had been in worse weather. It was understood that Capt. McMurdo was ready to run with Rip Rap and Mr. Bryson would prefer better weather for Tremont. The judges finally decided to run the dogs. After getting about a mile into the fields, the weather thickened. The judges consulted then and announced that the running for the day was ended. This was shortly after 2. A steady rain set in soon after the start for home was made.

SATURDAY.

The weather was cloudy, damp and slightly foggy. The heavy rains had saturated the soil. The grounds were soft and in places muddy. Birds, however, were not difficult to find.

RIP RAP AND TREMONT began at 9:46. Rip, standing in the open, pointed a bevy in a thicket. Tremont backed. Both were steady to shot. The birds were followed. Tremont made two points on single birds. Rip made a good point on the scattered birds. Rip pointed a single in open sedge; a moment afterward Tremont pointed the same bird. Next Rip flushed some scattered birds. Rip made two points on scattered birds. Next he pointed a bevy in open sedge. In the open Rip stopped to wing on a bevy he flushed in some thin weeds. Taking a circle in the field and coming back in the open on this bevy, Rip struck the trail and pointed the birds, Tremont joining in the point. The heat ended at 10:44. Rip was the better ranger, though his range was irregular, sometimes narrow and sometimes fairly wide. He was the better finder. Tremont had a narrow range and part of the time followed Rip. Each was steady to shot and wing.

LORA AND ORLANDO began the final heat at 10:57. Both ranged wide and fast, Lora showing better judgment. She was "off her nose" appreatly, as her point work was far below that of her previous heats. Among some scattered birds each secured a point on single birds. Lora pointed in a thicket; nothing found. Next, Orlando in the open got two points on singles; Lora one. Orlando pointed in a thicket; nothing found. A bevy was seen to pass in woods. No one knew what flushed it. Lora pointed a single which flushed wild in woods. She then pointed foot scent. Orlando pointed a bevy in a cornfield. Avent was ordered to wait, but he flushed the bevy before Lora could be got in. Lora pointed in sedge; nothing found. At the same time Orlando pointed, then moved on and flushed the single bird. Orlando pointed scattered birds. Lora had not seen the bevy when flushed from Orlando's point, therefore was at a disadvantage in working on the scattered birds. In the open Orlando pointed a bevy in weeds. Lora, about one hundred yards away in weeds, pointed a bevy at the same time. The judges thereafter consulted six minutes. The dogs were again sent on. Lora roaded in the open to a good point on a single. Orlando at the same time pointed a lark. In pines Lora pointed; nothing found. Lora flushed a bird and flushed another which Orlando had barely pointed. Up at 12:35.

It was said that Orlando had given Lora a sound beating. He had not done so. He had beaten her in this heat, but not on a very wide margin. Moreover, the work in her previous heats of this stake was of a much higher class than that of Orlando. Lora at her best can give him a sound beating when he is at his best, judging from the class of work done in the stake by each dog. Lora carries herself in an easy, graceful manner, although she could be improved in style. Orlando runs with a low head, his tail carried straight out behind and almost motionless. He, however, points in good style generally. His manner of working is inferior to that of Lora. He did a large amount of single bird work in his first heat, but that was largely a matter of large opportunity and having a lame competitor.

The judges, however, got through a long trial with most

LORA.

Owned by Pierre Lorillard, Jr., Tuxedo Park, N. Y.

commendable diligence. They handled the competion skillfully. They were constantly alert. They were not stampeded a single time by any emotional cry of "Point, judges!" and very little of it was attempted. The audible soliloquy of a few handlers in explaining the large number of things which might be to a point which had proved barren, might have

been left out, for it did no good. It might be profitable for those handlers, who deign to explain any doubtful work to the judges, to learn that they are simply wasting their time to no purpose, aside from the implication which the explanation of the work carries what it—that is, the implication that the judges can not comprehend the work. In short, the management and judging was far ahead of that of past years.

B. WATERS.

## MANITOBA FIELD TRIALS CLUB.

We must remind our Manitoban friends that in future, to insure the accounts of the club's doings finding place in these columns, said reports must be forwarded in due season, and not after they have appeared in other papers.

We are informed that the annual meeting of the Manitoba Field Trials Club was held Monday evening, Dec. 3, at the Clarendon Hotel, Winnipeg, and was a great success, being largely attended. After the usual routine business had been disposed of, the election of officers was proceeded with: Patron, Sir Donald A. Smith, K.C.M.G., Montreal; president, Frank G Simpson, Winnipeg; 1st vice president, F. H. Gotzian, St. Paul; 2d vice president, E. Hughes, Brandon; secretary-treasurer, E. D. Adams, Winnipeg; managing committee, D. Hope, F. Dorsey and Alex. Clarke; auditors, D. H. Telford and T. L. Peters.

A hearty vote of thanks was tendered to the retiring officers for the very successful manner in which they had conducted the business of the club during the year, and for the very promising condition in which its affairs now stand.

The events for next season are to consist of an Amateur Stake, open to dogs owned in Manitoba and the Northwest Territories only, and handled by amateurs, winners of previous events barred; the Derby and All-Aged Stake. The prizes for open events to be divided as follows: 60 per cent. to first, 25 per cent. to second and 15 per cent. to third.

The date for holding the trials was not fixed, owing to an intimation received by the secretary-treasurer that a new club was about to be organized in northern Dakota. If that proposition is carried into effect, and we earnestly hope it may, it is very desirable that both clubs should work harmoniously together. It was considered advisable in view of this fact not to fix upon a date until they had a further report from their American friends.

The advisability of holding the trials of the club at a point further west was discussed and laid over to come up later. Twenty new members were duly elected. There was a strong feeling manifested among those present that the season of 1893 was going to be the most successful in the history of the club.

## MASTIFFS AT BROOKLYN.

*Editor Forest and Stream:*

In Mr. Wade's criticism of the mastiffs he judged at the last Brooklyn dog show, he speaks of the bitches thus: "Bitches—The class was all bad in head, distinctions being in degree. First, a big roomy bitch on short legs, good skull, fair ears, muzzle too long and lacking in depth but square."

Take her as he sees her, what is there about her to recommend? Does she amount to anything? Then he says, "The second, Boss's Princess, an immense bitch, good all over except in muzzle, higher legs than desirable, but her muzzle is execrable, not merely too long, but shockingly overshot; a mastiff may have a longer muzzle than hers and still be typical of the breed."

When he says that Boss's Princess is overshot in the least he is much mistaken, in fact "shockingly mistaken." On that point it is not a matter of opinion of what he thinks or what I think. He is no more correct in that than he would be were he to say she is all black or all blue in color; one would be as evident to an observer as the other. But when he says her muzzle is execrable, that is a matter of opinion; he can call it anything he chooses. She is simply old type in muzzle, as good or better than three-fourths of the mastiffs in America, and better than a majority of the prize dogs a few years ago. The best thing about the first prize winner seems to be her skull according to his report, but the skull of Boss's Princess measured four inches more around than she did as measured, after the awards were made, by Mr. Geo. Glazier. If the bitches were scored by points it is my belief that the second prize winner would score thirty points more than any in the class. Had she been benched by the side of any other dog save Black Prince her one solitary defect would not have been so apparent. What sort of a show would the other bitches have made in her place? To use the expression of many, Mr. Wade's awards in the bitch class were "peculiar," to say the least.

As Mr. Wade, in his many letters, is such a "stickler" for good movers and most generously offers prizes for such here and in England (my bitch Girda, the dam of Black Prince, won the five pounds he offered in England, and Boss's Princess the $10 he offered at the Brooklyn show), he is particularly down on all unsoundness—cow-hocked dogs and the like. The "peculiar" part comes in when the two bitches are compared together, the second prize winner getting the prize for the best moving mastiff in the show. A very correct idea can be formed of the first prize bitch by reading what the critics say in the different papers. "The winner had lost her fat to some extent and thus looked better, but though she has a better type of head than Boss's Princess, in no other point is she her superior or at all her equal; much smaller, inferior in action, slightly cow-hocked, open feet, not so well made in body," and "the winner is very moderate, faulty in head, good in body, none too good in hocks. Boss's Princess, second is a very large upstanding, good-bodied bitch and a very active mover, has a good skull but weak muzzle, lacks character in head, still she ought to have won as she beats the winner so in size, legs and feet, and neither are good in head." I consider her as many others do, one of the best all around bitches that has been shown. I do not deny but what she has an old fashioned type of head, I will say she is my ideal of a mastiff save in muzzle, just such a one as I hope to show some time with the muzzle of Black Prince.

Boss's Princess was weighed by the baggage master at the Grand Central Depot when I came home from the show; she weighed 183lbs. She stands 32in. stick measure, at the shoulder; is 77in. long and in girth she measures 40in. tight; correct in color, perfect markings with a small jet black ear and jet black muzzle. Perfection is not often reached even with the best material. We hope, we anticipate.

J. L. WINCHELL.

FAIR HAVEN, Vt., Dec. 15.

## NATURAL FOODS.

WE are enabled, through Dr. Perry's kindness, to give some further extracts from his coming book, "Kennel Secrets."

"In giving raw meat," says "Ashmont," "there are certain precautions to be observed which are well worth considering here. The dog commonly 'bolts' the food placed before him largely because there is little if any necessity for him to do otherwise, but accustom him to foods which require mastication and the assistance of the saliva, and he soon shows that he has sense—or instinct—enough to know that he must chew them before he swallows them. In feeding raw meat the facts are often ignored that dogs have teeth for cutting and tearing, and that if the same are industriously used on this food it will be converted into a form favorable for digestion. As a consequence the erroneous practice of giving it to them in pieces but little smaller than the fist is a common one; and to this can be attributed many of the digestive disturbances of which breeders have occasionally complained and for which they have blamed their food.

"It ought not to be necessary to urge that raw meat for dogs, old and young, that are fairly healthy and have good, sound teeth should when possible be put before them in a form which will make it necessary for them to cut, tear and crush it before it can be swallowed; or in other words, it should be in very large pieces, and preferably attached to bones of good size. And when it cannot be obtained in suitable form it should be cut into small pieces or crushed with a mallet before it is fed out; or if intended for puppies or for the sick it should be minced or scraped."

A good many people have an idea that raw meat affects the dog's scenting powers. Commenting on this "Ashmont" remarks: "Where this food is given intelligently its effect upon the secenting powers is transitory merely and limited solely to the period of active digestion. In other words, after he has eaten his fill of meat, for two or three hours his sense of smell is less keen, but as soon as digestion is well advanced it is restored and just as powerful as before eating. And it can safely be said that a sporting dog might be allowed meat from puppyhood until incapacitated by age, and his 'nose' would not in the slightest degree fall off in consequence of his diet. But meat will injure this sense if it is given out of proportion to the amount of work or exercise, for then the dog is sure to become feverish and his nose must fail him as well as his general health. And where such failure has occurred in consequence of meat it has been invariably due to the lack of judgment on the part of the owners—they giving too much of this food and too little exercise."

"Ashmont" now goes on to lay down rules for feeding dogs of the different breeds, from the smallest to the largest, and under the various conditions of life. He states definitely the proportions of meat, vegetables and starches required, and the influences which should modify them, how these foods must be prepared, the quantity to be given at each meal, the requisite number of feedings, etc., etc. In fact, he gives accurate diet tables for Yorkshires as well as St. Bernards, and of what each meal of the day should consist, and in covering this vast territory he starts with puppies about leaving their mother, and remains with them until after they are matured, and even continues on with the dog in the stud and the bitch in whelp, leaving absolutely no room for speculation, but making clear every point and turn.

Mr. H. L. Kreuder has sold the noted beagle champion Racer, Jr., to Mr. E. Gerry Roberts, of Red Bank, N. J.

# DOG CHAT.

### "Scotch Baillie."

There are many dogmen in this country who will be pleased to learn that Mr. D. Baillie, familiarly known as Scotch Baillie, is still in the land of the living and "cakes." Mr. Baillie was for some time manager of the Meadowthorpe Kennels, at Lexington, Ky., recently dispersed, and for a couple of years was a familiar figure at our shows, generally having in tow a large team "o' all maks"—Gordons and terriers predominating. He wants to know how his old friends Messrs. Hitchcock, Mortimer, Mason, Oldham and many others are, hoping they are still going ahead in the fancy. Mr Baillie intends to visit this country next year to attend the World's Fair dog show "with an extra good team of sporting dogs." He is now manager of the famed Glenbeig Kennels of Gordon setter renown. They have now the largest and best stock of pointers and Gordons in the world. They have over 60 Gordons and 40 pointers, "all fit to win." He remarks: "To give an idea of our stock we had 13 setters and pointers at Birmingham and won 9 firsts and 4 seconds; all won in hot classes; as you are aware the sporting classes are very strong at that show." He likes his new surroundings better than his Kentucky venture, as he can sell 12 dogs there for every one he sold down South. He also gives us the news that Mr. Freeman Lloyd is now the kennel editor of the *Sporting Mirror*. Scotchmanlike, Baillie works in a little "biz" in his entertaining letter. He is willing to buy and bring out on commission any sort of dog that exhibitors on this side may require, with one exception—black and tan terriers. There is no doubt that if Mr. Baillie comes over he will receive a "braw" welcome from many a friend, ourselves included,

### The Boston Terrier.

The Boston Terrier Club is becoming disgruntled over the tardy action of the committee appointed by the A. K. C. to consider their claims to recognition by that august body. At least this is what we should imagine, judging from the expressions of some of its members at the meeting of the club held Dec. 14. At this meeting permission was kindly given by the B. T. C., allowing kennel clubs holding shows under A. K. C. rules to provide classes for the Boston terrier. We fail to see what there is in the claim that certain dogs of the breed can show pedigrees extending several generations. The dogs still come, as might be expected, from their mongrel origin, in all sizes and shapes. Its general recognition is bound to result in confusion, for the average public is already burdened with the difference between a bulldog and a bull-terrier, and if we make extended provision for the missing link confusion will be worse confounded. A novel reason brought forward by one of the members why the terrier had not been recognized by the A. K. C. was that if this "terrier" was some new breed from over the sea it would quickly gain recognition, etc. This is poor logic. Why, the very essentials of their terrier came from the other side, and the breed is by no means an American terrier. It is nothing more nor less, refined by inbreeding in some cases, perhaps, than the old English bull and terrier. The general appearance of these dogs at our shows would tend to undo all the educational influence that the friends and judges of the pure white bull-terrier have so long striven to uphold by instantly turning out of the ring all brindled and "bully" specimens of the so-called bull-terrier, and now happily but rarely seen. The Boston terrier is a local fad, let it remain so.

SHARP WORK AT THE NEW ENGLAND FIELD TRIALS.

### Washington City Kennel Club.

The Washington City Kennel Club held its annual meeting at the club rooms, Washington, D. C., on Dec. 15, 1892. They are more enthusiastic than ever, and will be "on top" with a big "Columbian Show" for 1893, and have claimed the circuit dates of March 14 to 17, 1893. Mr. Webster, the secretary, writes:

"We have secured one of the finest halls in the country, in a brand new building. The hall is about 360 feet long by 220 feet wide. This great space will easily bench 1,000 dogs. Further particulars and a full outline of the proposed show will be furnished later. It is intended to have this show second to none in character and importance in the circuit of this year. The officers for the coming year are: S. W. Stinemetz, President; Jos. H. Hunter, Vice-President; F. S. Webster, Secretary; H. E. Barrett, Treasurer; Board of Governors—W. R. Traver, Dr. E. K. Goldsborough, Howard Perry, T. Henry Gulick, George J. Brannigan, John Wanstall, A. H. Hancock.

### Sale of Aristocrat.

Mr. Shallenberger, of Alma, Neb., seems to be after the good ones in St. Bernardom, for he has just purchased the well-known dog Aristocrat. This dog was noted for his stud qualities on the other side, and his career while here is familiar to all. Mr. Booth reports two very fine litters by him out of bitches that whelped last week. The Duchess Kennels' new dogs are expected to arrive on Sunday next, an awkward time indeed, as Monday being a holiday they will probably have to remain on board till Tuesday.

FOREST AND STREAM was the first paper to call Mr. Booth's attention to the severe criticism about Lady Hibernia, that he shipped to Mr. John Hefferman, of San Francisco. To show what a needless smoke there was made from very little fire, we may quote Mr. Hefferman's words in a recent letter to Mr. Booth, in which he says, in speaking of Lady Hibernia's death by poison: "Mr. Booth, she was the first prize winner at our coming show, and if I conclude to purchase another shall certainly call on you for your list. * * * I want to ask you, Mr. Booth, have you got another Lady Hibernia for sale? etc." This shows that Mr. Hefferman, at least, was contented with his bargain.

### The Birmingham Show.

This show, notwithstanding it was boycotted by most of the specialty clubs, seems to have been quite as much a success as in former years, and the quality of the dogs was also just as good.

The duration of the show was one day less than in former years owing to the outcry made last year against the five day show. The judging seems to have given in some of the breeds anything but satisfaction. Mr Lloyd Price, for instance, an old breeder and thorough-going sportsman, made a "bash" of the retriever classes, in one class, where several good ones appeared withholding first prize, in another class giving Mr. Shirley V. H. C. for one of the best he ever bred. Other judges made almost as many blunders. Another, Mr. Funniston, took five hours to judge 70 bull-terriers. In St. Bernards, the owner of Duke of Maplecroft (Marvel—Princess Florence) had things about his own way, Duke winning the special for best in show, Marvel stock was well in front, for, besides Duke of Maplecroft, Mr. T. Smith ran second in open dogs with Clifford Marvel. A Scottish Prince—Hepsey bitch, Rustic Beauty, won in open bitches. The fox terrier Vice Regal beat the crack D'Orsay under Mr. Tinne, according to *Stock-Keeper's* extract from the judge's book, in head, ears, neck, shoulder, chest, back and loin. The Russian wolfhounds from the Duchess of Newcastle's kennels made a great showing. In all there were 987 dogs benched and 1,300 entries, according to the marked catalogue kindly sent us by Mr. R. Toon or George Thomas. By-the-by we note that the Toon & Symonds' greyhound bitch Southern Beauty won in open bitches, and their Wild Rose was also among the lettered ones. In challenge pointers Mr. Norrish's Ch. Saddleback was again to the front. The sporting classes as usual contained the cream of the fancy in pointers and setters. As each dog was examined by the "vet" the attendant was given a certificate, and this was delivered at the entrance to the show and held by the secretary as proof that the dog had been examined and passed. This was a safeguard, and the example might be followed by other shows.

### The Hollywood Hunt.

A new fox hunting club has been organized in New Jersey, to be called the Hollywood Hunt. The kennels are to be at the old Monmouth Park race-course and the club house at Hollywood, Long Branch. The ruling spirits are to be Messrs. Fred Gebhard, Fred. Hoey and P. F. Collier. James Blute, lately whip of the Meadowbrook Hunt, will be huntsman, and sailed the other day to England for the purpose of getting together the best pack that can be procured. In Mr. Hoey's case the step from fox-terriers to foxhounds is excusable.

### Good News for the Irish.

OWENSBORO, Ky., Dec. 17.—My Irish setter, Hiawatha, Jr. (Hiawatha—Lalla Rookh II.), only 13 months old, has done some elegant field work, and I should like to hear what others think of it. I took him into the field and he retrieved every bird that I killed, and made each point with the staunchness that would do credit to any old dog. While bringing in a dead bird he came to a firm stand with the dead bird in his mouth, about fifteen steps from where I stood, and I tell you it was a grand sight. I flushed the bird and killed it and the dog brought both in at the same time. I had enough, and witnessed the finest work I ever saw a dog do. J. G. BURCH.

### Gloversville Dog Show.

The Gloversville people, or to speak more correctly, the members of the Mohawk Valley Poultry and Kennel Club, are doing a little better this year, and are getting their premium list out betimes. By the list just to hand, we find that in all classes (except challenge classes) where there are more than three entries, the first prize will be $3 and $2. If there are more than three entries the prizes will be $5 and $2.50. In challenge classes where there is only one entry the prize will be $3, more than one entry $5 will be the prize. Third in open and second in challenge classes will be diplomas. For these prizes the club charges a $2 entry fee and entries close Dec. 24., with F. B. Zimmer, Gloversville, N. Y. The special prize list is unique; the club confining itself chiefly to diplomas as kennel prizes for different breeds. The Greyhound Club donates several medals and the Spaniel Club two $5 cash specials.

The number of gloves donated reminds one that this is the "glove" city. Mr. Manice, if he sends his dachshunds, can supply himself with his winter socks, and the owner of the best American foxhound bitch will receive a special of 50 cents, and two cakes of dog soap is a special for best foxhound pup. The Wankie Kennels and "A Friend" take care of the Scotch and Dinmont terrier specials with solid cash, and Mr. Kreuder gives $10 for best kennel of beagles. The sweepstakes at the end of the schedule should read "specials," as there is no entry fee for these. The handler who expects to win the $25 special given by the club must bring not less than eighteen dogs, and to win second, a steel engraving, twelve dogs are required. The exhibitor showing the greatest number of dogs will get from Mr. C. H. Mason a copy of "Typical Dogs," and the homeliest dog in the show gets a 20-pound ham; while the member of the club making the largest number of entries and winning the least number of prizes will be given 12lbs. of sugar to sweeten his defeat. Mr. C. H. Mason will judge all classes, and Mr. Ray Hillabrandt will superintend the show.

### Brunswick Fur Club Meet.

The fourth annual meet of the Brunswick Fur Club will be held at Westminster, Mass., Jan. 16, 1893. At this meet the officers are elected for the year, and any one who is fond of fox-hunting, in the rough, as it were, may be sure of having a good time both during the day and round the fireside in the evenings. Mr. J. H. Baird, Auburndale, Mass., is the secretary, and any further information may be had from him.

### Proposed Beagle Field Trial Club.

The meeting to form a New England Beagle Club was held at Young's Hotel, Dec. 17. The matter was discussed informally, but no action was taken. Letters favoring the project were received from H. S. Joslin, Oxford, Mass; Henry Hanson, Fall River, Mass.; and Paul C. F. Hoffman, Rockville, Conn. A number of gentlemen have expressed a desire to join the club. Another meeting will be held some time in January and the club will probably be organized at that time.

Mr. Winchell takes exception to the picture of Jack Shepard, published in FOREST AND STREAM last week, saying it is a picture of his Victor made by Harper & Bros. from a photograph of Victor taken in 1890, and appeared in their journal Feb. 28, 1891. Jack Shepard is a brother to Victor, so it's all in the family. Still, we do not like to be imposed upon. The plate was given to us, marked Jack Shepard, by Mr. John H. Naylor, who had that dog in charge at Nashville. If this sort of thing continues, we shall have to call upon the A. K. C. to insist on photographs being registered and authentic "pedigrees" furnished.

We understand that Mr. George Raper will judge again at the coming dog show of the W. K. C. At the same time, when we asked Mr. Mortimer if this would be the case, two weeks since, he replied that the subject of judges had not yet been discussed, but that it would be considered on his return to New York from Nashville show.

In 1893, as in 1892, the FOREST AND STREAM'S Kennel columns will give the news, and all the news, promptly, intelligently and fairly. The paper every week will be one that a gentleman may put into his pocket to take home without a horrible apprehension that he may unwittingly have buttoned to his breast a nauseating, disgusting and sickening mess of personal rows and wrangles, such as make up the kennel departments of some papers. "There is a mud-slinging trust, but we are not in it."

We wish our friends of the kennel world on both sides of the Atlantic A Merry Christmas and Happy New Year.

### Death of Champion Cambrian Princess.

One of the most noted specimens of the mastiff that has ever been shown either in England or America died last Sunday week in the kennels of Mr. Sanborn, Rochester, N. H. Cambrian Princess was a few months over 10 years old. Her sire was champion Beau and dam Modesty. Cambrian Princess was considered by many mastiff men as almost perfection in form, and her numerous prizes, including the valuable challenge cups, attest to the truth of their opinion. As the dam of the well-known champion Minting, that was considered more than the peer of any mastiff of his day, her record as a brood bitch was assured, to say nothing of being the dam of many other winners. Cambrian Princess was imported about 1889, by Mr. E. H. Moore, who has brought over so many of the crack mastiffs of the day. At the disposal of Mr. Moore's mastiff kennel Princess passed into the hands of Mr. Sanborn. In her late appearances at shows she has not been seemingly in good health, in fact such a bitch should have been granted the rest she had so honorably earned. Mr. Sanborn has our sincere sympathy in his loss.

### Pacific Fox-Terrier Club.

Mr. J. B. Martin, the secretary, tells us that at a regular meeting of the Pacific Fox-Terrier Club, it was determined to offer cups to be competed for by the dogs owned by members only at the bench shows of the Southern California Kennel Club, at Los Angeles, April 19 to 23, 1893, and the Pacific Kennel Club, at San Francisco, May 3 to 6, 1893, as follows: Best fox-terrier in show, best fox-terrier dog in open class, second best fox-terrier dog in open class, best fox-terrier bitch in open class, second best fox-terrier bitch in open class, best fox-terrier dog puppy, second best fox-terrier dog puppy, best fox-terrier bitch puppy, second best fox-terrier bitch puppy, best fox-terrier puppy bred in California. Cups numbers 1, 2, 4, 6, 8 and 10 will have an engraving of a fox-terrier upon each. All cups will be suitably engraved with the name, owner and prize won.

Mrs. Smythe, the fair owner of the Swiss Mountains Kennels, seems determined to get to the front, and she will be considerably aided in her laudable ambition by her latest importation, the St. Bernard Eboracum. This young dog arrived safe and sound on the steamship Bovic, Monday night, and we had a look at him on board. He is a nicely made dog, excellent color and markings and particularly good in front: shows a good deal of quality, and when in good flesh and further developed will have to be reckoned with when the money prizes are given out. Speaking of reckon reminds us of the chief steward of the Bovic, who, in the kindness of his heart, took Eboracum into his private room the first night out, and the dog, impressed with the English idea that "there's nothing like leather," made a supper off the steward's Sunday "shoon." Mr. Chapman is keeping his weather eye open for the owner of the dog.

Some people have been remarking that St. Bernards were on the down line in popularity. This scarcely seems to be the case, new men are coming in all the time. Mr Schmidt, of New York, is fast getting together a good kennel. He already owns Roland, Jr., and Otos, first and second, Brooklyn, and has now bought the bitches Guess Noble and Lady Bountiful from Mr. W. C. Reick. Lady Bountiful is a much improved bitch since she arrived in Mr. Geo. Raper's care last February, and is a specimen of more than ordinary merit.

Many of the handlers and others who attended the New England field trials will be sorry to learn that "Mandie," who looked after their comfort so well, has since then got herself into trouble owing to a misconception of *meum* and *tuum* which led the old colored lady into a scrimmage with the mother of her former master's wife. Needless to say that "Mandie," physically, came out ahead, in spite of her rheumatics, though in the eye of the law she will probably play second fiddle.

The numerous exhibitors at the late Brooklyn show given by the National Greyhound Club will be sorry to hear that the club sustained considerable loss; the deficit, however, will be met by the guarantors. That the members of the bench show committee are game is evidenced by the remark of one of them to us last Tuesday: "We've lost this time, but we'll have another show next year, and a better one, too."

The City of the Straits Kennel Club has been incorporated with a capital of $2,000 in shares of $10 each. Geo. M. Hendrie, A. L. McGrae, A. T. Knowlson, G. D. Wellon, C. F. Backus, G. Nicolai, W. H. Muir, T. C. Oneliette and C. W. Wolfritz are the directors for the first year.

Mr. L. C. Whiton's greyhound champion Spinaway won first at the late Aberdare show under Mr. Astley.

The rumor that the bulldog His Lordship has been sold to

an American, or any one else, is emphatically denied by his owner in this week's *Stock-Keeper* (Eng.). This dog, it is further stated, will be matched against the young crack Dockleaf.

Dr. C. H. Littleton, of Philadelphia, Pa., has purchased of Mr. Chapman, owner of the Glenboig Kennels, the pointer dog Heather Bounce. This dog is by Sandford Bang out of Regent of Milton.

Mr. J. R. Oughton, of Toronto, Canada, has purchased from Mr. Chapman, Glenboig Kennels, Scotland, the Gordon setter Heather Lad, that, according to *Stock-Keeper*, won second in the late Edinburgh show.

Messrs. Smith & Baker evidently have something to take the place of their late Premier, as *British Fancier* speaks of a seven and a half months old dog pup, by Young Bute—Rustic Beauty, that is a wonder, and if lucky will be the coming dog. Plenty of room at the top.

Mr. Harry Twyford arrived safely on the steamship Mohawk. He now styles himself the "British Chicken," but is evidently moulting, or would have made himself apparent to his friends ere this.

A Philadelphia correspondent writes: "I had the pleasure to-day of seeing a brute of a man locked up in the station house, to remain until some friend pays his fine or to slumber there for twenty-four hours. A gentleman with an English setter was waiting at one of the railroad stations in this city this afternoon for a train for up the State, where he intended to have three or four days' sport. A tough with a half-breed bulldog in his arms made his appearance at the station. When he saw the setter lying quietly by his master's gun case the tough dropped the dog so as to create a fight, which the bulldog did without any ceremony. The bull was pulled off two or three times by his master, but let go only to renew the fight. The owner of the setter made quick time in getting his gun from its case, and had not the owner of the bull got his dog away I feel sure that death to the bull would have been the result. After the brute of a man had taken his dog away it was found that the setter had been badly bitten on the right foreleg. The owner of the setter followed the man with the bull, got an officer and had him taken to the station house. Had the owner of the setter had time to remain until evening to prefer charges it might have proven serious, but the tough was only locked up for disorderly conduct."

The sledge dogs, in Kamtschatka, are trained to their future service at a very early period. Soon after birth they are placed with their mother in a deep pit, so as to see neither man nor beast, and after having been weaned they are again condemned to a pit. After six months they are attached to a sledge with other old dogs and, being extremely shy, they run as fast as they can. On returning home they are again confined in their pit, where they remain until they are perfectly trained and able to perform a long journey. Then, but not before, they are allowed their summer liberty. This severe education completely sours their temper, and they constantly remain gloomy, shy, quarrelsome and suspicious.

A contemporary states that there are 2,859,235 dogs owned in France, of which 2,074,687 are classed as working dogs and 784,248 as dogs of high degree. The former pay a tax of 3 francs and the latter 10 francs. All shepherd and watch dogs are exempt from taxation, and we should imagine that the definition of a watch dog is often stretched to its fullest capacity.

Mr. Cecil Cox kindly sent us a marked catalogue of the Crystal Palace show, and as usual with Mr. Taunton's progressive management the publication is replete with good things. We notice in the bloodhound bitch class that Mr. Brough's Banner, that won first, is a daughter of Belhus and Rosemary, and bred in America by Mr. Winchell, who forwarded her afterwards to Mr. Brough. Mr. Taunton had on exhibition no less than six noted mastiffs, most of them challenge winners. The index to classes and prizes is an arrangement we would recommend to the attention of secretaries of our large shows.

Those people who wish to buy a dog for a Christmas present cannot do better than look through our kennel special columns this week. Among the new "ads" D. C. Luse offers greyhounds for sale; H. S. Peach, trained English setter; E. E. Calder, Gordon setter dog; M. & W., mastiff pups; Lock Box 380, St. Bernard dog; Henry N. Howell, well-trained English setter dog; C. W. Winship, choice pointer pups; Glendyne Kennels, Irish setter brood bitch; Handsome Brook Kennels, trained cocker spaniel; W. H. Pierce, trained young pointer of good lineage; J. R. Purcell, some well-trained pointers; J. L. Winchell, bloodhound litter and choice mastiff pups; Riverside Kennels want dogs to train. We also draw attention to Dr. Sherwood's notice.

We have received a very neat catalogue, extensively illustrated with half tones of their dogs, from the Findern Kennels, owned by A. C. Shallenberger, Alma, Neb. The kennel contains St. Bernards and English setters of the very best breeding.

In your issue of to-day I read an account of a dog who had swallowed a gold watch and who was killed for the purpose of recovering the timepiece. The owner of the dog was not only cruel, but also idiotic, for the dog, if allowed to live, would, undoubtedly, have been the most valuable watchdog in the United States. Though troubled with ticks, they would soon have disappeared.—*Correspondence New York Sun.*

## ANOTHER DISTEMPER CURE.

*Editor Forest and Stream:*

Any remedy for this disease would be hailed with joy, as Mr. Stone intimates in your last issue; but unfortunately many of the so-called remedies are about as bad as the disease, and the latest discovery does not prevent the serious effects, but rather clears the lungs and channels of offensive matter. Therefore any one who has made a careful study of the disease must agree that it can only be taken as an aid in certain stages.

In the FOREST AND STREAM soon after the Boston show of 1890 appeared a note from Mr. R. Moore regarding the benefit derived from the application of a remedy in use in many English foxhound kennels, and by the president of the English Kennel Club. Messrs. Smith Bros., of Deep River, Conn., gave their experience in a very severe case with the same remedy, when some learned doctors were talking of bench show distemper. Messrs. James Mortimer, George Thomas, Frank Dole and many others who have large numbers of dogs under their care have since used it successfully, and as I got the most satisfactory results with it in England, and have found it equally valuable in America, I would say that it is a prepartion brought to perfection through long years of application by some of the most experienced kennel men in England.

Its action is to drive out all offensive matter through the bowels, water and lungs, preventing any serious complication or the attacking of any particular organ.

I shall be glad to give any further information through your columns or direct.

EDWIN H. MORRIS.

HACKENSACK, N. J., Dec. 12.

## POINTS AND FLUSHES.

DEC. 12.—This evening I had the pleasure of a call from from Mr. Geo. T. Leach, proprietor of the Bellevue Hotel, at High Point. He had his book containing the accounts of the field trial week with him. He assured me that I had done him an injustice in "Points and Flushes" last week, and desired me in a friendly way to go over his book with him and examine the accounts of his guests who were present during the field trials. His book, so far as I saw the accounts, showed uniform charges of $2 per day and 50 cents extra for fires. Where there were two or more in one room, the books showed only one charge for the fire, and not one for each guest as was represented to me and as I stated last week.

Mr. Leach desired me further to say that the lunch sent with the party of four was not intended for them and was taken by accident. Instead a basket with lunch for four was left by an oversight in the hotel.

He says also that there were four waiters instead of three. Four waiters to wait on about thirty guests are not enough. There were three the first few days and four afterward.

Also that he was not in any way connected with the exorbitant charges exacted by outsiders, the charges for housing dogs not being anything he had any connection with. This is true, and it is also true that I did not state that he had any connection with it.

Mr. Leach at first seemed to think I had some personal motive in making the statements I did. Such is not the case. It was an impersonal statement of matters, as I had the best of reasons for believing the facts were interesting to sportsmen.

I still maintain that $2.50 per day or $17.50 per week, a week being charged for at day rates, is higher than the accommodations warranted.

To show that the rates are not uniform, as in fairness they should be, I subjoin three different bills:

*J. M. Avent, Esq.,*

*To Bellevue Hotel.*

| | | |
|---|---|---|
| Dec. 5. | To 13 days for self, from Nov. 19 to Dec. 1 at $2 | $26 00 |
| Dec. 3. | To 1 day at $2 | 2 00 |
| Dec. 5. | To 1½ days at $2 | 3 00 |
| | | 31 00 |

The first week Mr. Avent had a room-mate, the second week none. The above bill included fires, Mr. Avent assures me.

*Maj. J. M. Taylor,*

*To Bellevue Hotel.*

| | | |
|---|---|---|
| Dec. 1. | To 11½ days' board, including fires, at $3 | $34 50 |
| | Less 50 cents per day | 5 50 |
| | | 29 00 |

The fifty cents per day reduction represents an objection to paying such a rate.

My own bill was made out at the rate of $2.50 per day, including fires. Mr. H. B. Anderson informs me that Mr. Leach made him a rate of $1.50 per day.

Here are four different rates.

I do not desire to do Mr. Leach an injustice or an injury. If I have misstated anything pertaining to the matter, there are an ample number of sportsmen who were present who can correct me. If I am in error, my standard of what a guest should receive for $2 50 per day is broken.

I have been favored with an opportunity of seeing some of the illustrations of Dr. Perry's forthcoming work. They are most exquisitely perfect half-tones. I learn that the work will be profusely illustrated. All the portraits are from perfect photographs, therefore are truthful in every detail. Such extensive illustrations add to making a most valuable work, yet make a very expensive one to publish. I note, from some advance sheets, that its pages are written in "Ashmont's" clear, vigorous style, and he writes because he has matter worth writing. Everyone knows that what Ashmont does is done well, but I predict a surprise for dogmen, in the way of this new work far exceeding their anticipations.

LEXINGTON, N. C., Dec. 18.—The Washington City Kennel Club, Washington, D. C., at a meeting held last Thursday night, decided to hold a bench show in the middle of next March. The club contemplates securing an entirely new lot of judges.

Distemper is playing havoc with the field trial dogs in different parts of the country. Mr. W. T. Irwin, in charge of the Glenmore kennel of Irish setters, has been most unfortunate. The valuable imported bitch Elphin II. is dangerously sick. There is very little hope that she will survive. Seven of the puppies, he informs me, were sick, two of which died. Other kennels are affected. Last week I mentioned that the Glenmore Kennels would not start any puppies in the Derby on account of sickness. I was told so by Mr. Irwin, the manager of the kennels. Two are entered to start, therefore Mr. Irwin was mistaken in what he told me.

It has become a settled fact that netting and shooting birds have been practiced on the grounds of the Central Field Trial Club. Several nets are owned by residents near the grounds. One descendant of a race of colored kings admitted that he had been guilty of netting birds. When Mr. Tracy informed him that it was unlawful and punishable by law, he suddenly became violently law-abiding and incorruptible. I think the emotional wave of honesty which swept over him remained till the party got out of sight. The club contemplates making some additions to its grounds, thereby making them more convenient and valuable for field trial purposes. To this end more ground will be secured, and some at present leased will not be leased again. The club should insist on the owners protecting the leased ground from poachers. It probably will do so. It was a common sight to see a group of men, boys and dogs hunting on the club's grounds while the trials were in progress. Bird hunters shot birds within sight and hearing of the field trial party several times. They appeared to have very little fear of punishment and no perception at all of right or wrong. If the club required that a certain number of bevies be found on each farm, or that the owner of a farm would receive a certain sum additional to the rental for each bevy found, and so made it a part of the lease, it would make a great and beneficial change in the moral perception of the horny-handed son of toil, the honest farmer. As it is at present, the club pays its money with no guarantee of anything in return except a privilege to hunt for something on the farmers' lands, a something which they have permitted their friends to gather in before the club begins its work. The time has arrived when the wise rural gentleman in his hunt for the innocent city lamb should be impressed with the idea that the latter gentleman can appreciate square dealing.

It has recently afforded me pleasure to mention the progress made by the Central Field Trials Club in its rules, its management, its judging, etc., all of which are the effect of many causes—a practical knowledge of field trials and their requirements, and a skillful management and managers. As a matter of course, energy and earnestness are an essential supplement, and the club has both. In a conversation with a prominent officer of the club I learned of something which was both gratifying and surprising. I had the impression, without any very tangible reason, that Col. C. H. Odell, the secretary-treasurer, was something of an obstructionist in a way. Not that he was really opposed to progress, but that from an earnest belief that the old order of things was correct, there was no need of the new. I imagined that the improvements which have been made were something which he tolerated without really approving. I believe that there were several others who had similar views, otherwise I would not dwell upon the matter so elaborately. In any event, it all simply goes to show how easily one can be mistaken. The aforementioned officer of the club informed me that Col. Odell was in accord with every detail of progress, and that every improvement had received his earnest support and cordial indorsement. That also no man was readier and prompter to promote the welfare of the club in every respect than Col. Odell. Owing to a serious illness after the first trials of the club, Col. Odell has attended but one trial since, if my memory is correct in the matter. I feel truly sorry that I have done Col. Odell the injustice in thought of believing that by holding to the old order of things he was obstructing the new. I hope this brief mention will set the matter right and that the credit will be conceded to him in the dog world, to which as the organizer and promoter of such a grand body as the Central Field Trials Club he is entitled to.

The question of grounds is one which interests more than one great field trial club this year. The grounds of the Eastern Field Trials Club are unsuitable. That club has appointed a committee on grounds. The United States Field Trial Club has no grounds. In searching for available grounds, all clubs postpone the matter till too late a date. Action is taken in late spring or early summer. No man can tell much about grounds then. They may look all right. The vegetation of summer is deceptive. In the fall or winter, many undesirable features are apparent which can not be observed in summer. This is written to call to the attention of clubs that now is the time to investigate and secure grounds.

The conditions of weather now are the same, or nearly the same, as when the trials are run.

A club can learn now whether birds are plentiful or make certain grounds their habitat. This cannot be done in summer.

By securing grounds now, a club can arrange for protecting them and planting in the spring a food supply for the birds.

The Free For All Stake has been decided, and added to the fat purses of some of the handlers. It is necessary now to change the amount of the winnings of three handlers given in the list of last week. J. M. Avent, $1,275, C. Tucker, $3,150, and Capt. C. E. McMurdo, $700, are the winnings up to the present of these handlers.

Mr. John White informs me that the setter dog Count Gladstone has been purchased by Mr. F. R. Hitchcock, of New York. In the report of his work in the All-Age Setter Stake of the Central trials, I made a mistake. He made two points and no flush at the close of the heat. In copying my notes the mistake crept in.

It is rumored that Mr. J. M Tracy has been invited to judge at the Southern Field Trials in February next.

Mr. P. H. Bryson was present during the running of the Free For All Stake last week. Capt. Pat Henry saw the last part of the stake run. Both gentlemen are famous in the doggy world ever since the inception of field trials in this country, yet I believe that this is their first visit to the trials held in the East.

Mr. Chas. T. Thompson's Irish setter bitch Rockwood Hen (Tim—Estelle) died yesterday of pneumonia. Mr. Thompson intended to run her in both stakes of the Irish setter trials.

B. WATERS.

## FLAPS FROM THE BEAVER'S TAIL.

TORONTO, Can., Nov. 19.—The Ottawa bench show committee have protested against the decision of the executive of the C. K. C. in the "Troublesome" case, and will appeal to the club.

Mr. F. Hobart has sold the fawn and white greyhound dog Fullerton (Jolly Boy—Nell), vhc. last Toronto show, to a gentleman in Philadelphia, Pa.

Mr. J. M. Harris, Hamilton, has imported from England the white English terrier Turk. Dr. Bedell Benison was the vender.

TORONTO, Canada.—The business to come before the meeting of the executive committee of the C. K. C., Dec. 20, was as follows: To decide as to the legality of meeting held November 11, 1892; election of members; Troublesome, protest; Sir John, disqualification; Pious Pembroke, protest; champion Starlight, protest; conflict of show dates; express rates; incorporation; statements of Mr. Geo. Bell re-judging at Ottawa show; reception of reports and communications; reports of meetings of C. K. C.; correspondence by members of the executive in the press; World's Fair dog show; revision of the constitution; engrossing C. K. C. diplomas.

There is a possibility of a dog show being held in Ottawa in February next in connection with the show of the Eastern Ontario Poultry Association. If a suitable hall can be provided the show will be held and prizes awarded on the percentage plan.

A meeting of the Canadian Fox-Terrier Club was held recently. The names of nine gentlemen were put in nomination for election as club judges, and a vote by mail of the members will be then taken, six to be chosen. It is probable that the club will hold a specialty show in the spring under C. K. C. rules.

Mr. F. Maclean, of Hull, has joined the ranks of black and tan breeders and has made a start by purchasing a brace by Kaiser out of Desdemona from Mr. J. V. Campbell.

H. B. DONOVAN.

## THOSE RUSSIAN HOUNDS.

*Editor Forest and Stream:*

In looking over "The Dog and its Races in the Five Parts of the World," with 202 drawings, by "Busse," St. Petersburg, Russia, 1859, I find the following names applied by the author to the now called psovoy borzoy, copied *verbat. et lit.* The numbers refer to the illustrations:

"61-62. Русская борзая костлявая, C. grajus villiosus s. rossicus. Le Lévrier Russe. Der Zottige Russische Windhund. The Russian Greyhound."

The illustrations 61-62 show the dog in dispute and clearly shows that the Russians themselves called the dogs Russian greyhounds in English. This being true, would it not be better and less confusing to call them that than to use Russian names that are spelled differently by different persons and pronounced properly by (I almost said none) extremely few.

Z.

## SOUTHERN FIELD TRIAL ENTRIES.

*Editor Forest and Stream:*

I inclose list of the entries to All-Age Stake of the Southern Field Trial Club. They number 33—25 English setters, 5 pointers and 3 Irish setters. I also inclose list of Derby entries which paid second forfeit. They number 43—37 English setters, 5 pointers and 1 Irish setter.

T. M. BRUMBY, Sec.-Treas.

MARIETTA, Ga.

### All-Age Stake.

ENGLISH SETTERS.

BETTYE S.—Avent & Thayer's black, white and tan bitch (Roderigo—Bo Peep).

RUPERT—Avent & Thayer's black, white and tan dog (Roderigo—Bo Peep).

NOVELIST—Avent & Thayer's black, white and tan bitch (Roderigo—Bo Peep).

JEAN—H. M. Short's black, white and tan dog (Jean Val Jean—Miss Thompson).

TENNESSEE AXTELL—B. M. Stephenson's black, white and tan dog (Roderigo—Pet Gladstone).

TENNESSEE DICTATOR—B. M. Stephenson's black, white and tan dog (Roderigo—Pet Gladstone).

TENNESSEE ROD—B. M. Stephenson's black, white and tan dog (Roderigo—Pet Gladstone).

[In the original entry published Sept. 1 the entries of The Laggard and Babe Blue were not given.]

## IRISH SETTER CLUB'S FIELD TRIALS.

LEXINGTON, N. C., Dec. 17.—The Irish setter trials are now in order. The judges, Messrs. John Davidson and W. Tallman, are both here. The writer acts as referee. The secretary, Dr. G. G. Davis, is present, and as energetic in furthering the interests of the trials as close attention and industry can accomplish. There are also present Messrs. Charles T. Thompson and James B. Thompson, Philadelphia; Dr. William Jarvis, Claremont, N. H.; H. B. Anderson, Glen View, N. J.; Horace Smith, Monroe, N. C., and others. The Derby was drawn to-night and has eight starters, namely: Glenmore Ownie with Tillie Boru II., Sagas Tearaway, Rockwood Dandy, Hawkeye Queen, Romaine, Molleen, Glenmore Appie.

The All-Aged Stske has 20 starters, drawn as follows: Winnie II. with Lady Alice, Ranger with Elcho's Maid, Beau Brummel with Bedford, Coleraine with Hope Boru, Betsy Craft with Queen Vic, Finglas with Merlin, Harte's Bessie with Adonis, Ruby Glenmore with Romayne, Squaw with Henmore Shamrock, Currer Belle IV. with Estelle.

LEXINGTON, N. C., Dec. 19.—*Special to Forest and Stream.* The Irish Setter Derby was concluded to-day at 3:24 P. M. The work done was inferior in every respect. First, Sagas Tearaway; second, Tillie Boru; third divided between Molleen and Rockwood Dandy.

Three heats in the All-Age Stake were run off. The work done therein was quite good. Romayne was withdrawn and Maid of Borstal was enteredin the list of starters. She will run with Ruby Glenmore. The weather is unfavorable.

LEXINGTON, N. C., Dec. 20.—*Special to Forest and Stream:* The first series was concluded this afternoon. In the second are Lady Alice, Elcho's Maid, Bedford, Hope, Tillie Boru, Squaw, Estelle, Henmore Shamrock and Currer Belle. The grounds are soft and wet from the heavy rainfall of last night. Weather pleasant. Expect to finish tomorrow by noon.

B. WATERS.

## AMENITIES OF KENNEL JOURNALISM.

THE editor of a Manchester, Eng., dog paper and a writer for a New York horse paper have been saying sweet things of one another; and the only reason they do not fall into each other's arms is that the salt, salt sea lies between. Here are some of their loving words:

| *The New York man of the Manchester man.* | *The Manchester man of the New York man.* |
|---|---|
| The rottenest carcase in the English kennel world— | Pent up choler and petulance— |
| Uncouth editor— | Unscrupulous scurrility— |
| Stupendous and asinine blunders— | Literary scavenger— |
| Mean, sneakish and cowardly insinuations— | Lie in the throat— |
| A low fellow— | Obsequious hireling— |
| The rottenest plum— | Beautiful biped— |
| Cellar flap dancing marauder— | Literary leper— |
| Vile and filthy repute— | Rancorous rubbish— |
| Wicked and filthy sheet— | Poisoned parchment— |
| Natural liar and blackguard— | Coarsest of calumny— |
| Blackguard would harg himself— | Loathsome linguism— |
| He was lying— | Low penny showman— |
| That tough carcase— | Cellar flap dancing— |
| Prince of blackguards— | This cur, sunk to the lowest depths of mental depravity— |
| Slimy marauder— | This vitiated villain— |
| Dastardly coward— | Will have to undergo a long crystallistic or purgatorial process of purification— |
| Scoundrel— | Blasphemy— |

To speak after the manner of the rival cocoa manufacturers, the Manchester man's terms of endearment are "grateful and comforting," but the New York brand "goes farthest."

## NATIONAL BEAGLE CLUB MEETING.

*Editor Forest and Stream:*

An adjourned meeting of the Executive Committee of the National Beagle Club was held at Young's Hotel, Boston, Dec. 17. The meeting was called to order by the president at 8:15 P. M. F. W. Chapman, W. S. Clark, W. A. Power and Bradford S. Turpin were present, and, in the absence of H. V. Jamieson the latter was appointed secretary pro tem.

Voted: That the treasurer be directed to pay all prizes won at the field trials of 1892 at once.

Voted: That W. S. Clark and W. A. Power be appointed an auditing committee to examine the club accounts for 1892.

Voted: That the treasurer be directed to bring the books and accounts of the club to the next meeting of the executive committee. Adjourned at 8:30.

BRADFORD S. TURPIN, Sec. pro tem.

## TORONTO KENNEL CLUB.

*Editor Forest and Stream:*

I have been directed by the Toronto Kennel Club to convey to your company a sincere vote of thanks, passed at the last meeting of the club, for their kindness in contributing to the club's library the following works: "House and Pet Dogs," "Dog Training, Training vs. Breaking," "Training Shepherd Dogs."

H. P. THOMPSON, Hon. Sec'y.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.*

G. C. A., St. Paul, Minn.—Antonio by Roderigo out of Bo Peep —Gath's Mark by Gath out of Gun.

C. S.—Apply to the National Greyhound Club, secretary H. W. Huntington, 148 So. 8th St., Brooklyn, N. Y., for your special.

W. H. K., Oswego, N. Y.—1. No dew claws on English setters. 2. Of what breed are Countess Waldersee and Royal Duke? 3. We do not know the firm.

WYCKOFF, N. Y.—*Re* Irish setter bitch Nanon. Kindly send name and address and further particulars of what you wish to know; also mention the show held in 1891.

R. T. P., Framingham, Mass.—We know of none in your neighborhood. Write to Mr. G. Leibacher, High Ground Kennels, Grove and Myrtle avenues, Brooklyn, N. Y.

W. S. W., Fort Assiniboine, Mont.—Yes, as far as we know. The names given in the pedigree show good strains, and we think you can depend upon it, especially if from the Osceola Kennel.

S. R. C., Greenville, Pa.—Where is the black pointer owned that took first premium at the last Toronto (Can.) bench show? Ans. We do not remember a black pointer winning at the show you mention.

U. F.—Please give pedigree of St. Bernard Hilda II., and tell if she is of good ancestry? Ans. 1. Hilda II. (A.K.R., 5,467), by Folko out of Borrina, by Smith's Barry (E., 6,414), out of Silverbell. Folko II., by Rollo, out of Ouida. 2. Fairly.

N. A. B.—1. The English setter is much superior on the whole. Consult our special kennel advertisements. The best works on training and care of dogs are Waters' Modern Training, etc., price $2 00, and Hammond's Training vs. Breaking, price 50 cents. We can supply them.

S. S. Christiana, Pa.—Will you kindly inform me what to do with my eight months old setter dog. He has that nervous disease in his front legs called chorea, brought on, I think, by distemper. Has been suffering about a month, and getting worse. Ans. Give the following mixture:

| | |
|---|---|
| Syr. hypophosphitesco | ℥ iii. |
| Liq. arsenicalis | ♏ i. |
| Aq | ℥ vi. |

Mix. Give one tablespoonful twice a day.

## PUBLISHER'S DEPARMENT.

THE BEAUTIES OF NATURE, And the Wonders of the World We Live In. By the Right Hon. Sir John Lubbock, M.P., F.R.S. With numerous illustrations and full-page plates. Uniform with the new edition of "The Pleasures of Life." Macmillan & Co., New York. Price $1.50.

Sir John Lubbock's recent book is one that appeals strongly to a large class of FOREST AND STREAM readers. It is a delight to one already a lover of nature though its purpose is more to inspire such love in the careless and indifferent observer. The author of "The Beauties of Nature" clothes his scientific facts and speculations in such a simple and attractive garb as to impress the ordinary mind with the idea that they are not too great for it to approach and make acquaintance with, while to those who are better informed on such subjects as are treated of in this volume and can best understand and appreciate the difficulties overcome in thus presenting them, a renewed acquaintance with the beauties of nature is welcome.

The author makes his readers of whatever class feel with him "It is well to realize how much of this world is beautiful," "that mansion," as Seneca calls it, "That fears no fire or ruin, covered with a roof which glitters in one fashion by day and another by night," whose loveliness is too often overlooked because it is constantly before us. Interspersed throughout the book are apt and spirited quotations from various authors. Seneca, Humboldt, Jefferson, Emerson, Ruskin and Kingsley.

The author considers animal life and immortality, the formation of the land and plant life that clothes it, the humblest of these forming an inexhaustible study that he considers would well repay the study of a lifetime and passes from the thousand species of ants, "no two of which have the same habits, living in complete harmony in their separate communities," to the harmonious order and illimitable wonders of the starry heavens.

At the close, many readers will assent to the truth or be ready to learn it, expressed in the introduction; "Happy indeed is the naturalist; to him the seasons come round like old friends; to him the birds sing as he walks along, the flowers stretch out from the hedges, or look up from the ground, and as each year fades away he looks back on a fresh store of happy memories."

## ROD AND GUN AND CAMERA.

As a recognition of the important place of amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, the FOREST AND STREAM offers a series of prizes for meritorious work with the camera. The conditions under which these prizes will be given are in brief as here set forth:

There will be ten prizes, as follows: First $25. Second $20 Third $15. Fourth $10. Six of $5 each.

The competition will be open to amateurs only.

The subjects must relate to FOREST AND STREAM'S field—game and fish (alive or dead), shooting and fishing, the camp, campers and camp life, sportsman travel by land or water.

There is no restriction as to the time when the pictures may have been or may be made—whether in 1892 or in previous years.

Pictures will be received up to Dec. 31, of this year.

All work must be original; that is to say, it must not have been submitted in any other competition, nor have been published.

There are no restrictions as to make or style of camera, nor as to size of plate.

A competitor need not be a subscriber of FOREST AND STREAM

All photographs will be submitteed to a committee, shortly to be announced. In making their awards the judges will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities and other things being equal, the unique and difficult nature of the subject.

Photographs must be marked only with initials or a pseudonym for identification. With each photograph should be given name of sender, title of view, locality, date, and name of camera.

The photographs shall be the property of the FOREST AND STREAM. This applies only to the particular prints sent us.

From time to time we shall reproduce by the half-tone process samples of the work submitted, and should the interest in FOREST AND STREAM'S Amateur Photography Collection prove to be what is anticipated, we may ask for an expression of opinion by a vote of all our readers after the manner of the successful and famous "Camp-Fire Flickering Vote." Such popular vote will be quite distinct from the award by the committee.

### The Duluth and Superior Special.

IN full keeping with its well-known progressive policy the North-Western Line (Chicago & North-Western Railway) has recently inaugurated through train service between Chicago and the Lake Superior region. This new train is known as the "Duluth and Superior Special," and it leaves Chicago daily at 5:50 P. M., arriving at Superior at 8:20 A. M., and Duluth at 8:52 A. M. the next day, making the journey in the remarkably quick time of fifteen hours. The train is made up of baggage cars, standard day coaches and palace buffet sleeping cars of the most modern and approved design, and all classes of passengers are carried through without change of cars. Supper is served in dining car after departure from Chicago, and breakfast is served from a well stocked buffet before arrival at Duluth. To insure yourself a quick and comfortable journey be sure to ask for tickets via the North-Western Line. Any ticket agent can furnish full information regarding this railway, or it will be promptly furnished upon application to W. A. Thrall, General Passenger and Ticket Agent, Chicago.—*Adv.*

# Yachting.

IT now appears that for some reason, we suppose a good one, the report of the measurement committee of the Y. R. A. was not published with the evidence, to which it properly belongs, but was published separately, for the members of the Y. R. A. only. In this report the committee recommend the Seawanhaka formula as being easier on sail than the existing one, but to retain the same class limits and allowance tables the form is changed to read thus:

$$\left(\frac{L+\sqrt{S}}{2}\right)^2 \div 6000.$$

The effect of this change would be to place the same relative value on sail as in the Seawanhaka rule, at the same time retaining the unit of rating instead of sailing length. Of course the question of classification was not involved, no change in this matter being proposed. The recommendation of the committee was not accepted by the Council.

THE action of the Clyde yacht clubs in prohibiting fin-keels and centerboards in certain classes has brought out a number of hostile comments on this side; all of them, so far as we can see, being based on a misunderstanding of the actual conditions of the case. The two classes to which the limitations apply are old established ones, and are made up of a particular type of small keel cutters; not over fast, but so closely matched that they are raced together regularly and give good sport to all interested. The advent of one modern fin-keel or centerboard boat in either class would immediately wipe out all existing yachts, destroying the class and producing no other in its place. At the same time there are other classes on the Clyde, in which races are plenty, and good prizes are given, which are open to fin-keel and centerboard, without tax or restriction.

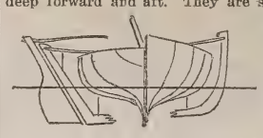
The result of unrestricted racing, even in small craft, is evident now on the St. Lawrence River, where the cost and labor of racing have increased very rapidly. The later boats with sail plans expanded to over 400 sq. ft., the hull being about 24ft. l.w.l. and 8ft. 9in. beam, require a crew of six men, and in order to win the owner must keep together a picked crew of skilled racing men. The expense and work involved in running a racing skiff have discouraged some of the keenest of the racing men, and for a time at least the racing has seen its best days.

### A Chat About Scotch Fishing Boats.

LAST summer I did not go abroad, or to the Norfolk Broads with my own canoe yawl as I've done for the last I don't know how many years for my holiday. I'd never been to Scotland, and from a distance had always looked upon it as a country that was overrun with tourists. However, when an opportunity arrived for seeing something of the west coast, without living in big hotels and making weary journeys in train or steamboat along with droves of tired and personally-conducted travelers, I was not sorry to embrace it. An invitation, most kind and urgent, was extended to me to join seven other good men and true, half of us being R. C. C. men, on the good ship Satellite, a cruising yawl of some seventy tons.

I don't intend to spin you a yarn about our cruise, although it was very enjoyable, nor shall I enlarge on the lovely scenery, with the ever changing play of light over brown hills and sunlit waters, for most of your readers know it all themselves, or if they don't, there are those with you who are far more apt than myself at painting it in words for them. I did essay, once or twice, to put it down in color, but my skill was altogether unequal to the task, and I threw it up in disgust, but remained full of wonder at the beauty or grandeur of the scene brought before us by the Great Artist.

Well, if the scenic effects were altogether beyond my powers there was another point worthy of note, in which, if a keen interest could assist, more success might be looked for. I mean the boats of the country. Every one who has seen the photos in the *Yachtsman*, etc., will be fairly familiar with the yachts. But it is quite possible that they may not be equally well acquainted with the fishing craft in common use here, and it is because I think that information about them may interest that I'm now writing.



Fishermen are much more conservative than yachtsmen and make changes in their craft only very slowly, for which reason doubtless the boats I saw and sketched will be almost exactly the same as have been in use for years, nay, perhaps I might say, generations. Of course the boats themselves on that rockbound coast will hardly be likely to have as long an average life as those in use where mud and sand are the prevailing elements, but, nevertheless, Sandy probably orders his new boat on somewhat the same lines as his father's, that is, if he's at all like John, in the southern portion of the island.

The first point noticed was that the Scotchman's boat, like himself, is almost invariably sharp at both ends. Next, that it is always rigged with a lugsail, either of the standing or dipping sort.

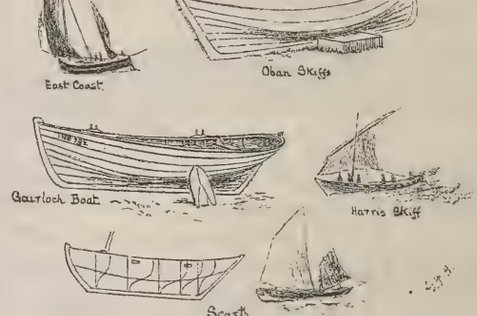
The Loch Fyne fishing boats, which I saw at Tarbert and Ardrishaig, are from 20 to 30ft. long and 7 to 10ft. beam, with a strong rake to sternpost and a draft of 2 to 3ft. aft. The waterlines forward are fairly straight, the midship section a little aft of center of length, and the extreme roundness of the gunwale line aft gives them quite a characteristic appearance and almost as much power as a square-stemed boat. At the same time the buttock lines aft are easy and give the water full leave to depart readily without having to crawl round sharp corners.

The mast, stepped well forward, rakes aft until its head is over the center of the boat. The sail is a standing lug sail (tack to mast), with only a short yard and no boom, and a jib is generally also carried. The forward position of the mast leaves all the center of the boat free for working the herring nets or for other fishing operations, while its rake aft is said to ease the boat in a seaway. They usually have a bit of deck forward, covering a small "cuddy," but the after portion of the boat is quite open. There is plenty of rock handy, and I expect (but am not sure) that that is what they are ballasted with. This rig and style of boat is found along the coast to considerably north of Oban. We left Isle Ornsay not long after one, and ran through a small fleet of them near Kyleakin, and in fierce mountain squalls they seemed good, able boats, and speedy, too.

When passing through Scarba Sound (further south) I noticed two or three little craft with the rig shown (see sketch) which, it will be seen, is almost identical with that of the fashionable 2½-rater. At Oban the dipping lugsail begins to show itself. Though mightily unhandy, it has the reputation of being a good "lifting" sail, and easy on the boat. The boats (skiffs) used at Oban and along the Sound of Mull are about 18 to 20ft. long, 6 or 7ft. beam and about 4ft. deep forward and aft. They are similar in general form to the Loch Fyne boats, and have a midship section somewhat like this: the garboard and sheet strake being nipped together before coming to a flaty floor, with considerable initial stability. By the way, I understand that, though clench build is cheaper in the smaller classes, in the 30ft boats it is considerably more expensive than carvel build, and as most of them are clench built, it is evident that the fishermen prefer the lapstreak built boats, even at more money.

In passing down the Sound of Mull we met some of the big East Coast herring boats. These are fine able craft about 40ft.×15ft.×8ft. depth of hold, with a large well which can be hatched over, converting them to practically fully decked boats. The foremast rakes aft and the mizzen mast forward, as in the Penzance luggers. They carry large crews, five or six men, I believe, so the unhandiness of the huge dipping fore lug is not so much felt.

The Fife boat is an East coaster, and the one I sketched, at Tobermory, was 19ft.×7ft. and fully 4ft. deep forward and aft; I saw a similar boat sailing under a dipping lug, the luff of which was kept flat by being propped out with a wooden "bowline."



Up at Loch Broom, our furthest north point, Gairloch (note the spelling) boats are used. They sail under a dipping lugsail, or are rowed with a pair of immensely long and cumbrous sweeps—of course by two men. They are fuller in the bows and approach more nearly to the regular Norway yawl, the influence of which is still more noticeable in the Lewis skiff. I saw one of these at Ullapool. She was about 19ft. keel, 30ft over all, 10ft. beam and entirely open, and had crossed the storm vexed waters of the Minch in order to fetch a cargo of mussels for bait. The six hardy Norsemen who formed her crew rigged up a tent with the oars and sail, and camped out on top of the molluscs with which their craft was loaded.

There (at Ullapool) I also saw an east coast "scarth," a boat which I thought looked "like going," but I couldn't get any definite information about the class.

Probably some of the Scots who are now "at home" in the States have imported with them their ideas, and it would be interesting to trace the influence of these craft on your local boats. Anyway, I had a good time up there, and felt that it was likely to interest your readers; FOREST AND STREAM, to which I've been indebted for so many hours of enjoyable reading, was entitled to have the benefit of it.

GEORGE F. HOLMES.

### The Registration of Yachts and Mercantile Flags.

A MOVEMENT has been on foot for some time among yachtsmen looking to the protection of individual rights in private flags, and as a result the following petition and accompanying bill have been prepared by Mr. Clarence L. Burger, of the Larchmont Y. C., and introduced by Congressman Coombs:

To the Senate and the House of Representatives of the United States of America in Congress assembled:

We, the undersigned, present herewith for your consideration a bill for the protection of the distinguishing flags and symbols used on commercial and pleasure vessels of the United States; and we respectfully represent that we are owners of certain flag symbols, which have long been displayed as distinguishing marks on a large number of vessels duly registered, enrolled or licensed under the law, and engaged in beneficent commerce or serving as useful examples to promote the science of naval construction; that these vessels comprise many important and illustrious specimens of the shipbuilders' art, and our flag symbols have, by reason of long continued association with such vessels, become of great value to us.

Many of our flag symbols have been copied and imitated without license by owners of greatly inferior vessels and displayed thereon with the intention and effect of deceiving the public as to their owner-ship and character, and there is no statute under which these infringers can be prosecuted for such infringment, or restrained therefrom.

Your petitioners, therefore, respectfully pray that the accompanying bill be enacted by Congress in order that relief may be had.

The New York Yacht Club, by Elbridge T. Gerry, Commodore; Eastern Yacht Club, by Malcomb Forbes, Commodore; Larchmont Yacht Club, by Caldwell H. Colt, Commodore; American Yacht Club, by Frank R. Lawrence, Commodore. Corinthian Yacht Club of Philadelphia, by Ogden D. Wilkinson, Commodore; Atlantic Yacht Club, Brooklyn, N. Y., by David Banks, Commodore; Vernon H. Brown & Co., New York; Snow & Burgess, New York; Boulton, Bliss & Dallett, managers Red "D" Line of steamers, New York; Paul F. Gerhard Company; agents the United States and Brazil Steamship Company, New York.

An act for the protection of distinguishing flags and symbols used on vessels of the United States.

Be it enacted by the Senate and the House of Representatives of the United States of America, in Congress assembled:

SEC. 1. That owners of distinguishing flags or symbols used on marine vessels plying between the United States and foreign ports or ports of different States, provided such owners shall be domiciled in the United States or located in any foreign country or countries which by treaty, convention or law afford similar privileges to the United States, may obtain registration of such distinguishing flags or symbols by complying with the following requirements:

First—By causing to be recorded in the Bureau of Navigation in the Department of the Treasury of the United States (1) a statement specifying the name, domicile and and citizenship of the party applying; (2) a description of the distinguishing flag or symbol itself, with a fac-simile thereof, and a statement of the length of time during which the flag or symbol has been used; (3) a written declaration, verified by the person or by a member of a firm, or by an officer of a corporation applying, to the effect that such party has used the flag or symbol on a vessel plying between the United States and foreign ports or ports of different States, and has at the time a right to such use, and no other person, firm or corporation has the right to such use, either in the identical form or in any such near resemblance thereto as might be calculated to deceive; and that the description and fac-simile presented for record truly represent the flag or symbol sought to be registered.

Second—By paying to a collector of customs for deposit in the Treasury of the United Strtes the sum of $2, and complying with such regulations as may be prescribed by the Commissioner of Navigation.

SEC. 2. That the time of the receipt of each such application shall be noted and recorded, and that a certificate of registry of the flag or symbol forming the subject of such application shall be issued in the name of the United States of America, under the seal of the Treasury Department, and shall be signed by the Commissioner of Navigation, and a record thereof shall be kept in books for that purpose. Copies of such flags or symbols, and of the statements and declarations filed therewith, and certificates of registry so signed and sealed, shall be evidence in any suit or action in which such flags or symbols shall be brought in controversy.

SEC. 3. That such certificate of registry shall remain in force for thirty years from its date. At any time during the six months prior to the expiration of the term of thirty years and of any renewal of such term such registration may be renewed on the same terms and for a like period.

SEC. 4. That the Commissioner of Navigation is authorized to make

rules and regulations and prescribe forms for the transfer of the right to use flags and symbols entitled to registry under this act, and of certificates of registry signed and sealed as above and for recording such transfers in the Bureau of Navigation.

SEC. 5. That any person who or member of a firm or officer of a corporation, which shall use or reproduce, counterfeit, copy or colorably imitate any flag or symbol entitled to registry under this act without license for the owner of such flag or symbol, shall be punishable by a fine of not more than $1,000 or imprisonment not more than twelve months.

## YACHT NEWS NOTES.

The strong English prejudice against centerboards was shown to be still alive at a recent meeting of representative Clyde yachtsmen, when a rule was passed barring out all plate, fin and bulb keels and centerboards from the 17 and 23ft. classes on the Clyde for the next five years. This action is undoubtedly the direct result of the tremendous beating administered to the Clyde cracks the past season by Mr. Allan's Herreshoff fin Wenonah. There seems to be a decided lack of fairness in this action and strong evidence of narrow mindedness. If the fins and centerboards are found to be too smart for the cutters, why shouldn't the cutters be classed by themselves? And if there is so great an antipathy felt by Scotch yachtsmen in general toward the American ideas as to preclude the possibility of a sufficient fleet of this class being owned on the Clyde, would it not be more generous to simply tax the Yankee craft than to force her into ordinary? The argument of a contemporary that this act is an ample defense in itself for the position so long held by the New York Y. C. on the America's Cup question seems decidedly weak, although in perfect consistency with the stand held by this paper throughout. All boats were eligible to contest for the Cup under the original deed of gift, and inasmuch as the Englishmen claim that to be the only legal document, they would not in all probability think of drafting any additional rules, should they ever win the trophy, to disqualify Yankee ideas. It is true that the Scotchmen stand directly in their own light by this action, and they attempt to undo all the progress of recent years and put a heavy tax on originality. It will work against them eventually. At this same meeting restrictions were placed on the sail area of the small classes so that a 23 footer will hereafter be taxed to an over all length of 30ft. and to a sail plan of 750ft. The 17ft. is restricted to 19ft. over all and to 470ft. of sail spread.—*Boston Transcript.*

Arenel, steam yacht, formerly Narod, is out at Poillon's for a radical re building and re-modelling. Although comparatively a new yacht, but little of the old hull will be used, beside the keel and interior joinerwork. Apart from the damage received in a collision last fall, the immediate cause of repairs, it has been necessary to re-timber and re plank the yacht, including new bow, stern and deck, and she will be greatly improved in appearance.

Titania, 70-footer, now being altered at Piepgrass's yard, will be re-christened Dagmar when she comes out as a schooner.

Mr. W. B. Waterhouse has been chosen to fill the vacancy caused by the death of Mr. Burgess on the consulting committee on yacht construction of the United States Standard Steamship Owners', Builders' and Underwriters' Association. The other members of the committee are A. Cary Smith and J. Beavor Webb.

Adrienne, schr., of the Southern Y. C., sailed last week from New Orleans on a cruise to Havana.

Evelyn, Theresa and Fra Diavolo, all large steam yachts well known in this vicinity, were fitted with Roter's boilers last season and their owners speak in the highest terms of the result.

The Cleveland Y. C. has finally secured from the city the lease of 400ft. of the Lake front and will build a fine club house.

The Hull Y. C. has taken the initiative in a movement to establish a cup, probably costing $500, for the 21ft. class, to be open to challenge and raced for yearly by one yacht for each of the clubs interested.

The nominations for officers, as posted at the house of the New York Y. C., is as follows: Com., Edwin D. Morgan; Vice Com., W. Butler Duncan, Jr.; Rear-Com., Ralph N. Ellis; Sec., J. V. S. Oddie; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch. Regatta Committee, S. Nicholson Kane, Chester Griswold and Irving Grinnell; Committee on Admissions, Edward M. Brown, Frank T. Robinson, James C. Bergen, Daniel T Worden and Robert Center; House Committee, E. A. Houghton, Frank M. Cronise, A. B. Jones and L. Vaughan Clark; Library Committee, J. M. Woodbury, M. D., William Gardner and Sanford B. Pomeroy. The election will take place at the annual meeting, Feb. 2.

A heavy gale on the Pacific Coast at the end of last month did serious damage to the shipping of San Francisco, the yachts and the houseboat fleet coming in for a share of the damage. The yachts Bell and Duke were totally wrecked.

On Dec. 17 there sailed from New York for Florida a new auxiliary of small size but most complete in all details. The Alma, designed and built by Chas. L. Seabury & Co., for Chas. J. Clarke, of Pittsburgh, Pa., is 56ft. over all, 45ft. l.w.l., 10ft. beam and 2ft. 6in. draft. She is rigged as a schooner, with a liberal sail plan, and in addition she has twin screws, driven by two Daimler motors, of 10 horse-power each; clean, compact and with no smokestack. They set low in a small compartment aft, and occupy little space; the estimated speed is 7 miles. The yacht has a trunk 22in. high above deck, large and roomy and well divided. Under the forward deck is a large naphtha tank, and next abaft is a chain locker and stores. The owner's saloon is 15ft. long, and fitted with wide comfortable seats each side, used for sleeping berths, with storage or clothes lockers underneath. This saloon is finished in cream and gold enamel and is beautifully upholstered in silks, damasks, etc. It has an extension table, book and chart rack, gun racks, china closet, etc. Aft on the port side is a toilet room and on the starboard side is a large galley. Aft of galley is motor. The cabins are lighted by electricity, and an electric windlass, the invention of Louis S. Clarke, a son of the owner, is used for hoisting the anchors. The yacht will go by canal to Philadelphia and thence by the inland passage to Florida, her final destination being Lake Worth. Capt. Thos. J. Miller is in command.

As the results of the trials made last summer, contracts have been given out for 75 electric launches for the World's Fair, the Detroit Boat Works building 50 and the Racine Hardware Mfg. Co. the remainder. The successful launch which will serve as a model, was the Electra, designed by Gardner & Mosher, and fitted with electric installation by the Electric Launch and Navigation Co., which designed and built the batteries and machinery. The yacht is 34ft. over all, 6ft. beam, and the battery includes 78 storage cells, each of 125 ampere hours capacity, the total energy being 2,250 Watt-hours. With a load of 25 people she made on her trial a continuous run of 10 miles, at times reaching a speed of 11 miles. The electric launch Corcyra, built for J. J. Astor, and fitted with the same power plant, is now out at Ayer's yard for alterations.

The annual meeting of the Rochester Y. C. was held on Dec. 5, the following officers being elected: Com., E. N. Walbridge; Vice-Com., A. T. Hazen; Fleet Captain, J. W. Robbins; Sec'y, Thomas B. Pritchard; Treas., W. H. Briggs; Meas., James Pillow; Fleet Surgeon, Dr. W. J. Herriman; Directors, R. K. Dryer, J. R. White, I. W. Butts, C. M. Everest; Delegates to the Lake Yacht Racing Association, Walbridge, Cartwright and Burroughs; Alternates, Dr. Saunders, T. B. Pritchard and C. S. Davis. The prizes for the year were distributed, the majority going to the Fife 25-footer Nox, built and sailed by her amateur owners. After the meeting a dinner was served, followed by speeches. At the close of the meeting a toast was drunk to the memory of the late Com. Newell.

The Pavonia Y. C., at its annual meeting on Dec. 13 elected the following officers: Com., Norman L. Rowe; Vice-Com., Frank M. Randall; Fleet Capt., George James; Financial Sec., William F. Tobin; Recording Sec., B. J. Soper; Treas., W. Chester; Fleet Surgeon, Dr. Van Mater; House Committee, A. B. Smith, John Leonard and James Costigan; Trustees, William Kent, M. Pritchard, Enoch Smith, D. W. Kohn and C. G. Mallet; Anchorage Committee, John Kreymeyer, Alexander Rose and Robert McFarland; Regatta Committee, Louis Mittlesdorf, O. W. Kohn and B. H. McClain; delegates to the New York Yacht Racing Association, Norman L. Rowe, F. M. Randall and A. B. Bennett.

Mr. Frank Cowper, an English yachtsman and follower of Mac Gregor and McMullen as a cruiser in small craft, is the author of a yachtman's coast pilot on a novel plan. The sailing directions are quite minute, but intended only for yachts of moderate size, and not for large vessels or coasters, and the most interesting portions of the coast, which are hardly mentioned in the large books, are fully described for the benefit of the single hander. This book is not only a pilot, but a guide book as well, describing all points of interest on shore. It is written in a pleasant chatty vein that makes it readable even by one who is not in special need of pilotage instructions. The present volume covers that portion of the Thames and East coast from Teddington to Aldborough, the author's intention being to continue the series in succeeding volumes to include the whole coast of Great Britain and Ireland. The title of the book is "Sailing Tours," and it is published by L. Upcott Gill, London.

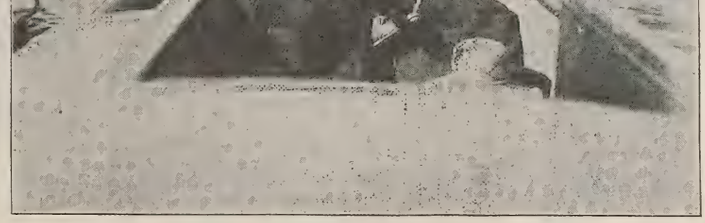
Triton, schooner, recently sold to Rufus King, is having a new stern put on at Solheim & Abramson's yard, South Brooklyn. The present stern was put on some three years since.

Miranda, schr., has been sold by Com. G. W. B. Hill to Mr. J. O. Coleman, of San Francisco, and will sail for that port early next spring.

Shamrock, schr., has been sold by J. Roger Maxwell to Willard P. Ward, of New York, owner of Minerva.

Nymph, the c. b. 40-footer, has been sold by F. W. Flint to W. H. Harris, of Yale College.

Drusilla, 35ft. fin-keel, has been sold by Vice-Com. Morgan to Rutherford Stuyvesant, and is now at Tebo's Docks.



R. D., the McIntyre 21-footer, has been sold to Fall River yachtsmen.

### Model Competition and Exhibition.

THE London Sailing Club has decided to repeat the model competition and exhibition inaugurated last year, the conditions of the '93 exhibition being as follows. The exhibition promises to be specially interesting to sailing men:

The large measure of success which attended the exhibition of models and designs of 1.0 raters, held last March, has induced this club to repeat the experiment and to announce another exhibition and competition to be held at their club house at Hammersmith for half models of boats of 1.0 rating, Y. R. A. measurement, and Mr. Dixon Kemp has kindly consented to act as judge and to award the prizes.

It is, however, felt that a boat which might show exceptional qualities on the smooth and shallow water of the upper reaches of the Thames would be entirely overcanvassed on more open waters, such as the Solent, and it has, therefore, been decided to divide the exhibition and competition into two classes.

"MAINSHEET!"

(A) Class for models of 1.0 raters suitable for sheltered waters, such as the upper reaches of the Thames.

(B) Class for models of 1.0 raters suitable for open waters, such as the Solent.

After carefully considering the suggestions which were made with reference to the former competition, the club regrets that want of space to exhibit the models prevents its making separate classes for professionals and amateurs; but in order to equalize the chances of amateur designers in competing with professionals, the finish of the model will not be calculated as an element of merit in awarding the prizes, and also for the protection of professionals, all models and designs entered for the exhibition will remain the property of the persons exhibiting them, and no one will be allowed under any circumstances to take any measurements except the judge for the purpose of judging. (A member of the committee of the club will be present throughout the time the exhibition is open to insure the strict observance of this restriction against taking measurements.)

Entry for the competition must be made by application in writing to the honorary secretary of the London Sailing Club, and on payment of an entrance fee of 5s. for each model proposed to be exhibited a card for each proposed exhibit will be furnished containing the exhibitor's name and address. No application for entry will be received after Feb. 4, 1893.

The model, packed in a box containing drawings and measurements, hereafter referred to, and also the entrance card inclosed in a sealed envelope, marked on the outside "Entrance Card," must be delivered at the club house, Hammersmith, on or before Friday, Feb. 17, 1893.

In order to avoid confusion it is requested that each box be marked "Class A" or "Class B" as the case may be.

No exhibitor will, under any circumstances whatever, be awarded a prize in respect of any models or drawings on which his name or identity, except in a sealed envelope, is in any way diclosed.

The secretary will, on receipt of the boxes containing the models, mark in the order in which they are received a number on each model drawing and sealed envelope, for the purpose of identification. The sealed envelopes will not be opened until after the prizes have been awarded.

Class A. Half model centerboard sailing boat 1.0 rating Y.R.A. scale 1in. = 1 foot.

Class B. Half model sailing boat (centerboard [optional) 1.0 rating Y.R.A., scale 1in = 1 foot.

In both classes there may be deposited with each model the following drawings:

(a) Sheer plan.
(b) Body plan.
(c) Half breadth plan and the following particulars:
  (a) Displacement.
  (b) Weight of proposed ballast inside and on keel.
  (c) For and aft position of center of buoyancy to be noted on sheer plan.

The drawings and particulars are required by the judge to enable him to form a correct estimate of the models. Supplying them is, however, optional on the part of the competitors, but they must understand that the merits of a design may fail to be observed if a model only is placed before the judge. A competitor may, however, inclose his drawings or particulars in a sealed envelope or wrapper, and mark same "for use of the judge only," in which event the drawing and particulars will be produced to the judge at the time of his making the award, and afterwards sealed and returned to the competitor.

For class A the club will give a first prize of seven guineas for the best boat according to the judge's award. A second prize of three guineas, and also certificates of merit.

Class B.—First prize, seven guineas; second prize, three guineas; also certificates of merit.

In both above classes third and further prizes will be given if in the judge's opinion the exhibits, owing to their number or other circumstances warrant recognition.

The committee of the club will take every possible care of the drawings and models of the exhibitors, but they undertake no legal liability whatever for any loss or damage.

The decision of the committee, except in the award of prizes, and all matters of dispute arising out of the competition and exhibition will be binding and final on all competitors.

The exhibition will be opened on Tuesday, Feb 21, 1893 and will remain open for a fortnight only, between the hours of 2 and 9:30 P. M. Admission free on production of visiting cards.

Any further information desired will be furnished on application to the honorary secretary. LONDON SAILING CLUB.

LOWER MALL, Hammersmith, S.W.

### New Yachts.

THE most important event of last week was the signing of a contract by Archibald Rogers on the one hand and the Herreshoff Manufacturing Co. on the other for the construction of an 85ft. cutter to meet the new Valkyrie. Mr. Rogers, who now owns Bedouin and Wasp, is the head of a syndicate of New York Y. C. members, the others being as yet unknown. The material for the new yacht will be ordered at once, and her keel will be laid as soon as the Carroll yacht is launched. The latter is about plated up, and will be ready for the launching about the end of January.

The Herreshoffs are putting the cabin joiner work in the 90ft. steamer, the 30 and 25-footer are about completed, and they have lately received orders for a catboat and jib and mainsail boat, each 20ft. long, for New York.

Saunders, at Bristol, is building a cutter for C. H. Merriam, of Providence, to be 33ft. 6in. over all, 29ft. 1in. l.w.l., and 9ft. draft, also one 23ft. l.w.l. for W. G. Lewis, of Brooklyn, and a centerboard 23ft. over all, 18ft. 6in. l.w.l. and 7ft. beam, for H. Perkins, of New York.

At Lawley's yard the White steamer, 95ft. l.w.l., is in frame, a 75ft. steamer is partly in frame, and a 70ft. steamer is completed, while the 55ft. Providence steamer is nearly completed. It is reported that the Lawleys have signed the contract for the Waterhouse 46ft. fin-keel for Mr. Foster, the yacht to be built of steel.

Stewart & Binney have designed a 21ft. knockabout boat, like the Jane and Nancy, for Com. J. J. Souther, Hull Y. C.

J. Borden, Jr., has designed a 21ft. centerboarder which the *Globe* describes as follows:

"The boat will be a centerboard of moderate beam and light draft, but with a heavily weighted board and a big sail plan. She will be 20ft. designed waterline, 32ft. over all, 9ft. beam and 16in. greatest draft. The long overhangs forward and aft are close to the water, and additional power when the boat is heeled is thereby hoped for. A gain will undoubtedly be made aft, for the body is carried well toward the stern and the quarters are low, but that a corresponding gain can be made forward is doubtful except occasionally in a seaway.

"The model of the boat shows a little keel below the sharply turned garboards, a long floor with quite a little dead rise, and an easy turn of the bilge into almost a straight side. The waterlines show no hollow forward, and the bow is not greatly different from the one which takes it name from its originators, the Herreshoffs.

"A peculiarly designed form of construction will give the boat great strength to resist twisting strains. The board will be of brass, hollow, and about an inch and a half in thickness. In the hollow of the board will be carried about 400lbs of shot, so arranged in pockets that when the board is up the shot will be distributed over its entire length of 9ft., while when it is down the shot will be found massed in its lower corner.

"For a rudder a flexible brass plate will be used. It will be fastened along the keel at its forward end, but will be free to play for about 4ft. of its length. To its outer end a curved tiller will be fastened which will come through a well in the counter and through an opening in the washboard to the cockpit. The tiller will be pivoted in the well, and the effort of moving it will be to bend instead of turn the rudder, as in ordinary usage.

"Mr. McIntyre claims ease of steering for this device, which could not be gained with the ordinary rudder.

"For a sail plan the boat will have a mast 27ft. above the deck and a bowsprit 10ft. outboard. The jib will be 20ft. on the foot with a pole. The mainboom will be 28ft. and the gaff 24. The gaff will peak upward very sharply, for the hoist of the mainsail is only 17ft. Mr. McIntyre's own preference in the class is for a fin-keel, and he may build a racer of that type later.

"Two models of racing 21-footers have been made, one by Stewart & Binney and the other by Smith, the City Point builder. Both models are likely to be built from, particularly if the $500 cup is offered.

"The Stewart & Binney model is that of a fin-keel of rather high power, though not such an extreme in that direction as the Freak. The model shows extremely clean and easy lines throughout, long overhangs and and all the latest ideas of speed.

"The Smith model is a centerboard of light displacement and moderate beam—about 8ft. 6in. The influence of the Alpha model is shown, and Mr. Smith frankly avows that his chief object is to beat the Herreshoff wonder at any cost. If the boat is given a wooden board she will carry some outside lead in the form of a fin. If a metal board is used the fin will be done away with. The model shows fine lines, considerable dead rise and a very easy bilge. A moderate sail plan would be given.

"The three boats just described are the only 21-footers in sight just now, but it is known that others are in the wind."

At Bay Ridge, Wintringham has three small yachts under way, all designed by Charles Olmstead, an amateur, of Brooklyn. The dimensions of one is over all 37ft., l.w.l. 23ft., beam 10ft., draft 4ft. 6in., keel 5,000lb lead. She will have a centerboard. The fore overhang is long and the bow quite full. Another is a centerboard 30-footer, and a third is a keel boat with the fashionable freak outline, like Wasp; to be 23ft. over all, 25ft. l.w.l., 11ft. beam and 6ft. 6in. in draft. Iroquois is wintering on the ways at the yard, and El Chico is safely housed in a close building.

Ayers has nearly finished the sloop and a handsome Spanish cedar dingy for Commodore Gerry. He has finished the hull of Scarecrow and laid the keel for a second boat of the same size and model for Mr. Burtis, of Brooklyn.

Wallin & Gorman are busy with a number of centerboard boats.

Solheim & Abramson, of South Brooklyn, have finished the stern on Eclipse, and are building a sloop for Major J. C. Mallory, Corps of Engineers, to be used about St. Augustine, Fla. She is 33ft. over all, 22ft. water line, 14ft. beam and 3ft draft. They also have in hand the schooner Triton for a new stern.

C. H. Bilyen will build a schooner for W. H. Putnam, of New York. She will be 76ft. over all, 58ft. l.w.l., 17ft. 6in. in beam, 4ft. 8in. in draft. The work will be done at the foot of Twenty-fifth street, South Brooklyn.

At Essex, Mass., Story is building a fishing schooner from designs by Thomas F. McManus, an amateur, the designer of the "Gloriana Fisherman" of last year. She will be 114ft. over all, 94ft. 6in. l.w.l., 24ft. 6in. beam, 10ft. hold and 12ft 3in. draft.

At City Island Piepgrass is busy with the alterations to Titania, and Wood & Son have a large force at work on the Mosher steamer, having greatly improved their shops and plant.

### Yachts at the World's Fair.

In view of the attendance of yachts at the World's Fair, the Yacht Club, recently organized in Chicago, has planned very extensive improvements to the lake front for the accommodation of a large fleet. In accordance with these plans, an ordinance was introduced before the Common Council on Dec. 8, providing for the construction of a naval academy and a yacht club house on East End Park. The preamble of the resolution recites that the lake commerce of the city should be promoted, and that knowledge, skill and experience in navigation and seamanship among the people of Chicago should be encouraged. The ordinance provides that the public ground lying between Fifty first and Fifty third streets and the lake shore, and the harbor in front thereof be devoted to a naval park and harbor for yachts and other vessels not engaged in commerce. Permission is given to the yacht club described as a voluntary association for the purpose of creating a naval academy to carry on in the park such naval academy.

This permission is made subject to the following conditions: That

the building so erected shall be the property of the city of Chicago, together with the land; that the Secretary of the Navy, Governor of the State, Mayor of the city and Collector of the Port shall be ex-officio members of the Board of Regents; that the building shall not exceed in ground dimensions 225×125ft. and shall cost at least $80,000.

The academy is required to be maintained without cost to the city, but control of the harbor and grounds is to be given to the city. The ordinance was sent to the World's Fair committee.

It is also proposed to construct a breakwater some 2,200ft. long, forming a large inner harbor, with a second breakwater outside. This will be at Morgan's pier; at 18th street a pier and landing will be erected, and on the North Side, between Ohio and Indiana streets, will be a very large boat house. At Chicago avenue another basin will be built, and at Evanston a club house and harbor. If these plans are carried out, there will be no lack of harbor and landing facilities for all yachts which may visit Chicago.

### International Racing.

Since the cable to Lord Dunraven announcing that the New York Yacht Club had accepted his challenge, there has been no communication between the two parties, the only important news being that relating to the new Rogers yacht. The final telegram from Lord Dunraven, which we quoted last week, was obviously incorrect, as it was impossible to make sense of it as read to the club and given out to the papers: "Have no authority from squadron relying on yours Nov. 22. Believing everything finally settled challenge forwarded terms. Your requested alteration impossible. I cannot further delay. Please cable definite acceptance or refusal." The *Times* alone, of all the papers, gave a reading which is other than sheer nonsense, and is probably correct: "Have no authority from squadron. Relying on yours of Nov. 22, believing everything finally settled, challenge forwarded, terms you requested. Alteration impossible. I cannot further delay. Please cable definite acceptance or refusal." In spite of its importance, but little weight was placed upon this cable at the meeting.

Thus far the Rogers boat is the only one to be positively depended on to defend the Cup, as Mr. Carroll is very desirous of going across and challenging for the Royal Victoria cup as well as the other trophies. It is probable that Vice-Com. Morgan may build a third boat, but nothing will be known until his return from Europe, probably next week. If he should do so she will also be a Herreshoff craft, and these three will be about all that the Bristol shops can turn out by July.

Thus far nothing definite has been heard from Boston, but either Gen. Paine or Mr. Henry Bryant is likely to build. The probabilities are that Boston will furnish one boat and New York two, besides the Carroll boat.

According to the *Field*, the design for the Prince of Wales's cutter has been ready for some time, the decision whether or no she should be built merely waiting for the final settlement of the measurement question. She and the new Valkyrie will probably be well under way in a very short time. Both will be of composite construction, the Rogers boat being of steel throughout. The story that at least four large cutters are to be built abroad, the other three accompanying Valkyrie to this country, is decidedly fishy.

### Florida Yachting.

Schooner yacht Whim, chartered for the winter by Mr Bradford McGregor, Larchmont Y. C., arrived in Key West last week after a long and stormy passage from New York. Mr McGregor, his mother and his friend, Mr. Lanman Robinson, who had reached Key West by steamer, joined the yacht there and proceeded in her to the Caloosahatchie River. They will spend the winter cruising, tarpon-fishing, etc., and expect to visit Biscayne Bay about regatta time.

At the time when most other yachting seasons are ending, that of the Biscayne Bay Y. C. is beginning. The club house went into commission for the season of '93 last week, and active preparations are being made all along the water front for the winter's sport.

Commodore Munroe has sold Micco to Mr. Arthur Merriam, of Manchester, Mass., and has built a 40-footer American yawl Wabun, in which he is now cruising down the coast. Mr. Jas. B. Hammond has a new Wintringham boat 50 feet over all, an American yawl, named Lounger, in which he is now on his way to this place. Mr. Albert Gallet has bought schooner the Markat, which makes the third of the Biscayne Bay fleet now making its way southward from New York.

Kirk Munroe's Allapatta and Walter Browne's Holgazana have each received entire new suits of sails, and have just gone into commission. Nicketti and Clapham yawl Roslyn are both on the ways being thoroughly overhauled. Atala, Gypsy, Presto and Egret are awaiting the arrival of Messrs. Bolt, Falls, Trowbridge and Nichols from New York. As Vice-Commodore Hine will not come south this winter, Nethla is for charter. The annual regatta of the Biscayne Y. C., open to all yachts of recognized clubs, will be held on February 22. Regatta open to all Biscayne Bay boats will be held under the club auspices later in the season. O. K. CHOBEE.

COCOANUT GROVE, Fla.

### A Good Word for the Fin-Keel.

The fin-keel craft have lately come in for some severe condemnation from yachtsmen and designers, but they have found one earnest advocate in Mr. Henry Allen, owner of Wenonah, who writes to the *Field* as follows: In the opinions expressed as to the type of boat produced under the Y.R.A. rule, I notice that there is a very general condemnation of the 2½ rater Wenonah and similar "bulb-keel" designs. My experience of Wenonah is briefly as follows: 1. In a heavy sea she behaves splendidly, and it was always in the hardest gales last season that she appeared to the best advantage as compared with other boats in her class. She is so buoyant that nothing but spray comes on deck. 2. She is very handy, and answers her helm very quickly and easily on all points and in all weathers, except when reaching with a strong breeze on the quarter. Then she is hard on her weather helm, but not much worse than most other 2½-raters. 3. Though severely tried last season, she has never leaked a drop nor shown the least sign of straining in any part. 4. She is as comfortable and has practically as much accommodation as any other racing 2½-rater. 5. It is perfectly easy to beach her. No one who has sailed in Wenonah has had a word to say against her. Some think her ugly, but she was never intended for an ornament. What better type of boat could one wish for?

### Lake Y. R. A.

ANNUAL MEETING, ROCHESTER, DEC. 17.

The annual meeting of the Lake Yacht Racing Association was held yesterday afternoon in the rooms of the Rochester Y. C. Ellwanger and Barry building. The following delegates were present: Commodore A. R Boswell, Norman B. Dick, and George E. Evans, of the Royal Canadian Y. C., Toronto; J. F. Monck, and Messrs. Ambrose and Grant, of the Royal Hamilton Club, Hamilton; John T. Mott, W. B. Phelps, and Allan Ames, of the Oswego Y. C.; Charles S. Davis, Edward Walbridge, and John J. Leary of Rochester. Matt Cartwright, president of the Association, presided.

The report of Hon. Sec. Geo. E. Evans was read by that gentleman and proved very satisfactory. Following this there was a discussion which lasted several hours over amendments to the constitution and the sailing regulations proposed by the Hamilton and Toronto clubs. The sailing regulations at present provide that any dispute or protest which may arise among yachts taking part in a race shall be decided by the Sailing Committee of the club holding the race, whose decision shall be final unless it is thought proper to refer the dispute to the Executive Committee of the Association. An amendment was offered to admit of an appeal from the decision of the Sailing Committee to the Executive Committee of the Association. The amendment was rejected by a large majority

Several amendments in regard to measurements were withdrawn, and a committee was appointed to consider the measuring rules and report at the next meeting.

An amendment offered by the Royal Canadian Club to the effect that the secretary-treasurer have voice but no vote in the proceedings of the annual meeting and other meetings of the Association, and that his expenses be paid by the Association, was adopted unanimously.

That part of Rule 4 which required a yacht's owner entering a race to provide a scrutinizer, be stricken out.

Rule 15 was amended by adding this paragraph: "Finishing—A yacht shall be considered to have finished the race when on completing the course any part of hull or spars shall be on or across the line."

The following were added to the sailing rules:

"Ballast—All ballast shall be properly under the platform or in lockers and shall not be shifted or trimmed in any way whatever; and no ballast shall be taken out or put in within 24 hours before a race." "None but the usual chains or anchors shall be carried during the race, and they must not be used as a shifting ballast or shifted to alter the trim of the yacht after she has started in the race."

It was decided to hold the first regatta at Charlotte, on July 4; Hamilton, July 8, and Toronto, July 11. There will be no regatta at Oswego, as the racing men of that city will be away most of the summer. Belleville was not represented at the meeting yesterday, and there will be no regatta from that place.

The following officers were elected: Pres., D. S. Mallock, Royal Hamilton Club; Vice-Pres., A. R Boswell, Royal Canadian Club; Sec.-Treas., Geo. E. Evans. Mr. Evans was elected for the tenth time. The next meeting will be held in Hamilton.

The delegates were tendered a theatre party at the Lyceum last evening, and supper at the Genesee Valley Club after the performance.—*Toronto Mail.*

## Canoeing.

### Do You Sail a Canoe?

THERE is one cardinal principle that governs my entire life (and sometimes gets me into trouble), and that principle is never to admit that there is anything in the world I cannot do. My associate in business has lately become afflicted with canoe fever, hence it came to pass that he asked me in an innocent kind of a way if I "knew how to sail a canoe?" Alas, my evil genius, "the principle," prompted me to assure my comrade, Joe, that if there was one thing more than another that I was posted upon it was canoe sailing. I even became so reckless that I darkly hinted that Gen. Oliver, Paul Butler and R. W. Gibson, together with many other canoe sailors, were constantly beseeching me to give them points on the science of sailing a canoe.

To say that Joe was delighted to find in me such an authority mildly expresses it, "for," as he said, confidentially, "I know almost nothing about it, and I am delighted to find that you do."

Fatal vanity, fatal principle. Headlong I rushed to my destruction, never seeing the pit that was yawning to swallow me up.

So when he reverentially asked me my opinion of "rigs," "dandies," "reefing gear" and a lot of other technical bother, I managed to keep head above water and increase his respect for my knowledge by bestowing knowing winks and "ahs" and "ums." I was feeling very puffy and important when the trap fell, the explosion came and the collapse followed.

The cause for the collapse will not sound very terrible, and was brought about by the very harmless request on the part of Joe that we take half a day off, go over to South Boston, where I should give him points practically as to how to sail a canoe.

Never in my life did my natural assurance come so near deserting me; but with all the power at my command, I summoned a smile, sickly though it was, and assured him (although my heart was in my boots) "that nothing would delight, charm, or give me more unqualified and unadulterated pleasure than to initiate him into the mysteries of how to sail a canoe." Full of glee and satisfaction Joe bade us adieu, and told me to be promptly on hand the following day and he would have the boat at the Puritan C. C. all ready for me to rig and sail.

No sooner had he disappeared than I frantically grabbed my hat, put on my coat and sought the exhilarating strength to be found in a large glass of soda lemonade with a straw in it. Then went up to my room, locked the door, got on to the bed and went over the motions of the frog, as taught by my preceptor in swimming lessons as being the proper caper for those who would retain bouyancy in water. I even went so far as to fill the wash bowl with water, put my face in it and see how long I could stay under without choking to death. I then sat down at the desk, took a sheet of paper, made a few notes as to how I wished my personal property disposed of. On another sheet I bade farewell to all my friends, assuring them that I was tired of life and that I was anxious to go to a haven (via water) where there would be no constant striving for a living.

I won't linger on the agony of mind which I feebly disguised to my intimate friends by an unusual and unnatural obstreperousness of spirits the following 24 hours. Everything I looked at I felt to be gazing upon for the last time, and every one spoken to I felt should never be seen again. How I got to South Boston will never be told. I have a faint recollection of having a row with the conductor as to whether I paid my fare or not, but at last I found myself at the gate of the Puritan Canoe Club; then I found myself inside the gate, and at last face to face with the smiling Joe, and in the presence of the canoe, which I looked upon as a coffin.

"What's the matter with you, old man?" said Joe, "you look pale." In response I summoned up a mechanical smile, and murmured something about lobster salad, ice cream, and then courage failed me. Life seemed so sweet, the sun never seemed to shine brighter. I could not bear the thought of leaving this warm (90 degrees in the shade), kind world, so down on my knees I went and owned up to Joe that I was a humbug of the worst type, that I did not know which side of the canoe was to sail uppermost, that I could not tell a lateen sail from the folding center board, that I was a poor, miserable creature, and all I asked was to be let off.

A look of scorn and contempt took the place of that of pleasure on Poe's face, and thus he spoke: "I do not propose to risk my life with you, but this I insist on, that you take that canoe, after I have set the sail, that you get into it and that you sail away, and may Heaven have mercy on your soul."

There was no alternative. We rigged the canoe as best we knew how. I entered it, sheeted home the sail and glided away. I've been gliding ever since, and have the plans in hand for my fifth canoe.

ILEX.

### Some Notes From "Tarpon."

TARPON SPRINGS, Fla., Dec. 11.—*Editor Forest and Stream:*—It is a long time since you have heard from me. So long that I would make an apology if I knew how. I have been very busy. We have had a long, dull summer, and one had to be busy in order to be level-headed. But the summer is over at last, the cool nights have come, the winter tourists are coming, and the quail, the turkey and the fish are here.

Everybody is hard at work loading cartridges, overhauling fishing tackle or painting boats.

Speaking of boats reminds me that we have another flyer, something on the model of the "Cape Cat." We have two of that class here now; both fast. Then there are several "Mosquito" boats from Atlantic City builders that are on hand when it comes to getting there. Cruising boats, good, bad and indifferent, are numerous. There is one cruising cat built by Rushton that has lots of go, but her owner will not race her.

Canoes are represented by several from crack builders of various parts of the country, and the amateur built canvas canoes are legion. So you see we're fixed for water travel.

I must compliment you on the fine appearance of the FOREST AND STREAM, it is improving all the time, and I used to think a long time ago that it was as good as it could be.

I am glad to see there is a prospect of another international race; I'll risk my shekels on the Englishman, not because I believe in English boats, for I don't, but because it's about time for the tide to turn.

By the way, we don't hear anything from Mr. Clapham lately, what's the matter, has he quit the business, or is he designing another type. And "Podgers," haven't heard from him since he told us about that cutter in California. He ought to be ashamed of himself anyway, its bad enough for a man to own an English cutter, without being twitted about it.

Yes! the panther screams, but you can't make me believe that rattlesnakes spit. But I have spun out this yarn so long, that I've forgot what I wanted to say, and I think it is time to reel up and go home. S. D. KENDALL.

### The New York C. C.

THE New York C. C. held its twenty-second annual meeting on Dec. 19, one of the most important meetings in the history of the club. The purser's report showed the experiment of the removal to Bensonhurst, which was regarded as doubtful by some members last year, to be a financial success, the increased income offsetting any extra expenses involved by the removal, and giving promise of a larger annual income in the future. Beside a reduction of the club debt from its income, the club has lately received from Messrs. W. W. Durant and G. H. Daly a donation of bonds to the amount of $500 each, with smaller donations from Capt. Whitlock and Purser Stevens, materially reducing the bonded debt. The report of the mate, J. R. Lake, was a very interesting and instructive document, while Mr. Vaux, in behalf of the regatta committee, made a full report of the year's work, giving full credit to the FOREST AND STREAM for much valuable advice, which has enabled the club to raise the standard of its regattas. A committee was appointed to draw up resolutions of regret over the death of Capt. John McGregor, an honorary member of the club.

The following officers were elected: Capt., J. R. Lake; Mate, Schuyler Schieffelin; Purser, C. J. Stevens; Ex. Com., Mr. Marbury. Mr. W. W. Durant was unanimously elected an honorary member.

In pursuance of the steps recently taken to incorporate the club, the articles of incorporation were signed by those present.

The questions of enlarging the house by the additon of a second story, of reducing the dues of active members, and of affording special facilities to the owners of canoe yawls, were favorably considered and referred to the trustees for further action.

### Psyche.

THE familiar red, white and red of the New York C. C. is now seen almost daily on Biscayne Bay flying from the masthead of Kirk Munroe's famous canoe Psyche, which after a thorough overhauling looks as fresh and dainty as though just from the builder's shop. She was built for exhibition at the Philadelphia Centennial Exposition of 1876, and is thus the oldest canoe now in active service in the country, or at least in the A. C. A. She has cruised in every navigable waterway of Florida, including those of both coasts; has thoroughly explored the Adirondacks, a score of Canadian and Maine rivers, is well known in all waters about New York. She explored the everglades and Lake Okeechobee as long ago as 1881, and was the first white man's sailing craft to find a way into these wilds. As her owner now makes his permanent home on the shore of Biscayne Bay, where he is collecting quite a fleet of small boats, it is not probable that Psyche will ever again be seen in New York waters. At present her great spread of sail and sliding seat are exciting the amazement and admiration of the bay boatmen, to whom she is a most interesting novelty. O. K. CHOBEE.

COCOANUT GROVE, Fla.

### A. C. A. Membership.

THE following gentleman, residing in the Eastern Division, has applied for membership: Stephen C. Powell, M.D., Newport, R. I.

## Rifle Range and Gallery.

### A Revolver Expert.

GEORGE E. JANTZER, whose face appears herewith, is one of the leading members of the Pistol Club. In the opening competition for the Winans trophy Mr. Jantzer was very near the top, and took one of the FOREST AND STREAM prizes supplementary to the main trophy. He then took the trophy by challenge shoot from

GEO. E. JANTZER.

Dr. Louis Bell, successfully defended it against Mr. Henry Oehl, and early in the present month met defeat from the steady hand and brilliant record of William E. Petty, the present holder of the trophy. Mr. Jantzer finds in revolver shooting a change and relief from business matters, and is very enthusiastic in the sport and earnest in his advocacy of it to friends as a gentlemanly means of relaxation.

### Chicago Sharpshooters.

CHICAGO, Ill.—The following scores were made by the Chicago Sharpshooters in their weekly prize shoots for the year 1892. All shooting is at 200yds., off-hand, on ¾-inch German ring target, one entry each week.

Ring target, best average:

| | | | |
|---|---|---|---|
| 1. A McBean | 20⅚ | 5. Mart Grau | 18⁴¹⁄₄₅ |
| 2. Dr Merkle | 19¹⁹⁄₂₁ | 6. H Thorwart | 18⅔ |
| 3. G F Schmidt | 19⅙ | 7. C Schotte | 18⁵⁄₁₈ |
| 4. F Loggenburger | 19⅛ | | |

Best single scores on ring target for gold medals:

| | | | |
|---|---|---|---|
| 1. H Thorwart | 220 | 2. A McBean | 220 |

Union target, best average of 3 shots, possible 75 rings:

| | | | |
|---|---|---|---|
| 1. A McBean | 60¾ | 5. F Loggenburger | 55 |
| 2. G F Schmidt | 56⅔ | 6. Dr Merkle | 54½ |
| 3. H Thorwart | 56⅙ | 7. C Schotte | 54 |
| 4. Mart Grau | 56 | | |

Best single scores on Union target for gold medals:

| | | | |
|---|---|---|---|
| 1. F Loggenburger | 70 | 2. Dr Merkle | 69 |

Stich target, best average of 3 shots, possible 39 rings:

| | | | |
|---|---|---|---|
| 1. G F Schmidt | 21 | 5. F Loggenburger | 15⅔ |
| 2. A McBean | 19⅔ | 6. Dr Merkle | 15⅓ |
| 3. H Thorwart | 16⅔ | 7. Mart Grau | 14⅔ |
| 4. C Schotte | 16 | | |

Best single scores on Stich target for gold medals:

| | | | |
|---|---|---|---|
| 1. E Thielepape | 32 | 2. G F Schmidt | 31 |

Most flags or 3-inch bullseyes:

| | | | |
|---|---|---|---|
| 1. H Thorwart | 564 | 7. Mart Grau | 208 |
| 2. F Loggenburger | 491 | 8. J Helmold | 164 |
| 3. G F Schmidt | 472 | 9. R Helmold | 140 |
| 4. C Schotte | 311 | 10. H Miller | 102 |
| 5. A McBean | 241 | 11. H Borsch | 98 |
| 6. Dr Merkle | 237 | | B. |

### Military Rifle Shoot in Newark.

AN open to all practice shoot will be held by the First Brigade (N. G. N. J.) Rifle Association on the 200yds. ranges at the Newark Shooting Park on Jan. 2, beginning at 11 A. M. The shooting will be open to all New Jersey guardsmen, using Springfield rifles. No ammunition heavier than the .55-405 carbine will be allowed and this will be sold on the ground. A feature of the day will be an open sweepstake of 50 shots per man, $5 entry, one-half the contestants being winners and one-half losers. This will be started about 1 o'clock P. M. It is hoped that shooters from every command in the First Brigade will be present. Y'RATHLIM.

### Miller Prize Shoot.

THE sixth annual prize shoot of the Miller Rifle Club of Hoboken, N. J (Captain R. W. Dewey) will be held at headquarters, new No. 428 Washington street, Sunday and Monday, Dec. 25 and 26. The programme calls for fifteen prizes from $30 to $1. Open to all comers. Any .22cal. rifle. Tickets of five shots 50 cents, two best tickets to count. Re-entries unlimited. First day shooting commences at 10 A. M. and closes at 11 P. M. Second day shooting commences at 10 A. M. and closes at $10 P. M. Well-known shooting rules to govern. Shooting committee, David Miller, chairman, J. H. Kruse, E. Fischer, John Meyer, J. Carragher, Aug. Meyne.

### Major Ties the Record.

AT the weekly shoot of the First Brigade (N.G., N.J.) Rifle Association at the Newark Shooting Park, on Dec. 17, Major D. L. Wallace, surgeon of the First Regiment, put on an extra spurt and made 45 out of a possible 50 at 200yds., tying the club record, previously held by C. H. Townsend. The day was a fairly good one for the season, the light being clear and there being no troublesome wind. All the shooting was done with Springfield rifles and Government carbine ammunition, with 55grs. of powder and 405grs. of lead. The attendance was light owing to the rush of the holiday trade. After New Years a better turnout is looked for. The scores follow, the usual 50-shot match being shot between Major Wallace and Private Townsend:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Major Wallace | 5 | 5 | 4 | 4 | 5 | 4 | 4 | 4 | 4 | 4—43 |
| | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | 3—39 |
| | 5 | 4 | 4 | 5 | 4 | 4 | 4 | 4 | 4 | 4—42 |
| | 5 | 5 | 5 | 4 | 5 | 4 | 4 | 5 | 4 | 4—45 |
| | 5 | 5 | 4 | 4 | 5 | 4 | 4 | 0 | 5 | 4—39—208 |
| Sergt Wilhelm | 4 | 5 | 4 | 4 | 5 | 4 | 4 | 4 | 4 | 5—43 |
| Private Townsend | 4 | 4 | 4 | 5 | 4 | 4 | 4 | 5 | 5 | 4—43 |

Y'RATILIM.

### Cincinnati Rifle Association.

CINCINNATI, O., Dec. 18.—This club has adopted fitting resolutions emoodying the regret of members at the lamented death of their friend and shooting companion Hyram H. Nieman; and a copy of the resolutions was sent to the bereaved family.

The association held its regular practice shoot at its range today and made the scores as appended below. Conditions: 200yds., off-hand, at the standard target. The captain again distinguished hiruself with a full score of bullseyes. Schuster used a sporting rifle:

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Gindele | 86 | 84 | 85 | Simon | 77 | 77 | 76 | Schuster | 53 | 51 | 46 |
| Louis | 76 | 70 | 67 | Stegner | 69 | 68 | 70 | Beinert | 50 | 52 | .. |
| Payne | 84 | 82 | 77 | Drube | 78 | 71 | 69 | Putthof | 44 | 59 | .. |

### Prize Rifle Shooting in Brooklyn.

THE two days' prize shoot on Jos. Link's new galleries, 800 Broadway, Brooklyn, closed on Saturday night. The shooting was done with .22 al. rifles, the best single ticket to count. There were ten cash prizes and one gold medal. Three men tied on full scores, and on the shoot off for the medal Jos. Lutz won. The cash winners and their scores were in order as follows: Philip Neuth 75, G. Noon 75, J. Lutz 75, Chas. Rein 74, J. Guenther 74, C. Richter 74, W. Rosenbaum 74, R. Wirth 74, J. Bermel 74, S. Appell 14.

### New York Revolver and Pistol Club.

NEW YORK, Dec. 19.—The following record scores were made by the members of the New York Revolver and Pistol Club, at their last regular weekly practice shoot, held on the 17th inst., at their gallery, No. 12 St. Marks Place. Ten shots on standard American target, distance 20 ds., 44cal. S. & W. revolver: G. E. Jantzer 85, B. Walther 84, H. O'Neil 80, F. G. Allen 70, F. Hecking 68, E. Walz (22cal. Stevens pistol) 88.

F. HECKING, Secy.

### Port Chester Rifle Club.

PORT CHESTER, Dec. 17.—Two hundred yards, offhand, standard American target:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| J Smith | 4 | 10 | 6 | 10 | 6 | 4 | 9 | 10 | 7 | 5—71 |
| R Rudd | 5 | 6 | 6 | 4 | 9 | 10 | 3 | 6 | 7 | 7—64 |
| F A Buchman | 9 | 6 | 5 | 3 | 5 | 7 | 4 | 7 | 7 | 8—61 |
| R McNeil, Jr | 8 | 5 | 3 | 4 | 6 | 2 | 7 | 3 | 9 | 5—52 |
| H Bleger | 4 | 3 | 2 | 4 | 9 | 6 | 6 | 7 | 4 | 4—50 |
| McQuilken | 4 | 3 | 7 | 3 | 6 | 3 | 3 | 7 | 1 | 3—43 |

R. MCNEIL, JR., Sec.

### An Ideal Winter Resort.

THE Oglethorpe of Brunswick, Ga., under the management of Mr. Warren Leland, Jr., is a splendid hotel in every respect. It is delightfully situated by the sounding sea and among pine forests, and famous for its charming walks and drives. Abundant opportunity is afforded for yachting and fishing, and excellent shooting is to be had over neighboring preserves, of which Jekyl Island is the best known. The climate is mild and dry, and it is altogether an ideal winter resort.—*Adv.*

## Trap Shooting.

All ties divided unless otherwise reported

### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 22-24.—Kansas City (Mo.) tournament, live birds and targets.
Dec. 24.—Elliott vs. Fulford, at Williamsport, Pa.; 26, at Harrisburg, Pa.
Dec. 24.—Williamsport (Pa.) Rifle and Gun Club, all day tournament at live birds.
Dec. 26.—Hartner's all-day target tournament, Orangeville, Baltimore county, Md.
Dec. 27-30.—Watson's live bird target tournament, Watson's Park, Burnside, Ill.
Dec. 28.—Tournament at live birds, on Erb's grounds, Newark, N. J.
Dec. 28-29.—Jacksonville (Fla.) Gun Club's fifth annual tournament; $500 guaranteed purses; $300 in money and merchandise prizes added. Professional experts barred. Bryan Taliaferro, Sec'y.

1893.

Jan. 2.—Hartner's all-day target tournament, Oradgeville, Baltimore county, Md.
Jan. 2.—Towanda (Pa.) Gun Club's all-day tournament.
Jan. 2.—South Side Gun Club's "annual," Newark, N. J.
Jan. 17-18.—Hamilton (Ont.) Gun Club tournament, live birds and targets.
Jan. 10-11.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.
May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.
May 23-25.—Knoxville Gun Club tournament, $1,000 added to purses. Also valuable merchandise prizes.
June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Elwanger & Barry building, Rochester, N. Y.
Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh, N. Y.

## DRIVERS AND TWISTERS.

The Shell Lake Fishing and Hunting Club, of Memphis, Tenn., held its annual meeting on Dec. 13 and elected the following officers: Pres., M. T. Garvie; Vice-Pres., A. T. Hayden; Sec'y, Jos. Theirs; Treas., Jos. Brignadell; Ex. Com., W. A. Scales, Jos. Specht, Jr., and Ed Sebrell. A general discussion ensued touching the plans which were submitted for the improvement of the club buildings. They were accepted as drawn. According to the arrangement the old building, which is 28×16ft., is to be divided into three compartments, to be used as kitchen club keeper's sleeping room and dining room. The new building will be 20×40ft. and divided into two club rooms of 20×20 each. This addition has been decided upon as necessary to meet the increasing membership, the limit of which has been changed from 50 to 75. The affairs of the club are in excellent shape. Its hunting and fishing territory embraces 13 lakes besides Blackfish Bayou. These lakes abound in all varieties of fish found in this climate, and the hunting is excellent throughout the season. The club will have at its disposal 32 boats instead of 22, and nothing is to be left undone to make it an attractive resort for its members and their invited guests. The rule as to certificates of membership issued to members will be strictly adhered to, and every one will be expected to have his certificate when he visits the club.

After the big sweep at Erb's, Frank Class expressed a wish to shoot a match against Harry E. Smith at 100 live birds each for $250 a side. Later we were informed that Mr. Smith's father has expressed his willingness to make a match for "his boy" on the above conditions, so that there is a good chance for a match. The progress of Harry Smith as a shooter has been rapid and shows conclusively what persistent practice will do. One year ago last January, when he began shooting as a member of the Essex Gun Club, he was classed at 6 birds out of 10, and for a time did not succeed in gaining a great many "points" over his rating. Soon, however, he began to catch on to the game, and so rapidly did he improve that at the close of the season he was up among the top winners. He never loses an opportunity to shoot, seldom misses a shoot of the Essex or Newark clubs, and is always on hand for match or sweepstake shooting, no matter what the conditions may be. In his proper form we consider him good under almost any conditions for 88 or better out of 100, and ordinarily he should be good for 90 or better. The strongest men he has met previous to the big sweep were G. L. Freche and Allen Willey, both of whom he has defeated. If he meets Class the latter will have no "cinch," but will have to shoot his best pace, and even then he will not be sure of a victory.

The success of the 100-bird match shot on John Erb's grounds last week led to a request for a repetition. Consequently another event of the same character will be shot on the same grounds early in January (the exact date to be announced at least two weeks ahead) with an entrance fee of $100. If four or less entries, there will be one money; five to seven entries, two moneys; eight to ten entries, three moneys; eleven to fourteen entries, four moneys; fifteen or more entries, five moneys. Entries, which must be accompanied by $20 forfeit, must be sent to C. H. Townsend, trap editor FOREST AND STREAM, 318 Broadway, New York.

An open-to-all tournament at live birds will be held on John Erb's "Old Stone House" grounds, in Newark, on Thursday, Dec. 28, and a large and enjoyable time is anticipated. The date comes right in a week when business will be stagnant, so that everybody will be at liberty to attend. The trouble will begin at 10:30 A. M., the events in order to be as follows: Six birds, $5 entry; 10 birds, $10 entry; 15 birds, $15 entry, and 6 birds, $5 entry. All events will be under modified Hurlingham rules. John Erb has plenty of birds on hand, and on the above occasion will trap a lot that are guaranteed to dodge anything in the way of a regulation charge.

A letter from Charley "Bilderbach" writes us that Poet-Secretary James K. Woodward, of the Wilmington Rod and Gun Club, has severed his connection with the club. This will be a severe loss, as Mr. Woodward was a faithful worker, a fair shot, a splendid tournament manager and hustler, and above all a genial friend and companion. The club will have hard work to replace him. Mr. "Bilderbach" also states that Vice President Frank Biggs, Capt. Harry "Hire-a hall" and Quartermaster "Jersey" De Cray have gone to southern Delaware for a couple of weeks' gunning and recreation, and thus far have secured plenty of birds. The spring tournament of the Wilmington Rod and Gun Club will be held in March or April.

The Newark Gun Club will have a jolly day's outing on John Erb's grounds in Newark on Thursday, Jan. 5, when they will have as guests the Parkway Gun Club, of Brooklyn. The visitors will arrive before noon and open sweepstakes will be shot until lunch time. Afterward there will be a friendly team match with teams of 15 men each, 10 live birds per man. Each club will turn out in strength and an enjoyable time is anticipated.

George E. Knowles, manager of the South End Gun Club, of Albany, sends us the programme for a tournament to be held on Monday, Dec. 25, beginning at 10 A. M. The programme comprises five events, all at live birds, in order as follows: 5 birds, $3 entry; 5 birds, $3 entry; 7 birds, $5 entry; 10 birds, $7 entry, and 5 birds, $3 entry. In the 5 bird events there will be 3 moneys and in the 7 and 10 bird events 4 moneys. The grounds may be reached by electric cars from State and North Pearl streets to Kenwood, thence by stage to the grounds.

Our attention has been called to an error which we inadvertently made when commenting on Will Cruttenden's innovation of the "Jack Rabbit" system. We stated that under Mr. Cruttenden's system a dividend would be paid for "all targets" broken. This should have read "to all who break over 50 per cent. of the targets." Thus in a 10-target event a shooter breaking 5 targets would be shut out, while those breaking 6 or more would receive a dividend on each target broken.

Frank Class, the well-known Jersey trap-shooter, has secured a lease on the Morristown Driving Park, formerly managed by Sire Brothers. Mr. Class will put the grounds and hotel in thorough repair, and will at once start in to boom live bird and target shooting. The grounds are admirably adapted to both styles of shooting, the foreground being excellent and the traps in full view of a commodious grand stand. He will hold a three days' tournament in January, when both live birds and targets will be used.

We have been informed that the Hamilton (Ont.) Gun Club have decided to make their January tournament last three instead of two days, as formerly announced. The shoot will begin on Jan. 17 and close on the 19th. The big event of the tournament will be at 21 live birds, $21 entry, to be shot on the first day. Entries for this event will close on Monday, Jan. 16. A number of shooters from the States will attend the tournament.

To day Pittsburg lovers of trap shooting are looking at the work of Elliott and Fulford in the third of their series of matches. Elmer E. Shaner will be referee. On Saturday they will shoot at Williamsport, Pa., James H. Millspaugh doing the honors as referee, and on Monday the final match will be shot at Harrisburg, when James H. Worden will referee.

The programme for the four days' tournament at Watson's Park, comprises two events at live birds and five at targets on the first day two at live birds and four at targets on the second day; three at live birds and four at targets on the third day; three at live birds and four at targets on the final day. On the second day there will be a sweep at 20 live birds; $15 entry; four moneys.

The lay press still insists that the series of matches between Elliott and Fulford are for the championship of the world. As neither man has ever shot for nor held such a championship, it is difficult to see how the possession of that title hinges upon the result of these matches. The principals themselves claim to be shooting for $200 a match, with an additional $200 to the one winning three out of five of the contests.

Harry Matz, of the Reading Association, engineered a fox chase at his Three-Mile House, Skillington, December 17. Billy Fieles, of Christiana, furnished the fox.

The Harrisburg Shooting Association will have 200 selected birds for next Monday's Elliott-Fulford match. The shoot will be held at Island Park, beginning at one o'clock, P. M.

Miss Ethel Virgin is considered one of the best game shots in the vicinity of Platteville, Ill.

The last badge competition of the Hastings (Neb.) Gun Club was won by Frank Crabill, who broke 21 out of 30 targets.

The Badger Gun Club was recently organized at La Crosse, Wis., with H. Holway as president; E. Gautch, captain, and A. Petricek, secretary treasurer. The club will shoot every Saturday afternoon.

The South Side Gun Club, of Milwaukee, Wis., will hold all-day shoots on Dec. 26 and Jan. 2. Valuable prizes will be shot for.

The Pickaway Rod and Gun Club, of Circleville, O., will hold an open shoot on Dec. 28. A feature will be a match at 25 live birds each for $25 a side, between Al Mason, of Columbus, and F. D. Alkire, of Circleville.

The Roxborough (Pa.) Gun Club will hold an all day shoot at live pigeons on Jan. 2.

Mr. L. G. Duff-Grant, secretary of the Smokeless Powder Co., will lectured most interestingly at the United Service Club, New York, on Saturday, the 17th inst, on "Smokeless Powder and Magazine Rifles."

John H. Hartner expects a big turnout at his shoot at Orangeville Md., on Dec. 26. The events will be open to all, at artificial targets.

The Amateur Gun Club of Newark, N. J., will have an all day shoot at bluerock targets on their Fifth avenue grounds on Dec. 26. Shooting will begin at 10 A. M.

Jerseymen will now have a chance to resume trap shooting as the open season for game closed on Dec. 15.

Unless all signs fail, John Erb's record for the season for live birds trapped will crowd that of Mr. Watson, of Watson's Park. Thus far Mr. Erb has had a fine lot of flyers and has trapped a large number.

Entries for the grand American handicap will close on Dec. 30.

Jack Parker will manage the Hamilton shoot in January.

C. H. TOWNSEND.

### Live Pigeons at Pine Brook.

CHARLES VERMORAL and T. W. Morfey, both of Paterson, N. J., drove over to the Pine Brook Hotel on Dec. 14 and had a pleasant time shooting over the traps. A good lot of live birds were on hand, and although the day was not a favorable one these flew well. The first shoot was at 25 live birds each, for $25 a side, 50yds. rise, 50yds. boundary. The scores:

Vermoral ..... 1112120111221012121010020—19
Morfey ..... 0011100012101212001210—16

Then came a sweepstakes at 5 birds, $5 entry, 2 moneys:

Morfey ..... 11131—5 Holl ..... 00112—3
Martin ..... 10011—4 Vermoral ..... 01201—3

### Coney Island Athletic Club.

THE Coney Island Athletic Club, of Coney Island, N. Y., offers a trophy emblematic of the championship for teams representing the regularly organized gun clubs of Kings county, to be competed for in a series of monthly shoots, commencing during the month of January, 1893. The value of said trophy to be not less than $500.

Conditions: 1. Entry open to any regularly organized gun club in Kings county, N. Y.

2. Each team to consist of five members from each club, and if more than six teams enter said contest, 15 live birds per man; six teams or less, 20 birds per man.

3. Each club entered on or before Jan. 1, 1893, shall file with said athletic club a list of 20 members of the club, and the five selected as the team thereof shall be from said list. Any man in such list to be entitled to shoot on the team of the club naming him. And in case of being a member of one or more clubs, and his name appearing upon the list of said clubs, he shall only be entitled to shoot upon the team first securing his services (except in case of withdrawal), and will not be permitted to shoot but on *one* team on the day of the monthly contest.

4. The shoots shall be conducted under Hurlingham rules, 80yds. boundary, 28yds. rise, 12 gauge guns; 30yds. rise, 10 gauge guns. The first and last shoot of said contest shall be upon the grounds of the Atlantic Rod and Gun Club on Coney Island, and the grounds for the intervening shoot shall be named by the club or clubs making the highest score at the previous shoot, but in no event shall two successive shoots be held upon the same ground.

5. The club making the highest score of the total of birds shot at by each club to be declared the winner and owner of the cup, and seven shoots to decide the contest.

6. The referee to be mutually agreed upon on the day of each monthly shoot by the competing teams.

7. Birds to be furnished by the club under whose auspices the monthly shoots are conducted, but each club to pay for its own birds.

Entrance free. Clubs in making an entry will please furnish the undersigned with the name and post office address of president or secretary of same.

CONEY ISLAND ATHLETIC CLUB.
C. A. DELLAR, Official Scorer.

### Hamilton Gun Club.

HAMILTON, Ont., Dec. 12.—The Hopkins gold medal, mentioned in one of my previous communications, is in the hands of our secretary, and is without doubt the handsomest trophy yet presented to the Hamilton Gun Club. It was up for competition for the first time to-day, and owing to the conditions on which Mr. Hopkins wished it shot for, namely, 21yds. rise and each man pull his own trap, unusual interest was taken in the contest. The medal is to be won four times. Our popular secretary won to-day with 11 out of 15, which, considering the handicap, was a good score.

For the Hamilton Powder Co.'s medal ties in November and December shoots were shot off, William Stroud winning in both.

Encouraging reports are received daily regarding our tournament, which promises to be one of the most successful held in our city. Mr. M. F. and Mrs. Lindsley have signified their intention of being present.

Hopkins medal handicap:

| | |
|---|---|
| Crooks, 18 birds | 001110101011100100—10 |
| Spencer, 16 birds | 0011001010101110 — 9 |
| W Stroud, 17 birds | 0001000100100100 — 5 |
| Hunt, 15 birds | 0001111 0010000 — 5 |
| Wilson, 15 birds | 111101000110111 — 7 |
| Clifford, 15 birds | 0100 000000w |
| A Smyth, 15 birds | 101101010111111 —11 |
| J Stroud 19 birds | 0100001001100001111— 7 |
| Kaiser, 19 birds | 00000 0010101010010— 5 |
| John Smyth 15 birds | 1101110101000111 — 7 |

Hamilton Powder Co. medal handicap, unknown angles, rapid-firing:

| | |
|---|---|
| Wilson, 23 birds | 0110111111001110111111 —18 |
| Spencer, 27 birds | 1111111101111111110110011001 —20 |

| A Smyth | 1010011111111111110111 —20 |

W Stroud won ties.

J. E. OVERHOLT.

### Damascus vs. Brockwayville.

ON Thursday, Dec. 15, the Brockwayville and Damascus gun clubs shot a match at Ridgeway, Pa., on the Damascus's grounds. The teams comprised ten men each, and each man shot at 25 blue rock targets, from three traps, unknown angles. The scores follow:

Brockwayville.

| | |
|---|---|

### North Side Gun Club of Long Island.

The snowstorm of Tuesday, Dec. 13, prevented the majority of the members of the North Side Gun Club from attending the last regular club shoot of the year at the Queens County Driving Park, Maspeth, L. I. Only five entered for the club's gold medal at seven birds each, modified Hurlingham rules. G. Grau was the winner with a straight score. In the sweepstake shoot, C. Meyer and J. Tiernan had a good race. The scores:

Regular monthly shoot for annual prizes:

| | | | |
|---|---|---|---|
| J Tiernan | 2012222—6 | H Manning | 1012111—6 |
| A Duryea | 0?1211—5 | G Graue | 1212221—7 |
| J N Meyer | 1220000—3 | | |

Sweepstake, $1 entry, one money, 3 birds:

| | | | |
|---|---|---|---|
| J Tiernan | 111—3 | G Graue | 000—0 |
| C Meyer | 122—3 | A Duryea | 112—3 |
| J N Meyer | 202—2 | H Manning | 122—3 |

Ties:

| | | | |
|---|---|---|---|
| J Tiernan | 1112110—6 | A Duryea | 0w |
| C Meyer | 1112211—7 | H Manning | 10w |

### Live Birds at Milton Point.

A PARTY of New York sportsmen went up to Milton Point to Vanje's club grounds on Dec. 14 and had a pleasant half day's shoot at live pigeons. The first event was a match between two teams of three men each, at 10 live birds per man, the winning team to receive $30 and the man making the highest score to receive $10. The scores were as shown:

| | | | |
|---|---|---|---|
| P Hunt (28yds.) | 2122010111—8 | J Arickson (28) | 1121111212—10 |
| T Jenson (30) | 1210211101—8 | J Mills (28) | 2012211122— 9 |
| L Kolter (28) | 1202012000—5—21 | D Stuber (28) | 2202020211— 8—25 |

Two sweeps at 3 birds each, $2 entry, three moneys, were also shot, the results being:

| | No. 1. | No. 2. | | No. 1. | No. 2. |
|---|---|---|---|---|---|
| Janson | 202—2 | 000—0 | Arickson | 110—2 | 011—2 |
| Kolter | 021—2 | 210—2 | Stuber | 122—3 | 210—2 |
| Hunt | 101—2 | 121—3 | Knof | 121—3 | 121—3 |

F. Knof was referee.

### Sweepstake Shoots.

Several members of the Glenmore Rod and Gun Club had some quiet sweepstake shoots at Dexter Park on Friday, Dec. 16. Some good scores were made, the birds being rather poor, but the money and expenses were about evenly divided. The scores:

Ten live birds, 28 yards rise, entry, $5 each.

| | First. | Second. | Third. |
|---|---|---|---|
| M E Hayden | 2122212212—10 | 2122010221—8 | 2122210210—8 |
| R Jones | 2212210211— 9 | 1101122011—8 | 1122102111—9 |
| W Thompson | 2221120101— 8 | 2221121212—10 | 1222111012—9 |

Match: $10 a side, 20 birds, 25 yards rise.

P Gastiger 2121211122201211201-18 J Gastiger 1112212211201011011-17

Referee, W. Mills.

## Fulford—Elliott.

KANSAS CITY, Dec. 17.—The first shoot of the series of five matches to be shot between J. A. R. Elliott and E. D. Fulford, took place in the Ball Park in this city this afternoon in the presence of about 500 spectators. As is usual in Kansas City the visitor carried with him the sympathy of the audience, and when he was tried out in the latter end of the race he was encouraged to a "fare-you-well," every kill being applauded. The shooting as a whole was considerably below par, Fulford winning the race by a score of 86 to 85 out of 100, and as that there is a protest on referee McGee's decision on Fulford's 77th bird. The bird was a left-quartering driver and was hit slightly in the wing. He circled around and alighted on a crossbar some twenty feet above the ground, and after balancing for about a minute lost his hold and flew downward. Luckily for Mr. Fulford there was a wire screen in front of the grand stand, which the crippled pigeon flew against and then fell into the grounds. Referee McGee had called "Lost bird," but when the bird fell in bounds he changed it and ordered the bird scored "dead." Elliott protested the decision on the ground that it was a lost bird under the rules governing the shoot, and the match was proceeded with. The score at that time was 64 to 62 in favor of Fulford. From that time on it was a hot race, Elliott losing but one bird while Fulford lost two more, and the disputed bird would have made it a tie if referee McGee had stood by his original decision.

The rules under which the matches are being shot are a special set of London Gun Club rules, and Rule 10 says: "If a bird which has been shot perches or settles on the top of the fence or on any of the buildings in the ground higher than the fence it is to be scored a 'lost bird.'" The bird never fairly closed his wings, but was certainly "perched" for probably a minute. The decision will have to stand, however, as Referee McGee is satisfied that his last declaration was made on the question of the perching or settling of the bird, and he is the sole arbiter of that point, and Fulford is declared the winner of the first match.

There are five races to be shot in this series, at $200 a race, and $200 on a majority of the contests. The next race takes place at Indianapolis Dec. 19, and the others at Pittsburg, Williamsport and Harrisburg, Pa., in the next 10 days, and local sportsmen are confident that Elliott's way of using wood powder will result disastrously to his shooting record, it being the general opinion among Kansas City Gun Club men that his loads were faulty and lacked penetration, as bird after bird hit by both barrels carried the load over the high fence.

The shoot commenced a few minutes after 1 o'clock, with Capt. James H. McGee as referee and James Whitfield official scorer. Elliott shot a 7¼-pound new Greener, and the loads for both barrels were 47grs. of wood powder and 1⅛oz. of No. 6 shot in an Ely case. Fulford shot a hammer Greener weighing 7lbs. 12½oz. He used the U. M. C. shell, loaded with 33grs. of Schultze and 1¼oz. of shot, No. 7s in the right and No. 6s in the left barrel.

The day was a typical trap-shooting day, barring the several inches of snow that covered the ground. The birds were a good lot, and while not particularly quick to wing, were of the kind that can carry out of any bounds a good load of shot if it fails to strike a vital part. This can readily be perceived by the scores of 86 and 85 out of 100, under London Gun Club rules, in a base ball park, with "the earth" as a boundary and a year's time in which to gather a wounded bird.

Elliott was first to the score, and started in by losing his first bird, an easy right-quarterer which scaled the fence, and missed his 7th, a fast one in the same direction. Fulford started out like a quarter horse, grassing his birds in good style, killing them clean with one barrel until the 8th, which he missed clean with both loads; but Elliot lost the next three in succession, leaving the Easterner four in advance. Thus early in the race the inefficiency of Elliott's loads were observed, as Fulford's shot alone was heard to rattle on the back fence. Fulford missed his 13th, 20th and 22d, and Elliott killing straight was only one behind, but his 24th carried the load beyound the fence, and at 25 birds he was two behind, the score standing 21 to 19 against him.

Elliott fell behind further in the next ten, losing his 32d and 33d birds, while Fulford dropped back on his 36th and 37th, and both missed the 40th bird. Fulford lost his 41st dead out of bounds and his 43d clean, which left the score a tie until the 45th round, when Elliott missed a hard right-quartering driver which flew the coop, and at the end of the 50th round Fulford was one ahead on the poor score of 41 to 40.

Elliott lost four out of the next 25, and Fulford but three, which gave the latter a lead of two on the main score, two of Elliott's and one of Fulford's falling dead out of bounds. On the 77th bird, as above related, Fulford was fortunate in having a baseball foul tip screen save him from losing a bird. He missed his 79th clean and lost his 82d dead out of bounds, which again made the score a tie, without counting the bird protested by Elliott. From that out, however, Fulford shot a good race, killing out straight,while Elliott missed his 86th bird and lost the match. Elliott still insists that Fulford's 77th bird should be scored "lost," but Referee McGee's decision will doubtless prevail, as he is the sole judge of the question under the interpretation of the rules. In his opinion the bird had not "perched," and while up in a balloon and only kept from flying out by a wire screen, he decides that under his construction of the rule it was a "dead bird," and there you are.

On the whole, Fulford was lucky in a marked degree. He got a bird that would have been lost on any other ground, and outdrew Elliott all the way through. Elliott did not show good generalship, however, frequently wasting powder and shooting too quick with his second barrel when he had plenty of time for deliberate shooting. His great weakness, however, according to the sportsmen who watched the race, was in the lack of penetration shown by his loads, bird after bird going out that was apparently riddled with shot.

The following is the official score of the shoot, giving the traps shot from (King's trap used), the direction of flight, etc.:

o Dead out of bounds.

## The Knoxville Gun Club.

AT the January meeting, 1892, the Knoxville Gun Club devised a scheme to encourage a friendly rivalry and create an interest among the members to attend the regular monthly shoots as follows: To give three cash prizes, $10 to first, $7.50 to second, $5 to third in each of the three classes. Class No. 1 to shoot unknown traps and known angles; Class No. 2 to shoot known traps and unknown angles; Class No. 3 to shoot known traps and known angles. The entire membership was classified into classes, Nos. 2 and 3 subject to be advanced into next higher class as follows: A member breaking 23 out of 25 twice would be advanced into Class No. 1. A member in Class No. 3 breaking 21 out of 25 twice, would be advanced into Class No. 2.

To determine the three winners in each of the classes a member's best 7 scores were selected to determine his average. The highest three averages in each class to win respectively first, second and third prizes in the class in which the shooter was located at the end of the year. After the regular December club shoot the averages of the best 7 scores were made up and it was found that the following members had won the prizes:

Class 1:

| | Per cent. |
|---|---|
| R. Van Gilder, first, prize $10.....19 21 21 22 22 24 25—154 | 88 |
| S. Van Gilder, second, prize $7.50...18 19 22 22 22 23 23—149 | 85.3 |

Class 2:

| | |
|---|---|
| F. A. Morris, first, prize $10.....20 20 21 21 21 22 22—147 | 84 |
| T. C. Eldridge, second, prize $7.50...19 20 20 21 21 21 22—144 | 82 |
| G. H. Wilson, third, prize $5.....14 16 19 19 19 21 18—126 | 72 |

Class 3:

| | |
|---|---|
| C. B. Ross, first, prize $70.....17 18 18 18 20 20 21—132 | 75.5 |
| J. C. White, second, prize $7.50.....14 17 18 19 19 20 20—127 | 73.5 |
| S. B. Dow, third, prize $5.....7 9 10 14 15 16 18— 89 | 50.8 |

The lowness of some of the scores can be attributed to the high winds and bad weather at some of the meetings.

Some members in Class No. 4 who had good scores missed shooting on several club days hence they not having 7 scores for an average were barred.

This scheme on the part of the club has helped to keep interest in the club and has proven beneficial, and I hope other clubs will adopt some such method to revive lagging interest.

R. VAN GILDER, Secretary.

## Pigeons and Keystones at Watertown.

THREE members of the Watertown (N. Y.) Gun Club had a seance on the club grounds on Dec. 15, when they shot at both live birds and Keystone targets.

The first event was at 18 live birds between Tallett and Paddock, Kingsley keeping them company for a time. The scores:

```
Tallett ....2212101101111212l—16  Kinglsey.....021212020—6
Paddock....2120011102111111—15
```

Then came two events at 25 targets each, all shooting from unknown angles and putting up the following totals:

```
Paddock.....1111110111111111111111111—24
Tallett.....1111111111111111111111110—22
Kingsley.....0110110101101111111101111—19

Paddock.....1111111111111111111111110—24
Tallett.....1101110111111111111111111—22
Kingsley.....1110111111010111111010101—18
```

*Dec. 17.*—The following scores were made at to-day's shoot:

Event No. 1, at live birds: Paddock-2111, Ayers-012, Tallett-110.

Event No. 2, 25 Keystones, unknown angles:

```
Paddock.....1111101101101101101111111—19
Tallett.....1011111000011011111111101—18
Ayers.....1111111111111111011010111—22
```

Event No. 3, same:

```
Paddock.....0111111111111111111011111—24
Tallett.....1111111110111101101111011—21
Ayers.....1101111111111111111111010—21
```

Event No. 4, 5 pairs:

```
Paddock .....01 10 10 11 11—7  Tallett.....11 10 11 11 10—3
```

No. 5, same:

```
Paddock.....10 10 11 11 11—8
```

## Harry Smith Wins the Purse.

IN spite of all predictions to the contrary the big open sweepstake at 100 live birds per man, $100 entry, shot on John Erh's "Old Stone House" grounds in Newark, on Thursday, Dec. 15, was a success. True, there were only three entries, but these represented precisely three more than were predicted. Then again the weather bureau was not at all kind in the manner of weather conditions dealt out; in fact, until 9:30 A. M. it looked as though there would be a wading match instead of a shooting match. The air was misty and heavy, while the clouds were dark and threatening as though ready to send down a torrent at slight provocation, and there was scarcely a suspicion of a breeze. Long about 10:20 the clouds grew lighter, a little wind came down over the Orange Mountains, and the outlook became more cheering.

It was about this time that we reached Erh's place, where we found one shooter in the person of Phil Daly, Jr., of the Hollywood Gun Club who had been waiting an hour for some one to come along with a gun. It was another hour, however, before any one else arrived, and then came J. Frank Class, of Morristown, and Harry E. Smith, the promising young expert of the Newark and Essex Gun clubs. After a wait of another half hour and no sign of any accession to the ranks, sweepstake shooting was proposed in order that the guns might be warmed up for the big event of the day.

The traps were in position, a big lot of birds were on hand, "Lem" was impatient to do some gathering, so at the fun they went. The opening event was at 5 birds, $5 entry, one money: No. 2 was at 10 birds, $10 entry, also one money. In this all killed straight and decided to shoot off for the pot at 7 birds each, the birds to be paid for out of said pot. The results:

```
Class.....22221—5   2221112211—10   1211011—6
Daly.....21002—3    2211121212—10   0121121—6
Smith.....12221—5   1221111121—10   1111111—7
```

Here it is thought best to call a halt in order that the 100-bird sweep might be shot off before the light grew dim. The entries were: H. Frank Class, Phil Daly, Jr., and Harry E. Smith, each of whom put up $100, and decided that the pot less the cost of the birds should go to the winner. Very little time was lost in preliminary arrangements, Dr. P. J. Zeglio, of Warrenville, N. J., being chosen to officiate as referee and C. H. Townsend being official scorer.

It was just 12:50 p. m. when Class first called "pull," and with a neat first grassed a strong driver. Daly followed by losing a right-quarterer, although it was hit, while Smith sent both barrels into an incomer and scored. At this time there were probably a hundred spectators present, although the crowd kept increasing as the day wore on, until there were fully three hundred on the ground. Among the visitors were John Cockefair, of Bloomfield; Fred. Class, of Boonton; Frank Piper, J. R. Leonard, R. Trimmins and A. Moffatt, of Morristown; J. F. Morfey, of Paterson; George Raynor, of Orange; E. F. Pierson, of East Orange; George Work, of New York; Samuel Castle, senior and junior; C. M. Hedden, W. G. Hollis and others, of Newark.

The birds despite the unfavorable weather conditions flew splendidly, and what they would have done on a cooler, drier and more sunny day can only be conjectured. Not over half a dozen birds refused flight when the traps were sprung, and of these only two were called, the others starting off within an instant. Some few were slow as a matter of course, while a large number were as fast and tricky as ever left a trap. As a whole they could fairly be classed a good lot.

Class shot in good form during the early part of the race, killing 24 in the first quarter; his 9th bird, a twisting left-driver, being hit but falling dead just over the boundary. His 54th, a zig-zag incomer to the right, also fell within a couple of yards of the score line.

Daly's shooting was a puzzle. Nearly every bird was hit, but during the first half he seemed to have a penchant of putting his charges too low, and did not seem to lead his birds enough. As shown by the score, he lost four out of his first five birds, although every one of these were hit. In the second half he "got on" in better form, and killed 46 out of the 50.

Smith shot his same old gait throughout, his deliberate first barrel being effective. Of the 36 times his second barrel was used at least one-third was merely for safety.

At the end of the first quarter of the race Class led on 24 to Smith's 22 and Daly's 19. Here bets of 30 to 25 were offered on Class with no takers. On the half Class had scored 46 to Smith's 44 and Daly's 38, and the odds were made 50 to 25, and still no takers. On the third quarter Class was still in the lead with 70 to Smith's 68 and Daly's 62. On this round Smith lost his first bird and killed the remaining 24. On the final quarter both Class and Smith kept up their good work for a time, when suddenly Class began to let his birds get away. He killed 9 straight and still led Smith two birds. He then lost his 10th, 12th, 13th and 15th, when it began to look like a victory for Smith, who kept on killing, making a straight run until the 24th round, when he lost a bird. Class also lost his 20th, and at the finish it was seen that Smith had won by the fine total of 92 kills to Class's 90 and Daly's 84. Class could not account for his sudden dropping back, as he said all his shells were out of one lot, and he thought he held correctly on the birds he lost.

Smith's finish was a very strong one, he killing 48 out of his last 50, and making a run of 47 straight. He also made another run of 19. Class's best runs were 24, 13 and 30. Daly made runs of 15 and 28.

The first quarter of the race was shot in 47m., the second quarter in 39m., this being 1h. 26m. for 150 birds. The last half was shot in 1h. 32m., the trapping of the 300 birds consuming 2h. 58m., or a little better than 100 an hour.

Class's 26th bird was shot within a few yards of No. 3 trap, but when Lem attempted to gather it the bird showed considerable life, and before the dog succeeded in getting it in his mouth he had to chase half across the field to the right and then back near No. 1 trap, where he finally captured it. One of Smith's and one of Class's birds would have gone out of bounds had there been a low fence boundary, each of them striking against the high board fence. One of Daly's birds settled on the top rail of the fence, from where he was gathered, and under the conditions governing the match was scored.

Thus was shot the first open sweepstake at 100 live birds ever shot in this country, and as has been before stated it was a success. The birds were good, the trapping such as can be found only at John Erb's, and from start to finish not a dispute nor a jar occurred to mar the pleasure of the occasion.

Below will be found the detailed scores of the match, the first line of figures showing the trap from which the birds were sprung and the third line the barrels used:

C. H. TOWNSEND.

## Kingbird Target Match at Albany.

SOME time ago a party of Albany sportsmen who were chatting in Elmer Vine's store, got into a discussion as to the relative shooting merits of John B. Sanders, the youngest shooter in the Eastern New York League, and one of the old standbys who we will call the "Old One." Glenyl, of the South and West End Gun Club expressed the opinion that young Sanders was the better shot of the two, and this "the Old One," who was present, took as a challenge, the result being that before the party left for home a match had been arranged to take place on the West End Gun Club grounds on Dec. 15, each man to shoot at 100 kingbird targets. The match came off as agreed, and the manner in which it terminated is shown by Horace B. Derby's story in the *Argus*:

"The day designated for the match proved a terror in the raw air, cold, wet sodden grounds, and a heavy atmosphere wherein a gruesome gray haze pervaded all space and gave to the light of day a dingy character that brought out the best efforts of the sharpest eyes to catch on to the whirling kingbirds and follow them in their swift and long-continued flight. A few fitful precipitations of rain shortly after midday caused many sportsmen, who had been given the tip and who were anxious to witness the match, to fear that it would not be shot out, consequently the event was rather slimly attended.

Leon. Wadsworth, Stone, Glenyl, Barron, Colloton and Shafer, all club members, were on hand, and of the other visitors I noted John Mullaly, of the South End Gun Club, and W. I. Wemple and William Bunn, of Amsterdam, members of the rifle club in that bustling little town. The boys had all come to see a good race and take a hand in the shooting, and they were gratified in both directions.

The contestants in the 100-bird match were called to the score shortly before 3 o'clock. The conditions of the match were, 100 kingbirds per man, three traps, known angles. With the wretched light, the chilling air, the swift flight of the birds, and the sharp angles at which they were thrown, the shooting of both men was very creditable. The match was closely contested, the shooters hanging to each other with grim determination from start to finish; but the lead the young fellow gained in the first 25 he maintained to the end, and won the game handily though his margin was a narrow one. Sanders used an L. C. Smith hammerless, 12-gauge gun, his opponent using a Colt of the same calibre.

The detailed score:

```
John B Sanders .. .....1111101011111111111111111—23
                       1111110111111111111011111110—23
                       1111111111111111111011111—24
                       0011101111101101111111111—20—89
The "Old One".....1110111111011011111111111—21
                       0100111111111111101101111—20
                       1111111101111111111111111—24
                       1110111110111111111110101—21—86
```

The veteran was not assured by his defeat that the young chap was the better man with the breechloader, and the victor was immediately challenged to shoot another match, under the same conditions, the date to be decided at a future conference. Both men are well-seasoned experts, and a slashing race may be looked for.

The other shooters present shot out several scores, some of the men shooting in excellent form and rolling up splendid totals. As these scores were made only for practice and pleasure, detailed mention is not needed. It would be unjust, however, not to notice the finest aggregate score of the competition, made by Henry R. Sanders, an elder brother of the winner of the individual match. This skillful marksman, with a 12-gauge Winchester repeating shotgun, scored a total of 91 out of 100 kingbirds."

## Parkway Rod and Gun Club.

The last regular club shoot of the Parkway Rod and Gun Club for 1892 was held at Dexter Park, L. I., on Wednesday, Dec. 14. There was a good attendance of the members, nineteen entering for the club medal, class prizes and the best averages for the annual prizes. Each shot at seven birds. Class handicap—Class A, 28 and 30 yards; Class B, 25 and 27, and Class C, 23 and 25. J. Bennett, A. Botty and A. Waeldin tied with seven each for the medal, and on the shoot off Bennett won it, also the special prize in Class A. J. Link, H. Selover and H. Bookman tied with six each for the Class B prize, which J. Link won on the shoot off. A. Waeldin took the Class C prize. The first annual prize is a hammerless gun, valued at $100, and it is a close race between J. Bennett and A. Botty as to who shall take it, there being a difference of one bird on the best scores. The score of shoot:

Class A.

| | |
|---|---|
| A Botty.....2112111—7 | A Andrews.....0022222—5 |
| E Helgans.....2120101—5 | T Short.....0112020—4 |

## Shooting Matches.

A FOUR-HANDED match was shot off on the same grounds and date between four prominent Coney Island hotel keepers at 10 birds each, 25yds. rise, the loser to pay for the birds and wine. H. Sturdevant was the victim.

Another match at 10 birds was shot off between Frank Goodale, who has joined the Atlantics, and C. E. Morris. The latter won easily. Scores:

```
H Sturdevant.....2010000100—3  G Vandervaer.....2101021112—8
C Stuebenbord.....2100002001—4  F Gallagher.....0220122111—8
```

```
F Goodale.....0001101220—5  C E Morris.....1120211112—9
```

## Plenty of Sport at Rutherford.

THE members of the Boiling Springs Gun Club, of Rutherford, along with a delegation from the Passaic City Rod and Gun Club, had a pleasant outing at Rutherford on Dec. 17. The day was a fairly good one for trap work. The main feature was the shoot-off of the tie for fifth place in the New Jersey Trap Shooter's League tournament. This was shot by teams of five men each, at 25 targets per man. The result follows:

Boiling Springs.

| | |
|---|---|
| Kless | 01111101110110101111011111—19 |
| Hollister | 01111101111111101111101111—21 |
| Ed Collins | 11111111111111111111111101—24 |

| Abbott | 11011111001100110111111111—19—81 |

Then followed the third of the series of 10-men team matches, at 25 targets per man, between the two clubs, each of which had previously won one match. The race was closely contested, and it was only after a struggle that the Passaic team finally won the match and thus the series. The scores are appended:

## The Coney Island Rod and Gun Club.

THE attendance of the members of the Coney Island Rod and Gun Club at Woodlawn Park, Gravesend, L. I., on Wednesday, Dec. 14, was up to the usual average, twenty-two competing for the Eppig diamond badge and extra club prizes at seven birds each, club handicap, modified Hurlingham rules. A good race took place between C. Plate and C. Detlefsen for the trophy. The former won with twenty straight. S. W. Northridge won the second prize, outshooting "Snapper" Garrison. Dr. Van Ord won the third and the fourth and fifth were divided. The scores:

Regular monthly shoot for the Eppig diamond badge and club prize:

| | | | |
|---|---|---|---|
| W Lair | 2102122—6 | R Lambert | 1010212—5 |
| Dr Van Ord | 1201012—5 | J J Eunis | 0121211—6 |
| E McNaughton | 2122122—7 | J E Lake | 1002212—5 |
| F McLaughlin | 2120212—6 | C Plate | 1211121—7 |
| W Green | 0010022—3 | C Detlefsen | 1221222—7 |
| Dr Little | 0200122—4 | H W Blattmacher | 2122022—6 |
| L Eppig | 2102122—6 | J B Voorhees | 2012112—6 |
| J Schlieman | 1110211—6 | F Ibert | 0101021—4 |
| W Lohman | 0010021—3 | J Cottier | 1010120—4 |
| C Englebrecht | 2121221—7 | W Scheelje | 1212212—7 |
| S W Nordlinger | 2102121—6 | E H Garrison | 0122222—6 |

The birds were good but bad light.

Sweepstake shoot, 25yds., 3 birds:

| | | | |
|---|---|---|---|
| J Schlieman | 121—3 | Dr Van Ord | 112—3 |
| L Eppig | 112—3 | R Lambert | 210—2 |
| C Englebrecht | 100—1 | W Lair | 010—1 |
| Dr Little | 012—2 | F Ibert | 000—0 |

## Atlantic Rod and Gun Club.

As there is no regular prize put up for competition for this month's shoot by the Atlantic Rod and Gun Club the members present had a good afternoon's sport at sweepstake shooting at the West End grounds, Coney Island, on Thursday, Dec. 15. It was more of a trial of skill between the novices of the club, the older members and more experienced staying out. The birds were a first class lot. C. E. Morris in practice killed 48 out of 50 picked birds. The score. No. 1, 5 birds, lowest score to pay for the birds; No. 2, 3 birds; Nos. 3 and 4, 5 birds each:

| | No. 1. | Tie. | No. 2. | |
|---|---|---|---|---|
| R J Sutherland | 01111—4 | 122 | 111—3 | 22111 |
| R Richards | 10111—4 | 210 | 010—1 | ..... |
| J Gavin | 01101—3 | ... | 111—3 | 21220 |
| D Sturdevant | 01111—4 | 100 | 012—3 | ..... |
| G Vandeveer | 11111—5 | ... | 111—3 | ..... |
| | No. 3. | | | No. 4. |
| R J Sutherland | 12112—5 | 21221120 | | 00101—2 |
| R Richards | 21101—4 | ..... | | 01101—3 |
| J Gavin | 12111—5 | 12221111 | | 12001—3 |
| D Sturdevant | 01210—3 | ..... | | 21022—4 |

## Garrison Defeats Morris.

THE long talked of match between C. E. Morris, president of the Atlantic Rod and Gun Club, and E. H. Garrison, the well-known jockey, of the Fountain Gun Club, was shot off on Saturday, Dec. 17, at the Atlantic Rod and Gun Club's grounds, West End, Coney Island. The conditions of the contest as arranged were at 100 live birds each under modified Hurlingham rules, gun handicap. Morris used his E. C. Higham gun, 10-bore, 30yds., Garrison a Scott gun, 12-bore, 28yds., the stakes being $300 a side. The birds furnished by Bonden were a good lot; the weather was cloudy and cool. Morris was well handled by Dick Monsees, and Garrison had the services of C. W. Wingert in his last 50, which materially aided him in winning the match.

The match was started promptly on time, 1 P. M., Garrison winning the toss and sending Morris to the traps first, who downed his first, a straight driver, in good style. Garrison followed with a fast left-quartering driver, which he nearly stopped; he missed his 2d bird, a fast right-quartering driver, Morris following suit on a fast incomer; he again missed his 9th and 11th, both incomers; 15th, a right-quartering driver; 19th, another incomer, and 23d, another right-quartering driver, making a total of 6 out of 25.

Garrison, after killing 14 straight missed his 17th, an incomer, 18th, 21st, 22d and 25th, all quartering drivers, and tieing the score.

Morris then killed 15 straight and then missed his 39th, 40th and 49th, the first another incomer and the two last drivers.

Garrison missed his 34th, 37th, 42d, 44th and 47th birds, nearly all being drivers, leaving him 2 birds behind on the first half of the match, the score standing Morris 41, Garrison 39.

After a recess of 10 minutes the second half was commenced. Morris lost his 56th bird, a fast straight driver from No. 3 trap, which was hard hit, and dropped dead for alighting on the fence. He also missed his 69th, an incomer; 71st and 74th, both right-quartering drivers, although hard hit, got away.

Garrison did some tall shooting with a straight run of 20. He missed his 71st bird and finishing the third round 1 bird ahead.

In the last round on his 84th bird Morris's gun got very stiff and hard to pull and caused him to miss a fast left incomer, but he kept on with it, although it caused him to miss his 87th, 90th and 91st, all incomers, and his 99th, a fast right-quarterer.

Garrison missed his 78th, a hard straight driver, which dropped dead over the fence. He then killed 17 straight, 16 with the first barrel, but missing his 96th, a fast incomer, having killed 47 out of his last 50, and winning the match by the score of 86 to 82. The best runs were: Morris, 15, 9, 9, 8, 7, 6. Garrison, 23, 17, 14, 8.

Both made some good kills, the most notable were Morris's 86th, a fast left-quartering driver; Garrison's 60th and 85th. The score:

C E Morris, (30yds.)

## CHICAGO TRAPS.

*[From a Staff Correspondent.]*

CHICAGO, Ill., Dec. 17.—John Watson has invented a new word for the trap shooters, and not a bad term either, though nobody would think, just to look at John Watson, that he was threatened with philology, synonyms, or anything of an equally painful nature. In the programme which he issues of his holiday tournament, Dec. 27-30, Mr. Watson specifies certain shoots which are to be shot under the "manotone system." A little figuring will enable any one to see that by this Mr. Watson means the rapid-fire system. There will also be, however, a large number of events at unknown traps. Of course there will be plenty of live bird events, among which is the very interesting one billed as follows: "Twenty-eighth and last contest will be a straight freeze-out, shot to a finish, at live birds specially and carefully selected, entrance $5." In short, Mr. Watson evidently aims to give a tournament a little outside the fragile and worn out lines of the old sort. Speed the day when we may have more shooting worthy of this day in the development of sport. Shooters coming to this tournament will probably see some good birds and good shooting. Singular comment on the present confused condition of shooting rules in this section is to be found in the announcement of the rules for this tournament—American Association, except 1¼oz. of shot, except boundary, which is the Illinois horseshoe, except distance, which is 30yds. for all guns. Truly bastard rules, and in one particular, at least, of bastard vicelousness.

CAPT. ANSON'S PARK.

Capt. Anse has bloomed out as a shooter of energy and resource. Not content with the deplorably dilatory action of the Illinois State Sportsmen's Association's inexecutive committee in the matter of next season's tournament, he has concluded arrangements for the leasing of the South Side baseball park at Thirty-fifth street for a term of weeks next summer, and will hold a World's Fair shoot, targets and birds, open to the world, on his own hook. He will make money, and deserves to. Is there no way in which Adrian can be made an annex to the inexecutive committee? In his enterprise he may associate others with him, and has already offered John Watson a half interest in the project.

INCORPORATED.

Messrs. Thorssen & Cassady, of this city, will on Jan. 1 merge their firm name into that of Thorssen & Cassady Co., articles of incorporation having now been filed. It will please many friends over the country to hear that Mr. H. F. Jenney, of the late Jenney & Graham Gun Co., will again come back into the sporting goods trade, where he was so long and favorably known, and will be henceforward at the sign of the new company above mentioned.

E. HOUGH.

175 MONROE STREET, Chicago.

## Trap at Watson's Park.

BURNSIDE, Ill., Dec. 6.—Score made to-day by the Fort Dearborn Club for the club medal; 15 live pigeons each, under new Illinois State rules:

| | |
|---|---|
| Geo Kleinman | 2120211111111122—14 |
| F R Bissell | 0100120220012—9 |
| Abe Kleinman | 0211222222212212—14 |
| J A Macomber | 1111010211111122—13 |

The two Kleinmans will settle the tie next shoot.

For target medal same day, 20 targets each from 3 unknown traps; Abe Kleinman 15, Geo. Kleinman 9, Bissell 13, Macombey 11.

*Dec. 14.*—Score made to-day by the South Chicago Gun Club for club medal: 20 live pigeons each, under new Illinois State rules:

| | |
|---|---|
| L Willard | 21011122111212222211—19 |
| F Willard | 21212111?211222211222—20 |
| Dr Larkin | 00212212111201010002—14 |
| Ben Fogli | 10212121212111111222—19 |
| J Watson | 10122210221101111222—17 |
| P Miller | 12011122111021011102—16 |

Sweep for birds:

| | | | |
|---|---|---|---|
| L C Willard | 0211212111—9 | Dr Larkin | 21222—5 |
| Fogli | 0211202012—7 | Watson | 12101—4 |
| F E Willard | 01121—4 | | |

For target medal, 30 targets each from 3 unknown traps: Miller 15, L. C. Willard 14, F. E. Willard 13, Fogli 14.

RAVELRIGG.

## Massachusetts Shooting Association.

BOSTON, Mass., Dec. 14.—The third tournament of the Massachusetts Shooting Association was held at the grounds of the Brocton Gun Club yesterday. It was an elegant day for trap-shooting, but a small delegation were present to compete for the State trophies. This meet saw more of the eastern "cracks" come together, but there was one fault, that the entire State was not well represented.

We saw no representatives from Springfield, Palmer and the western section; not a soul from Fall River, New Bedford or vicinity. It was about the same sporting crowd that assembled at the first tournament at Clarendon Hills, but considering the dreariness of this season of the year, the attendance though small is certainly worthy of notice.

Competitors from Lynn, the "Angel City," were there in the persons of Capt. Martin, W. G. Wetherbee and Friedrich Forbes; Coate, Gore, Bradbury, Gale and Snow, of Boston; C. E. Forehand, E. Tolman, Chas. Colvin, and W. L. Davis, of Worcester, and last but not least, many enterprising members of the Brocton Gun Club.

Shooting began at an early hour and continued till dark. As an average the scores were very uneven and several local cracks, who are considered 90 per cent. men, made a poor showing in the individual match.

W. L. Davis won the race by one bird. Thus far three of the best "cracks" in the State are tied on first position, namely Mr. Bennett, of Boston, who won the badge at Clarendon Hills; W. F. Brown, of Lynn, winning at Worcester; and W. L. Davis, of Worcester, winning at Brocton.

The team races were closely contested for, but the Brocton men flying high and won both the amateur and professional team badges.

Following are the scores:

No. 1, amateur team contest, State badges:

| Worcester Team. | | Brockton 1st Team. | |
|---|---|---|---|
| Forehand | 1111111111—10 | Wilbur | 1110111111— 9 |
| Tolman | 1101111011— 8 | Kneel | 1111111011— 9 |
| Davis | 1110100101— 6—24 | Leroy | 1011111111— 9—27 |
| Boston Team. | | Lynn Team. | |
| Choate | 1110111011— 8 | Welch | 1100100011— 5 |
| Gore | 1011101111— 8 | Wetherbee | 1100*11001— 6 |
| Bradbury | 1100110101— 6—22 | Forbes | 1010100101— 5—16 |
| Brockton No. 2 Team. | | | |
| Jones | 1111011101— 8 | Wood | 1100101111— 7—18 |
| Atwood | 1001010000— 3 | | |

No. 2, individual race, 20 singles, for the State challenge badge:

| | |
|---|---|
| Choate | 11101011110101011111—15 |
| Forbes | 11001000101001010— 9 |
| Forehand | 11101111011111101111—17 |
| Wood | 11011011010100110111—16 |
| Wilbur | 11011101110110110110—14 |
| Kneel | 11111011111011111111—18 |
| Post | 11110111111101111111—18 |
| Leroy | 11111111101111101111—18 |
| Gale | 11110101101101101101—15 |
| Davis | 11111111110111111111—19 |
| Bradbury | 11110111101111110111—17 |
| Smith | 11110111011011011111—16 |
| Gore | 01110111011101101101—14 |
| Jones | 10011011101110111010—13 |
| Snow | 10101001101110110110—13 |
| Colvin | 10100110101101010101—11 |
| Martin | 10110110101010101111—14 |
| Weth'bee | 10001010010000000101— 7 |
| Welch | 10111110111111101111—17 |

Davis won first position and sweep; Kneel, Post, Leroy, second; Forehand, Bradbury and Welch, third.

Professional team race for State badges:

| Boston. | | Lynn. | |
|---|---|---|---|
| Choate | 1001101010—5 | Welch | 1101101100—6 |
| Gore | 1101111011—8 | Wetherbee | 1100011010—5 |
| Bradbury | 1101110110 7—20 | Forbes | 1111011101—8—19 |
| Worcester. | | Brockton No. 2. | |
| Forehand | 1010110101—6 | Wood | 1110101101—7 |
| Tolman | 1111101111—9 | Atwood | 1111011010—7 |
| Davis | 1011111101—8—23 | Tisdale | 1111101111—9—23 |

Brockton Team No. 2 won this match, having shot out Worcester on the tie.

The next tournament of the Massachusetts State Trap Shooting Association will be held at Walnut Hills, when we hope to see the entire State well represented.

A. J. KELSEY.

## Falcon Gun Club.

ONLY three members competed for the Falcon Gun Club's gold medal, at Dexter Park, on Thursday, Dec. 15, at 10 birds, each under Long Island rules, bird killed with the second barrel to score as a half bird. J Vagts won the medal. The score:

| | |
|---|---|
| J Vagts | 1112121121—8½ |
| J H Miller | 2110101111 7½ |

Sweep at 10 targets, $1 entrance, 1 money:

| | | | |
|---|---|---|---|
| Miller | 1111111111—10 | | |
| Vagts | 1110111111— 9 | Van Stader | 1111011011—8 |

Referee, W. Miller.

## ANSWERS TO CORRESPONDENTS.

R., Gray, Me.—The following question has caused considerable discussion, and all parties are willing to leave it to you for final settlement: A put out fox bait and sets trap to a light drag. B, passing by the following day, discovers fox and shoots him about 10 rods from the bait. The fox was in the trap. B returns the trap to A, claiming the fox. Now, will you decide to whom does the fox belong? Ans. To A.

D. B. C., New York.—What rivers that flow into Lake St. John have the best hunting? How far up can one go in a 21ft. naphtha launch? Would you advise me going up any of those rivers in a naphtha launch on a hunting trip? Ans. The rivers are: Ashuapmouchouan, navigable for 15 miles; Mistassini, navigable for 20 miles; Ticouapee, navigable for 30 miles; Peribonco, navigable for 30 miles. But for a small naphtha launch the above distances might be exceeded. Correspond with Mr. B. A. Scott, Roberval, Lake St. John, who will give all information referring to hunting and guides, etc.

## Cleveland as a Fisherman.

WM. H. CRANE, the comedian, is somewhat of a fisherman himself, but he yields the palm to Grover Cleveland. "I never saw a man," said Mr. Crane, "who had the passion for angling and the patience at it that Cleveland has. He doesn't seem to care whether he catches any fish or not; he'll sit for hours under a broiling sun, watching his bob go dancing in the water, and never utter a complaint if he doesn't get a nibble. I went out several times with him last summer—Joe Jefferson took us out. Joe isn't any sort of a fisherman—he's a great actor and a great painter and all that kind of thing, but he can't fish a little bit. Joe can't bait a hook; seems to be afraid of the worms; so Cleveland and I took turns at putting bait on his hook. Joe got restless before we had been out half an hour; he kept wanting to move around—was sure that it 'was better fishing on the other side of the pond.' Perhaps you've been fishing with that sort of a man. It worried Cleveland a good deal, and by and by says he: 'Joe,' says he, 'when I was a small boy I went fishing with my uncle Elihu, and I remember that he told me that one of the secrets of success in life was to stick to the place where you'd thrown your anchor out. Too many folks,' said uncle Elihu, 'spend all their time pulling up anchors and rowing around; they don't catch the fish.' 'As for me,' says he, 'when I start to fish I sit right there and fish until either the pond runs dry or the horn blows for supper.'"

THE strangest couple in the menagerie in Central Park are the raven and the common crow, who share a cage in the aviary. The latter imposes on his giant cousin in the most barefaced manner. The crow never deigns to descend to the ground to get his food, which is raw meat. The raven humbly flops to the floor and, selecting the largest piece of meat, puts it in its beak and proceeds to masticate it and then return to his perch. When it is sufficiently tender, bit by bit is exposed, the remainder held firmly with the powerful beak. The crow then deigns to peck at the tender morsel, and it is not until he is thoroughly satisfied that the raven dares to begin eating his own meal. It may be that the raven thinks the crow is a young bird of his own clan, and only wants feeding up to grow. Whatever, however, may be his delusion, it is a fact that this curious comedy may be witnessed every day in the aviary about 3 o'clock.—*New York Evening Post.*

An interesting case of a wild rabbit living in an almost tame condition is recorded by Helen J. Murray in the current number of *Nature Notes*, the Selborne Society's magazine. Mrs. Paul, a fisherman's wife, living in a hut between Ardnahein Farm and the mouth of Loch Goil, deserves the credit of having achieved this result. The rabbit was brought in when very young by a cat, and reared by Mrs. Paul, from whose hand it still feeds. It now spends part of its time in the woods and part on the low sloping roof of the hut among the pigeons, or at the door among the fowls. It is shy in the presence of strangers, but quite friendly to the fisherman's wife.—*Nature.*

ACCORDING to a writer in the *Pioneer Mail* of Allahabad, the thatch on Burmese houses gives a tempting shelter to snakes, especially during the rains, and many of the occupants of the houses would be surprised if they knew the number of snakes that share the shelter of their roof on a rainy night. One night an officer was wakened up by a noise in his room; and by the light of a lighted wick, floating in a tumbler of oil, he made out that two combatants were disputing the possession of the small space in the centre of the bedroom. The belligerents turned out to be a snake and a rat, that somehow had jostled against each other in the tiny tenement.—*Nature, Dec. 1, 1892.*

ON and after Sunday, D. c. 18, important changes will be made in through trains via Pennsylvania Railroad, leaving New York as follows:

Columbian Express at 9 A.M. daily instead of 2 P. M., arriving at Pittsburgh 9 P. M., Chicago 10 A. M., Cincinnati 6:35 A. M. and Indianapolis 7:55 A. M., with sleeping and dining cars through to those points. At Philadelphia connection will be made with Fast Line for all points in central and western Pennsylvania, Cleveland and Toledo.

Pennsylvania Limited at 12 noon daily, instead of 10 A. M., arrive Chicago 12 noon. Sleeping car to Cincinnati discontinued on this train.

St. Louis and Cincinnati Express at 12 noon instead of 2 P. M., with through sleeping and dining cars, arriving in St. Louis 5:30 P. M. and Cincinnati 8:15 A. M.

Southwestern Express will leave at 7:50 P.M., Sundays 7:45 P.M., forty minutes earlier than present schedule; no change in through connections; sleeping and dining cars.

There will be no change in Western Express and Pacific Express.

New York and Washington Limited will leave at 10 A. M. instead of 10:10 A. M.

The 2:10 P. M. train for Washington and the South will be changed to leave at 2 P. M.—*Adv.*

## The Breech-Loader

**AND HOW TO USE IT. By W. W. Greener. Illustrated.**

1892. Boards, 288 pages. Price, $1.00.

THE AUTHOR'S INTRODUCTION EXPLAINS

This treatise is written for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study. Published at a popular price, it will, it is hoped, reach many who have hitherto been deterred from shooting, believing it to be an expensive recreation. The author's aim is to induce all who can to participate in a manly sport, and to advance the interests of those who can look to the gun for pleasure, health or occupation. The book is not written for experts, nor for those who have special opportunities for the acquisition of the art of shooting; and in order to make it as attractive as possible to the general reader, many matters which would interest the enthusiastic shot only have been omitted.

## CANOE HANDLING.

**By C. B. VAUX ("DOT.")**

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

### *THE AMATEUR PHOTOGRAPHS.*

THIS is the last week for receiving work submitted in the FOREST AND STREAM Amateur Photography Competition. All photographs must be mailed to us not later than Dec. 31. Nothing bearing a later post mark will be received.

### *POLLUTION OF STREAMS BY CULM.*

A SUBJECT of much importance to Pennsylvania anglers and to guardians of the public health is the washing of coal mine refuse into the streams of the State. This has resulted in the destruction of fish and the contamination of the water supply, followed by various diseases growing out of such pollution.

Those who have suffered most from this cause have expressed their indignation through the press and to their representatives in the Legislature. One of the aggrieved parties brought suit against a coal company and secured a verdict awarding damages for the injury to his property. The case was that of David S. Elder against the Lykens Valley Coal Company. Mr. Elder claimed that his property was damaged by the washings from the company's mines into Wiconisco Creek. The plaintiff's lawyers were John E. Fox and Lyman D. Gilbert, while the coal company was defended by Hon. L. W. Hall. The trial took place before Judge Simonton, and the jury, after several hours' deliberation, returned a verdict for the plaintiff of $1,507. Mr. Hall moved for a new trial, which was denied, and the case was appealed to the Supreme Court.

The public will continue to agitate the matter and insist upon its rights until relieved of the nuisance and menace to health.

### *PATRIOTISM IN 1893.*

WE have sent out numbers of pamphlet reprints of our recent statement of the case of Cooke City vs. the National Park. The document has been widely called for by individuals. It has gone very generally to the press. On another page are copied some of the comments.

The Park issue is momentous, truly national in its bearing, and concerns the future more than the present. Being of such a character it should have the consideration of every individual who counts himself a true American. Every claim of patriotism and love of country should prompt to personal interest and exertion to withstand this menace to our magnificent National Park. If

Peace hath her victories
Not less renowned than war,

it is no less true that in peace, no less than in war, the good citizen is called upon individually and personally to do something toward achieving those victories. That is an exceedingly narrow and inadequate conception of patriotism that would limit the exercise of the virtue to conflicts of war. He is the truest patriot who waits not for a rally to arms, but hears as well the demand of the hour to secure good government, and to preserve intact for the people of to-day and to-morrow the national possessions which of right are theirs.

With the beginning of 1893 no higher privilege is open to one as a public spirited citizen than that of protesting to his representatives at Washington against the progress of this iniquitous scheme to rob from the people a portion of their Yellowstone National Park.

### *SNAP SHOTS.*

WE have often pointed out the value of the aid transportation companies may render to the protection of big game by refusing to transport hides and carcases. Enlightened railroad managers understand this, and certain lines which find sportsmen-tourist patronage profitable have not been slow thus to ally themselves on the side of protection and the laws. California, from whose limits elk and antelope have disappeared, has for two years had a close season on deer, with a view to preserving the species from extermination. The close time will expire next year. The measure has been decidedly effective; deer have increased and again become plentiful. The Fish and Game Commission report that the efficient working of the law has been due in a large degree to the co-operation of the express companies, the Southern Pacific Co. and Wells, Fargo & Co. These have refused to transport carcases to market, and thus have compelled the market-hunter to give over his occupation.

Once in a while a transportation company learns a lesson, as did one in New York State not long ago, when a game protector brought suit for an unlawfully carried carcase of venison. "We received 20 cents for carrying it," said the president of the line, "and it cost us $100 fine and counsel fees. That doesn't pay." And it didn't.

The Michigan game law reads, as to possession: "No person shall sell or expose for sale, or have in his possession for the purpose of selling or exposing for sale, any of the kinds or species of birds or animals protected by this act after the expiration of eight days next succeeding the times limited and prescribed for the killing of any such birds or animals." In a recent suit brought by Game Warden Hampton against F. J. Dettenthaler, of Grand Rapids, for selling venison out of season, the defendant admitted the charge, but contended that as the venison had been purchased in open season it had then become his property and the statute could not prevent his selling it when he pleased. The judge, Gove, thereupon took the case from the jury. It need not be added that the defendant's plea would not stand for a moment in any court familiar with the accepted principle of law relating to game protection.

The Minnesota case cited by "Jay Beebe," we assume, was decided on different grounds. Possibly the contention in this case was that the prohibition of selling venison may be construed as relating only to venison killed in the State. Judge Cory is himself a sportsman, and is informed on game legislation; his decision is presumably based on defensible ground.

In the spring of 1892 the California Fish Commission planted 317,000 fry of the Eastern brook trout in streams of Los Angeles, Mendocino, Marin, Sonoma, San Mateo, Santa Cruz, Santa Clara, Calaveras and Placer counties. Planting began on April 1 and closed on May 31. The eggs were taken jointly by the Nevada and California Commissions at Marlette Lake, Nevada, and they were hatched in the Bear Valley hatchery, California. The tributaries of the San Gabriel received 25,000 of the trout.

Staten Island, in New York Harbor, would hardly be looked upon as a profitable game field, but the actual revenue derived from small birds on the island the past season has been $400. The average price of birds there has been $5, paid by gunners to the local justice, and the precise number of birds killed on the island and so paid for may be found by dividing 400 by 5.

News stand purchasers of FOREST AND STREAM next week will welcome the new and more legible head which is then to be used for the first time. And every one will be pleased with the new outfit of type with which we shall mark the beginning of another volume, the fortieth.

With all the bear stories, which from time to time run their course in the pages of this journal, few of them are grisly tales of hand to hand conflict, where fate is one moment for the bear and the next for the man. For the most part, actors in scrimmages with the grizzly, when come out of the fray alive, are not given to writing; and it is rarely that they find adequate pen chroniclers. The average daily newspaper account of a bear fight is so overdone that one must discount it, and a discounted bear story is as flat as cold-storage game. Those who have known Mr. Ira Dodge, and have hunted with him as a guide in the Rocky Mountains, will readily bear witness that his story of the encounter with a grizzly is to be taken for its full face value—the modest relation of an old hunter, who has been through a fracas just as he tells it; and by such readers his story will be followed with liveliest interest and sympathy.

we expressed our distrust of the advantage to be derived from a National Sportsmen's Association. We do have faith, however, in the united efforts of groups of contiguous States to secure uniformity of laws and a certain union and co-operation in game and fish protection. Such a movement was given impetus in Minneapolis the other day, when Fish and Game Commissioners and Wardens met in a convention representing the six States of Illinois, Iowa, Minnesota, Wisconsin, North Dakota and South Dakota, a report of which is given elsewhere. There is reason to believe that the ends sought in such a way, and by such men, may not be impossible of attainment. The specific purposes of such a conference are clearly recognized, and command respect and approval.

Those who have admired Mr. E. E. Thompson's spirited animal drawings in FOREST AND STREAM and elsewhere, or are familiar with his interesting writings on natural history subjects, will learn with pleasure that he has been appointed Government Naturalist for the Province of Manitoba, and is commissioned to prepare and arrange the native products exhibit of that province at Chicago for the World's Fair. Just at present all Toronto is agog over Mr. Thompson's wolf picture, which is to be exhibited at Chicago. The picture by its excellence appeals strongly to art critics, but its realism and the horror of the subject horrified people at first. At length, however, as the public became a little accustomed to it the picture received universal applause.

Mr. J. U. Gregory, of Quebec, passed through the city last week on his way to Florida, where he will spend a winter vacation. As Agent of the Department of Marine and Fisheries, Mr. Gregory is emphatically a man of affairs, and the Canadian days are all too short for the responsible duties of his office. But as it is from the busiest men that most is demanded, Mr. Gregory has been called upon in the course of his official life to render courtesies and services uncounted and unstinted to American sportsmen visiting the Dominion. Now that our Canadian friend has come over the line, it is a pleasure to bespeak for him like favors among the sportsmen of the South, that his winter may be as full of sunshine as a Canadian summer.

A reproduction of an amateur photograph (one of the FOREST AND STREAM series) by Mr. F. F. Frisbie, accompanies this issue as an extra page supplement. The subject is the "Hunting Prospector," and Mr. Frisbie has supplemented this charming picture with not less pleasing descriptive text. We count the prospector in his far Northwestern wickyup happy in the finding of such an artist with camera and pen to introduce him to the FOREST AND STREAM public, and in behalf of that public we wish him a Happy New Year and in 1893 a richer strike than in any of the years that have gone before.

The man of rod or gun is so much of a traveler that his patronage is well worth the seeking by hotel managers, and it is surely sound business enterprise on the part of Southern hotel men at this season of the year to put a card in FOREST AND STREAM, where it will catch the eye of the South bound sportsman tourist. The hotel list in our advertising column is growing. Care is exercised to give representation to good houses only. The list should prove useful to tourists.

Our contract with a subscriber calls for a thirty-two page paper weekly. We have been giving in addition frequent illustrated supplements. As announced last week, a full page supplement illustration, from drawings by Mr. E. E. Thompson, will be given with the first number of each month for the first five months of the year. That of next week will be of the Wolf.

This number is the last one of Volume XXXIX.

# The Sportsman Tourist.

## PALLAD.

BY O. O. S.

De vintry vind ish plowin',
Der croundt ish vite mit shnow,
De leetle pirds vot singen
All to de Soud dit go;
Und in dere blace de rafens,
Und ploochays vot can't sing,
Is groakin' and a schreamin'
Und all dat sort of ting.

De vaggon wheels go greakin'
All in de schnowy roadts,
Und icigles so peaudiful
To de trifer's nose ish growed;
Und de horses mit dere noses,
So pig und red und round,
Ish plowin' shteam like avery dings,
Shoost like a enchine sound.

De shickens not can scratchen,
Und kit somedings to eats,
So dey shtands demselves oopon von leks
Und varm dere leetle feets.
It's fun do pe a shickens,
Mit fedders shlick und nice,
Und pool your feed ub ven dere cold,
Id's de pulliest ding on ice.

De caddles all ish hoongry,
Dey don'd go far afay,
Bud go behind de vaggons round,
All loaded fool mit hay.
Dat's easy way do fodder,
Id dond cosht anydings;
I dink I knows some beoples
Vat does shoost de same tings.

Somedimes id's pooty vindy,
At leasht vill bass for dat,
Ven id plow de hair off of your het
Und plind you like a pat.
Mit dust a vlyin' in your eyes,
Und shtones und shnow und shticks,
Und durn your umpril inside oud,
Und all dese gind of dricks.

De shtreams ish covered ofer
Mit shrouds so cold und vite,
Bud lifetb, aldough in a crafe,
Und hitten from de light.
Yed, in de coming shpring dime,
Ven natcher laughs mit clee,
'Tvill shparkle in de sonnenschein
Und ripple merrily.

So ish id mit each von of us
Vot roams dis vorld around.
Ven fortune ish soom gontrary
Und all our plans ice-pound.
Haf batience shoost a leedle vile!
Id isn't alfays vinter,
De vheel durns round, our durn vill coom,
Dere's notings den vill hinter.

De dimes ish bassing rapidly,
Ve don't got long do shtay,
A few short years of lapor
Ve doo vill bass afay.
Id's hoory, vork und droubles
De vhile ve lingers here,
Und of vhe dond look scharply oud
'Tvill pe mooch more so *dere*.

De old man Ninedy-dwo ish cray,
He's feeble ash can pe,
He basses shwiftly oud of sight
Und ender Ninety-tree.
So vhile ofer de fading pasht
Ve drops a barting dears,
Ve hopeful say mit crasped hands,
"De Habbiest of New Years!"

## THE HUNTING PROSPECTOR.

*(See Supplement Illustration.)*

THE life of a prospector in the mountains of the forest is a rough one, but one not devoid of charms and attractions for many.

It is a life free from the restraints, cares, conventionalities and annoying trifles of society and civilization; and there is in the soul of most every man a slumbering desire to throw aside, for a time at least, all bonds and trammels and become a savage, once more living, as his ancestors did in the ages past, the life of a free unrestrained animal.

The life in the open air, pure and free from all that can contaminate it, and the necessity of a plain, though hearty diet, serve to give the average prospector perfect health, and while he may suffer hardships and be deprived of all that to the dweller in the city makes life worth living for, in the way of luxuries and even the common comforts of life, still the prospector is ligh-hearted and happy. He rises in the morning, and cooks his simple meal, and eats it with a relish unknown to civilization; and shouldering his tools, proceeds to search for that hidden wealth which he hopes to uncover with every stroke of his pick, or lay bare with every "blast" he sets off.

Buoyed up by hope, life looks rosy to the hardy toiler, as he labors on in the "drift," sinks his "shaft," or runs his "tunnel" into the mountain side, and thoughts of how he will spend his "pile" when made keep his brain busy and drive away all loneliness.

The illustration accompanying this is no fancy scene, but was taken from life in the mountains of Idaho, near the South Boise River, about 100 miles from the Union Pacific R. R.

The amateur artist who made the photograph, was living in the mountains in a little outside mining camp, and the "subject" was camped near by. One morning when our prospector arose to cook his bacon and coffee, the camera was placed, and when he seated himself, the lens was uncovered an instant—and we had him.

In the foreground sits the prospector, just in the act of pouring out his coffee. His tin plate lies on a convenient log. At his side is his bread pan, with his "sour dough" cake. Above his head a primitive shelf holds the syrup jar and the sugar bag. At the extreme right can be seen the "fireplace" and cooking pots, while on the left the entrance to his sleeping hut or "wickyup" made of fir boughs, shows darkly. In this hut he slept during rain and snow storms in September and October. The prospector's "gold-pan" leans against the boughs of the "wickyup" and his axe is where he can easily find it. Though the morning is cold and frosty, a pair of overalls and a shirt were all our hardy prospector thought necessary to don as a breakfast toilet. No one objects to his "style" and he is "monarch of all he surveys."

When ready to move his camp, his little pony is brought in from some neighboring gulch, all the camp equipage is packed on its back; and off goes our prospector for some new camp.

If his larder is growing low, he shoulders his rifle and hunts a day or until he can hang up a deer: then with plenty of venison, some flour and coffee he is happy, until the deep snows of winter drive him to some mountain town. Or he may put up a little log cabin in some valley, where the game "signs" are good; and here with a winter's supply of grub he stays and traps and hunts until spring, when he goes to some frontier city and sells the furs and skins he has taken during the winter. If he is of a more industrious nature he gets work, doing anything that turns up, generally preferring, however, to work in some mine in some large "camp." In either case he saves his money; and when spring comes and the snow has disappeared from the mountain sides, our prospector starts out again to seek his fortune, "Hoping on, hoping ever."

The subject of this sketch is a man who has a hunting record that few men can equal, as he killed in fair combat with a club and a common butcher knife a silver-tip grizzly bear.

PRAIRIE DOG.

## THE CHARMS OF LAKE WORTH.

ANGLERS and tourists to Florida hear of the beauties of the Indian River, and apparently with the satisfaction that they have "seen it all," terminate their trip either at Rockledge or Juniper Inlet, thereby missing Lake Worth, the gem of the South Atlantic coast. It is easily and comfortably reached from Jupiter by a narrow gauge railway, eight miles in length, to Juno, where small steamers are in waiting to convey persons and baggage to points on the lake.

The lake is a salt water lagoon, about twenty-two miles long and one mile wide, formed by the ocean receding, and forming a narrow ridge of sand, now about one mile wide at its widest part. It is connected with the sea by a shallow inlet at its northern end, through which the tide ebbs and flows. The channel in the lake is 200 or 300ft. wide, with water 6 to 8ft. deep, decreasing very much in depth at the southern half of the lake.

The climate is very greatly influenced and tempered both in winter and summer by the Gulf Stream, which passes close to the shore at this point. The normal winter temperature is about 70° to 75°, falling to 40° under the influence of "cold northers," and probably once a winter the very tender leaves of the banana trees will be lightly touched by frost or affected by the low temperature.

The scenery of this section is entirely tropical, the native palmetto palm, with its bunchy, plumelike top, being very conspicuous above the other foliage; with numerous cocoanut palms, in the vicinity of each settlement, lifting their graceful fronds above, entirely different from any other foliage. Behind these are frequently seen those red and golden tropical sunsets, where everything is still: the smoke, rising from a cottage chimney while the evening meal is being prepared, apparently stands up in a straight, perpendicular line, with definite and sharp edges, until it vanishes 50ft. above; a synonym of silence. To this tropical foliage and scenery must be added at day dawn the songs of mockingbirds, robins and catbirds; numbers of redbirds, crested woodpeckers and other birds common to the North, who are also enjoying the climate. At night the whippoorwills keep up a continuous condemnation of poor William. Almost any day the strange and apparently awkward-looking pelicans may be seen feeding in the lake, and flamingos ranged in line on the sandbars.

The cocoanut palms, as nearly every one knows, originated here by a Spanish bark being wrecked on the coast in 1879, and the nuts were washed ashore and scattered along the beach for miles. Cocoanuts are now shipped North in large numbers, amounting to over 2,000 barrels in 1891; besides, considerable numbers are sprouted and planted in the vicinity.

The strip of sand, one mile wide, between the lake and the ocean for about five miles of its length, appears to have the richest soil in this section. Here are located the extensive tropical gardens, costly mansions and tasteful cottages of the Northerners, a number of whom come long distances and have braved many discomforts in years past to enjoy six winter months of ideal out of doors existence. Visitors must not forget that they are near the frontier in this section, and that all the comforts and conveniences that the natives and land owners now have and enjoy were brought from and produced mostly in the North, and the skilled labor from at least as far as Jacksonville, 330 miles.

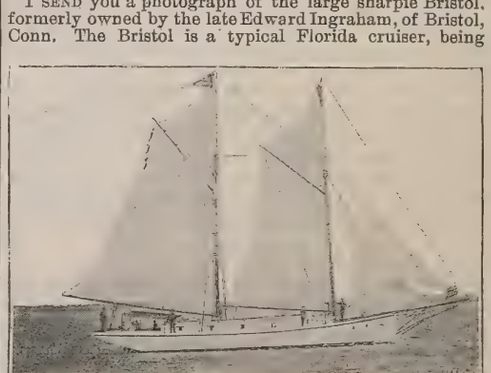
A description of these tropical gardens would alone make an interesting article. Those of Mr. Cragin, of Philadelphia, Mr. McCormick, of Denver, and Mrs. Lane, of New York, are the most extensive. Some of these gardens are said to be worth $80,000, and land near the hotels $1,000 per acre. Tropical plants and trees from all parts of the world are gathered here. Walks shaded by groves of cocoanut palms are laid out in geometrical patterns bordered with concrete curbs, and with the lawns protected by curved sea walls of concrete and coquina on the lake front. Oleanders, hybiscus and passion flowers are in bloom. Mangoes, guavos, limes, lemons, oranges, figs, sappadillas, date palms, bananas, pineapples and early vegetables are common in all the gardens; some have strawberries ripe in February, and tomatoes in abundance in March. Rubber trees, royal ponceana, paradise, coffee, travelers, and numbers of curious trees ornament the gardens, and the gnarled straggling arms of great live oaks covered with knobs and bunches of two varieties of orchids and hanging moss, by weird contrast add to the beauties.

The cacti garden is alone worth an extension of your trip to see. Walks 20 feet wide and one mile long, bordered with cocoanut, palms, oleanders and azaleas, lead from the lake front, where are located all the residences and hotels, to the ocean front, which is almost a perpendicular bluff from 10 to 15 feet in height, with a steep and narrow beach of crushed shells and little sand, upon which with a magnificent surf the ocean breaks, in color a clear, bright, ultamarine blue, entirely different from the dull, green color of the ocean on the New Jersey coast. In a ditch along one of the avenues may be seen two alligators, each 7 feet in length, with their young; somewhat tame, being accustomed to being fed, so that you can approach within six feet of them.

The western shore of the lake, and for four miles into the interior, is occupied mostly by homestead settlers, many of the most recent ones being negroes. Here are large pineapple plantations, each year increasing in numbers and in production. Thirty miles to the west is Lake Okechobee and settlements of the Seminole Indians, who occasionally make their appearance at Fort Worth, generally dressed as the "white man." A short walk of two miles takes you into the Everglades, where you walk over the dazzling white level sand, with a hard crust like snow, in which your foot makes only a slight impression, the toe of your shoe cutting a little cup in the sand as you walk. Here are the dwarf evergreens of several varieties, that for ornamental purposes would make a quick fortune could they be transported to and withstand the climate of the North.

On the west shore of Lake Worth are at least two oyster shell mounds 10 feet in height of pre-historic origin, and several canal-like excavations, both objects of interest and study. Nearly all the sea fish are found in the lake, such as bluefish, spotted sea trout, cavallé, gray snapper, barracuda, pompano, sawfish and mullet, only the three first kinds were caught by me during my visit last winter, as they were the most numerous, or at least the easiest caught. Mullet or cut fish was used for bait. Red fish or channel bass were heard drumming, but none were caught, as suitable bait could not readily be obtained. Tarpon are not found here, although they are caught north and south of this point. For the angler or epicure who is fond of fish food, the delicate and delicious pompano fresh from the water will be a revelation. These are generally caught in nets and served on all the steamers and at the hotels. During a "norther" which lasted three days, mullets could not be caught for bait, and the game fish would not bite. To a northern person until acclimated, these cold winds are very unpleasant. The visitors from the Northwest, with clothing suitable there for temperatures 20° or 30° below zero, were uncomfortable and hugged the stove; while the native without any underclothing on, would probably wear his coat for a change or stay indoors until 9 or 10 o'clock A. M.

The largest fish caught were 11lb. bluefish, 17lb. cavallé and 8lb. spotted sea trout. Nineteen bluefish, weighing from 3 to 8lbs. each, were caught in less than two hours with rod and line without chumming, by two persons, one a novice, and we quit fishing because we had as many as could be used, and not because they ceased biting. All the fish were fat and in excellent condition. For the hunter innumerable flocks of ducks are at times on the lake, mostly bluebills. Deer are found two or three miles in the Everglades.



The last of March is the end of the visitors' season for several reasons. The principal reason is that continuous south winds then hold the water out of the Indian River and make the water so low as to seriously interfere with navigation by the steamboats, which, although only drawing 3ft. of water, makes the time and length of their trips very uncertain. Another is that the sections further north are becoming more pleasant. From my observation, there is no place on the east coast of Florida, north of Lake Worth in the winter where the air is so soft and balmy, and in which invalids recover their strength so quickly as here. The air is so dry that beef can be kept indefinitely, and cured by simply hanging it in the open air. There are numererous hotels and boarding-houses ranging in price from $2 to $4 per day. Among them are the Cocoanut Grove House at Palm Beach; Lake Worth Hotel, Oak Lawn House and Pitts's Island House. The last two are nearest the inlet and therefore most suitable for anglers. There is a daily mail to and from the North and telephone from Juno to the telegraph station at Jupiter.

For those who care to venture further south without going to sea, to Miami and Biscayne Bay, there will this season be operated by the J. T. & K. W. R. R. a stage line trip of two days from the lower end of Lake Worth.

J. M. T.

## AN INDIAN RIVER CRUISER.

I SEND you a photograph of the large sharpie Bristol, formerly owned by the late Edward Ingraham, of Bristol, Conn. The Bristol is a typical Florida cruiser, being

THE BRISTOL.

built for the Indian River and similar waters. She is 77ft. overal, 73ft. l.w.l., 24ft. beam, 6in. draft forward and 27in. aft. She was built by J. McFadden, of Melbourne, on the Indian River, in 1891. She is schooner-rigged and has a large cabin house elegantly furnished, offering accommodations for a large party. The yacht can

make about eight miles per hour and carries a crew of five. The large cockpit aft gives space outdoors, a great convenience in warm weather. The Bristol cruised all last winter on the Halifax and Indian rivers and Lake Worth, Mr. Ingraham extending a generous hospitality to his friends. She will be sailed this winter by his son.

TROPIC, Florida. W.

## MAROONING IN HIGH ALTITUDES.

BY CHARLES HALLOCK.

### Chapter III.

HAS any living person, be he geographer or explorer, scientist or layman, any approximate conception of the magnitude and superficial extent of the mountain system of the great Northwest, lying between the Great Plains and the Pacific Ocean? Only a veteran mineral prospector who has eked out a weary life in wandering from belt to belt and range to range can possibly know. Twenty Switzerlands are to be found in Montana, Idaho and Washington. In the Cascades are sentinel peaks higher far than Mont Blanc, whose white and lofty summits are strangers to human feet. The Alleghanies and the White Mountains are mere foothills in comparison. In British Columbia the ranges are even higher in the aggregate and far more extensive. There are at least seven distinct groups and parallel chains, with intermediate fluvial systems carrying more navigable water than any in New England or the Middle States. The Kootenai Columbia and Okanagon, with their tributaries, are greater than the Ohio, while the Flathead, Pend d'Oreille, Fraser and Thompson vie with the Merrimac and Connecticut. All of these grand bodies of water are crossed by the line of the Pacific extension of the Great Northern Railroad.

The Kootenai River itself has 3 to 4 miles of navigable water. At least nine steamboats ply upon it, albeit the country has hardly been open one year, and accessible by rail only since the middle of last August. This river and the Columbia interlock in a most remarkable manner in their search for a passage through the intricate mazes of the mountains. The upper Kootenai starts a little north of the 51st parallel of latitude, and runs due south three degrees to about the 48th parallel; then swings sharp around the terminal spur of the Purcell range, and flows due north to nearly the same latitude it started from and only some 40 miles west of the point of departure. The Columbia starts a little north of latitude 50 degrees, at a point within a mile of the Kootenai channel and flows due north to the 52d parallel, when it likewise makes an abrupt turn called the "Big Bend" around the terminal abutment of the Selkirk range, and runs due south to about the 46th parallel, meanwhile uniting its waters with an outlet of Kootenai Lake at a point midway between the 49th and 50th parallel. The courses of the two rivers are exactly reversed, like two letters U inverted and interlocked.

The district drained by the Kootenai occupies a tract 200 miles wide, lying mainly between the 115th and 118th meridians. It comprises the East and West Kootenai Divisions, the first being reached by steamboat from Jennings, Montana, and the latter from Bonner's Ferry, in Idaho, both on the line of the Great Northern. The distance between these two stations is 63 miles, and the railroad follows the river the entire distance, passing the Kootenai Falls en route. This is a wild bit of scenery, beginning with a chute of white water lashing mid-channel rocks, and then tumbling over a series of steps, followed by a double plunge of twelve feet or so, and a succession of white and green whirls, and finishing with a tumult of angry rapids and a rush through a gorge twenty-five feet deep, with crags and mountains on each side, and a rock forty-five feet high in mid-stream crowned with trees. It is very charming.

The stern-wheel steamboat "Annerly," Capt. Dupuy, 95 feet long, runs from Jennings twice a week to Fort Steele, a Hudson Bay Company's post established in 1864, a distance of 165 miles. Just above Jennings Fisher Creek joins the Kootenai. Here is a great game country, with deer and bears in the lower ranges, and grizzlies higher up; trout in the stream, grouse and pheasants in the bottoms, geese and ducks in the river. Blue grouse are found in the hills, pheasants and fool hens among the brush in the coulees. The pheasant has white meat and is the analogue of the New England partridge. For a long distance above this point the river bottom widens to several miles and forms a remarkable agricultural valley known as Tobacco Plains, where fine crops of oats, hay, potatoes and vegetables are raised by irrigation. At Tobacco Plains Landing is a store and a permanent camp of Kootenai Indians living in log houses. Above the Plains the Elk and Bull rivers come in, famous for elk and deer. At Fort Steele the river divides into several branches, with rolling uplands and high benches, trout brooks flowing out of the foothills, and high mountains a few miles to the north, where much gold, silver and copper-bearing quartz has been found and several lucrative mines developed. Eight miles south of the post there is a princely domain of 18,000 acres of bottom land called "Cranbrook Ranche," owned by Hon. James Baker, M. P., who raises wheat, barley, oats, blue grass, red top, hops, tobacco, fruit and dairy products. He also controls 200,000 acres of grazing lands which pasture large herds of graded cattle—altogether quite an anomaly in a rough mountain region.

The river trip is interesting, though incomparable with the trip down the Lower Kootenai, the two fluvial divisions being united by a long succession of impassable rapids, of which the Falls are the scenic culmination.

Bonner's Ferry is the head of navigation for the Lower Kootenai. It occupies an elevated flood plain above the reach of the ordinary spring rise. The town was started only last spring and now has 600 population, being the largest town in the Idaho panhandle, which is but 56 miles wide. Adjacent portions of the bottom are overflowed in June, and when the flood subsides it leaves expansive lagoons and sloughs, some of which remain permanent and become the resort of various kinds of ducks and waders. One of these ponds lies within a mile of town, separated from the river by a natural dyke or levee 10 rods wide, partly of rock formation, overgrown with trees. This neck is an ideal camping ground. One calm morning near the close of September I found the surface of the lake fairly alive with ducks and geese moving about in the center out of gun range, but a few properly disposed stools and blinds set out the night before would have given some good sport. It was Sunday, and I contented myself with rambling alone about the rocks. Whenever I sat quietly for a few moments, congregations of blue-jays, magpies, camp robbers, crows, ravens and woodpeckers would gather on the fences and trees, and squawk, scold, chatter and scream like parrots. The ravens had an apparently extensive gamut and vocabulary. There are a few large trout in the river, but the bottom is clay and not favorable. Suckers and squawfish are abundant, and the latter gather in schools around the steamboat landing, picking up waste from the kitchen of the boat. From Bonner there is a horse trail leading up to the Moyea River and lake, both of which are full of cut-throat trout. Two of us rode out 11 miles and took five dozen in a couple of hours' fishing.

The American steamer Spokane, Capt. Robt. Gray, an ardent sportsman, leaves for northern landings on Sundays and Wednesdays, and the Canadian steamer Nelson on Mondays and Thursdays. Both are commodious boats, 180ft. long, with stateroom accommodations for thirty or more cabin passengers, and excellent table, supplied with landlocked salmon from Kootenai Lake, frogs' legs and wild game. There are six other steam craft plying on the lake, five of them freighting for the mills and mines. From Bonner to the rival custom houses on the international boundary the distance is 62 miles; from the boundary to the head of the lake 32 miles; from head of the lake to Pilot Bay 30 miles; from Pilot Bay to the Hot Springs and town of Ainsworth 8 miles; from Ainsworth to Kaslo 13 miles; from Kaslo to Balfour and Nelson 26 miles, and from Kaslo to foot of the lake 28 miles. The Hot Springs are the sole surviving relic of the ancient volcanic disturbances which upset this region. Kootenai Lake is eighty miles long and six miles wide. The places named are all mining towns which have been built up within a year or two. Kaslo has 600 population, Nelson 1,200, and Ainsworth 200. Each has its quota of hotels, stores, banks, sawmills, electric plants, newspapers, schools, churches, sidewalks, real estate offices, etc. Pilot Bay is the site of the Kootenai Smelting and Reduction Company, which operates a plant of fourteen immense buildings worth $250,000. These towns are all on the lake. The passenger steamer Ainsworth runs from Kaslo to Nelson by an offset or outlet of the lake near its center, and at Nelson connects with a railway twenty-eight miles long which runs to the town of Robson, on the Columbia River, where connection is had with boats running south to Little Dalles, Wash., and north to Revelstoke, B. C., on the Canadian Pacific Railway.

To those who have been accustomed from childhood to regard this part of the continent as an untracked wilder-

KOOTENAI BIRCH CANOE.

ness, its recent development is a marvel. Within less than two years, communication by railroad, wagon, steamboat, canal and telegraph has been established between every important business and mining center, in spite of almost insurmountable engineering difficulties. In some cases wagon roads have cost an average of $1,000 per mile. The magnitude of all these improvements is wonderful to contemplate. A great deal has been done by American capital, but the Canadians are energetic, too. To this vast inter-montane system the great Northern Railway is the key and conclusion. It unites and binds the whole by no less than eight transverse connections which cross the boundary and touch the Canadian Pacific Railway at Port Moody, Sicamoose, Revelstoke, Letheridge, Regina, Deloraine, Gretna and Emerson, the two last named running to Winnipeg.

Steamboat service on Kootenai waters is subject to the Great Northern schedule; and as the regular trains arrive and depart at midnight at Bonner, it was not until 3 o'clock A. M. that the Spokane blew her warning whistle and got under way for the lower landings. The river runs north from Bonner, so that down river is north. The tourist will require to bear this always in mind. At 7 o'clock, Sept. 28, the weather was so warm that an overcoat was not needed. The water was green as emerald and its surface without a ripple. All the trees and shrubs were reflected. Ducks and muskrats swimming left a wake as long as the boat. Clumsy dragon flies plumped into the drink, and after a brief struggle were pulled under by the squawfish. Occasionally we met the quaint birch canoes of the Kootenai Indians, who are an association of runagates from sundry tribes on both sides of the boundary, whose model is something like that of the modern war ship, with submerged beak at both ends. I have never seen canoes of this pattern except in Alaska.

The river is for the most part deep and sinuous, and its features are much alike for the entire distance of 63 miles to the lake; banks wooded and so high that one can seldom look over them from the roof of the pilot house. At meridian the sun is warm, but by 4 o'clock in the evening the temperature falls. The difference is noticeable when we pass under the shadow of an impinging mountain, and anon into the sunshine of a broad bend. Place a prairie four or five miles wide between two mountain ranges, slash it with a tortuous channel which swings alternately from one to the other, fringe the banks with poplar and balm of Gilead, and you will have the general features. These high mountains, gray, blue, green and white, rising out of a waste of forested foothills, are continuously present. There are perhaps 50 shacks, claim shanties, farm houses, Indian hovels and cattle ranches on the bank of the river, some with garden patches green with cabbages and turnips, and others surrounded by big mounds of hay worth $25 per ton—a product quite as remunerative as some of the captivating ore beds which venturesome men endure so many hardships to develop. One ranch grazes 500 head of cattle and another cuts 200 tons of hay. There are six cattle ranches all told.

Haying is a winsome occupation, I ween. The crop is harvested while the summer skies are brightest, and cheerfulness broods like a dove over the lea. But the miner's task is ever in Cimmerian gloom, deep in the earth. His weary bones know no perfect rest day or night. Bent under the weight of grub sack, blankets and pick, he trudges over the ranges year after year, delving and prospecting, until at last he bends for aye under the weight of adversity and accumulating years, and lies prone. But then, the precious ore is so alluring! It glitters; it shines! More than all, a miner is apt to strike it rich at any time and so become independent for life. This is the incentive which attracts and holds him—ever glistening, ever tempting, ever present, but yet, forsooth, always distant, like the pot of gold at the base of the rainbow.

Into these precincts of the gnomes and the grottoes of Monte Christo, an Appian way is being built, and scores of workmen are busily making the rough places smooth. By the first of January it is expected that an incomparable wagon road, 35 miles long, will be completed across the rich Slocan mineral district from Kaslo to the Arrow Lake country lying west, over mountains 8,000 feet above sea level, and steamboats will run to its termini all winter, breaking the ice whenever it forms. New tramways are being constructed in all directions, and all is hurry and stir and busy preparation for the anticipated output of ore which the mines are promising for the coming year. All this is interesting to sportsmen because it makes a broken country so accessible.

Ever and anon a new settler comes in and squats or stakes out a claim and raises his little edifice of logs, which looks so neat and clean and cosy when it is spick-span new; and they come and come, silently, without notice or premonition, and in numbers so widespread that already a population of 200,000 has gathered within a radius of 150 miles of Spokane where there were only a few hundreds twelve years ago. Spokane itself has 30,000 inhabitants, and in all its progressive features is fully abreast of any city of its size.

About fifty miles down river from Bonner is a landing at the beginning of a trail which runs across country 15 miles to the Pend d'Oreille, or Priest River district, which is a favorite resort for goat and bighorn hunters. At the international boundary are the two neat custom houses, one mile apart, and here the unwilling passenger is incontinently cinched. Opium is the *point d'appui* of scrutiny. Consistent protectionists may here put one foot on each side of the line and behold the beautiful workings of the principle in all its varied phases. Its operation is cheerful. It inspires patriotism.

Just at this point begins the great dyke, 110 miles long, of the Kootenai Bottom Reclamation Co., which is to be finished in five years. The land at present is subject to overflow in spring when the ice melts on the mountains, the river rising from 14 to 20ft. It is expected that 600,000 acres will be reclaimed, and the coast is estimated at $2,000,000. This is of course a Canadian venture. It may pay. At present the outflow forms innumerable lagoons which become the breeding places for the various kinds of wild fowl. There is a big one ten miles below the mouth of the inlet where a market hunter would fairly revel. Another grand and gigantic enterprise already undertaken by the Dominion Government in British Columbia is, to run the Columbia River through an ancient bed known as the Grand Coulee, which will then form a ship canal sixty miles long, shorten river navigation 100 miles, flank eighteen rapids and irrigate 2,500,000 acres of arid land at a cost of only a quarter of a million of dollars—a bold and happy conception.

In due course of the voyage the steamboat turns an abrupt bend of the river and the tourist comes unexpectedly upon one of the grandest views in the world. Kootenai Lake is before him, the Cabinet Range is on his right hand and the stupendous Selkirks on his left—a continuation of the same marvellous range of giant peaks which has made the Canadian Pacific Railway famous among tourists. Looking down an illimitable vista, which seems to terminate in blue haze, he beholds a mighty alignment, bold, snow-capped and scored by avalanches, looming up to an average height of 6,000ft. on either side as far as the eye can reach, and dropping down in mighty inclines to depths more profound than the measureless Saguenay. Eighty miles of continuous wall rock climbing to the sky and interrupted only at mighty intervals by cañons hundreds of feet deep, but modified to mere scratches on the surface by the distance. Capes Eternity and Trinity all the way! Who can grasp the titanic proportions? The sense is bewildered by such a combination of height and depth, and immensity of space. It is Alaska condensed. Then such reflections of all upon the water! Every detail of these sublime expressions is repeated with startling distinctness. Nay, more. I have sometimes seen, not only individual reflection, but reflection laid upon reflection like the colors of a chromo, where at some favoring angle the shadows from a projecting point of land, with its gay autumnal foliage, were thrown athwart the foundation picture.

It will be perceived that Kootenai Lake occupies a mighty V-shaped chasm in this vast realm of depression and upheaval, whose proportions are in scale with the entire stupendous formation. Yet, in spite of its dimensions the inflow of melting snow in spring is so immense as to raise its surface level some fourteen to twenty feet, the marks of its high water line being visible on the vertical cliffs along its shores. At that season the scarred and rifted mountain sides fairly gush with deluges of water from the accumulations of snow which the warm Chinook winds are dissolving. Hundreds of waterfalls higher than Yosemite leap from parapet and shelf. Torrents pour out of the cañons and ravines, and there is a continuous roar and resonance from height to height which simulates the ocean surf in a storm. Rocks tumble from high eminences and ledges are wrenched from the flanks of the cliffs. Such wild ravage and commotion is in marked contrast with the calm repose of the autumn, when these grand forces of nature are in quiescence, and mosquitoes come not to annoy. These pests of the forest and stream all disappear with the subsidence of the floods. But they are mighty while they last.

---

IF YOU HAVE a friend, good and true, whom you would like to remind of *his* friend, fifty-two times in the year—once every week—why not ask us to see that a FOREST AND STREAM wrapper has his name on it, with your initials in the corner of the address label?

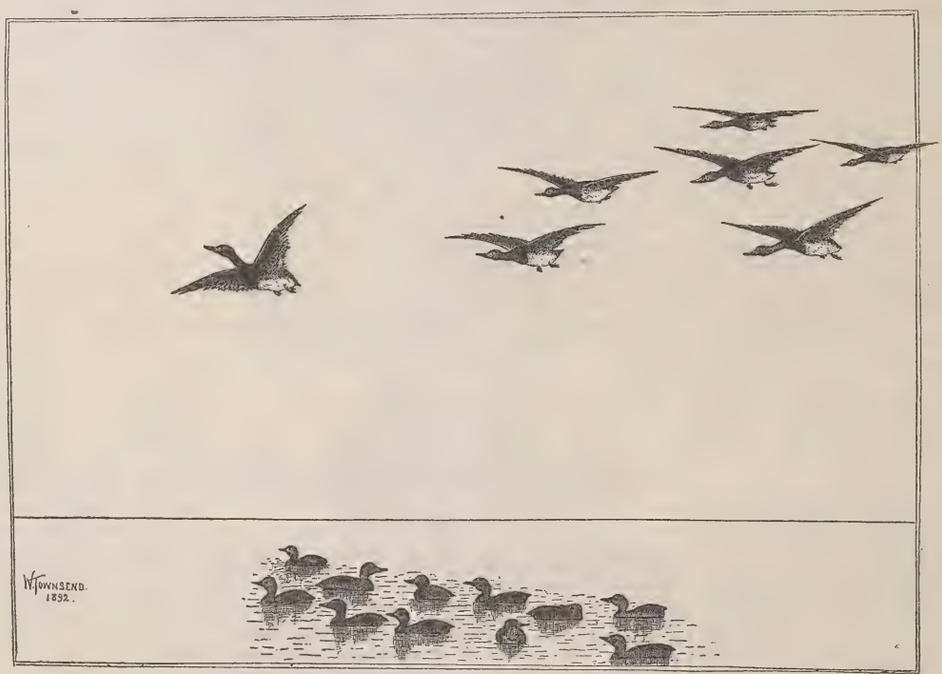
## "AN INVESTIGATING COMMITTEE."



THERE is a fascination about the sport of wildfowling that at best can be but feebly portrayed with pencil and brush. If the gunner possess, in addition to his love for the pursuit of game, a pair of quick eyes, and will cultivate his power of observation, he will find an hitherto undiscovered charm to complete his delight when indulging in his favorite sport.

The wild duck is the embodiment of nervous energy. Built for speed, and inheriting from long generations of ancestors a suspicious nature and active brain, he is at once a most striking example of "the survival of the fittest" among the feathered tribe. When closely observed one will find a purpose in his every action. The gunner hidden in the blind among the rustling sedge, can tell the moment his eye catches sight of a flock in air their kind. And as they whiz along on buzzing pinions, their subsequent actions tell him whether they will swing to his decoys and allow of a shot.

"An Investigating Committee," composed of broadbills (*Fuligula marila*), have come up to look over the bunch of decoys that float so innocently on the still water near the meadow bank. If a novice were in the blind he would most likely be tempted to fire at the fowl, as depicted in the sketch, but our "old hand" says, "Wait! you see by their action that they are not at all alarmed, and you may rely upon it that after going off for a short distance they will swing back again. Then, just as they bunch up over the decoys preparatory to settling, fire, and unless 'badly rattled' you will secure three or four to your shot, as with fluttering wings they endeavor to alight."

It is exciting to lie perfectly still in the blind and have them come right up to you, and until one learns by experience the temptation to fire at such a moment is well nigh irresistible. Many times I have blazed away under such circumstances, sometimes bringing one, sometimes two, from the flock, and again never a feather has rewarded my undue haste. But when, after letting them go and waiting ("everything comes to him who waits," even ducks) until their return as above, one's forbearance is usually rewarded.

I trust the action displayed in this little sketch will commend itself to my brother sportsmen and revive memories of bright days among the sedge grass. In such spirit I offer it. WILMOT TOWNSEND.

AMONG THE WILDFOWL.—XX.

AN INVESTIGATING COMMITTEE OF BROADBILLS.

## DEER AND BEAR IN CAROLINA SWAMPS

"TO GO or not to go," was the question which puzzled me most. Not that there was any doubt in my mind about wanting to go, but whether or not I should take the time from my business. I thought about it until visions of deer and bear floated before me awke or asleep. It seemed there was but one thing for me to do, and I did it. Six hours after having decided, I was on my way south.

For twelve months I had been planning a hunt in North Carolina, and many letters from different sections of the country were received. Finally one came from a source which I could rely upon; in fact, from a friend, and that settled it. So on Oct. 30 I left the Quaker City, and after a long and tedious ride—I say tedious, because we had a break down on the railroad and I missed connections in Norfolk and had to wait there for twenty-four hours and then go another route, with an additional wagon drive of thirty-five miles, and part of the road "corduroy." Kind reader, don't go into that country expecting to find luxury, if you do, you will be sadly disappointed. Go prepared to rough it in every way. I had luxury compared to many because as I said I stopped with friends. Go for game and nothing more unless it is to study the natives, and if you take with you a "Kodak" you will be amply repaid. Unfortunately for me my camera was broken during the thirty-six mile drive, thoughts of which will ever linger on my memory. I had expected some good photos for FOREST AND STREAM, but alas! "the best laid plans," etc.

This section abounds in game. Deer, bear, quail, woodcock (called there "snipes"), coon and possums, ducks, geese and swan, can be had for the hunting.

It is a veritable sportsman's paradise. But when you go, take everything with you, as you can't buy much there, and the little you get is of the very worst to be had.

I have read several times about the people of North Carolina being hostile to the Northern sportsman; but I never met a more hospitable people in my life. I was given permission to hunt and shoot on every farm and in every swamp I visited; and more, was asked to visit and break bread with all I met.

Wednesday, Nov. 2, was my first hunt there. We (Tommy, Pappy and myself) were late starting out, having lingered too long over good mother S's. hot corn bread, chicken and coffee, but as the "huntin'" grounds were only a half mile away it did not make much difference. After a fifteen minutes walk the dogs were put in a swamp, and in less than ten minutes more they had jumped a deer, and the woods were full of music—music such as thrilled body, soul and brain of one who spends eleven months out of twelve attending to business. I stood there in that great Dismal (so-called) swamp, drinking in everything in nature that God in his goodness has made for man's enjoyment and happiness. It seemed to me that there was music in everything—every bird, every leaf; every tree seemed to speak to me in a separate and distinct voice. I stood as if in a trance. I forgot what I came there for. The sound of the dogs had died away in the distance, gradually I seemed to awaken, the baying of the hounds became nearer and clearer, and almost before I knew it a big buck sprang into the air and across the road at one bound, and was gone. I watched him cross within 20yds. of me; I did not attempt to shoot him, there was more pleasure in that than in shooting at him. No, it wasn't buck fever either. We started four deer that day and that was the only one that I had an opportunity to shoot.

Thursday my host and self went to the same stand and in a half hour both shot a doe. We saw three deer that day before 2 o'clock. In the afternoon we rowed (at least Tommy rowed us) eight miles down the river to hunt bear. They hunt them by moonlight. That night we went up the creek in a dugout, paddled by mine host. And the way he put that skiff up the creek without swamping us will ever be a mystery to me. It seemed as if there was nothing in the water but snags and stumps and logs. I could almost feel my "hat raise" before we had gone a hundred yards. The bears come down to the water's edge to feed on the gum berries, and when a suitable tree is found, he climbs it and pulls the limbs in and eats the berries. In the bright moonlight he looks like a huge black man. The least noise will cause him to vacate at once. Our first night was a failure. Not a sign; but the second night ditto until after I had gone to my bunk in the shanty. Then it was I had the bear fight of my life. Talk about "hair raising," and "The Panther's Scream." Go bear hunting, wound your bear and then fight it out. Such a night! I nearly killed my friend before he could awaken me. Saturday we went for deer again, and saw two fine bucks, but did not get a shot. Sunday was a day of absolute rest. Monday we saw three deer and got one.

Tuesday at 3 A. M. started on a 9-mile drive to the boat for home—having had one of the most, if not the most, enjoyable trips of my life. Too much cannot be said of my host and friend, both as a hunter and an entertainer. He is brim full of adventure, and his hunting stories are of the best because true. His son Tommy, a bright young man and a good hunter, attempts at times to teach the old gentleman how to hunt. But Tommy occasionally gets rattled too. One day when his father and I both shot at and missed a doe, he guyed us considerably about "letting deer run over us, and getting a rope and catching one for us," etc. The next day a magnificent buck swam within 20ft. of him and he aimed carefully and fired, but never touched him, and the deer swam out and gave him a broadside shot, with the same result. Tommy hadn't much to say about it except that "he didn't believe his right barrel had any buck shot in it," having found where the shot from the left struck.

As said before, the country abounds in all kinds of game, and if nothing happens to prevent I shall try the geese and swan in February. If any brother sportsman would like to go there on a hunt and will send me FOREST AND STREAM credentials, I will be pleased to give all the information possible. Why I say this is because my friend will entertain only sportsmen and gentlemen. He has a lovely wife and two charming daughters that make everything bright and cheerful. In fact, it is homelike. May they all live long and prosper. J. R. P.

PHILADELPHIA.

## HUNTING THE WHITE HARE.

NORTH TARRYTOWN, N. Y.—On Wednesday, Nov. 23, Dr. M. and the writer started for a three days' hunt of white hares (*Lepus americanus*). We were accompanied by Lead, a foxhound, and as good an all-round dog as lives, and will run anything from a cottontail to a bear; Sport, what is commonly called a "rabbit hound," and Bub, a beagle, being a son of champion Frank Forest.

Big Indian, a small hamlet situated on the Ulster & Delaware R. R., in Ulster county, New York, was our destination. We arrived there in good season Wednesday eve, and were warmly welcomed by Mrs. Willard Marsh, at whose house we stopped. Everything looked favorable for a good day on the morrow, and after spending a very enjoyable evening with plenty of music and singing, we retired. On awakening in the morning we found the weather anything but favorable for a good day's sport; wind blowing a gale and snowing quite hard. However, not to be daunted, and wishing to make the most of our time, after partaking of a most excellent breakfast we started out. We found the hares very plentiful, but owing to the high wind and falling snow the dogs had hard work in holding a trail. However, we succeeded in making a fair bag.

Friday was another such day, with high winds and plenty of snow falling. On this day we took a different route, which we afterward regretted, as we found the game very scarce on the mountain we hunted this day. We had several good runs, bagged a few hares and several ruffed grouse, flushed while following the dogs.

Saturday was an ideal hunting day, with just snow enough on the ground for good running, no wind, and the sun out quite warm. We hunted this day on the same mountain that we hunted Thursday. We found plenty of hares, and the way the dogs hustled them was a caution, and such running it has never before been my lot to see. As soon as one hare was started and killed another was jumped; and so it continued all day, and when evening came hunters and dogs were pretty well tired out. But after returning to the house and partaking of the good things Mrs. Marsh set before us all fatigue passed away, and the evening was spent with music and song.

Big Indian is situated in the heart of the Catskill Mountains. The hares are always found at the top of the mountains, never at the bottom, making a tedious climb to get to them. So the walking is up hill or down hill about all the time, level stretches are few and far between. The mountains are full of wood roads, made for the purpose of hauling out timber. The hunter can keep to the roads and get all the sport he wishes without going into the brush. The sides of the mountains are covered with fallen timber, which were cut and peeled of their bark for tanning purposes, and the logs left lying as they fell. Great huge trees lying in every direction making the going for dogs about as hard as one could find anywhere. If any one has a pack of beagles that they care to test for gaminess and staying qualities, I know of no place the equal of this for the purpose. A dog must be a stayer "from away back" or he is of no use in hunting this game. We had several runs that lasted all of three hours each before the game was killed; and quite often the dogs would be out of hearing for over half an hour, but would always bring the game back to the starting point. The first hare that we started took a circuit of at least five miles, the dogs were out of hearing for a long time, and D., who had never hunted this game before, insisted that the dogs had lost the trail. I had hard work in persuading him to hold his stand and wait. Finally, after a long wait, the dogs were heard coming toward me, and the hare passed within 30yds. of D., who shot at and killed it.

Any one wishing a few days sport with the white hares will do well to write to Willard Marsh, Big Indian, N. Y., who will care for them and post them as to the haunts and habits of the game. Mr. Marsh is a whole-souled, good-natured gentleman, a good shot and a thorough sportsman. Mrs. Marsh cannot be excelled for her cooking, and the good things that she places before a tired and hungry hunter on his return from a hard day's tramp, will brace him up and take all thoughts of weariness from him. Her husband being a sportsman, she fully understands the wants of man and dog, and is always ready and willing to do all she can for them. Their rates are but $1.50 per day, which means plenty to eat and the best, nice warm rooms and soft beds, and good care for the dogs.

Big Indian is easily reached from New York city by

the Hudson River R. R. to Rhinecliff, ferry connects from there with Ulster & Delaware R. R. at Rondout. Or by the West Shore R. R. to Kingston, where the Ulster & Delaware R. R. can be taken.

If all goes well and the weather should be favorable, I expect to pass the holidays in hunting *Lepus americanus* at Big Indian. OSSINING.

## THE PRESS ON THE PARK SCHEME.

### A Mischievous Scheme.

OUR weekly contemporary FOREST AND STREAM is doing a good service by circulating as a pamphlet an article which recently appeared in its columns, opposing the projected railroad through Yellowstone National Park. A like view was long ago taken in the *Times*, but its reiteration is called for by pending legislation. The object of the proposed road is to connect "a small mining camp," which rejoices in the name of Cooke City, with Cinnabar, a station on a branch of the Northern Pacific Railway. Cooke is just without the northeast corner of the Park on Soda Butte Creek, and its proposed railroad would run down that creek to the East Fork or Lamar River, and thence to the Yellowstone. But that is not the only practicable route. Expert testimony given before a House investigating committee has shown that a railroad might be brought to Cooke wholly outside the Park, on grades not exceeding 150ft. to the mile, or certainly not over 185. These are high grades, but on the Union Pacific system are found maximum grades of 175, 185, 190 and 211ft., and on the Northern Pacific itself grades of 211, 248 and even 327ft. If such grades are undertaken where there is no obstacle, except what nature imposes, certainly inferior grades should be submitted to where they can only be avoided by sacrificing public interests to private, and intruding upon a national Park, which for twenty years has been established and kept free from such encroachments. * * * Outside the Park a road could also build up a line of settlements for local traffic. Here, perhaps, it may be well to explain that one bill pending in Congress cuts off from the Park the northeastern corner, including the area north of the streams and rivers already mentioned, along which it is proposed to build the railroad, so that the latter may be outside the Park border with a river boundary intervening. To compensate for this loss of area, it is proposed to add strips on the south and east, which will much more than make up the loss, but FOREST AND STREAM argues that the scheme adds quantity and takes away quality. "It robs the Park of beautiful and accessible scenery, of a magnificent game preserve. It gives in exchange an inaccessible mountain region which tourists will never visit and which heavy winter snows render incapable of supporting game." * * * It is alleged that land speculators and others at Cooke City and Livingston are counting on Congressional permission for the railroad in order to advance the value of their property, and that they are the chief urgers of this scheme.—*New York Times, Dec. 25, 1892.*

### An Impudent Job.

FOREST AND STREAM published on Dec. 8 a very full exposure of the schemes of a lot of speculators and land jobbers, interested in Cooke City, a mining camp situated at the northeast corner of the National Park, to wreck the Park for their own selfish interests. The Park should be kept in its present form and extent as a great forestry preserve and national pleasure ground, and no selfish private interests should be allowed to intrude upon it. Its boundaries were carefully fixed, when it was originally established, to inclose territory most interesting for its natural features and most valuable as a preserve for wild game and for the forests at the source of two of our greatest rivers.

The whole Cooke City business is a job, and to dismember the National Park and to open it to the raids of private speculative greed should damn every member of Congress who gives it a moment's countenance.—*Louisville Commercial, Dec. 20.*

### Preserve the Yellowstone Park.

But we don't want a railroad there at all. It would be against the public interests any way, and could not be defended as a local necessity. The minerals of the Cooke City region might be hauled by wagon along the proposed railroad route; and to that there would be no objection, and in fact the Government could build the road. Or the railroad, if it was insisted on, could follow either of two other practicable routes, both leading directly away from the Park. They might be costlier to make, but if the mineral wealth of the Cooke City region is what it is represented to be, such a railroad, far outside the Park limits, might pay for itself.

Our esteemed contemporary, FOREST AND STREAM, shows the valley through which the proposed railroad is to run to be "incomparably the finest in natural scenery in the entire reservation. It is destined to be the great scenic route of the Park. Here and here alone is a coaching tour which cannot be excelled elsewhere in this country. A railroad will so monopolize this route as to ruin it for tourist travel." In narrow gorges there may be hardly room to build both a road and a railway, and in any case there would be constant danger of accident from fright to teams. Besides, the proposed railroad would pass directly through the finest winter pasturage for game in the Park, where the grass is thick and luxuriant and the snow moderate.

The proper course for Congress to take in the matter is very plain. It need not be put in a dilemma. When asked to choose between two evils, it should choose neither. If an increase of area is valuable for picturesqueness and for guarding the sources of rivers, as is said to be the case on the east, or for a breeding ground of elk and deer, as on the south, let it be acquired. But there is no need of giving up any desirable area on the north in exchange for it. If the railroad now projected is likely to devastate that area no right of way should be granted.

Yellowstone Park is a magnificent pleasure ground, set apart for the enjoyment of the people of the United States. The like of it exists nowhere else in the world; and in a future generation, when its wonders and beauties become more widely known, and access to it is easier, it will be a resort for all peoples. It is also the great zoological garden and game preserve of the continent. There are probably more buffaloes there to-day than are left roaming in all the rest of the United States. Vast herds of elk and deer may be descried there by the tourist, and hundreds of antelope in a single band. The value of its fur-bearing animals, and the possibilities of restocking from this source parks and preserves in various parts of the country must be kept in mind. This noble reservation is also a valuable natural reservoir and water supply, great rivers rising there which take divergent courses toward either ocean. A prime duty of Congress is to guard against any injury to this national possession, and to prevent any encroachment upon it in private interests. —*New York Sun, Dec. 20.*

### A Kansas Opinion.

FROM FOREST AND STREAM, a pamphlet entitled "A Standing Menace," referring to the attempt of Cooke City to secure a railroad through the Yellowstone National Park, has been received. Congress should never permit a change of boundaries (except to enlarge) of this wonderful reservation, nor should a railroad line be permitted to run through any portion thereof. The reasons given by the editor of FOREST AND STREAM are conclusive, and the greed of speculators should never be allowed to prevail. The park is a national curiosity and should be kept in a state of natural wildness. Ignorance, or the power of a lobby, could be the only excuse for any legislator favoring the opening of this park to a railroad.—*Olathe (Kansas) Mirror, Dec. 22.*

## CRIPPLED BY A GRIZZLY BEAR.

I HAVE killed 126 bears without ever receiving a scratch, but at last I have been badly mangled by one.

I have been asked a great many times to relate my experiences in bear fights and encounters with wild animals, but have always touched very lightly upon the subject, and some of those with whom I have talked have been put off with very unsatisfactory replies considering that they came from one who has had so much experience with bruin. Now that my time has come and I have been so completely taken in, I feel that I have a subject which may be of interest to many, if my precarious condition will permit me to put it together intelligibly.

My wife and I were camped on the west side of the Wind River range in Wyoming, and after reconnoitering as one has to do in a strange country for a day or two, I succeeded in locating a small amount of signs high upon the side of the mountain. On the morning of Nov. 2, my wife concluded to ride out for the mail, a distance of seventy-five miles to Big Piney, expecting to return on the fourth day. After seeing her safely started with saddle and pack-horse, I started up the mountain side looking in the fresh snow for the tracks of bears or any other game that might be of value to me. Elk, deer and antelope were seen every little way as I passed along from bench to bench, zig-zag up over peak and crag, until suddenly I came upon the tracks of bear.

I was not long in deciding to follow them as they seemed to be quite fresh in the last night's snow, but I thought some distance would have to be covered before starting them, so I stuck to my horse and followed the trail as closely as possible over down timber, logs, boulders and other obstacles which made very rough traveling. Now and then I would get off and lead my horse, making quite a circle from the trail and coming back to it at a point further on. After following a few hundreds yards I saw the bears had separated and I learned that there were three of them—all large bear—and as the toe nails or claws seemed to protrude a few inches ahead of the toes, I was glad to recognize *Ursus horribilis*.

A good portion of the day was yet ahead of me, so I pushed on cautiously and as fast as practicable. After following about two miles, crossing open ground and small patches of timber, the bears entered a dense growth of underbrush. There I knew some hunting must be done; so leaving my horse behind, I pushed my way into the brush, but after a few minutes' trial found it too thick to enter without being sure to startle the bears should they be in there, so I retraced my steps and made a wide circle around the thicket, and before completing my circle discovered that the bears had gone out of the thicket and returned to the same mountain on which I had first struck their tracks.

Securing my horse, I lost no time in going back over the two miles just covered, the bears having traveled back in a line parallel to the trail by which they came to this place, probably for the carcass of an elk. When they started up the muontain side I followed, sure now that my game was close at hand, so tying my horse and making some other precautions, I took up the trail and followed it, slowly, carefully, up the mountain side. I had not gone very far, when I came upon a bed, then another, then a third; but these were not fresh, so I did not think that they had taken alarm by any noise I had made, the wind being in my favor all the time.

After they had satisfied their hunger, bears will often make from one to a dozen beds during a day, each time getting up, taking a survey of the surroundings, satisfying themselves that all is well, then make another bed not many feet perhaps from the one they have just left. As these beds became very frequent I knew I might expect to see these bears or at least start them any minute, therefore it was necessary to advance as fast as possible and at the same time make no noise that might attract their attention. The drawing of one's pantaloons across a little bush may seem to the ordinary hunter almost noiseless, nevertheless it may be heard by the animals; or the swaying of the twig may be caught by their watchful eye, and then the next move or noise in that direction is sure to be seen or heard and then all his efforts thus far are in vain. But I was after the bear and felt sure that they could not be more than 50yds. or so distant, so that one mismovement of mine at this stage would spoil all.

Presently I discovered where the bear had gone back on their back track, as it were, and passed in behind me to my left. As the wind favored me from that quarter, I now felt that I had the best end of this hand. Carefully stepping over or going back around any little leaning bush that a bear would go under, I passed on a few yards, when I saw a very large bear lying in its bed; but the brush being too thick for me to locate any vital point and shoot it in that place, I concluded that a bullet from my .50-100 placed near the center of that bear would do its work. Besides, how could I know but that those other bears were watching me at the same time, and should any of them make one jump my chances were gone. As the sound of my gun died away the air was filled with one of those hideous bawls, squeals or roars, such as are made by the grizzly bear.

I advanced cautiously, expecting that one of the two other bears had crossed the opening to a bunch of brush much resembling a sieve, only coarser. I placed a ball in the center of this bunch as nearly as I could direct it, when another roar rent the air and mingled with those of the first. I now again advanced, watching in every direction for the other bear, which I knew was near by and might be looked for any place. Something led me to believe that the third bear had preceded the second one shot, I therefore passed by the first one as it lay there apparently in the agonies of death, passed on to where the second one was rolling around in the snow.

As I failed to discover it, I returned to the first one shot; but upon reaching the place my bird had flown. Taking up the trail, I followed but a short distance when I discovered it in a clump of bushes. It raised up on its feet and I fired at it back of the shoulder, and it dropped to the ground and commenced rolling over and biting itself in bear fashion. I threw in another cartridge and discovered that the bear was coming toward me. It raised above the bushes, giving me what I supposed a good shot, but just as the gun fired the bear dropped, and I knew that I had missed. As the bear came on, I discovered that it had jumped a log and by coming down to the ground had dropped out of my sight in place of falling. I endeavored to throw out the old shell, but it would not come. It was stuck and the bear was on me.

Here came the point where I have always maintained, and backed my assertions by strong arguments, that if a man had nerve enough the bear might come very close but would never come to him, but would always stop. But that little "if" was in my way—I did not have the nerve. I felt that the bear meant fight and that I must get out of the way, so I started to a large tree that stood near by and made a complete circle before I was overtaken. The first thing the bear did was to strike me in the breast, and down we came together. The bear then grabbed my right leg just above the knee and commenced biting and jerking with all the force of a furious beast. I reached for my gun and tried once more to extract the shell, but it would not come. All this time the bear was biting so close to my body on my left leg that I concluded it was best to sacrifice my right hand by placing it in the bear's mouth so as to guard against, so far as possible, any internal injuries and giving me the free use of my left hand to wield my butcher knife. I drew this but found that all the force I had was not sufficient to drive the blade through the hide of this bear in any part that I could reach. It now made a dive for my head, catching me on the bridge of the nose with its upper and holding on to the cheek bone with its under jaw. It held me in this position until consciousness almost left me. It was so exhausted that it fell upon me while in this position and lay there for some time. It would not do for me to estimate the time, for minutes seemed hours. Presently I revived and discovered that the animal had left me, and cautiously peered around to see if it was ready for another dive, but no bear was in sight so I got up, picked up my gun and stood it up against a tree and started down the mountain side to my horse.

I would fall, then raise myself, fall again, bathe my face in the snow and by efforts which seemed a little beyond me succeeded in returning to my horse, bearing in mind that all my troubles were not over, for on this particular occasion I had a horse that few would ride under the most favorable circumstances. Now that I was covered with bear's and human blood, it would not be surprising if he would be a little mean. Both of my hands were injured, almost useless, but I found in my right hand two small fingers a little grip. I fastened them securely around the horn of the saddle and by making great effort I sprung squarely into the saddle and he started with me on anything but a steady gait toward the camp. My right eye was entirely closed, and I could only see out of my left by holding the lids apart. When I passed near our camp I concluded that would be a cheerless place to stop, as I expected no one for four days, so I passed on, thinking to go to a ranch some 12 miles below, but most fortunately I met a hunter where he was stopping for the night, and he offered me the hospitality of his camp.

I had already ridden 12 miles and was nearly chilled to death and covered with blood. He offered me, and of course I accepted, the best bed in the house, viz., one saddle blanket and a few antelope skins. He then took my saddle horse and started for my wife and medical aid, both of which arrived as soon as horseflesh could bring them.

This, brother sportsmen, is what I believe to be a fair and just description of my fight, and while many of you may feel like censuring me for not doing differently, I believe, with the control I had of my mental powers, I did the only thing I could, and all that I could under the circumstances. IRA DODGE.

WYOMING.

### Pennsylvania Game.

WE learn from Fish Commissioner H. C. Ford that eighty deer have been killed in Pike county during the past season. A goodly number of bear were shot; one of them weighing over 400lbs. was obtained near Marshall's Creek. Five or six wildcats were reported among the captures, two at Pond Eddy, two at Dingman's Creek and one near Porter's Lake.

Commissioner W. L. Powell states that upward of 100 wild turkeys have been brought to Harrisburg. The largest one he has seen weighed fully 25lbs. This fine bird came from the South Mountain near Fayetteville. A curious habit of the wild turkey in captivity was once observed by Mr. Powell in connection with one kept in a cellar. When alarmed by the approach of any person it would run into the shelter of a vault and hiss like a goose.

MARSH, Pa., Dec. 17.—Game in this section of Chester county has been unusually plentiful this season. As elsewhere, the gray squirrels have been many and good bags have been taken. Rabbits are always with us and quail have been more numerous than for years past. Most of our local shooters are rabbit hunters and bird dogs are scarce, so the partridges, as we call them, have stood the season well, some bevies having never been shot into, while the majority of them contain from seven to ten birds for seed. Woodcock were scarce this year and the pheasant is, doubtless, hunting more wooded regions, although a few are still found on our hills.

O. BULL.

## A LETTER FROM TENNESSEE.

LAST fall a friend and myself, in quest of sport and recreation, were situated in Humphrey's county, Tenn. We were twenty miles from any railroad, in a very wild country, and among a people who eke out a most poverty stricken existence from the results of their corn and peanut crops. They live, as we did, on pork, molasses and heavy biscuits.

Our host, Capt. O., who had been a captain of the original Ku Klux, was considered quite a monopolist down there, because he had a home with two rooms and a hired man named "Jodie." My friend and I slept in one of the rooms along with "Jodie" and four dogs, while the captain and family (wife, mischievous boy of nine, bright little girl of thirteen and baby) occupied the other, which also served for dining-room—a rather cramped *salle à manger*.

The baby had arrived a day before my friend and I did, and naturally the captain insisted that his New York guests should name it, and so we duly christened it Dorothy, a name quite unknown in that region, though apparently appreciated. Of course, as we gave the child a name we had to send it a dress when we got home, and if our host had any thoughts of that at the time, I am glad to think we did not disappoint him. And little Cora, though only thirteen, after a few lessons became such an adept at bird stuffing, that I sent her down as well a set of implements, which doubtless she has put to good use.

But I am not enough of a writer to try to describe the people and the country, nor do I intend to go into the details of our hunt, which was quite successful. I have only written this to lead up to a letter recently received from good old Capt. O., of which I herewith transcribe an exact copy. It gives a slight idea of the nature of the people and of the present prospects for sport in this part of Tennessee, and if it strikes everybody as being half as funny as it did me, it may be worth the trouble of reading:

Dec the 11th 1892

Mr. S— and Mr. C— of New York

Dear friends

it is with pleasur that i seate my self to write you all afew lines to let you know that we hant for got you yet these lines leaves us all well and hope they will find you all well, well Mr. S— i wish you had ben with me the secone night of this instaut i went and found a bunch of wild turkeys and i kild two that night and one next morning i had to let the major G— have one and if i hedent ben so busy i would have sent you all one i was not dun getherin corn then but i are don now and if i kill eny more i will send you them thay are a good meny around here this fall i would be glad if it is so you can come down this winter and spend two or 3 weeks or amonth with me you and Mr. C— ort to see Miss Dorithe now she can go any where she wonts to and can talk i will send you some of her hair, thay hant very meny quail here some two or three bunches right around here and the ducks is just now comence to come in here now i went up to the slough yesterday evning and i saw some 10 or 12 but did not get non of them, Cora skind the pretest hawk you ever saw and was going to send it to you but the cats got holt of it and tore it up we will send you some this winter if we all keep well, we all received your presents and was glad of them we wish we had something to send you but you know how it is and you must wate till i can send you a turkey i think maibe i can send you one be fore long i have got my crop in now and i think i will hunt some but I will hunt with you all if you all will come down here this winter if you come down let me know whin you will get to W— and i will meat you there, Jodie ses he wore his hog skin gloves to se his girl but when he went to put his arm around hur wast he puld them off so i will close for this time hoping to here from you all soon i remain as ever your friend

The length and apparent strength of "Dorithe's" lock of hair, which accompanied the letter, speak well for that little one's health and for the country's being, in spite of some disadvantages, a good place for babies, even if their parents are somewhat behind the age. But if I have seemed to laugh and make too much fun of a most honest and heart-whole people, I take it all back, and assure any one who might be tempted to take a trip to this region, that he will receive a royal welcome, and at very slight expense will have the best the country affords. And he will return to town with better health and spirits too in spite of the pork and molasses and heavy biscuits.

FAD.

## NEW ENGLAND GAME FIELDS.

BOSTON, Dec. 26.—With the present week the season on big game in Maine closes. Then the moose, deer and caribou should be at rest for eight months, with a chance to increase and multiply. It would seem that everybody in Maine, and out of that State, should be willing to give the big game a chance, since it is now so absolutely certain that letting the game alone for a reasonable portion of the year is so prolific of good results. Such a season for big game has never been experienced in New England as that which Maine has just passed through. The number of deer taken in the open season has been something wonderful, and concerning which a good deal has already been written. The number of moose taken is a surprise to those who had begun to regard this noble game as nearly extinct in New England. There are reports of two more big moose killed by Franklin county sportsmen within a week. As for caribou, they have failed to put in an appearance this season.

Probably the last Boston party after big game this season left town on Thursday for the game preserves of the Megantic Club. They will also visit the Moose River Valley of Maine. The company consists of Messrs. Waldron B. Hastings, Harry W. Sanborn, Stephen S. Johnson, all of Boston, and N. C. Nash of Cambridge, President of the Massachusetts Rifle Association. The party is convoyed by Dr. Heber Bishop, President of the Megantic Club, and they accompany him on his annual Christmas hunt. The party expected to arrive at the club camps about noon Friday, where they had arranged to go into the woods at once for moose, caribou and deer. But the weather suddenly came off the coldest of the season and held so until Sunday. This may have caused some delay to the hunters, though, doubtless, the bravest of them will spend the most of the daytime in the woods. Their time is short, since the close time of the game they wish to hunt begins on Jan. 1. Indeed, they propose to be back in Boston Jan. 2.

Mr. Walter S. Hill, son-in-law of John B. Squire, the celebrated Boston pork packer, is to take a short rest from business with shotgun in hand. Mr. Woodward, of Norfolk, president of the Ragged Island Shooting Club, of Currituck Sound, has for a long time been inviting him to come down and enjoy the shooting. He has lately written Mr. Hill, and will not take no for an answer. So Mr. Hill was to start on Tuesday of this week. To say that his expectations are great would only express what is fully more than true. President Harrison has shot at these camps, I believe. Mr. Woodward writes that the shooting should be excellent. This club is one that has good rules, and is reported to live up to them. Mr. Hill says that one of these rules is—he is quite certain—that shooting is allowed for two days, and then a halt is called for two days, in order that the game may have a chance. It is also believed that as many birds are obtained, and obtained easier, than would be the case were shooting allowed every day. The birds are not all frightened away, as they would be by constant shooting.

Mr. Harry Dutton, of Houghton & Dutton, a well known Boston dry goods house, intends to soon go on a quail shooting expedition to Tennessee. Reports mention excellent sport there. Mr. Dutton has one of the best dogs in the world, and those who have followed the FOREST AND STREAM field trials carefully will remember the exploits of Duke of Kent.

With the recent cold weather the ponds in New England have all been frozen thoroughly, and now the pickerel fishermen are at hand. Already some good strings are reported from the ponds in Plymouth, and at Lake Weldon. In Maine the pickerel fishermen have been at it for some weeks, the ponds in the northern and middle portions of that State having frozen over early. Better results are mentioned than last year.

SPECIAL.

## DEER RIFLES AND SPLIT BULLETS.

*Editor Forest and Stream:*

Two items in FOREST AND STREAM of Nov. 17, "Rifles for Deer," and "Losing Wounded Deer," attracted my attention. My observation and experience cause me to agree with the writers of those items. My sporting friends, men of large experience, in hunting deer, concur with me on those points, as I know by frequent conversation with them.

We all have used rifles of different calibers, but those friends now use caliber .45. I would not want a rifle for deer hunting of a caliber less than that, unless I could make it as effective as a caliber .45 at least. For the last fifteen years or more I have used a caliber .40, but for a few years past I have made it as effective I believe as a caliber .50 or more, solid bullet. I use 75grs. powder, 320grs. bullet, bullet 1¼in. in length, split.

In molding my bullets I insert between the jaws of the molds a thin piece of paper, extending from the tip of the bullet about one-half its length. When the bullet is taken from the molds, the casual observer would not notice the charred paper in the bullet. When such a bullet strikes a bone or tough muscle, the two points will spread, and roll over toward the butt end of the bullet making a wound larger than a .50cal. solid bullet, larger I believe than a .50cal. express.

Three years ago I killed a large buck, shot it through the body with such a bullet. The wound apparently was large enough readily to admit the end of a broom handle. I killed with such a bullet a spike buck, by shooting it in the neck from the front, the bullet passing through the shoulder and cutting in two five ribs and lodging in the hip.

The wounds in deer killed with such bullets were so great, and noticeable, that my companions would jocosely remark to me, they would rule me out of the hunt on account of using such things. My observation is that many more deer shot with buckshot are lost than with the rifle of the caliber now generally used. I believe the difference is occasioned by the bullet being larger in diameter than the buckshot, for one thing. A deer wounded with a bullet of large diameter will bleed much more rapidly than when shot with a small bullet, and the deer will become exhausted quicker, besides that the large bullet seems to shock, paralyze the animal to a greater extent than a small bullet.

When a lad I shot squirrels in tall trees with shotgun, No 6. shot, filling the animal with shot, perhaps breaking a leg, and still the squirrel would hang to the tree top, sometimes requiring a second shot. When I came to use the rifle for the same game, I found that when only a leg was broken he would fall. I then but a lad believed as now, that the bullet shocked, paralyzed the game. There is another reason why a rifle of large caliber is preferable to a small one. A heavy bullet will crush bones that a light one will not affect. The hunter using buckshot frequently finds shot lodged against the bones of the limbs without breaking them, so with small bullets. Of course bullets now used, fixed ammunition, as a rule are much heavier than the spherical bullet of the same caliber; the same may be said of the larger calibers.

I believe not one-half the deer shot by good hunters, men skilled in the use of the rifle, are secured. I have hunted deer for over thirty-five years, and in different places, and but few times have I found the game accommodating enough to give me a standing shot; the most they would concede would be a snap shot. If the hunter waits for an opportunity to select a point so as to make a dead sure shot, he will in all probabilities leave the timber without meat.

It is surprising how far a severely wounded deer will sometimes run. I have had more than an ordinary opportunity to vereify this idea. In most of my deer hunting, I have had with me my bird dogs, trained to slow trail deer, and with their aid seldom lose a severely wounded animal.

On one occasion I was hunting with a companion in the Rockies and a black-tailed deer ran past us. I fired the rifle and missed, then let the buckshot go. The deer gave no appearance of being hurt. I watched it running for about a quarter of a mile, untill it passed over a bluff into a creek bottom out of sight.

From some reason, what I cannot say, an impression was on my mind I had killed the animal. I so stated to my companion, and that I would follow it. He said it was folly, that there was never a gun made that would kill a deer with buckshot, the distance I had fired. I followed the trail and found the deer at the foot of the bluff shot through the heart with a buckshot. On another occasion I shot a large doe in the edge of the timber as she ran past me. It ran out upon a freshly burnt prairie. I could see no blood but with the aid of my dog trailed her over two miles until she struck into an old deer trail, and coming to the conclusion I had not hit the animal, gave up the chase. A few days afterwards while following that old deer trail, I found the doe dead. One of her shoulders was badly broken by the bullet. I shot a buck as it ran past me, shot it with the rifle, it fell, then sprang up and was out of sight in the brush before I could get in another shot. I followed it about half a day, there being a snow, before I could get a second shot. The animal was shot through the breast, low down. The wound was evidently mortal. When hunting where there are several camps of hunters, within a few miles of each other, it is not an uncommon occurrence to find dead deer evidently killed by some of the hunters. I could multiply instances to illustrate the points under consideration. It is better for the sportsman and mercy to the deer to use as deadly a weapon as possible.

H. L.

## CHANGES IN NEBRASKA.

DAWES COUNTY, Neb.—Northwest Nebraska is not usually a very inviting field to the sportsman. Six or seven years ago there was game here in abundance. Deer and antelope in goodly numbers roamed the pine-clad hills and pastured in the unbroken prairies, while now and then a huge antlered elk could be seen browsing in the valley or standing with head erect on the steep hillside. At that time, too, grouse, the pin-tailed variety, were here in countless numbers. I think I can say without warping the truth that I have seen single flocks of these savory birds that contained upwards of 1,000. They were almost as tame as the common domestic fowl and the settlers killed them by thousands. In fact this was the chief source of subsistence to many a poor homesteader during the winter of 1885 and '86. It was fried grouse for breakfast, broiled grouse for dinner and grouse cold for supper, day after day for months. To give some idea of the tameness of the grouse here then it will only be necessary to tell how a vast number were slaughtered. The hunter, armed with a .22 breechloading rifle, would walk boldly up to within a few yards of the tree on which a flock of these birds had settled and there stand and shoot until a dozen or more had fallen dead to the ground before their companions would take flight. I have known fifteen to be killed in this way from a single standpoint.

It is usually too dry here for waterfowl, but the past season was uncommonly wet, and in consequence large ponds and lakes were formed in various places throughout the country, which induced a good many cranes, geese, ducks and snipe to sojourn a while with us on their way South.

For a few days after our heaviest rains great flocks of curlew visited the stubble and pasture fields and feasted on big plump grasshoppers.

Six years ago there was not a quail in northwestern Nebraska, but some gentlemen at Long Pine, about 150 miles east of here, had a few shipped in and turned loose; and they have increased and scattered abroad over all this part of the State. Last fall I saw several coveys of from 10 to 20 young birds. I think they will do well here, for our winters are generally mild, and there is an abundance of food and shelter.

The place seemed more civilized and homelike when these cheerful little rustlers appeared on the scene and began to pipe in the bright June mornings those old familiar words, "Bob White," I had loved to hear since early boyhood.

Song birds are a great deal more numerous here now than a few years ago. During the summer of 1885 I think I saw but two robins and one thrush, although I kept on the lookout for my feathered friends. But now the fields and groves are endeared by the low sweet notes of the robin and the mild joyous melody of the thrush from April until October.

Last year a good many robins and meadow larks wintered here; the former kept close to the timber and brush, but the latter, during stormy weather, sought the barn yard or straw pile for feed and shelter.

There is a marked difference in the song of the meadow lark here from that of the East; it is more shrill and harsh and has several variations. Perhaps the climate is responsible for the change.

T. S. ALLISON.

## COLORADO ASSOCIATION.

THE Rocky Mountain Sportsmen Association held their adjourned meeting in Denver, Dec. 19. The name was changed to the Colorado Game and Fish Protective Association, and all reference to trap-shooting was stricken from the constitution and by-laws. It is the intention of the members to work for game protection and leave all trap-shooting tournament to the shooting clubs.

The game law committee reported, and their report was adopted after some discussion. The following were the most important changes recommended: An open season on sage hens from Aug. 1 to Nov. 15, on quail from Nov. 15 to Dec. 1; to extend the season on wild fowl to April 15. to raise the maximum penalty in all conviction to $200 and the minimum to $50: to give power to the game warden to seize and confiscate all game, etc., unlawfully killed or in possession, and to search wagons, tents and outfits; to extend complete protection to bison, mountain sheep and goats; to prevent the sale of hides, and to make the open season on large game from July 1 to Nov. 1. They also recommended the repealing of the bounty law in regard to bears and mountain lions, and that the office of game warden should be separate from that of Fish Commissioner.

The following officers were elected: W. C. Bradbury, President; F. A. Williams, Vice-President; M. Hewitt, Secretary and Treasurer.

A vote of thanks was extended to the outgoing officers.

J. N. Barrett, Game Commissioner of Utah, has written Game Warden Land, informing him that M. A. Perkins of Dixon, Wyo., had 5,000 pounds of deer and elk meat in his possession and was preparing to ship it West. Perkins made an affidavit that the game was killed in Colorado. The market hunters are killing deer by the hundreds in the White River country and the meat is being shipped out by the wagon loads. Mr. Land has gotten Governor Routt to appoint G. A. Lechmere deputy warden for that country, and he will investigate this wholesale killing at once and, if possible, make some arrests.

TESEEBY.

### What a Store of Good Reading He Has Had!

PITTSFIELD, MASS., Nov. 9.—*Editor Forest and Stream:* Dear Sir: The bit of history you put on back of your letter in regard to the paper starting in 1873 reminds me that the first sporting paper that I subscribed for was the *American Sportsman*. I was printed by Parker Brothers., West Meriden, Conn. This was in 1868. The name was changed to *Rod and Gun* and then to FOREST AND STREAM.

I have been a subscriber off and on for many years, and will say that it improves with time.

P. W. S.

## OUR OUTING.

"Ye who love the haunts of nature,
Love the sunshine of the meadow,
Love the shower of the forest,
Love the wind among the branches,
And the rain shower and the snowstorm,
And the rushing of great rivers,
Through their palisades of pine trees,
And the thunder in the mountains."

—*Longfellow.*

YOU, dear reader, who are compelled by force of circumstances to forego the pleasure of an outing, far from the cities and towns, were none the less remembered while we were enjoying the beauties of nature, and a life of freedom and pleasure in the forest depths.

The term "our" is used in the plural rather than as a customary form, as the party consisted of my wife, eight-year-old boy and self—and the trip was the result of several years planning and anticipation.

I once read the advice given by an enthusiastic vacationist, "That it is better to begin planning your vacations as early as possible in January, even though they are not to be taken until September, or later, as with the long time ahead there is so much anticipation, and even if adverse circumstances prevent your going then, you have at least derived much pleasure from it."

Assuming this to be correct, the pleasure of our trip may be somewhat imagined from the length of time it was still in the stages of design. One bright, warm morning in July, after having satisfactorily closed up our domestic and business affairs in the city of L , in Ohio, with the necessary good-byes to friends and scenes of city life, we took the train for Indian River, Mich. "Oh pshaw, I thought that fellow was going off to some wild place." I imagine I hear the foregoing exclamation, but let me tell you that this place is selected after a successful hunting trip the fall before, for the following reasons—accessibility by rail and thence by wagon, good water for camp use, boating and fishing, an abundance of game, from bear and deer down, freedom from intrusion from settlers and pot-hunters.

It was broad daylight, and with a clear eastern sky lit up by the rising sun, when we descended from the sleeper at the end of our railroad trip the next morning after we left home, and for a few moments before going to the hotel for breakfast we enjoyed the fresh morning air and the beautiful scenery, the glittering sheen of the placid waters, the fresh glowing sun over the bright green pine-tops to the east of us, birds singing in the wood, and here and there the slowly rising smoke from a villager's cabin, which betokens that man as well as nature is at the morning of day.

After a hearty breakfast with our genial host, H., while I looked after a team and our camp outfit, the good wife was preparing herself for a combined trip on foot and by wagon to the scene of future incidents by laying aside traveling clothes and donning outing duds.

As usual on such trips, where I generally walk a great deal, and sometimes find an inquisitive bear, I carried my .40-65 Winchester as a precautionary measure, and well, too, for about 7 miles out on the route to camp, sure enough, there sat a pleasing specimen of *Ursus major* just beside the path, and he seemed to delight in the antics of the terrorized horses, until I concluded to come into the game with a full ante of 260grs. of lead. This dose settled matters so that we had to hitch the horses to a tree and let them get over their fright.

M., the teamster, assisted me in removing the hide and hanging the carcass, the skin and a few choice cuts being taken along to kind of break in to camp life on, leaving the balance for M. to take into town for himself and friends on his return.

### Making Camp.

It was about 4 o'clock in the afternoon when we got to the little lake where I had desided on camping, and after getting the team nicely fed M. and myself unloaded and began making camp. Our 14x16 wall tent was first set up. Then the stove and other articles too heavy for one person to handle were put in place; boxes opened to get out the necessary materials for supper, which Mattie prepared while M. and myself carried the boat down to the lake, then we chopped off several fallen trees into good logging lengths and hauled them up to camp—for you know that to keep the cook in good humor, you must keep her well supplied with good firewood.

"I don't see much fun about that kind of an outing, there is too much work," you say, but that is to be expected and, of course, we do not look for a full measure of leisure for the first few days until things are somewhat "camp-shape." By this time supper is ready and, with the exception of bearsteak, our menu is quite civilized, excepting, of course, that we have said good-bye to milk in our coffee, with sundry dainties, and, henceforth, will take it as the Kentuckian does his whisky—straight. Supper over, M. hitches up his horses again for his return home, and after seeing him out of sight down the tote road, I resume my fit of industry and get a good bed built up in one corner of the tent, and of this bed I must tell you, for its comfort is grand: Four crotches driven into the ground so that two poles laid in them will be about 16in. high, across these two poles other smaller poles are laid slat fashion, then upon these we piled small hemlock twigs to a depth of 6 or 8in.—coarser ones at the bottom with butt ends all one way, then the fine ones on top. Over this is spread a piece of potter's cloth or a rubber blanket, then good heavy woolen blankets until it is soft enough. "Sheets?" why bless you, nor white goods of any kind—all clothing and bedding is as far as possible of woolen, and up there one can crawl in between blankets of a July night and not lose a minute's sleep.

### A Moonlight Row.

After completing the sleeping appurtenances, we go down to the lake for a row and spend an hour or so whiling away in the bright moonlight; just drifting about and talking of the pleasures of such a life, while the little boy in the bottom of the boat has laid his head on his mother's knee and gone to sleep, dreaming of the fish he will catch and the bears he intends to kill: for, like other children, he is full of life and hope. Once in a while we drift in shore and send a flock of water fowls scurrying up the lake; then as it grows later we occasionally see two bright spots in the shadows of the pines, and presently a deer steps down to the water to drink. Such scenes as this we are accustomed to and can witness without any desire to shoot at this season, as the deer are properly protected by the laws of the State of which we are guests and the freedom allowed sportsmen in the open season are considerations too binding to permit of unlawful killing of the State's game. Like all true sportsmen, we are so thoroughly appreciative of the pleasures and privileges of a resort to such a glorious place that no abuses will be permitted, and though deer may be seen every day, and within sight of the tent are partridges, or as they call them up here, sage hens, raising their young broods, yet no desire to kill is felt until the season is lawfully open.

Even my 10-gauge Remington is laid away till autumn and only the rifles are carried on our trip to secure our safety from a stray bear or an occasional wolf. Mattie uses a .32 Marlin repeater, which is well adapted to her, and her marksmanship is good, as is evidenced by the specimens in our collection—an eagle, two cranes, one great Northern woodpecker, a porcupine and some other miscellaneous trophies preserved by the taxidermist.

### Bass for Breakfast.

But by this time we have rowed back to camp, fastened the boat for the night and will retire. At daybreak next morning I am out and gathering up my fishing tackle, row quietly out into deep water, where a full mess of bass is caught for breakfast. In fishing as well as hunting nothing is taken more than to supply present needs, for of all abominations (Proverbs 12: 27) is the one who ruthlessly catches or kills only to throw it away, and as our stay here is to be a good long one, we want no unnecessary fuss to drive away the fish and game.

After cleaning those I have caught and setting them aside in a pan of clear, cool lake water, the next job is to get a supply of wood for our helpmeet and companion. As the chips begin to fly I hear a little stir in the tent; looking around I see a daintily wrapped figure emerging, fresh as the morning daisies. Somewhat anxiously I inquire as to how my wife enjoyed the night and her experiences thus far in camp life, for it is an uncertain experiment to coax a city girl off into the woods.

The dear creatures have such a horror of snakes, bugs and mice, but this particular little woman has accompanied me on several minor expeditions and acquitted herself honorably, so the fair reader can imagine that my questions were answered satisfactorily.

Taking a short stroll around the camp and vicinity and an exhilarating drink of water from the lake she returned to the tent to prepare breakfast.

"Hello there, son; where are you, and how did you like that for a night's sleep?" as the little fellow sat up among the blankets rubbing his eyes. "Oh, papa, ain't this fun, a real tent off in the big woods, and just think of what fun we can have here all the time." Then like a flash he was out of bed, climbing into his clothes, so anxious to be out and around that he could scarcely eat any breakfast.

Now it will take us a couple of days to get things fixed up in shape to really begin our outing, so I will leave the reader to follow Mattie and Walter in their rambles and walks around the lake while I devote my time to more arduous tasks about camp.

"Get lost?" Well some women might, but my wife is not in danger of it as she is provided with a compass that has a small map of the territory we are located in, said map being made after my trip through that section the fall before, and then, too, she carries the little Marlin all the time and two shots, our help signal, will start me on double quick to the rescue. Of course in these strolls alone she will not get more than a half mile from camp, and as I know the country thoroughly I could reach her if necessary in a very short time. Bears at this season are not troublesome at all, and I have faith enough in the finger that pulls the trigger to assure me that the little .32 would do its duty.

The reader may think that our preparations have been somewhat extensive up to this time, but I will say here that this is to be an outing in every sense of the word, and in all probability one that will last for me at least till the spring. Mattie and Walter will remain with me until cold weather (providing of course no sickness or accident occurs) so that she may try her hand on game both large and small; then she will return to the city, while I accompany her as far as the railway station, to guide back a party of chosen friends, who have come up solely for a shooting and among whom is my particular friend Frank B., who will remain with me for the winter and spring trapping.

With the coming of the gentlemen we shall abandon the tent and construct a substantial log camp in anticipation of long cold storms, but hold on, they have not come yet, and I must not get so far ahead of my story.

### "Outdoor Sports for Women."

The work being done up now and nothing to do but fish, row, bathe and roam through the woods, I must tell you of the new life it is putting into us all. I am an enthusiastic believer in "Outdoor sports for Women," and children, and having such examples of its virtues daily with me, I can fairly note the happy changes in my companions. Our fare is simple, hearty, easily prepared, while the work is almost nothing. As the food tastes better from Mattie's hands, I prefer to have her cook, though not because I can't, and I do all the dish washing and dirty work, leaving her to the many little pleasures of leisure. When it rains, we simply remain in the tent, reading, writing, or I make such additions to my map as have been suggested in our roamings. This map is serving a double purpose, that of keeping me in a spirit of close observation of my surroundings and as a very useful article when our party comes up. It is largely to this purpose that I am devoting it, for after an experience one fall in a strange locality, I wisely concluded that an accurate map would save many weary walks, and when a fellow downs a 200lb. buck four miles from camp, along toward the close of a November day, he naturally wants to know the quickest route to camp and supper, especially if there is snow on the ground, but of such an experience more anon.

### Berries and a Bear.

Sometimes we devote rainy weather to repairing clothing, etc., cleaning up the guns, or occasionally would use the lighter rifle or revolvers for target shooting. This necessitated reloading shells, a further source of occupation. Walter had seen some toy birch bark canoes on one of our trips, so I made a whole fleet of them for his amusement. He had also a little airgun using BB shot, which afforded him much diversion, but as we were favored with very little unpleasant weather, the time was passed quite agreeably. A neighboring huckleberry patch afforded many a relishing dish, and we dried not a few for winter use; then a little later, when blackberries began to ripen, we had many a feast, and it was on one of these expeditions that Mattie had a full opportunity of testing her valor and aim. We had been gathering berries until, tiring of it, we sat down to rest and eat some. I had walked off a little distance to look at a curiously grown tree, and while gone heard a scream followed by a shot back where the folks were. I turned and ran back, just in time to see a fairly sized bear go off through the brush, but not too late to send a few farewell mementoes with him. Assuring myself that all was well with the berry eaters I took up the trail.

About a quarter of a mile I found bruin sitting up licking his wound. As soon as he discovered my presence he assumed an attitude of defense, but presenting as he did such a fair mark, my first shot passed right through his heart, dropping him dead even while I was throwing the lever of my gun for another shot.

The killing of these two bears is recorded in very few words, no great excitement or tussle called forth, as we often read of. This may be attributed to two circumstances, first, both were good shots, secondly, the modern magazine or repeating rifle is a terrible weapon, both in penetrating and in speed of operation, and it requires more than an ordinary black bear to stop one of those 260 grain balls. But, dear reader, life was not always as smooth as when we were introduced to the presence of a bear. The other two that fell to our lot by the following spring, gave us a little more to remember them by.

Here we are a mile from camp, a woman, boy and a lot of berries to take care of, also a dead bear to hang and dress, but as it is early in the day, there is no hurry only on account of the last mentioned feature. I always prefer to get an animal dressed as quickly as possible after it is killed, as it is handled easier and is less objectionable for many reasons. Going back to report my success with bruin, I enlisted Mattie's assistance in my work. Together we got him hung up between a couple of trees, and when I removed the hide we found where the .32 ball had struck fairly enough, but in missing any of the vital parts, had merely caused pain enough to start him off. By the way, the aforesaid scream came from the throat of our brave little boy, who found a real live and very present bear loose in the woods, much different from his ideal as formed from acquaintance with tame ones in menageries, and his courage fell correspondingly, until his fears found vent in a yell. But once dead and safely placed, he had courage to approach and examine the cause of his fright. Mattie, too, felt much better then than before and ever afterwards, concluded to carry her own gun when we went away from camp, if there was any danger of my absenting myself from the party more or less.

This bear afforded us a great deal of meat and considerable gun oil. When brought into camp we immediately salted some and started more to smoking for winter use, for it would not do to waste any, and in fact that bear was partaken of until we were all nearly tired of bear meat. "Didn't you have any dogs?" No, not a dog—we have no use for curs, and as it was not open season for game a sporting dog would have been a useless feature. Then the laws distinctly prohibit hunting deer with dogs, so that we had no use for a hound, and as one dog will drive more game than five men, we did not want one on that account. Some dogs may be brought in later for use on birds and as retrievers in duck shooting.

We found plenty of diversion and excitement during the remaining warm weather, but nothing worthy of recording here. Our camp life is one continual repetition of leisurely fishing, rowing and walking excursions, which, with plenty to eat, are bringing color to the faces and flesh to the bodies, renewing life and spirit. Truly there is no remedy for the minor, and some of the major ills of life, like that afforded by nature in the seclusion of her fastnesses. Those burdened with domestic and business cares should try a season like the one herein described, for it is an efficacious medicine and one easy to take.

Day after day passed rapidly over our heads until we found the season open for smaller game, then taking advantage of it, we secured several substantial meals from the feathered denizens of the forest and lakes. With the advent of cooler weather, we feel like taking more extended rambles, during which the most likely places for larger game are noted carefully, and left as undisturbed as possible for future use.

### The Camp Company Changes.

At last draws very near the time for the arrival of our gentlemen friends and departure of Mattie and Walt for the comforts of city life, so we gather up and pack in the trunks the things of feminine and juvenile utility, and almost sadly start out to the nearest settler for a team to take them to the railroad. Certain it was that I should sadly miss the companionship so congenial and pleasant, yet with all enthusiasm Mattie assures me that she will look weekly for the letter detailing success in the chase, and Walt even has exacted the promise of a young fawn's skin to have stuffed for his own, together with sundry trophies so dear to a boy's heart. The farewells said, it was a hard job surely, but over now, and away down the track I watch the rapidly disappearing train bearing my loved ones away; yet in an hour will another loom into sight, and as she pulls in I see some familiar-looking boxes, etc., standing just inside the baggage car, but leaving that to the care of the station agent, I hasten to welcome the boys. Here's Tom, Frank and Doc, with two friends whom we will introduce as Hank and Joe, making with myself six in the party. We get our "truck" all loaded up and start back to camp as soon as possible, for it is getting late now and travel is not pleasant after dark in that country.

Nothing occurred to cause any excitement on our trip in, and immediately after arriving the eating, sleeping and unpacking preparations are entered into with vigor. Tom and myself are elected cooks, Frank is water man, while Doc, Hank and Joe will get up an appetite and a goodly woodpile at the same time; that being our arrangement while together, everything runs smoothly in the prescribed channel.

During the last few days of Mattie's stay I had gathered up sufficient material for bedding and wood enough for a few days at least, so that we could devote all the

time to getting our cabin built before snow comes. Now of course this particular job must be delayed more or less, for the boy's ardor for the hunt is such that it must be catered to, and with prospects of good weather and a good, comfortable tent to sleep in it does seem hard to work when we came up here to hunt.

One deer hung up near by satisfies all hands for the present, and the taste of wild meat makes them still more willing to get things fixed up, so that we can have an uninterrupted season of sport.

Now, this shanty or cabin is built of logs in the usual manner, covered with boards. It is sufficiently large to accommodate all hands, experience having taught us that a hunting party could stow away in pretty small quarters.

Hank and Joe take the boat almost daily with the avowed intention of providing ducks and fish, while the rest of us devote our time to deer and bear hunting, our evenings being spent in the usual camp fashion—cards, stories, smoking, and reading after mail days.

### Night Shooting.

Our usual programme is, arise at 4:30 and get breakfast over and work done up so as to be off to our runways and mast ridges by early daybreak. No dinner, only a lunch, carried in coat pockets. The first man into camp at night has to commence choring by firing up and lugging water. Supper after dark generally, unless there is to be some watching of runways at dark; if so, we usually dine at 2:30 or 3:30 P. M., that gives easy time to place ourselves by dark. This style of hunting is perfectly legitimate and usually successful. There is no light used, the hunter locating himself near a runway or feeding ground, waits patiently for the appearance of the game. If moonlight, a rifle, and if dark, a shotgun, with buckshot, will be the weapon to use. Keep absolutely quiet and still, and when perfectly sure of the game, then pull.

Perhaps to some nervous people this would be a trial, to be, as I have often been, sitting perfectly quiet for hours, as it seems, and at last you hear the slow step approaching nearer and nearer, then looms up the figure of a proud buck. No, not yet! Too far away; let him come a little closer. Steady! Hold your breath—now he is coming nearer; raise your gun very slowly and steadily, inch by inch, bending the head to bring the eye along the barrel, and just as soon as you think he is near enough, pull the trigger. If you have a rifle throw in another shell as quickly as possible, as you may need it, or if a shotgun hold your spare barrel ready for an emergency, offensive or defensive—even have two extra shells in your hand ready to throw into the gun—but no, he is down, and the next thing is to properly bleed him. Experience has taught that a wounded buck must be approached very cautiously, as even in their death struggles they are liable to seriously injure a man, of which fact Tom bears witness, as a few words will relate later on.

Now, for this night's shooting everything depends on the wind. A good strong wind is favorable if blowing from the direction from which the game may be expected and if brought to ground at first shot it is usually safer to plant a revolver ball in their foreheads before they recover from the shock. This will settle any little differences of opinion between game and hunter, and does not mutilate the animal like a body shot, nor does it nerve them into a fierce struggle as when they feel the edge of a knife at their throat.

### Tom's Deer.

Tom's deer you say? Well yes, and being his first I guess he won't care if I tell you about it, or perhaps he can do it better.

"Early one morning while quietly on my way to the 'North Grounds' as we called one of our favorite sections for deer, as I stepped into a little opening of perhaps four acres, I heard a rustling in the brush about fifteen rods away. With the motion of throwing my rifle into position, out jumped a large buck. He saw my motion and for an instant stood just as he struck, looking at me as I pulled the trigger. At the report of the gun he turned and bounded straight away from me into the brush but not quick enough to escape three more shots which I sent after him as rapidly as I could work the gun. Still with all my boasted marksmanship I saw my deer disappear in the brush. However, with some doubt as to my success, I started over to look for blood upon the leaves, and while following up the trail I soon came upon my deer, lying down in the struggles of death. Thinking to soon end his sufferings, I set my gun against a tree and drew my knife to cut his throat; approaching from behind I placed one foot on a prong of his antlers, and grasping the other branch of them so that I could hold him firmly, I reached over to put in the finishing touches, when as the knife touched the skin, rip! zip! thud! That deer had risen on his fore quarters and was trying to get over to where I lay on my back, about 20ft. from him. That he could not do, however, and finding myself not seriously hurt, I took my gun, thinking to finish him with a ball in the head, but as I made ready to shoot he dropped again to the ground, satisfying me by his actions that I could more safely approach him. This I did, but in future I will take no chances.

This deer, by the way, was a very large and powerful one, as we paid express charges on 205lbs. when dressed, the reader may judge of the size. The post mortem examination, which was conducted by an interested party, developed some remarkable results as to penetration, marksmanship and vitality, as of the four shots fired the first passed clear through back of the shoulders and out, another entering about an inch to one side of the median line and about an inch and a half below the root of the tail, passed through the large hip joint, shattering it completely, on through the stomach and ribs, then through the front shoulder blade and was found badly battered up just under the skin of the shoulder. One of the other two clipped off about 2in. of the tail, while the last, passing under the belly, ripped a gash about 8in. long. The cartridges used in this case were .38cal., 40 grains of powder and 180 of lead, developing, as shown, enormous penetration. From a description of these wounds it will be seen that a heavy calibered weapon is neccessary for deer hunting, as only in case of a heart or head shot will a light one stand any show.

During these hunts, where each man goes off alone, it may be of interest to the intending hunter to know what we consider a proper outfit of weapons, not touching the matter of clothing further than to remark that it should be of good texture and corresponding to color of trees, etc. Each man carries a repeating rifle, with ten to twenty extra cartridges, a belt, with revolver, knife and a small axe, a compass, of course, being indispensable.

Perhaps the reader may have become so interested in this subject as to want to know more fully all of the details of forest hunting. Before I became a sportsman I was an enthusiastic reader of sporting literature and eagerly devoured, as it were, ever scrap of outing miscellany. Even now my desires in that direction have not waned, and sometimes after a long day's hunt I am to be found at night reclining on the hemlock bed, reading, by the light of the lantern, the exploits of some other fellow who knows what it is to rough it in camp.

### Hanging Up a Deer.

Let us imagine a hunter as mentioned before, say about four miles from camp, standing over his 200lbs. buck, too far away to signal for help, and that deer cannot lie there till morning; it must be hung up, dressed and be so placed that foxes or other vermin cannot get at it.

Prepare from a good stout sapling a gambrel similar to that used by farmers at butchering time, insert it the same as for a hog or calf; now select a convenient tree with projecting limbs about nine or ten feet from the ground. On one of these limbs place the butt end of a stout pole, say 12 to 20ft., having first got the deer in shape under it, and with the small end of the pole passed through under the gambrel stick; now commence and work the deer up this inclined pole as far as you can, if necessary cutting notches for the gambrel to rest in to prevent slipping. With a good crotch stick ready, raise the small end of the long pole up alongside of some convenient tree as high as you can, placing the crotch stick under to hold it there. This will be high enough to dress it. Now if desired you can raise the deer still higher by cutting longer crotch sticks and pushing the end of the long pole higher thereby.

Dress a bear in the same way. This is a job where your ax comes in, and by the time it is done you find the shadows deepening around you, which, with occasionally an owl's hoot, gives warning of fast approaching darkness. You feel tired, but not desiring a lonely night's vigil by the root of a tree, you must hurry off to camp while it is yet twilight. Darkness will certainly overtake you, but you know the camp rules: "If any man is not in by dark, those in camp will fire two shots at intervals of two minutes, three times unless answered, then after fifteen minutes the same is repeated until answered, or two of the boys will start out with lanterns, firing signal shots occasionally." One shot from the missing party is the answer. Bang! Bang! Yes, they are shooting for you now; so raise the muzzle of your gun to deliver the sound well up in the air, and answer them. Away through the woods yonder came the sound of camp shots, cheering up the spirits and freshening the muscles for a finish of the day's work. Into camp again with a smoking hot supper awaiting you, then a general recounting of the day's adventures by all members of the party. Two deer, some ducks, partridges and a nice mess of fish are added to the list of eatables to-day.

Such is the usual routine of camp life, varied by less favorable days of storms and consequent scarcity of game.

### Winter in Camp.

Fortunately we have met with no accidents during our sojourn together, and with feelings of regret that the season is so soon over, Frank and myself help the boys pack up and see them aboard the train homeward bound, with a good supply of game in the baggage car for the folks at home. Back we go to camp for the winter, and as the daily events from now on will be so nearly alike, I will not bore the reader with more than a general idea of how we passed the time.

The season being one of severe storms, we usually hunt together for safety. Every morning making the round of our traps by boat when we can, on foot when the lakes freeze over, removing any game that may be caught for the fur, resetting when no signs of recent visitation from animals, or carrying into camp those we can find no new places for. When the ice gets stronger we fish through it for the gamy pickerel, or stormy days finds us close about camp, cutting wood, writing letters or reading, with the many odd little jobs to occupy our attention.

Our pack of furs is growing larger day by day, but as yet we have not succeeded in getting any more bears until along toward spring during a warm spell, we found some fresh tracks one morning not far from camp, and of course that fellow is our meat, even if we have to follow him a week. Back we go to camp for a supply of grub apiece and more cartridges; for at this time of the year that bear is hungry and cross, and in his search for food may lead us a long chase. How long the reader can judge from the fact that we camped on his track that night, and along in the afternoon of the next day came up with him in a swampy place, through which we had to crawl almost on our hands and knees. Hark! There he goes tearing through the brush, and bang! bang! bang! the old repeaters send messages of death after the black carcass. "Jeewhiz!" says Frank, "he is a buster sure, but I guess we will get him now."

Dropping all superfluous clothing and blankets on the snow, we tear ahead after him as fast as we can. After a good half-hour's chase, during which the sight of blood drops appearing on the snow with increased frequency is a strong stimulant to us—we come up to a little thicket of brush and are "brought up all standing" as a sailor would say, by a succession of very savage growls. Evidently bruin is at bay, and we must use great care, but care nothing! There is a rush and rustle of the brush, and before we have time to think that bear is almost on top of us. "Jump, Frank!" "Look out, Jim!" were the exclamations made as my .40-65 jumped to my shoulder in time to see Frank sprawling over the snow by a blow from that strong paw, and as he fell I fired at the bear's foreshoulder. Finding that he had another enemy, he turned to me, as again I sent a leaden command to halt, but halting was not in his mind then, and before I could get in the third shot, I was myself sprawling in the brush, while it seemed as though a mountain of hair and flesh stood over me. While trying to draw my revolver to give him a few of its soothing pills before he would be able to injure me much, Frank had gotten himself in shape and seeing my danger, took careful aim and fired, the ball entering back of his shoulder and passing through the heart. As he fell he gave me one farewell pat with those long claws which not only took off my coat, vest and shirts, but also went into the skin, leaving four little scratches to be patched up with court plaster. That's nothing, though, for a bear hunt, and "we got him," hide, meat and all.

### A Bear "Scrap."

While taking that bear into camp, we found where another had been eating the carcass of a deer which had evidently died of a wound. The weather being fine, we concluded to patch up a little before trying issue with that gentleman. Next morning bright and early, we started on the trail, following it all forenoon, and coming up to a settlers found that they had frightened the bear away from their pig-pen the night before. This settler, Mr. B., wanted a little bear meat and concluded to join us in the hunt. After a good warm dinner at his house all three started out, taking his mongrel dog Jack. We tracked that bear all the afternoon, and at night stopped with another settler Mr. Y., who joined with us the next morning in the renewal of the chase. The weather turning very cold in the night we hoped that our game would den up somewhere near.

Out on the track again, through the woods and "burnings" across lakes and streams, sure enough we found an apparent ending to those queer-shaped footmarks. Just ahead there is a tangled up mess of trees, branches and blackberry brush, the work of some wind-storm and the prolific brier. Leaving my three companions to wait for me, I start out around the pile, making a complete circle back to the waiting trio, finding no signs of bruin's departure. "Yes, he is in there," but how to get him out, is the question. My little strips of court plaster remind me that I don't want to crawl in there for a private interview with a sleepy, hungry, beary bear; for my gentle intrusion might suddenly awaken him to a renewed appetite and liveliness. No, that won't do, but as the others are a little backward about forming a close acquaintance with live bear meat, something must be done. We can't freeze him out, don't want to burn him out and can't coax him out. Our dog Jack, too, is very expectant (of a chance to run home as fast as he can), if his manner is at all indicative, for he stands back on the trail, with closely reefed tail and sides shivering with cold or fear, plainly showing that we can expect no assistance from him.

Well, I've crawled after the game before and as I'm here to hunt, hunt it is. Doffing overcoat and closely buttoning my canvas hunting coat about me, with my rifle left conveniently near the entrance, revolver in right hand, trusty hunting knife in the other I start in on "all fours." It begins to smell "beary" as I get further into the pile and listening quietly I hear a wheezy breathing still further in. Now, dear reader, don't think that I am a Daniel Boone or Davy Crockett, for candidly I am not, and just then I wished myself far away "o'er hill and dale" where I had more friends, but with a bear ahead of me and three men behind me to laugh at my cowardice (well they might laugh when they were better fixed to run or fight), the situation was becoming more desperate. I considered matters as calmly as my pardonably excited condition would allow, evolving a plan whereby I might wake up that bear without letting him know who did it. Locating his body as near as I could by the breathing, I backed out until nearly to the entrance, still having as I judged a straight course for the bullets. Noting the position well, I went on out to report matters as they stood, explaining my intentions. Knowing full well what dependence I could put on Frank, I had him remain at the entrance with rifle cocked, Mr. B. was detailed half way around on the right while Mr. T. took up a position on the left.

Thus arranged with due caution not to shoot me instead of the bear, I went back in as far as I dared, intending to send three or four shots from my revolver, and then get out as quickly as I could. This scheme worked perfectly. "Fools for luck" every time, with my third shot I commenced crawfishing my way out as best I could, and as I reached open air a yell from Mr. T. announced "Here he comes." Bang! bang! "Hurry up, boys," bang-bang-zip-zip-zip, there goes Jack, whose fear was forgotten in the excitement, the bear still going on through the windfall. "There! he's stopped to fight the dog," and pell-mell we rushed to the spot from whence Jack was sending yelps of offense. By not having an overcoat to hinder my motions I soon overtake T. and arrive first to the "scrap." One shot from me and from Frank, another and another, which finished matters just as B. and T. arrived on the scene. The hide was all we took, leaving the meat for our friends, as we had plenty in camp. Going back we stayed over night with Mr. T., taking the round of our traps the next day; and although we found an occasional track in the woods as spring approached, no more bears were killed.

We continued our trapping until about the middle of April, when breaking camp, we again sought civilization, feeling that our outing had been all that we had planned it to be, not, however, enough to completely allay the desire, and now each season finds us again, for the brief period allowed by law for deer hunting, living in a canvas house on the bank of a lake, where memory recalls many scenes of comfort and pleasure.

JAMES KNIGHT.

## Game Notes from the Pecos Valley.

EDDY, New Mexico, Dec. 20.—Mr. W. F. Krum and Mr. Harold Gregory, of Chicago, have just returned from an antelope hunt on the staked plains. They went out forty miles to a small lake, in the vicinity of which they found sumething like twenty bunches of antelope, from ten to fifty in each bunch. The country was almost perfectly level and the hunters found it impossible to get within easy shooting distance. They succeeded, however, in getting one antelope, plenty of quail and one coyote.

Mr. Albert Netherland, who lives in the Guadalupe Mountains, about seventy miles west, lately brought in ten deer and two antelopes, which he sold to a local meat market. A hunter who lives near Roswell killed and brought in, a few days ago, eight antelope, which he sold for $1.50 a head. Miles T. Stone brought in, on Wednesday last, nineteen deer and a bear, which he killed in the Guadalupes. All good people regret to know that this market-hunting is being carried on; but there is no means of preventing it, and since it is being done it is just as well to let it be known, in order that the readers of FOREST AND STREAM may know where they can find game when they want it. G. O. SHIELDS.

## FOR UNIFORM LAWS.

MINNEAPOLIS, Minn., Dec. 23.—A meeting was held here last week to agree upon a uniform game law, which may be recommended to the several legislatures of Michigan, Wisconsin, Iowa, North Dakota, South Dakota and Minnesota. James J. Hogan, of La Crosse, was elected president and A. F. Ferris, of Brainerd, secretary. The following were present: H. W. Wilder, Grand Forks, N. D.; James Nevins, Superintendent of the hatchery at Madison, Wis.; T. S. Grigg, Fish Commissioner, of Spirit Lake, Ia.; Dr. R. O. Sweeney, Superintendent of the hatchery at Duluth; S. S. Watkins, of St. Paul; Wm. Bird, of Fairmount, Minn.; Frank L. Stetson, Game Warden of Minnesota; Secretary Andrus of the Minnesota Fish Commission. The meeting discussed a bill prepared by Mr. Andrus, and a committee on legislation was appointed, which consists of Senator Calvert Spensley, of Mineral Point, Wis.; Senator E. F. Mack, of Storm Lake, Ia.; W. L. Wilder, Grand Forks, N. D.; W. P. Andrus, Minneapolis; Dr. S. P. Bartlett, Quincy, Ill.; Col. Winsor, Sioux Falls, S. D. A thousand copies of the proposed bill will be printed and placed in the hands of the members of the several legislatures. A strong effort will be made for uniform seasons in the several States, which will do away with the shipping of game from one State to another. Spring shooting will be abolished and the season for ducks and chickens will open on the same date. It will also be unlawful to shoot any birds for sport. There was a strong sentiment in favor of a game warden or deputy in each county invested with enough police powers and backed up with a sufficient amount of salary to make them wide awake and fearless enough to head off and bring to justice the pot hunter and poacher.

It is an open secret that deer are killed out of season by parties that could easily be brought to book, but as the law now stands it is almost impossible to obtain convictions in country justice courts. W. F. D.

## CHICAGO AND THE WEST.

*[By a Staff Correspondent.]*

### Trapped Quail.

CHICAGO, Dec. 24.—Warden Bortree tells me that the markets here are full of trapped quail coming from Kansas. They come in thousands, by boxes, bags and barrels. "For heaven's sake," said Mr. Bortree, "shake up the sportsmen out in Kansas. What are they about? The destruction of quail this fall by netting and trapping is perfectly fearful. They come in here by thousands, not a wing broken and not a shot mark on them. We ought to have a clause in the Illinois and Indiana laws like that in the Missouri law, forbidding the having in possession any bird that does not show shot marks."

It is no unusual sight to see countrymen come in on the trains to Chicago carrying strings of very neat and not much demoralized quail. The most of these come from Indiana. I suppose many more quail are trapped there than are shot.

Our quail season is now over here for this year, closing last Tuesday for Indiana, where most of the Chicago shooters go. In addition to the good bags made by Chicago men on quail this fall I should add that of Mr. O. Von Lengerke, who bagged 41 on last Saturday near Ackron, Indiana, and 18 the day previous. Mr. F. C. Donald, in his November visit to Page county, Iowa, near the Missouri line, had very good sport, he and his brother-in-law bagging over 100 in four days' shooting. Their top bag was 32 in one day, which they thought was quite enough. Mr. Donald tells of a singular point made by his dog on this hunt. The dog was crossing a small stream, and when about half way across, and leg deep in the icy water, struck the scent of a bird on the opposite bank, and pointed hard and fast where he stood, the bird being put up some moments later, the dog remaining in the water, staunch on the point all the time. This I believe to be an incident that would not often happen.

### Mollie O'Brien.

Mr. G W. La Rue writes from New York regarding the obituary of the late Mollie O'Brien, the dog which Mr. Roll Organ took out hunting and didn't bring back. Mr. La Rue incloses a handsome picture of a shepherd dog for Mr. Organ to give Mr. O'Brien as a souvenir. I always wondered how Mr. Organ was going to break the news to Mr O'Brien about Mollie O'Brien's death. From Mr. O'Brien's story it would seem that it was much like the case of the laboring man who proposed marriage as a way of breaking the news gently to a lady who was ignorantly a widow.

"You know that dog I borrowed of you?" said Mr. Organ.

"Yes," said Mr. O'Brien.

"Well, you ain't got any dog now," said Mr. Organ, and then he walked away.

The jokes don't always go Roll Organ's way. I recall a time when Jack Wiggins and a friend or two were down in Florida. At a little railway station they met a negro woman who had a lot of children with her, one only a few months old. Jack got talking with the old aunty, and inquired the names of all the children. It appeared that the youngest had not yet been named. An idea struck Mr. Wiggins.

"I'll tell you what I'll do, aunty," said he. "If you'll name that boy of yours 'Roll Organ,' I'll give you a new calico dress."

"Go 'way!" said the lady.

"I mean it, it's business," said Jack.

"Well, sah," said the lady of color, "ef you'll jes' write dat name down on er piece of paper, an' gib me two dollahs fer a new dress, I suht'ny gwine baptise dat boy jes' dat veh'y name." So the bargain was concluded, and I do not doubt that to-day there lives in the wilds of Florida a hearty black boy who exults in the name of "Roll Organ." Under a system somewhat like this, about fifty of the pushers and natives around Mak-sawba club house have named their sons "Roll Organ," and I once met a dog in Indiana that was called "Roll Organ." He was no good, too—I mean, either.

### A Good Pack Bag.

These piping times of Christmas remind one of Santa Claus, and Santa Claus reminds one of a pack sack. I have discovered a pack bag made by a man away up in Duluth, Minn., which is a rare thing, a practical pack bag. It is patented but practical. It is about 22 inches wide, rather higher than that, and made with a cover flap, which gives it as much holding capacity as you like. The cover buckles neatly down with long straps. The carry straps are so set on that they catch the shoulder naturally, and can be adjusted. With this bag a man can make a tramp under a good-sized load with much more comfort than with any I have yet seen, and I have tried a good many poor ones and good ones. This bag also has the Indian forehead or "tote" strap, sometimes called "lump strap." An Indian will not pack except with the strap passing over the forehead. As to the shoulder straps, he usually remarks briefly, "Ugh! Hurt Injun heap!" I find my new bag very convenient for carrying rough clothing, ammunition, etc., on a brief hunt out of the city. Not so heavy as a canvas carryall-bag, more convenient than a long sailor-bag, and better than a trunk or any number of valises.

### For Advertisers.

At Warsaw, Ind., one day this week, I saw an advertising wall card which showed that the enterprising fakir had been faking in an newish sort of way. This scheme was to print on this elegant chart, guaranteed circulation half a million, the advertisement of each local merchant at, say, $5 a head, each advertisement to be framed in terms not of harsh prose, but in flowing English verse! The total was headed "Warsaw in Poetry." One of these sheets I obtained and shall long keep it as proof of the astounding things that human beings can do. The "poetry" was horrible beyond the wildest dreams of travesty. No one can know how ludicrously tough it all was, for I have only room for one sample, which I commend to the attention of the able advertisers who are to be found in the columns of FOREST AND STREAM in ineffective prose. The local sporting goods dealer was thus mirrored forth by the advertising artist:

Should you wish to go afishing
A fowling or what not,
Call in and view a sample
Of what H. J. Mansfield has got.

Sportsmen will find guns, rifles here
For shooting ducks, rabbits and deer;
He'll furnish powder, shot and shell
The very best and treat you well.

His double barrel shotguns
Are just what you desire,
And his rifles and revolvers
Did never yet miss fire.

All goods to suit the sportsman
On every class and kind,
Fishing tackle, and outfits
The best you here will find.

All of these things Mansfield supplies
And he's the man to patronize.
Tis said his goods are cheapest
And none deny his claim;
And if you trade with Mansfield
You will also say the same.

If Mr. G. Harry Squires, Mr. W. C. Thorne of Montgomery Ward, etc., or other hard laboring young men who have to frame new advertisements occasionally, will cast their eyes upon the above, I think they will learn something to their interest. The full flower of advertising as a fine art was left to bloom in Warsaw. New York and Chicago can only gaze in envy.

### Photographing the Fair.

Apropos of FOREST AND STREAM'S "Rod, Gun and Camera" series, an excellent thing, one that has attracted much attention in this section. It may be of interest to many amateur photographers to learn that a fee of $2 is charged at the gates of the World's Fair for any camera taken on the grounds, and no camera larger than a 4x5 photo is allowed to be used by any but the official photographer. The management is afraid of having its intellect photographed, I presume. It looks to me as though a good source of free and valuable advertising was thus cut off, and many of the people deprived of what might seem their right to an interesting and valuable privilege. E. HOUGH.

175 MONROE ST., Chicago.

## THE POT-HUNTERS OF PIKE.

MILFORD, Pa., Dec. 19.—*Editor Forest and Stream:* The article in your issue of Dec. 15 signed F. Y. H. should be read by every sportsman, pondered over, remembered and acted on. No truer words were ever written, and they confirm in every way all that I have seen or written on the same subject. I can even go further than F. Y. H. in showing up the pot and market hunters of Pike county. It is time that some action should be taken to save the game of this great State. There are men able to do it. Will they not act?

Not a better hunting district is to be found than in Pike county, but it makes the blood of a sportsman boil to see the slaughter of game, every law broken, no game associations, no game wardens, not a voice raised against the lawbreakers, the law a dead letter.

The lawbreakers are known. Year after year the same men continue their work. The county papers publish the names of the hunters, compliment them on their success as shots, and laud the results as a credit to the men and abundance of game. This season shows 100 deer killed, and a safe estimate of illegal killing by hounding is eighty. The best known lawbreakers have twenty deer to their credit. Grouse are snared by the dozens, other game killed out of season, and no word is heard against it. The farmers are desirous of a change in the game laws, and there is a possibility of some action being taken by the coming Legislature.

What is needed is a leader and unity of action. Cannot this be done? Y.

### Game in Minnesota.

TOLEDO, O., Dec. 24.—At St. Paul, Minn., a few days since a decision was rendered in a suit brought for the violation of the game law of the State which raises an interesting question as to its effect, if sustained, on protection. Merrill Ryder, who keeps a meat market on Jackson street, in St. Paul, was arraigned in the civil branch of the municipal court charged with selling venison out of season. The accused showed to the satisfaction of the court that the game in question came from adjoining States, and contended that for this reason he was not amenable to the laws of the State of Minnesota in its sale. This view was sustained by Judge Cory, who heard the case, and the defendant was discharged. It would be desirable to learn what were the grounds on which the St. Paul court took this view of the violation of the State law, and whether he regarded the latter as in conflict with the law regulating interstate commerce. Is not this something new?

A Toledo game dealer the other day, in his list of game in season, advertises "English pheasants, the first ever brought to this market." JAY BEEBE.

## THE NEW YORK GAME LAWS.

SYRACUSE, N. Y., Dec 24.—*Editor Forest and Stream:* The following amendments to the game law have been submitted to the Committee on Legislation of the Executive Committee of the State Association for the Protection of Fish and Game:

SEC. 30. Amend so as to read as follows: "Special Protectors: The Board of Commissioners may, in its discretion and at pleasure, appoint or remove a person recommended by any Board of Supervisors, or by any incorporated society, for the protection of fish or game, as special protector, who shall possess the same powers that are conferred upon State Protectors; such special protectors shall receive no compensation from the State, but they shall receive from the county wherein the work is performed, compensation for their services at the rate of $3 per day and their necessary expenses, not to exceed the sum of $100, exclusive of expenses in any one year, and the same shall be a county charge to be audited and paid as other county charges are paid. The accounts shall be verified as similar accounts are required to be verified. They shall make similar reports to those required from State Protectors."

SEC. 41. Amend by inserting after the word "venison" the words "elk and antelope," and strike out of said section the words "or out of the State."

SEC. 44. Amend by striking out the words "eleventh," "tenth" and "September" in the second line, and inserting in place thereof the words "first," "twentieth" and "October."

SEC. 47. Amend by inserting before the word "crusting" the words "floating and jacking."

SEC. 49. Add, "and rabbits and hares shall not be hunted, shot at, killed or possessed, between the first day of January and the first day of September."

SEC. 70. After the words "south of Iona Island," amend by striking out the words "and that portion of Lake Ontario known as Great Sodus Bay."

SEC. 75. Amend by striking out the words "or out of the State," and by adding at the end of such section the words "China pheasant shall not be caught, killed, sold or possessed in the State of New York for five years."

SEC. 77. Strike out the words "and excepting in the counties of Onondaga, Wayne, Oneida, Cayuga, Wyoming, Genesee, Niagara, Monroe, Erie, Chautauqua, Cattaraugus and Orleans."

SEC. 102. Amend by adding the words, "Having in possession nets, or fish caught or killed in any manner or by any device, except angling, upon the shores, islands or inland fresh waters of this State, shall be sufficient evidence of the violation of this section."

SEC. 108. After the words "landlocked salmon" insert the words "pike and pickerel."

SEC. 110. Amend by inserting after the words "thirtieth of May," "except in the waters of Lake Ontario, in which black bass or Oswego bass shall not be fished for, killed or possessed between the 1st day of January and the 15th day of June."

SEC. 111. Strike out the words "eight inches" and insert in place thereof "one pound in weight or one foot in length."

SEC. 112. Strike out the words "thirtieth of May" and insert "15th day of June."

SEC. 120. Amend by inserting after the words "$10 for each fish caught," the words "killed or possessed."

SEC. 132. Amend by adding after the words "any islands therein," "nor within three miles of the mouth of the Niagara River," and by striking out all of the words in parenthesis as follows "The waters of Lake Ontario in the county of Jefferson, included between Blue Rock Point, in the town of Brownville, and the town line between the towns of Lyme, Cape Vincent, including Chaumont Bay, Griffin Bay, Three Mile Bay, are hereby exempt from the provisions of this act."

SEC. 134. Amend by striking out the word "eighth" and inserting in place thereof the word "half."

SEC. 140. Amend by striking out the words "It shall be lawful to fish for bullheads with fyke nets in Seneca River, in Cayuga, Wayne and Seneca counties, but not in any part of said river, within fifty rods of the mouth of the Clyde."

ART. 9. Amend by inserting a section after Section 214, as follows:

SEC. 214A. "After the laying out of the grounds for private parks, and the due publication and posting of the notices provided to be published and posted in this article, and upon filing in the clerk's office of the county where the premises are situated, proof by affidavit that the foregoing provisions of this article, as to posting and publishing notices, has been complied with, an order may be entered in any court of records in the county where the premises are situated, reciting the fact of such publication and posting of notices, and declaring that the premises therein described have been constituted a private park, in accordance with the provisions of this article."

A certified copy of said order may be read in evidence in any civil or criminal action or proceeding, as evidence of the facts therein recited.

SEC. 215. Amend by inserting after the words "or interfere in any way with," the words "or catch, shoot, kill or possess."

SEC. 217. Amend by inserting in the first line, after the word "article," the words "is a misdemeanor, and in addition," and by striking out after the words "damages in," the word "an," and insert in place thereof the word "the," and after the word "amount," strike out the words "not more than," and insert in place thereof the word "of," and after the word "lessee," insert the words "and penalties in the sum of $10 for each fish so caught, killed or possessed, and $25 for each wild bird or wild animal so caught, shot, killed and possessed."

SEC. 236. Amend by striking out in Section 236 as follows: After the word "may," in the fifth line, insert the words "prosecute for and," and after the word "penalties," in the same line, add the words "and fines;" after the words "such person shall be entitled to" strike out the words "one-half of," and after the word "penalty" insert the words "and fines," and after the word "recovered" strike out the words "the other half to be paid to the Board of Commissioners."

SEC. 237. Amend by adding the words "No person imprisoned under an execution against the person, as herein provided, shall be admitted to the liberties of the jail."

SEC. 248. Amend by adding to the section the words "the fact of giving such evidence by an offender against a co-offender in any civil or criminal action, prosecution or proceeding shall be a bar to any civil action or criminal proceeding against such witness."

WALTER S. MACGREGOR, Chairman.

### Long-Sighted Shooters.

For the benefit of those who have grown old and require spectacles to shoot on the wing, I give the following advice: Put the glasses upside down. This brings them higher than the usual way. Place the right-hand notch of the connecting arch over the nose, if you are a right-handed shooter. This brings the glasses to the left. With the glasses thus placed a shot made far around to the left will not bring the rim which surrounds the glass come between your eye and the game. If you are a left-handed shooter place the glasses to the right. By wearing the glasses in the usual way they are apt to slip down unperceived, and the rim gets before the vision or even below it, and in side shots the eye is quite sure to look outside the rims, and the shooter misses his mark without knowing the reason why. Old shooters, try it, and see if you haven't something to thank me for. N. D. ELTING.

### Woodcock Weights.

AVOCA, N. C.—While out shooting on Dec. 19 I shot a woodcock that weighed full 8oz. down weight. It was the fattest one I ever saw. Who can beat this? There seems to be quite a lot of them here for so early.

S. W. EVERITT.

### The Gun Tax Again.

MEDINA, Tenn., Dec. 19.—Quail are very abundant in this vicinity; turkeys scarce; foxes and gray squirrels, coons and possums fairly plenty: and well-trained dogs over plenty, as the writer has Bruce M. and friend Dick Morgan has a full dozen cracks along.

The farmers, or rather the planters, are, as a rule, friendly toward us, as we are here for sport and always ready to divide our bag of birds with them. The market shooter would find no favor here, as, in Southern parlance, "they have no use for him."

There is one nuisance that should meet "short shift" here, and that is the negro with his pot metal gun, who is found sneaking around every cornfield, cotton patch and fence corner, where it is his delight to find a covey of quail huddled up in a bunch to fire into, though every bird or beast that comes his way is meat for him. The only way to stamp out this evil is to put a heavy license on guns owned in the State, and then enforce the law rigorously. STANSTEAD.

### A Stray Pheasant.

BUSHKILL, Pa., Dec. 19.—The only English pheasant ever seen in this county, was killed lately by a party grouse shooting. It is supposed to have escaped from Tuxedo Park. Y.

### Making Up a Texas Party.

SAN ANTONIO, Tex.—Texas to-day is the finest and best hunting and fishing ground in the United States, for such game as deer, antelope, chicken, quail, plover, geese, duck, brant, swan, turkey, curlew, snipe, wild hog, squirrels, rabbits and doves; and such fish as black bass, channel cat, blue cat, trout, perch and crappie; and on the bay we catch sea bass, trout, redfish, Spanish mackerel, flounder, tarpon and jewfish. Florida is "not in it" for tarpon. We are making up a party now and want six or seven more of our Northern sportsmen to join us. We shall leave here betwetn Jan. 3 and 10, and are going on a grand hunt on the bay for geese, duck, brant, swan, snipe and curlew, and on the Island for deer, coon, fox, etc. It will be one of the best outings one can have and the expense is very light; we shall be out from two to four weeks, which ever we agree upon, and our expense will not be more than $10 per week, that including board and boat. We shall sleep right on the schooner and have our cook and everything complete. There are now three from Illinois, one from Iowa and two of us Texas men, but we want a party of ten or twelve, as we can have a better time and it will not cost so much. We can hunt, fish and root up oysters, and go flounder spearing at night. This is only for some of the boys that really want a good time and to show what we have here. One can get round trip excursion tickets very cheap. Come and join us, you are heartily welcome. We don't sell town lots, nor are we real estate agents, but true sportsmen, and it does us good to see others enjoy themselves. L. F. MEYERS.

## Camp-Fire Flickerings.

"That reminds me."

A SHORT time ago, just as the glorious orb of day was sinking peacefully to rest behind the western hills, a solitary fisherman might have been seen wending his quiet way toward a country hotel not more than fifty miles from the center of Ottawa county, Michigan.

The said fisherman's creel was as full of emptiness as when he shouldered it at early morn. His inward faintness, rumblings and grumblings plainly denoted nothing there "nuther."

The bar room of the hotel, barring a long board bench and a flaming poster announcing when the next county fair would be held, was as empty as both of the above-mentioned articles lumped.

There was no obsequious landlord nor pompous clerk with a seventy-five candle power electric light on his expansive short front to welcome the weary, hungry fisherman; but a dapper, bustling, nervous little woman soon put in an appearance, to whom the self-invited guest quickly made known his wants, which were simply supper, lodging, breakfast and a chance to wash; all of which the little landlady said could be furnished, "provided he would put up with country fare." Of course he would. All that was required for supper was bread, butter, tea and some boiled eggs. This matter being settled to the entire satisfaction of both parties, he was shown into the wash room, the little woman brought in a tin wash basin about half full of water, hurried out and soon returned with a piece of bar soap, the corners of which had been nicely rounded off probably in doing the family washing. There was more hustling about, when on her third appearance a towel was brought in and properly deposited on one corner of the sink. Silence reigned, with the exception of the spluttering over the wash bowl, for a short time, when it was again interrupted by the fourth appearance of the energetic little lady, whose entire manner and expression of countenance denoted perplexity and doubt. Gloomy gravity, seriousness and distrust were plainly frescoed all over her little face. She hesitated, sort of held back, as though she had undertaken a tremendous job and was sinking under the fearful responsibilities assumed. After the towel had been hung on the window fastener and the clean, shiny face of the party of the first part shone with becoming gentleness and lenience on her, she partially regained her former composure, sidled up to him, drew a long breath and mildly asked, "Would he have one or two eggs for his supper?"

A. W.

GRAND RAPIDS, Mich.

### Perfection in Traveling.

AT 6:00 P. M. daily one of the handsomest trains in the United States and known as the North-Western Limited leaves the passenger station of the North-Western line in Chicago on its journey to St. Paul and Minneapolis, the twin cities of the Northwest. Vestibuled throughout, and equipped with buffet, smoking and library cars, private compartment sleeping cars, drawing room sleepers and superb dining cars, it furnishes its occupants with every comfort and convenience which could be desired by the most fastidious. While in its entirety it undoubtedly takes rank with the finest trains in the world, there are two features of its equipment which deserve especial mention, for they are new departures in the western railway world: The buffet, smoking and library car is furnished in the most luxurious manner with comfortable arm chairs, writing desks, book cases and a well stocked buffet, from which light refreshments are served. The private compartment sleeping car is designed especially for the accommodation of family parties and ladies traveling without escort. It is composed of ten separate compartments, each complete in itself, and containing washstand, hot and cold running water and all necessary toilet arrangements. Aside from these two features it is in keeping with the rest of the service to say that the supper served in the dining car after the train leaves Chicago is a meal calculated to please the epicure. In a word, if you desire to travel in the most comfortable manner and make the trip to St. Paul, Minneapolis, or any point in the Northwest, in the quickest time, be sure your ticket reads via the North-Western Line. Maps, time tables and full information can be obtained upon application to any ticket agent, or by addressing W. A. Thrall, General Passenger and Ticket Agent, Chicago & North-Western Railway, Chicago.—*Adv.*

## Natural History.

### HAVE ANIMALS A SENSE OF DIRECTION?

THIS is a suggestion of great interest to the lover of the dog, and the student of animal mentality generally, and one which has been threshed out round many a camp-fire, if not exhaustively, at least as nearly exhaustively as the condition admitted of. The general tendency has been to answer the question in the affirmative, on the plea that the facts adduced admit of no other construction. With a like tendency the question has been propounded and discussed even in scientific journals, and this, too, by men who could easily have reached right conclusions if they had only trained themselves to a habit of investigating such problems critically and systematically. Let me now put the readers of FOREST AND STREAM on the track of thinking out the problem for themselves.

A *sense* implies a sense-organ connected with the brain by a sensory nerve, which latter conveys to the brain the perception of objects apprehended by the sense organ. If the animal can locate an object beyond the sphere of the sense-organs of seeing and hearing, the presumption is that the special sense-organ must be very conspicuous. Not only can we not locate any such organ in the dog, for example, but physiologists and anatomists have failed to detect it. It is quite possible that some of the insects have special sense-organs of whose special mode of operation we have not and cannot have the faintest idea. The sense of sight does not afford any insight into the mode of operation of our other senses, nor could our five senses afford any possible clue to the mode of operation of a sixth sense. But turning to the higher vertebrate animals, the fact that we cannot discover an additional sense-organ, if not conclusive evidence against the existence of a sixth sense, is at least strong negative evidence against it.

Let us now approach the problem by considering the facts in evidence. A dog is taken by rail a journey of 200 miles in a circuitous course, and set free at a distance of fifty miles from his home. He disappears, and the next day turns up at his old haunts. Presumably he has taken the short cut, but perhaps if we could follow his tracks we should find that he did not take a bee-line, but first reached familar home scenes a mile or more off the direct lines. This is, however, parenthetical.

Now let us suppose that, during the dog's absence, the house has been burnt to the ground, and that the family has removed to a point five miles distant, and equally with the home from the point at which the dog is set down. If the dog had the supposed sense organ he would as easily locate the family as the old site, he will nevertheless make for the latter.

It may here be objected that there is not sufficient evidence on this point. Well, let us take another and more familiar illustration. The dog is chained. The master leaves the camp gun in hand, vanishes into the woods, and makes a detour which at the end of an hour brings him within half a mile of the camp on the opposite side. The dog is then let loose, and if he had the supposed "sense of direction" could locate his master at once; would, in fact, have located him at every step of his course. But, instead of making straight for where he then is, he trusts to his eyes and nose, and sets off on his master's trail.

Here, then, we have positive evidence that the dog has no "sense of direction," no extraordinary means of locating objects, no means of locating places, except through their perceived relation to the place on which he now stands. If the dog could locate an object by any faculty other than the senses which he enjoys in common with man, his being thrown off the scent would be no bar to his continuing the hunt.

A dog, at the close of a day's march, however devious, has a clear knowledge of the relation of the place he stands on, not only to the camp he left in the morning, but to every point of the route. The route is, as it were, mapped out to his perceptions at any instant he tries to recall it. This knowledge he, in common with all other animals, owes to a faculty of close observation, sub-consciously performed, along with an intelligent perception of relations.

This faculty is not inherent under all circumstances, and is enjoyed in varying degree by different individuals. It is, moreover, liable to interruption by any startling or confusing circumstance. The clue is of course lost in sleep.

It may be objected that this explanation does not cover the difficulty, that animals may be carried from home in closed cages, and will nevertheless find their way back. This is very interesting and remarkable, but as it is vain to hypothecate a sixth sense to account for it, the most reasonable method of accounting for it is to assume a highly developed sensitiveness to every change of direction.

Darwin made some experiments with bees which throw light on the subject. Having captured some bees, he placed them in dark paper boxes and carried them some little distance by a circuitous route. Being set free the bees all returned to the hive. He took more, carried them by a similor circuitous route, but while en route he spun the boxes round rapidly. Only one or two bees found their way back to the hive, and these, presumably, by accident. While being spun round they lost perception of the direction in which they were being taken.

This faculty of perception of the direction taken is very low in man; it nevertheless exists in sufficient strength to enable us to appreciate the higher development of the faculty in our friends, the other animals. Blindfold a man with his shoulders square to the wall of a large hall and bid him walk straight forward fifty paces: he will ordinarily deviate considerably from the straight line. Take his hand and tell him you will guide him in a straight line, and you may lead him around the sweep of a large circle while he supposes he is going in a straight line, but if you try to lead him round and round in a small circle he will quickly realize the fact.

Experiments with some other animals force us to conclude that animals caged, or blindfolded, may be carried and turned in any direction without for a moment losing their perception of the route they are being taken, with all its curves and angles, as long as their faculties are alert and their perceptions quickened to the task.

C. F. AMERY.

## Sea and River Fishing.

*The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.*

### MY FIRST FISH.

UP to date my heaviest "string" has been fifteen chub and catfish weighing all told, including the stringer and a fair amount of thumb pressure, 2¼lbs. So I am going to tell of my first fish that could be honored by having his name commence with a capital letter. The string above referred to was one of several caught and proudly carried home many years ago, when a walk of ten miles before breakfast, a mud bath all day and a return on foot in the evening had no terror for a pair of hearty boys.

However, as the bald spot grew balder and I set up the remembrance of those days as the foundation of my knowledge of the sport, I concluded that fishing was "no fun," and all the yarns told by friends as to the pleasure to be had in whipping northern waters as mere emanations from a well stocked vocabulary.

It so happened that I reached Spirit Lake early one season and was there converted, it being, I think, the quickest conversion on record. It happened this way:

Mr. A., an insatiable old angler, round, plump and jolly, who has fished in all the waters of this fair land from Maine to Mexico, one morning took pity on my woebegone looks, and invited me to accompany him in his private boat. "For," said he "although you are not heavy enough for ballast you are plenty long enough for a mast and may be of some use in getting us home in case our engine breaks down; the engine in the case being Larsen, a stalwart Dane, whose superior as a waterman I have never seen.

So it turned out that in a few moments I was seated snugly in the comfortable tilting pivot chair at the stern of the roomy boat, prepared to string anything from a cod to a catfish, my mind not being exactly clear as to the kind or quality of fish to be found in the lake.

My companion, who occupied a mate to the chair I was in, in the middle of the boat, commenced business early and drew in several pretty perch, which he unceremoniously cast back into their native haunt, telling me, when I remonstrated, that he was "out for fish, not kickers." Quite frequently he would pull in a 3lb. pike, and when 7 or 8 of this tribe had been gathered to their fathers, while I had not felt the semblance of a nibble, I concluded that something was decidedly wrong, and determined to try the old plan, in which most boys have more implicit confidence than in their prayers—to spit on the bait; so I reeled in. Hardly had the spoon touched the water when a jerk nearly pulled the rod from my grasp, and in a moment I was all excitement.

"Whoa! Larsen!" I shouted. "By the great eternal! I've hooked a fish that is a fish! Whoa!"

"Steady, Doc," said my companion, "or you'll upset the boat and spoil the machinery. Just clean your hooks and drop them over again."

A quiet chuckle from him and a loud laugh from Larsen quieted me somewhat, and I subsided entirely as the spoon with a steady drag came to view with about 14 fathoms of weed. Several times this thing happened, and at each pull I would be positive that I had anything but the weeds, only to find my hook again and again entangled. Becoming somewhat discouraged, my mind reverted to the old days of chub and catfish, and I had about reached the old conclusion that fishing was "no fun," when the reel, with a zip-biz-iz z! startled me from my reverie.

"Hold on, Larsen," I said, "I've got another 'Burgess bite'," meaning that I had caught the bottom. The "Burgess bite" was named in sarcasm after one of the lodgers, who occasionally came in from his day's sport with same great yarn about a phenomenal fish which "carried away hook, leader, sinker and line, barely saved the rod by skillful handling; fact, now, sho!"

"Burgess, nothing! That's a daisy," growled Larsen.

"No, you've hooked a good one this time, Doctor, and if you let him get away, overboard you go," so said my friend in the middle of the boat as he rapidly brought his side line out of the way. "Take it easy," he added, as I, becoming aware that there was an indefinable something on the end of that line which sent a very extraordinary thrill coursing up and down my spinal column, made a lunge at the reel, which kept up its song until checked by my rude hand.

"Take it easy! Easy!" If every fibre in my body had been a nerve, and every nerve attached to an electric battery, I couldn't have been less at ease than at that moment.

Larsen kept the boat so situated that I constantly faced my game. I tried to reel in the hundred feet of line, but was so nervous that time after time my fingers slipped, and the quarry unwound more in a second than I could regain in a minute. I endeavored to pay attention to A.'s instructions, but his low groans and Larsen's words, "not loud but deep," rattled me, and at each biz-i-iz my reel made I grabbed for something, anything that was handy about my tackle. Once I had rod, line and reel all in a death grip for the purpose of checking that song, and brought up my runaway "all standing" with rod bent nearly double, and the line as taut and straight as a piano wire. I felt A. give the seat of my chair a kick, and a word from Larsen, not so deep this time, put a little sense into my calvarium, and I determined to have that fish, if I had to lasso him and pull him in hand over hand. The shock, luckily, had done no damage, for M. W., from whom I had borrowed the outfit, was too old a hand not to have the very best stuff in his tackle, so the only effect was to make the frightened beauty jump. And jump he did, his four feet of glistening scales and the enormous splash nearly making me lose my head again.

Giving ear to A.'s injunctions, I reeled in, once more endeavoring to bring my prisoner near the side of the boat, and still not too near. We had no gaff, and my companion considered a dip net only good for ladies' use. so I must work my yanking monster closer and closer all the time, fearful lest he dash against the side of the boat and free himself. His head appeared and a great shovel nose protruded above water. A hand reached far over; the brilliant, fiery eyes watched for a brief second

then the enormous mouth opened to an alarming extent, exposing to my wondering gaze the whole internal organism of that fish. It closed like a steel trap, and A.'s hand was out of sight—in his coat pocket. At the same instant he made a rush and again my reel sang its song. I thought I had lost him and was in despair, but Larsen just then shouted, "Never mind, Doc, he's all right. You've got him hooked clean down to his tail!" Cheering words, those, to a tyro with his first fish in tow.

Once more he leaped in a vain effort to free himself, although A. said he was merely endeavoring to get a good look at me before he came aboard. My heart leaped with him and I hung to the reel handle as firmly as though it was my only hope of salvation. I coaxed him in once more; he was getting tired now and fought less fiercely. His brilliant eyes glared again at the side of the boat. Surer than a gaff, A.'s plump hand had him by the small of the neck and with the same sweep lifted him over the gunwale and dropped him on the floorboards, where he laid but a second before commencing the most exciting dance I had ever witnessed. I became so anxious lest he jump overboard, that had it not been for Larsen's broad grin surely I should have lain down on the lively creature. He weighed a plump nine and was the best pickerel taken that season.

A few days later I took a mate weighing 7½lbs. on a hand line, but he made no fight until after he was landed.

A. seemed to think that I needed coaching, and I don't blame him, so I managed, under his judicious tuition, to make quite a pretty string of pike and bass before we turned homeward, but to this day I enjoy hooking nothing so much as a gamy pickerel.

A.'s lessons will be remembered long after those given by the professors of book and birch have been forgotten, and the teacher himself, or at least a vision of him, appears with every thrill sent along my nerves by a "strike."

## ANGLING NOTES.

### Further Concerning Hudson River Salmon.

MY information in regard to some one who attempted to impersonate a New York Fish Commissioner at Mechanicville, about which affair I made a note last week, was of course most reliable, otherwise it would not have been written; but thinking there was more to be learned about the matter, I wrote to a gentleman connected with the Pulp Company at Mechanicville, asking what he knew about it, and he writes me as follows: "The story about the visit of the New York Fish Commissioner to this place is true, because I am the one that he called upon. The man appeared to be under the influence of liquor, and he said his name was Barber and that he lived in Greenwich, Washington county. I pointed out a large salmon in the raceway, and then he wanted a gun or spear with which to kill it, as he said he had been notified by the Fish Commission to get them a salmon in any way that he could, and send it to them. The watchman at the Plaster Mill says that the next morning about 4 o'clock the man still calling himself Barber was at the mill and asked for a spear, but the watchman (Wheeler) would have nothing to do with him, although Barber offered to watch while Wheeler went for a spear. The fishway is filled up with drift wood so no fish can pass through it. No one has been here to examine or inspect the fishway except Commissioner Barber, and he is a daisy."

I presume it will be unnecessary for me to say to any one in the least familiar with the organization of the New York Fish Commission, that this man Barber is not one of the Commissioners, and that he was simply an imposter masquerading as a Commissioner. That he fooled my correspondent is evident, for all through the letter from which I have quoted he refers to him as "the Commissioner." I find, however, in the list of State Fish and Game Protectors that the protector for the seventeenth district is Charles H. Barber, and that his residence is given at Greenwich, Washington county, and that his district embraces Warren, Washington and Saratoga counties. Whether this is the man that appeared at Mechanicville, and, calling himself a Fish Commissioner, desired to kill a salmon illegally, of course I cannot say; but if it is, it would seem that he is wholly unfit to hold the position that he does. A gentleman who once held the office of Fish Commissioner in this State writes me: "It should not be necessary for private citizens to report upon the condition of the fishways, as the game protectors are paid to do that work. When I was on the board I made it a point to have them visit the fishways frequently during the season to see that they were in working order and that the law was observed." Of course game protectors have no right to spear salmon, and Fish Commissioners have no right to order it done. If the man who called himself Barber was really the State game protector of that name, it was his duty, when he found the fishway closed with drift so salmon were unable to pass through it, to see that it was cleared instead of wishing to kill the salmon that were prevented, by his negligence, from going up stream to seek spawning grounds.

### "Fifty Rods to the Fishway."

The New York fish and game law contains this provision: "The Commissioners of Fisheries are required to maintain, fifty rods from any fishway erected by the State, and on both sides of the stream, signboards containing substantially the following notice: 'Fify rods to the fishway; all persons are by law prohibited from fishing in this stream between this point and the fishway.'" A few years ago I wrote an article in which I took the ground that this fishway limit was too sweeping (at that time the distance was eighty rods instead of fifty rods as at present), as it was the intention of the law to prevent fishing for fish that congregated to pass the fishway. The close distance required at one fishway to protect ascending fish may be twice or three times as great as the distance required at another fishway. It is obvious that there must be a fixed distance to apply to all fishways, but what should this distance be? Is not fifty rods too much? Eighty rods was evidently, for it has been shortened.

My Mechanicville correspondent writes me on this subject thus: "I had a letter from Mr. Rogers a little time ago in which he said he thought the people should take sufficient interest in the fishway to keep it clean. Well, no doubt they would if it were not for one thing. The law which prohibits fishing within 80 rods of the fishway has spoiled the fishing for our place, and the fishermen who would be interested are now wishing the fishway would go down the river, or become such a failure that it would fall into decay. Now, I do not defend this view, but give it to you as I hear it. The law as it now stands stops all fishing here, for after you get beyond the limit the river is of no account, as all the rapids are covered by the limit. I think it might be done away with just as well as not and do no damage to the fish, for hook and line fishing cannot work a great injury."

It is apparent that the signboards at Mechanicville have not been changed since the limit was changed, for this correspondent writes of it as 80 rods. If private citizens must be depended upon to clear the fishways, if game protectors go to the fishways only to spear or shoot fish, it might be well to have such a law as the citizens want, and that they will then enforce: still, I think there should be some protection for fish around the mouth of a fishway, but 50 rods may be a greater distance than is necessary to secure this protection.

### Foresight and Hindsight.

Being greatly interested in the lake trout I have written much about them, their habits, manner of fishing for them, etc. Repeatedly I said that they never jumped above the surface of the water when hooked, when seeking food, or in play. I said it because I belived it to be true. I had fished for them for more than twenty years, fished in the spring when they were at the surface, and later in the season when they were at the bottom. I flattered myself that I knew quite a bit about the lake trout, and if any one had questioned the statement about their jumping I would have been quite ready to take issue with them on the subject. I had seen trout feeding on whitefish at the surface every spring for years, and knew the "boil" they made in the water without showing themselves as well as I knew one of these fish when it was dead in my boat. I had seen the fish, as I supposed, under all possible conditions and had never seen one above the surface until it was gaffed. One spring I was trolling and turned my head to watch an approaching boat, when between the two boats a lake trout shot out of the water with a leap as fair as ever was made by a black bass or a salmon. Within the next half hour another and larger trout jumped in a like manner clear above the water as gracefully as any fish ever jumped. The lake was still, not a ripple on it, and I recognized the fish distinctly, and in one minute hindsight knocked foresight galley west and crooked.

Only last week I said that I had not seen any complaints because pike were found in trout waters in England, and assumed that the people over there accepted them as a necessary evil and netted them out and kept them below the point of actual danger to the trout, and eschewed making any great fuss about it. That note was scarcely in type before I saw a letter in *Land and Water*, which, while it is not exactly a complaint against the pike, shows the fish in a new and undesirable light. The question as to the movements of pike in a stream having arisen—one authority, no less than the late Francis Francis, claiming that the tendency of the pike was to work down stream; another, Major Turle, that all fish except the grayling work up stream—the writer of the letter produced evidence that the pike works up stream, back for feeding and breeding, and more than that works up against very strong water. Writing of the Stour he says: "Higher up the stream is broken by low falls into sharp shallow water and swirling pools . . the keepers told me that they had killed a 9lbs. pike high up the river, so this fish must have ascended the small falls and rapids."

The pike is not credited, generally, with being able to ascend much of a fall of swift water, but I once caught a pike under conditions that I was careful about giving unless I had a witness to the capture close at hand. I was fishing under Palmer's Falls on the Hudson for black bass and my companion was Dr. James G. Porteous, of Poughkeepsie. The time was early in the summer and the water was at a "good pitch" in the river. We fished just below the falls, which are 60ft. high, in the rough water. Little by little I worked up stream until finally I put my bait directly under the downpour and was a little surprised to get a strike. A fish to get there from below had to go through wild water, and I have some doubt about a bass being able to do it. I hooked the fish that struck and the downpour of water formed such a current upward against the rocks I was able to save the fish, which to my intense astonishment proved to be a pike. Had he got out of the open stream section he must have taken my tackle simply from the force of the water below.

### Mr. Stanley's Trout.

The last issue of FOREST AND STREAM mentions Mr. Stanley's brook trout as weighing 12¾lbs. Is Mr. Stanley credited with two brook trout of about this weight? He was credited with one, I know, and concerning that one I quote from his letter now before me: "In regard to the big trout you want to know about, I cannot vouch for the truth of it, yet I think it is correct. They were caught after I came away. * * * He (Frank Henry, who was dipping blueback trout) first dipped the big fish (a female), which was so large he had the curiosity to weigh it, and it weighed 12lbs. A few minutes after he dipped a male of 10¼lbs., both ripe fish, and he put them back."

A. N. CHENEY.

## NEW YORK STATE ASSOCIATION.

THE annual winter meeting of the New York State Association for the Protection of Fish and Game will be held in Syracuse, Jan. 12. Each club will be entitled to representation by nine delegates. Important matters will be considered. A full attendance is desired. Clubs and individuals in sympathy with the association are cordially invited to unite with it. For copies of the constitution address JOHN B. SAGE, Sec'y, Buffalo, N. Y.

### Striped Bass and Black Bass.

THE upper Delaware River had a late run of striped bass, according to Fish Commissioner Ford. Large numbers of these fish were seen during the latter part of October and early in November. Anglers took them by trolling with lamprey eels for bait. One of the specimens captured weighed 8lbs. Black bass were plentiful at the same time. Just below Dingman's a bass weighing 5¼lbs. was taken.

During the season, states Mr. Ford, small bass weighing from ¼lb. to ¾lb. were in excess. He frequently took 50 or 60 in a day, and of this number not more than 15 would be carried home. The year 1891 was especially favorable for the spawning of black bass because of the absence of freshets during the nesting season in spring.

The last spring was favorable also for the rearing of black bass in the Government ponds at Washington. Fifteen adults, brought from Quincy, Ill., late in 1891, were placed in a large pond near the Washington Monument. The young fish observed during the summer were estimated to number nearly 80,000, and had it not been for cannibalism doubtless most of them would have survived. The number actually counted and stored in tanks for stocking ponds and streams reached nearly 39,000. Most of these were about 4in. long, but the cannibals, to the number of 500, averaged about 8in. in length, and some weighed fully ¼lb.

As a result of this first and extremely successful experiment the U. S. Fish Commission will be able to stock more than 100 streams and ponds. We are informed that arrangements will be made to increase this work greatly in the future.

## Fishculture.

### INTERNATIONAL FISH CONFERENCE.

DETROIT, Dec. 20.—A conference of the various State and Canadian Fish Commissions opened at the Hotel Cadillac this morning. The last conference was held at Hamilton, Ont., Dec. 8, 1891, when an adjournment was taken to meet here in October last, but owing to the pendency of the political campaign the meeting was postponed until to-day.

Those in attendance at the session were C. F. Osborn, of Dayton, representing the Ohio Fish Commission; L. D. Huntington, president, and W. H. Bowman, secretary of the New York Fish Commission; Samuel Wilmot, Ottawa, Ont.; Edward Harris, Toronto, Ont., and Thomas Marks, Port Anthony, Ont., representing the Dominion Fisheries Department; F. W. Gould, Leasport, president of the Fish Commission of Maine; Dr. Robert Ormsby Sweeney, Sr., of Duluth, president of the Minnesota Game and Fish Commission; Herschel Whitaker, Hoyt Post and Frank N. Clark of the Michigan Fish Commission; C. W. Keyes, of the Sandusky Salt Fish Co.; Frank J. Amsden, of Rochester, N. Y., member of the New York Cheaper Fish Food Association; S. A. French, of Baltimore; Judge J. J. Speed, W. W. Griffin, Wm. Dupont, A. G. McDonald, John Zimmerman, Otto H. and C. H. Rush, C. H. Moore, George C. Green, Wm. Craig, and A. Solomon, all of Detroit.

The meeting was called to order by Mr. Whitaker, who stated the object of the conference to be a free discussion of the laws of each State governing fisheries, with a view to the adoption of a universal system throughout the entire country. It is also desirable, he said, to adopt a uniform law governing the duties and powers of State wardens which shall secure a satisfactory enforcement of such laws as should be adopted by the various States for the purpose of regulating the taking of fish and game. Commercial fisheries, said Mr. Whitaker, should also be an important matter to come up for discussion, as well as the best methods of restocking the streams and of securing to the public the benefits of artificial propagation. The various State and Dominion governments, he said, have been liberal in the matter of supplying fish for food, but we all know that the laws already enacted are being openly violated and therefore for the purpose of acquiring universal laws we have asked men interested not only in fishculture, but in commercial fisheries, to meet with us and discuss these important matters.

In the absence of Senator McNaughton, of New York, who had presided at previous conferences, Mr. Whitaker was chosen chairman, and Frank J. Amsden, of Rochester, N. Y., secretary.

Letters were read from Hon. Emory D. Potter, of Toledo; A. Booth, of the Booth Packing Company, Chicago; Messrs. Dunning of Wisconsin, Skinner of St. Lawrence, N. Y., Secretary Stewart of the Canadian fisheries conference and a number of others, all of whom regretted their inability to be present.

A letter was also read from Levi Brown, of Saud Beach, Mich., a fisherman of 30 years' experience. He admitted that state fish hatcheris had been of incalculable value to professional fishermen, but thought more stringent laws should be enforced for the protection of the young fish. He would make a penalty of from $100 to $500 for every whitefish of under 1½ pounds found in the possession of any person, fisherman or otherwise. He also thought every state should adopt a close season system for the purpose of giving the fish a much needed rest.

Chairman Whitaker announced the first topic for discussion to be the necessity for an efficient enforcement of laws by a paid fish and game department, and intimated that as the conference was international in its scope Mr. Wilmot, of Canada, might enlighten those present on the subject.

Mr. Wilmot said that if the object of the meeting was to consider the question of game laws from an international standpoint he and his colleagues from Canada must withdraw, as international questions should only be discussed by the highest bodies in the countries interested. If it was to be an interstate session he would be glad to give those present the benefit of his observations. He, with the other Canadians present, had been appointed by the Commissioner of Fisheries to investigate the subject in all the Provinces. They were now on their way back from Manitoba to Ottawa, and were instructed to stop at Detroit for the purpose of attending the conference.

Mr. Huntington, of New York, gave an outline of the system now in vogue in New York for the protection of fish and game. The chief game protector in that State is paid $1,000 per year and traveling expenses. Violations of game laws are prosecuted by the State Commission and fines accruing from convictions are divided, one half going to the deputy protector making the complaint and the other half to the Commission, which is utilized in engaging counsel to prosecute obstinate cases. Mr. Huntington thought the only possible way to enforce fish and game laws was to place the entire matter in the hands of the Commission.

Mr. Bowman, also of New York, said his Commission had spent much time in educating the public on the importance of protecting fish during the close season and the results were better than could be expected.

Mr. Gould, of Maine, said the game wardens in that State were paid $2 a day and their actual expenses paid out of State treasury. They make a daily report and all fines go to the county treasury and thence to the State treasury. They have 200 wardens without any chief.

C. F. Osborn, of Ohio, said his state has one warden and a deputy for each county, and thought the only manner in which fish and game laws can be strictly enforced is by placing the wardens under the direction of the State Commission.

Hoyt Post, of Detroit, offered a resolution to the effect that the necessity exists for an efficient and uniform enforcement of protection laws by a paid fish and game department on the general basis of the New York laws.

Dr. B. O. Sweeny, president of the Minnesota Fish and Game Commission, outlined the plan of action in his State. Deputy game wardens are appointed for two years and are compensated out of a treasury replenished by fines for vio

lations. He regretted to say, however, that the laws are violated with impunity, owing to inefficient laws which are yet in a crude state. In many cases charges are dismissed by police justices with the remark that deputies should be engaged in better business, as there is game and fish for everybody who has the time to hunt for it. The chief game warden is paid $1,500 per year.

Other members of the conference gave their views and an adjournment taken for lunch.

After dinner the delegates went on a tour of inspection to the fish hatchery on Joseph Campau avenue, and all the visitors were favorably impressed with what they saw. There are 180,000,000 whitefish in various stages of propagation at the hatchery. Herschel Whitaker says it is the greatest display ever gotten together.

The conference reconvened at the Cadillac at 4:30 o'clock. The subject discussed was: "Should There Be a Close Season for Whitefish?" Hon. Samuel Wilmot, of the Fisheries Department of the Dominion of Canada, argued long for the adoption of a law which would be uniform with the Canadian law making the month of November a close season. He also wanted the size of meshes increased to 4½in. This would prevent the capture of small whitefish, probably up to the size of 1½lbs.

C. M. Keyes, of Sandusky, opposed both ideas. He represented the interests of six large fishing concerns and claimed that November was the best month for catching whitefish. As to decreasing the size of the meshes he believed that the fishermen should be instructed to throw back into the water all fish within a certain limit, but protested that no law should be passed that would in any way hamper the fisherman's business.

In the evening the whitefish discussion was resumed, the almost unanimous verdict being that there should be a close season extending over the whole of November if possible to enforce the law.—*Detroit Tribune.*

## PENNSYLVANIA FISH CULTURE.

DURING the year ending June 1, 1892, the fish hatcheries of Pennsylvania produced nearly 78,000,000 of fish, which were planted in the waters of the State. The U. S. Fish Commission also deposited 9,500,000 shad in the Susquehanna and Delaware rivers by request of the Pennsylvania Commission.

The fish deposited included nearly 59,000,000 of pike-perch, 15,000,000 of whitefish, upward of 3,500,000 of trout, 345,000 salmon, besides rock bass, black bass, strawberry bass, yellow perch and carp.

In the Delaware, 32 shad nets, set in violation of the law, were captured and destroyed. Upward of 400 baskets were taken out of the Susquehanna, and numerous arrests were made for killing fish illegally.

Chairman Ford informs us that the State obtained about 35,000,000 whitefish eggs which are now in the hatcheries at Erie and Corry, besides the following trout eggs:

| | |
|---|---|
| Von Behr (or brown) trout | 250,000 |
| Lake trout | 400,000 |
| Hybrid trout | 400,000 |
| Brook trout | 3,500,000 |

The brook trout are about equally divided between the Corry and Allentown hatcheries.

The next legislature will be asked to appropriate money for a new hatchery in the central part of the State, to meet the ever increasing demand for trout. The appropriation for the entire work, including the protection of fish and game by wardens in nearly every county, is only $20,000 per annum, a sum which might be doubled with advantage to the State.

## BROOK TROUT DEFORMITIES.

ALL persons who have reared fish know that monstrosities are frequent among the young, and especially among trout and salmon. Individuals with two heads or two bodies are common. The spinal column is often bent more or less and occasionally is twisted into a spiral form. These freaks of nature seldom or never live to maturity unless the vertebræ resume, or nearly resume, their normal line of direction. Mr. Stone once marketed a trout aged three years which, from having a dark skin and a crook in his back, had been nicknamed the "Black Crook."

The accompanying illustrations were made from a series of typical deformed specimens which were presented to FOREST AND STREAM by Superintendent J. P. Creveling, of Allentown, Pa. The outlines were made by carefully tracing from the bodies of the fresh fish. The lengths of the trout are the following: Fig. 1, 5in; Fig. 2, 7½in.; Fig. 3, 6¼in.; Fig. 4, 8in.; Figs. 5 and 6, 6½in. Figs. 1 and 3 show parr marks very plainly; none of the others have these signs of youth.

Mr. Creveling has found that deformed trout often yield eggs and milt, but we have not yet learned from him what effect the abnormality of the parent has upon the development of young from its eggs.

Deformities of the kinds here represented are not always congenital; in some cases Mr. Creveling has traced them to injuries of the embyro after it has left the egg. Undue pressure on some part of the spinal column may produce several of the types of fish illustrated. The thickened lower jaw of Fig. 2 may have resulted from an accident after birth. The length of the upper jaw in the series of specimens shows that nearly all the trout are males.

Dr. Francis Day has given, in his "British and Irish Salmonidæ," a very interesting chapter on monstrosities. According to this author, "The following divisions of monstrosities and deformities, as seen among fishes, may be observed: (1) Due to *constitutional causes* as from young parents, hybridization, etc.; (2) *congenital or hereditary* causes as hereditary monstrosities such as the various races of gold carp; (3) *acquired* causes or *accidental circumstances* as arrest of development or accidents to the embryo prior to hatching * * *

"The types of simple monsters may generally be classed under one cause, arrest of development occurring in the normal course of embryonic life. And these may be shown in the head, wherein the eyes, mouth, upper jaw, lower jaw, or opercles may be affected; or the body, as in some portion of the vertebral column, or in the fins which may be shortened, lengthened, or the rays in an abnormal condition.

"Sometimes the upper jaw is the shorter, sometimes the lower * * *, and these monstrosities, especially the latter, are common among hybrids and fish raised from young parents. Although these monstrosities may be occasioned by increased growth, they are more commonly due to the arrest of development in some of the bones of the head.

"The bulldog deformity of the snout * * * is by no means rare, more especially in fishes raised by the fishculturist. The example figured was sent me from a burn near Perth, but I have also examples of *fontinalis* from Howietoun with a similar deformity, one of which was a female, from it many eggs were obtained, but none of the young were thus malformed, it not being inherited.

"There may be an apparently shortened lower jaw, as is more commonly seen in hybrids or in fish artificially raised than in those in their natural condition. Many, however, do not seem to be born thus, and at Howietoun it has been observed to be most common in such as are kept in wooden tanks, and supposed to be owing to their using their lower jaws with injurious force against the sides occasioning some deleterious effect. Sometimes the lower jaw is twisted round to one side, and may likewise be lengthened. * * *

"In 1747 Mr. Barrington sent a paper to the Royal Society on the 'Hog-backed Trout of Plinlimmon.' He remarked that they occurred in watersheds where there were considerable falls, and theoretically it seemed probable that such might be occasioned by injuries occurring to the embryo, and in 1886 I tried what would be the effects of concussion on eggs and their contents, and while the embryo was still unhatched, and assisted by Mr. S. Wethered, F.G.S., we ascertained that concussion had occasioned spinal injury. In accordance with its extent the young fish has curvature of this portion of the body, and in the slightest cases they recover but with shortening of the spinal column, occasioning hog-backed deformity."

An illustration of the effects of concussion in transporting eggs may be found in the last report of the California Fish Commission, page 25. Referring to operations with the eastern brook trout (*fontinalis*) which were brought from Carson, Nevada, to the Bear Valley hatchery, he wrote: "The total amount of spawn received was 362,000. The total loss of transplanting was 18,882. As the spawn neared the period of hatching quite a number of the eggs hatched out and died. The embryo would burst from the shell or membrane and die soon after. These were all organically weak, the result unquestionably of carrying the green spawn so far over the rough road. After the eggs were hatched there was an unusual number of malformed embryos in the troughs, the effect of the jolting the ova received on the way from the lake to Carson. Those embryos that came from the eggs in a healthy condition developed into fine healthy fish."

Among wild trout in our experience deformities are seldom or never seen. They undoubtedly occur, but in the sharp struggle for existence all of them fall victims to their vigilant and persistent enemies.

### The Bristol Steel Fishing Rods.

THE Bristol steel fishing rods, made by the Horton Manufacturing Co., of Bristol, Conn., have stood the test of time and are growing in favor with anglers all over the world. From testimonials in the company's handsome little catalogue just issued it would seem that these rods combine lightness and elasticity with an unusual degree of strength. They are made in fourteen sizes varying from a 6½ oz. fly-rod to the heavier weights of casting and bait rods. Progressive anglers would do well to give this rod a trial.—*Adv.*

CHALLEN'S Records save publishers, advertisers, business and professional men time, labor and money. 10 Spruce st., N. Y.—*.*

### FIELD TRIALS.

1893.

January.—Pacific Coast Field Trials, at Bakersville, Cal. J. M. Kilgarif, Sec'y.
Feb. 8.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y.
Feb. 13.—United States F. T. Club Trials, New Albany, Ind. P. T. Madison, Sec'y-Treas., Indianapolis, Ind.

## THE IRISH SETTER CLUB'S FIELD TRIALS.

THE second annual trials of the Irish Setter Club began at Lexington, N. C., on Dec. 19. They were run on the grounds of the Central Field Trial Club, for which privilege a stipulated sum was paid, the sum it was said being $75 for two days and part of a third. Of course the business arrangements of the two clubs are their own private concern; but it impresses me that the sum mentioned is most unreasonably large for the privilege aforementioned, the more so when it is considered that the grounds were not in the least protected. It was commonly reported that they were shot over without limit; that birds were netted, which was strongly corroborated by the facts that nets were owned by parties on the grounds, and the large number of netted birds in the market. The Central Club did not complete its leases till a few weeks ago, therefore its ground were not a preserve in any sense of the word. If my memory serves me correctly, the large grounds of the Southern Field Trial Club only cost the club $120 or $130 per year rental. The Irish Setter Club could easily get grounds of its own, if it makes the effort. Any town should gratuitously and cheerfully rent grounds for any field trial club which will make the town its headquarters. What with charging full day rates to any dogman who stays a day or a month, the large demand for horses and carriages, the renting of a large number of vacant buildings for kennels, etc., the presence of a field trial club is a small bonanza to a country town and insures bread and butter for a year to a large part of it.

It is one of the anomalous features of a doggy man's life, however, that he has to pay full dog rates by the week, whereas a brother who is not a doggy man can get week rates which rarely in the country exceed $1 per day.

The judges were Messrs. John Davidson, Wm. Tallman and the reporter of FOREST AND STREAM, the latter acting as referee.

Many good dogs in the stake were improperly prepared both in respect to experience and training. It is a mistake to enter dogs in these trials in such a state. It brings the breed into unmerited adverse criticism. A trainer, who brings dogs improperly conditioned for hard work and imperfectly broken, is doing himself harm and his employer an injustice. I trust that Mr. Irwin will particularly note these lines, and the real cause of his magnificent kennel being out of the competition may be thus made plain to him. The expenditures of the hundreds of dollars was money wasted, not to mention the value of lost opportunities.

There is not, except in a few instances, the willingness that there should be among Irish setter owners to further, by personal effort, the interest of the breed. The many leave too much work and expense to the few. Such a policy can not fully succeed. United action is necessary. Apathetic expectation never accomplished much. If Irish setter owners would even give their support by making entries or giving some kind of material aid, such earnest and tireless workers as the efficient secretary, Dr. G. G. Davis, would attend to the rest, in all probability, if his ceaseless efforts in the past is any criterion of the future. Without a general shaking up among Irish setter owners, and concerted effort for the general good, no hope for any rapid progress need be expected. Still, the trials are a success and can be made permanent. I refer to rapid and important success. Among the admirers of the red dogs were present the secretary, Dr G. G. Davis, Chas. T. Thompson, James Thompson, Dr. Wm. Jarvis, W. H. Beazell, Pittsburgh; Nelson McIntosh, William Warner, J. M. Tracy, Frank Work, New York; Joseph A. Hunter, Washington, and others.

### THE DERBY.

This stake had ten starters. The work was very inferior. Few birds were found and these with great difficulty.

The winner of first, Sagas Tearaway, started well, ranged the best of any dog in the stake at the outset, but gradually narrowed down his range to a few yards and his speed to a trot. He carried a high head and had a merry action in his first heat.

The other winners, Tillie Boru, winner of second, and Rockwood Dandy and Molleen, dividers of third, may be grouped as indifferent performers and winners more from force of circumstance than from force of good work.

The drawing was as follows:

Glenmore Kennels' bitch Glenmore Ownie (Elcho, Jr.—Romaine), W. T. Irwin, handler,

*with*

W. H. Laird's bitch Tillie Boru II. (Tearaway—Tillie Boru), George E. Gray, handler.

George E. Gray's dog Sagas Tearaway (Tearaway—Tillie Boru), owner, handler,

*with*

Charles T. Thompson's dog Rockwood Dandy (Desmond II.—Fly), John White, handler.

Perry & Switzer's bitch Hawkeye Queen (Claremont Patsy—Nora of Claremont), George E. Gray, handler,

*with*

Dr. Wm. Jarvis's bitch Romayne (Duke Elcho—Romaine), S. C. Bradley, handler.

F. L. Cheney's bitch Molleen (Henmore Shamrock—Daisy), Horace Smith, handler,

*with*

Glenmore Kennels' bitch Glenmore Appie (Desmond II.—Nellie), W. T. Irwin, handler.

MONDAY.

A dense fog and a raw temperature prevailed during the forenoon. The fog was remarkably thick. About 80 to 100yds. was the limit of vision, but it was rarely indeed that a dog got out of sight. The afternoon was favored with better weather. Still birds were moving all day long, as indicated by their presence in the open stubble and sedge fields when the dogs found them.

*First Series.*

GLENMORE OWNIE AND TILLIE BORU started at 8:50. Both made game roading quickly about with noses to the ground in open stubble. Tillie flushed the bevy. Tillie dropped to a point. Nothing found. Ownie refused to back. Tillie flushed a single. She was the wider ranger, though her range was but moderately wide. Ownie did not show any knowledge of point work. Up at 9:35.

SAGAS TEARAWAY AND ROCKWOOD DANDY were started at 9:38. They ran 54m. Both made game, roading and pointing alternately a long distance. Tearaway pointed a bevy. Dandy roaded and flushed a single bird, which Tearaway had stopped on a moment before. Tearaway made two points, to which there was nothing found. Dandy followed Tearaway about. The latter was the better and speedier ranger. His range was fairly good. He carried a high head and was searching with spirit. He had good tail action.

HAWKEYE QUEEN AND ROMAYNE began at 10:41 and ran 55m. They pootered a great deal at times. Their pace was slow. At 1:02, after lunch, they were again started. Queen pointed a bevy in thick cover in a run. Romayne flushed a single bird in corn. They ranged close in front of their handlers. Up at 1:18.

MOLLIE AND GLENMORE APPIE were started at 11:43. Irwin and Appie walked up a bevy. Thereafter Appie was bird shy and refused to go out to work. She was ordered up at 12:12. Molleen was worked among the scattered birds, but failed to get a point. She had a moderate range, but was industrious. Up at 12:17.

The party went to lunch.

*Second Series.*

Four were kept in. These were not selected so much on account of their good performance as upon the poor work of the others.

ROCKWOOD DANDY AND TILLIE BORU started at 1:22. Dandy tagged after Tillie a great deal. He showed fatigue. A bevy was seen to flush wild. On the scattered birds in woods, both roaded and pointed over a distance of about 150yds. Tillie across wind flushed a bird. They were turned back to where the birds were marked down. Both dropped to a flush in sedge and pointed the remaining birds. The work was poor. Tillie was ordered up at 1:43. Dandy was sent on, the judges wishing to know whether he would range alone. He worked close in front of his handler. Up at 1:52. Tillie was next tried alone. She went out and worked, although her range was but fair. Up at 1:54.

MOLLEEN AND SAGAS TEARAWAY started at 1:56. Tearaway acted as if on the trail of a bevy. He pointed several times, but no bird. On scattered birds, Mollie pointed one but was not stanch. Tearaway backed. Both were steady to shot. The work was poor. Both were going very slow and doing very poor work. Up at 3.

TILLIE BORU AND SAGAS TEARAWAY were started more to comply with the rules which requires that the dogs for first and second be run together. Both were tired. In fact, the further the stake was run the worse the running, and if there had been much more running the dogs would have been run nearly to a standstill. Tearaway flushed a bevy near a roadway in woods. On the scattered birds he pointed one indifferently well. Up at 3:25.

The judges soon announced Tearaway first, Tillie Boru II. second, and Molleen and Rockwood Dandy divided third.

The prizes were $200 to first, $100 to second, $50 to third. Mr. H. B. Anderson donates a special prize of $15 to the winner of first.

### The All-Age Stake.

The competitors were drawn to run in the following order:

Glenmore Kennels' bitch Winnie I. (Frisco—Grouse II.), W. J. Irwin, handler, *with*
H. B. Anderson's bitch Lady Alice (Redstone—Lady Noreen, owner, handler.

Glenmore Kennels' dog Ranger (Irish Elcho—Irish Belfast), W. T. Irwin, handler, *with*
George E. Gray's bitch Elcho Maid (Elcho, S.—Maid), owner, handler.

Glenmore Kennels' dog Beau Brummel (Elcho, Jr.—Red Rose), W. T. Irwin, handler, *with*
James B. Blossom's dog Bedford (Minstrel—Aurora), H. H. Anderson, handler.

Glenmore Kennels' bitch Coleraine (Fingal III.—Aveline), W. T. Irwin, handler, *with*
George E. Gray's bitch Hope Boru (Brian Boru, Jr.—Biddy), owner, handler.

Glenmore Kennels' bitch Betsy Crape (Keno—My Maid), W. T. Irwin, handler, *with*
W. H. Beazell's bitch Queen Vic (Kildare—Red Rose), owner, handler.

Glenmore Kennels' dog Finglas (Fingal III.—Aveline), W. T. Irwin, handler, *with*
C. T. Thompson's dog Merlin (Grabb—Flora), J. White, handler.

W. Harte's bitch Harte's Bessie (Carless—Jessie Loraine), W. T. Irwin, handler, *with*
H. E. Richard's dog Adonis (Tim—Currer Bell III.), J. White, handler.

Glenmore Kennels' bitch Ruby Glenmore (Glencho—May), W. T. Irwin, handler, *with*
McIntosh & Warner's bitch Maid of Bristol (Inchiquin—Onota Belle), T. Aldrich, handler, (in place of Dr. W. Jarvis bitch Romayne, withdrawn.

Dr. J. H. Meyer's bitch Squaw (Darrah Pat—Ruby Glencho), H. B. Anderson, handler, *with*
F. L. Cheney's dog Henmore Shamrock (Muscarry—Avoca), H. Smith, handler.

Dr. G. G. Davis' bitch Currer Bell IV. (Tim—Currer Bell III.), J. Cassidy, handler, *with*
Omer Villerd's bitch Estelle (Nedio Red — Vineta), H. Smith, handler.

Bedford, the winner of first, is good in his work on bevies and singles. His range is narrow and his speed but middling, though he gallops and is industrious.

Elcho's Maid, second, is a wider ranger, has better speed and beats out her ground better. She wiggled her tail on her point, and at times pointed in a slack attitude. She is a good finder.

Currer Bell IV. is an excellent puppy, sharp and quick in her work on birds and an industrious ranger. She acted a bit puppyish at times. Lady had but moderate range, was heavy in her way of going, and a fairly good performer on birds.

The awards were satisfactory to most of the winners.

One fault in the work of nearly every dog was that the performance was not sustained one heat with another. As the trial progressed nearly every dog would fall off in range.

*First Series.*

WINNIE II. AND LADY ALICE were cast off at 3:37. Down 30m. Alice had quite a fair range and hunted diligently. She made a very superior competition on point work, pointing one bevy nicely and two single birds. Winnie flushed the two singles which Alice pointed. Winnie trotted about close in front of her handler, showing little training and less preparation.

RANGER AND ELCHO'S MAID commenced at 4:15. Maid pointed a bevy in ledge and Ranger refused to back. Ranger flushed a bevy in open weeds. He immediately became timid and over cautious for several minutes. Maid pointed a bevy in open weeds and Ranger backed. Both were steady to shot. Down 30m. Maid was the better and more intelligent ranger. Ranger showed a lack of experience.

BEAU BRUMMEL AND BEDFORD began at 4:47 and ran 30m. Both drew about and frittered away a good deal of time on the scent of sparrows in stubble. Beau pointed a bevy in stubble. Bedford refused to back and stole the point. Sent on. Soon Beau began to draw on footscent. Bedford about 50yds. ahead pointed the bevy. He was steady to shot. Beau was a bit unsteady. Up at 5:17. Both ranged well. Bedford the better; also he had better judgment.

TUESDAY.

The steady rainfall of the night had thoroughly soaked the ground. The roads were muddy and streams were full. Bottom lands in places were impassable. The weather was clear and pleasant. Toward night it became quite cool. The work of the day was quite good. A late beginning was made.

COLERAINE AND HOPE BORU were started at 9:38. Coleraine ranged nicely, she going at a merry gait, beating out the stubble well. Hope also ranged well, but was lacking in the dash of her competitor. Hope roaded to a point on a bevy which Coleraine soon afterward flushed. On the scattered birds, Coleraine was timid and overcautious. She flushed again. Hope pointed a single and Coleraine backed. At 9:50 Hope was ordered up and Coleraine sent on alone for nine minutes. She still showed timidity in her work on scattered birds. She and Hope were then run till 10:12 without finding. Hope did decidedly the better work.

BETSY CRAFT AND QUEEN VIC were started at 10:18.

TOLEDO BEE.
First International Field Trials Derby, 1892.
Owned by Frank W. Eddy, Detroit, Mich.

Betsy pointed a bevy in sedge and backed by Queen. Both were steady to shot. On the scattered birds, each pointed one. Out in open sedge, Queen roaded down wind on a bevy which was flushed accidentally by one of the judges. Betsy made a point, her handler claimed, but the pines concealed her for the moment and the judges did not see her work. Betsy pointed a single. Queen pointed twice on singles. Up at 10:50. Queen showed the better judgment and ability in pointing birds. Both were slow, narrow rangers.

FINGLAS AND MERLIN began at 11:11. There were good opportunities to work on a bevy and single birds, but both made a poor showing. They ran a poor heat. Both pointed inaccurately at times. Up at 11:41.

HART'S BESSIE AND ADONIS started at 11:46. Bessie tagged Adonis a bit in the early part of the heat. Both were suspiciously near a bevy which flushed in sedge some distance ahead of the judges. Diligent search failed to find the scattered birds. Both showed fair range. Up at 12:35. Bessie did not seem to know much about searching.

The party went to lunch.

The judges, to give Adonis another chance on birds, put him down on scattered birds in a good place at 2:12. He made such a poor showing both in finding and pointing that he was soon ordered up.

RUBY GLENMORE AND MAID OF BORSTAL were cast off at 1:30. Ruby started, ranging well, but soon narrowed down to a small fling. Maid flushed a bevy. Maid got one point on a single and flushed several others. Both ranged close. Ruby appeared to have no knowledge of birds, and it was difficult to keep her handler near where they were marked. The work was poor. Up at 2:08.

SQUAW AND HENMORE SHAMROCK started at 2:25. They were worked on scattered birds in corn. Squaw roaded nicely. Shamrock was up wind of the birds when they flushed wild. Shamrock dropped to a point on a bird in pines. Squaw backed or pointed. Shamrock pointed a single. Both ranged well in a businesslike way and were industrious. Shamrock was the better ranger. Rock carried a high head. Up at 3:18.

CURRER BELL IV. AND ESTELLE began at 3:17. Bell pointed a bevy and was backed. This trial was Mr. Cassiday's first attempt at handling in a competition, and he did it nicely and skillfully. Moved on. Belle dropped to a point at the edge of a weedfield. She drew on, whereupon Estelle went in quickly and pointed. The bevy flushed wild in weeds some distance ahead. Bell behaved well on the scattered birds. Squaw worked in a businesslike way. Down 30m.

*Second Series.*

Eight dogs were kept in, namely, Lady Alice, Elcho Maid, Bedford, Hope Boru, Squaw, Estelle, Henmore Shamrock, and Currer Belle.

LADY ALICE AND ELCHO MAID began at 4:06. They ran a very even race so far as range and pace are concerned, but Maid had some the better of the ranging and was the better on birds. Maid wagged her tail sometimes on point, which marred her style. Maid pointed a bevy and Lady backed. On the birds in a thicket both pointed; nothing found. Maid pointed a bevy in the open. Lady going down wind, flushed the same bevy. Sent on. In open Lady pointed; Maid backed; nothing found. Lady pointed part of a bevy, which flushed wild. Maid sent in after Lady had moved on, pointed the remainder of the bevy. The birds were followed into woods. Maid made a flush. There was no positive work done, the birds flushing wild or being flushed by horsemen. Up at 5:15.

This ended the day's running.

WEDNESDAY.

The morning was clear but sharply frosty. A late start was made, the conditions not being unfavorable for good work.

BEDFORD AND HENMORE SHAMROCK started at 9:36. Bedford in the open dropped on a point too close on a bevy and it flushed wild. On the scattered birds in pines, Bedford pointed a single and Shamrock flushed it. In the open, both dogs roaded and before they located a horseman accidentally flushed the bevy. Bedford made a flush on a single bird in woods. Up at 10:11. Both dogs ought to have got more points considering the opportunities. Shamrock apparently was off his nose and did work inferior to that of his first heat. He ranged well with much dash, in which respect he was equal to the best in the stake. Bedford was quite good on birds, but was lacking in range.

HOPE BORU AND CURRER BELL IV. were started at 10:20. Both at the same time pointed a bevy in sedge and were steady to shot. Bell made two good points on singles and was steady to shot. She had the better range and speed and also was better in point work. Up at 10:43.

SQUAW AND ESTELLE began at 10:57 and ran 30m. Squaw followed Estelle in the forepart of the heat, not working independently. Their range was narrow. Squaw pointed a bevy and was steady to shot. No work was done on the scattered birds.

*Third Series.*

BEDFORD AND ELCHS'S MAID started at 11:34. Maid had much the better way of going, and was the better ranger both as regards the ground covered and the regularity of her fling. Bedford was much better in pointing birds, a feature in which he performed quite well. He pointed a bevy in open weeds, he casting to and fro on the footscent and locating it nicely. Next, each pointed a single bird and was steady to shot. Up at 12:15. Maid wiggled her tail when on point and was not rigid at all times.

Lunch was next in order.

CURRER AND BELLE LADY ALICE were started at 1:26. In a cornfield both found and pointed the same bevy. Both steady to shot. The birds were not followed. In the open, Lady roaded in an awkward manner to a flush on a bevy—a sloppy piece of work. On the scattered birds in thick cover, it was difficult to determine what was done. Belle pointed a single. It was said she stole the point from Alice. The latter was a poor ranger, ran heavily and came in frequently for orders. She required constant urging. Belle was much the better ranger, was sharper and more skilful in her work on birds. The heat and trials ended at 2:36 Both dogs were tiring and ranging close when ordered up.

Bedford won first, Elcho's Maid second, Currer Bell IV. and Lady Alice divided third.

The prizes were $200 to first, $100 to second, $50 to third.

## WOLFHOUND TYPE AND STANDARD.

*Editor Forest and Stream:*

You raise, in a short paragraph in your number for Oct. 20, a question as to the extent to which we should modify breeds we adopt from other countries. There is a good deal involved in this question. Climate usually works changes which we counteract only with difficulty and rather unsuccessfully, and had better accept, perhaps. But it seems to me unfair to continue to call a breed by the name given it when it originated, while we produce fundamental changes in its form. It therefore would seem to be wrong for the English successful breeders, as they are, to attempt to so modify the Russian wolfhound that he would become merely a long-coated greyhound. There is one feature in this breed on which all authorities seem to agree in Russia, *i.e.*, the enormous arch of back and loins. This arch affects even the skeleton and, as I understand from all authorities, a hound, especially a male, cannot be a Russian wolfhound without this arch. In this country this point does not seem to be distinctly recognized, for the judge of the miscellaneous class at Kingston was criticised in several quarters for putting back a hound with back and loin as flat as a board. As I understand it the dog not pass the Russian standard at all. Surely we must not begin by ignoring parts that affect the very skeleton of the animal. Nor do I think these Russian breeders were all wrong in this. For a dog of great speed for a short distance, and with his success in wolf-hunting depending on striking the fleeing animal so as to knock him over, this form seems to meet the case. If the arch of loin is desirable in a greyhound, how much more is it to be encouraged in a dog intended for a shorter course with tremendous impetus. If we are going to have the Russian wolfhound by all means let us not depart from essentials of structure and form. I do not write as an authority on this breed, but as a student of form in relation to function. WESLEY MILLS, M.D.

MONTREAL, Can.

### To Cure a Gun-Shy Dog.

A gun-shy dog, or one that you want to be sure of under fire, treat as follows: Tie him in the yard; put a primed but unloaded shell in your gun; go near him, walk about as if you were looking for game; point your gun in the air and fire the primer; don't look at him, but go into the house and get another primed shell and repeat the act. Do this several times in the day for two or three days. Then begin to use some powder, and keep adding until you are "dead sure" he is without apprehension or fear. Always fire directly from him, not looking at him before nor after firing. Let some one observe his actions under fire. I had a Skye terrier that was afraid of the slightest rumble of thunder, which would drive him into the house and under the bed; but he was teachable, and I soon taught him to love the gun, and delight in its thunder when rabbits were to be had. N. D. ELTING.

Messrs. George Meister and Charles W. Sarvis, of Jackson, Mich., have entered into partnership to breed English and Gordon setters and greyhounds, and claim the name of the Jackson Kennel for their kennels.

### A New-Subscriber Offer.

A *bona fide* **new** subscriber sending us $5 will receive for that sum the FOREST AND STREAM one year (price $4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price $5)—a $9 value for $5.

This offer is to *new* subscribers only. *It does not apply to renewals.*

For $3 a *bona fide* new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Ieet's handsome work, "Bird Portraits for the Young" (the price of which is $3),

| | H. B. Anderson's | Lady Alice | | Bitch | Redstone | Lady Noreen | | Owner. |

### The Reason Why My Dog Did Not Win Is

Because he had an awfully sore foot. He stuck a thorn in it, I think. He is such a fine dog, too!

Because a blank nigger upset a bucket of feed the night before my dog ran his heat, and he ate so much he could not run any the next day. You ought to see him work when he is all right!

Because the judge had a grudge against me and I could not win. You can't beat the dogs and the judges, too. My dog is a corker!

Because my dog is out of form somehow. He worked all right yesterday, but he is out of form to-day or off his nose. He is a great dog, too.

Because my dog was sick last week. This week, when he was getting well, I could not manage him, he felt so good. He is the greatest dog in the world!

Because my dog ran so fast he lost his nose. It never happened before. He can knock spots off any dog in the race for $5 or $5,000, and don't you forget it. Do you want to bet?

Because my bitch is in season and I could not enter her. She would have won this stake easy. Talk about field dogs, you ought to see her work!

Because my dog is too well broken. You can't win when the other handler works your dog, see!

Because my dog is a first-class dog and the judges don't know what that is. They want plug-shooting dogs. I haint coming here no more!

Because the other fellow had all the prestige of a winner and the judges were afraid to decide against him.

THE CYNIC.

## CANADIAN KENNEL CLUB MEETING.

Canadian Kennel Club's Executive Committee held a meeting at the Queen's Hotel, Toronto, on Dec. 20, 1892, beginning at 3 o'clock.

Present—Dr. Wesley Mills (in chair), P. G. Keyes, A. D. Stewart, H. Bedlington, H. Gorman, J. G. Mitchener, S. F. Glass, and H. B. Donovan, secretary.

Minutes of annual and executive meetings (as printed in *Gazette*) taken as read.

Troublesome protest.—Moved by Mr. Bedlington, seconded by Mr. Stewart, that decision of judge be sustained. Carried.

The following letter was read from the judge, Mr. F. E. Curtis:

"SIMCOE, Dec. 9, 1892.—G. Bell, Esq., Toronto, Dear Sir: In reply to your letter I would say that I awarded your bitch, Troublesome, 1st prize in the open bitch class, black, at the Ottawa bench show, held in September last, and had she been brought in the judge's ring should have awarded her the special for the best cocker in said class in the show.
"FRANK E. CURTIS."

*Resolved*, That this Executive is of opinion that the bitch, Troublesome, owing to protest entered against her was not allowed to compete for the special prize in the cocker spaniel class at Ottawa, and that had she been shown are of opinion from the communication since received from the judge, that she would have been awarded the special prize for the best cocker in the show. Mr. Bell waives all claim to the special prize thus awarded.

Sir John Protest.—The secretary was instructed to write to A. K. C. inclosing copy of amended pedigree handed in by Mr. Bell, which, if approved of by that body, will be received as authentic and make the dog eligible for registration. Also to write Mr. F. Stettenbenz, in reply to his letters of various dates, and to Mr. C. A. Stone, superintendent of Toronto bench show, stating that Sir John having been disqualified at the Toronto bench show of 1881, the dogs placed below him are to move up in same order as placed (see Rule 20). Prize money to be distributed according to new order.

Pious Pembroke Protest.—Moved by Mr. Stewart, seconded by Mr. Mitchener, that protest lodged by Mr. Wurtele be sustained, and that Mr. Purbeck refund the prize money. The dogs placed below Pious Pembroke to move up. Carried.

Further resolved that this committee are of opinion that Mr. Purbeck's error was unintentional and that he be exonerated from acting under any dishonorable motive.

Champion Starlight Protest.—The following explanatory letters were read:

"OTTAWA, Dec. 17, 1892.—H. B. Donovan, Esq., Sec. C. K. C.: Dear Sir—The inclosed will settle the matter of date in the champion Starlight protest. ALFRED GEDDES."

"OTTAWA, Dec. 17, 1892.—Alfred Geddes, Esq., P. O. Dept., Ottawa: Dear Sir—The telegram addressed to you from H. M. Howes, Boston, Mass., in reference to protest of champion Starlight, was received here at 11:35 P. M. on the 7th October, 1892. It was a night message and was delivered to you on the morning of the 8th October. The date (17th) on the message is a mistake. It should be 7th October.
"WM. NICHOLS, Chief Clerk G. N. W. Tel. Co."

Moved by Mr. Mitchener, seconded by Mr. Gorman, that protest of Mr. Howes be sustained. Carried.

Committee on Show Dates.—Moved by Mr. Stewart, seconded by Mr. Glass, that Messrs. Donovan, Stone and Mitchener be a committee *re* show dates. Carried.

Incorporation.—Moved by Mr. Glass, seconded by Mr. Stewart, that secretary be instructed to ascertain cost of incorporation under Dominion statutes. Carried.

At this point Dr. Mills left the chair, which, on motion, was assumed by Mr. Glass.

Mr. George Bell's Charges against Dr. Wesley Mills.—The following communications were read:

"TORONTO, Nov. 11, 1892.—H. B. Donovan, Esq., Secretary, C. K. C. Sir—I beg to hand you some charges against Dr. Wesley Mills, of Montreal, as under, and I hope that you will bring them up for investigation before the executive committee at its meeting to be held this evening.

CHARGES.

"1. That at the late Ottawa bench show Dr. Wesley Mills did alter an award as written by another judge in his judging book.

"2. That at the late Ottawa bench show Dr. Wesley Mills did judge his Great Dane bitch Minerva's Fawn in conjunction with another judge.

"3. That at the late Ottawa bench show Dr. Wesley Mills did judge and award his own setter dog a diploma for best in open class, at the same time awarding one to winning bitch.

"4. That at the late Ottawa bench show Dr. Wesley Mills did on his own responsibility, after a meeting of the show committee had decided that Mr. Corbett should not judge the Great Danes with him, secure the assistance of Mr. Corbett. I am sir, yours truly, G. BELL."

"TORONTO, Dec. 20, 1892.—H. B. Donovan, Esq., Secretary Canadian Kennel Club. Sir—I understand that the president of the Canadian Kennel Club has declared the meeting of the executive committee at which I preferred certain charges against him to be illegal and unconstitutional.

"I write now to say that I withdraw charge No. 4, but desire to add another charge in place thereof, so that my charges against Dr. Mills are now as follows:

[Charges 1, 2, 3 as before.]

"4. That Dr. Wesley Mills has been guilty of unbecoming conduct as president of the Canadian Club in that he has permitted highly damaging charges against his good faith and honor by Mr. H. Goodman, to pass undenied, thereby allowing Canadian dogdom to be disgraced in his person. I am, sir, yours truly, G. BELL."

"At a meeting of the Ottawa bench show committee held on Tuesday afternoon, Dec. 8, 1892, the following resolution was passed:

"*Whereas*, So-called 'charges' have been laid before the Canadian Kennel Club by Mr. George Bell, against one of the judges at the late Ottawa show, and have been published in some of the widely read sporting papers, which 'charges' without explanation are calculated to impart an impression injurious to the Ottawa bench show committee, as well as the judge concerned, the following answers be forwarded to the secretary of the C. K. C., to be read at the executive committee meeting to be held on the 20th inst., in the event of the matter being discussed at that meeting.

ANSWERS TO CHARGES.

"No. 1. That Dr. Mills after Mr. Corbett had left, discovered that one of the awards in the English setter dog class read hc. reserve, and as this was an anomalous award suggested that there must have been an unintentional omission of the letter V, and further suggested that it should be inserted, in which the members of the committee present acquiesced, and by such alteration no change in the relative positions of the dogs was made.

"No. 2. He did, and by so doing no rule of the C. K. C. was violated. There was no competiton in this class.

"No. 3. Mr. Corbett having left for home, it was suggested that a diploma be awarded to each of the first prize winners, Mount Royal Rush and Lady Gordon, but the agent of the latter objected and no diplomas were given.

"No. 4. He did not, the committee having assented to the joint judging of great Danes.
"ALFRED GEDDES, Sec. Bench Show."

Moved by Mr. Gorman, seconded by Mr. Mitchener, that charges be considered in numerical order. Carried.

No. 1. The evidence not being clear in this case, the chairman, on motion of Mr. Stewart, was asked to telegraph Mr. Geddes, asking if proof were forthcoming that judges' book had been altered, and if it was, if it were done by Dr. Mills. The following reply was received:

"OTTAWA, Ont., Dec. 20.—To S. F. Glass, Toronto, Ont.: Dr. Mills said he would take responsibility of altering. Did not see him make alteration. ALFRED GEDDES."

Moved by Mr. Bedlington, seconded by Mr. Gorman, that in the opinion of the executive committee that charge No. 1 is not sustained, no evidence or motive being shown for the change that occurred. Carried.

No. 2. Moved by Mr. Stewart, seconded by Mr. Bedlington, that the committse finds that this charge is sustained, Dr. Mills admitting that he judged the Great Dane classes with Mr. Corbett, but in the absence of any rule forbidding such action, and there being no competition, the committee exonerate Dr. Mills from blame in the matter. Carried.

No. 3. Moved by Mr. Bedlington, seconded by Mr. Gorman, we find the charge is not sustained.

Moved in amendment by Mr. Stewart, seconded by Mr. Mitchener, that the words be added, "as no diplomas were received by the owners of the dogs." Amendment lost. Motion carried.

No. 4. Moved by Mr. Bedlington, seconded by Mr. Gorman, that this executive committee declines to take any action in regard to charge 4, as it lies beyond their jurisdiction. Carried.

Mr. Bell was present in support of his charges and to offer evidence. The motions were carried after much discussion and cross questioning. Meeting adjourned for 30 minutes, and resumed business with the same members present.

Reports to Press.—Moved by Mr. Stewart, seconded by Mr. Mitchener, that secretary send reports of all meetings to the kennel press. Cost to be borne by the Club. Carried.

World's Fair Bench Show.—Moved by Mr. Glass, seconded by Mr. Bedlington, that competition for selection of Canadian dogs be held in Toronto on the third Tuesday and Wednesday in April. Carried.

Moved by Mr. Glass, seconded by Mr. Bedlington, that Messrs. Stone, Brodie, Donovan and Mitchener, be a committee to generally arrange the details in connection with the holding of the bench show competition for the World's Fair selection in April. Carried.

Stud Book Committee.—The president appointed the committee of 1892, Messrs. Gorman, Stone, Mitchener and Williams to act for 1893.

C. K. C. Diplomas ordered to be engrossed.

New Members.—The secretary was instructed to cast one ballot for the reception of the following names, Messrs. R. Barnes, G. Bowman, H. Stableford, J. H. McNally, A. McKinnon, W. Barber, T. Swan Smith, H. M. Williams, R. H. Faithorne, G. H. Maxham, — Williams (Ottawa).
H. B. DONOVAN, Secretary.

## A PHANTOM COURSE.

*Editor Forest and Stream:*

I was much astonished on reading the copies of FOREST AND STREAM containing the Great Bend report to find no account of the phenomenal phantom chase run the second morning of the coursing meet. I suggest that your reporter might have been so wrapped up in extricating an indefinite but agonizing sandbur from his Fauntleroy leggings as to have been oblivious of the race, while owing to the early hours the other newspaper men were probably warming their chilled visages in the club house. The judge, being too busy himself to write, suggested that I send you a brief account of the remarkable incident which cannot fail to be of interest to you.

You remember that the morning opened clear and cool, with best opportunities for that range of vision obtained over the Cheyenne Flats. The crowd of spectators had not yet gathered, but the press men were on the grounds, and a small knot of men were standing in the field admiring the level stretch before them. In the group was Mr. Buglethorn, one of Great Bend's favorite sportsmen; beside him stood in leash Mabyn, the clever brindled freak, resembling Clara Vere de Vere in the matter of high descent.

Not a drop of common blood coursed her veins, as was evinced in her clean limbs, aristocratic muzzle and keen nervous temperament.

Mabyn was in remarkably fit condition this year and running very fast, having been out all that summer, with that rapid youth Mr. Buff, of the Garden City of Meteor.

She was a prime favorite among the betting men, and great things were expected of her by the ladies on account of her rare grace.

Suddenly Mabyn, generally perfectly obedient, slipped her collar and darted out upon the prairie. Her master immediately urged her to return, but she gave no heed, and to his great surprise he saw evolve itself from the open air a gigantic hare. In the excitement of the moment its supernatural origin was not then suspected, but this being afterward ascertained, it was then known that Mabyn had scented the hare with her keen nose before it became fully materialized.

Now ensued a most remarkable race, and one cruelly punishing to the hound, as the hare turned almost immediately to rough ground on the right. The plucky little dog, however, followed like lightning, but was unable to gain one step on the quarry, which leisurely trotted along at an ever even distance from the flying pursuer.

Suddenly, from behind the strained group of spectators, darted a new comer, Pink Nose, a dog of low degree and wolfish build. His ears stood erect with excitement as he glanced past the men and gradually drew up to Mabyn. Drew up and drew by. A wild shout of enthusiasm went up in admiration of this telling pace, but lo, the hare kept just as far in advance of her new pursuer as of the first.

After a long circling course, on account of the peculiarly clear atmosphere, plainly seen by the intensely excited watchers, the hare was observed to make for the hills. "She's gone!" was the universal cry, except for those who gasped, "She's went!"

For a moment naught was seen by the crowd, and the following remarkable sight was nearly lost to sight for lack of witnesses.

Fortunately, early in the race, Mr. Swinburne Smith, J. P., observing in a fire guard near by an immense sunflower stalk of magnitude attained in Kansas only, shinned up its altitude and from this coign of vantage was enabled to report what next occurred. The dogs, Mabyn being slightly in advance, showing that blood will tell in a staying race, were about to enter the stony fastnesses, when they suddenly fell back on their haunches in amazement, for lo, bounding right at them, rushed the great hare, spectral gleams of fire emitted from its rough coat and big goggle eyes. On each ear stood a lambent tongue of flame!

Mabyn, like most of her sex, was of great delicacy of organization. The shock was too much. She fell over stone dead. Pink Nose, *au contraire*, feared neither man nor fiend, and immediately recovered from his momentary stupefaction, whirled round and followed the fleeting phantom with unabated cleverness and vigor.

The chase was retraced, the pursued ever in tantalizing distance of the pursuer's nose. The breathless gazers gaped at the breathless flight turned directly toward them. On danced the rabbit, elusive as a Morrison House banquet, when, just before the foremost horseman was reached, the hare, with a baleful gleam of its orbs, once more promptly and successfully resolved itself into "thin air." Pink Nose, like the hounds in "The Lady of the Lake," who, baffled by their quarry,

Raved thro' the hollow pass amain,
Chiding the rocks that rang again,

tore up the ground in impotent fury, and finally slunk off like a whipped cur.

Suddenly a mournful wail was heard from the club house, attracting the entire crowd by its bitter pain and insistence. An Eastern young man, feeling well nigh famished, had attempted to bite into a Hoisington sandwich, which, accidentally or maliciously, collided with his cheek. In the flurry that ensued the phantom chase was for a time forgotten, but as I was cantering home from the meet I fell in with Uncle Jerry Krüller, a mighty Nimrod of these parts, one who is as familiar with nature's prairie secrets as Chicago with coal smoke, and he said, "Talkin' about that there rabbit, no livin' dog could ketch it! 'Twas a spook! Nobody but me and the other old hunters know the goin's on at night on these here ha'nted bottoms. As fer the phantom Injun and bufferlers Mr. Hough wrote about, I could tell——"

But that's quite another tale. G. O.

## KENNEL SUGGESTIONS.

DIARRHŒA.

ONE of the most troublesome, inconvenient and often dangerous forms of illness to which dogs, and especially show dogs, are subject, is diarrhœa. Change of food and water, nervous excitement at shows, all tend to produce this troublesome state. When affected, whether at a show or in its own kennel, the dog should be kept dry and warm, and as quiet as possible, allowing no exercise at all. Dr. A. J. Sewell, in the English *Kennel Gazette*, gives some very plain directions as to treatment of the various forms of diarrhœa. This complaint, as he remarks, proceeds from various causes; indigestion, worms, chills, improper food, excessive secretion of acrid bile, etc. Contrary to the opinion of some doctors, Dr. Jewell recommends, in some cases of diarrhœa, a diet entirely of lean meat, preferably mutton, in small quantities and often. This well-known vet. then goes on to say that it a mistake to administer astringents at once; they may stop the motions, if continued, for a time, but the complaint asserts itself again as soon as the medicine is stopped. Besides, there is great danger in trying to stop the malady while the cause remains, of inducing inflammation of the bowels; it is therefore advisable first to try and remove the matter that is causing the bowel tronble.

Excepting in the case of worms, when a vermifuge is indicated as well, a dose of castor oil varying, according to the size and age of the dog, from a teaspoonful for small dogs and young pups to two tablespoonfuls for full grown big dogs, St. Bernards, etc., should be given. For simple diarrhœa, one of the mixtures he recommended is as follows: Laudanum, 2drs.; tincture of rhubarb, 1oz.; peppermint water, 6oz. Dose, one teaspoonful for small dogs and up to two tablespoonfuls for the large dogs, three times a day. A prescription for pills is also given: Kino, 1dr.; powdered ipecacuanha 1 scruple; powdered opium, 6grs. Excipient, q. s. Mix and divide into 12 pills. One or two to be given three times a day.

As to diet, it should consist of milk, thickened with arrowroot, weak beef tea, or mutton broth thickened with arrowroot, corn flour or isinglass, and rice or barley water, or water with the white of egg added, given to drink. When the diarrhœa is persistent, discontinue the milk diet and give only the thickened broth. If the dog seems to require a more solid food than that just mentioned, rice, tapioca, or sago pudding, made with milk and egg and baked, may be offered. When there are symptoms of inflammatory diarrhœa, and much mucus with blood is being passed with the motions, after giving the aperient (castor oil) the following mixture may be administered, but let the oil first work off before commencing it. Chorodyne, 1dr.; carbonate of bismuth, 2drs.; sol. gum acacia, 1oz.; water to 6 ounces. Two teaspoonfuls to two tablespoonfuls, according to size, three times a day.

When vomiting accompanies the diarrhœa, as in bilious diarrhœa, it is necessary to give some medicine to act on the liver, combined with a stomach carminative, such as a dose of calomel and opium. For small pet dogs ½gr. of each; fox-terriers and such dogs, ¾gr. of each; collies etc., 1gr. of each and such dogs as St. Bernards 1½grs. of each, made into a pill with some common extract. If the sickness continues after three or four hours, give, shaken dry on the tongue every three or four hours, from 3grs. (for pet dogs) to 15grs. (for very large dogs), of carbonate of bismuth. In extreme cases of diarrhœa an enema may be given just tepid and consisting of thick boiled starch and opium; one teaspoonful to one tablespoonful, according to size of dog, with from three to ten drops of laudanum added. Inject very slowly so as not to irritate the bowels and keep the dog as quiet and still as possible to avoid a motion.

Chronic diarrhœa, generally seen in the worst form in old dogs, though dogs of any age may be subject to it, is the result of neglected simple diarrhœa. In giving the aperient castor oil add a sedative; to one tablespoonful of castor oil three drops of laudanum, and up to ten drops of laudanum to two tablespoonfuls of oil, according to size. Repeat the laxative and sedative the next day and then give after the oil has worked off: Diluted sulphuric acid, 1dr.; tincture nux vomica, 1dr.; laudanum, 1½drs.; water to 6oz. Dose: Toy dogs, one teaspoonful; fox-terriers, etc, a dessertspoonful; and large dogs, one tablespoonful three times a day, given about one hour after feeding. The diet in this case should consist of raw meat, mutton preferred, cut up fine and given in small quantities three or four times a day.

## IRISH SETTERS IN CALIFORNIA.

*Editor Forest and Stream:*

I received recently from the Glenmore Kennels the Irish setter dog Glenmore Hoodlum, by the noted Finglas out of Champion Ruby Glenmore, and the Irish setter bitch Maid of Glenmore, by Finglas out of Betsy Crafts.

I am so thoroughly pleased with these dogs and with the manly, straightforward treatment that I have received from the hands of Mr. Bishop, that I write you of them, trusting that you will give the notice space in your interesting "Dog Chat." They were crated strongly but very lightly and came through in fine shape. They are both beauties, the dog especially so, strong, healthy, rich dark red in color, both possessing great quality and promising to excel anything hitherto brought to this coast. Mr. Bishop has won the confidence of the breeders here and will doubtless receive many more orders from this section. The breeders here have had a rather rough experience in purchasing Eastern dogs. When we are treated honorably we like to tell of it. Hence this writing. L. L. CAMPBELL.

BAY VIEW KENNELS, West Berkeley, Cal.

We note among our new ads. in the kennel business column this week the following:

Chas. W. Sarvis offers for sale his prize-winning greyhound, King Dick; W. H. Ashburner offers his partly broken beagle; J. Hope offers for sale his St. Bernard dog Kaiser; J. H. Miller wishes to dispose of some rabbit dogs and bitches. Jess. M. Whaite wants to take dogs to train.

# DOG CHAT.

### Mr. Geo. Raper Will Judge.

In justice to Mr. Mortimer perhaps a little explanation would not be out of place regarding the paragraph in last week's "Dog Chat," in which we exclusively gave the news that Mr. Raper would judge at the coming W. K. C. show. We supposed that the arrangement would be made by mail, instead of that the cable was used. On Dec. 5 we asked Mr. Mortimer if Mr. Raper would judge again and he replied that the subject of judges had not yet been discussed, but would be on his return from Nashville show. On Mr. Mortimer's return, Dec. 9, the first serious discussion on the subject of judges was held by the W. K. C. bench show committee, and it was not until the evening of the third day that Mr. Mortimer cabled to Mr. Geo. Raper, asking him whether he would come or not. He received Mr. Raper's reply in the affirmative on the following day, Saturday, Dec. 10. No one but himself and the operator knew that Mr. Raper had accepted the invitation until Sunday, Dec. 18, when Mr. Terry came to Hempstead Kennels and was told of Mr. Raper's reply. This completely clears Mr. Mortimer of any suspicion that he was withholding the truth from us on Dec. 5. In writing to us, however, on the subject Mr. Mortimer intimates that we had no authority for the "news." We will set that straight too. Mr. Thos. Terry told Mr. L. C. Whiton, and Mr. L. C. Whiton told us that Mr. Geo. Raper would judge, and now we have Mr. Mortimer's authority for the statement, which is conclusive, and Mr. Geo. Raper is down to judge again in 1893 at the W. K. C. show.

### Field Trials of 1892.

In the list of open field trials held in the United States and Canada during the past year we have been unable to ascertain the amount of every prize won, but where amounts are given we believe they will be found correct. As a ready reference the record of field trials of 1892 will be appreciated by field trial men.

Dr. H. H. Furness, LL.D., in accepting the keys of the new hospital for dogs, recently erected at the University of Pennsylvania at Philadelphia, made an eloquent speech breathing of love for dogs and horses. In the course of his oration he remarked: "All honor, then, and praise to our surgeons of the canine infirmary. It is when our poor dumb friends are sick and in pain and are drawing nigh to death that we are conscious most oppressively of that barrier between us and them which debars us from expressing to the poor suffering things our deep sympathy and love. But let us not wish that this barrier shall be ever broken down, sweet though it might be to hear their gratitude for the kindness bestowed on them in this infirmary. No, no; it will be an hour of humiliation and shame for human mortals if the tongues of dogs or of horses should be ever unloosed and we have to listen to a history of torture, cruelty and agony to which even man's inhumanity to man can scarcely afford a parallel. Ah, no! Let them remain forever dumb to us, and in conclusion let us resolve not to call them brutes, but acknowledge them as teachers, whose lessons we may not disregard, of steadfast fidelity and unswerving devotion." Further on he said, "Moreover the kindness that is here shown is of the purest, untainted by any expectation of reward, or even of any audible expression of thanks. Time and money and skill have been and are to be here expended from the most unalloyed, the sublimated, motives of gentleness and tender mercy. There is no hope for us of any good round legacy in the wills of any of our patients: their good will here and now are our only guerdon. Neither can we expect that our sombre labors will be entwined by any mirth from our convalescents; there will be no sound of laughter, not even the merry tale of a wag; our highest hopes are bounded by the wag of a tail. And we have no other limitations. If we here foster the nine muses they most perforce be canine, moreover we must blink the temperance question altogether, and at our threshold prohibition must halt its domineering foot. It cannot be helped. It is inevitable. Wherever there are dogs there must be lickers—and there will be whines, and yet I'll warrant you we'll never have a case of inebriation—but if we should we'll not throw physics to the dogs; we'll give it to them gently with a spoon."

An advisory committee meeting was held at the A. K. C. office Dec. 21. Those present were Messrs. Anthony and Wise, Mr. Belmont coming in after the meeting had been on some time. As far as we can learn, the charges against Mr. Eberhart were not proven, and till further evidence is given the affair is laid on the table. In the Elliott—Twyford matter it was decided that Mr. Twyford must pay the difference between his board bill and the value of the dog, which was given as $30. The whole question seems to rest on this—is a man justified in selling a dog when he cannot collect the money for its board, or is he to keep said dog indefinitely and live on hope.

Why did not the owner of the Rockland Kennels receive a premium list of the Gloversville show, although he wrote twice to the secretary for one? Having no list Mr. Kreuder could therefore make no entries, but is allowed, however, to donate a kennel prize for best four beagles. As a fellow beagle owner Mr. Zimmer should certainly have made sure that Mr. Kreuder had a chance to enter his dogs.

Mr. Woodward, owner of bulldogs Bo'swain and King Lud, writes us that King Lud was not brought into the ring at Nashville to compete with Bo'swain in the challenge class. We say he was, and our statement is confirmed by the judge, who, however, was informed before giving out the ribbons that King Lud was not for competition, so the prize was given to Bo'swain.

Here's a pretty go, told in a *Times* despatch from Kansas City: The City Council, after two weeks' consideration, has arrived at the conclusion that the bills rendered by the poundmaster for the killing of unfortunate dogs have been excessive, he renders a bill for the death of 6,000 dogs during the past eleven months. The Council last night settled the poundmaster's fees by adopting the following resolution:

*Resolved*, That the city impound be and is hereby instructed, from this date, to cut off and preserve the tails of all dogs killed by him and his employes, and to deliver the same to the city clerk on the last day of each month, together with the bills against the city for the killing of the same. The city clerk, after counting and ascertaining the correct number of dog tails turned in, shall then and there certify to the correctness of said bill before it shall be acted upon by the Council. All dog tails rendered to be forever destroyed by the said city clerk.

The sense of smell in dogs is always a subject of great interest. That dogs, as a rule, depend more on their nose than their eyes can be easily proven by the action of your dog in a crowded thoroughfare. Dogs not remarkable for their scenting powers losing their master temporarily will snuff first this one and then another until it finds the right one. Dogs are able to track their masters through crowded streets where recognition by sight is quite impossible, and can find a hidden biscuit even when its faint smell is still further disguised by eau de cologne. In some experiments Mr. Romaines lately made with a dog he found that it could easily track him when he was far out of sight, though no fewer than eleven people had followed him, stepping exactly in his footprints, in order to confuse the scent. The dog seemed to track him chiefly by the smell of his boots, for when without them, or with new boots on, it failed; but followed, though slowly and hesitatingly, when his master was without either boots or stockings. Dogs and cats certainly get more information by means of this sense than a man can; they often get greatly excited over certain smells and remember them for very long periods.

The ballot for club judges of the Canadian Fox-Terrier Club resulted as follows: 1, German Hopkins; 2, G. Bell; 3, C. H. Mason; 4, James Mortimer; 5, Richard Gibson; 6, J. E. Thayer.

We acknowledge the receipt of a photo of Mr. Charles K. Farmer's pug, Pansy's Judy, second Grand Rapids show, 1892. It makes an interesting addition to our collection.

We have a note from Mr. J. R. Ballard in which he says that Mr. Mulcaster did ride Oct. 27, in Dr. Cattenach's wagon, to the coursing grounds. "I recollect the circumstance very distinctly, because Mr. Mulcaster had his fawn pup Roy in the front and I had my pup Buckskin there; and when two men the size of Mr. Mulcaster and myself with two dogs, ride in the front seat of a surrey eight miles, one is apt to have a good memory on that point." This may all have happened and still a mistake have been made in the date. However, we are pleased to know that Mr. Mulcaster managed to get to the grounds anyhow.

Mr. W. T. Irwin is still at Lexington, N. C., with the Glenmore dogs, but will soon go on to Sherman, Tex., to be ready for the Bexar field trials.

The well known collie, Prince Wilkes, is something of a clever dog in his way. Mr. Frank R. Carswell, his owner, of Wilmington, Del., keeps the dog at a farm about 12 miles from Wilmington. Prince stays at the farmer's for a week or two and then turns up at Mr. Carswell's home. Along this road there are other farmers with whom he has boarded at different times. While on his way to Wilmington he will stop at all these places and sometimes stay a day or two. In the first instance he was taken to the boarding place in a carriage. Mr. Carswell lately lost his bitch Lady Mol.

How this would suit Mr. E. Brooks if such a state of things were to obtain in America. At Dumfries show, held Dec. 14, there were to be 150 entries in Dandie Dinmonts! A record entry. The collies numbered 200 entries.

Mr. H. L. Kreuder has sent us a neat little catalogue of the beagles he has for sale and at stud. The outside leaf of the catalogue is adorned with a capital pen and ink sketch of the owner, by the well-known artist V. G. (Gribaydoff). By the way, the Rockland Kennels lost old Ch. Myrtle by death through old age a couple of weeks since.

According to the Utica, N. Y., *Press* a verdict has just been rendered in the Herkimer county court, N. Y., in the case of Hitchings vs. Bartlett, by which the latter is to pay the sum of $8,000 for allowing his dog to run after a horse on the street.

Hornellsville show has 158 entries.

## POINTS AND FLUSHES.

CHICAGO, Dec. 24.—Dr. William Jarvis has sold his Irish setter bitch Maid to Mr. Charles T. Thompson, of Philadelphia. She is in whelp to Blue Rock.

Mr. Frank Richards is still confined to his bed, but is recovering.

Messrs. J. M. Tracy and N. Wallace took part of a day's shooting on the Central Club's grounds on Tuesday, and made a bag of 25 birds. They were all shot on the wing.

The recent trials of the Irish Setter Club publicly demonstrated what had been so long known by trainers and owners, that is, that the Irish setters are not a hard-headed, self-willed breed of dogs. On the contrary, they are as a breed pleasantly submissive as compared with the English setter. Many of the dogs were well broken. Mr. J. Cassidy made his début as a field trial handler, and he made a most favorable impression by the manner in which he handled Currer Bell and the manner in which she worked. The dogs of Mr. H. Smith also showed practical knowledge, although it was said that he had a very short time in which to prepare some of them. The idea that Irish setters are hard-headed dogs is one of the fallacies which live on, and on, and on. Still, it is one of the peculiarities of dogdom that many fallacies live on without reason, and many live on against it.

The Irish Setter Club adopted the rules of the Eastern Field Trials Club to govern its running. The club particularly favored the time limit. This, too, is one of the fallacies which has been proved absurd in theory and obstructive in practice. It is a rule wholly in the interest of poor dogs. There seems to be an absurd idea prevailing that an owner is entitled to a stipulated amount of competition for his money. Not a competition which rests on whether an owner's entry can make any competition, or whether his entry is thoroughly beaten from the beginning, etc., but he must have something fixed and certain. No judges will throw out a good dog on a question of time, and no poor dog can win by being kept in by legislation longer than he deserves. The time limit was adopted to satisfy the importunities of a few visionary theorists. Once adopted, it is difficult for a doggy organization to let anything go.

The tendency of the times in respect to judging at field trials is to let the judge decide according to his lights. The many attempts in the past to form a code of rules which would make the decisions of a judge automatically correct have been found weak and faulty. The attempt to put the dogs in a hopper and sift out the winners is a failure.

Some of the rules of the prominent clubs are absurd and ridiculous. Nearly all, under "Instructions to Judges," explain at tiresome length what constitutes a "break in," a "break shot," a "chase," etc. There is a large lot of such trash in the rules. If it were put in as instruction to handlers, it would have a possible excuse in that there are new handlers coming in who do not fully comprehend these matters, but to instruct a judge what constitutes a chase, point, back, break shot, etc., is a piece of presumption.

B. WATERS.

### A New Series of Pennsylvania Railroad Tours to Washington, D. C.

THERE will be six of the popular personally conducted tours run to the Capital during the winter and spring of the new year. Jan. 19, Feb. 9, March 13, April 13, May 4 and 25 are the dates selected. On Dec. 29 the last of the present series will be run, affording a splendid opportunity in which to spend the holidays. The remarkably low rate of $13 from New York includes railroad fare and hotel accommodations at the best of Washington's hotels during the three days spent on the tours. Further information furnished on application to ticket agents of Pennsylvania Railroad Company or tourist agent, 849 Broadway, New York.—*Adv.*

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

### NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Beaumont Kennels.* By James B. Blossom, New York city, for his kennels.

### BRED.

☞ **Prepared Blanks sent free on application.**

*Daisy Gladstone II.—Toledo Bee.* Chas. Deavis's English setter bitch Daisy Gladstone II. (Ned Gladstone—Miss Rhodes) to F. W. Eddy's Toledo Bee (Toledo Blade—Maggie Bee), Dec. 20.

*Clara Barton—Altoneer.* G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Clara Barton (Sir Bedivere—Judith) to E. H. Moore's Altoneer (Alton—Hera), Nov. 8.

*Lady Lamond—Alton, Jr.* G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Lady Lamond (Alexander—Bessie) to E. H. Moore's (Alton—Judith), Nov. 11.

*Queen—Blemton Reefer.* J. B. Martin's (San Francisco, Cal.) fox-terrier bitch Queen to his Blemton Reefer (Venio—Rachel), Nov. 20.

*Chief's Kate—Tearaway.* H. B. Ledbetter's (Farmington, Mo.) Irish setter Chief's Kate (Chief—Jennie P.) to Hatfield Kennels' Tearaway (Muskerry—Floss), Dec. 13.

*Pansy's Judy—Eberhart's Cashier.* C. K. Farmer's (Haartman, Mich.) pug bitch Pansy's Judy to Eberhart Pug Kennels' Eberhart's Cashier, Dec. 15.

*Nadjy of Naso—Spot Dash.* Liberty Kennels' (Hyattville, O.) Nadjy of Naso (champion Nick of Naso—Temptation) to their Spot Dash (Sir Phillip Sydney—Topsy), Dec. 22.

*Bess—Don.* J. B. Martin's (San Francisco, Cal.) mastiff bitch Bess to W. Growall's Don (Turk—Cassandra), Dec. 8.

*Lassie Bang—Prince Don.* F. S. Webster's (Mount Vernon, N. Y.) pointer bitch Lassie Bang—Telie Doe) to his Prince Don (Tennyson—Nellie B.), Nov. 2.

*Cleo—Bradford Ruby II.* W. B. Smith's (Mount Lookout, O.) pug bitch Cleo to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Dec. 15.

*Judy—Eberhart's Cashier.* C. K. Farmer's (Indianapolis, Ind.) pug bitch Judy to Eberhart Pug Kennel's Eberhart's Cashier (champion Kash—Lady Thora), Dec. 13.

*Queenie—Patsy Bolivar.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Queenie (champion Penrice—Mint) to their Patsy Bolivar (Eberhart's Cashier—Flossie II.), Dec. 17.

### WHELPS.

☞ **Prepared Blanks sent free on application.**

*Nora.* D. G. Hirsh's (Lancaster, Pa.) St. Bernard bitch Nora, Dec. 19, twelve (seven dogs), by W. Peirson's Beri.

*Veto.* C. K. Farmers's (Indianapolis, Ind.) Irish setter bitch Veto, Oct. 28, nine (four dogs), by his Hiawatha.

### SALES.

☞ **Prepared Blanks sent free on application.**

*Queen.* White and tan fox-terrier bitch, by J. B. Martin, San Francisco, Cal., to C. F. Tottenham, Penryn, Cal.

*Tops.* Apricot fawn pug dog, by Eberhart Pug Kennels, Cincinnati, O., to S. L. Williams, Chicago, Ill.

*Hiawatha—Veto whelps.* Red Irish setter bitches, whelped April 4, 1892, by C. K. Farmer, Hartman, Mich., one each to S. C. Kile and W. H. Havens, both of Indianapolis, Ind.

*Hiawatha—Veto whelp.* Red Irish setter dog, whelped Oct. 28, 1892, by C. K. Farmer, Hartman, Mich., to Lieut. J. M. Stotsenburg, Fort Niobrara, Neb.

*Dixie—Topsy whelp.* Silver fawn pug dog, whelped November, 1892, by Eberhart Pug Kennels, Cincinnati, O., to J. B. McFarland, same place.

*Cinch—Minnemac whelps.* Black, white and tan ticked English setter pog and bitch, whelped October, 1892, by Liberty Kennels, Hyattville, O., to Geo. O'Bannon, Hartwell, O.

*Blemton Reefer—Blemton Brilliant whelps.* White, black and tan fox-terrier dog and bitch, whelped Oct. 17, 1892, by J. B. Martin San Francisco, Cal., dog to D. M. Taylor, Mare Island, Cal.; bitch to F. E. Holden, Los Angeles, Cal.

# Yachting.

There appears to be a strong feeling on the part of some British yachtsmen in favor of the adoption of the Seawanhaka formula in place of that of the Y. R. A. for the reason that it would produce yachts more nearly of the American type. Whether or no this of itself would be desirable is open to serious question; but in any case such a type would not result from a mere change of formula for measurement, The American type is distinctly the product of a waterline classification, and would not be produced by merely changing the measurement and rule while retaining a classification by rating or sailing length.

AFTER the praises of the 90ft. cutter as the only yacht fit for a gentleman to race in, which were so loudly sung five years since, it is amusing to hear of wealthy yachtsmen who are stopping to do a little careful figuring before ordering a modern 85-footer, and who are one and all coming to the conclusion that it costs more than it is worth to win in the class, and still more to be defeated.

The news of more cup defenders comes in slowly, while time is becoming more precious every day. The situation in Boston is very fairly described by the Boston *Globe*, and the prospects for a new boat from that quarter are but slim. Vice-Com. Morgan returned from England last week on the Teutonic, and at once denied the reports that he had purchased a large steam yacht and that he would build a Cup defender.

EARLY in the coming year the FOREST AND STREAM will publish a "House Boat Number," devoted to an extended description of these useful and popular craft, with working drawings of several sizes. We will be glad to receive any description or photos from those of our readers who have used or owned house boats.

MR. MORGAN reports a diversity of opinion over the Dunraven challenge, many English yachtsmen deploring the fact that a match was arranged under existing conditions.

### Changes in Y. R. A. Rules.

THE meeting of the Yacht Racing Association on Dec. 8 resulted in a long discussion, as the result of which the report of the council, as printed in the FOREST AND STREAM of Dec. 1, was adopted. The proposal to adopt the Seawanhaka formula was not adopted, the changes being that beginning with the coming year the loadline of each yacht will be plainly marked by the owner with marks which will be out of the water at all times when the yacht is lying in smooth water in her usual racing trim.

The rule relating to ballast was altered to read "No ballast or other dead weight shall be shifted, shipped or unshipped, so as to lighten the water line, after a yacht has been entered for a race, nor without giving notice thereof in writing to the secretary of the Y. R. A., as enjoined in Rule 3; and no ballast shall be shipped, unshipped or shifted after 9 P. M. of the days previous to the race; and the weight of the ballast on board shall at no time exceed that which was on board when the yacht was measured. A race resailed shall be regarded as a new race, so far as the 9 P. M. condition is concerned."

In the 10 rating and smaller classes the crew will be limited, and in all classes the fore triangle will be measured by taking the perpendicular, I, from the deck at the foreside of the mast to where the line of the luff of the foremast headsail, when extended, cuts such perpendicular; the base, J, from the foreside of the mast to where the line of the luff of the foremast headsail cuts the bowsprit other spar, or hull, as the case may be.

## The Single-Handed Cruiser Myra.

In the course of a recent brief visit to Canada we found time to spend an afternoon at Cobourg with Mr. Henry K. Wicksteed, an old and valued correspondent of the Forest and Stream, and known to all our readers through his many stories of cruises in yachts, single-handers and canoes, as well as by many clever designs, Freda, Sylvia Madcap and other cruising craft.

On his drawing board was a new design, yet in pencil, another cruiser, a boat remarkably like the design of Scarecrow, which appeared just a week later in the Forest and Stream.

At our request Mr. Wicksteed has sent a tracing of the design, from which the accompanying cuts were made. Though not intended for publication his letter contains so much of interest concerning this popular class of small craft that we venture to quote at length from it as follows:

"I think the strong family resemblance between Scarecrow and Myra are very interesting, in that they have been developed by evolution in opposite directions, the former by giving a more yachtlike and stylish make up to the snakbox model, and the latter from the ordinary sailing skiff. The steps in your progression were the sneak box *pur et simple*, the cruising ditto, the Forest and Stream cruiser La Gloria, and lastly Scarecrow.

"In my case they were Hebe, a sharp-stemmed skiff of ordinary model; next a square-sterned boat, next the Montreal cruiser of 1889, then Madcap, which was merely an experiment in heavy centerboard and rudder in a boat of ordinary model, and then Egret, Elsa and Myra. As being the productions of two enthusiasts working in different grooves, the similarity in the final results may fairly be taken as an evidence of an approach to the highest development.

"Myra is still an effort in the direction of good rough-and-tumble qualities in open water rather than mere speed—which, however, was aimed at in part—I am quite prepared to believe that Scarecrow is the faster model of the two under ordinary conditions, independent of rig and greater size and power.

"For the rig, Elsa's is I think the better for afternoon sailing—and racing—the objection in camping was the very far forward position of the C. E. of mainsail, especially when reefed, making it necessary when going at all close to the wind to carry two pieces of sail which in a blow and narrow channel was sometimes more than I cared about.

"Again, the mast being so far in the eyes and incapable of being stayed aft, it sprang forward so that in a strong wind under the pull of the jibstay, with mainsail in gaskets the "jib and mizen" rig which is one of the excellent features of the regular yawl rig, was almost impracticable, the jib was a mere leeward pulling sack. Consequently I had to abandon the method of reducing sail and resort to double reefed main and reefed mizen with jib stowed. With two hands on board this could be carried in almost any weather, but on my October cruise I frequently found it more than I wanted, especially when it was desirable to drive easily through a choppy head sea.

"The mast in the eyes has other disadvantages in a cruiser, in getting ashore, attending to ground tackle and making and stowing headsail; but I believe the cat-yawl to be pretty near to perfection for a fine weather boat, equal to the cutter to windward and faster on any other point. Sail is more distributed fore and aft and the C. E. is lower, and as a corrallary more can be carried. The disposition of Myra's sail will admit of her being pointed to windward under a corner of the mainsail only, and as the mainsail comes down the C. E does not shift forward as it does in the leg of mutton rig.

"Again, the gaff is of moderate length and weight. A leg of mutton of same area and length of boom would require a yard of 14ft. or more. Elsa's was 12ft. and no trifle to swing up snug and taut in a breeze when under way, and even under close reefs it was always aloft and on end, adding to the weight of the mast in encouraging pitching and scending, although I must say that Elsa lifted at all times as lightly and quickly as any boat I ever had to do with.

"Lastly the battened sail is difficult to stow in a 'neat skin,' and sails bunched up in a slovenly way are an abomination to the sailorman.

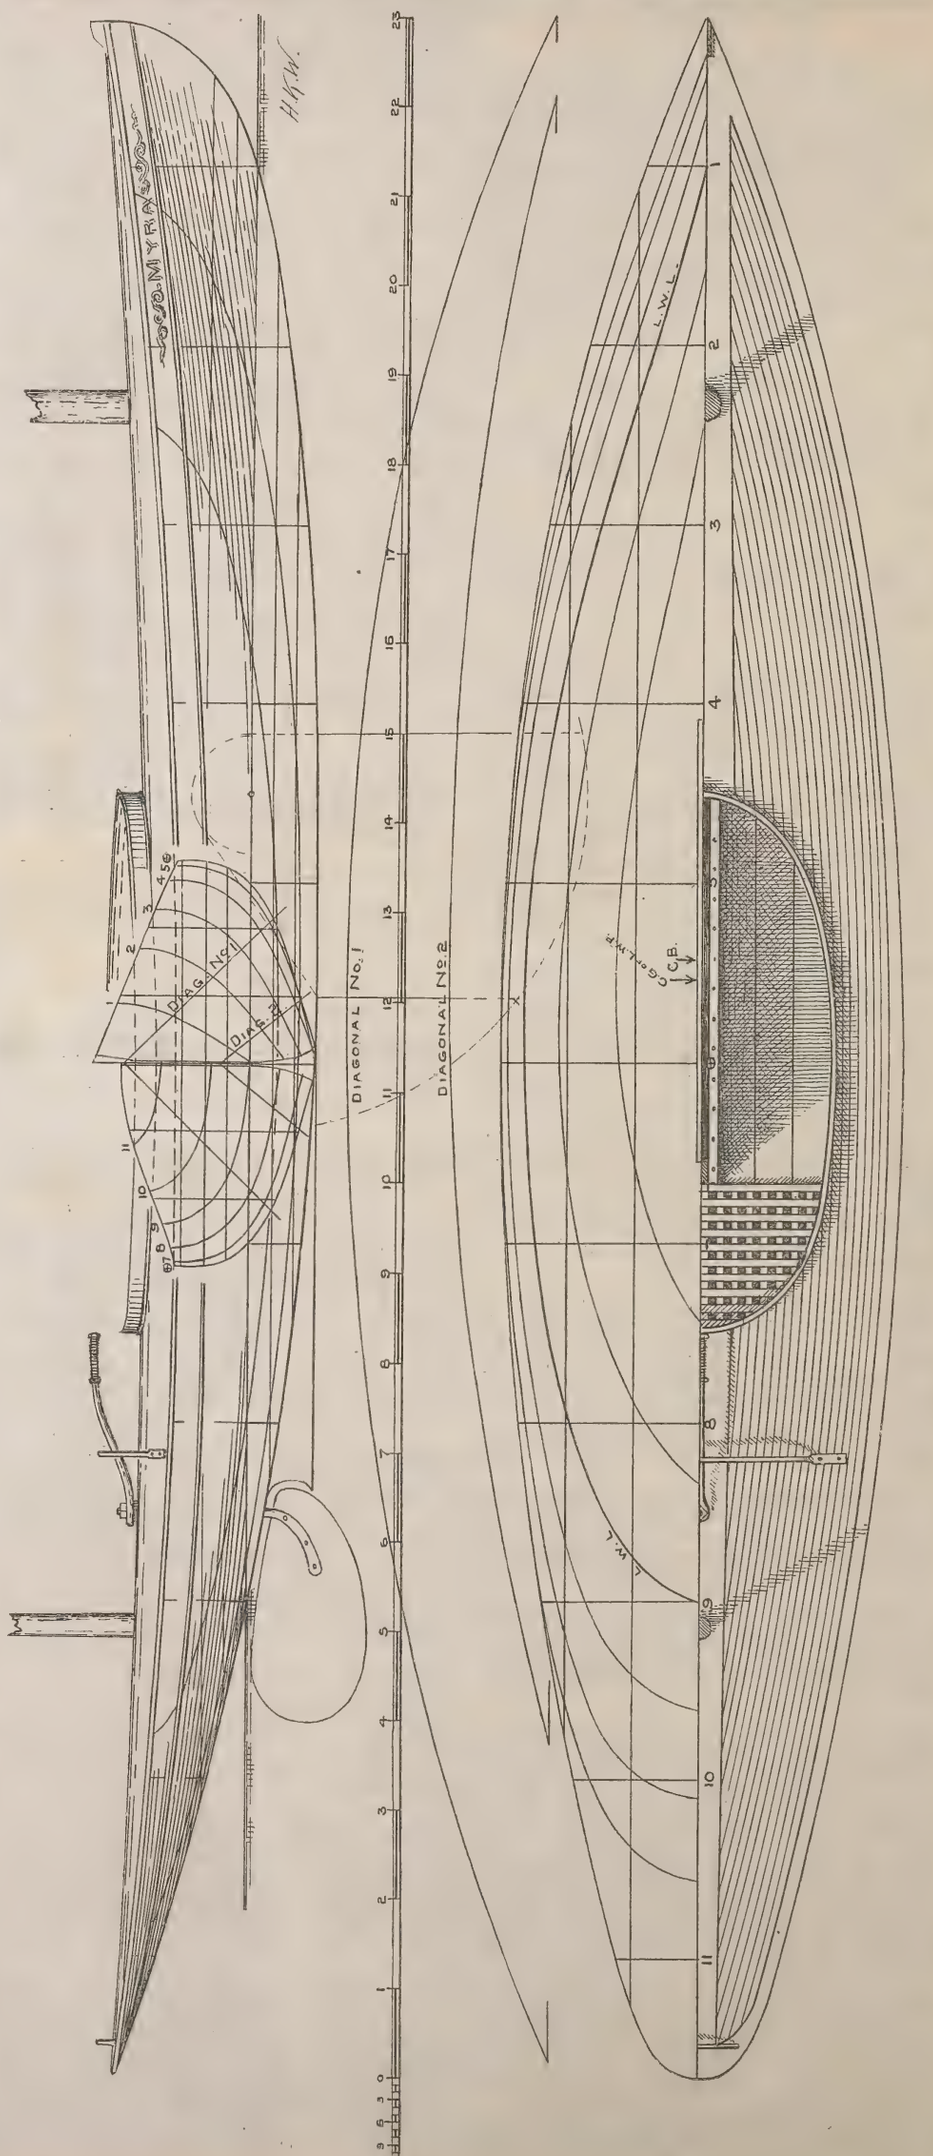
"Myra's spinaker, as shown by the dotted lines, should be a good one. One of the great advantages of the cutter has always seemed to me to be that with her lofty mast she could spread so much more sail than the yawl going down wind, but I think the high peaked lug spinaker solves the problem of how to make the two rigs equal in spread.

So much for rig. Myra's steering gear is a great improvement on Elsa's and I think better than Scarecrow's. Commenting on my using a big rudder in the way of an after centerboard, somebody asked, "But she must carry a very strong weather helm." Not so, for the rudder being heavy naturally tends to leeward as the boat heels, and both Madcap and Elsa, and I believe Egret carried an almost imperceptible weather helm except in very strong winds. In Myra I have provided against this by making the C E move slightly forward when jib and mizen come in for a blow. To get rid of the tiller lines is a great gain—the boat is more sensitive and every sailor likes to "feel" the helm. A cruiser wants a big cockpit, so I have put one in and provided for partial closing by a hatch over forward end.

I have not quite decided whether the sailplan will be as per drawing or whether it will be like Elsa's, but in any case the position of the masts is about right according to my ideas. After the yard of the leg of mutton gets larger than 13 or 14ft., it is a heavy spar to swing aloft and I rather think the gaff sail is the best sail, it stows snugger without battens.

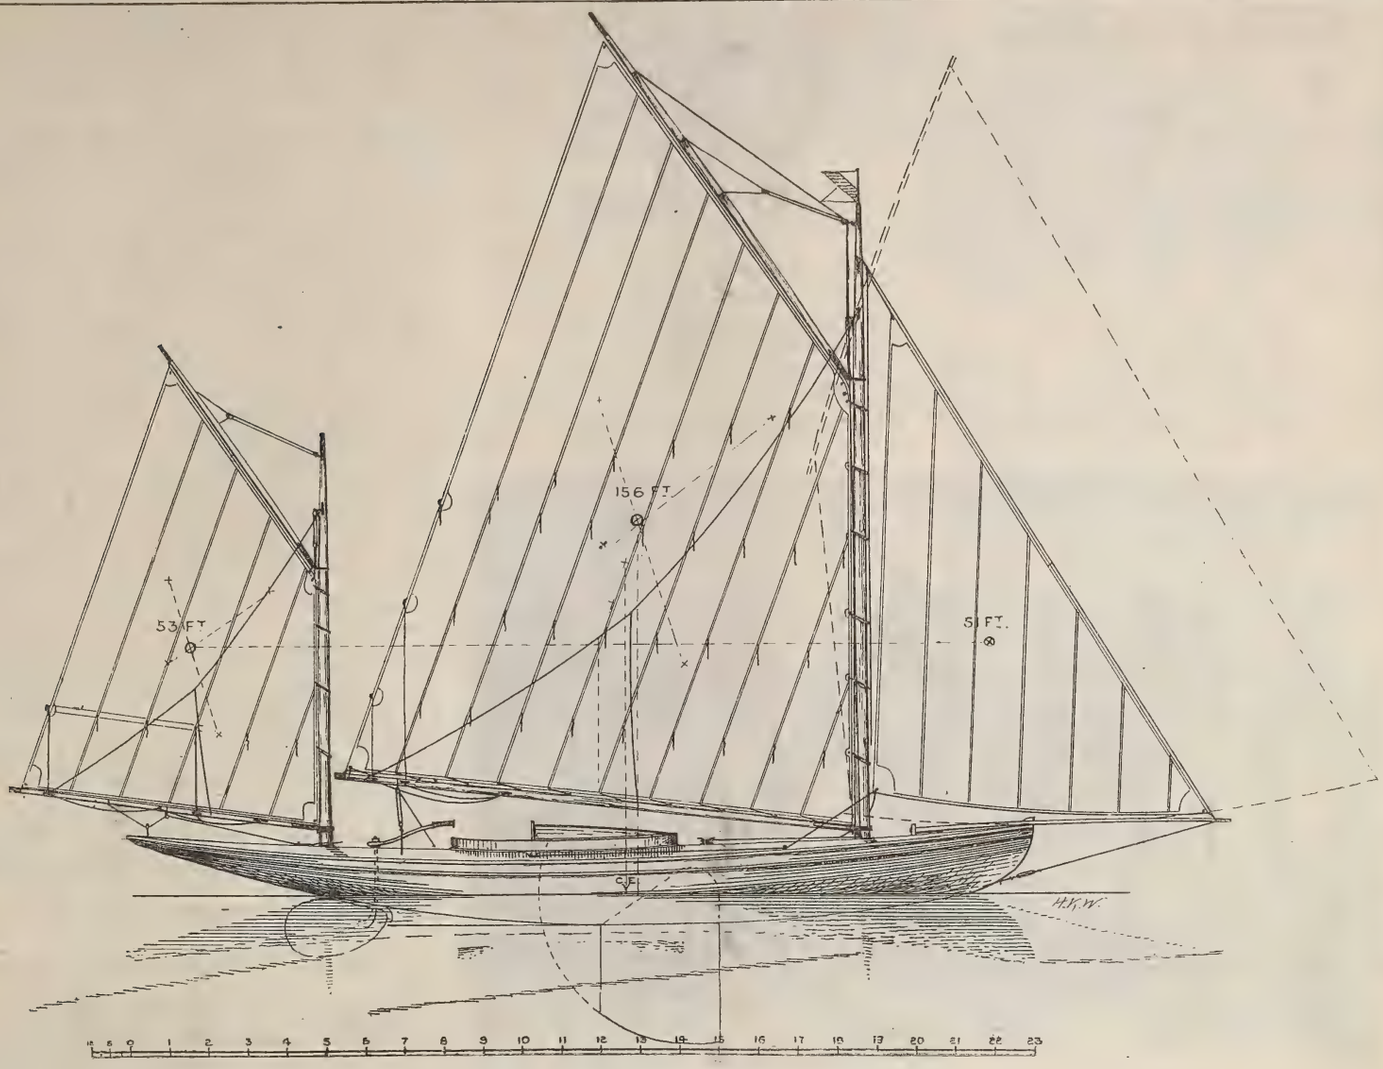
The dimensions and elements are:

| | |
|---|---|
| Length on waterline | 16ft. |
| Length over all | 23ft. |
| Beam on deck | 4ft. 6in. |
| Draft | 9in. |
| Least freeboard | 10in. |
| Displacement | 923lbs. |
| Sail area | 260sq. ft. |
| Sheer forward | 11in. |
| Sheer aft | 8in. |
| Area wetted surface | 58sq. ft. |
| Ratio sail area to do | 4.5 |
| Co-efficient of fineness under water body | .31 |
| Centerboard | 250 to 300lbs. |



## The Society of Naval Architects and Marine Engineers.

With ample evidence on every hand of material advances in all branches of naval architecture and marine engineering within the past ten years, there has at the same time existed a deficiency to which we have often alluded, the lack of technical instruction for learners, and of coöperation among those at the head of the two professions. For over 30 years Great Britain has boasted of an "Institute of Naval Architects," and in this country similar organizations have long since been perfected by both civil and mechanical engineers and by architects. Within a year we have been able to announce the inauguration of several attempts to provide the best technical instruction in the two branches mentioned, notably in the case of Cornell University, and now as the year ends comes the announcement of an equally important movement to form an association of naval architects and marine engineers.



The organization of the new body, which will be known as the Society of Naval Architects and Marine Engineers, has just been completed, the officers and principal incorporators being:

President, Clement A. Griscom, of Philadelphia, president International Navigation Co.; First Vice-President, Theodore D. Wilson, of Washington, D. C., chief constructor, United States Navy; Vice-Presidents, Charles H. Cramp, of Philadelphia, president William Cramp & Sons' Ship and Engine Building Co.; George W. Melville, of Washington, D. C., engineer-in-chief, U S. Navy; George W. Quintard, of New York, president Quintard Iron Works; Irving M. Scott, of San Francisco, vice-president and general manager Union Iron Works; Francis A. Walker, of Boston, president Massachusetts Institute of Technology; William H. Webb, of New York, naval architect (retired); Members of Council Francis T. Bowles, of Norfolk, Va., naval constructor, U. S. Navy; F. E. Chadwick (assoc.), of Washington, D. C., commander, U. S. Navy; F. L. Fernald, of New York, naval constructor, U. S. Navy; H. T. Gause, of Wilmington, Del., vice-president Harlan & Hollingsworth Co.; N. G. Herreshoff, of Bristol, R. I., vice president and general manager Herreshoff Manufacturing Co.; Philip Hichborn, of Washington, D. C., naval constructor, U. S. Navy; T. W. Hyde, of Bath, Me., president Bath Iron Works; W. H. Jaques (assoc.), of Bethlehem, Pa., Bethlehem Iron Works; J. C. Kafer, of New York, superintendent Morgan Iron Works; Frank King, of Sparrow's Point, Md., superintendent marine department, Maryland Steel Co.; F. E. Kirby, of Detroit, consulting and constructing engineer, Detroit Dry Dock Co.; Chas. H. Loring, of New York, ex-engineer-in-chief, U. S. Navy; J. W. Miller (assoc.), of New York, president Providence & Stonington Steamship Co.; Lewis Nixon, of Philadelphia, general manager Wm. Cramp & Sons' Ship and Engine Building Co.; C. B. Orcutt, of New York, president Newport News Shipbuilding Co.; J. F. Pankhurst, of Cleveland, O., vice-president and general manager Globe Iron Works; Harrington Putnam (assoc), of New York, counsellor-at-law; W. T. Sampson (assoc.), of Washington, D. C., captain, U. S. Navy; Horace See, of New York, consulting engineer and naval architect; G. E. Weed, of New York, president Morgan Iron Works; F. W. Wheeler, of West Bay City, Mich., president F. W. Wheeler Shipyard and Dry Dock Co.; Sec.-Treas., Washington L. Capps, of Washington, D. C., assistant naval constructor, U. S. Navy.

The object of the society is the advancement of all branches of

SINGLEHANDER "MYRA." Designed by H. K. Wicksteed, 1892.

SAIL PLAN OF SINGLEHANDER "MYRA."

naval design and construction, both in hulls and engines; and in naval, mercantile and pleasure vessels. One of the chief means to this end will be the periodic meetings of members for the reading and discussion of papers, and the general interchange of ideas; together with the publication of the papers and discussions.

The society will include members, associates, juniors, honorary members and fellows. The first class of members is open only to naval architects and marine engineers, including professors of naval achitecture or mechanical engineering in colleges of established reputation; the requirements being that the candidate shall be at least 25 years of age and have been engaged in the practice of one or the other profession for at least three years.

The class of associates is open to all who, by profession, occupation or scientific attainments, are qualified to discuss the qualities of a ship or her propelling machinery; or the construction, manufacture or arrangement of some part or parts of the hull or its equipment.

The class of juniors shall consist of persons not less than eighteen years of age, graduates of technical schools of established reputation, or who have had not less than two years practical experience in marine engine works or shipyards.

The class of honorary members, limited to 25, will include only persons of special eminence in their professions.

The class of fellows will include persons in sympathy with the development of naval architecture and marine engineering who shall contribute not less than $200 to a permanent fund for the advancement of the interests of the society.

A meeting of the council will probably be held in January for the completion of all details of organization and the adoption of a constitution and by-laws; and following this it is proposed to hold the first general meeting in New York, at the time of the naval review next May. In view of the list of officers given above, it is hardly necessary to predict that the undertaking will prove a success from the start or that its influence in the improvement of all classes of vessels will be felt at a very early day.

### Boston and the Cup.

Now that New York yachtsmen are in the field of cup defence with a boat from the Herreshoff's hands, the one question among Boston yachtsmen appears to be as to whether or not they shall also be represented. Trial races without a Boston boat, after the splendid showing made in 1885, 1886 and 1887, would be something to which Eastern yachtsmen would not look forward complacently, and yet there is at the present time little else in view. Gen. Paine will not build, and Henry Bryant daily grows more doubtful as to taking the general's place. Possible syndicates have vanished into air when closely followed, and there is really no Boston boat in sight.

But if there is no boat actually in sight, it is true nevertheless that there is a strong undercurrent of feeling that Boston should be represented, and by a Boston designed and Boston built boat. This feeling may or may not come to the surface in tangible form, but it is certainly growing stronger rather than weaker, and in itself is a most healthful sign that the need of a choice of boats for a cup defender is being appreciated.

With Gen. Paine out of the fight "the Adams boys" are naturally looked to by the older heads in Boston yachting as best fitted to take up the work. They have gone step by step from small to large boats, and have shown themselves equal to everything in the yachting line which they have undertaken. No racing craft was ever better sailed or handled than was the Harpoon last year, and a very small score would be required for errors of judgment which occurred.

Why, then, do not the Adams brothers build a boat themselves or head a syndicate? is the question which most naturally arises.

In answer, it may be said that both George and Charles Adams frankly admit that an 85-footer represents an outlay of more money than they can see their way clear to devote to such a purpose. A 70-footer might have been built by them had Dunraven come with a boat of that size, but an 85-footer put them "out of it" at once on the ground of expense alone.

As to why they do not head a syndicate, nothing could better show their feeling in the matter than the thoroughly characteristic reply of Mr. George Adams to the writer when asked that very question.

"What," he said, "go around and ask my friends to build me a boat? Wouldn't I look fine running around and saying 'please build me a boat or the cup is lost,' to men who know more about it than I do!"

Which is, of course, a somewhat exaggerated idea of the way the yachtsmen who would be willing to back the brothers in a syndicate would look at it, and yet contains the pith of the whole matter—that the brothers would not go far magnify their abilities as to ask their friends to place them at the head of a syndicate, however much they might like to take a hand in cup defence.

"The Adams brothers would be just the ones to head a syndicate," said a yachtsman who has been deeply interested in cup matters, and who was one of the Puritan syndicate, "but I can fully appreciate their position of not careing to go begging for such a privilege."

And so the matter rests at present. A syndicate with the brothers at the head of it would undoubtedly be a first-class thing, but no way appears to bring it about, for even if the head of a syndicate were offered them, it is not known that they would accept.

As to the chances of a boat from Mr. Bryant's hands, that gentleman is himself the authority for the statement as to the growing doubts that he will build.

"Aside from the question of expense," he said recently in speaking of the matter, "the type of boat now being produced is in many respects so undesirable as to make one hesitate before building.

"The long overhangs which the Herreshoffs have introduced, while undoubtedly conducive to speed, I consider as a detriment to a boat's sea worthiness, while the shallow hulls give little room below In short, a man who builds a cup defender is not likely to find her of use for anything else.

"Here is what I hoped to build for cup defense when I came home from abroad," he said, as he showed photographs of designs for a steel boat of about 85ft. waterline, "but I find that this would not be in it with the boat Herreshoffs are likely to turn out."

The photographs showed a centreboard boat of clean lines, easy midship section and good displacement; a boat in which speed would evidently be attained, but not at the expense of future cruising qualities. The design was one of much originality in several ways, and the boat built from it would certainly have been favorably heard from.

But Mr. Bryant feels that something else is required, and so he is still in doubt.

In view then of the present situation in cup defense matters in Boston, there seems nothing left but to express the hope the Adams brothers may be persuaded to take the head of a syndicate, or that Mr. Bryant may build.

To hope for both would, indeed, be too much.—*Boston Globe.*

### "The Yachtsman's" Christmas Number.

THE English paper, *The Yachtsman*, has issued a special Christmas number which is altogether a very creditable production, in spite of the marked deficiency of the literary portion of its contents. The most notable feature is the design of the handsome 20-rater Chiquita, by Arthur E. Payne; a yacht built as late as 1890, but showing none of the freak features that have lately invaded even the middle-sized classes. She is a most wholesome cutter, of the general type of Minerva, her dimensions being: Length, stem head to taffrail, 64ft., l.w.l. 45ft. 6in., beam 11ft., draft 11ft. 9in. The best of several full-page reproductions is entitled "Gertrude, Prince Batthyany-Strattman," and is from a painting by Admiral Beechy, R. N.

No mention whatever is made of the interesting facts in connection with this picture. It represents the yawl, then owned by Lieut. Henn, in the noted ocean race of Oct., 1880, from Lisbon to Gibraltar, 300 miles, for a prize of £200. On board of Gertrude were Lieut. and Mrs. Henn, with Capt. Bradford. At the start the weather was so bad that the Portugese committee cautioned the yachts against crossing Lisbon Bar, advising that they should anchor when over the starting line and wait for the sea to moderate. Gertrude went away at once without a pilot, crossing safely. She was sold by Lieut. Henn when he built Galatea in 1886.

The other large plates show a group of Clyde 2½ raters, a close finish between Yvonne and Dora on the Clyde, the steam yacht Lady Ina, and two reproductions of paintings. There are several readable cruises, but the fiction is poor, the yachting novelettes being particularly so; while a description of a yacht race at Chicago is likely to be none the less offensive from a strong flavor of fact to its satirical descriptions. The article on Australian yachting, with its accompanying photos, is quite interesting. As we said at the start, however, the number as a whole makes a very good appearance, and the publishers at least deserve due credit for their effort to provide for yachtsmen the same amusement and entertainment which the illustrated newspapers offer so liberally to the general reader at the holiday season.

The ice yacht season on the Shrewsbury opened with the cold weather of last week, and a good race was sailed on Dec. 26. The Hudson River is just closing, but it is probable that the yachts will be out this week.

## YACHT NEWS NOTES.

The officers of the Harlem Y. C. for 1893 are: Com., T. H. McDonnell; Vice-Com., W. J. Cooper; Rear-Com., W. J. Kennedy; Fleet Capt., W. A. Borst; Fleet Surgeon, H. M. Cox, M. D.; Meas., W. D. S. Hyer; Treas., F. H. Davis; Financial Sec., H. B. McAllister; Recording Sec., Sidney Macey; Corresponding Sec., F. W. Creegan; Steward, M. L. Goetz; Board of Directors, F. I. Fitch, R. K. Wylie, E. M Griffiths, T. W. Jackson, William Grophert, A. N. Bacon and W. A. Towner; House Committee, A. H. Van Every, R. Tate, W. T. Hyde, C. Hutchinson and G. A. Ryer; Membership Committee, Geo. Bergen, J. Conklin and W. A. Scardefield.

Capt. Howard Patterson has just completed the designs for a 90ft. l.w.l. schooner, which will probably be built this winter under his supervision. The yacht will be 112ft. over all. 90ft. l.w.l., 21ft. beam, 10ft. draft of hull, 20ft. draft with board down. She is intended for racing and will carry a large rig, with the mainmast well forward.

The records of the past season in British waters show Queen Mab at the head with a total sum of £1,187; 46 starts, 24 firsts, 11 seconds and one other prize. Iverna started 29 times, won 13 firsts, 2 seconds and one other, with £955. and Meteor (Thistle) made 31 starts, with 10 firsts, 10 seconds, one other and £645.

Miranda, schooner, has been examined by Mr. John Harvey, who built her in 1876, and has been found sound throughout. She will be re-coppered and fitted with new steel wire rigging under the direction of Captain Dudley Brand, and when ready for sea she will sail for San Francisco, probably under command of Capt. J. W. Buddington, an old whaler.

An exhibition of models, apparatus and everything pertaining to yachting, will be held at the Aquarium in London from Feb. 1 to March 15, and is likely to be most interesting to yachtsmen.

On Dec. 20 the members of the Seawanhaka C. Y. C. listened to a very entertaining talk by Prof. Charles Sprague Smith on the subject of "The Life of the Vikings," illustrated by lantern views.

The officers of the Audubon Y. C. are Com., R. Van Riper; Vice-Com., C. Wagner; Fleet Captain, R. Rowley; Treas., Robert B. Saul; Sec., E. O. Kramer; Meas., F. Schoffer.

The Corinthian Y. C., of New York, has extended the courtesies of its club house and anchorage to Lord Dunraven.

Jacob Buckhout, of Poughkeepsie, the noted builder of the Hudson River ice yachts, died on Dec. 24, at the age of 60 years.

## Canoeing.

### W. C. A. Executive Meeting.

CHICAGO, Ill., Dec. 24.—The executive meeting of the Western Canoe Association is called for Saturday, Jan. 7, at the Wellington Hotel, Chicago. In the evening the visiting canoeists will be tendered by the Chicago Canoe Club a dinner at the Wellington, which will be the occasion of a pleasant reunion and a general canoeing good time.

Where is the W. C. A. meet for '93 to be held? The leaning is toward Ballast Island. Several favor the Madison Lakes, of Wisconsin. Policeman Casey is said not to favor Winnebago. E. H.

### A. C. A. Membership.

THE following gentleman, residing in the Atlantic Division, has applied for membership: Theo. Forst, Hoboken, N. J.

## CANOE NEWS NOTES.

We have received an invitation to the annual meeting of the Western Canoe Association, which will be held at the Hotel Wellington, Chicago, on Jan. 7, at 2 P. M., a dinner following in the evening.

A three mile canoe race was sailed on Thanksgiving Day by the Oakland (Cal.) C. C., with four starters, W. W. Blow winning in Jack, and Geo. A. Warder being 5s. astern in Gnat.

# Rifle Range and Gallery.

### Death of a Prominent Sharpshooter.

ST. LOUIS, Dec, 22.—Franz Lendi, a well-known German sharpshooter and shooting master of the St. Louis Club, died last night from the effects of a gunshot wound in his chest, which he received at the hands of Louis Brown, a river man, about noon on Dec. 14. Mr. Lendi was fifty years old, and leaves a widow, but no children. He had a large acquaintance and was loved and respected by all who knew him. As a rifleman he was always enthusiastic and an expert, as the many medals which he won in competition with the crack shots of this country and the old will testify. To the St. Louis Sharpshooters the loss of their shooting master, who was more of a father than master, the loss is irreparable. The boys will miss his kind words of encouragement and advice to "try and do better next time." The funeral will be under the auspices of the St. Louis Sharpshooters, Sunday, Dec. 25. A sad Christmas. RAMROD.

### Hoboken's Goose Shoot.

AFTER the close of the Miller Rifle Clubs's prize shoot Monday evening, a happy crowd of riflemen started up Washington street and to a shooting gallery by storm. The party was headed by big Barney Walther, and by the time the proprietor of the place could collect his thoughts, he had already consented to the boys shooting for the goose which he had on exhibition. It did not take long before the three shots allowed each man were ended and a summary of the totals were as follows, with four men for first

1. J. E. Overholt, Pres.
2. E. V. Spencer, V.-Pres.
3. A. Smyth, Sec'y-Treas.
4. E. A. Clifford.
5. C. R. Hunt.
6. T. H. Wadland.
7. Chief Hazel.
8. George Fisher.
9. Col. Thos. Axworthy.
10. Jos. Smyth.
11. John Smyth.
12. James Crooks.
13. Father Byrne.
14. E. B. Wilgate.
15. J. H. Hamilton.
16. R. Crooks.
17. Frank Kaiser.
18. Jno. Stroud.

HAMILTON (ONTARIO) GUN CLUB.

choice of the goose: Dorrler 32, Filter 32, Braun 33, Rosenbaum 32, Bird 31, Rebhan 31, Walther 31, Hutch 31, Ross 30, Keller 27, Mahlenbrock 21. It was then decided that the four winners should each shoot one shot, which resulted in another tie between Dorrler and Rosenbaum. As "Barney" wanted to see the goose go to New York and not remain in Jersey, he told "Rosey" "just so goot as he know," and Rosey won the goose, but when they looked he had disappeared as did Fred Ross and that big bird, the "Eagle." They searched the town but could find no trace of it, but when they arrived near the ferry the Honorable Mr. Keller asked the boys to have one with him, which, of course, they all refused, but it cost T. K. just the same. THE EAGLE.

### Revolver Shooting in England.

AN Australian team is expected again at Bisley in 1893. It may be remembered Australia sent a team in 1891 which was very successful in the rifle competition, especially the mounted ones, although they did not do much good with the revolver.

A French revolver team is also expected at Bisley, and the South London Rifle Club have decided to make them honorary members of the club so that they will be able to have a practice ground, so as to get used to the English miles and also the English climate.

Capt. Hamilton, who shot in the revolver competition at Bisley in 1891, getting a ninth and an eleventh prize in two of the series, has done very good work at Queensland, Australia. At their Rifle Association meeting just over, he carried off almost all the top prizes.

### Empire Rifle Club's Annual.

NEW YORK, Dec. 25.—The second annual prize shoot of the Empire Rifle Club, of New York, took place at their headquarters, 12 St. Marks Place, Dec. 18, 19 and 20. Small 25-ring target, any .22-cal. rifle, two best tickets to count, open to all comers. Distance 100ft. Some of the prominent riflemen of New York, Brooklyn and New Jersey visited the ranges and tried their skill at the targets. The scores of the prize winners are as follows:

| | | |
|---|---|---|
| B Walther, Zettler R C | 73 | 72—145 |
| N R Isenbaum, Empire R C | 73 | 71—144 |
| H Holges, Zettler R C | 72 | 72—144 |
| B Zinn, Empire R C | 72 | 72—144 |
| F Ross, Zettler R C | 71 | 72—143 |
| M Dorrler, Zettler R C | 71 | 71—142 |
| C Busch, Harlem R C | 70 | 72—142 |
| Chas Zettler Jr, Empire R C | 73 | 68—141 |
| R Bendier, Manhattan R C | 74 | 67—141 |
| M Engle, Zettler R C | 70 | 70—140 |
| Geo Plaisted, Zettler R C | 71 | 69—140 |
| J Rebhan, Hudson R C | 73 | 65—138 |

After the closing of the prize shoot B. Walther, president of the Zettler R. C, shot a match with W Rosenbaum, captain of the Empire R fle Club for refreshments, in which Walther was defeated by 8 points. EMPIRE R. C.

### London Rifle Shooting.

THE rifle shooting at the South London Rifle Club is chiefly confined to the English army regulation rifle (the Martini). The rifle champonship of the club goes each year to the member making the highest aggregate in a series of selected scores.

The emblem of the rifle championship since 1890 has been a bronze statuette of a Rocky Mountain trapper and his horse, with all his trappings, etc., complete, the four corners of the stand being decorated with buffalo heads in bronze, the emblem being the work of one of the members of the club, Mr. Walter Winans.

This trophy had to be held two years in succession, or three years in all, before becoming the absolute property of the winner. Last year Mr. Trask won it, and this year he again won it, beating all the other members at all ranges from 200 up to 900yds. four times over.

The trophy, therefore, becomes his property, and the club will have to get another one for next year. This is being modeled by Mr. Winans, and represents a "road agent" who has galloped his horse to death and is standing over its dead body shooting a Winchester repeater at his pursuers.

Copies of both these trophies are going to the French art section of the Chicago Exhibition.

If Mr. Trask keeps up his shooting form he will add this trophy to his collection. He being the rifle champion of the club represents it against all challengers.

# Trap Shooting.

All ties divided unless otherwise reported

### FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 27-30.—Watson's live bird target tournament, Watson's Park, Burnside, Ill.

Dec. 28.—Tournament at live birds, on Erb's grounds, Newark, N. J.

Dec. 28 29.—Jacksonville (Fla.) Gun Club's fifth annual tournament; $500 guaranteed purses; $300 in money and merchandise prizes added. Professional experts barred. Bryan Taliaferro, Sec'y.

1893.

Jan. 2.—Hartner's all-day target tournament, Oradgeville, Baltimore county, Md.

Jan. 2.—Towanda (Pa.) Gun Club's all-day tournament.

Jan. 2.—South Side Gun Club's "annual," Newark, N. J.

Jan. 12.—Open sweepstake at 100 live birds. $100 entry, on Erb's grounds, Newark, N. J. Entries (with $20 forfeit) will be received up to Jan. 10, by C. H. Townsend, 318 Broadway, New York.

Jan. 17-18.—Hamilton (Ont.) Gun Club tournament, live birds and targets.

Jan. 10-11.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap, live bird tournament, New Jersey (grounds to be named); Hurlingham rules, Monaco boundary.

May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.

May 23-25.—Knoxville Gun Club tournament, $1,000 added to purses. Also valuable merchandise prizes.

June 12-16.—New York State Sportsman's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry building, Rochester, N. Y.

Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh, N. Y.

## DRIVERS AND TWISTERS.

The Gate City Gun Club held three shoots in Kansas City on Dec. 15, two of them being postponed shoots from October and November. The conditions were 10 live birds per man in each shoot. When these were finished it was too dark to shoot off the tie for the season's average between J. B. Porter and J. A. R. Elliott. The scores follow:

| | Oct. score | Nov. score | Dec. score |
|---|---|---|---|
| Burrell | 1111112222—10 | 2220211222— 9 | 2211012222—9 |
| Bolen | 1111000112— 7 | 2221210122— 9 | |
| Bennett | 1211221221—10 | 2111222112—10 | 2111212101—9 |
| Elliott | 2122111112—10 | 1021222220— 9 | 1112210111—9 |
| Kearns | 0112112122— 9 | 2211101012— 8 | 1010220222—8 |
| Self | 1110122221— 9 | 1122110012— 8 | 0102102202—6 |
| Mason | 2112222222—10 | | |
| Hallowell | 1100210120— 7 | | |

Jack Winston and kindred spirits are agitating a movement for banding together the dozen trap clubs of St. Louis, Mo., and by pooling their strength establish a park, which shall be known as the headquarters of the shooting interests in that section.

PITTSFIELD, Mass., Dec. 18.—The Pittsfield Rod and Gun Club held their annual meeting, with a banquet at the American House on the 14th. The officers elected were: President, John M. Stevenson; Vice-President, John F. Noxon; Secretary and Treasurer, Wm. W. Tracy; Captain, H. S. Russell; Chairman of Executive Committee, Henry Hine. The organization has stocked many of the brooks with trout fry, and has taken legal precautions to have the fish and game preserved. The result of their efforts is that the partridge and woodcock are more plentiful than usual. Rufus A. Teeling, a veteran member of the club, extended an invitation at the annual meeting to have the club come to his cottage on Lake Pontoosuc, and have a day's fishing through the ice, which they will accept in the near future.

The quarterly shoot of the South Side Gun Club of Kansas City, Mo., took place in a snow storm, which kept a good many members away. The shoot for the cup was at 50 targets, the winner being Mr. Wood, who broke 43, Green broke 40, Fenner 33, L. Kritser 33, Griffen 29 and P. Kritser 27. In the medal shot at 25 targets Wood won with 18 breaks, Green getting 18, L. Kritser 16, Fenner 15, Griffen 13 and P. Kritser 12.

FAIRBURY, Ill., Dec. 21.—The Fairbury Gun Club had a successful shooting tournament to-day. Eight matches were decided, 7 of which were at bluerocks, with 10 targets in a match, and one at live pigeons. In match No. 1, first money was divided between Wilson, of Peoria, and Wilds, of Gilman; in match No. 2, Wells, of Piper City, and Wilson were tied with clean scores; in match No. 3, Wilson, Fortier, of Piper City, and Fellows, of Wing, tied; match No. 4 was won by Fritz Singer, of Mossville; in match No. 5, first money was won by Wilds with a clean score; in match No 6, Bartlett and Mortimer, both of this city, tied and Wilson won match No 7 with a clean score. The live pigeon contest was at 6 birds, with 14 entries. A. Brown, Fosdick, Wilson, Singer and T. Morris tied for first money with 4 birds each."

The Reading (Pa.) Shooting Association held its annual meeting at Matz's Three-Mile House on Dec. 19 and elected the following officers: President, Henry C. W. Matz; vice-president, Peter A. Fritch; secretary, Walter D. Eiler; treasurer, John Shaaber; captain, Matt. Eisenbise; directors, George Ritter, James Kilpatrick, William H. Bauman. It was decided to hold a three days' tournament at the Three-Mile House Park in February, the dates to be arranged later and to erect a club house at the same point. Two days are to be devoted to target shooting and one day at live pigeons.

There will be another 100 bird sweep, $100 entry, on John Erb's Newark grounds on Thursday, Jan. 12, beginning at 10 A. M. Entries, accompanied by $20 forfeit money, will be received up to Jan. 10 by C. H. Townsend, trap editor FOREST AND STREAM, 318 Broadway, New York. The divisions of money, after deducting the cost of the birds, will be as follows: Four to six entries, two moneys; seven to nine entries, three moneys; ten to fourteen entries, four moneys; fifteen or more entries, five moneys. All will shoot from the 30yd. mark.

January 5 will be a gala day on Erb's Newark grounds, that being the date of the friendly team match between the Parkway Gun Club of Brooklyn and the Newark Gun Club. Each club will put in teams of fifteen men each and each man will shoot at ten live pigeons. The Brooklyn visitors will reach the grounds before noon and shooting will begin immediately upon their arrival. The Newarkers intend to give them a good reception and make the day a pleasant one for all.

The Rochester Rod and Gun Club announces a "Jack Rabbit" shoot for Jan. 2. There are an the programme six 15 target events, two 10 target events, one at 20 targets and one at 25 targets. The latter event will be shot under the class system, with $3 entrance fee and four moneys. All the others will be straight "Jack Rabbit" divisions, the shooter getting 10 cents for each target broken, and the surplus being divided into three moneys.

The Auburn (N. Y.) Gun Club has elected the following officers for 1893: President, George W. Nellis; Vice-President, J. E. Brigden; Secretary, Lewis E. Fiero; Treasurer, William A. White; Committeeman, Charles R. Egbert. The above also comprise the Board of Directors. The reports for 1892 show the club to be in a sound condition.

The South Side Gun Club, of Newark, N. J, anticipates a big attendance and great sport at its "annual" next Monday. Artificial targets will be thrown at two cents each. I. H. Terrill, manager, and W. R. Hobart, secretary, will look after the comfort of visitors.

The Hell Gate Gun Club was recently organized in Harlem with the following officers: President, Col. J. H. Voss; Vice-President, Henry Hanlein; Recording Secretary, E. Doelnick, Financial Secretary, A. Kiechle; Treasurer, Emil Stein.

"Dutchy" Smith and P. Williams, of Plainfield, N. J., will shoot a match at 50 live pigeons each on the Independent Gun Club grounds at Hyde Park, on Jan 3. There will be open sweepstake shooting before and after the match.

The Cicero Gun Club, of Chicago, have completed their new club house and will hold snoots on Saturday and Monday. Their grounds are at Oak Park, Home avenue and Madison street. Both live birds and clays will be used.

The American Manufacturers' Association will hold a meeting at the Astor House on Jan. 10 and will probably arrange its list of fixtures for the 1893 series of expositions.

The Towanda (Pa.) Gun Club, Roxborough (Pa.) Gun Club and the South Side Gun Club of Milwaukee, Wis., are among those who will hold open shoots on Monday.

Clubs who propose holding tournaments during the coming season should claim dates as soon as possible in order to avoid conflicts of dates.

Mr. and Mrs. M. F. Lindsley, of Hoboken, and Phil. Daly, Jr., of Long Branch, will attend the shoot at Hamilton, Can.

John A. Hartner will run his usual open tournament at Orangeville, Baltimore county, Md., on Jan. 2.

Louis Miller proposes to hold another tournament for teams from clubs which hold forth on his grounds.

Frank P. Class intends to hold a tournament on his Morristown grounds in January.

A live bird shoot will be held at Clinton, N. J., on Monday.

C. H. TOWNSEND.

### Shooting at Springfield, N. J.

THE final shoot of the season of 1892 of the Union Gun Club was held at Springfield, N. J., on Dec. 20. Early in the morning the weather looked bad but about noon the storm clouds disappeared, the sun came out brightly, and the rest of the day was clear though cold. These club grounds are situated at the foot of the Springfield ridge of the Orange Mountains in an exposed position, where the full benefit is derived from the mountain breezes. However, Enoch Miller had a roaring fire in the stove, plenty of hot coffee and a bountiful supply of hot Boston baked beans, so that the shooters did not worry themselves much about the cold breezes.

The attendance was light, as was expected, owing to the threatening character of the morning hours, but those who were on hand were full of shoot. The main event was the club shoot at 25 Keystone targets for club prizes, this being the deciding contest of the season. The members were divided in two classes, each class shooting within itself for club prizes. Among those who were on hand were E. D. Miller of Springfield, J. Warren Smith of Orange, R. S. Williams of Elizabeth, A. Sickley of South Orange, J. Bryan of Springfield, Chas. M. Hedden and Wm. R. Hobart of Newark, C. C. Dean and W. N. Drake of Maplewood.

The club shoot was preceded by a number of 10-target sweeps, $1 entry, unknown angles. The results:

| | No. 1. | No. 2. | No 3. | No. 4. |
|---|---|---|---|---|
| Hedden | 0001111010— 5 | 1111110111— 9 | 1100111011— 7 | 1100111111—8 |
| Smith | 1111111111—10 | 1111101101— 8 | 1111111111—10 | 1111111011—9 |
| Miller | 1111101111— 9 | 1111111111—10 | 1111101011— 8 | 1110111111—9 |
| Drake | 1111110010— 7 | 1111111110— 9 | 1101110101— 7 | |
| Addison | | | | 1111111111—10 |
| Roberts | | | | 1110101011— 7 |
| Dean | | | | 1110011101— 7 |

No. 5:

| | | | |
|---|---|---|---|
| Smith | 1011111011—8 | Drake | 1111111111—10 |
| Miller | 1111111101 9 | Roberts | 1111111011—9 |
| Addison | 1101001111—7 | | |

Then came the club shoot at 25 singles, rapid-firing system, C. M. Hedden shooting along with Class B, although not as a member:

Class A.

| | |
|---|---|
| Miller | 1111111111011111111111110—23 |
| J W Smith | 1101111111111111111111101—23 |

Class B.

| | |
|---|---|
| W N Drake | 1111111011011111110111110—21 |
| A Sickley | 1111011111011111111111110—22 |
| R S Williams | 0100010110001011011110110—14 |
| J Bryant | 1101100111110101111001—18 |
| C M Hedden | 1111111111111111101111111—24 |

The prizes were awarded immediately after the above event, the winners being as follows: First prize in each class going to the shooter who won first place the most number of times; second for the most second places won; third for the most third places won, and in Class B a prize for the most fourth places.

Class A: E. D. Miller, seven firsts, $15; Wm. Sigler, four seconds, $10; J. W. Smith, third prize, $5.

Class B: A. Sickley, first, $10; W. N. Drake, second, $7.50; Geo. Pudney, third, $5; R. S. Williams, fouth, $2.50.

Special prize, a $50 trophy, for best average: E. D. Miller, 97 per cent., R. H. Breintnall averaged 94 per cent., Wm. Sigler 91 per cent., J. W. Smith 92 per cent., W. N. Drake 87 per cent. and A. Sickley 89 per cent. during the season.

Shooting in the appended 10-target sweeps, $1 entry, finished the day:

| | No. 6. | No. 7. | No. 8. |
|---|---|---|---|
| Smith | 1101110111— 8 | 1111111110— 9 | 0111011001— 6 |
| Drake | 1111111111—10 | | |
| Hedden | 1011010111— 7 | 1011111101— 8 | 1111101110— 8 |
| Dean | 1011010111— 6 | | |
| Miller | 1001111111— 7 | 1011111111— 9 | 1111110111— 9 |
| Roberts | 1011011000— 5 | | |
| Bryan | 1101111110— 8 | 1103111000— 5 | |

The club will be put into good shape for the season of 1893 and will start to work early in January. Valuable prizes will be offered for the competitions.

## Fulford—Elliott Second Match.

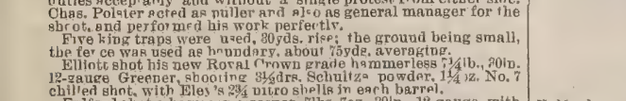
INDIANAPOLIS, Dec. 19.—The second of the series of five matches between J. A. R. Elliott, of Kansas City, Mo., and E. D. Fulford, of Harrisburg, Pa., for $200 a side and a side bet of $1,000 on the general result, was shot in this city to-day before a small crowd of spectators. Nothing but an enthusiast would have braved such unpleasant weather and the small attendance is chargable to that cause.

A score or more of the "cracks" of this and the surrounding towns were on hand early, despite the fact that it snowed more or less all day, and during the greater portion of the match it snowed directly in the faces of the participants and spectators, aside from being cold and a cold wind blowing in the faces of the crowd.

Among those in attendance were: Alvin Grube, Chas. Lockwood and T. A. Gentle of Southport; J. S. Dowling and Wm. L. Derman, of Greencastle; Ed Voris, of Crawfordsville; M. W. Washburn, of New Richmond; Geo. G. Whartin and F. H. Rigdon, of Marion; J. H. Wilson, of Rushville; M. W. Hutto and F. D. Dursler, of Noblesville. Among the Indianapolis representatives were Geo. C. Beck, who lost the championship to Mr Elliott, Dr. S. H. Moore, Dr. C. C. Evert, Dr. A. Martin, J. E. Humphrey, Henry Smith, E. A. Peck, and others.

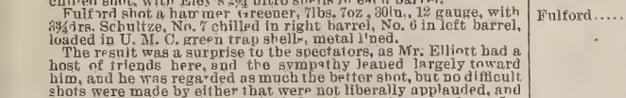
Dr. O. F. Britton, of this city, acted as referee and fulfilled the duties acceptably and without a single protest from either side. Chas. Poister acted as puller and also as general manager for the shoot, and performed his work perfectly.

Five king traps were used, 30yds. rise; the ground being small, the fence was used as boundary, about 75yds. averaging.



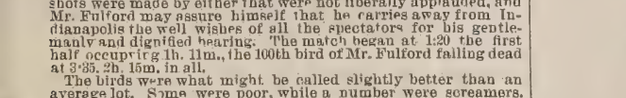
Elliott shot his new Royal Crown grade hammerless 7¼lb., 20in. 12-gauge Greener, shooting 3½drs. Schultze powder, 1¼ oz. No. 7 chilled shot, with Eley's 2¾ nitro shells in each barrel.

Fulford shot a hammerless Greener, 7lbs. 7oz., 30in., 12 gauge, with 3¼drs. Schultze, No. 7 chilled in right barrel, No. 6 in left barrel, loaded in U. M. C. green trap shells, metal lined.

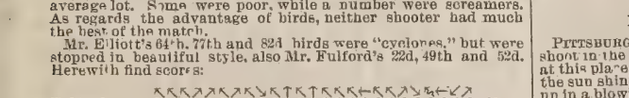


The result was a surprise to the spectators, as Mr. Elliott had a host of friends here, and the sympathy leaned largely toward him, and he was regarded as much the better shot, but no difficult shots were made by either that were not liberally applauded, and Mr. Fulford may assure himself that he carries away from Indianapolis the well wishes of all the spectators for his gentlemanly and dignified bearing. The match began at 1:20 the first half occupying 1h. 11m., the 100th bird of Mr. Fulford falling dead at 3:35, 2h. 15m. in all.

The birds were what might be called slightly better than an average lot. Some were poor, while a number were screamers. As regards the advantage of birds, neither shooter had much the best of the match.



Mr. Elliott's 64th, 77th and 82d birds were "cyclones," but were stopped in beautiful style, also Mr. Fulford's 22d, 49th and 52d. Herewith find scores:



Fulford..... ...2 1 1 2 1 2 1 2 1 2 2 1 2 1 1 1 1 2 1 2 2 2 2 1 2—25

o Dead out of bounds.

## The Final Match.

HARRISBURG, Pa., Dec. 20.—*Editor Forest and Stream:* The last of the series of prize matches was not so well attended as such shoots generally are in this locality, no doubt owing to the extreme condition of the weather with the thermometer almost down to zero.

However, small knots of men might have been seen very reluctantly going out to the grounds, where these two contestants had previously faced the traps and where some of our local amateurs have piled up the same identical scores.

The match was somewhat delayed by Mr. Elliott objecting to the position of the traps, which had to be reset, thus giving the wind a direct driving direction.

Mr. J. H. Worden, Secretary of the State Sportsmen's Association of Pennsylvania was by appointment declared referee; Mr H. F. Lindsley, trap puller, and Mr. Ed. Banks and H. Brewster Shoop, official scorers. The birds were of excellent quality, furnished by Worden Bros. Yet a great number were called and the traps refilled, the birds not getting up the instant the trap was sprung, the shooting device (ball filled with shot) being considered inferior to the old style flannel duster. A pointer dog belonging to Mr. Jas. Worden and Jas. Dinger did the retrieving, dividing honors evenly.

Elliott shot one of his two new Greeners, 12 gauge, 7½ lbs, loaded with 3¼drs. Schultze powder in both barrels, with 1¼oz. No. 7 shot in Eley's cases.

Fulford used his Greener hammer gun, 12-gauge, 7lbs, 12oz., 3¼ drs. Schultze powder, with 1¼ oz. No. 7, in right and same quantity No. 6 in left, loaded in American U. M. C. green shells.

As North America seems to be the boundary in the rules governing, it was finally agreed that the outer fence encircling the race course should be the boundary on the occasion, which gave 90yds. from center trap.

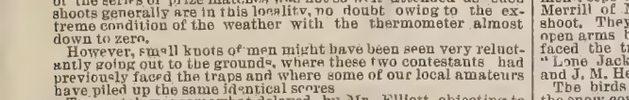
Mr. Fulford won the toss and sent his opponent to the score. A bird went from No. 4 trap which Mr. Elliott downed in elegant style, and the match had started at 1:35. Mr. Fulford's first bird, a dark blue one, made a bad mistake when hovering, and the score was tied. Mr. Elliott's second one, however, gave him the slip, and though hit by both barrels wobbled over the fence and was out of sight. The shooting went smoothly enough until the fourth bird of Mr. Elliott's, which refused to fly on the instant the trap was sprung. Elliott refused to take it and left the score. The bird presently got up and flew. After the bird had crossed the boundary Mr. Fulford challenged it on the ground that the shooter had not declared "No bird." The challenge was sustained and it was scored a lost bird, which was freely commented on by friends of both contestants. Mr. Elliott claimed that his action in walking away from the score was evidence enough that he had decided not to take it.

The match ran along at a freezing gait until Fulford's ninth bird was reached, a driver from No. 4, which landed dead out of bounds wi h two leads that did not score. Elliott seemed to be shooting in a very decidedly reckless gait, as he slipped up on his 10th and 20th, apparently not doing those birds much damage.

Fulford showed determination and steadiness in a marked degree, using his second with good judgment often for safety only. The first quarter finished with Elliott 21, Fulford 24.

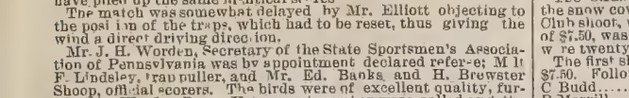
Elliott was the next to drop his bird, a right-quartering driver from No. 5, which should have stopped, but fell dead outside the boundary. Fulford missed his also, a fast climbing one from No. 3, and followed it up and scored another goose egg on his 30 h, another driver out of No. 10. Elliott lost his 32d, also the 38 h, both drivers; but finished his second 25 with 22, his 50 with 43. Fulford in his 35th one of the best of the shoot, a light snakey blue hen from No. 4, a low driving bird, which only stopped with the second. Failing to stop his 37th he ran along ordinarily until his 48th, when he received an ugly right-quartering twister from No. 5, which in his flight seemed as though he had indulged in egg-nog. After refusing three good ones which failed to jump, he slipped up on an apparently easy one from No. 3, ending the second quarter with 21, and the first half with 45.

He was next to fall a victim in his 53d, a right-quartering bird out of No. 2, when Elliott followed in the 58th round, a driver out of No. 2, but made a magnificent kill of a twisting driver out of No. 3. He repeated it on his 67th with one barrel. He missed his next, an incoming left-quarterer, repeating it again on his 73d, scoring 21 out of 25. Along went the shoot and along went the spectators dancing to keep warm, when suddenly Fulford's 63d, an income, left for Worden's coop. Failing to score on his 69th, he afterwards ran the 75 and gained one on his opponent, being 3 in the lead.



Elliott now changed from the left side of the score to the right side on account of the cold and biting wind. This seemed to brace his back, for up to this time luck had been against him to a remarkable degree.

His 77th bird, from No. 4, was a fast left-quartering bird, which he followed up with one barrel; this was a splendid kill. His 82d, after falling close to the boundary, drew out a good deal of discussion as to its probable scoring. The referee ordered another bird shot at, which was stopped, considerably nearer the traps. Then all went merrily as a Christmas bell, until on the 87th he once more failed to score, and twice repeated it; both birds falling out of bounds. He finished with a total of 85. The men now shot more rapidly, as the cold was almost unbearable. Fulford, somewhat improving, ran along until his 82d, when he scored a miss, his 89th falling dead out of bounds. He finished with a straight 90. The referee declared this fifth match in favor of Fulford.



Mr. Fulford will go to his home in Utica, N. Y., for a short time and Mr. Elliott, in company with two brothers, will visit a brother on the eastern shore of Maryland. Summary of flights:

J. W. HAGUE.

## Kansas Mid-Winter.

KANSAS CITY, Dec 24.—The midwinter holiday tournament of the Kansas City gun clubs under the management of Kinnan & Bennett closed this evening. It was a fairly successful tournament, especially so for Charlie Budd of Des Moines and Dick Merrill of Milwaukee, who quit nice winners on the three days shoot. They are both good fellows and always welcomed with open arms by Kansas City sportsmen. Among the visitors who faced the traps on Thursday besides Budd and Merrill were "Lone Jack" Dr. J. F. Lesh of Seneca, A. L. Scoville of Seneca and J. M. Hershey of Osage City, Kan.

The birds were a very good lot, and the shooting, considering the snow covered ground, was very good. The Kansas City Gun Club shoot, which was made a sweepstake with an entrance fee of $7.50, was the principal shoot of the day. In this shoot there were twenty-four entries, and three ties on ten straight.

The first shoot was a ten live-bird race, with an entrance fee of $7.50. Following is the score:

| | | | |
|---|---|---|---|
| C Budd..... | 2112122222—10 | A L Scoville ..... | 1111121221—10 |
| R Merrill..... | 1212121122—10 | "Lone Jack"..... | 1201211212— 9 |
| L W Scott..... | 1221202112— 9 | A L Bennett..... | 2112111222—11 |

There were two moneys in this shoot, 60 per cent. first and 40 per cent. second. Both moneys were divided.

The first "mud pie" shoot, a fifteen bird sweepstakes, resulted in a victory for Karl Guinotte and Lill Scott, who divided first money on clean scores. Following is the score of the shoot:

| | | | |
|---|---|---|---|
| C Budd..... | 111111111111110—14 | L W Scott..... | 111111111111111—15 |
| A L Scoville... | 110111111111110—13 | A L Bennett.. | 101111111111010—12 |
| R Merrill..... | 110111111111111—14 | C Bennett.... | 011110111101111—12 |
| W Bryant..... | 001011010110101— 7 | G Rickmers... | 111111111011111—14 |
| F K Guinotte.. | 111111111111111—15 | | |

There were three moneys in this shoot, 50 30 and 20 per cent. First and second moneys were divided, and there was no tie for third. The shoot was for $2 entrance. $10 added.

The first money in the big shoot amounted to $32. It was divided The second money, $24, was divided by Con. Holmes, Charley Budd and W. Bryant. After shooting out G. A. Fowler and J. K. Guinotte, who tied with them for second money. Those who tied on third and fourth divided. The score of the shoot was:

| | | | |
|---|---|---|---|
| F J Smith..... | 2102202020— 6 | J P Jackson..... | 2010020100— 4 |
| W S Halliwell.... | 2122220100— 7 | G A Fowler..... | 2112211201— 9 |

| G-o Youmans..... | 2020011100— 5 | J K Guinotte..... | 2212220121— 9 |
| C Cogswell..... | 1212102202 — 8 | "Lone Jack" ..... | 2021122111— 8 |
| E W Kinnan..... | 2020212112— 8 | W Bryant..... | 2223111201— 9 |
| C W Budd..... | 1121120111— 9 | H McGee.. ..... | 21012 w. |
| R Merrill..... | 2122112121—10 | "Dan Quinn"..... | 01001110 0— 5 |
| G Rickmers..... | 1011022120— 7 | C F Holmes..... | 0111211211— 9 |
| L W Scott.. ..... | 1021221210— 8 | J Dennis ..... | 1222221222—10 |
| A L Bennett..... | 2211010021— 7 | A B Cross.... ..... | 0201101110— 6 |

The last shoot of the afternoon was a 20-target race. Budd took first money with a clean score, Scoville second, and Merrill, Bennett and Rodney third. Following is the score:

| | |
|---|---|
| Scoville...11111111111101111—19 | Halliwel .0101010001100000011— 6 |
| Scott .....10111011011111111—17 | Bennett...11111110110101111—16 |
| Guinotte..10111010111111111—16 | Rickmers 01101111100311001l—12 |
| Budd .....11111111111111111—20 | Bryan ....11101001111101011111—15 |
| Merrill....11101011111111111—18 | Rooney...01111011111110111111—17 |
| Kinnan...11101000111101001—13 | Bennett...11111111011101111111—18 |

On Friday the shoot in which the most interest was manifested was the novelty shoot for teams of two, both at scores at same time and shooting at triple rises, that is, three birds sprung from the traps simultaneously, two birds to be on the wing before any shot counts and the third one to be flogged in case he be a sluggard. The race furnishes a world of sport for spectators as well as shooters, and will be hereafter known as "cocked hat" from its resemblance to the bowling game where the three corner pins are only used. There were three moneys in the shoot and went to the teams making the three highest scores. The score:

| | |
|---|---|
| Budd & Merrill ..11111111101—11 | Holmes & Flow- |
| Smith & Bennett111101011111—10 | eree.....1001110111l— 9 |
| Milligan & Ger- | Bryant & Hershey1010101101101— 6 |
| man.....1000111001100— 6 | Scott & Scoville..1000001111l0— 6 |
| Bolen & Keene...1001001001l— 5 | |

The entrance in this shoot was $10, and the three moneys amounted to $24 50, $14.70 and $9 80.

The big shoot of the day was a fifteen live bird race with an entrance fee of $15 and $30 added money. This shoot brought ten men to the traps. Charley Budd and Merrill, who are shooting in great form and getting the big end of the moneys, tied in this shoot on clean scores and divided first money. The ties on fourteen shot off and German finally took the pot after killing twenty birds in the shoot off. Gordon and Hickman divided third money. The moneys in the shoot amounted to $71.25, $42.75 and $28.50. Following is the score of the shoot:

| | | | |
|---|---|---|---|
| Budd..... | 221122222221l2—15 | Gordon..... | 1211211201112l1—13 |
| Dennis..... | 2021211111122—14 | Smith ..... | 1102020101020— 9 |
| Merrill ..... | 1222121222222—15 | Hickman..... | 1201111111012—13 |
| Hershey..... | 2010121101102l—11 | Bryant..... | 1211211112101l—14 |
| Bennett..... | 2120112111122—14 | German ..... | 0121a1121111211—14 |

There was a fair attendance on the closing day. The principal live bird shoot was the $100 guaranteed purse, 10 birds, $10 entrance, which drew out 16 entries. Budd won first money, being the only one to make a straight score. Bryant, Merrill and Bennett divided second on ties of 9. Hickman, Keene, Burrell, Schroeder and Scott third on 8, and Smith, Holmes and W Bennett fourth on ties of 7. The moneys were $48, $36, $24 and $12 respectively. The score:

| | | | |
|---|---|---|---|
| C F Holmes..... | 1012221210— 7 | R Merrill..... | 2112212202—9 |
| F J Smith ..... | 1001211101— 7 | A L Bennett..... | 1111102122—9 |
| J M Hershey..... | 0020 w | L W Scott..... | 2111101110—8 |
| Hickman ..... | 1221102110— 8 | W Bennett..... | 0222202021—7 |
| W B Bryant..... | 1112l1o211— 9 | J Burrell..... | 1022122022—8 |
| J A Bolen ..... | 0C11011101— 6 | J Keene. ..... | 2220222220—8 |
| C Milliken..... | 2'11100001— 6 | G German ... ..... | oo11212112—8 |
| C W Budd..... | 2221212222—10 | W S Halliwell..... | o100212010—5 |

The next live-bird shoot was a 10-bird sweep, $7.50 entrance, with 8 starters. Budd, Merrill, Hershey and Burrell divided first money, $24, on ties of 9, and Bennett, Smith and Bryant divided second, $16, after shooting out German. The score:

| | | | |
|---|---|---|---|
| C W Budd..... | 1211212102—9 | F J Smith..... | 0101211222—8 |
| R Merrill..... | 1220112l2—9 | W B Bryant..... | 1122212002—8 |
| A L Bennett..... | 0011111211—8 | J B Burrell..... | 2122212202—9 |
| J M Hershey..... | 1120121222—9 | G German.. ..... | 0112211101—8 |

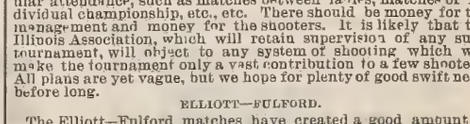
There were several target shoots during the day, in which Merrill, Budd, Bennett and Bryant took down most of the coin.

WHITFIELD.

## CHICAGO TRAPS.

*[From a Staff Correspondent.]*

MATTERS are a shade better in the outlook for the World's Fair shoot. The executive committee of the Illinois Association met last Thursday evening at the Sherman House, this city, one week after the meeting adjourned without quorum. Neither Mr. Nicholls nor Mr. Edbrooke has yet been present at any meeting of the committee. There were present this evening first Mr. Organ, president, and Mr. Shepard, secretary, Mr. Donald and Mr. Hough; no quorum, as Mr. Organ is only *ex-officio* a member. Mr. M. R. Bortree, city game warden, was present by invitation, as also Mr. F. S. Baird, of the law committee. These met in general session, and at length a timid knock announced the coming of Mr. M. J. Eich. Then some one said,



"THE ICEMAN HAS CAME,"

and there was much rejoicing, for there was now assembled the first quorum yet present at a called meeting of this committee. President Organ certainly has been long suffering and kind in a position which would naturally be one of considerable anxiety at this stage.

The matter of inviting one of the shooting associations, either the American Manufacturers' or the Interstate, to take hold of the open tournament of next summer came up for discussion. Mr. Eich thought no foreign corporation should be tendered until it had first been offered to the shooters of Chicago. This view prevailed. It was decided to call a mass meeting of the shooters of Chicago for 8 P. M. of next Thursday evening, Dec. 29, for the purpose of attempting the organization of a stock company with sufficient capital to give a tournament of the proper proportions and character. The secretary is now issuing invitations for this meeting. All present were made a committee to urge attendance of all those likely to be interested. The secretary was instructed to insert the proper notices in the daily papers.

The secretary was also instructed to write the secretary of the recent meeting of the game and fish wardens of the Northwest, for the purpose of establishing relations of mutual advantage in matters of game and fish legislation.

Warden Bortree called attention to the necessity for an improved game law, and the time before the convening of the Legislature being now short, to suggest early instructions to the law committee for the draft of a bill. The law committee will draft such bill and meet for discussion with the executive committee,

PICTURE OF EDDIE BINGHAM'S GUN.

or available part of such committee, at the Sherman House, next Friday evening, Dec. 30. It is probable that the bill will recommend the appointment of county game wardens with police powers. It may take up the matter of protecting birds sought to be acclimatized, and may have a shooters of Chicago. This view prevailed. or available part of such committee, at the Sherman House, next Friday evening, Dec. 30. It is probable that the bill will recommend the appointment of county game wardens with police powers. It may take up the matter of protecting birds sought to be acclimatized, and may have a short-neck clause on quail. It was decided as an entire new bill, the old law to be repealed, but this latter is hardly likely. Indeed it is one thing to frame bills and another to get them passed as laws, the only thing certain being the fact that you don't get any more than you ask for.

The date of the annual tournament of the Illinois State Sportsmen's Association was set for the second week of June. It will probably continue for nearly two weeks, and after that, at close or remote interval, there may follow whatever there is to be of the much-delayed World's Fair shoot. I would advise alarm as to this latter not to be too serious as yet. The start is the hardest step, and the matter is really a difficult question, but it is impossible to believe yet that Chicago is going to permit a failure.

A stock company could make a great thing and a good penny out of this World's Fair shoot. The gate money would net a large sum. Matches could be shot which would bring out a good popular attendance, such as matches between ladies, matches of individual championship, etc., etc. There should be more for the management and money for the shooters. It is likely that the Illinois Association, which will retain supervision of any such tournament, will object to any system of shooting which will make the tournament only a vast contribution to a few shooters. All plans are yet vague, but we hope for plenty of good swift news before long.

ELLIOTT—FULFORD.

The Elliott—Fulford matches have created a good amount of interest here. Chicago men mostly favored Elliott to win at Kansas City. The prediction here at this date, Dec. 24, before the race is shot, is that Elliott will win at Harrisburg. A turn about is fair play. The scores have run very even. Fulford has done good shooting—more than good—on Chicago grounds, in practice. He should shoot stronger here than before. He may get another race here this winter, and he may not. There is not a great deal of talk about it, but whether or not this is on account of his late high scores I can not say. Is Chicago a-weakenin'? By and by we can tell better, but I expect she am not.

CHRISTMAS IN THE STORE.

At Montgomery Ward & Co.'s gun department this morning I found lamentation and despair. You see, in view of the recent performances of Eddie Bingham at the trap, the boys of the gun department had resolved to make him a present of a new gun. They got one of very recent design, tin barrel and a real good spring, and put it in the clamps to have the stock straightened a little, as Eddie had said his bad shooting was due to his gun stock being too crooked. All the visitors to the store were allowed a glimpse of Eddie Bingham's new gun, and there was a general feeling of expectancy. But, alas! just as Christmas was about on hand, Mr. Moran, in order to be sure to have the stock straightened by Christmas, gave the screws one turn too much. There was a groan of riven timber, and Eddie Bingham's new gun stock parted company with itself in the middle! The whole house mourned and would not be comforted. They thought Eddie was going to lay up money with the new gun, and remove that odious tin ring from his best girl's index finger.

Rolla Heikes was not saying a word, but he was busy. "Don't bother Rolla," said Horace G. Holt, "he's studying. He's getting out a patent on his new auxiliary trap, for throwin' barrel heads."

"Say!" said Rolla, looking up suddenly, "you fellows think you're all-fired smart, don't you?"

"Yes," said Eddie Bingham, with fine sarcasm, "and I don't think they got the best of a whole lot of folks I know. I want to give it out right here that my good girl aint wearin' no tin ring—not after John Watson's tournament, nohow."

"There'll be a new piano on the West Side next week," said Rolla Heikes, "and there'll be music every evening at R. O. Heikes's home. I am going to mingle in that tournament deep and plenty."

E. HOUGH.

175 MONROE STREET, Chicago.

## Christmas at Weidenmeyer's Park.

THAT portion of Hamburg place which borders on the Newark meadows, exposed as it is to a clean sweep for the wind as far as the bay and Elizabethport, is not the most comfortable place one could select for a winter's outing; but given a comfortably sheltered and well-warmed club house, a jolly lot of companions, plenty of ammunition and targets, a set of traps in position and above all a gun, and one can manage to forget or ignore the

Borean blasts which come across the waste. So far as the above accessories are concerned, they were all at hand on Christmas Day at Weidenmeyer's Woods, when the East Side-Mutual Gun Club held their annual Yule-tide outing. The day was extremely cold, although the sun shone brightly. The wind was strong, raw and penetrating, and overcoats and sweaters were necessary. There were over a dozen shooters on the grounds and several hundreds of bluerock targets were thrown, the shooting being difficult, as the targets were tossed hither and thither by the wind.

The principal event to interest those present was a supper match between two teams of seven men each, handled by Henry C. Koegel and Robert Schrafft. Each man shot at 15 targets, under the rapid-firing system, the scores resulting as follows:

| Koegel's Team. | | Schrafft's Team. | |
|---|---|---|---|
| Koegel | 0110101001010111—9 | Schrafft | 1001000101001111—7 |
| Perment | 0100110010001101—7 | Schilling | 1111100111111111—13 |
| Hassinger | 1110001010001111—8 | Hague | 1101100110000011—5 |
| Schorck | 1110011100000000—6 | Heinrich | 0100000011010110—5 |
| Fischer | 0100001000011101—6 | Reach | 0101010010000010—5 |
| Perry | 0101001110010100—6 | Noon | 1000000000011100—3 |
| Henning | 1100101101010018—50 | Baar | 0110101111001010—7—48 |

The rest of the day was devoted to shooting sweepstakes at 10 targets each, of which the scores follow:

| | No. 1. | No. 2. | No. 3. |
|---|---|---|---|
| Perment | 1110000111—6 | 0111111101— 8 | 1011001011— 6 |
| Hague | 0000000101—2 | 1000101100— 4 | 1100111101— 7 |
| Koegel | 1011100110—6 | 1111111111—10 | 1111011011— 8 |
| Schork | 1010101101—6 | | 0010001011— 4 |
| Schrafft | 0100101010—4 | 1110010000— 4 | 0110001000— 3 |
| Hassinger | 1010001100—4 | 1010111101— 7 | 1101111011— 8 |
| Reach | 0100000111—4 | | |
| Perry | 1011000111—6 | | |
| Henning | 1000011000—3 | | 0001011111— 6 |
| Schilling | | 1110110111— 8 | 1111111111—10 |
| Heinrich | | | 0001010101— 4 |
| Koeller | | | 0101110101— 6 |
| Ulrich | | | 0000011111— 5 |

### Live Birds at John Erb's.

CHRISTMAS DAY was celebrated with the usual series of live bird sweeps on the "Old Stone House" grounds in Newark, but turkey seemed to have more charms than pigeons, and the attendance was light. The sun shown brightly all day but the wind was raw and cutting, chilling the birds within a few moments after they were put in the trap. Despite this drawback, however, the birds flew well, but few having to be flushed.

All the events, 14 in number, were in the form of "Jersey" sweeps, 4 birds per man, $5 entry, 2 moneys. The results:

| | No. 1. | No. 2. | No. 3. | No. 4 | No 5. | No. 6. | No. 7. |
|---|---|---|---|---|---|---|---|
| Canon | 2200—2 | 0002—1 | 1000—1 | 2021—4 | 0210—2 | 2202—3 | 1212—4 |

### Boiling Springs' Christmas Shoot.

THE Boiling Springs Gun Club members braved the cold wind which blew across the Hackensack meadows on Monday and had a jolly day's sport on their well equipped grounds at Rutherford. The wind was intensely cold and cutting, but the club house was provided with several roaring fires as well as an abundant supply of hot coffee, and cold weather had no terrors for the enthusiasts. There were over a score of shooters present, among them being Messrs. Vermoral, Abbott and Coe, of the Passaic City Rod and Gun Club.

The most interesting contest of the day was at 25 bluerock targets per man, unknown angles, this being one of a series of shoots for a gold watch valued at $50, presented by the club, and to become the property of the member winning it the greatest number of times in 12 shoots. The contest resulted in a victory for Paul Jeanneret, the scores being as below:

| | |
|---|---|
| Lenone | 0101101011000010001101—11 |
| Paul | 1111110111101111110101111—21 |
| James | 0110101111111011011111101—16 |
| Klees | 1111110000011010011111011—16 |
| Huck | 1100100001110000000011011—10 |
| Frank | 0100000000101101110000000—7 |
| Coe | 1110101101011111111101110—19 |
| C Collins | 0111100010101101011100111—15 |
| L Lane | 0101100011111111110000101—16 |
| Jeanneret | 1001111001010011101001011—13 |
| Peck | 0011100101001010101001011—10 |
| Seeley | 0111101101110111111101100—17 |

The following scores were made in a series of sweepstakes:

No. 1, 10 singles, $1 entry: Huck 8, Motzen 6, Klees 6, Peck 5, Frank 3.

No. 2, same: Huck 7, Matzen 7, Klees 6, Frank 6, Peck 5.

No. 3: Matzen 7, Frank 6, Coe 6, Peck 5, Klees 5, C. Collins 4, Huck 4.

### Live Birds in Hunterdon County.

Nearly a dozen exponents of the smooth-bore and live bird shooting gathered on the grounds at Three Bridges, N. J., on Dec. 22, for some sport at the traps. The day was cold with a strong wind and the birds a good lot. The initial event was a team match in which Messrs. Case and Millburn were pitted against Messrs. Stryker and Mason at 23 live birds per man, "H and T" traps, otherwise Hurlingham rules for $25 a corner. The score:

| | |
|---|---|
| Case | 0211112010c210c01c02202101—15 |
| Millburn | 0110112110110212112201220—19—34 |
| Stryker | 1010122112222212101012200—18 |
| Mason | 0111111012011222122111212—22—40 |

The rest of the day was devoted to "Jersey" sweeps, 4 birds per man, $3 entry, two moneys, which ran as below:

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. | No. 6. |

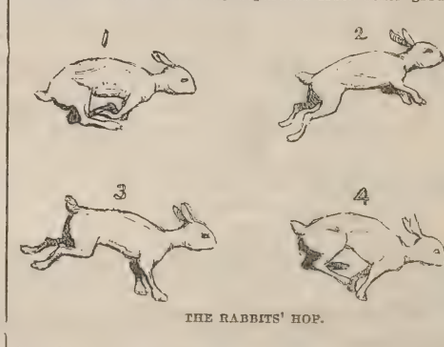
### ANSWERS TO CORRESPONDENTS.

H. B., New York.—1. Tanner has never taken a prize at a New York show. 2. We have no record of the race in question.

H. L. L., Greensboro, N. C.—1. It would be invidious on our part to give the names of kennels. 2. It all depends whether you require setters for bench or field.



T. B. P., Rochester, N. Y.—According to the latest decisions of the courts, a yacht large enough to be classed as a sea-going vessel need not pay duty, tonnage dues or light money. Any small boat would be classed as a manufactured article and taxed accordingly.

HOUSEBOAT, Newark, N. J.—1. We have in preparation a very complete article on houseboats, which will appear shortly; there is no work on the subject. 2. "Steam Yachts and Launches," published at this office. 3. There has been for some years a school of navigation in Burling Slip, New York, which we understand is still open.

W. G. D.—Would you be so kind as to send me a formula for protection from moth and other insects of feathers for natural history specimens and others. Ans. One of the simplest receipts for poisoning against moths and other insects is the following: "Procure a quantity of alcohol sufficient when diluted with 50 per cent. of water to completely saturate the hair (or feathers) of the specimen and dissolve in it some corrosive sublimate, about one ounce to every three pints of the liquid. The point to strive for in making up such a solution is to make it as strong with the corrosive sublimate as it can be without leaving on dark hair a gray (or white) deposit when the liquid has evaporated." This solution should be poured over the specimen so as to reach to the roots of the hair or feathers.

R. T. N., Boston.—1. Where can I get first-class pedigree blanks? 2. Will a .40-60-210 shoot accurate at 500yds. and is it heavy enough for moose and bear? 3. Will a Colt frontier revolver burn all the powder in a .44-40-200 shell when shot, or is a large part of the powder wasted? 4. Where can I get my setter bitch registered, and where can I get the pedigree of Royal Albert? 5. I would like the address of Mr. Walter Winans as I would like to find out more about his new sights. Ans. We can furnish you pedigree blanks for 25 cents a dozen. 2. Yes. 3. A revolver of the caliber and cartridge named will burn all the powder charge. 4. At the office of American Kennel Club, 44 Broadway, New York city; fee $1; send for registration form, which gives all information. Royal Albert by Sir Alister out of champion Novelty, by Blue Prince II. out of Cockerton's Flame; Sir Alister by champion Tam O'Shanter out of champion Daisy, by Blue Prince out of *old* Kate. 5. Brighton, England.

RABBIT, Ohio.—There has been quite an argument in regard to rabbit tracks. When a rabbit makes a track in the snow there are three tracks made as marked — ⁻ ⁻ It has been left to the FOREST AND STREAM to decide what way the rabbit is supposed to be going by such tracks and what feet made the different tracks. Ans. The rabbit was going toward the right. The tracks indicated by the single dash to the left of the diagram were made by the forefeet, which often fall so close together as to be confused for one track. The two tracks to the right were made by the hindfeet. This statement that the hindfeet fall ahead of the forefeet will no doubt seem erroneous to many, but may be verified by a study of the impressions of the rabbit's toes in a soft, wet snow. Provided the group of four impressions made by an individual leap be correctly separated from other groups, the

THE RABBITS' HOP.

direction of the toes will always show the hindfeet ahead of the forefeet. It will also be noted that the small tracks made by the forefeet are invariably close together, while the long tracks left by the hindfeet are widely separated. It is not an easy matter to explain the philosophy of rabbit peregrination, but the following is offered as at least a plausible hypothesis: Rabbits run with a seesaw motion, using their forelegs as props and their hindlegs as propellers. The motion is similar to leapfrog. In the accompanying sketches Fig. 1 shows the rabbit just as it leaves the snow for a spring. The impressions left would be of the hindfeet. Fig. 2 shows the animal in the air, and Fig. 3 in the act of alighting. In Fig. 3 the burden of its weight is borne by the forelegs. By the momentum of the animal (Fig. 4) the hindlegs are carried forward and on the outside of the supporting forelegs, and (Fig. 1 again) are planted on the snow ahead of the forelegs, which are quickly raised preparatory to a new leap. The group of tracks resulting from 3, 4 and 1, in order, would correspond to those at the head of this query.

The Breech-Loader
AND HOW TO USE IT. By W. W. Greener. Illustrated.
1892. Boards, 288 pages. Price, $1.00.
THE AUTHOR'S INTRODUCTION EXPLAINS
This treatise is written for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study. Published at a popular price, it will, it is hoped, reach many who have hitherto been deterred from shooting, believing it to be an expensive recreation. The author's aim is to induce all who can to participate in a manly sport, and to advance the interests of those who can look to the gun for pleasure, health or occupation. The book is not written for experts, nor for those who have special opportunities for the acquisition of the art of shooting; and in order to make it as attractive as possible to the general reader, many matters which would interest the enthusiastic shot only have been omitted.
Sent postpaid by
FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.

New Edition of Small Yachts.
Now Ready: Small Yachts, Their Design and Construction. By C. P. Kunhardt. A new edition, enlarged and extended to 470 pages of text and illustrations, and 87 full-page plates. Size of page, 14½ x 12½ in. Price, $10.00.
As comely as it is practically serviceable to yachtsmen of large as well as small craft.—*Evening Post.*
The new edition should be purchased and carefully studied by any amateur yachtsman who wants to buy or build a boat and is not yet certain as to what he wants.—*N. Y. Herald.*
